2. COIN TYPES. The type is a mark of origin and an implicit guarantee, a badge or 'device' denoting a person or a community, in Asia, at first, often a person. Its significance was occasionally reinforced by an inscription, like the koppa always added beneath Pegasus at Corinth. The types of important cities like Corinth, Aegina, and later, Athens changed little. Their coins travelled widely, and uniformity was a valuable factor in keeping them familiar and acceptable. But the earliest personal badges on coins of Ionia—badges of rulers, office-holders, or merely of someone with large payments to make or receive, reveal the essence of the coin type. The closest analogy is to a seal, as is clear from the pair of primitive coins, almost certainly from Ephesus, bearing a stag; one is inscribed with an uncontracted genitive, *Φανέος*; the other reads *Φανῶςἐμάρημα*. 'I am the badge of Phanēs', a formula which occurs elsewhere on a seal-stone engraved with a different name and device. The type of these coins, the favourite beast of Artemis patroness of Ephesus, provides an obvious personal device for a prominent citizen (or tyrant) whose name already suggests the moon goddess; and shows, incidentally, how a person's type may sometimes reveal his city. Occasional types may be punning ('canting'), like the *φώκη* at Phocaea, or the curious banker's table at fourth-century Trapezus; but the majority, whether civic or personal, are concerned with deities. This is not, as has sometimes been thought, because of some special connexion between religion and money, but because the gods were of the very texture of archaic Greek life. For a century it was quite exceptional for a coin to have more than one type, and before the introduction of reverse types (c. 530) direct representation of the god was most unusual; the reference was oblique, through an animal (e.g. the stag above), or an attribute (e.g. Apollo's lyre at Delos); in the last analysis even so-called 'commercial' types (corn-ear at Metapontum, tunny fish at Cyzicus, silphium plant at Cyrene), or types sometimes thought to represent primitive currencies (double-axe at Tenedos), fall into the same category. After c. 530 the use of reverse types and the increase of inscriptions greatly widened the field. The old obverse type, usually retained and supplemented by an ethnic inscription on the reverse, left no doubt whence the coin came, and direct representation became general—at Corinth and Athens among the first. Once or twice outstanding occasions produced commemorative issues, usually on pieces of exceptional weight: the decadrachms struck simultaneously in Athens and Syracuse (479-478) celebrating victory over the barbarians east and west; or Alexander's decadrachm struck at Babylon, one side showing him in mounted combat with King Porus on his elephant, the other standing in semi-oriental dress and holding, like Zeus, Nike and thunderbolt.

3. TECHNIQUE. Greek coins were always struck with dies, never cast like Roman Aes Grave by pouring molten metal into moulds, except for a few bronzes from the outlying west and north (Selinus, Olbia). In essence dies were prepared by engraving the device direct into an anvil (*ἀκμων*) or into a small block let into it (*ἀκμωνίσκος*). A blank, globular or disk-like, of the required weight, probably heated, was then beaten into the sunken device by a short stout bar (*χακκίτη*, originally 'punch', later 'die', 'type'), its butt end resting on the blank while its top was struck by a hammer to force the blank into the die beneath. Thus the blank became a coin with a device in relief on one side (obverse), and a depression called an incuse on the other (reverse), reproducing a negative of the rough surface of the butt. In time (c. 530) the

practice arose of engraving the butt also with a device, and two-sided coins emerged. Dies were of toughened bronze till c. 400; later, rust marks show that they were sometimes of steel. Recent experiments suggest that one obverse should produce not less than 16,000 coins and that two to three reverse dies would be consumed in the process. At first the position of the axis of one die in relation to the other, when the coin is rotated, is arbitrary, but from the fifth century, with improved technique, in many places it became regular, sometimes providing valuable evidence for period and districts (e.g. at the Bactrian mint the position is regularly inverted until Euthydemus II; after him, parallel). Whether, before the Roman period, any dies were made by engraving a punch with a device (e.g. a head) in relief, and striking this into the still smooth surface of the die to produce a negative, which could then be finished off with a graver, is disputed.

4. STANDARDS AND DISTRIBUTION. Much has been written about the origins of Greek Weight Standards, but little established. It is certain that rough natural weights must have sprung up in the Aegean area with the use of unworked metals for currency, while others entered it from outside; and that by the seventh century indigenous and imported elements had been adjusted into a working relationship; for the first coinages embody hybrid standards, later called Euboic and Aeginetic, containing local elements arranged in a Mesopotamian framework of talent, manah (*μνέα, μνά*), and shekel (*σταντή*), whose weights and internal relations vary considerably from each other as well as from their model. These two standards roughly cover the major part of the Greek world down to Hellenistic times in a cruciform pattern: the Aeginetic makes the upright stretching from Crete and Caria over the mainland and up to the Macedonian border except for a strip covering the Isthmus, Attica, and Euboea; the cross-bar is the Euboic, centred on this strip, with extensions eastward over Samos to Lydia, and westward to Italy and Sicily, and colonial offshoots northwards from Corinth, into the Adriatic, from Chalcis, up the Aegean, to Chalcidice. The *Aeginetic standard* regulated the first silver coinage (see § 1) which replaced the old iron currency of mainland Greece. For the denominations see WEIGHTS, to which should be added the didrachm or stater (12.25-12.35 gm.), largest and commonest of all Aeginetic coins and theoretically important as revealing the eastern shekel-mina framework, though the pattern followed is western Semitic, with 50 shekels to the mina, not Mesopotamian, with 60. Mina and talent are necessarily only money of account. When in 450-425 bronze coinage was introduced 12 chalkoi were reckoned to the obol. Aeginetic drachms were early brought into the easy relationship of 70:1 with the light Euboic mina at Athens (Aristotle, *Ath. Pol.*); and some cities which, like Delphi, used the Aeginetic standard, long preferred to reckon their coinage in Euboic minas at this rate. The *Euboic standard* is more complex than the Aeginetic, and there is no sign of its having represented the silver equivalent of currency artefacts. It is used for electrum as well as silver, and exists in heavy and light form, one double the other; each form contains local versions, six in all, Lydo-Milesian, Samian, Chalcidian, Corinthian, Italo-Achaean, Attic, differing slightly in their weights and make-up. The relation of stater to mina is again western Semitic (50:1), with the single and significant exception of the Lydo-Milesian group, which retains the Mesopotamian relation of 60:1. The Euboic stater, however, is divided by 3, not 2 (except at Athens), to produce the lower denominations later called drachms. Here only the Lydo-Milesian and the Euboic-Attic versions can be dealt with. The *Lydo-Milesian* is the only surviving link

with the older unstamped currencies. It is used for the first electrum coins, and the typeless dumps preceding them (see § 1). The stater weighs 13.85–14.25 gm. with thirds and fractions according, giving a 60-stater mina of 825–855 gm., well within the limits of the heavy Euboic system; nor need it surprise us at this time and place to find the mina reckoned at 60 not 50 staters. Lydia had been in contact with Mesopotamia direct from Gyges onwards. In Ionia this stater continued in electrum (Miletus, Ephesus), sometimes losing weight, down to the Ionian Revolt, and in silver even later (Samos, Rhodes). *Euboic-Attic*. Though the weight system of Attica, as of Corinth, was a light Euboic, no coins were struck before the reform traditionally attributed to Solon, and the common Aeginetic stater-didrachms, with their rare drachms, filled the gap. These were reckoned at 35 staters (70 drachms) to the mina, because of their heavier weights, the normal reckoning, e.g. at Corinth, being 50 staters and 150 drachms. The reform gave the mina back its normal 50 staters, but these, following Aeginetic usage were thenceforth divided into 2, not 3 drachms. This left the old light Euboic mina for reckoning as before, with its normal weight and quota of 50 staters but with a new drachm, the half stater weighing 4.26–4.30 gm.; lighter than the intrusive Aeginetic, but heavier than the old Euboic third-stater drachm, as, struck e.g., at neighbouring Corinth. The first Athenian coins were not struck till after the reform; they are one-sided silver stater-didrachms and occasional fractions with changing heraldic-like types: the so-called *Wappenmünzen*. Few numismatists now would allow even the earliest to belong to Solon's archonship (594), and they are loosely dated in 575–525, along with their occasional electrum pieces which are fractions of the same standard. When reverse types were introduced (c. 530), the tetradrachm was added, perhaps under the influence of Chalcis and her northern colonies which used the heavy stater (tridrachm to them); the didrachm consequently ceased to be regularly struck, though still remaining nominally the stater, as the later gold coinages show. In the 20s Hippias inaugurated the familiar Athena owl series which continued with modifications till Roman times. In 350–325 bronze coins were introduced as at Aegina, the Attic obol being reckoned at 8 not 12 chalkoi owing to its lighter weight. By 525–500 the standard in its final form had reached Sicily, where it remained supreme till 300, and the Cyrenaica, where by 450–425 it had been transformed into another shape. With Alexander's adoption it became the most important in the ancient world and finally exercised a strong influence on the currency of Rome. *Other Standards*. Electrum first passed at ten times the value of silver (three-quarters of gold), but its true nature must soon have become apparent, for Croesus preferred to replace it, half-way through his reign, by a simultaneous issue of pure gold and silver pieces of identical weight (10.60–10.70 gm. with fractions, notably $\frac{1}{2}$), leaving their exchange for adjustment at the current rate for the day (1:13 $\frac{1}{2}$). The new gold stater has the value of the old electrum stater at 3:4; this was the first appearance of a double coinage (Hdt. 1. 94). His Persian successors at Sardis, taking over the idea and even types, developed an integrated system at different weights in which twenty silver pieces (5.15 gm.) passed for one gold (8.05 gm.). Darius I (c. 510) fractionally adjusted the weights, changed the types from the celestial lion and ox to the Great King at war, and gave his name to the gold piece. The resulting system lasted until Alexander. Meanwhile from 550–525 to 350–325 increasing supplies of gold coin and bullion within the Persian Empire and especially in the Thracio-Macedonian region, which briefly formed part of it, steadily

depressed the commercial as against the official gold-rate, and eroded the silver standards except in regions like mainland Greece whose currencies were firmly based on silver. After the Peloponnesian War the *Rhodian* (tetradrachm 15.10–15.20 gm.) replaced the Euboic-Attic and local standards in the currency of the Ionian coast; while already in 425–400 Macedonian cities (e.g. *Acanthus*) began to issue staters of 14.00–14.50 gm. instead of the old heavy Euboic stater. This implies the rough rate against gold of 12:1, which Philip II later adopted for the silver staters accompanying his issues of Euboic-Attic gold. Under Alexander the rate fell to 10:1 and the position was stabilized by returning to Croesus' plan of striking both metals on the same standard. Unlike Croesus three Ionian cities, Cyzicus, Phocaea, and Mytilene, with electrum coinages of graceful style and wide circulation from 550–525 onwards, retained them till Alexander's conquest. All have types changing yearly (?), but only two have constant mintage marks in addition (tunny fish at Cyzicus, seal at Phocaea); Mytilene has none, but we know that she and Phocaea issued their coinages by treaty in alternate years (Tod ii. 112). These consist of sixths only (2.50–2.58 gm.), with average gold content of 30.49 per cent; if staters were struck none have survived save a unique emergency piece of Mytilene. The stater, if not merely a unit of account, should weigh c. 15.00–15.60 gm. The standard, named *Phocatic*, was used for silver too and was carried westwards by Phocaeans to Massilia and its dependencies, and also to Velia (c. 540), whence it spread throughout Campania. Its historical importance lies in its adoption by the Romans for their earliest coinages. *Cyzicene* staters weigh 16.05–16.15 gm., with sixths and twelfths according, and an average gold content of 37–47 per cent, not far below the *daric* with which they were roughly equated; whether they had a fixed rate either there or in the Athenian *ἀρχή*, within which they circulated in large numbers, is doubtful. In the fourth century they were in special demand in Black Sea ports. With the rise of the Hellenistic kingdoms the face of Greek coinage altered. Apart from odd corners (e.g. Crete) and a few privileged cities, autonomous issues are rare except for bronze; and the bulk, east and west, comes from larger units: kingdoms, states (Rome, Carthage), leagues (Aetolian, Achaean, etc., and Brettian). Only two major city-states, Athens and Rhodes coined continuously in the Aegean down to the first century B.C. though there is much imitation of the tetradrachms of Alexander and Lysimachus in Anatolia. For Athens see above. The Rhodian standard fell steadily and its place abroad was largely taken in the second century by the *cistophoric* (staters 12.50–12.60 gm. falling): the pseudautonomous coinage of city-states under Pergamene and, later, Roman rule, named from its Dionysiac type which is frequently mentioned in Roman records. The larger kingdoms may have several mints but they are controlled from the centre and have little initiative; types are prescribed and the coinages uniform; officials, even dies, may pass from one to another. By Actium Greek coinage is practically extinct. The considerable city coinages in bronze with Greek legends and local types which appear, in the eastern provinces especially, under the Empire, are Roman in appearance and conception, and are best considered under that head.

INTRODUCTORY. G. Macdonald, *Coin Types* (1905); *Evolution of Coinage* (1916); K. Regling, *Münzkunde* (Gercke-Norden, 3 (1911), ii, pt. 2); C. T. Seltman, *Greek Coins*² (1955); M. Hirmer—C. Kraay, *Greek Coins* (1966), wide selection, with K.'s careful text to H.'s fine photographs. For general reference G. F. Hill, *Handbook of Greek and Roman Coins* (1899), F. von Schrötter, *Wörterbuch der Münzkunde* (1930).

ADVANCED. Head, *Hist. Num.*² (1911 and reprint) now under revision but still indispensable though in parts out of date; in conjunction with it should be studied the *British Museum Guide to the*

Principal Coins of the Greeks (1959) with fifty-two dated plates; almost as valuable, but incomplete, is E. Babelon's *Traité des monnaies grecques [et romaines]* (1901-32), three parts in eight vols., 1 *Théorie et doctrine*, 11 *Description historique*, 111 *Planches*, which at B's death had reached Alexander except for Italy and Sicily (to 480 only), P. Gardner, *History of Ancient Coinage 700-100 B.C.* (1918), partly economic. Monographs on districts and cities are too many to list here, but see for modern methods of research E. Boehringer, *Syracus* (1929) to 435 only; G. K. Jenkins and R. B. Lewis, *Carthaginian Gold Coins* (1961); E. T. Newell, *Eastern and Western Seleucid Mints* (1938 and 1941), M. Thompson, *New Style Silver Coinage of Athens* (1963) Museum collections with discussion, *British Museum Catalogues (BMC) Italy-Cyrenaica* (1873-1927), since 1883 with increasingly valuable introductions; *Bibliothèque nationale* (Paris), E. Babelon, *Rois de Syrie* (1890), *Perses Achéménides* (1893). For further material, fully illustrated and described but not discussed, the British Academy's international series of public and private collections, *Sylloge Nummorum Graecorum* (SNG 1931-) includes, among public collections, Aberdeen (Newnham Davis), American Num. Soc. (Berry), Ashmolean, B.M. (Lloyd), Copenhagen, Fitzwilliam; among private, Lockett, von Aulock. Among independently published collections public, Bibl. Nat. Paris, J. Babelon, *Coll. Laynes* (1924), Bibl. nat. Brussels, P. Naster, *Coll. L. Hirsch* (1939), Boston, Mus. of Fine Arts, A. Baldwin-Brett, *Cat. of Gr. Coins* (1955), Fitzwilliam, S. W. Grosse, *McClean Coll.*; private, R. Jameson, *Coll. Jameson* (1913-12), L. Forrer, *H. Weber Coll.* (1923).

Art, K. Hegling, *Die Antike Münze als Kunstwerk* (1924); B. Ashmole, *Relation between Coins and Sculpture*, *Trans. of Internat. Num. Congress* 1936 (1938), G. E. Rizzo, *Monete Greche della Sicilia*, 1946, G. F. Hill, *Select Greek Coins* (1927), excellent enlargements.

METROLOGY. In this highly controversial subject little is yet certain. F. Hultsch, *Gr. u. röm. Metrologie* (1882), still useful for the literary sources and discussions, as is I. Pernice, *Griechische Gewichte* (1894), for the archaeological; A. Sege, *Metologia e circolazione monetaria degli antichi* (1928); O. Viedebantt, *Antike Gewichte-normen*, penetrating but limited in scope, J. Hamer, *Festigkeit der griechisch-latinen Münzen* (1966).

BIBLIOGRAPHY. Head's *Hist. Num.* includes general bibliography to 1911; since then has appeared S. P. Noe's *Bibliography of Greek Coin-Numismatics* (1937), American Numism. Soc. 'Num. Notes and Monographs', no. 78. Otherwise the only recourse is to regular indexes of numismatic periodicals, especially *Ann. Numism. Society's Numismat. Literature*, quarterly since 1947. E. S. G. R.

COINAGE, ROMAN. All mentions of coinage under the kings and the early Republic are unhistorical. Rome reckoned values in terms of oxen and sheep (hence *pecunia*, from *pecus*) down to c. 450 B.C., and later in uncoined bronze (*aes rude*), which was superseded in central Italy by cast bronze bars (*aes signatum*) bearing distinctive devices and related to the Roman pound (327.45 gm.) of 288 scruples.

2. By 290 B.C. Rome dominated central Italy, and tradition gives to c. 289 B.C. the establishment of triumvirs of the Roman mint, who continued the production of *aes signatum* and began that of *aes grave*, circular cast bronze *asses*, weighing 1 pound and marked I (= 1 *as*), together with subdivisions—true coins of which weight-variation was offset by defined face-value. Such currency was appropriate to an area familiar with bronze as a measure of value, and to a power now richer in bronze spoils and available copper mines. Each denomination bore its own characteristic types. There was no ethnic inscription.

3. The Pyrrhic War of 280 B.C. involved Rome in south Italy, with its long tradition of silver coinage; and she now produced, as extraordinary issues, struck silver didrachms. These 'Romano-Campanian' coins, of about 7.4 gm., were Greek in workmanship and style, and probably came from such mints as Naples and Tarentum: their Mars/Horse's head and Apollo/Horse types were accompanied by the legend ROMANO. Token bronze coins were also issued, similar to the earlier Neapolitan ΠΡΩΜΑΙΩΝ pieces. *Aes grave* continued at Rome under the mint-triumvirs, with stylistic improvement due perhaps to employment of Greek workers: the Janus or Mercury heads of the earlier *asses* were now replaced by Apollo. The *aes* weight-standard remained without obvious change, or even rose slightly. Corresponding *as* issues were in production at other central Italian com-

munities. Bronze bars were by now being generally superseded.

4. Pliny, as correctly interpreted, assigns the first silver of Rome proper, under the *tresviri monetales*, to 269 B.C.; this consisted of didrachms, of about 7.1 gm., with types Hercules/Wolf and twins, obviously appropriate, and legend still ROMANO. The Pyrrhic war had taught Rome the importance of a regular south Italian currency, supervised by the *tresviri* but monetarily independent of her own value-marked *aes*. The First Punic War prompted a new silver didrachm issue of lighter weight (6 scruples, 6.8 gm.), with types Roma/Victory and legend ROMANO: these led to others of the same weight, whether during or after the war, on which ROMA replaced ROMANO; and c. 235 B.C. the Greek-style didrachms gave way to the more Roman-style *quadrigati* of the same weight, with types Young Janus/Victory in *quadriga*, and legend ROMA. There were concurrent changes in *aes* coinage: at first, in a series of issues with varying *as*-types, the weight began to drop, indicating the war-time necessity of over-valuation for bronze, and after c. 235 B.C., when the Janus/Prow *aes grave* appeared, with a full range of minor denominations, the *as* (originally weighing 1 pound) had sunk to semi-libral (half-pound) standard.

5. There is no certain evidence to show whether the mint of Rome worked in association with regional mints elsewhere from c. 269 until this time. But the Second Punic War undoubtedly found Rome as the only regular mint in operation, apart from special monetary emissions made by military leaders in the field. The strain of war was quickly reflected in the adoption of the triental standard for *aes*, followed closely by the quadrantal, itself unstable and waning. Hitherto the prime monetary unit had been the bronze fixed-value *as*, supplemented by silver traded at market value. About or just after 213 B.C. the silver *quadrigatus* gave way to the silver *victoriatus* (with *rev.* type Victory) of half its weight, i.e. c. 3.4 gm., still without defined face-value and struck also by Italian mints other than Rome: the stress of war had already resulted, c. 216, in the coining of the Janus/Oath-scene emergency gold. Finally, at a date which, not yet absolutely determined, archaeological evidence has suggested may be c. 211 B.C., Rome made the fundamental change, striking the silver *denarius* (of *victoriatus* weight) with types Roma/Dioscuri and legend ROMA. The obverse was marked X, — 10 *asses*: the coin was thus the silver equivalent of 10 reduced-weight bronze *asses*. Halves (*quinarii*, marked V and quarters (*sestertii*, marked II) were also coined. Henceforth the *as* was struck not cast. More gold, with types Mars/Eagle, marked as being of 60, 40, or 20 *asses*, was also produced, c. 209, drawing again on the state's extensive reserves of this metal. Internally the war had resulted in complete coinage-reform, with silver (aided by emergency gold) appearing as the major partner in a new system of bi-metalism. *Bigati* (*rev.* type Luna or Victory in *biga*) of denarial weight but without value-mark were probably produced for external purposes.

6. The pattern of Roman coinage was now set for many decades, upon the basis of silver *denarii* (with infrequently issued fractions) and a range of bronze, all struck, which tended to fall in weight, with the sextantal (2 ounce) *as* becoming uncial (1 ounce) in the later second century B.C.; the token nature of *aes* was now confirmed, although reckoning in *asses* or their multiples continued for a long time. In the rest of Italy the spread of the *denarius* resulted in the diminution of non-Roman silver coinages, though local *aes* in various categories was still frequent. Rome herself gained large bullion supplies in the century following the Second Punic War from war-indemnities and spoil: the gold 'Philippei' of

Macedon after 188 and 167 B.C. and the later *argentum Oscense* from Spain, on the denarial standard, were among major sources of coined metal. Gold, however, was not struck between c. 209 B.C. and the time of Sulla, who produced it during his eastern campaigns. The period of the Gracchi witnessed an internal monetary reform by which the *denarius* was valued at 16 *asses* (and marked XVI, and subsequently X) instead of 10. Soon after there was an increased production of plated *denarii*, some of which may have been issued alongside the normal pieces as a means of government profit, though many were perhaps the work of forgers, against whom later measures were directed.

7. The mint of Rome was in the temple of Juno Moneta, who thus gave her name to 'money'; and methods of production were those already elaborated for earlier coinages (see COINAGE, GREEK). In the course of time this mint was supplemented by others elsewhere, necessitated by the extension of colonies or the operation of armies in long-term campaigns: such 'military' issues were frequent from Sulla onwards. The mint of Rome continued under the supervision of the *tresviri*, progressively defined as *aere argento auro flando ferundo*, though certain issues of the first century B.C. were sometimes controlled by quaestors, aediles, or other magistrates through special authority (S.C. or EX S.C.). No coins of Rome bore magistrates' marks before the first *denarii*, of which some developed small pictorial symbols. These gave way to simple monograms, and these in turn to abbreviated names; after c. 150 B.C. these names might appear in fuller form, and ultimately excluded the legend ROMA.

8. The chronological arrangement of the republican denarial coinage and its associated *aes* is difficult, depending on the comparative analysis of hoards, the prosopographical identification of a long series of named *tresviri*, and the development of the coin-types. Normally an annual college of *tresviri*, of whom one seems to have acted as senior, struck in silver or bronze or both, producing a volume of coinage determined by higher authority; and the problem has been to accommodate the known or potential number of colleges within a given period of years. Prosopographical investigation is much assisted by study of type-development. Down to the Gracchan period *denarii* usually showed *obr.* head of Roma, *rev.* Dioscuri, or deity in *biga* or *quadriga*. Then the reverses changed, to show some incident illustrating the political or military services rendered by the moneyer's ancestors. After c. 100 B.C. such 'historical' types were increasingly invested with current political meaning, leading to type-sequences of party significance; and powerful *imperatores* like Sulla and Pompey did not hesitate, when coining on campaign, to use types of purely personal reference. Julius Caesar, as dictator, followed their example, and his final coinage (produced by *quattuorviri*) broke with all precedent and showed the portrait of a living man.

9. By now the coinage of Rome comprised abundant *denarii*, with some *aurei*: *aes* coinage had virtually ceased c. 80 B.C., when the *as* had sunk to $\frac{1}{2}$ ounce standard, and earlier issues presumably continued as purely token money. During the second triumvirate coinage was struck in gold and silver by the triumvirs and their subordinates, who also coined in *aes*; and these coins were directed primarily to the political sympathies and the military necessities of Antony and Octavian in East and West respectively. The mint of Rome ceased coinage c. 40 B.C.

10. Augustus stabilized and modified the coinage-system of the Republic. He retained the *aureus* (at 42 to the Roman pound) and the *denarius* (at 84), in the relationship of 1:25, and struck a wide range of token

coinage in *orichalcum* alloy (*sestertius*, *dupondius*, and *semiss*) and copper (*as* and *quadrans*). Coinage in gold and silver tended to follow his own movements and military necessities in both East and West, but from c. 20 the mint of Rome was reopened, and from c. 15 B.C. another major mint, probably Lugdunum, was busy, though coinage at both could be periodic. Gold and silver (the latter substantially alloyed) generally stressed the Emperor's military powers, the *aes* his civil powers and the honours paid civically to him, whether at Rome by S(enatus) C(onsulto) or elsewhere in other ways. It is unlikely that there was any systematic difference in the control of the precious and non-precious coinages: the *tresviri a.a.a.f.f.* signed both at Rome down to c. 4 B.C., all names disappearing thereafter, when imperial slaves and freedmen operated the mint under imperial agency. In the provinces there was a large variety of civic and regional coinages, permitted by the *princeps*, and almost wholly of *aes*; those of the West were severely curtailed after Gaius' reign. The obverses, with few exceptions, showed the Emperor's portrait.

11. The major and 'official' mints of Augustus struck types which emphasized the imperial achievements, the imperial house, and the peace and prosperity of a new era secured by the Emperor through favour of the traditional gods. From this model all subsequent imperial coinage derived, and the *aes* continued to be marked SC, though different Emperors varied the emphasis of their types at will until, in the third century A.D., the coinage (by proclaiming and promising everything) had come typologically to mean little or nothing. In the eastern provinces, however, there was another idiom. A very large number of Greek cities retained or gained the right to strike civic or regional *aes*, thus relieving the Emperors of a heavy economic obligation while adding to their own revenue. These coins, down to their disappearance c. A.D. 250, normally showed an imperial obverse portrait, the reverses were given up to representations of local gods and buildings or to themes of local history or mythology. Their inscriptions were normally in Greek. They were produced in quantity and form a rich commentary upon the continuing Hellenism of the flexibly organized eastern provinces of the Roman Empire.

12. Site-finds and hoards show that the imperial coinage proper was struck in large volume and circulated widely and over long periods. The *as* and its double, the *dupondius*, were for some time the commonest denominations, for civilians and soldiers alike. Silver and gold were probably restricted to the smaller number of the well-to-do, and also passed beyond the imperial frontiers in the service of luxury trades. This, together with growing imperial expenditure and other causes of economic maladjustment, soon resulted in monetary revision, in which Augustus' gold/silver bimetalism was, however, at first preserved.

13. Nero reduced the *aureus* from $\frac{1}{2}$ to $\frac{1}{3}$ of a pound, and the *denarius* from $\frac{1}{84}$ to $\frac{1}{96}$, increasing the amount of alloy in the silver. As the debasement of the silver, once begun, increased till it reached over 50 per cent under Septimius Severus, the coinage came to rest more and more on an essential gold basis. Caracalla, in A.D. 215, issued the so-called *antoninianus*, a coin of 2 (or possibly $1\frac{1}{2}$) *denarii* substantially overvalued. Abandoned by Severus Alexander the coin was restored by Balbinus and Pupienus and, by the reign of Philip, had practically ousted the *denarius*. The *aureus*, reduced by Caracalla to $\frac{1}{6}$ of a pound, gradually fell in weight, by the reign of Gallienus gold was struck on no single apparent standard. The debasement of the silver continued, and, in A.D. 259, the *antoninianus* became a mere copper piece, coated with silver. Under Trajan Decius it had fallen to the value of a *denarius*; now it

fluctuated at low and irregular values in the market. The *aes* coinage ran an even course down to Gallienus: Trajan Decius struck the *quadrans* after long intermission and introduced a double *sestertius*. But, when the silver piece collapsed, this coinage was suspended.

14. Aurelian called in the old money and issued new. He struck no regular *aureus*, and no good silver piece, but a slightly improved piece of silver-coated bronze marked XX.I. Whatever the value thus defined (the interpretation 'this 1 unit = 20 *sestertii* = 5 *denarii*' is not improbable), this reform carried the Empire over the immediate crisis, even though it was never fully effected in the West.

15. By the late third century the imperial mint-system had been greatly extended. Rome was still a major mint, but the urgency of frontier needs promoted the importance of Antioch, Siscia, and Milan: others in operation included Lugdunum, Ticinum, Serdica, and Cyzicus, apart from those temporarily established by provincial usurpers like the Gallic Emperors or Carausius in Britain. Alexandria, virtually continuous since Augustus, was still the official and imperial mint in Egypt, striking a debased Greek-style coinage with Greco-Egyptian types.

16. Diocletian began by standardizing his *aureus* at 70 to the pound and retaining the silver-washed unit of Aurelian. But in A.D. 294 he undertook a complete coinage-reform which provided (i) *aurei* marked Σ (60 to the Roman pound), (ii) good silver of Neronian weight marked XCVI (96 to the pound), (iii) large copper coins, with predominant *Gemio Populi Romani* reverse, some of them marked XX I, (iv) small copper radiate-head coins, and (v) even smaller copper laureate-head coins. The XX I coins were probably worth 5 of the new *denarii communes* of his Price Edict; and 5 of the XX I coins may have been worth 1 silver piece: the value of the gold was probably not fixed in relation to that of the silver and copper. This monetary system was followed, with more or less completeness, by 15 mints extending from London to Alexandria.

17. About 309 Constantine introduced the lighter *aureus* of 72 to the pound, the famous *solidus*. Silver was hardly struck between A.D. 305 and 330. Then the $\frac{1}{16}$ of the pound reappears, succeeded, c. 350, by the *aurea* ($\frac{1}{12}$ pound) and the *multiarene* ($\frac{1}{16}$). The subsidiary coinage of silvered bronze went through a series of changes and reductions, only partially intelligible to us. One reform fell under Constantius II (A.D. 348), another under Julian (363). *Pecunia maiornia* and *centenionalis* were names of coins not yet certainly identified. In the main, the *solidus* stood apart, in a privileged position, commanding a premium on its nominal value. Its issue was long regarded as the special prerogative of the Roman Emperor, and the barbarian successor-states were slow to usurp the right. It was, par excellence, the money in which tax payment was required.

18. The range of Diocletian's mints was in general continued later, though the weakness of the Western Empire in the fifth century saw ultimate contraction to Italy itself. Diocletian's change of types, modified by Constantine, also provided the basis for later usage. Late imperial coinage, more formal—even hieratic—in appearance, referred more and more to permanent aspects of the imperial rulers, and less to specific events; and each denomination tended to have its characteristic reverse type. Close uniformity in mint-control was exerted by *rationales*, dependent on the *comes sacrarum largitionum* who controlled the disbursement of bullion, itself protected by the Emperor's *comitatus*. The imperial name and features on the obverse were hallowed: but false coining was often rife, and was sternly repressed by edict.

19. The gradual development of independent money-

systems among the barbarians of the West and the great reform of Anastasius in the East belong to another story.

COLCHIS, the region at the east end of the Euxine Sea, just south of the Caucasus mountains; the legendary home of Medea and the goal of Jason's expedition. The land was rich in timber, flax, hemp, wax, and pitch, and Phasis was the terminus of a northern trade route to central Asia. Its people consisted of many tribes; seventy languages, it is said, could be heard in the markets of Dioscurias. Greeks established trading posts on the coast. Colchis was conquered by Mithridates; it was assigned to Rome's client princes, and remained long under Polemon (q.v. 1) and Pythodorus. Under Hadrian there were Roman forts along the coast and the tribal chiefs were nominated by Rome.

Strabo, II, 406-9; Ariian, *Periplus M. Eux. Maris*, *Rom. Rule Asia Min.* (index). T. R. S. B.

COLLATIA, in Latium (q.v.) about 10 miles east of Rome (modern *Lunghezza*?). Already under Roman control in regal times, it played a role in the Tarquin saga. Cicero (*de leg. agr.* 2. 96) records it as a village, Pliny (*IIN* 3. 68) as non-existent. The Via Collatina, however, long continued in use. E. T. S.

COLLATIO LUSTRALIS. The *collatio lustralis* (χρυσόπυρον) was a tax in gold and silver levied every five years (later four) on traders in the widest sense. It was instituted by Constantine (q.v.), and abolished in the East by Anastasius in 498; it continued to exist in the Ostrogothic and Visigothic kingdoms in the sixth century. From the late fourth century it was levied in gold only. Not only were merchants liable, but money-lenders, craftsmen who sold their own products, and apparently anyone who received fees. Prostitutes paid, and the fact that the government thus profited from sin made the tax unpopular with Christians. Doctors and teachers were expressly exempted. Landowners and peasants selling their own products were also immune, and rural craftsmen were declared exempt in 374. Painters were freed from the tax in 374, and clergy and veterans who practised crafts or trade were exempt if their assessment fell below a certain minimum. The tax was assessed on the capital assets of the tax-payer, including himself and his slaves and family. The rate of tax does not seem to have been heavy, but it caused grave hardship to poor craftsmen and shopkeepers. It was levied in each city by *manicipes* chosen by the merchants on the tax-register (*matricula*). The revenue went into the *largitiones*, but the collection was organized by the praetorian prefecture.

COLLEGIUM

(1) PRIVATE. Any private association of fixed membership and constitution: see CLUBS, ROMAN.

(2) MAGISTERIAL. A board of officials (or strictly speaking, of more than two officials). The principle of collegiality was so common a feature of all republican magistracies at Rome that its origins were embodied in the mythical figures of Remus and Titus Tatius (q.v.). To prevent the rise of a new monarchy disguised under the names of consulship or dictatorship, it was ordained that every magistracy should be filled by at least two officials, and in any case by an even number. They were to possess equal and co-ordinate authority, but subject to mutual control. Thus a decision taken by one consul was legal only if it did not incur the veto (*intercessio*) of the other. This principle led to alternation in the exercise of power, depending on age (*collega maior*), or, under the Empire, on domestic circumstances, the married being preferred to the single. Alternation gradually became a purely honorary distinction.

Mommsen, *Röm. Staatsr.* I. 27 ff.; see, however, E. S. Staveley, *Hist.* 1956, 90 ff. P. T.

(3) PRIESTLY. The name *Collegium* was also applied to the two great priesthoods of the *Pontifices* (q.v.) and the *Augures* (q.v.) and to the *duoviri* (later *decemviri* (q.v.) and *quindecimviri*) *sacris faciundis*, who had charge of the Sibylline oracles and of the *Graecus ritus* in general. Minor religious 'Colleges' were the *Collegia Compitalicia*, concerned with the worship of the *Lares* (q.v.) at the *compita*, the *Collegium Capitolinorum*, responsible for the *Ludi Capitolini*, and the *Collegium Mercatorum*, who presided over the worship at the temple of *Mercurius*. The lesser priesthoods were known as *Sodalitates*: see SODALITES.

Wissowa, *RR*, 404, 483 ff.

C. B.

COLLUTHUS (5th c. A.D.), epic poet from Lycopolis in Egypt. Author of several panegyrics, an account of the Persian war of Anastasius (506), and a *Calydonian Suda*, s.v.), now lost. His only surviving work is a *Rape of Helen* in uninspired hexameters clearly influenced by Nonnus, but not so strict in metrical practice, particularly in the regulating of accent at both caesura and word end (cf. A. Wifstrand, *Von Kallim. zu Nonnos* (1933), ch. 1, esp. pp. 75-7).

Text: W. Weinberger, 1896, and a useful Loeb by A. W. Mair (1928, together with Oppian and Triphiodorus). Bibl. R. Keydell, *Bursian, Jahresh.* 1931, 125 ff. A D E C.

COLONIA AGRIPPINENSIS (*Colonia Claudia Ara Augusta Agrippinensium*), modern Cologne. In 38 B.C. Agrippa transferred the friendly tribe of the Ubi (q.v.) from the right to the left bank of the Rhine, and c. 9 B.C. an altar for the imperial cult (*Tac. Ann.* 1. 57) was consecrated at their tribal capital. About the same time two legions were stationed close by. These were transferred later and in 50 Claudius founded a colony in honour of Agrippina his wife (*Tac. Ann.* 12. 27) which was laid out in regular form. A fine naval base, the headquarters of the Rhine fleet, was built a little upstream and a large mercantile port developed between the colony and the river. The colonists and the Ubii merged rapidly, and the latter only adhered unwillingly to *Civitas* in 69-70. Cologne suffered in the wars of the third century, the naval base was abandoned by the middle of the century, but the city's fortifications were strengthened. Subsequently the bridge-head was massively fortified in the Constantinian period. The city was taken by the Franks in 355, but Julian drove them out the following year. They retook it in 463.

From the first century Cologne was the chief commercial city of the Rhineland and the capital of *Germania*

Inferior; it became a bishopric not later than the third century. Various manufactures are attested, and its glass was exported all over western and northern Europe.

COLONIZATION, GREEK. Colonization was always a natural activity for Greeks, living in a poor country. Mycenaean colonies of the Late Bronze Age have been revealed by archaeologists (e.g. at Miletus), the coast of Asia Minor and the islands off it were settled at the beginning of the Iron Age, and there was much colonizing in Asia under Alexander and in the Hellenistic period. Nevertheless, the greatest colonizing achievement, by which Greek cities were spread round the coasts of the Mediterranean and Pontus, is that of the archaic period, c. 750-c. 550. The colonizing epoch precedes written history and the source material is inadequate. In the literature incidental accounts of colonies in Herodotus and, more notably, Thucydides (who was particularly interested in colonization) stand out as precious exceptions. Information on most of the colonies comes from brief notices in comparatively late writers, especially geographers like Strabo and the so-called Ps.-Scymnus. Archaeologists have striven to improve our knowledge, often most successfully. Interpretation of archaeological material, however, is often marred by the abuse of the dangerous argument from absence of finds, and the creation of bold theories of commercial, and even political, connexions on the sole basis of painted pottery. Archaeological evidence is most valuable for establishing the chronology, which otherwise depends largely on the foundation dates worked out by Greek chronicographers and preserved by late compilers, notably Eusebius. These dates cannot be relied on as exact. However, where there has been thorough archaeological exploration in Sicily and southern Italy, the traditional dates have been in a general way confirmed, so they may be used (with reserve in detail) as a general chronological framework.

The regions colonized were determined by political and geographical factors. Greek settlers were excluded from politically advanced areas such as Egypt and the Syrian coast, though occasional trading settlements were established by invitation, as the unique Naucratis in the Delta (7th c.), and, probably, Posidium (modern *Al Mina*) at the mouth of the Orontes (8th c.). The colonists sought areas with a similar climate to Greece, suitable for the way of life they knew. Thus southern Italy (Magna Graecia) and Sicily were the first great areas of settlement. Here the Euboean cities Chalcis and Eretria were very active, especially the former, e.g. at Pithecusae (modern *Ischia*) and Cumae (c. 750), Naxos (734), Zancle (c. 730?), and Rhegium (c. 720?). Corinth founded Syracuse (733) and Sparta Tarentum (706). Most of the colonies in southern Italy were Achaeans, notably Sybaris (c. 720) and Croton (709). Seventh-century colonies include Gela (688) from Crete and Rhodes, Selinus (c. 628) from Megara Hyblaea, Himera (c. 648) from Zancle, Posidonia (c. 700?) from Sybaris; later still Acragas (580) from Gela.

Also in the eighth century colonies were established in the northern Aegean on the Thracian coast, though both chronological and other indications are exceptionally slight. Chalcis and Eretria, joined slightly later by Andros, colonized Chalcidice, founding, e.g., Torone (from Chalcis), Mende, and Methone (c. 710?) from Eretria, Acanthus (654) from Andros. Further east the Parians settled Thasos (first quarter of the seventh century), which in turn established many colonies on the coast opposite.

The colonization of the Propontis, and especially the Pontus, was mostly later, probably partly because of the less attractive climate. Eighth-century dates for Sinope and its colony Trapezus (757) have not yet received archaeological confirmation. However, extensive archaeological investigation has so far been confined to the north and west coasts; here no material earlier than the second half of the seventh century has come to light. Miletus was the dominating mother-city in the whole region, founding in particular, Cyzicus (756?), Olbia (647). Beside Miletus Megara alone played an important role, founding Chalcedon (685), Byzantium (c. 667).

North-west Greece was a Corinthian preserve. Corcyra was settled c. 733 or c. 710, but the remaining colonies were not founded till the second half of the seventh century under the Cypselid tyranny, e.g. Epidamnus from Corcyra (c. 627), Leucas, Ambracia from Corinth.

In Africa Cyrene was settled from Thera c. 630. The Spanish and French coasts were a Phocaean area (Massilia c. 600). Here the Phocaeans met with determined resistance from the Phoenicians and Etruscans, who combined to force them to abandon Alalia in Corsica (c. 540).

The character of Greek colonization reflects that of the city-states from which it arose. Their economy was based on agriculture, and the overriding cause of the Greek colonizing movement was land hunger. Trade frequently followed the establishment of colonies and became very important for some, but colonies founded consciously for trade were exceptional, as, e.g., those of the northern Pontus, which Herodotus called *emporai*.

The process of founding a colony became regular. A founder (*oikistes*) was appointed, who first sought sanction from Delphi (hence Delphi's important role in colonization, though few, if any, of the oracles preserved are authentic), then led the expedition, chose the site, divided the land, and received heroic honours at death. Often a small preliminary party would be reinforced by later emigrants from the mother-city.

Normally a colony formed a new *polis*. However, the unity of colony and mother-city was symbolized by common participation in cults, by kindling the fire at the sacred hearth (Hestia) of the colony from that of the metropolis, and by summoning a founder from the metropolis when a colony itself colonized. The primacy of the metropolis in general terms was normally recognized, so that it was natural for a colony to turn to the mother-city for help in war or internal troubles. Thus, when circumstances were favourable, as when the distance was small or the mother city a sea-power, close associations of colonies and mother-cities and dependent colonies are found. The colonies of Corinth under the tyrants afford the most striking examples, or, later, those of Pisistratid and imperial Athens (see *CLERUCHY*). Bad relations could also occur; see the very revealing passages in Thucydides' account of Corinth's dispute with Corcyra about Epidamnus (I. 24 ff.).

The colonies generally formed enclaves of Hellenism on the edge of barbarian hinterlands, which were sometimes hostile; but friendly commercial relations were probably more usual. Mixed communities of Greeks and barbarians sometimes occurred, e.g. in Chalcidice, and the Pontus.

A. J. G.

COLONIZATION, HELLENISTIC. The diffusion of Greek settlers through Asia and Egypt in the century after Alexander's conquests was as far-reaching in every sense as the earlier colonial movements. Macedonian

settlers, as distinct from Greek, were an *élite*, and must have been relatively few. Greece in the fourth century had suffered cruelly from unemployment, but now the Macedonian rulers of the new lands needed Greek soldiers for their armies, and a Greek population attached to themselves (as their native subjects were not) to occupy places strategically or economically important. Alexander himself gave the lead. His greatest colony, Alexandria in Egypt, was one type of the new city, founded with an eye to trade and to creating a splendid Greek centre of administration. His military settlements in Sogdiana were likewise imitated by his successors wherever they had turbulent subjects to restrain or a dangerous frontier to hold.

In Egypt, apart from Alexandria itself (q.v. 1), the colonizing process was mainly for military purposes. Land (*kleros*) was assigned to soldiers individually, with a military obligation which passed to each occupant in successive generations. The 'cleruchs' did not form political communities, a lack which probably explains the failure, in time, of the Ptolemaic system to fulfil its original military object.

In Asia, the military *kleros* carried the same obligation; but the wide, open spaces allowed, and even demanded, communal groups of settlers. Most of the new Greek 'cities' began as military colonies. The possibilities of colonization on these lines were realized by Antigonius I and probably by the Ptolemies in their Asiatic provinces, but the greatest work was done by the first two Seleucids. Clusters of colonies in Bactria-Sogdiana to guard the northern frontier, and in Asia Minor and Syria to facilitate quick mobilizations in war-time, formed the backbone of the Seleucid military system, and ultimately of Greek civilization in Asia. Naturally they did not remain mere military centres. Greek civilians went to live there, and many foreigners; and in time they became self-governing cities (*poles*) with the normal Greek institutions and the minimum of political interference from the king. Their citizen-body probably consisted always in the first place of Greeks (or Macedonians, Thracians, etc.) only, and Greek was always the official language, even in cities with large native populations. (Later foundations, e.g. of Antiochus IV, were often made by granting a city-charter and a Greek name to a native place containing few Greeks.) In northern India, in the 'Greek' Empire of the second century B.C., there are signs of a more liberal policy from the start towards the conquered, dictated mainly by the fewness of the Greek immigrants. In India the experiment did not survive to leave a permanent impression; but in the Near and Middle East the new cities, with all their limitations, remained for centuries the great representatives of civilization under Roman, and even under Parthian, rule.

G. T. G.

COLONIZATION, ROMAN. The earliest colonies of Roman citizens were small groups of 300 families sent to garrison the Roman coastline at Ostia (q.v.), Antium (338 B.C.), and Tarracina (329 B.C.). Others were added as the Roman territory expanded, through reluctance to maintain a permanent fleet. In 218 there were twelve such *coloniae maritimae*. After 200 B.C. citizen colonies were

used to guard the coasts of Italy in general. *Coloni* retained their Roman citizenship because the early colonies were within Roman territory, and were too small to form an independent *res publica*; later colonies might be a mere enclave within an existing community. Thus citizen colonies are distinct from Latin colonies which, though largely manned by Romans, were autonomous states established outside Roman territory (see LATINI, IUS LATI). *Coloni maritimi* were normally exempt from legionary service, though the exemption was revocable, and were bound not to absent themselves by night from their colonies in time of war. About 177 B.C. the system of citizen colonies was reorganized. They were assimilated to Latin colonies, and the use of the latter abandoned. Henceforth citizen colonies were large—from two to five thousand men—and were employed for the same purposes as Latin colonies formerly. Generous allotments of land were given and their internal organization was changed also. They remained citizen colonies but received extensive powers of local government with annual magistrates—*duoviri, praetores*, or *duoviri praetores*—a council (*consilium*), and priestly officials. Not many of the new style were founded till the Gracchan age, when a further change took place in their employment. Henceforth colonies were founded not for strategic but for political reasons, either as an emigration scheme for the proletariat or to provide for veteran soldiers. But under the Principate strategic centres were usually chosen for such colonies.

The first foundation outside Italy was the Gracchan *Junonia* at Carthage. Its charter was revoked, but the *coloni* retained their allotments. In 118 B.C. Narbo Martius was successfully founded in Provence despite senatorial objections to overseas colonies. In 103–100 B.C. Saturninus and Marius proposed large-scale colonization in certain provinces, and effected a few settlements in Africa, Corsica, and Provence. But extensive colonization outside Italy became regular only under Caesar and Octavian. Some colonists were still drawn from the civilian population, notably at the refounding of Carthage and Corinth, also at Urso in Spain. Such colonies were known as *coloniae civicae*, being exceptional. Colonies sent to places where native communities already existed encouraged the romanization of the latter, which eventually received citizenship and municipal rights and coalesced with the colony. Augustus established numerous colonies not only in Narbonensis, the Spanish provinces, Africa, and Mauretania, but also in the East, notably the group in Asia Minor, surrounding the rebellious Homonadenses. Claudius began the regular colonization of the Balkan provinces and the northern frontier. These processes continued till Hadrian. Henceforth no new colonies were founded. The increasing tendency to local recruitment of legionaries rendered veteran colonies unnecessary. Instead, the title of colony and *ius coloniae* became a privilege increasingly sought out by *municipia* as the highest grade of civic dignity. This process began when Claudius conferred the title upon the capital cities of certain Gallic *communes*, but only became considerable in the second century (see MUNICIPIUM, IUS ITALICUM). Colonies usually adopted the names of their founders and subsequent benefactors as titles of honour.

The arrangements for local government in Caesarean and imperial colonies were a more complex development of the earlier system. Colonial magistracies were always more uniform than municipal magistracies, and soon came to resemble a standardized, small-scale replica of the Roman constitution. Hence the later popularity of the *ius coloniae*. *Duoviri iure dicundo* replaced consuls and praetors; then came aediles and sometimes quaestors. *Pontifices* and augurs looked after cults and religion. The

census was taken by *duoviri quinquennales*, replaced in some Italian colonies by *censores*. Ex-magistrates passed into the council of *decuriones* (q.v.), sometimes called *conscripti*.

Colonization was sometimes unofficial. In the later Republic casual immigrants established *pagi* and *conventus* (qq.v.) *civium Romanorum* in native communities, thus spreading Roman civilization and forming the basis of future *municipia*. See also AGER PUBLICUS.

COLONOS, a small Attic deme whose territory included the hill *Kolonos Imios* (as distinguished from *Kolonos Aypaños*, on which the Hephaestum stands overlooking the Agora), was situated a mile and a half north of the Acropolis, near Plato's Academy. Here Oedipus found refuge and was buried; Theseus and Pirithous descended to Hades by the bronze threshold; and the assembly that set up the Four Hundred in 411 B.C. met in the sanctuary of Poseidon Hippios. The natural beauty of the place, now almost entirely lacking, was lovingly described by *Colonos'* most famous demesman, Sophocles.

Soph. *OC*, esp. 688 ff., *Paus.* 1. 30. 4. E. Kirsten and W. Kraiker, *Griechenlandkunde* (1962), 150 ff. C. W. J. L.

COLONUS. (a) A member of a *colonia* (see COLONIZATION, ROMAN). (b) A tenant farmer. *Ager publicus* (q.v.) and municipal domains were normally let to *coloni*, as were the estates of private landlords when slave gangs were abandoned in the first century B.C., and also imperial estates. Private and imperial estates were usually managed by bailiffs (*vilici*), often slaves or freedmen of the owner, or farmers-general (*conductores, mancipes*), who cultivated a home farm and let the other farms to *coloni* and collected their rents. The rent was at first usually a fixed sum of money, later generally a share of the crops; on African estates the *coloni* also owed a few days' labour in the year on the home farm. On some municipal estates the tenure was perpetual, so long as a fixed rent charge (*vectigal*, q.v.) was paid. Nominally leases were for five years, but tenure tended to become hereditary. Perpetual tenure by emphyteutic leases (see EMPHYTEUSIS) was granted to *coloni* who reclaimed waste land. In order to simplify the collection of taxes Diocletian tied all the rural population to the places where they were registered. Landlords, finding this rule convenient, persuaded the government to enforce it against their tenants and to strengthen it. In 332 landlords were allowed to chain *coloni* suspected of planning to leave, and in 365 *coloni* were forbidden to alienate their property without their landlords' consent, and in 396 to sue their landlords except for increasing their rent. All these rules applied only to descendants of the tenants first registered (*originales, adscripticii*), and other tenants were free.

R. Clausen, *The Roman Colonate* (1925); M. Rostovtzeff, 'Studien zur Geschichte des römischen Kolonates' (*Arch. Pap.*, Beheft 1, 1910); Jones, *Later Rom. Emp.*, 795 ff. A. H. M. J.

COLOR in rhetoric was often applied to cast of style or embellishment of diction, but also specially to a type of argument, plea, or insinuation used to palliate (or occasionally exaggerate) an offence debated in a

controversia. In this sense it is one of the main rubrics in the collection made by Seneca (q.v. 1). The danger was that a *color* might be too far-fetched (Sen. *contr.* 1. 6. 9 'longe accessito colore') or supremely silly (9. 4. 22 'colorem stultissimum induxit'). Seneca, on the Vestal who survived being thrown from the Tarpeian rock, cites Junius (q.v. 2) Otho's *color* 'Perhaps she prepared for her punishment and practised falling from the time when she began her offence'! (1. 3. 11). *Colores* might be published separately; Junius Otho was author of four books of them (*contr.* 2. 1. 33).

Full discussion in S. F. Bonner, *Roman Declamation* (1940), 55 f. J. W. D., M. W.

COLOSSEUM, the medieval name of Amphitheatrum Flavium, near the Colossus Neronis, on the site of Nero's 'stagnum domus aureae'. It was begun by Vespasian and said to have been continued and completed by Titus and Domitian; the dedication took place under Titus in June A.D. 80. The axes measure 188 metres and 156 metres, the height 48.50 metres. Externally the building, which is of concrete faced with travertine, has three arcaded storeys with half-columns of the Doric, Ionic, and Corinthian orders, surmounted by a podium and a masonry with pilasters; there are windows in the podium and in the spaces between the pilasters. Above the windows were bronze *clipei* and next came mast-corbels for the awning, worked by sailors. The seating was in three tiers, with standing-room above it. The arena was cut off by a fence and high platform carrying marble chairs for guilds and officials, and, on the short axes, imperial or magisterial boxes. The arena was floored in timber, covering dens for beasts, mechanical elevators, and drains. Audiences, estimated at 50,000, were regulated outside the building in a plot bordered by bollards, and held tickets corresponding to the numbered arcades, whence an elaborate system of staircases commodiously served all parts of the auditorium.

The amphitheatre was restored by Nerva and Trajan (*CIL* vi. 32254-5), Pius (S.H.A., *Pius* 8), between 217 and 238 (Dio Cass. 78. 25; S.H.A., *Elagabalus* 17, *Alex. Sev.* 24, *Max. et Balb.* 1. 14), in 250 (Hieron. *ab Abr.* 2268), after 442 (*CIL* vi. 32086-9) and 470 (*CIL* vi. 32091-2, 32188-9), about 508 (*CIL* vi. 32094), and in 523 (Cassiod. *Var.* 5. 42).

COLOTES (1), Greek sculptor, native of Paros or Heraclea (in Elis?). Active in the second half of the fifth century B.C. He is said to have assisted Phidias in his work on the chryselephantine Zeus at Olympia (Pliny 34. 87), and to have himself made several chryselephantine statues, as well as bronze figures of 'philosophers'. It has not been possible to recognize Roman copies of these statues. S. C.; G. M. A. R.

COLOTES (2) of Lampsacus (4th-3rd c. B.C.), pupil and fanatical admirer of Epicurus. Works: Against Plato's *Lysis*; Against the *Euthydemus* (both ed. by W. Cröner in *Kolotes u. Menedemus*, 1906); Against the *Gorgias*; Against the *Republic*; 'Ὅτι κατὰ τὰ τῶν ἀλλῶν φιλοσόφων δόγματα οὐδὲ ζῆν ἔστιν. From Plutarch *Adv. Coloten* we learn that the last-named work tried, in a superficial and ill-informed way, to show that any theory of knowledge other than the empiricism of Epicurus affords no secure basis for practical life.

W. D. R.

COLOURS, SACRED. Three colours are especially important for sacrificial purposes in antiquity; they are white, black, and red, the last being understood in the widest possible sense, to include purple, crimson, even violet (cf. E. Wunderlich, 'Die Bedeutung der roten Farbe im Kultus der Griechen und Römer', 1925 *RGV* xx. 1), 1 ff.).

White is in general a festal colour, associated with things of good omen, such as sacrifices to the celestial gods (white victims are regular for this purpose in both Greece and Rome). See for instance *Il.* 3. 103, where a white lamb is brought for sacrifice to Helios (q.v.); the scholiast rightly says that as the Sun is bright and male, a white male lamb is brought for him, while Earth, being dark and female, gets a black ewe-lamb (cf. Verg. *G.* 2. 146 for the white bulls pastured along Clitumnus for sacrificial purposes). It is the colour of the clothing generally worn on joyous occasions (e.g. Eur. *Alc.* 923, *Mart.* 4. 2, whereon see Friedländer); of horses used on great festivals such as (probably) that of Demeter and Persephone at Syracuse (Pind. *Ol.* 6. 95, cf. J. Rumpel, *Lex. Pindaricum*, 1883, s.v. λευκίππος, and cf. LEUCIPUS). In Rome, white horses drew the chariot of a triumphator (J. Marquardt, *Röm. Staatsverw.* (1881-5), II², 586).

Black on the contrary is associated with the chthonian gods and mourning (Homer and Euripides, loc. cit.), and with the dead (hence the Erinyes wear sombre clothing, φαειχίτωνες, Aesch. *Cho.* 1049, as infernal powers). There are, however, exceptions. At Argos, white was the mourning-colour (Socrates of Argos in Plut. *Quest. Rom.* 26); Plutarch's assertion that white was the colour of Roman mourning will hardly pass muster, see Rose, *Rom. Quest. of Plut.* (1924), 180. Hence to wear it at a festival was both ill-mannered and unlucky (Martial, loc. cit., cf. Ov. *Ib.* 102 and the scholiast there). The above facts easily explain why 'white' and 'black' respectively mean 'lucky' and 'unlucky' when used of a day, etc. The natural association of white with light and black with darkness is explanation enough, but it may be added that white garments are conspicuously clean (cf. *Od.* 4. 750 for clean clothes at prayer), black ones suggest the unwashed condition of a mourner; cf. DEAD, DISPOSAL OF. See further G. Radke, *Die Bedeutung der weissen und der schwarzen Farben* (Diss. Berlin, 1936).

Red has more complicated associations, for which see Wunderlich, op. cit. It would seem to suggest blood, and therefore death and the underworld (hence, e.g., the use of red flags in cursing, Lysias 6. 51), but also blood as the source or container of life, wherefore a red bandage or wrapping of some kind is common in ancient, especially popular medicine, and also the ruddy colour of healthy flesh and various organs of the body, wherefore it is associated with rites of fertility on occasion (e.g. statues of Priapus, Hor. *Sat.* 1. 8. 5). Perhaps because red, or purple, is the colour of light, red is on occasion protective, e.g. the *praetexta* of Roman magistrates and children. But it is also associated with the burning heat of summer, cf. AUGURIUM CANARIUM.

Other colours are of little or no sacrificial importance, but it may be noted that the veil (*flammeum*) of a Roman bride, often stated to be red, is distinctly called yellow (*luteum*) by Lucan (*Phars.* 2. 361) and Pliny (*HN* 21. 46).

II J. R.

COLUMBARIUM. (1) A Roman dove-cot. These were sometimes small and fixed in gables (*columna*), sometimes very large tower-like structures (*turres*), fitted with nesting niches in rows, perches, and running water.

(2) *Columbarium* was also applied to the sepulchral chambers of large households or of *collegia* (Mommson, *De collegiis*, 93), where ash-chests and urns were stored

in pigeon-holes (*loci, loculi*). These appear originally in Etruria (G. Dennis, *Cities and Cemeteries of Etruria* i². 10, 26) but are a feature of large Roman slave and freedmen groups attached to given households. The most striking are those of the Empress Livia, containing some 3,000 urns, the well-preserved *columbarium* of Pomponius Hylas, between Viae Appia and Latina, and the three *columbaria* of Vigna Codini (*CIL*. vi. 4418-880, 4881-5178, 5179-538), all within the later city wall of Rome.

G. Lugh, *The Classical Monuments of Rome* i (1929), 400 ff.

I. A. R.

COLUMELLA, LUCIUS IUNIUS (*PW* 104) MODERATUS, a Spaniard from Gades contemporary with Seneca. As a young man he served as a tribune with Legio VI (*CIL* ix. 235) about A.D. 36, probably in Syria. He came of a Spanish land-owning family and himself held estates in various parts of central Italy.

The *De Re Rustica*, which he was writing in A.D. 60-65, is a systematic treatise on agriculture in twelve books. Book 1 deals with general matters of buildings and labour, 2 with soils and crops, 3-5 with vines, olives, and fruit-trees, 6-7 with domestic animals, 8 with poultry and fishponds, 9 with game and bees, 10 (in verse) with gardening, 11 with the bailiff's duties and the farmer's calendar, 12 with the bailiff's wife's duties: the last two books were an addition to the original plan. The separate treatise *De Arboribus* seems to be part of an earlier and shorter treatment of the subject.

Columella writes as a successful practical farmer who is deeply concerned over the decline of Italian agriculture. He finds the causes of that decline in the growth of enclosures and the absenteeism of landlords and deplores its result in Rome's dependence on imported food: the essentials for recovery are knowledge, hard work, and personal interest on the part of the landowners. He draws mainly on his own experience but he also uses a series of authorities, from the Greeks to his own day, with whom he is prepared on occasion to disagree. His prose is direct and elegant, without affectation or extravagance: in book 10, in which he modestly accepts the invitation of *Georgic* 4. 147-8 and which he meant to be the climax of his work, his admiration for Virgil is not matched by his skill and his verses are dull and uninspired.

TEXT. W. Lundström-A. Josephson (Uppsala, 1897-1955: bks. 5 and 12 still lacking); B. B. Ash-E. S. Forster-F. H. Heffner (with transl. Loeb, 1941-55).

COMMENTARIES. J. M. Gesner² (Leipzig, 1773); J. G. Schneider (Leipzig, 1794); J. H. Reiss (Petersburg, 1795); bk. 10, H. B. Ash (U.S.A. 1930). C. J. F.

COMEDY (GREEK), ORIGINS OF. In many pre-literate cultures there are public occasions on which people pretend humorously to be somebody other than themselves, and it is a safe assumption that comedy, so defined, was of great antiquity among the Greeks (possibly of incomparably greater antiquity than tragedy). The word *κωμῳδοί*, 'κῶμος-singers', presupposes *κῶμος*, and a *κῶμος* is a company of men behaving and singing in a happy and festive manner. In the fourth century B.C. the City Dionysia included 'procession, boys' (i.e. boys' chorus), *κῶμος*, comedy and tragedy' (doc. ap. Dem. xxi. 10). The inscription which was erected in the fourth century to put on public view the records of victories at the City Dionysia from the beginning (*IG* ii². 2318) is headed ἀφ' οὗ (?) πρῶτον κῶμου ἦσαν τῶν Διονυσίων, and under each year the entries are in the order: boys' chorus, men's chorus, comedy, tragedy. It appears from these data that, so far as was known in the fourth century, a humorous adult male chorus was an archaic

feature of the City Dionysia, and it is probable that comedy was a specialized development from this. The question: 'when did the *κῶμος* first develop a dramatic character?' is not answerable. The practical question is: 'how far back, and to what parts of the Greek world, can each ingredient of Old Attic Comedy be traced?' There are three categories of evidence which help to answer this question, and five more which are of doubtful value.

A. 1. An Attic black-figure amphora of the mid sixth century B.C. depicts men disguised as horses, with riders on their backs, accompanied by a flute-player. This shows that the animal-chorus so common in fifth-century comedy far antedates known comedies. Another Attic vase showing men dressed as birds is contemporary with the earliest known comedies.

2. During the sixth century B.C. vase-painters (especially on the Greek mainland, including Attica) commonly depict (i) dancers whose dress is exaggerated fore and aft for humorous effect—occasionally they wear a phallus of exaggerated size—and (ii) satyrs of various types, sometimes hairy, phallic, and in general grotesque. The distinction between (i) and (ii) is not absolute, for dancers may be found as participants in mythical scenes, and there is sometimes room for doubt whether the painter is depicting a satyr or a man dressed up. These facts suggest that in the archaic period men dressed as satyrs in order to enact scenes and incidents from mythology and (old or fresh) folklore. The most striking single item of evidence in this category is a Corinthian krater of the early sixth century, in which we see both a dancer wearing a mask and some naked beings of abnormal proportions, indicated by names which suggest demons rather than mortals, engaged in activity with large jars. Unfortunately, the interpretation of this vase is controversial, but if it really depicts a humorous dramatic performance it antedates all comparable evidence from Attica.

3. Archilochus in the seventh century and Hipponax at the end of the sixth composed many poems which contain unrestrained vilification and the grossest sexual humour. These elements in Attic Comedy thus have a distinguished literary ancestry, and it is not necessary to account for them by reference to Dionysiac ritual of any kind.

B. 1. The earliest and best-known theory about the origin of comedy is Aristotle's (*Poet.* 1449^a10), that it began ἀπὸ τῶν ἐξαρχόντων τὰ φαλλικά. As it is hardly to be supposed that Aristotle had any information on the nature and content of phallic songs 200 years before his own day, it seems that having (reasonably) decided that the origins of both tragedy and comedy were to be sought in festivals of Dionysus, and having derived tragedy from the ἐξάρχων-chorus relationship in the serious and heroic dithyramb, he looked for a similar relationship in something gay and ribald, and found it in the phallic songs of his own day (he says: 'the phallic songs which are still customary in many cities'). Semus of Delos (ap. Ath. 622 c) speaks of φαλλοφόροι (at Sicily?) who ridiculed members of their audience, and it is possible that the germ of the parabasis of Old Comedy lay in words or verses uttered in mockery of the public by men who accompanied the phallus in the procession in Dionysiac festivals at Athens. It must, however, be remembered that phallic songs as known to Aristotle and Semus may have been deeply influenced by literary comedy.

2. Equally, when Sosibius (*FGH* 595 F 7) speaks of 'an old type of comic sport' at Sparta, he is not necessarily speaking of anything as old as the sixth century B.C. The clay models of grotesque masks found at the sanctuary of Artemis Orthia are as old as that, but we

do not know whether the masks were used for any dramatic purpose.

3. Although Aristotle (*Poet.* 1448^a33) speaks of Epicharmus (q.v.) as 'much earlier' than the earliest poets of Old Attic Comedy, Chionides and Magnes, an alternative tradition (*Marm. Par.* 71, cf. Anon. *De Com.* 4) made Epicharmus a contemporary of Ilicron, and references in frs. 98 and 214 support the latter tradition. Epicharmus may reasonably be ranked among the influences on Attic Comedy, but not among its ancestors.

4. The Megarians claimed to have originated comedy (Arist. *Poet.* 1448^a31), and Epiphantides fr. 2, corrupt though it is, certainly says something about 'Megarian comedy'. This, however, only shows that some kind of comedy at Megara was contemporary with the earlier poets of Attic Comedy, and the Megarian claim recorded by Aristotle does not seem to rest on good grounds. The tradition that Susrion (q.v.) was Megarian is later than the tradition which made him Attic.

5. Extrapolation from extant comedies—a line of inquiry on which much time and ingenuity has been spent—is perilous. Our earliest complete play, *Acharnians*, was produced in 425 B.C. Very few of the citations from lost plays throw any light on the structure and composition of those plays, and, in any case, no citation can be dated with assurance earlier than 450 B.C. Since the fifth century was a period of rapid change in the arts generally, it is irrational to suppose that the form of comedy remained essentially unchanged until the time of Aristophanes. The most we can glean from extant comedies is the fact that they contain two disparate elements which may have entirely separate ancestries: (i) a disguised chorus which addresses itself directly to its audience, and (ii) dramatic scenes to which the chorus's disguise is irrelevant.

Pickard-Cambridge Webster, *Dithyramb*; L. Brühloltz, *Die deutsche Farsce im griechischen Mutterland* (1930) K 1 D.

COMEDY (GREEK), OLD. For practical purposes, 'Old Comedy' is best defined as the comedies produced at Athens during the fifth century B.C. An early form of comedy was composed in Sicily (cf. EPICCHARMUS), the connexion of which with Attic comedy is hypothetical. At Athens itself no transition from Old to Middle Comedy occurred precisely in 400 B.C., but the two extant plays of Aristophanes which belong to the fourth century differ in character from his earlier work, above all in the role of the chorus (see § 2 below). The provision of comedies at the City Dionysia each year was made the responsibility of the relevant magistrate in 488/7 or 487/6 B.C. (eight years before τὰ Περσικά, *Suda*, s.v. *Χαονίδης*; cf. *IG* ii². 2325); Aristotle's statement (*Poet.* 1449^b2) that before then comic performances were given by 'volunteers' (ἐθελονταί) is probably a guess, but a good one (cf. COMEDY (GREEK), ORIGINS OF). Comedies were first included in the Lenaia shortly before 440 B.C. (cf. *IG* ii². 2325). During the Peloponnesian War three comedies were performed annually at the City Dionysia and three at the Lenaia; before and after the war, five. In the fourth century they were performed also in the deme at the Rural Dionysia (cf. Aeschin. i. 157); we do not know how old this practice was. No complete plays of any poet of the Old Comedy except Aristophanes (q.v. 1) survive, and he belongs to the last stage of the genre, but we have a great many citations from the work of his elders (notably Cratinus, q.v.) and contemporaries (notably Eupolis, q.v.). Some of these support generalizations about Old Comedy based on Aristophanes, but where support is absent or doubtful it is important to remember Aristophanes' date and not to assume that the structural features common to his earliest plays constitute, as a whole, a formula of great antiquity.

2. The chorus, which had twenty-four members (cf. *Ar. Av.* 297 ff., with scholia ad loc. and *Ach.* 211), was of primary importance in Old Comedy, and very many plays (e.g. *Babylomans*, *Banqueters*, *Acharnians*) take their names from their choruses. In Aristophanes (the practice may have been different in Cratinus, q.v.) the chorus addresses the audience in the parabasis, which has a central position in the play, and again at a later stage. In parts of the parabasis the chorus maintains its dramatic role (as Acharnians, knights, clouds, jurymen, etc.), while in others it speaks directly for the poet; in the former case dramatic illusion is partly broken, in the latter case wholly. The entry of the chorus is sometimes a moment of violence and excitement; it may be (as in *Acharnians* and *Wasps*) hostile to the 'hero' of the play, and it has to be won over; thereafter it is on his side, applauding and reinforcing what he says and does. It is possible that the sequence hostility—contest—reconciliation between chorus and hero was a common formula.

3. The plots of Old Comedy are usually fantastic. In their indifference to the passage of time, the ease with which a change of scene may be assumed without any complete break in the action (places which in reality would be far apart can be treated as adjacent), and the frequency of their references to the audience, the theatre, and the occasion of performance, they resemble a complex of related charades or variety 'turns' rather than comedy as we generally understand the term. The context of the plot is the contemporary situation. In this situation, a character takes some action which may violate the laws of nature (e.g. in Aristophanes' *Peace* Trygaeus flies to the home of the gods on a giant beetle in order to release the goddess Peace from imprisonment and bring her back to earth) or may show a complete disregard for practical objections (e.g. in Aristophanes' *Acharnians* Dikaiopolis makes a private peace treaty with his country's enemies and enjoys the benefits of peace). Events in Old Comedy are sometimes a translation of metaphorical or symbolic language into dramatic terms, sometimes the realization of common fantasies; they involve supernatural beings of all kinds and the talking animals familiar in folklore. The comic possibilities of the hero's realization of his fantasy are often exploited by showing, in a succession of short episodes, the consequences of this realization for various professions and types. The end of the play is festive in character (Aristophanes' *Clouds* is a striking exception), a kind of formal recognition of the hero's triumph, but the logical relation between the ending and the preceding events may be (as in Aristophanes' *Wasps*) very loose, as if to drown the question 'But what happened then?' in the noise of song and dance and to remind us that we are gathered together in the theatre to amuse ourselves and Dionysus by a gay show.

4. Men prominent in contemporary society are vilified, ridiculed, and parodied in Old Comedy. Sometimes they are major characters, either under their own names (e.g. 'Socrates' in *Clouds* and 'Euripides' in *Thesmophoriazousae*) or under a very thin disguise (e.g. the 'Paphlagonian slave' in *Knights*, who is Cleon). Many plays, e.g. *Hyperbolus* and *Cleophon*, actually bore real men's names as their titles. The spirit in which this treatment was taken by its victims and by the audience raises (and is likely always to raise) the most difficult question in the study of Old Comedy. A man would hardly become a comic poet unless he had the sense of humour and the natural scepticism which combine to make a satirist, and prominent politicians are always fair game for satire. Equally, artistic or intellectual change is a more obvious and rewarding target for ridicule than traditional practices and beliefs. There is nothing in the comic poets' work to suggest that as a class they

wished for an oligarchic revolution, and their own art was characterized by elaborate and continuous innovation. There is some evidence (schol. Ar. *Ach.* 67, cf. schol. Ar. *Av.* 1297) for attempts to restrict 'ridiculing by name' (ὀνομαστὶ κωμῶδειν) by legislation; their scope is not known, and their effect was obviously insignificant.

5. Mythology and theology are treated with extreme irreverence in Old Comedy; some plays were burlesque versions of myths, and gods (especially Dionysus) were made to appear (e.g. in Aristophanes' *Frogs* and Cratinus' *Dionysalexandros*) foolish, cowardly, and dishonest. Yet the reality of the gods' power and the validity of the community's worship of them are consistently assumed and on occasion affirmed, while words and actions of ill-omen for the community are avoided. It is probable that comic irreverence is the elevation to a high artistic level (Demodocus' tale of Ares and Aphrodite in *Od.* 8 may be compared) of a type of irreverence which permeates the folklore of polytheistic cultures. The essential spirit of Old Comedy is the ordinary man's protest—using his inalienable weapons, humour, and fantasy—against all who are in some way stronger or better than he: gods, politicians, generals, artists, and intellectuals.

6. The actors wore grotesque masks, and their costume included artificial exaggeration (e.g. of belly and phallus) for comic effect; the phallus may have been invariable for male roles until the fourth century. No limit seems to have been set, in speech or action, to the humorous exploitation of sex (normal or perverted) and excretion, and the vocabulary used in these types of humour eschews the euphemism characteristic of prose literature.

7. Most of the extant comedies of Aristophanes require for their performance four actors and, on occasion, supernumeraries, whose responsibilities can be precisely defined. Performance by three actors plus supernumeraries is possible only if we give the latter a degree of responsibility which blurs the distinction between actor and supernumerary.

A. Meineke, *Fragmenta Comicorum Graecorum* (1839–57), is a work of pre-eminent scholarship and judgement, and the first volume (*Historia Critica Comicorum Graecorum*) is fundamental. T. Kock, *Comicorum Atticorum Fragmenta* (1886–8); J. Demiańczuk, *Supplementum Comicum* (1912); the latest corpus of the fragments, J. M. Edmonds, *The Fragments of Attic Comedy*, vol. 1 (1957), is full of errors and absurdities, and should be used with great caution. T. Zieliński, *Die Gliederung der altattischen Komödie* (1885); P. Geissler, *Chronologie der altattischen Komödie* (1925); A. W. Pickard-Cambridge, *The Dramatic Festivals of Athens* (1951).

See also: ARISTOPHANES (1), COMEDY (GREEK), ORIGINS OF; CRATINUS; EPICTETUS.

COMEDY (GREEK), MIDDLE. The term 'Middle Comedy', coined by Hellenistic scholarship, may be conveniently used to describe the period between Old and New Comedy (c. 404–c. 321 B.C.). It was a period of experiment and transition; different types of play seem to have predominated at different times; and probably no single type of play deserves to be labelled 'Middle Comedy' to the exclusion of all others.

2. The downfall of Athens, 404 B.C., vitally affected the comic stage; the loss of imperial power and political energy was gradually reflected in comedy by a choice of material less essentially Athenian and more cosmopolitan. In form at least the changes began early. Aristophanes' *Ecclesiazusae* and *Plutus*, now generally acknowledged to be early products of Middle Comedy, reveal the decline of the comic chorus. The parabasis has disappeared; instead of original lyrics composed for each choric song, interpolated pieces (ἐμβόλιμα) whose words are not preserved came to be used and their place was marked in the MSS. by the word ΧΟΡΟΥ. By the

time of the *Plutus* (388), the part specially composed for the chorus is reduced to their opening song and a very few other verses addressed to the actors. Doubtless the decline of the chorus was gradual but not rectilinear: throughout the period plays were written that took their titles from the chorus (a later example is Eubulus' *Stephanopolides*), and instances can be found of a chorus that still conversed with the actors (Aeschin. 1. 157: 345 B.C.) or sang specially composed lyrics (Eubulus, frs. 104, 105); cf. also Alexis, fr. 237; Hemonchus, fr. 5. Yet the typical chorus of New Comedy, completely without participation in the plot, must have become the norm by the end of the Middle Comedy period, together with the five-act structure that its four interludes make possible.

3. The obscene costume of Old Comedy, with grotesque padding and phallus, was probably given up during the period, but it is uncertain whether this change was gradual or promoted by appropriate legislation (Lycurgus' theatre reforms, c. 330 B.C., for instance?).

4. But the exact flavour of Middle Comedy is elusive. The pronouncements of ancient scholarship (e.g. Platonius, 11: emphasis on the lack of political criticism and the popularity of mythological burlesque; Arist. *Eth. Nic.* 4. 1128^a20: contemporary comedy (i.e. later Middle Comedy) had replaced the αἰσχρολογία of Old Comedy with ὁμόνοια) seem reasonably accurate, provided they are not interpreted too rigidly. In the absence of any complete play (after the *Plutus*) judgements must largely depend on the interpretation of the large number of fragments, often quoted with the titles of their plays; but it cannot be too strongly emphasized that the bias of the main preserver of these fragments, Athenaeus (q.v. 1), gives a distorted impression of the part that descriptions of food and drink played in Middle Comedy.

5. Yet titles and fragments, when carefully examined, can be very informative. The variety of subject, especially in contrast with New Comedy, is striking. Plays with political themes were produced mainly (but not exclusively) in the early part of the period (notable titles are Eubulus' *Dionysius*, Menesimachus' *Philip*), and politicians such as Demosthenes and Callimachus were frequently ridiculed, if rarely criticized directly. As in Old Comedy philosophers were pilloried and their views comically misrepresented; Plato and the Pythagoreans seem to have been the commonest victims. In the earlier half of the period mythological burlesque played a dominant role, doubtless continuing the Old Comedy tradition. There may have been two types of such burlesque: straight travesty of the myth, with or without political innuendo, and parody of tragic (especially Euripidean) mythological treatments. The aim was often to reinterpret the story in contemporary terms: thus Heracles takes a book from Linus' library of classical authors (Alexis, fr. 135), and Pelops complains of the meagre meals of Greece when contrasted with the king of Persia's roast camel (Antiphanes, fr. 172). Among other popular themes were riddles, and the comedy of mistaken identity (modern scholars have posited Middle Comedy originals for Plautus' *Amphitruo* and *Menaechmi*).

6. Numerous fragments and titles show that a common characteristic of Middle Comedy was the observation of contemporary types, manners, and pursuits (e.g. καθαριφῶδός, μεμβήμιρος, σκυτεὺς, φιλοθήβιος). This interest in the details of ordinary life clearly influenced the development of one particular type of comedy, dealing with a series of more or less plausible everyday incidents such as love affairs and confidence tricks, and based on a group of stock characters ultimately

(though often with caricature) drawn from life: the type of play mainly associated with New Comedy.

7. Virtually all the stock figures of New Comedy (e.g. cooks, courtesans, parasites, pimps, soldiers, angry old men, young men in love) can be identified in the fragments and titles of Middle Comedy. Although several of these characters go back at least to Old Comedy (thus the *miles gloriosus* has a prototype in Aristophanes' portrayal of Lamachus; titles bearing the names of courtesans are attributed to Pherecrates; Eupolis had a chorus of *κόλακες*), it is clear that the middle of the fourth century was the period which had the greatest influence on their typology—about then, for instance, the cook began to receive his typical attributes of braggadocio and garrulousness, and the term *παράσιτος* to be applied generally to the character hitherto called *κόλαξ*.

8. Plots of the New Comedy pattern already existed in Middle Comedy, e.g. Alexis' *Ἀγωνίς* ἡ *Ἰππικός* (date c. 340–330) included a young man in love, a courtesan, and probably a confidence trick and a recognition. Some of the typical plot elements (e.g. the low trickery, the clever slave) go back to Old Comedy and probably beyond that to popular farce; and others (e.g. the recognition scenes) owe much to tragedy, especially Euripides. Though the question of origins is very complex, the part played by Middle Comedy must not be underestimated. Aristophanes is said to have originated the comic application of rape and recognition, but in a mythological burlesque: the *Κόκκαλος*, a late play written in the Middle Comedy period; such burlesques may have represented an important stage in the development of certain typical New Comedy elements (significant titles here are Eubulus' *Auge* and *Ion* and Anaxandrides' *Helen*, all perhaps travesties of Euripidean plays famous for their rapes and/or recognitions). Consequently, when the *Suda* claims that Anaxandrides invented 'love affairs and rapes of maidens', this may mean that he was the first to use them as incidents of ordinary life in a non-mythical framework.

9. To fifty-seven poets Athenaeus assigns more than 800 plays: we know the names of about fifty poets (many of them non-Athenian), Antiphanes, Anaxandrides, Eubulus, Alexis, and Timocles (qq.v.) being the most prominent.

Meineke, Kock, Edmonds, vol. II (1959: very unreliable, (as under OLD COMEDY) E. Fraenkel, *De media et nova comedia quaestiones selectae* (1912). K. J. COMEDY (GREEK), NEW belongs to the last quarter of the fourth century and the succeeding, no longer exactly definable period during which creditable comedy continued to be written at Athens; an ancient tradition saw in the death of Philemon (264/3 B.C.) the end of the creative epoch.

2. Its significance is twofold. On the one hand, it is the final flowering of Athenian poetic genius: Menander (q.v.) is the last great poet of Athens, and New Comedy no less than Old Comedy, from which, with an infusion of tragic, principally Euripidean influence, it is ultimately descended, is Athenian national theatre, sustained by the resources of the state and the interest of the citizens. On the other hand, it is already of the Hellenistic era. Its creators hail from far and near and, though based on Athens, they must often have written for other cities. Its characters speak an Attic which foreshadows the international *κοινή*. Its servile names tell of economic expansion in the wake of Macedonian conquest: Getas, Daos, Libys, Syris(i)os, Tibeios, etc. Set beside its mobile people, whom business, misfortune, or mer-

cenary service is constantly sending abroad, the folk of Old Comedy appear relatively stay-at-home. This restlessness is matched by an inner confusion: in place of the old, unselfconscious piety, fanaticism (e.g. *Priestess* and *Theophrastumene* of Menander) and experiment (e.g., for the first time, Sarapis in Menander's *Dagger*) enter in. Contemporary political conditions are noticed only where they impinge directly on the fate of individuals (e.g. the *tyrannis* of Dionysius of Heracleia in Menander's *Fisherman*). The people whom New Comedy so faithfully represents have more in common with the masses of the Graeco-Roman world than with the inhabitants of the classical *polis* who were not citizens unless 'politicians': because a great part of their political independence is gone, they live all the more intensely for self and family. Therefore, New Comedy remained 'modern'—*νέα* is less a chronological than a critical term—and popular down to the end of antiquity.

3. Discovery of long-lost children, love, intrigue of slaves are but some of the ever-recurring, inherited themes. Even where evidence is lacking it is not rash to suppose that the motifs encountered have had a complicated prehistory on the Attic stage. Originality is shown in another direction: in the accurate delineation of character and mood as well as in the artistic variation of traditional matter. In spite of the systematic repetition of fixed names and masks (consult T. B. J. Webster, *Greek Theatre Production*, 1956), the characters behind them, at any rate in the better plays, differ vividly and come alive with individual life. Antique burlesque has by no means disappeared; melodrama, under strong impulses from tragedy, gains ground. But the best work shuns both of these excesses.

4. The division into five acts separated by a non-dramatic chorus seems to have become general. In exposition, use is made, separately or in combination, of means developed by earlier drama, comic or tragic: prologue figure (e.g. *Ἄγρ* Philemon fr. 91; 'internally' too, e.g. Menander's *Agnoia*, not unprecedented, cf. *Knights* of Aristophanes), expository dialogue (e.g. Menander's *Heros*) and monologue (e.g. *Pantmoöph*. 15: Barnes and Lloyd-Jones, *JHS* 1964, 25 ff.). The direct address to the 'gentlemen' (*ἀνδρες*) of the audience lingers, but the organic connexion with earlier comedy comes out still more strikingly in, e.g., the Taming of Cnemon (see MENANDER 1). Iambic trimeter is the principal verse form, trochaic tetrameter coming next in importance; this metrical constraint does not impair colloquial vigour.

5. Being held inferior as a model of Attic speech, it did not find its way into the Byzantine schoolroom (minor exception: see Jäkel, *Menandri Sententiae*, 1964, Teubner). This proved fatal to the MS. tradition. Before the—thankfully unabating—papyrus discoveries, mostly of Menander, there were only the quotations preserved in various authors. Besides these two direct sources there are the adaptations of Plautus and Terence (qq.v.; consult also Ribbeck, *CRF*); far less important but not negligible are Alciphron, Aelian, Lucian, Libanius, Aristaenetus, and Theophylactus (qq.v.), where they are inspired by themes from New Comedy. Archaeology, finally, is an illustrative source of mounting value.

6. Philemon and Diphilus (qq.v.), along with the peerless Menander, formed the representative triad canonized by ancient critics; of the seventy or so remaining playwrights only a few, notably Posidippus and Apollodorus (3) of Curytus (qq.v.), are more than mere names for us.

COMEDY (LATIN), see **DRAMA, ROMAN**.

COMINIANUS (early 4th c. A.D.), grammarian. His *Arts*, compiled for school use, is not extant, but is referred to respectfully by Charisius and was probably the basis of Dosithueus (q.v. 2).

Schunz-Horst, § 825

COMITATENSES, i.e. units forming the Emperor's *comitatus*, were one of the two divisions in the Roman field army as reorganized by Constantine. They comprised both *vexillationes* (cavalry units of 500 men) and *legiones* (infantry units of 1,000 men) and were under the command of the *magistri militum*. See **PALATINI**.

D. van Berchem, *L'Armée de Diocletien et la réforme constantinienne* (1952), Jones, *Later Rom. Emp.* 608 ff. H. M. D. P.

COMITES. Under the Principate those who accompanied the *princeps* on his journeys abroad were semi-officially styled his *comites*. In the Constantinian reorganization the title was bestowed by official codicil upon the leading military and civil functionaries. The *comites* were classified in three grades (*ordinis primi, secundi, and tertii*).

Comites was also the title of certain mobile cavalry units which are first attested in the late third century.

Jones, *Later Rom. Emp.* 52 f. 104 ff. H. M. D. P.; G. R. W.

COMITIA. In Rome *comitium* was the place of assembling; *comitia* meant an assembly of the Roman People summoned in groups by a magistrate with *ius agendi cum populo*. The convocation had to be on a proper day (*comitalis*), after the *auspicia* had been taken, on an inaugurated site. When only a part of the People was summoned, the assembly was strictly a *concilium* (Gell. 15. 27). When the whole People was summoned, but not by groups, the assembly was a *contio* (q.v.). In the *comitia* the majority in each group determined the vote of the group. The *comitia* voted only on business presented to them by magistrates, and they could not amend proposals. As the three main divisions of the Roman People were *curiae*, *centuriae*, *tribus* (qq.v.), the three types of *comitia* were *curiata*, *centuriata*, *tributa*. A special form of the *comitia curiata* and *centuriata* was the *comitia calata* (it is disputed whether they were summoned by the *pontifices* who played an important part in them). The resolutions of the *comitia* (and possibly of the *concilia plebis*) depended for their validity on a formal ratification by the patrician senators (see **PATRUM AUCTORITAS**).

2. (a) *Comitia curiata*. The most ancient *comitia* were the *curiata* (see **CURIA** 1), dating from the age of the kings. Their competence was progressively limited by the *comitia centuriata*. In historical times they formally confirmed the appointment of magistrates by a *lex curiata* (q.v.) *de imperio*, and witnessed the installation of priests, adoptions, and the making of wills, when the *pontifex maximus* perhaps presided at these ceremonies. The monthly announcement by the *pontifices* of the day on which the *nonae* would fall was probably made before the *curiae*. In Cicero's time the 30 *curiae* were represented in the *comitia* only by 30 lictors (Cic. *Leg. Agr.* 2. 12. 31).

(b) *Comitia centuriata*. The *comitia centuriata*, on a timocratic basis (see **CENTURIA**), were traditionally instituted by Servius Tullius. Many modern scholars prefer a later date (after 450 B.C.). The enacting of laws, the election of the magistrates *cum imperio* and of the censors, the declaration of war and peace, and the infliction of the death penalty—at least for political charges and offences—were concerns of *comitia centuriata*: the relation

between *provocatio* (q.v.) and trial by *comitia centuriata* is a matter of dispute (see for opposite views Mommsen's and Kunkel's works). An interval (*trivindium*—probably of twenty-four days) was observed after the notification of a meeting, during which preliminary discussions (*contiones*) of the proposals (*rogationes*) were held. In the judicial *comitia* a preliminary investigation before a *contio* had to be held, lasting for three days; after a *trivindium* and perhaps a further *contio* the vote was taken. The *comitia centuriata* met 'extra pomerium' (q.v.), usually in the Campus Martius, in military order. But in the last period of the Republic the voting centuries were no longer identical with the tactical field-units. The *Lex Caecilia Didia* (98 B.C.) forbade the presenting in the same bill of proposals dealing with unrelated subjects. The formula by which the magistrate proposed the law was: 'ucltis iubeatis Quirites rogo'. Approbation was expressed by the formula 'uti rogas'; rejection by 'antiquo'. The method of voting is described s.v. **VOTING** (2). The voting groups were unequal, and the wealthier citizens consequently exercised a preponderating influence. In the third century B.C. this disparity was lessened; but the *comitia centuriata* never became democratic.

(c) *Comitia plebis tributa*. The assemblies of the plebs were not strictly *comitia* but a *concilium*. But when *plebiscita* were given equal validity with the laws (287 B.C.), the *concilium plebis* was as a rule called *comitia*. It was divided in conformity with the territorial tribes (see **TRIBUS**). In them the tribunes of the plebs and the plebeian aediles were elected, trials were held for non-capital offences, and nearly every form of business was enacted. The procedure was quicker than in the *comitia centuriata*.

(d) The *comitia populi tributa* were founded in imitation of the *comitia plebis tributa*, at an uncertain date. They differed from the former in that they were convoked by consuls or praetors, and patricians were admitted. They elected quaestors, aediles curules, tribuni militum a populo, enacted laws, and held minor trials.

3. From c. 250 B.C. the Pontifex Maximus and from 104 B.C. (except during the period from Sulla to 63 B.C.) *pontifices*, *augures*, and *decemviri sacrorum* were elected by special *comitia* of seventeen tribes.

4. The *comitia* in Rome decayed with the extension of the Roman territory, which made it impossible for individuals to attend, and with the growing oligarchic spirit of the leading class, which avoided any reform of them. An attempt of Augustus to give to the *decuriones* of the colonies a chance to vote without coming to Rome was too late (Suet. *Aug.* 46). The election of magistrates was transferred to the Senate by Tiberius; only the declaration of the result (*renuntiatio*) was still performed before the People. The judicial functions also lapsed; and the last law known to us is an agrarian law of A.D. 98. The *comitia* continued a formal existence at least until the third century A.D.

5. The *municipia* and *coloniae* had *comitia*, at which (in republican times and at least in the first century of the Empire) magistrates were elected. In-republican times they had also some legislative powers.

COMITIUM, the chief place of political assembly in Republican Rome (Varro, *Ling.* 5. 155; Livy 5. 55) occupying an area north of the Forum between the Clivus Argentarius and the Argiletum. The topographical problems are difficult. It has been argued that the comitium was an open slope, perhaps stepped like a theatre descending to an open space in front of the *Rostra* and the *Graecostasis*. The Curia stood on the northern rim, the *carcer* and perhaps the *Basilica Porcia* on the west. The site was consecrated like a templum and the buildings apparently orientated by the cardinal points. The area was restricted by Caesar to a small space containing the successive republican *rostra* respectively associated with all but the first and last of five levels ranging from the sixth century B.C. to 52 B.C. The numerous monuments and statues which filled it have perished, excepting the ancient group consisting of a *sacellum*, a tufa cone, and an archaic *cipus* of ritual law (*ILS* 4913), all sealed in damaged condition below a black marble pavement (*lapis niger*) itself at least once altered in position.

COMMAGENE, in north Syria, became an independent kingdom in 162 B.C. when its governor, Ptolemy, revolted against the Seleucids. His son Samos succeeded as king by Mithridates Callinicus (c. 96–c. 70). The latter's son, Antiochus I (q.v.), submitted to Pompey in 64 B.C. and was rewarded with a piece of Mesopotamia; he was deposed by Antony in 38 B.C. for abetting the Parthian invasion. On the death of Antiochus III Tiberius annexed the kingdom in A.D. 17, but it was restored by Gaius in A.D. 38 to King Antiochus IV (q.v.), who, after being deposed by Gaius, was reinstated by Claudius in 41 and reigned till 72, when Vespasian, on account of his alleged Parthian sympathies, finally annexed the kingdom and incorporated it in Syria. The royal house claimed descent, through the satrapal dynasty of Armenia, from Darius, and, by a marriage alliance with the Seleucids, from Alexander; its genealogy and its religion, a superficially hellenized Zoroastrianism, are illustrated by the pretentious funeral monument of Antiochus I. On the annexation the country was divided into four city territories, Samosata (the royal capital, founded by King Samos c. 150 B.C.), Caesarea Germanica (founded by Antiochus IV in A.D. 38), Perrhe, and Doliche. Commagene remained a separate *κοινὸν* within the province of Syria.

COMMENDATIO. Under the Roman Republic distinguished consulars influenced the elections of magistracies by open canvassing (*suffragatio*) on behalf of their friends. This practice, when employed by an emperor, was known as *commendatio*, and the recommended candidates (*candidati Caesaris*) were elected without opposition. Augustus at first canvassed in person (Suet. *Aug.* 56), but after A.D. 8 (Dio Cass. 55. 34) announced the names of his candidates in writing.

Commendatio was first employed for magistracies between the quaestorship and the praetorship (for which the Princeps recommended four candidates; Tac. *Ann.* 1. 15), but by the end of Nero's principate it was employed for the consulship also (Tac. *Hist.* 1. 77). The *Lex de imperio Vespasiani* (Dessau, *ILS* 244) granted to the Emperor the right of *commendatio*, apparently for all magistracies without limitation of number. Henceforth the consuls appear to have been the Emperor's nominees (cf. Pliny, *Pan.* 77, 'praestare consulibus ipsum qui consules facit'). J. P. B.

COMMENTARII (ὑπομνήματα) were memoranda, originally of a private character, e.g. *tabulae accepti et expensi*, note-books for speeches, legal notes, etc. Their public use (excluding the false *commentarii regum*) developed in the priestly colleges (e.g. *commentarii pontificum*, *augurum*), and in the magistracies (e.g. *commentarii consulares*, *censorum*, *aedilum*), and with the provincial governors. Under the Empire, the *commentarii principis*, like the Hellenistic ἐφημερίδες, represented a court journal, and the system spread in the imperial administration, under the influence of the ὑπομνηματογράφοι of the *praefectus Aegypti*. The Emperors' *commentarii* of campaigns and audiences, constitutions, rescripts, epistles, and edicts, had official authority.

From the business *commentarii* arose the literary form, autobiographical in character, written in plain style as a basis of full history, yet directed to the reading public, e.g. Sulla's ὑπομνήματα and, above all, Caesar's *commentarii*.

A. Rosenberg, *Einführung und Quellenkunde zur röm. Geschichte* (1921), 2, cf. I. H. Bury, *Ancient Greek Historians* (1909), 232 ff.; F. Bömer, *Hermes* 1953, 210 ff. A. H. McD.

COMMENTARII or **LIBRI PONTIFICUM**, general name for the records kept by the *Collegium Pontificum* in Rome. They included *commentarii sacrorum*, of which an idea may be formed from the existing *acta Arvalium* (see *FRATRES ARVALES*) and *acta ludorum saecularium*, save that these are records of ritual actually performed, the pontifical *commentarii* being directions for the performance of ritual when necessary. They probably contained not only this, but also the text of prayers, sacred laws, and other relevant matter. The details are often extremely obscure, since neither the *commentarii* themselves nor any sufficient number of what may be safely regarded as verbatim quotations have come down to us. How old any kind of written liturgy, etc., was in Rome we do not know.

G. Rohde, *HGVV* 1936.

H. J. R.

COMMERCE, GREEK AND ROMAN. A certain amount of trade with valuable raw materials and products of craftsmanship can be proved for Neolithic Greece and Italy from finds and excavations, and in an increasing degree for the same regions during the Bronze and Iron Ages. Many early traders seem to have been warriors, sailors, pirates, and craftsmen simultaneously. Those of the Minoan and Mycenaean town cultures were, perhaps, employees and serfs of their rulers after the model of the ancient oriental cultures. They had connexions with and brought their products to all Mediterranean coasts and even to middle Europe. We have, however, no evidence of barter in cheap products from published Linear B inscriptions, but its existence is self-evident.

2. The development of Greek trade after the migrations (see *COINAGE, GREEK* for later dates) is closely connected with the invention of coins c. 600 B.C., and especially those of small denominations c. 570 B.C. Sale of cheap goods like grain, oil, pottery, small hardware, etc., became easier and paid better than exchange by barter. The Phoenician traders in valuable products of foreign

countries lost their earlier importance for Greece and Italy, and gave way to native trade centres (e.g. Corinth, Athens, Aegina; the ports of Asia Minor, the Black Sea, and Magna Graecia). Three Greek commercial crafts developed during the later seventh and sixth centuries B.C., all free and independent, but without much working capital, those of the *naukleros* (a sea-merchant with his own ships), the *emporos* (a sea-merchant using the ships of others), and the *kapelos* (a petty trader in small districts).

3. The Classical Greek Age carried Hellenic trade patterns to neighbouring countries. Greek imports and exports of cheap goods, grain, oil, wine, cattle, Corinthian, Attic, and other pottery, metal products, etc., as well as inter-regional commerce, grew in such a degree that the markets (*agorai*) of Athens and of other towns became surprisingly efficient, and their *kapeloi* were able to specialize in single products and crafts like those of middlemen for imported products. The sea-merchants began to specialize as well, e.g. as foreign agents and as exclusive transport merchants. Some of the *emporoi* became land merchants. *Deigmata* (mercantile exchanges) were built in large ports. 'Corners' of merchant associations tried occasionally to increase prices. The foreign population of Athens grew enormously. Greek imports of valuable foreign products were also more intensive than in earlier centuries, Greece being wealthier than before the Persian Wars. Greek export trade with valuable merchandise reached the Atlantic coasts and India.

4. Rome became, during the same period, a modest river port and centre of communications for the middle Italian trade, and had a certain importance for the salt trade of its neighbours. It introduced market days and festivals (*nundinae*, *ludi Apollinares*, *ludi Romani*, *ludi plebei*), and created the *Forum Boarium* for foreign merchants. The beginnings of the Roman law of sales were of future importance.

5. The campaigns of Alexander, the *Diadochi*, and the Roman generals from the Punic Wars to Augustus unified the immense region between the Atlantic Ocean and India, the Sahara, Rhine, Danube, and the Ukraine. The Greek economic structure was imitated everywhere, but not without being modified and adapted to new conditions. The towns of the Greek mother country, and many of the *poles* and hellenized Phoenician towns in the East, preserved much of the economic structure of the pre-Alexander days. Main centres of such an economic type were Syracuse, Tarentum, Naples, Carthage, Massilia, and Cyrene in the West; Alexandria in Egypt, Corinth, Athens, Ephesus, Miletus, Apamea, Delos, and Rhodes in the old country; Olbia, Tanais, Byzantium, Thessalonica, and Sinope in the North, Antioch on the Orontes, Seleucia in Pieria, Sidon, Tyre, Seleucia on the Tigris, and Alexandria Charax in the East. The main trade was in cheap goods, the commercial crafts and their trading methods were not materially altered, but trade associations became more common and some of the *emporoi* were more specialized than during the classical period.

6. On the other hand, compulsory state planning was the most characteristic trade condition for the Egyptian countryside, for Hellenistic India, and to a lesser degree the more barbaric regions of the Seleucid, the Pergamian, the southern Arabian, and the Parthian empires, which gradually developed a separate Semitic-Iranian Hellenism. In Ptolemaic Egypt, for example, the trade in oil, soda, salt, perfumes, beer, mining products, textile, leather, metal products, and (perhaps) papyrus was monopolized, so that the government was able to control the price and quality of such merchandise and to claim special fees for the right to buy and to sell, very few enterprises being privileged. Prices and trade conditions of grain, cattle, fish, game, wood, wine, slaves, and the

whole of the import and export trade were more or less government-controlled.

7. Roman civilization followed the Greek example, but modified it. Italy's essential imports of cheap products could not be paid for in full by her trading exports. Therefore the supply of Rome with raw materials for military purposes and grain was largely dependent on tribute. The exports of Italy, especially those in pottery, hardware, wine, and oil, spread over the whole of the Mediterranean during the last two centuries B.C., but by political as well as economic methods. The foreign trade in valuable products was much more important in the Latin than in the Greek part of the ancient world. Rome was the economic centre. Its main ports were Puteoli and later Ostia; its main provincial import and export harbours Aquileia in north Italy; Narbo and Arclate in Gaul; Utica and Cyrene in Africa; Athens, Delos, Pergamum, Ephesus, Apamea, Antioch, and Alexandria in the East. The Roman commercial crafts *nauicularii* (= *naukleroi*), *mercatores* (= *emporoi*), *caupones* (= *kapeloi*) of the second century B.C. and their pattern of trade were similar to the Greek practice, albeit not so specialized; but from the first century onwards *caupo* (and later *kapelos* as well) meant an innkeeper, *mercator* a *kapelos* or a small *emporos*. The great capitalists, already known from Alexander's time in the East, became a special craft, that of the *negotiatores*, who were at the same time merchants, bankers, and owners of workshops and large estates. They almost superseded the Greek type of great *emporoi* and absorbed the main business in all Roman provinces up to the time of Caesar.

8. A large area of the Old World remained outside the Greek, Latin, and the not very different Semitic-Iranian regions of Hellenism, which were in close commercial exchange. Britain, Germany, southern Russia, western Siberia, and India were visited by Mediterranean merchants; but their trade habits had to be assimilated to alien conditions. Valuable products of the Hellenistic world even reached China and central Africa, as finds and Chinese reports prove.

9. The time of the Roman Principate began with an absolute commercial supremacy of Rome and Italy, and free Empire trade (wherever advisable). It ended with a far-reaching economic autarky of the Roman provinces and state control over commerce. Britain and Dacia only were added to the central zone of ancient commerce during that period. The foreign trade of the Roman Empire was considerable, as finds and many Latin and Greek words in Irish, German, Pahlavi, Semitic, Iranian, and even a few in Indian and Mongolian languages prove. A few Roman merchants reached China, and Chinese merchants seem to have come to Iran and the most eastern parts of the Empire either via ocean or caravan routes.

10. The internal changes were more revolutionary. The imports and exports of most of the earlier centres for cheap products gradually lost importance for private buyers, because such merchandise could be, and as a rule was, produced locally or in a consumer's own province. In such circumstances only the inter-provincial import and export of valuable goods remained lucrative from about the third century A.D. A considerable amount of local trade was done by large estates and state institutions which did not require real merchants for this purpose. During the first century A.D. the *negotiatores* had spread as *pragmateutai* to the Hellenistic East, and the merchants and traders had been able to specialize in the Hellenistic way throughout the Latin provinces of the Empire, and in regions and provinces like Egypt which had not known free trade during the Hellenistic period; but from about the time of Hadrian all important commercial crafts had to be saved from

complete collapse by the Roman government. The *collegia* (see CLUBS) of merchants—originally private organizations—were bound, regulated, and privileged by the state, first those of the transport merchants, then those of the other crafts. The Hellenistic trade control had not been completely dissolved by the Roman government in many provincial regions. Now a new compulsory system with characteristic legal regulations arose wherever state necessities were concerned. The end of free trade for many centuries had come. Prices and trade conditions were controlled by magistrates whenever difficulties arose.

II. The commerce of the Late Roman Empire up to the Islamic conquest has often been underestimated. This was no period of 'house-economy'. The trade in valuable products was equal to that of earlier centuries. Jewels, perfumes, ivories, valuable textiles and glasses of the Mediterranean world were well known in northern Europe, Abyssinia, India, central and even eastern Asia. Trade in cheap products had suffered owing to Diocletian's system of taxation in kind, the decrease of the Roman and Greek town population during the third century A.D., and the autarky of many large feudal and church estates; but it was doubtless on the average superior to that of classical Greece (with the exception, perhaps, of Athens). The markets of Rome, Alexandria, Antioch, Constantinople, and many other towns were in normal years as full as ever of all that the population required. On the other hand, the strict and well-organized government control of the conditions of sale, and the codification of Roman commercial law, were novelties. Foreign trade was, if possible, restricted to certain frontier places, so that arms for prospective enemies as well as raw materials and victuals, as far as they happened to be scarce in the Empire, could not be exported. Profitable imports, e.g. Chinese silk, became state monopolies. Government officials controlled the quality and prices of all merchandise in their districts as well as the quantities allowed to a merchant. The variety of products is well known from Diocletian's Price Edict and the Church Fathers. On the other hand, the purchasing power of the Empire population had much decreased, and only in big towns and very wealthy country districts could the earlier specialization of commercial crafts be maintained to any extent. Not much difference existed, as a rule, between *negotiator* and *mercator*, between *emporos* and *kapelos*. Traders were very often craftsmen simultaneously, and comparatively few big merchant firms remained; but on the whole the standard of Late Roman commerce was sufficient for the needs of the period, and we may justly consider its controlled organization as indispensable for the future world-wide progress of commerce during the Islamic and the later European Middle Ages.

COMMERCIIUM was the right of any *Latinus* (see LATINI) to enter into contracts with a Roman according to the forms of Roman law and enforceable in the Roman courts without recourse to the *ius gentium* (and vice versa). Without it a foreigner could only secure his rights by the help of the *praetor peregrinus*. *Conubium* similarly was the right to contract a legal marriage with a member of another state without either party forfeiting inheritance or paternity rights. Without *conubium* a Roman's children by a foreigner took the citizenship of the foreigner. These complementary rights formed an essential part of *ius Latu* (q.v.). Their development, unparalleled in the ancient world until the later stages of some Greek cities, belongs to the period before the growth of large states in Latium, and was encouraged by the continental environment of the numerous small *populi* of the plain-dwellers, *Latini* (q.v.). In 338 B.C. Rome temporarily suspended these rights between certain Latin peoples, and again between certain Hernici in 308. This was only a temporary expedient in punishment for their revolts. The Latin colonies, including the so-called 'Last Twelve' founded between 268 and 181 B.C., all shared these rights not only with Rome but with one another, for, being often contiguous and also adjacent to Roman colonies, they could not flourish without such connexions. These *iura* also formed the chief practical benefit of *civitas sine suffragio* (see MUNICIPIUM), and could be granted to other *socii Italici* by special dispensation. By the Social War they were perhaps common throughout Italy. Under the Empire *conubium* was sometimes withheld from *ius Latu*, but the spread of Roman citizenship inside Latin communities rendered this rare. The grant of either to *peregrini*, however, remained exceptional. *Conubium cum peregrinis mulieribus* was thus given as a reward upon discharge to the praetorian troops, when required, and also along with the citizenship to the auxiliary troops drawn from the provinces.

These conceptions could also be applied to the relations between any communities of *peregrini*. Thus in 168 B.C. Macedonia was split up into four districts which were forbidden *commercium* or *conubium*, as an exceptional expedient to avoid the creation of a new province.

For bibliography, see LATINI, IUS LATII.

A. N. S. W.

COMMIIUS, appointed king of the Atrebatas by Caesar 57 B.C., acted as cavalry leader and general diplomatic agent, especially in Britain. He joined the revolt of 52, however, and evaded attempts at capture and assassination. He finally retired to Britain, where he founded a dynasty (British Atrebatas inscribed coins may be his).

C. Hawkes and G. C. Dunning, *Arch. Journ.* 1930, 291 ff.; R. P. Mack, *The Coinage of Ancient Britain* (1953), 31 ff.; Frere, *Britannia*, C. E. S.

COMMODIANUS, Christian Latin poet, variously assigned to the third, fourth, and fifth centuries A.D., and to Syria (Gaza), Gaul, and Africa, wrote the *Instructiones*, eighty short poems in acrostic form, and *Carmen apologeticum*, a metrical exposition of Christian doctrine. The language is noteworthy for its vulgar content, the versification for its rude hexameters, in which quantity plays little part.

COMMODUS, LUCIUS AELIUS AURELIUS (*PW* 89), sole Emperor A.D. 180–92, elder son of Marcus Aurelius, was born in A.D. 161. During his father's principate he was gradually advanced to the status of joint-ruler which he attained in 177 (Caesar in 166, *imperator* in 176, consul, *tribunicia potestas*, and Augustus in 177). In 177, after his marriage to Crispina, he accompanied his father to the second German-Sarmatian War.

On his accession in 180, he changed his name to M. Aurelius Commodus Antoninus. Peace was concluded on the German frontier, restrictions and controls being imposed on the tribes in return for subsidies and the evacuation of occupied territory. Commodus maintained a peaceful policy on all frontiers; the only serious trouble was in Britain where the Antonine Wall was overrun, the situation being restored by Ulpian Marcellus.

At first Commodus retained some of his father's ministers, e.g. Tarrutenius Paternus as praetorian prefect. But soon he resorted to government by means of favourites and displayed hostility to the Senate, which was exacerbated by an abortive conspiracy promoted by Lucilla and Ummidius Quadratus (182). For the next six years Rome was virtually governed by the praetorian prefects Perennis (182–5) and Cleander (186–9).

Commodus finally came under the influence of his concubine Marcia, his chamberlain Eclectus, and Laetus, who became praetorian prefect in 191. The intoxication of power seems to have deranged his mind. Senatorial persecutions were redoubled, Rome was rebaptized *Colonia Commodiana*, and the Emperor regarded himself as the incarnation of Hercules (title of *Hercules Romanus*). To perfect the impersonation he determined to appear in public on 1 Jan. 193 as both consul and gladiator, and this so outraged the feelings of his advisers that they suborned an athlete called Narcissus to strangle him.

COMMON PEACE (*κοινή εἰρήνη*), the phrase used by Diodorus Siculus, following Ephorus, and by some contemporaries (though not by Demosthenes, Isocrates, or Xenophon) to describe a series of peace-treaties in Greece in the fourth century B.C. applicable to all cities on the basis of autonomy. Such treaties were concluded in 387/6 (the King's Peace), 375, 371 twice, 365 (possibly), 362/1 and 338/7 (the League of Corinth), and proposed on other occasions; their principles strongly influenced the foreign policies of leading cities between 387 and 338 and were used as the basis of their relations with Greece by Philip II, Alexander, and Antigonus I.

T. T. B. R.

COMMUNES LOCI, 'commonplaces' (in Greek *κοινὰ τόποι*), traced back as far as Gorgias and Protagoras by Cicero, *Brut.* 46–7, were 'arguments that could be transferred to many cases' (Cic. *Inu. Rhet.* 2. 48). They could be practised separately in schools (Quintilian 2. 4. 22), and published separately (id. 10. 5. 12). Some were directed against vices (id. 2. 1. 11); some discussed topics

of importance in court, such as the value of witnesses (Cic. *Cael.* 21 f.: *Part. Or.* 48 f.); others, like those listed in Cic. *De Or.* 1. 56 ('de dis immortalibus, de pietate, de concordia', etc.) were begrudged to oratory by philosophers. The variety was much increased by the declaimers of the first century A.D., because such passages could be easily learnt up and inserted more or less appropriately in declamations (see S. F. Bonner, *Roman Declamation* (1949), 60 f.); and by this route they appear in Silver Age literature. Thus the *locus de indulgentia* can be instructively traced from Lysias (24. 17) through Cicero (*Cael.* 39 f.: see Austin's note) and the Elder Seneca to Juvenal.

L. Arbusow, *Colores Rhetorici* (Göttingen, 1963), 91 ff. (mainly medieval). M. W.

COMMUNIO, common ownership by two or more persons of a thing (including land) or of an undivided group of things (e.g. inheritance), originating in a contract by the parties (*societas*, see **CONTRACT**), or, independently of their intention, in a common inheritance or legacy. In early law (*consortium*, *societas ex co. non cito*: *Gai. Inst.* 3. 154 a, b) a legal transaction in relation to the thing by one owner affected the rights of all (e.g. alienation transferred ownership of the whole), but in classical law such a transaction affected only the particular co-owner's notional share, or, if it did not admit of such divided effect, was void. (Thus a purported creation of a usufruct (see **SERVITUDES**) over the whole affected only the creator's share, and a creation of a praedial servitude was void. There were special rules as to manumission of a common slave.) In the material enjoyment of the property each co-owner could exercise the full rights of an owner, subject to the veto of any other co-owner (*ius prohibendi*). Disputes were adjusted by an action for division of the property (*actio communi dividundo*; *actio familiae erciscundae*, for division of inheritance). The judge divided the property among the co-owners in proportion to their shares, with equalizing payments where necessary. Profits, expenses, and damages, incurred by individual joint owners, were also apportioned by the judge.

COMPRECATIONES. Aulus Gellius (13. 23. 1–2) quotes from the *libri sacerdotum populi Romani*, that is to say the *commentarii pontificum* (q.v.), the following forms of address, which he calls *comprecationes deum immortalium* (since they are in the accusative, it would appear that some verb meaning 'to invoke' is to be supplied): *Luam Saturni, Salaciam Neptuni, Ioram Quirini, Virites Quirini, Maiam Vulcani, Heriem Iunonis, Moles Martis Nerienemque Martis*. It is clear that each pair consists of a well-known deity associated with an obscure one, or in two cases, a plurality of such. Since family relationships among Roman deities are unknown, and Gellius distinctly says that these prayers 'ritu Romano fiunt', no such word as *uxor* or *filia* can be supplied (contrast, e.g., *Terentia Ciceronis, Tullia Ciceronis*). It therefore remains to suppose that the genitives mean that the lesser deity is somehow active in the sphere presided over by the greater one, and are therefore used in a sense which could equally well be expressed by an adjective.

K. Kerényi, *SMSR*, 1933, 17 ff.; Latte, *RR* 55.

H. J. R.

COMUM, 'modern *Como*, birthplace of the Elder and the Younger Pliny, of whom the latter owned large properties there and was a notable benefactor. A flourishing centre of the South Alpine Iron Age Golaseccan culture, it came under Celtic rule in the fourth century B.C. and in

196 B.C. it passed within the Roman orbit. After 89 B.C. it received a first group of colonial settlers, and in 59 B.C., at the hands of Julius Caesar, a second group, under the name of *Novum Comum*. During the Empire it became a *municipium*, with territories bordering on those of Mediolanum and Bergomum. In late antiquity it was an important military base for the protection of north Italy. The principal surviving remains are those of the Ca' Morta Iron Age cemetery, in the Civic Museum, and the chequer-board street-plan of the Roman town, still faithfully reflected by that of the modern city.

D. Randall-MacIver, *The Iron Age in Italy* (1927); J. Whatmough, *The Foundations of Roman Italy* (1937), 136 ff.; G. E. F. Chilvers, *Chalpine Gaul* (1941); J. B. W.-P.

CONCILIABULUM, a type of large village which down to the Social War formed political centres for the Roman country-folk. They replaced the *tribus rusticae*, whose structure as civic units was shattered by the territorial expansion of Rome in the third century. Beginning 'beyond the tenth milestone' they covered the Roman territory except where other *oppida* existed. Official announcements were published in them, but as in other villages, their powers of self-government were slight, since they possessed neither municipal territory nor jurisdiction (see *vicus*) until during the Ciceronian age they were assimilated to *municipia* (q.v.). A. N. S.-W.

CONCILIIUM was a general name for any Assembly; it was often used to denote the Popular Assemblies at Rome, especially the Plebeian Assembly (*Concilium Plebis*, see *COMITIA*).

The provincial *concilia* (κοινά) were assemblies of delegates from the constituent cities or tribes of a province or of several associated provinces (e.g. Gallia Comata, *infra*) or of such parts of certain provinces as had, at an earlier stage, been (or formed part of) independent kingdoms or states (e.g. the separate κοινά of Bithynia, Pontus, or Lycia). The original basis of their organization was ethnic, not provincial. The *Commune Asiae*, properly τὸ κοινὸν τῶν Ἑλλήνων τῆς Ἀσίας, given by Octavian in 29 B.C. the task of carrying on what came to be the cult of Rome and Augustus, was the continuation of the κοινόν of representatives of the earlier Pergamene kingdom, which had likewise been concerned with questions of cult and honours to individual benefactors. In the less romanized western provinces such ethnic assemblies, tied to the imperial cult, were a useful instrument of romanization. Augustus' stepson, Drusus, inaugurated a *concilium* of the three provinces of Gallia Comata at Lugdunum (12 B.C.). With the Flavian emperors appear *concilia* organized on a provincial basis, e.g., in Baetica, Gallia Narbonensis, and Africa. Eventually the *concilia* received an official organization which covered the whole of the Roman Empire except Egypt.

The nature and functions of the *concilia* varied from province to province. The *concilia* ordinarily met once a year at a central point of their district (e.g. Carthage in Africa, Ephesus, Pergamum, Smyrna, or other important cities in Asia). Their primary function was the worship of 'Roma et Augustus', and their president was also chief priest of this cult. Games and festivals were often associated with the religious ceremonies. But the *concilia* also served as channels of communication between the provinces and the emperors, and in the first century A.D. they often rendered good service in reporting on bad governors and facilitating their condemnation in the Roman courts. But they never acquired powers of legislation or taxation; they lost all significance in the troubled times of the third century; and an attempt by Constantine to reanimate them (without emperor-worship) proved ineffectual.

E. G. Hardy, *Studies in Roman History* i (1906), ch. 13, P. Guiraud *Les Assemblées provinciales dans l'empire romain* (1887); E. Kornemann, *PW*, s.v. κοινόν (Suppl. iv) and 'Concilium', *Magie, Rom. Rule Asia Min.*; J. A. O. Larsen, *Representative Government* (1955), 106 ff. M. C.; E. W. G.

CONCORDIA, personification of agreement between members of the Roman state or of some body or bodies within it (*Concordia provinciarum, militum or exercituum, imperii*, etc., on coins; occasionally inscriptions are dedicated to the *Concordia* of a town, guild, or the like). Her oldest and principal temple, near the Forum (Platner-Ashby, 138 ff.), was allegedly dedicated by Camillus in 367 B.C. (end of disturbances over the Licinian Rogations), restored by L. Opimius in 121 B.C. (death of C. Gracchus) and re-dedicated by Tiberius in A.D. 10 as *Concordia Augusta*, which from then on became a frequent title, apparently with reference to agreement between members of the imperial family. She had also a shrine near the above temple, dedicated in 304 B.C. (Liv. 9. 46. 6), and another on the Arx in 216 B.C. (Liv. 22. 33. 7; 23. 21. 7). The former was a political gesture, the latter commemorated the end of a mutiny. See *HOMONOIA*.

Wisowa, *RK* 328 f.; Latte, *RR* 237, 322; A. Momigliano, 'Camillus and Concord', *CQ* 1942, 111 ff. Temple Nash, *Pict. Dict. Rome*, 1, 292 ff. H. J. R.

CONDATE, a common place-name in the Celtic provinces of the Roman Empire (as *Condate Redonum, Rennes*, etc.), meaning 'confluence'. See also *UGDUNUM* (1).

A. Holder, *Alt-Celtischer Sprachschatz*, s.v. (thirty examples cited). A. J. F. R.

CONDUCTOR was a person who either contracted with a private person for the carrying out of some work, such as the construction of a building (Vitruv. 1. 1. 10), or who leased land, either cultivating it himself or subletting to *coloni* (see *COLONUS* 2). In the second century A.D. the term, while continuing to signify a private contractor or lessee (*Dig.* 19. 1. 52 *pr.*, 40. 7. 40. 5), is also widely used for persons contracting for the exploitation of imperial properties. In this period *conductores* leased, for instance, both the actual mineshafts and other concessions in the mining-area of Vipasca (*ILS* 6891) and contracted for imperial *horrea* (*Dig.* 20. 4. 21. 1; cf. *ILS* 5914), and imperial flocks in Italy (*CIL* ix. 2438). The inscriptions of the imperial estates in Africa (*CIL* viii. 25902; 25913; 26416) show that the *conductores* were men who both cultivated parts of the estates themselves and acted as middlemen between the *procuratores* (q.v.) and the *coloni*, from whom they were entitled to fixed proportions of the produce and fixed amounts of service. The inscription from the *Salus Burunitanus* (*ILS* 6870) contains a *libellus* of the *coloni* to Commodus complaining of the connivance of the procurators and the *conductores* who exacted excessive services and had even sent troops against them. The function of *conductores* as middlemen continues in the imperial and private estates of the Late Empire.

From the beginning of the second century the word is also used for the individual collectors of the *portoria* (q.v.) who replaced the companies of *publicani* and were themselves replaced in the latter half of the century by imperial procurators (q.v.); *conductores* are not attested in connexion with any other tax.

In the second century, and possibly on occasion earlier (*AE* 1962, 288), *conductor* was also used for those who contracted for the *vectigalia* of local communities (Gaius 3. 145; *CIL* iii. 1209; 1363). F. G. R. M.

CONFARREATIO, the oldest and most solemn form of Roman marriage, confined to patricians and in classical times obligatory for the three *flamines maiores* and the *rex sacrorum*, who must also have been born of such

marriages (Gaius 1. 112). The ceremony is imperfectly known, but outstanding features were that bride and bridegroom sat with veiled heads on joined seats, which were covered with the hide of a sheep (Servius on *Aen.* 4. 374); a cake of *far* (spelt) was used in some way (perhaps eaten by the parties), and the whole rite was in honour of Jupiter Farreus (Gaius, *ibid.*). The *flamen Dialis* and the Pontifex Maximus were present (Servius on Verg. *G.* 1. 31) and there must be ten witnesses (five, a sacred number, for each of the two *gentes* concerned?) (Gaius, *ibid.*). The marriage was indissoluble save by an elaborate ceremony, *diffarreatio* (Festus, 65. 17 Lindsay, cf. Plutarch, *Quaest. Rom.* 50; see Rose *ad loc.*; he speaks of 'horrible, extraordinary, and dismal rites'). See MARRIAGE CEREMONIES, § 2 *and* MANUS.

Roszbach, *Die römische Ehe* (1853), 95 ff., P. E. Corbett, *The Roman Law of Marriage* (1930), 71.

CONFLUENTES, modern *Coblenz*, lay at the meeting of the Moselle with the Rhine (traces of a bridge over the former have been noted). From a Julio-Claudian (early Claudian?) fort it developed into an important road junction. Sacked by Germans in A.D. 259/60, its renewed walls were standing in 354. By the mid fifth century it was held by Franks. The name corresponds with the Celtic *Condate* (q.v.).

CONGIARIUM. Under the Republic this term designated gifts of wine or oil made by magistrates, candidates for office, or generals. Later these distributions consisted, at first mainly, and then exclusively, of money. From the time of Augustus *congiaria* were given by Emperors only or under their authority, and were associated with such events as the accession of a new Emperor, imperial birthdays, victories, or the erection of buildings. The recipients were identical with the *plebs frumentaria* who received doles of corn. Distributions of *congiaria* are frequently represented on imperial coinage.

D. van Berchem, *Les Distributions de blé et d'argent à la plèbe romaine sous l'Empire* (1939), 119 ff. C. H. S.

CONON (1) (c. 444–392 B.C.), an Athenian of noble birth. He was admiral of the squadron based on Naupactus in 414, and from 407 to 405 commanded the fleets operating in the Aegean and Hellespont. At Aegospotami he alone of the Athenian generals was on the alert, and slipped away to find refuge with Euagoras. He inspired the programme of reviving Persian sea-power, and his efforts were crowned with success when he annihilated the Spartan fleet at Cnidos (394). He crossed in triumph to Athens, completed the rebuilding of the Long Walls, and even dreamed of a new Athenian Empire. The visit of Antalcidas to Tiribazus in 392 converted the satrap to a pro-Spartan policy. Conon, who was in Sardis on a diplomatic mission, was arrested, and although he succeeded in escaping, died shortly afterwards.

D. E. W. W.

CONON (2) of Samos (3rd c. B.C.), astronomer and mathematician. After travelling in the western part of the Greek world in search of astronomical and meteorological observations, he settled in Alexandria. He is best known for his discovery (c. 245 B.C.) of the new constellation *Βερενίκης Πλόκαμος* between Leo, Virgo, and Boötes, recounted in Catullus' imitation (c. 66 B.C.) of Callimachus' elegy on the Coma Berenices. He wrote an astronomical work *De Astrologia* of which nothing remains, and was well known for his researches into solar eclipses. In mathematics, he wrote a work *Πρὸς Θρασύδαμον* on the mutual sections and contacts of conic sections. He was a close friend of Archimedes, who always praises highly his mathematical work, and regrets his early death.

W. D. R.

CONON (3), mythographer, who dedicated his work to Archelaus Philopator (Philopatris) of Cappadocia (36 B.C.–A.D. 17), published *διηγήσεις*, fifty tales from Greek saga, Atticist in style, based on a Hellenistic handbook, and preserved in Photius.

FGH II 26; Photius (ed. R. Henry, vol. 3, 1962).

CONSCRIPTI. This obscure term may refer either to an official list or *album* of senators, the *patres* 'on the list'; or to an early union of two different kinds of senators—i.e. *patres* <et> *conscripti*—either patricians and plebeians, though the struggle of the Orders renders this unlikely, or the *patres* of different communities incorporated in Rome.

A. N. S.-W.

CONSECRATIO, the process of making anything into a *res sacra*. We are best informed of the ceremonial in the case of a temple (*aedes sacra*) and the ground on which it stood. The latter must be the property of the Roman people; e.g. Trajan saw no objection to the moving from its place of an old temple at Nicomedia, because it could not have been dedicated in Roman form (Pliny, *Tra.* 49, 50; cf. Mommsen, *Staatsr.* iii. 734). Furthermore, dedication must be authorized by the state (Cic. *Dom.* 136). Usually the Senate, the People, or in later times the Emperor appointed some person, or persons (*dumviri*, Livy 23. 21. 7 and often), with a natural tendency, if the temple had been vowed by a magistrate in office, to appoint him or some relative. It remained for the gods to accept the gift through their earthly agents, the *pontifices* (e.g. Justinian, *Inst.* 2. 1. 8). It was proper for the whole college to be present (Cic., *ibid.* 117); the minimum requisite was for one of them to be there. He held one of the *postes* of the entrance door and pronounced the necessary formula (*ibid.* 119, 121). Like all ceremonies, this must be gone through without interruption, hesitation, or stumbling (e.g. *ibid.* 134, 141; Pliny, *HN* 11. 174). The dedicator also held a doorpost (Livy 2. 8. 7), and went through a form of prayer (*ibid.* 8), dictated to him by the pontiff (Cic., *ibid.* 138, 'quid praerit . . . ius fuerit' and Livy, *infra*), containing a clause to the effect that he gave the building (or other object) to the god (Servius on Verg. *G.* 3. 16). The ceremony was necessary also if a new building was put up on ground already consecrated (Livy 9. 46. 6).

Of the other consecrations less is known; the goods of a condemned man were on occasion consecrated by a magistrate, who covered his head, employed a flute-player to drown ill-omened sounds, and had by him a small portable altar (*foculus*) for incense (Cic., *ibid.* 123–4).

A title-deed (*lex dedicationis*) seems regularly to have been drawn up, at all events for important dedications. To judge by the provincial specimens which alone have been preserved (Bruns, *Fontes*, nos. 90, 92) it was recited by the dedicator under the direction of the pontiff and contained a precise statement of the size of the ground on which the object stood, the conditions under which it was to be used, etc. See DEDICATION.

Convenient assemblage of material (requiring some revision) in J. Marquardt, *Röm. Staatsverwaltung* (1881–5), III² 260 ff. For discussion of the ceremony of holding the *postis*, see Latte, *RR* 200.

H. J. R.

CONSENTES DI, the Roman version of the Athenian Twelve Gods. Their gilt statues stood in the Forum (Varro, *Rust.* 1. 1. 4), later apparently in the Porticus Deorum Consensuum (see Platner–Ashby, 421; Nash, *Pict. Dict. Rome* ii. 241 ff.). As there were six male and six female, they may well have been the twelve worshipped at the *lectisternium* (q.v.) of 217 B.C. (Livy 22. 10. 9), Jupiter and Juno, Neptune and Minerva, Mars and Venus,

Apollo and Diana, Vulcanus and Vesta, Mercury and Ceres (Wissowa, *RK* 61).
H. J. R.

CONSENTIUS (5th c. A.D.), grammarian. His extant treatises *De nomine et verbo* and *De barbarismis et metaplasmis* (ed. Keil, *Gramm. Lat.* v. 338-85, 386-404) are excerpts from a complete grammar. His illustrations drawn from the speech of his own times make him valuable for the study of vulgar Latin.

Schanz-Hoerius, § 1103

J. F. M.

CONSILIIUM PRINCIPIS. A Roman magistrate was always at liberty to summon advisers in deliberation or on the bench. Under the Roman Empire a body of advisers summoned by the Emperor acquired the character of a Privy Council. At first it was unofficial, and no more than an indeterminate collection of 'amici Caesaris' who had been summoned by the Princeps to act as assessors in a judicial inquiry (*Tac. Ann.* 3. 10; 14. 62) or as advisers in problems of administration. Hadrian went further and, in judicial inquiries, summoned 'amici', 'comites', and juriconsults, 'quos tamen senatus omnes probasset' (*Vita* 18). Severus Alexander established a regular *consilium* of seventy members, who assisted him in the framing of *constitutiones*; twenty of them were juriconsults, the rest the Emperor's nominees, chiefly, no doubt, senators (*Vita* 16). Its members were known as *consilarii Augusti*, some of them—perhaps only the *equites*—receiving salaries. The body was reorganized under Diocletian, membership being made permanent, and its name was changed to *sacrum consistorium* (q.v.). This *consilium* is to be distinguished from the regular *consilium* established by Augustus, and known as the *consilium semestrale*, consisting of the two consuls, one member of each of the other colleges of magistrates, and fifteen senators chosen by lot, who retained their membership for six months (*Dio Cass.* 53. 21. 4 ff.; *Suet. Aug.* 35. 3). This body prepared business for the Senate in collaboration with the Princeps (see, for example, the *senatus consultum* conveyed in the fifth of the Augustan edicts from Cyrene, *JRS* 1927, 36). Its character was altered slightly in A.D. 13 and again after Tiberius' accession, but the institution came to an end after Tiberius retired from Rome in A.D. 26.

J. A. Crook, *Consilium Principis* (1955).

J. P. H.

CONSISTORIUM. The name given to the imperial *consilium* from the time of Diocletian (q.v.), since the members no longer sat but stood in the Emperor's presence. It functioned both as a general council of state and as a supreme court of law. Its membership depended upon the Emperor's choice but normally included the principal civil and military officers of the *comitatus*, former holders of these offices, and also *comites consistorii* who held no office; these last included legal experts, mostly drawn from the Bar. The consistory was still an active council of state in the fourth century, but its time was increasingly filled by ceremonial business, and by the fifth century its proceedings appear to have become entirely formal. Its sessions were called *silentia*, and its ushers *silentarii*. Its minutes were kept by the imperial *notarii*, who in the fifth century were replaced by a *secretis*, drawn from the *agentes in rebus* or *memoriales*.

Jones, *Later Rom. Emp.* 333 ff

A. H. M. J.

CONSOLATIO (λόγος παραμυθητικός). Topics of comfort and consolation are found in many places in Greek literature (e.g. *Il.* 5. 381 ff., *Eur. Alc.* 416 ff.). The sophist Antiphon, the Academic philosopher Crantor (q.v.), and the popular philosophy of the Cynics all contributed to the formation of a set repertoire of arguments which occur again and again in both Greek and Roman

writing. The *consolationes* which have come down to us concern chiefly death, sometimes exile, rarely other misfortunes. Simple letters or philosophic treatises, they differ according to the author's style and personality, the circumstances which dictated them, and the character of the recipient. Yet they all wear a fundamental likeness.

Of the stock arguments (*solacia*), one group is applicable to the afflicted person, the other to the cause of the affliction. Among the former the commonest thoughts are: Fortune is all-powerful—one should foresee her strokes (*praemeditatio*); has a loved one died?—remember that all men are mortal; the essential thing is to have lived not long but virtuously; time heals all ills; yet a wise man would seek healing not from time but from reason, by himself putting an end to his grief; the lost one was only 'lent'—be grateful for having possessed him. As to death, the cause of the affliction, it is the end of all ills: the one who is lamented does not suffer; the gods have sheltered him from the trials of this world. To these *loci communes* consolers sometimes add eulogy of the dead, and almost always examples of men courageous in bearing misfortune.

The tone is usually one of extreme intellectualism: reason is the supreme consoler. Seneca, however, views family affections as precious sources of comfort, and Christian consolers (Ambrose, Jerome, Paulinus of Nola), while resorting to pagan arguments, were enabled to renew the genre by the stress laid upon feeling and by the character of their inspiration, which was at once biblical, ethical, and mystic.

A good idea of the Greek material can be obtained from Ps.-Plato, *Axiochus*, and Ps.-Plutarch, *Consolatio ad Apollonium* (an anthology of consolatory topics). Plutarch's own *Consolatio ad Uxorem* is a moving example of the effectiveness of the *ρόλοι* in a deeply-felt bereavement. For Latin, see especially: *Tusc.* 1 and 3; Sulpicius ap. Cic. *Fam.* 4. 5; Sen. *Dial.* 6 (*ad Marciam*), 11 (*ad Polybium*), 12 (*ad Helviam matrem*; exile); *Ep.* 63, 81 (ingratitude), 93, 99, 107 (runaway slaves).

A. Gereke, *De Consolationibus* (*Tirocinium philologum* Berl.) 1883; K. Buresch, 'Consolationum . . . historia critica' (*Leipzig Stud.* ix. 1), 1886; C. Martha, *Études morales sur l'antiquité* (1896), 135 ff.; J. D. Duff, *Sen. Dial.* 10, 11, 12 (two last being *Consolationes*), 1915; Ch. Favez, *Introductions to his edns. of Sen. Ad Helviam* (1918) and *Ad Marciam* (1928); *La Consolation latine chrétienne* (1937); R. Kassell, *Untersuchungen zur griechischen und römischen Konsolationsliteratur* (1958); R. Latimore, *Themes in Greek and Latin Epistaphors* (1962), 215 ff.

CONSOLATIO AD LIVIAM, an elegiac poem of condolence, of 474 lines, addressed to the Empress Livia on the death of her son Drusus, campaigning in Germany 9 B.C., whose body was brought to Rome for burial. Date and authorship have been much discussed. The traditional ascription to Ovid is obviously false, indeed the imitation of Ovid's manner is not very expert. The poem is almost certainly a fictitious exercise in a recognized genre, the *consolatio* (q.v.); see also EPICEDIUM).

TEXTS. *PLM* II 2; F. W. Lenz, P. Ovidii Nasonis *Halcutica*, etc. (1956).

COMMENTARY A. Wilcox (1934)

E. J. K.

CONSTANS, Roman Emperor (c. A.D. 323-50), was the fourth or fifth son of Constantine the Great. On the death of his father in 337, he became Emperor of Italy, Africa, and Illyricum. In 340 he defeated and killed his brother Constantine II (q.v.), who had invaded northern Italy, and thus became Emperor of the entire West. In 343 he visited Britain, the last legitimate Roman Emperor to do so. He was overthrown and killed in Gaul by Magnentius (q.v.) in 350.

E. A. T.

CONSTANTINE, known to history as 'the Great', FLAVIUS VALERIUS CONSTANTINUS (*PW* 2) (c. A.D. 285–337), was born at Naïssus, the son of Constantius Chlorus and his concubine, Helena. When Constantius (q.v. 1) was appointed Caesar (293) Constantine was kept by Diocletian at his court. He showed great promise as an officer, served with Galerius against Persia, and was at his court in 305, when the old Augustus abdicated. The new ruler, Galerius, with both Caesars—Severus and Maximin Daia—devoted to him, was superior in all but name to his fellow Augustus, Constantius, and Constantine was virtually a hostage for his father's good behaviour. In 306 Constantius requested Galerius to release Constantine for service in Britain; Galerius reluctantly consented. Constantine, fearing interruption by Severus, hastened to Britain and assisted his father in Scotland. When Constantius died at York (25 June), Constantine was proclaimed Augustus by the troops, urged on by the Alamannic king, Crocus; Galerius, smothering his resentment, granted Constantine the rank of Caesar; the rank of Augustus of the West was given to Severus.

2. The rise of Maxentius in Rome reacted on the fortunes of Constantine. The old Emperor Maximian, returning to power to help Maxentius, visited Constantine in Gaul, gave him in marriage his daughter Fausta (already betrothed to him in 293) and the title of Augustus. Constantine made no move, when first Severus and then Galerius unsuccessfully attacked Maxentius, but he sheltered Maximian when driven from Rome after a vain attempt to depose his son. At the Conference of Carnuntum in 308 Constantine was called on to resign the title of Augustus and become Caesar again, under Licinius as second Emperor. Both he and Maximin Daia refused to be satisfied with the makeshift title of 'Filius Augustorum' and retained the full rank of Augustus. In Gaul, meanwhile, Constantine had successfully defended the Rhine against Franks, Alamanni, and Bructeri. He was absent on one of these expeditions in 310 when Maximian, restless and discontented, seized Massilia. Constantine turned and forced the old man to surrender and commit suicide. As the connexion with the Herculean dynasty was now discredited, Constantine emphasized his hereditary claim to the throne by alleging descent from Claudius (q.v. 2) Gothicus.

3. In 311 Galerius died and a new grouping of powers began. Constantine and Maxentius sought support in Licinius and Maximin Daia respectively. Early in 312 Constantine invaded Italy, broke up a stubborn resistance in the north by great victories near Turin and Verona, and then marched on Rome. Maxentius gave battle and found defeat and death at the Mulvian Bridge. Welcomed as deliverer by the Senate, Constantine replaced Daia as senior Augustus. In 313 Licinius visited Milan, married Constantia, sister of Constantine, and with him issued certain regulations in favour of the Christians, known as the 'Edict of Milan'. Licinius then struck down his eastern rival, Maximin, and the two kinsmen Emperors were left to rule East and West in harmony. The concord was unstable. A first war, fought in 314 or 316 was decided in favour of Constantine by victories at Cibalae and in the Mardian plain. The result was the cession to Constantine of territory as far as Thrace. In 317 Crispus and Constantine II, sons of Constantine, and Licinius II, son of Licinius, were appointed Caesars. But trouble soon arose again. Licinius, jealous and suspicious, began to persecute the Eastern Christians. In 323 Constantine, in beating back a Gothic invasion, violated the territory of Licinius; war followed. Victorious in great battles by land and sea—Adrianople, Chrysopolis, and the Hellespont—Constantine forced the abdication of Licinius, who soon afterwards was executed (324).

4. Constantine now held the whole Empire, reunited

under his own hand. He completed the administrative work of Diocletian and introduced innovations. A substantial field army was created under new commanders, *magister peditum* and *magister equitum*, responsible directly to the Emperor: its soldiers (*comitatenses*) had higher pay and privileges than the frontier troops (*limitanei*). The number of Germans seems to have increased, especially in the higher ranks. The separation of civil and military commands, begun by Diocletian, was completed. At the highest level, the praetorian prefects and the *vicarii* now had purely administrative and judicial functions; the former as well as the latter controlled fixed territorial circumscriptions. In a reorganization of the central government consequent on the change in the role of the praetorian prefects, the *magister officiorum* controlled the imperial bureaux (*scrinia*), a new corps of guards (*scholae*) which replaced the praetorians, and a corps of couriers and agents (*agentes in rebus*); the *quaestor sacri palatii* was the chief legal adviser; and the *comes sacrarum largitionum* and the *comes rei privatae* handled the revenues and expenditures in gold and silver. The Emperor's council (*consistorium*) had the above as permanent officials as well as *comites*. At first these were strictly those who served at court or as special commissioners, but the title was soon given freely as an honour. Constantine gave senatorial rank to many, and reopened a number of official posts to senators who began to recover some of the political power they had lost in the third century.

5. The founding of Constantinople (q.v.) on the site of Byzantium was of great consequence. The need for an imperial headquarters near the eastern and Danubian frontiers had been recognized by Diocletian, who preferred Nicomedia. The strategic importance of Byzantium was impressed on Constantine in his war with Licinius. Major works were begun in 326, the *consecratio* of the site took place in 328, and the *dedicatio* in 330 with both traditional pagan rites and Christian ceremonies. From the beginning it was to be 'New Rome', though formally slightly lower in rank. Many of the traditional features of Rome were reproduced (e.g. a Senate, and free corn for the populace), but the pagan temples and cults of the old capital were conspicuously absent. As an imperial city in a Greek environment, the foundation in the end emphasized the division of the Empire between Greek- and Latin-speaking *partes*.

6. The transformations in Constantine's religious outlook are disputed; he probably went through more than one change. Highly emotional, and superstitious like all his contemporaries, he became convinced of the superiority of the God of the Christians, and of the need to secure this divine support for himself and the Roman Empire, after his victory over Maxentius. He was perhaps impressed by the growth of Christianity in spite of the persecutions. While ruler of the West only, where paganism was deeply entrenched, he gave much material support to the Church and privileges to the clergy. After he had settled in the East where Christians were more numerous his assertion of the new religion became more emphatic. He openly rejected paganism, though without persecuting its adherents, favoured Christians as officials, and welcomed bishops at court. His actions in church matters were, however, his own, and designed solely to maintain the unity of the Christian Church as essential to the unity of the Empire. He failed entirely in the Donatist schism in North Africa in the years following 312; in the East he called the first general council of the Church to Nicaea in 325 to deal with the Arian controversy, but his apparent success was rapidly seen to be superficial.

7. Constantine had a yearning for popularity; he was open-handed to all, to the detriment of the economy, and

was forced to increase taxation in spite of the confiscation of the vast temple treasures. He tried but could do little to stop corruption in the steadily growing bureaucracy. He successfully established a gold coinage of 72 *solidi* to the pound but the *denarius* continued to depreciate. The greater part of taxation was in kind and we have the first laws designed to prevent *coloni* and other productive workers, not to mention *curiales*, from leaving their homes and work.

8. The prestige of the Empire abroad seemed fully restored, and most of Constantine's last years were peaceful; in 332 the Goths were repulsed on the Danube and thousands of Sarmatians were admitted within the Empire as potential recruits. A Persian war threatened but did not break out till after his death. At court, however, in a mysterious scandal, he ordered the execution of his eldest son Crispus and his wife Fausta in 326. His other sons, Constantine II, Caesar in 317, Constantius II, Caesar in 323, and Constans, Caesar in 333, were groomed for the succession with two sons of his half-brother. With so many descendants and relatives, Constantine, the advocate of hereditary succession, could do little but hope they would rule together in amity after his death. He was baptized on his death-bed, such a postponement being common at the time, having brought Christianity from the status of a powerful, though persecuted, minority to effective supremacy in the religious life of the Empire, and having built a new capital on a site deliberately chosen for its strategic importance and well equipped to face the permanent dangers on the Danube frontier.

CONSTANTINE II, Roman Emperor (A.D. 317-40), second son of Constantine the Great, was born in Arles in Feb. 317 and on 1 Mar. was proclaimed Caesar. He became ruler of Britain, Gaul, and Spain on his father's death in 337. In 340 he invaded northern Italy so as to overthrow his brother Constans, but was defeated and killed at Aquileia. E. A. T.

CONSTANTINE III (FLAVIUS CLAUDIUS CONSTANTINUS), Roman Emperor, at first a usurper but recognized by Honorius in A.D. 409. He was elevated by the army in Britain in 407 and immediately crossed to Gaul, taking with him some, but not all, of the British forces. He established himself at Arles, won over Spain to his cause, unsuccessfully invaded Italy, and in 411 capitulated at Arles to the generals of Honorius and was put to death there. E. A. T.

CONSTANTINOPLE. Constantinople was founded by Constantine on the site of Byzantium in A.D. 324, shortly after his victory over Licinius near the city. Constantine states that he 'bestowed upon it an eternal name by the commandment of God', and the new foundation was probably intended as a memorial of the final victory which God had given him. The new city therefore, as Eusebius states, was probably never sullied by pagan worship. Some old temples of Byzantium were preserved, but apparently only as museums, and the city was amply adorned with churches, notable among which were those of the Holy Apostles, where Constantine and his successors were buried, SS. Sophia and Eirene. The building of the city was quickly pushed on, private persons being encouraged to build houses by the grant of imperial lands in Asia Minor or of bread rations in perpetuity, and it was formally inaugurated on 11 May 330. It was

adorned with numerous works of art taken from pagan temples.

The city was styled the New Rome from the beginning, and was the normal imperial residence in the Eastern parts. It lacked the constitutional prerogatives of Rome, however, until in 340 Constantius II created its Senate, with quaestors, tribunes of the plebs, and praetors; henceforth, one of the consuls was normally inaugurated at Constantinople. On 11 Dec. 359 the first prefect of the city took office. Its administration was modelled on that of Rome, with a *praefectus annonae*, *praefectus vigilum*, and *magister census*; Justinian renamed the *praefectus vigilum* the *praetor plebis* enhancing his rank and salary, and created a new police officer, the *quasitor*, whose function it was to see that visitors to the city returned home after completing their business, and to provide work for the able-bodied unemployed and to give begging licences to those unable to work. Like Rome Constantinople was divided (after 413) into fourteen regions (one across the Golden Horn and one outside the walls), each under a *curator*. As at Rome, there was a free issue of bread, inaugurated 18 May 332 for 80,000 persons.

The bishop of Constantinople, as bishop of the capital, acquired great prestige. In 381 the Council of Constantinople declared that he 'should have the primacy of honour after the bishop of Rome, because it was the New Rome', and in 451 the Council of Chalcedon gave him patriarchal jurisdiction over the dioceses of Thrace, Asiana, and Pontica; in the late sixth century he assumed the title of oecumenical.

In 425 a university was established. Its professors, five for Greek rhetoric and ten for Greek grammar, three for Latin rhetoric and ten for Latin grammar, one for philosophy and two for law, had a monopoly of higher teaching and were appointed by the Senate.

Constantinople grew rapidly. The Constantinian walls were demolished in 413, and the present walls built about a mile further west; the area of the city was doubled. The imperial import of corn under Justinian amounted to 8,000,000 *artabae*, enough to feed about 600,000 persons. The prosperity of the city was largely due to the fact that it housed the imperial court, the Senate, the palatine ministries, the praetorian prefecture of the East, and the two *magistri militum praesentales*. It was also the seat of the supreme courts of appeal with all their lawyers, of a university with its students, and of the patriarchate with its numerous clergy. It was thronged with petitioners and litigants ecclesiastical, civil, and military.

The Notitia of the city, drawn up under Theodosius II, gives interesting statistical information. There were in the city 20 (or 21) public bakeries, 120 private bakeries, 9 public baths (*thermae*), 153 private baths, and 4,388 houses (*domus*) apart from blocks of flats.

Of the buildings of the early period there survive the 'Burnt Column' of Constantine, the Hippodrome with its two obelisks, the aqueduct of Valens, the Theodosian Walls, the basilica of S. John of Studion, a mosaic floor from the Great Palace, Justinian's churches of S. Sophia, S. Eirene, and SS. Sergius and Bacchus, the palace of Justinian on the sea of Marmora and several huge cisterns.

C. Diehl, *Constantinople* (1924); Jones, *Later Rom. Emp.* 83 f. 687 ff.; M. MacLagan, *The City of Constantinople* (1968). A. H. M. J.

CONSTANTIUS (I, PW 1) (**CHLORUS**), FLAVIUS VALERIUS (Fl. Iulius before he became Caesar; the nickname Chlorus occurs first in Byzantine sources), b. A.D. 250 of Illyrian stock, served with distinction as officer and governor, and was called by Diocletian in A.D. 293 to become Maximian's Caesar in the West. He had earlier married Theodora, stepdaughter of Maximian,

and put away Helena, his concubine, the mother of Constantine.

The first task allotted to Constantius was the recovery of Britain, held by the usurper Carausius. In 293 he stormed Boulogne; but Allectus, who murdered Carausius, was left in peace for three years. In 296 Maximian came up to guard the Rhine, and Constantius and his praetorian prefect, Asclepiodotus, put to sea. Asclepiodotus, landing in fog near Clausentum (*Bitterne*), routed and killed Allectus in Hampshire. Constantius, separated from him, came up the Thames and reached London in time to cut to pieces the marauding survivors of the beaten army. Constantius showed mercy to the island and restored its defences. In 298 he gained a spectacular victory over the Alamanni at Langres.

The abdication of Diocletian in A.D. 305 left Constantius in the West as senior Augustus, but hampered by his Caesar, Severus, a creature of Galerius. Constantine remained with Galerius, virtually as a hostage. In 306 Constantius asked that his son might be restored to him. Constantine, travelling with desperate speed, reached Britain just in time to help his father in a last victory, over the Picts, and to succeed him when he died at York.

Constantius was an able general and a generous and merciful ruler. Though not a Christian himself, he was as lenient to the Christians under persecution as his loyalty to Diocletian would allow, and stopped as soon as Diocletian abdicated. The stories of his descent from Claudius (q.v.) 2 Gothicus are inventions of Constantine's propagandists.

J Moreau, *Jahrbuch für Antike und Christentum*, II (1950), 148 ff.
H M, B H W.

CONSTANTIUS II (FLAVIUS JULIUS CONSTANTIUS), Roman Emperor (A.D. 324 to 361), was the third son of Constantine the Great. On his father's death in 337 he became ruler of the East. His reign was largely spent in repelling Persian attacks and in suppressing usurpers. He appointed his cousin Gallus (q.v. 8) to rule as Caesar at Antioch, but put him to death in 354. In 355 he appointed Julian to act as Caesar in Gaul. Julian rebelled at Paris in 361, and Constantius died at Mopsucrae on 3 Nov. while marching to suppress him. He was deeply interested in theology and was an opponent of Athanasius (q.v.), but despite many efforts he solved none of the religious questions which vexed the Empire in his day.

E. A. T.

CONSTANTIUS III, Roman Emperor in A.D. 421, married in 417 Honorius' sister Placidia (q.v.), who bore him the future Emperor Valentinian III. In 418 he settled the Visigoths in south-western Gaul. Appointed Augustus in Feb. 421, he died in Sept. in that year.

E. A. T.

CONSTELLATIONS. The first evidence of knowledge of the constellations possessed by the Greeks appears in the poems of Homer and Hesiod. Homer speaks of the Pleiades, the Hyades, Orion, the Great Bear ('also called by the name of the Wain, which turns round on the same spot and watches Orion; it alone is without lot in Oceanus' bath', *Od.* 5. 271 f.), Sirius ('called Orion's dog', 'rises in late summer', 'a baleful sign, for it brings to suffering mortals much fiery heat'), the 'late-setting' Boötes. Hesiod mentions the same stars, his name for Boötes being, however, Arcturus. The inference is that, at first, the observations of the sky were all directed to practical utility, the needs of persons following various callings, the navigator, the farmer, etc. The stars served as signs to guide the sailor, or as indications of the

weather, times, and seasons. Calypso tells Odysseus to sail in such a way as always to keep the Great Bear on his left. Hesiod marks the time for sowing at the beginning of winter by the setting of the Pleiades in the early twilight, or the early setting of the Hyades or Orion, the time for harvest by the early rising of the Pleiades, threshing-time by the early rising of Orion, vintage-time by the early rising of Arcturus and so on; for Hesiod, spring begins with the late rising of Arcturus. Then, later, legends came to be attached to the various constellations, often owing to supposed resemblances in shape, and poetic fancy played its part.

2. (1) *Orion*, Ὠρίων (*Ὠριάν*, Hesiod), was perhaps the constellation to which a Greek legend was earliest attached. A Boeotian legend made him a mighty hunter, ultimately killed by Artemis, or, according to a later version, by a scorpion sent by her. In art he is represented with a club in his right hand, a sword dependent from his belt (ἐσφίρης Ὠρίων, Eur. *Ion* 1153) and a lion's skin on his left arm. In Ps.-Eratosthenes *ad Arat.* an alternative name Ἀλεκτροπόδιον ('cock's foot') appears. The three stars of the belt were in Latin *Iugulae*, and in Greek astrological texts *Χάρτες* ('graces').

(2) *The Great Bear*, ἡ Ἄρκτος = the Wain, ἡ Ἀμαζα, which is no doubt the earlier name. To the former name attaches the story that Callisto, beloved of Zeus, was turned into a bear by Hera and thereon placed by Zeus in the heavens. Another story is that the two bears were placed in the heavens as constellations, and that they were two bears which had hidden and nourished Zeus, when a youth, in Crete for a year (Aratus 30-5). With the 'Wain' is connected the name of the star called Βοώτης ('oxen-driver') by Homer; when the Wain becomes the Bear, Boötes is naturally called Arcturus (Ἀρκτοῦρος, 'Bear-guard', Hesiod; Ἀρκτοφύλαξ, Eudoxus and Aratus 92). Another name for the Great Bear was Ἐλίκη (Aratus 3; Apoll. Rhod. 3. 1105) implying convolutions; one interpretation is 'snail's-house', from a supposed resemblance in shape; the other rests on the revolution of the Bear round the pole. The Romans called it *Septentriones*, 'seven threshing-oxen' (*trio* — 'threshing-ox' in Varro and Gellius) going round and round. Βοώτης would be the suitable attendant for such a team, and perhaps there was an earlier Greek name corresponding to *Septentriones* which dropped out of use.

(3) *The Little Bear*. The Greeks, we are told, sailed by the Great Bear, the Phoenicians by the Little Bear (Aratus 39). Thales advised the Greeks to follow the Phoenician lead, the reason being that the Little Bear is the better guide to the position of the north pole. The Little Bear was commonly called *Cynosura* (κυνόσουρα, 'dog's tail', Aratus 36); another name was 'Callisto's dog' (schol. in Arat. 27).

(4) *Boötes* (Βοώτης), *Arcturus* (Ἀρκτοῦρος, Ἀρκτοφύλαξ) see *Great Bear*.

(5) *Hyades*, Ὕαδες, a group of stars, the morning setting of which marked for Hesiod the time for ploughing. The name is derived from ὕς, 'swine', and it was regarded as representing a sow with four young; this is a more likely derivation than the alternative one from ὕειν, 'to rain', because it corresponds to the Latin *suculae* (Cic. *Nat. D.* 2. 111).

(6) *Pleiades*, a group of seven stars near the Hyades. Hesiod calls them the seven daughters of Atlas by Pleione; their names were Hecyone, Merope, Celaeno, Electra, Sterope, Taygete, Maia (Aratus 262 f.). The name Pleiades may be derived from πλεῖν, 'to sail', since their early rising in spring marks for Hesiod the beginning of the sailing season. The spelling of the word as Πλειάδες is, however, supposed to justify the early Greek view of them as a flight of doves. Another significant name for them is βότρυς, cluster or bunch of grapes

(schol. on *Il.* 18. 486). The Latin name is *Vergiliae* (Plaut. *Amph.* 275), perhaps derived from *virga*, a twig.

3. *The Zodiac.* The Greeks obtained their knowledge of the twelve signs of the zodiac and the constellations in them from the Babylonians, to whom the Egyptians of the Ptolemaic period were similarly indebted. It was probably Cleostratus of Tenedos who imported this knowledge into Greece in the second half of the sixth century B.C. (see Pliny, *HN* 2. 3; Hyginus, *Poet. Astr.* 2. 13). The pictorial representations of the constellations, or most of them, passed over to Greece, as has been inferred from a number of boundary stones (see L. W. King, *Babylonian Boundary Stones in the British Museum*, (1912)).

(7) *The Ram* (*Κριός*). According to Pliny this name was first used by Cleostratus. The story is that it was the ram with the golden fleece which bore Phrixus and Helle over the sea (whence 'Hellespont'). It was sacrificed to Zeus, who placed it among the stars; the fleece was the object of the Argonauts' quest.

(8) *The Bull*, *Ταύρος*, is in the Greek legend the bull of the Europa-story.

(9) *The Twins*, *Δίδυμοι*, *Gemini*. They were variously identified as Castor and Pollux, Amphion and Zethus, Theseus and Heracles, Apollo and Heracles, Triptolemus and Iasion. The notion of them as Apollo and Heracles seems to go back to the time when the Greeks first became acquainted with the signs of the zodiac; they appear, however, in Babylonian texts.

(10) *The Crab*, *Κράβανος*, *Cancer*, the fourth sign of the zodiac, was easy, from its appearance, to picture as a crab. An earlier name for it was *ὄνω φάτινη*, 'Asses' Crib' (see Aratus 898 f.), representing a crib and two asses.

(11) *The Lion*, *Λέων*, *Leo*, the fifth sign, was associated with the hot harvest-season. Greek legend made it the Nemean lion killed by Heracles. Its main star is *Regulus*.

(12) *The Virgin*, *Παρθένος*, *Virgo*, the sixth sign, is represented with wings and holding an ear of corn (*σταχὲς*, *spica*). Aratus tells the story that she was the daughter of Zeus and Themis and dispensed justice on the earth, but, when men became vicious, she was translated to heaven; hence the alternative name of the constellation, *Δίκη*, Justice. She became, later, associated with the succeeding sign, the *Scales*, *Ζυγός*, *Libra*; hence the treatment of *Spica* by Aratus as a separate constellation. Other names attached to the constellation from time to time were: Demeter (because of her holding the ear of corn), Athena, Isis, Atargatis, Tyche (— *Τύχη*, Ps.-Eratosth. *Cat.* 9), and Erigone, daughter of Icarus or Icarus (Manilius 5. 251).

(13) *The Scales*, *Ζυγός*, *Libra*. The original Greek name was *χηλαί*, *Claws* (of the Scorpion). The name *Balance* is of Babylonian origin. The *Scales* were at first represented as held in the claws of the Scorpion; later, separated from the Scorpion, they were pictured either alone or as held by a female or male figure.

(14) *The Scorpion*, *Σκορπίος*, is of Babylonian origin. The Greek story is that it was sent by Artemis to kill Orion.

(15) *The Archer*, *Τοξότης*, *Sagittarius*, was represented sometimes as a Centaur, sometimes as a creature with two feet, standing upright. Ps.-Eratosth. (*Cat.* 28) says of him: 'Most men call him a Centaur. Others dispute this, because he does not appear to have four legs, but stands upright and shoots with his bow. But none of the Centaurs used a bow.' The figure is of Babylonian origin.

(16) *The Sea-Goat or Horned Goat*, *Αἰγόκερως*, *Capricornus*, the tenth sign of the zodiac, is of Babylonian origin. It is a Goat-Fish, with the head of a goat and a fish-tail. Epimenides identified it with the Cretan goat

which brought up Zeus; others make it Pan under the name *Aegipan*. Theogenes caused it to be adopted as part of the Arms of Augustus, and it was put on the banners of the Augustan legions (G. Thiele, *Antike Himmelsbilder* (1898), 69).

(17) *Aquarius*, *Υδροχόος*, *water-pourer*. 'The man that holds the watering-pot' of the rhyme is represented as pouring out water from an urn variously described as *ὕδρια*, *κάλπις*, or *κάλπη*, *urna*. Legends identify it sometimes with Deucalion, sometimes with Ganymede.

(18) *The Fishes*, *Ἰχθύες*, *Pisces*, one north and one south, tied together by *δεσμά* or *συνδεσμός* (Aratus 243, 245). The northern one was also called 'swallow-fish' by the Chaldeans = *χελιδονία ἰχθύς*, the other *ὁ νότιος* (schol. in Arat. 242, Boll 196). The idea of this constellation came perhaps from the *Water* (*ὕδωρ*) of which Aratus made a separate constellation (Thiele 13).

4. Beginning with the fifth century the constellations (their observed positions, risings, and settings) were used by Meton, Euctemon, and Democritus for the purposes of the calendar (*παραιτήματα*) and weather-indications (*ἐπισημύσεις*). By the time of Eudoxus (first half of 4th c.) the following constellations were known and described in literature, with various legends attached. We take first those in the northern hemisphere.

(19) *Lyra*, *Λύρα*, containing the bright star Vega, is mentioned in connexion with the Twins. Apollo being one of the Twins, the association is appropriate, as legend has it that Apollo presented the lyre to Orpheus. The Lyre was used by Democritus and Euctemon for calendar-making (Diels, *Vorsokr.* 5 ii. 143); it was also of significance in the calendar of Caesar (Plut. *Caesar*, 50).

(20) *The Swan* (*Ὀψς*, 'Bird', *Olor*, *Cygnus*), belonging, like the *Eagle*, to the Milky Way, touches the northern tropic circle. Aratus (279) says that its right wing stretches out to the right hand of Cepheus. Legend connects it with the story of Leda and the Swan.

(21) *The Eagle*, *Ἄετος*, *Aquila*, was used by Democritus (Diels, loc. cit.). According to the legend, Zeus used the Eagle to carry Ganymede to Olympus.

(22) *The Dolphin*, *Δελφίς*, *Delphinus*, known to Democritus (Diels, *Vorsokr.* 5 ii. 144), and used for the calendar by Euctemon and Eudoxus, was supposed to have been placed in the heaven by Poseidon for having helped him towards his marriage to Amphitrite.

(23) *The Horse*, *ἵππος*, *Equus*, a constellation on the equator with back southwards; according to Aratus (283) his head is touched by the hand of the *Υδροχόος*, 'water-pourer', in the *Catasterismi* and later he became Pegasus.

(24) *The Crown* (northern), *Στέφανος*, *Corona*, is mentioned by Aratus (71), next after the *Kneeler* (Heracles), as placed in the heaven to commemorate Ariadne; also used for the calendar by Euctemon.

(25) *The Charioteer*, *Ἰνίοχος*, *Auriga*, a constellation between the Twins, the Bull and the north pole, was first conceived as a man holding reins and driving a horsed chariot (Thiele 4. 28; F. J. Boll, *Sphera* (1903), 111); he was then combined by astronomers with a still older constellation, the goat, *Αἴξ*, *Capella*, with two kids (*Ἐπιφύοι*), so that he carries the former on his shoulder and the latter on his left hand. Legend associated him with Bellerophon.

(26) *The Kneeler* (*ὁ ἐν γόνασιν*) is described by Aratus as 'like to a toiling man resting' on one knee with both arms raised, and the tip of his right foot on the head of the Dragon. He is represented as Heracles, with a club in his right hand and the lion's skin on his left arm, in his fight with the Dragon which watched the Garden of the Hesperides. Others identified him with Theseus, Ixion, Prometheus, etc.

(27) *The Serpent-holder* (*Ὀφιοῦχος*, *serpentarius*) holds

a serpent in his hands. His head is near and opposite to the Kneeler; he is above the Scorpion. Identified by ps.-Eratosth. *Cat.* 20 with Asclepius, and so with Ὑγιειν.

(28) The *Dragon*, Δράκων, *Draco*, passes in and out enclosing the Bears in coils turned opposite ways. Its head is under the foot of the Kneeler (Heracles). It was variously identified with the dragon killed by Cadmus, the dragon which watched over the Garden of the Hesperides, or the Python killed by Apollo.

(29) *Cassiopeia* (earlier spelling *Cassiepeia*), a group of stars represented (a) by Aratus (192-3) as in the form of a key, (b) as a queen sitting on a throne with arms uplifted as if in agony about her daughter Andromeda. In another picture she is shown chained to two trees.

(30) *Andromeda* is represented by Aratus (203) as having her hands bound, agreeably to the story (cf. Eur. fr. 124 N.).

(31) *Perseus* is pictured running, unclothed save for a chlamys, with a sword in his right hand, wings on his feet, and Medusa's head in his left hand. Aratus (249-50) does not mention the Gorgon's head. The constellation includes Algol (Arabic: *Head of the Demon*).

(32) *Cepheus*, husband of Cassiopeia and father of Andromeda. His position in the heavens is described by Eudoxus (ap. Hipparch. in *Arat.* 1. 2. 11) and Aratus (179 f.). His upraised right hand touches the Swan's right wing; his feet are just below the tail of the Little Bear.

(33) The *Arrow* (Ὀϊστός, *Sagitta*) is under the Eagle. It is supposed to represent the arrow with which Heracles killed the Eagle gnawing the liver of Prometheus.

(34) The *Triangle* (called Δελτωίδον, Aratus 233) is below Andromeda, between her and the Ram (Eudoxus ap. Hipparch. in *Arat.* 1. 2. 13).

The southern constellations are the following:

(35) *Cetus* (Κῆτος, the *Sea-Monster* or *Whale*), represented as the Sea-Monster sent to kill Andromeda, is some distance south of her and Perseus. Its head is on the equator, near to the feet of the Ram (cf. Aratus 354). It is said to occupy more space in the heavens than any other constellation.

(36) The *Eridanus* (or Ποταμός, *River*), alternatively called Oceanus and by some identified with the Nile. Eudoxus described it as Ποταμός, starting from the left foot of Orion and lying below the Cetus (Hipparch. in *Arat.* 1. 8. 6). The legend connects it with Phacethon who fell into it when struck by Zeus with a thunderbolt. Later combined with ὕδωρ from Aquarius (Boll 136-8).

(37) The *Hare* (Λαγώς, *Lepus*), a constellation described as under the feet of Orion and pursued by the Great Dog (Sirius) behind it (Aratus 338).

(38) The *Great Dog*, Κύων, *Canis Major*. Its feet lie, like the head of the river Eridanus, on the southern tropic (Eudoxus ap. Hipparch. in *Arat.* 1. 10. 37). The bright star of the constellation, *Sirius*, was known to the Egyptians as *Sothis*; the early morning rising of Sirius more or less coincides with the beginning of the rising of the Nile.

(39) *Procyon*, Προκύων, *Antecanis*, the *Little Dog*, was called Procyon because its morning rising is just before that of Sirius, its position being a little more to the north (schol. in *Arat.* 450. It is just under the Twins. Cf. Hipparch. in *Arat.* 2. 2. 13, etc.).

(40) *Argo*, Ἀργώ, is described by Aratus (349-50) as being marked by stars only in the half of the ship from the mast to the stern. Hipparchus objects to this part of the description. Argo's position is near the hind legs and the tail of the Great Dog.

(41) The *Southern Fish* (Ἰχθύς Νότιος, *Piscis Australis*) is described by Aratus (386-8) as being under the Sea-Goat (*Aiyόκερως*) and turned towards the Cetus. It receives the water poured out by Aquarius. It is alternatively called the *Great Fish* (schol. in *Arat.*).

(42) The *Water-Snake* (Υδρα, Aratus 444, 519; Ὑδρας Hipparch. in *Arat.* 1. 11. 9). Its head reaches the middle of the Crab, its coils are below the Lion and its tail above the Centaur. On its coils respectively are the *Bowl* (Καρτήρ) and the *Raven* (Κόραξ), a representation which is of Babylonian origin. It was identified with the Hydra killed by Heracles (schol. in *Arat.* 443). The scholium also has the story that the Raven is a servant of Apollo who was sent to fetch a cup of pure water for a sacrifice; the servant found a fig-tree on the way and waited for the figs to ripen; ultimately he carried back to Apollo a snake and the cup, saying that the snake had prevented him from drawing the water from the spring.

(43) The *Centaur* (Κένταυρος). According to Eudoxus (ap. Hipparch. in *Arat.* 1. 2. 20) and Aratus (501-3) its back is along the winter tropic, like the Argo and the middle of the Scorpion; Aratus says (437-8) that the part like a man is under the Scorpion and the hinder (equine) part under the *Claws*. Hipparch. in *Arat.* 1. 8. 19-23, correcting this, says that it is almost wholly under Vugo except for the right shoulder, right hand, and forelegs, which are partly under the *Claws*. In his left hand he is supposed to hold a thyrsus, and a hare dependent; on his right lies an animal (θηρίον) which has been differently understood as a dog or a wolf or a panther (Boll 143-8).

(44) The *Altar* (Θυστήριον, *Arat.*) is in front of the forehead of the Archer (between them and the fore-foot of the Centaur). Aratus uses the name θυστήριον (403), Eudoxus and Hipparchus θυμιατήριον (Hipparch. in *Arat.* 1. 8. 14; 11. 9, etc.); so Ptolemy.

(45) The *Southern Crown*, Στέφανος Νότιος, is under the feet of the Archer. It is probably identical with the nameless stars διανοταί κύκλοι in Aratus (400). The name Στέφανος is later than Hipparchus but is used by Geminus and Ptolemy. Alternative names, according to schol. in *Arat.* are Οὐρανιάκος, Prometheus, wheel of Ixion (Ἰξίωνος τροχός). Others again call it πλοῖον (Boll, 150).

5. We may assume that Eudoxus gives in his works, entitled *Phaenomena* and the *Mirror* (Ἑνοπτρον) respectively, a description of all the constellations known in his time. According to Hipparchus (In *Arati et Eudoxi phaenomena* 1. 2. 2) the books were separate works, though they agreed in all but a few particulars. Hipparchus quotes freely from both. The poem of Aratus, *Phaenomena*, was a popular version of Eudoxus so far at least as lines 19-732 are concerned. The commentary of Hipparchus gives three names which do not appear in Aratus: Πρόπους = η of the Twins; in a text from Teucros a variant Τρίπους occurs; as to this see Boll 126 f.); Προτρονήτηρ, *Vindemiatrix*, herald of the vintage = ε of *Virgo*; *Canopus*, omitted in Aratus, according to schol., because not visible in Greece, = α of *Argo*: on this see Hipparch. in *Arat.* 1. 11. 7. Called the 'pilot of Menelaus'.

6. Geminus (*Εἰσαγωγή εἰς τὰ φαινόμενα*, c. 3) gives a list of the constellations, which he divides into three classes, those in the zodiac and those to the north and south of it respectively. The list does not differ substantially from that given above, but Geminus mentions separately the following stars:

The *Crib* (Φάνη); two *Asses* (ὄνοι): as to these see under *Crab* (10) above; Καρδία λέοντος (the Heart of the Lion, *Cor Leonis*, which Hipparchus calls ὁ ἐν τῇ καρδίᾳ τοῦ λέοντος), with the alternative name Βασιλίσκος, *Regulus*; Αἰνοί, *Bands*, between the two fishes in the constellation of that name, and Συνδεσμός, *Knot* (see *Fishes* (18) above); Ὀφίς, the *Snake* held by Ophiuchus; Προτομή Ἰππου καθ' Ἰππαρχον = *Equuleus*, *Little Horse* (apparently Hipparchus has not the name, but Ptolemy has); Θυραδόλογος, *Thyrsus-staff*, which according to Hipparchus 'the Centaur wields'; Ὑδωρ, the *water* from Aquarius (see *Eridanus* (36) above); Κηρύκειον καθ' Ἰππ-

αρχον, 'Herald's staff, according to Hipparchus' (= *Caduceus*), mentioned by Valens as held in Orion's left hand (perhaps Egyptian in origin, Boll 167); *Γοργόνιον*, 'the Gorgon's Head, 'at the end of Perseus' right hand'; 'the small stars close together at the end of Perseus' right hand are made into the *Ἀρπη* (Sickle)'; *Βερενίκης πλόκαμος*, *Coma Berenices*, so called by the courtier-astronomer Canon in honour of Berenice and celebrated in the poem of Callimachus: Ptolemy (*Alm.* 2. 56) calls this last constellation *Πλόκαμος* simply.

7. The *Milky Way*, *Γαλαξίας κύκλος*, is described by Aratus (400) as 'that wheel with glaring eyes all round which they call Milk'. Democritus was the first to recognize that it consisted of stars packed very closely together. The name arose out of the legend of Hera's milk which was spilt when she refused the breast to the infant Hercules. Popularly and poetically it was variously regarded as the way to the Home of the Gods, the one-time orbit of the sun, Phaethon's course, the souls' meeting-place, etc.

8. The positions of the various constellations and stars in the heavens were shown on globes or 'spheres'. Even Thales and Anaximander are credited by the Doxographi with the construction of such globes. Eudoxus is certain to have had one; so had Hipparchus; and Ptolemy gave detailed instructions for the construction of a globe which would even allow for the change in the position of the poles with precession (*Alm.* 8. 3). The globe on the shoulders of the Atlas Farnese in the Naples Museum represents such a globe, and is attributed to a date not later than A.D. 150. It shows the constellations with the principal great circles on the heavenly sphere, but not individual stars; the positions of the constellations show that the artist avoided the mistakes of Aratus pointed out by Hipparchus; he was aware, and made use, of Hipparchus' corrections. A fragment of a similar globe of blue marble is preserved in the Berlin Museum (No. 1050 A); this has separate stars shown in yellow colour within the contour of the figures representing the constellations. T II.

9. We know, through fragmentary preserved astrological literature, that in Egypt of the Hellenistic-Roman period many fanciful 'constellations' were invented which may reflect, at least in part, late Egyptian and Babylonian traditions. These new groupings were distinguished as the *sphaera barbarica* in contrast to the conventional *sphaera graecamca*. The first evidence for this distinction is found with Nigidius Figulus (1st c. B.C.), later on with Manilius (3) and Firmicus Maternus (qq.v.). The constellations of the *sphaera barbarica* had little influence on astronomy but greatly affected Islamic, Hindu, and finally western astrology and its artistic representations.

10. A 'catalogue of stars' has as its purpose the localization of individual stars in a precise fashion, enabling later astronomers to establish changes in stellar positions. The first catalogue of this type, listing probably between 800 and 900 stars, was compiled by Hipparchus in the second century B.C. The ways in which Hipparchus defined the positions of stars is known to us through his *Commentary* to Aratus and Eudoxus; the most important method of describing the location of a star consists in giving the distance of the star from the north-pole and the point of the ecliptic at which the great circle from the pole to the star meets the ecliptic. These mixed equatorial ecliptic coordinates appear again in Indian astronomy (so-called 'polar longitudes'). There is no evidence for the consistent use of ecliptic coordinates; in particular, latitudes (perpendicular to the ecliptic) are never attested.

The first catalogue of stars in the modern sense of the word is contained in Book 7 of the *Almagest* (for A.D. 137). There one finds for 1,022 stars, distributed among

forty-eight constellations, their ecliptic co-ordinates and magnitude (ranging from 1 to 6). This catalogue of stars remained the prototype for practically all major oriental and western catalogues until modern times.

CONSTITUTIONES, the generic name for legislative enactments by Roman Emperors, which were made in different forms. In the first place the Emperors possessed the *ius edicendi* like all higher magistrates (see *EDICTUM*); imperial *edicta* were issued for enactments of a general character (cf. Caracalla's edict on citizenship, q.v.), to a less extent for law reforms. This purpose was better served by *decreta* (decisions in civil or criminal trials passed by the Emperor) and *rescripta* (imperial decisions upon special points of law, in answer both to petitions, *libelli*, addressed to him by a litigant, and to the inquiry of a judicial official in complicated cases, *relationes*). The *rescripta* were also called *epistulae*, when directed in the form of a letter to the inquiring official or *subscriptiones* when written on the *libellus* itself and signed by the Emperor. Such *constitutiones*, although in form they merely interpreted existing law, often in substance laid down new rules. The Romans had no theory of the binding force of precedent in general, but such rulings, coming from the Emperor, were regarded as authoritative for future cases, unless their context showed them to be 'personal'. In the later Empire attempts were made to limit the general effect of *rescripta*. Another type of *constitutiones* was the imperial instructions (*mandata*) given to officials, especially to provincial governors. These were more concerned with administrative matters, but exceptionally they touched civil law, e.g. in dealing with legal relations (marriage, wills) of military persons.

At the beginning of the Principate there was no clear basis for the Emperor's legislative power, apart from *edicta* as expressions of his magisterial *imperium* (*proconulare*). The first Emperors used therefore to give effect to their legislative intentions by means of the Senate, before whom they pronounced personally (*oratio*) or by a *quaestor* their motion for approval by the senators. The resolution of the Senate became later a mere formality, so that an imperial *oratio* was simply a kind of publication of an imperial law. By the middle of the second century, however, *constitutiones* themselves were recognized as having the force of law (*legis uicem* [*iugorem*] *optinent*). The numerous quotations of imperial rescripts in the works of the classical jurists excerpted in the *Digest* show how productive was this activity of the Emperors in the times of the Antonines and their successors. From the time of Diocletian and Constantine, at the latest, the legislative power of the Emperors was formally and clearly unlimited: they issued directly general enactments (*leges generales*), laying down new legal rules with

unrestricted validity. For collections of constitutions, see *CODICX*.

For bibliography see under LAW AND PROCEDURE, ROMAN, § 1 (books on History and Sources). A. B., II. N.

CONSUL, the supreme civil and military magistrate of Rome under the Republic. The etymology of the word *consul* is uncertain: it has variously been derived from *cum-esse* (Niebuhr), from *cum-salire* (Mommsen), and from *consulere* (De Sanctis). In any case it was not the original designation of the chief magistrates: Livy (3. 15. 12) and the Greek translation of their title (*στρατηγός* or *στρατηγός ὑπατος*) show that they were in the first instance called 'praetores'. This name (from *prae-ire*, to march ahead) and its Greek equivalent emphasize the military character of the magistracy. The name of 'consul' may have come into use earlier, but it is unlikely to have become the official title of the eponymous praetors until some time after a third praetorship had been created in 366 B.C. (see *PRÆTOR*).

According to the traditional account, which has the support of the *fasti* (q.v.), the dual magistracy dated from the first year of the Republic in 509. The two principles of annuality and equal collegiality constituted the answer of the Romans to the threat of a return of monarchical rule. This view has its adherents among moderns, but many alternative theories have also been propounded in recent years. A small minority see the transition from monarchy to Republic as a gradual evolution. Others who accept the traditional 'revolution' claim to find the antecedents of the consuls in two civil or military assistants of the kings. Others again believe that the dual consulship of equals was a comparatively late development from what in the early fifth century had been either a single magistracy or a college of two or more unequal partners.

Analysis of the *fasti* suggests that the tradition may have been wrong in regarding the consulship as an office from which plebeians were at one time excluded by law. In the fifth century, however, plebeian consuls were few, and it was not until 367 that the Licinian plebiscite provided for the compulsory election of at least one consul of plebeian status. Assisted perhaps by the creation of a third praetorship in 366, the *comitia* repeatedly violated this enactment in spirit, if not in letter, during the next twenty-five years, and it was only after what was probably a more precise formulation of the measure in 342 that the election of a plebeian became a regular annual occurrence. Even then the patricians continued to fill the other consulship until 172.

Throughout the Republic candidates for the consulship were elected by the people in the *comitia centuriata*, but, as they were proposed by the senators from their own ranks, liberty of choice was greatly restricted. It disappeared under the Empire when the *comitia centuriata* were suppressed and the Emperors either recommended the candidates or themselves assumed the consulship. Under the Republic the consuls entered office on 15 Mar. (after 153 B.C. on 1 Jan.) and retained it for a whole year; under the Empire they retained it from two to four months only. Consequently, while during the Republic consuls, except *suffecti* (that is, other men appointed in case of the death, illness, or resignation of a consul), both gave their names to the year, despite differences of rank arising from their age (*collega maior*) or the polling (*collega prior*), consuls during the Empire did so only if they entered office on 1 Jan. (*consules ordinarii*, to be distinguished from their successors *consules suffecti*). A further distinction during the Empire depended on whether consuls were single or married, and the number of their children. Moreover, the Emperors often appointed themselves or their relatives and protégés consuls, entirely

disregarding the legal age limits, which had been carefully fixed in 180 B.C. by the *Lex Villia Annalis* (see *VILLIUS*). In the age of Cicero no one under forty-two could be elected consul; under the Empire even children could be invested with the office, which was conferred upon Honorius at birth. But the consulship survived in the Western Roman Empire until A.D. 534.

(on origins); Ogilvie, *Comm. Livy* i-5, 230 f.; F. Cassola, *I giuristi politici romani* (1962); A. E. Astin, *The Lex Annalis before Sulla* (1958), A. Lippold, *Consules* (Bonn, 1967) (dealing with 264-201 B.C.). For lists of consular *Fasti*, A. Degraffi, *Inscr. Ital.* xiii, i (1947), Republican, and *I Fasti consulari dell' impero romano* (1952); Broughton, *MRR*; E. J. Bickerman, *Chronology of the Ancient World* (1968), 170 ff. P. T.; E. S. S.

CONSUS, a Roman god whose festivals (*Consualia*) were on 19 Aug. and 15 Dec., possibly in connexion with the ending respectively of the harvest and the autumn sowing. He seems connected with Ops (q.v.), by the dates of his festivals. The most reasonable explanation of his name is that it is connected with *condere* and he is the god of the store-bin or other receptacle for the garnered grain. This, as corn was often stored underground, may account for his subterranean altar in the Circus Maximus, uncovered only on his festival days (Varro, *Lang.* 6. 20; Dion. Hal., *Ant. Rom.* 2. 31. 2); for its alleged inscription (Tert., *De Spect.* 5) see v. Blumenthal and Rose, *ARW* 1936, 384; 1937, 111. The ancients commonly supposed his name to have something to do with *consilium* (Dion. Hal., *ibid.* 3) or, because his altar lay in the Circus, identified him with Poseidon Hippios (Livy 1. 9. 6). He had also a temple on the Aventine, probably vowed or dedicated by L. Papirius Cursor about 272 B.C. (see Platner-Ashby, 141). His characteristic offering was firstfruits (Dion. Hal., *ibid.*). Horses and asses were garlanded and rested on his festival (Plut., *Quæst. Rom.* 48, whereon see Rose). Whether he was originally honoured with circus games is doubtful.

Latte, *RR* 72.

H. J. R.

CONTAMINATIO: a word used by modern scholars to express the procedure of Plautus and Terence in incorporating material from another Greek play into the play which they were 'translating'. The precise sense in which Terence's critics intended *contaminare* (*Andr.* 16, *Heaut.* 17) is not clear, for the word was being used not descriptively but pejoratively; but the concern of the critics was with the Greek plays and their intention to preserve them from violence. The practice which it was intended to condemn is clear since Terence makes it explicit (*Andr.* 9 ff.) that it referred to his 'translating' Menander's *Andria* and incorporating some parts of the *Perinthia*. He goes on to claim the precedent of Naevius, Plautus, and Ennius, and prefers their *neglegentia* to the *obscura diligentia* of his critics (these words too are not being used descriptively, but in the interest of producing assonance and antithesis—as is common in the ambitious rhetoric of Terence's prologues). The fragments of Naevius and Ennius are too meagre to judge, but Plautus (q.v.) gives evidence of the procedure criticized in Terence.

G. E. Duckworth, *The Nature of Roman Comedy* (1952), 202 ff. G. W. W.

CONTIO (*conventio*) was a public gathering at Rome which even non-citizens, though illegally, used to attend. It was summoned by a magistrate or priest, either as a preliminary to legislation, in which case the measures to be passed were announced, or as a political assembly, called to discuss questions of public moment or the programmes of the political leaders. A magistrate could cancel a meeting summoned by an inferior (*contionem avocare*),

and a tribune could veto or adjourn it (*intercessio* and *obnuntiatio*). The right of addressing the audience (*contionem dare*) depended on the will of the president who addressed the assembly from the platform (*ex superiore loco*), while the debaters spoke *ex inferiore loco*. The meetings generally took place near the rostra, in daytime, on *dies fasti*. As the kings had done, so the Emperors alone summoned the meetings to address the people in solemn circumstances.

Mommsen, *Röm. Staatsr.* p. 191 ff.; G. W. Rotsford, *The Roman Assemblies* (1909), 139 ff.; A. H. J. Greenidge, *Roman Public Life* (1911), 158 ff.

CONTRACT, ROMAN LAW OF. For the earliest contractual forms, see NEXUS, STIPULATIO. The classical law had no single principle of contract but rather, on the one hand, a form (*stipulatio*) into which any agreement could be cast, and on the other, a list of contracts (i.e. of typical circumstances in which an agreement would be given legal effect). Unless an agreement were clothed in the form of a *stipulatio* or satisfied the requirements of one of the listed contracts, neither party could sue on it. According to Justinian's classification (*Inst.* 3. 13. 2), which was based on that of Gaius (3. 89), contracts arose in four ways (a) *re*, by the handing over of a thing; (b) *rebus*, by formal words (*stipulatio*, q.v.; *dotis dictio*, see MARRIAGE); (c) *litteris*, by written entries in the account book of the creditor; (d) *consensu*, by a simple agreement within defined limits. The contract *litteris* was obsolete or obsolescent in the time of Gaius, and its exact character is obscure. The 'list of contracts' mentioned above comprises in fact those arising *re* and *consensu* (and certain other specific agreements of minor importance—the so-called clothed pacts—which were made actionable in the course of time by the praetor (see FIDUCIUM) or by imperial *constitutiones* (q.v.)). The four 'real' contracts were: (1) *mutuum*, a loan for consumption, i.e. of things such as money and food which can ordinarily be used only by being consumed; the borrower was obliged to return an equivalent in quantity and quality; the payment of interest, with a maximum of 12 per cent., reduced by Justinian to 4 per cent., required a special agreement, normally a *stipulatio*; (2) *commodatum*, a gratuitous loan for use; (3) *depositum*, a handing over of a thing for gratuitous safe-keeping, the depositee having no right to use it; (4) *pignus*, a pledge (see SECURITY). The consensual contracts were: (1) *Emptio venditio*, sale. This contract is made when the parties agree on a thing to be sold and a price (in money). Thereafter, although the thing belongs to the seller until it is handed over, the buyer bears the risk of its being damaged or destroyed (unless by the fault of the seller), and is correspondingly entitled to any accruing benefit. The seller must guarantee to the buyer undisturbed possession of the thing and, in the law of Justinian, the absence of serious but latent defects of quality. (This liability for latent defects was the result of a development to which the edict of the *aediles* (q.v.) *curules* concerning the sale of slaves and beasts made a large contribution.) (2) *Locatio conductio* (hire) included not only the hiring or leasing of a movable or immovable, but also contracts of employment in the form either of the hire of services or of the placing out of a job of work to be done (distinguished in modern terminology as *locatio conductio operarum* and *operis* respectively). Here, as in sale, the reward must be fixed and in money. Where a reward was not intended or was inappropriate because of the social position of the person rendering the services, the contract would be: (3) *Mandatum*, an undertaking to perform a gratuitous service for another at his request. Even though the contract was in principle gratuitous it was common to pay an *honorarium*, and in the late classical law it was possible to claim it in a special proceeding

(cf. ADVOCATUS). (4) *Societas* (partnership), an agreement to co-operate for a common purpose, each party making some contribution, of either capital, skill, or labour, and each sharing equally, unless otherwise agreed, in profits and losses (see also COMMUNIO). These contracts were flexible not only because they rested on a formless agreement but even more because the parties were obliged to observe *bona fides* in the making and execution of them, and in the hands of the jurists *bona fides* was a fertile concept.

For agreements which did not fall within these types the praetor could grant a special action (*actio in factum*). These exceptions were eventually (but probably not in the classical law) generalized into the category of what are now, following a Byzantine terminology, called 'innominate contracts', enforced by *actio praescriptis verbis*. An innominate contract is any agreement which does not conform to any of the types listed above (e.g. a contract of exchange, which was not sale since it had no money price, or a contract of employment in which a reward was intended but was not fixed at the time of the agreement), but only if it has been performed on one side (e.g. the services have been rendered). The importance of this type of contract is that it provides a general principle which (subject to the requirement of performance on one side) fills the gaps left by the traditional typical contracts.

CONTUBERNIUM (from *taberna*) meant a 'dwelling together', as of soldiers or animals, but especially cohabitation between slave and slave or slave and free. Since a slave lacked juristic personality, a *contubernium* was not a marriage but a factual situation, at the pleasure of the owner, creating no legal consequences despite the use of such words as *uxor*, *maritus* or *pater*, even in legal texts. Children were the property of the mother's master; no slave woman could be guilty of adultery; manumission of one or both parents need not extend to their issue. It is impossible to determine how widespread *de facto* slave 'families' were: there was little place for them in Cato's estate management or in the mines, much more among urban slaves, increasing under the Empire. Despite a certain 'humanitarian' trend in imperial law (e.g. *Dig.* 33. 7. 12. 7; but cf. 33. 7. 20. 4), there was never a significant diminution of an owner's legal right to separate them.

For bibliography, see FREEDMEN; SLAVERY.

M. I. F.

CONVENTUS, 'assembly', is technically used (1) for provincial assizes; (2) for associations of Italians abroad.

(1) In most provinces, by the late Republic, assizes were held in fixed centres, in each for a defined district (later called *conventus iuridicus*). The system was probably borrowed from Hellenistic practice, and in the East Cicero still used the Greek term *διοίκσις*. The *conventus*, under the Empire, sometimes (e.g. in Spain) had their own imperial cult.

(2) By the early second century B.C., Italians (especially in the East) united for religious and other purposes under elected 'magistri'. These associations called themselves 'Italici' [later 'cives Romani']—but the Greeks from the start called them *Ῥωμαῖοι* qui [e.g.] *Argi negotiantur* (or similar informal titles). Owing to their race, and often to special concessions, they obtained a position of great local importance, and the governor would rely on them

for service on juries and on his *consilium* and for advice on local conditions. Under the Empire these *conventus civium Romanorum* (as they came to be called) even passed decrees together with Greek city authorities. In some provinces (e.g. the Gauls) local associations (each normally under a *curator*) united under a *summus curator* for the province. *Curatores* were often Romanized natives. With the spread of Romanization, especially in the West, the *conventus* naturally disappeared.

Ruggiero, *Diz. Epigr.*, s.v.

E. B.

CONVERSION, abandonment, more or less sudden, of one way of living in favour of another, a genuine phenomenon and occasionally testified to in antiquity. The most famous case is that of the young rake Polemon, who strayed into Xenocrates' lecture-room and was so impressed by his discourse on temperance that he turned philosopher (Diog. Laert. 4. 16). Horace professes (*Carm.* 1. 34) to have been converted from materialism by thunder from a clear sky, which at least shows that such a thing was supposed possible. But religious conversion, i.e. the abandonment of one religion for another, did not take place under polytheism; a believer in certain gods would not cease to believe in them because he was attracted to and became a devotee of another. A mystery-cult might attract a man to a religious life as a monastic order does today, but that again is not abandonment of former beliefs. Only Judaism and Christianity produced conversions in this sense.

A. D. Nock, *Conversion* (1933), and in *Psiculi Franz Joseph Dölger dargeboten* (1939), 165 ff., also art. 'Conversio' in *RAC*.

H. J. R.

COOKERY. The surviving evidence is regrettably incomplete for ancient methods of cookery. The only extant cookery book is that ascribed to Apicius (q.v.); but remnants of what must once have been an extensive literature (especially in Greek) are preserved by Athenaeus, and there are numerous incidental references elsewhere, especially in the Roman agricultural writings and (for the *haute cuisine* of his day) the *Cena* of Petronius. The contents of some Roman kitchens have come to light *in situ* at Pompeii, but Greek culinary objects of various periods, found in the Athenian agora and elsewhere, had for the most part been broken and discarded. Further information comes from vase-paintings and terracotta figurines.

Bread, which for the greater part of the period formed the basis of the diet, was as early as the sixth century B.C. often produced in commercial bakeries, which became increasingly common later. But it could also be baked at home, from flour ground within the household on saddle-stones or, later, rotary querns (see *MILLS*). (The mortar proper (*ἄλμος*, *pila*) was used for dehusking grain and for pounding other foods (e.g. dried fish), while the smaller *theia* (*mortarium*) was probably similar to our mixing-bowl.) The dough was kneaded on a kneading table (*κάρπτος*, *μάκτρα*) and baked either 'under the ashes'—under a tile or dome-shaped cover (*πυγυεύς*, *testu*) with burning charcoal heaped over it—or in a small oven (probably — *κρίβανος*, *hibanus*), heated from below and often portable, or else, in Roman times, in a large baking-oven (*furnus*), which was pre-heated from within, the fire being removed before cooking began. All these ovens could be used for other foods also. For the kneaded barley *μάζα*, which served the poorer classes in Greece, the dough was prepared in a large bowl after the grain had been parched on a *φρύγερρον* and perhaps roughly crushed.

Other foods could be prepared either by dry heat (grilling, frying, roasting) on a brazier (*ἐσχάρα*) or over an open fire, often with the help of spits or a grill (probably — *τάγηνον*); or else they could be boiled or stewed. For

the latter purpose pots (*χύτραι*) or covered 'casseroles' (*λοπάδες*) were used, which could be heated either in large 'barrel cookers' or on small braziers or on tripods or gridirons over charcoal burning on the hearth. Sometimes wood appears to have been burnt in the hearth and sausages, sucking pigs, etc., smoked above it, the smoke escaping through the roof or a vent in the wall. From Roman sites water-heating contrivances, at times highly ornamented, are also known, some of which suggest cooking by the *hain-marie* process.

The ancient kitchen also contained ladles, spoons, strainers, graters, meat-hooks, cleavers, knives, and the like, often very similar to their modern counterparts. In general its equipment was more portable and, at least in Greece, less tied to a purpose-built room than is usual nowadays; but many of its implements, like the cooking methods employed, show a remarkable degree of continuity, especially in Greece, from ancient to modern times. See also *FOOD AND DRINK*, *MEALS*.

L. A. M.

COPAIS, a lake, now drained, which in early days covered most of the west plain of Boeotia. It took its name from Copae on its north side. The swallow-holes on its east side were cleared and enlarged, and canals dug north and south to lead the Cephissus and other streams to them round the edge of the plain. Shafts for uncompleted tunnels were also bored on the low hills in the north-east corner and between Copais and Lake Helice on the east. The drainage works were usually ascribed to the Minyans of Orchomenus. The outlets were said to have been blocked by the Theban hero Heracles: perhaps the Thebans stopped them during their wars against Orchomenus. In classical times, in spite of attempts to drain it, the lake was always swampy, and famous for eels (*Ar. Ach.* 880 ff.). On what afterwards became an island in the lake is the Mycenaean fortress called Gla (formerly identified by some with Arne), the importance of which has been shown by renewed excavations there: a great citadel with elaborate double gates from which roads lead, especially to the site of Hagia Marina, an elaborate palace of two wings and two megara, and a great enclosed space, the so-called 'Agora', divided from the palace precinct and containing other buildings, but apparently an integral part of the whole establishment. The complex was built in Late Helladic III, and shows signs of violent destruction after no long period of use.

COPTUS (modern *Keft*), chief city of the 5th nome of Upper Egypt, on the west bank of the Nile, was the starting-place of several routes to the Red Sea, especially one eastwards to Kosser. But Ptolemy II caused this route to be less important than that to Berenice (q.v. 2), on the Red Sea, which became a well-equipped camel-track and the principal link between the Mediterranean and eastern waters. It was developed by Augustus; in the third century it temporarily fell into the hands of the native Blemmyes and was almost destroyed by Diocletian (A.D. 292), but recovered and maintained itself in the Byzantine Age. Part of a customs tariff survives on a papyrus from Coptus.

Warminster, *Indian Commerce*, 6 ff., 14 ff., 50 f., 104 f.; Kees, *PW*, s.v. 'Koptos'.

E. H. W.

CORA, modern *Cori*, strongly placed at the north-west angle of the Volscian mountains in Latium (q.v.). Latins and Volsci (q.v.) disputed its possession before 340 B.C.

After 338 B.C. it was an ally of Rome and later a *municipium*. Fine remains exist of polygonal walls and two temples.

G. Lugli, *La tecnica edilizia romana* (1957), 134 ff.; Castagnoli, *E. T. S. Stud. urb.* 13 ff.

CORAX of Syracuse (5th c. B.C.) is said to have been the first teacher of rhetoric. He perhaps taught the division of a speech into *προοίμιον*, *ἄγων*, and *ἐπίλογος*. Tisias (q.v.) was his pupil. (See RHETORIC, GREEK § 1)

L. Radermacher, *Artium Scriptores* (1951), 28 ff.; G. A. Kennedy, *The Art of Persuasion in Greece* (1963), 58 ff. D. A. K.

CORBILO (probably the equivalent of St. Nazaire or Nantes), a town of the Veneti on the Loire, to which British tin was shipped for conveyance across Gaul to Massilia (*Marseille*) and the Mediterranean coast. The transit across Gaul was made in thirty days. Scipio Aemilianus (c. 135 B.C.) met traders from Corbilo at Massilia or Narbo, but failed to extract information about Britain from them. The town declined when the Cornish tin trade languished.

Strabo 4. 190; Diod. 5. 22. Cary, *JHS* 1924, 172 ff. E. H. W.

CORBULO, GNAEUS DOMITIUS (*PW* 50, Suppl. iii), through the six marriages of his mother Vistilia (Pliny, *HN* 7. 162) was connected with many prominent families; one of his stepsisters married the Emperor Gaius. Probably *cos. suff.* A.D. 39, in 47 he was legate of Germania Inferior when he successfully fought against the Chauci led by Gannascus, but was not allowed by Claudius to go further. A strict disciplinarian, he made his troops dig a canal between the Meuse and Rhine. Proconsul of Asia under Claudius, he was soon after Nero's accession made *legatus* of Cappadocia and Galatia with the command against Parthia in the war about the control of Armenia. This started in earnest only in 58, when Corbulo had reorganized the Roman army in the East. He captured Artaxata and Tigranocerta, installed Tigranes as king of Armenia, and received the governorship of Syria. But Tigranes was driven out of Armenia, the war was renewed in 62, and at Corbulo's request a separate general, Caelennius Pactus (q.v.) was sent to Armenia. After Pactus' defeat, Corbulo obtained in 63 a *maius imperium*, restored Roman prestige, and concluded a durable agreement with Parthia: Tiridates, the Parthian nominee to the throne of Armenia, admitted a Roman protectorate. Corbulo probably did not abuse his popularity, but his son-in-law Vinicianus (q.v.) conspired. In Oct. 66 Nero invited Corbulo to Greece and compelled him to commit suicide. His daughter Domitia Longina became wife of Domitian in 70. It was the homage of the new dynasty to the name and influence of the greatest general of his time. The account of his achievements in Tacitus (*Ann.* bks. 12-15) and Dio Cassius (bks. 60-63) derives ultimately to a great extent from Corbulo's own memoirs.

M. Hammond, *Harv. Stud.* 1934, 81 ff.; Syme, *Tacitus*, see index. Portrait: F. Poulsen, *Rev. Arch.* 1932, 48 ff. A. M., G. E. F. C.

CORCYRA (*Κέρκυρα*), popularly identified with the Phaeacia of the *Odyssey*. In comparison with the bare rocks and heathland of other Ionian islands, Corcyra has an almost tropical luxuriance, thanks to its heavier rainfall. Today it is the staging-post between Greece and Italy, but, rather surprisingly, it was not always so. Its prehistoric links are with the north, not with Greece, and there is no evidence of any contact between Greek lands and Corcyra until the arrival of colonists, perhaps Eretrians at first (a tradition supported by the Euboean cow and calf among its coin types) and then Corinthians, traditionally in 733 B.C. Recent excavations have revealed Geometric pottery of the latter part of the eighth century. While there are fine architectural fragments of early

temples, Corcyra's chief artistic treasure is the splendid but terrible Gorgon pediment, which seems to epitomize the bitterness of the struggle with the mother city, Corinth. The standard of Corcyrean behaviour in war was set by Periander, the ferocious tyrant of Corinth: kidnapping of firstborns, revenged by murder among the olives. It shared with Corinth the foundation of Epidamnus (q.v.), and perhaps of other colonies in Illyria; but it resented the dominion of the tyrant Periander, and after his death it became a competitor of Corinth in Adriatic waters. Pursuing a policy of isolation, it stood out of the Persian Wars; but in 435 it was drawn into open hostility against Corinth, in consequence of a scramble for the control of Epidamnus, and to escape defeat it sought an alliance with Athens (433), which it renewed several times. It received protection from the Athenian fleet in 433, and again in 427 and 425, when Corinthian fleets attempted to co-operate with disaffected elements on the island; in 427 and 425 the Corcyrean democracy disgraced its victory by wholesale massacre of the oligarchs. In 410 Corcyra shook off the Athenian connexion, but in 375 it joined the Second Athenian League, and so drew upon itself a Spartan expeditionary force, which it beat off after a prolonged siege (373). By 360 it had again detached itself, but c. 330 it rejoined Athens in a vain attempt to prevent the intrusion of Macedonia into Adriatic waters. After the death of Alexander it became an object of dispute between various mainland dynasts, Cassander, Demetrius, and Pyrrhus, and was occupied for a time by the Syracusan tyrant Agathocles. In 229 it was captured by the Illyrians, but was speedily delivered by a Roman fleet and remained a Roman naval station until at least 189. At this period it was governed by a prefect (presumably nominated by the consuls), but in 148 it was attached to the province of Macedonia.

CORDUBA (modern *Cordoba*), a city on the middle Baetis (*Guadalquivir*), founded by M. Claudius Marcellus in 152 B.C., and raised to colonial status, with the title *Patricia*, some time after 49 B.C. It was sacked by Caesar in 45 for its Pompeian allegiance, and later settled with veterans by Augustus. It was the chief centre of Roman life and letters in the republican Spains; under the Empire it had few rivals, and retained capital importance in the administration of Baetica. Its republican poets were succeeded by the Senecas and Lucan; its Bishop Hosius (Ossius) was the dominant figure of the Western Church throughout the earlier fourth century. Its wealth was sustained by oil, wool, precious metals nearby (*Mons Martunus*), a flourishing business interest, and a waterway navigable by small ships. Decline cannot be inferred from the scantiness of Roman remains, overlaid by its brilliant Moslem period.

M. I. H.

CORFINIUM, town of the Paeligni (q.v.) on a strong site on the Via Valeria (q.v.) controlling a strategic bridgehead across the R. Aternus near modern *Corfinio*: remains exist at the church of *San Pelino* (i.e. Paelignus). Corfinium is unrecorded until the Social War when the Italians made it their seat of government and renamed it Italia, intending it to become the permanent capital of Italy (90 B.C.). They were quickly obliged, however, to transfer their seat of government first to Hovianum and then to Aesernia (qq.v.). After the Social War Corfinium became a Roman *municipium*. In 49 B.C., garrisoned by Domitius Ahenobarbus, it offered temporary resistance to Julius Caesar (Caesar, *BCiv.* 1. 15 f.; App. *BCiv.* 2. 38; Suet. *Iul.* 33 f.; Lucan, 2. 478 f.). Subsequently Corfinium received colonists on several occasions, but

apparently was never styled *colonia* (*Lib. Colon.* 228, 255). Inscriptions indicate that it remained a flourishing *municipium* in imperial times, but its later history is unknown. Presumably it was destroyed in medieval times.

Diod. 37. 2. 4; Strabo 5 241; Vell. Pat. 2. 16. D. Ludovico, *Doue Italia nacque* (1901). E. T. S.

CORINNA, lyric poetess, of Tanagra (fr. 2; Paus. 9. 22. 3), thought in antiquity to be an elder contemporary of Pindar, with whom various legends, none very trustworthy, connect her (*Suda* s.v. *Κόριννα*; Plut. *de Glor. Ath.* 4; Acl. *VII* 13. 25; schol. Ar. *Ach.* 720). But her language may mean that she did not write before the third century B.C. She wrote narrative lyrical poems on Boeotian subjects for a circle of women (fr. 2), with titles such as *Boeotus*, *Seven against Thebes*, *Euonymus*, *Iolaus*, *Return of Orion*. A papyrus at Berlin contains substantial remains of two poems. In the first (fr. 4) she describes a contest in song between the mountain gods Cithaeron and Helicon. Since Helicon is defeated, the contest may stand for the competition between her own kind of art and that of the Hesiodic school. In the second the seer Acraepheon foretells the high destiny of the daughters of Asopus, who are married to gods. The material used may go back to epic sources, and is based on legends of colonization. Both are written in regular stanzas of fixed length in which a metre is repeated and the stanza closed with a *clausula*. She uses simple verse-forms, such as minor ionics and choriambic dimeters. She also wrote lyric nomos, and fr. 5 II, called *Orestes*, seems to be a choral hymn for a spring festival. Her text is in the reformed Boeotian spelling of the third century and if she wrote earlier, must have been transliterated from what she wrote. She normally keeps to her own dialect, but sometimes admits Aeolic and Homeric forms.

COMMENTARY, etc.: U. von Wilamowitz-Moellendorf, in *Berl. Klass. Text.* v (2), 10 ff.; Page, *Corinna* (1953); E. Lobel, *Hermes* 1930, 356 ff.; P. Maas, *PW* xi. 1395. C. M. II.

CORINTH, the isthmus city controlling communications between north Greece and Peloponnesus and the eastern and western seas. The city lay north of the citadel (Acrocorinth), 2 to 3 miles from the sea, with ports, Lechaum and Cenchræa, on both gulfs. Finds of Mycenaean pottery make it likely that the 'wealthy Corinth' of the Achaean catalogue in the *Iliad* was there and not at the site of classical Corinth.

At the Dorian conquest Corinth probably fell to Temenus the conqueror of Argos. Later the kingship gave place to the Dorian oligarchy of the Bacchiadae, under whom Corinth founded Corcyra and Syracuse (both traditionally 733 B.C.), led the way in shipbuilding (Ameinocles of Corinth built ships for Samos in 704) and naval warfare (battle with Corcyra, 664), and developed a great pottery industry. In its latest phase the Bacchiad government may have fallen under the ascendancy of Pheidon of Argos. About 657 it was overthrown by the tyrant Cypselus, under whose house Corinth reached its greatest prosperity and power (commemorated by dedications at Olympia and Delphi), while the discontented Bacchiad Demaratus, according to tradition, emigrated to Tarquinii and became the father of Tarquinius Priscus, king of Rome (Blakeway, *JRS* 1935, 129 ff.).

The chronology of the Corinthian tyranny is disputed, but archaeological evidence supports the dating of fourth-century historians, according to which Periander died in 585, and his nephew and successor Psammetichus (Cypselus II) was overthrown soon after.

The tyranny was replaced by a constitutional government, based apparently on a board of eight executive

magistrates and a council of eighty (*FGH* 90; Nic. Dam. F 60). Trade still flourished and craftsmen still enjoyed special consideration. The city fostered friendly relations with the rising powers of Athens and Sparta; mediated between Athens and Thebes over Plataea (519), between Athens and Cleomenes of Sparta (507), Gela and Syracuse (491); supported Sparta against the medizing Polycrates of Samos, and Athens against Aegina; and fought well against Persia at Salamis, Plataea, and Mycale.

With the growth of Athenian imperialism Corinth's relations to Athens deteriorated, though even at the revolt of Samos from Athens in 440 she opposed Peloponnesian intervention; but Athenian interference at Megara and in the Corinthian Gulf had already led to fighting between Athens and Corinth in 459, and disputes between Athens and Corinth over Corcyra and Potidaea led to the outbreak in 431 of the Peloponnesian War. Corinth suffered severely, losing ships, trade, and colonies, and after the temporary peace of 421 was for a while estranged from Sparta, but at Mantinea in 418 was again fighting on the Spartan side. The Sicilian expedition of 415 increased her hostility to Athens: Corinthians under Gylippus took a leading part in the struggle at Syracuse and till the fall of Athens in 404 continued among Athens' most implacable foes. But shortly afterwards Corinth combined with Athens, Argos, and Boeotia to make war against the tyrannical rule of Sparta. During this 'Corinthian War' (395-386) a democratic government was established c. 392 with Argive help, but after the war it was replaced by an oligarchy. In the troubled times of Epaminondas and Philip II Corinth aimed at a neutral policy in Greece proper, but when Sicilian Greeks sought help against local tyrants and Carthage she sent out Timoleon in 344 and helped to repeople Syracuse, whose coins now showed the Corinthian *pegasus*. After the battle of Chaeronea (338) Corinth was made the gathering place of the new Hellenic League; here Philip, its author, and Alexander proclaimed their crusade against Persia.

In the Hellenistic period Corinth became a centre of industry, commerce, and commercialized pleasure, and also a key fortress that frequently changed hands in the dynastic struggles of the period. In 243 it joined the Achaean Confederacy; in 224 it sided against Aratus and Macedon with Cleomenes III of Sparta, and on the latter's overthrow passed again under Macedon till Flaminius' victory over Macedon in 198-6, when it was declared free like all other Greek cities and became the chief city of the Achaean Confederacy. As such it suffered heavily when Rome sought to curtail the Confederacy's power, and in 146 it was completely destroyed by Mummius.

Refounded in 44 B.C. as a Roman colony, it became the capital of the province of Achaia and was visited by apostles, emperors (including Nero, who made a vain attempt to cut a canal through the Isthmus), philosophers, Gothic hordes, and earthquakes. Its destruction by one of these last in A.D. 521 is cited by Procopius as evidence that God was abandoning the Roman Empire.

CORIOLANUS, GNAEUS MARCIUS (*PW* 51, Suppl. v. 653 ff.), was probably the eponymous hero or god of the Volscian town Corioli, from the capture of which he was reputed to have won his *cognomen*. He is said to have withdrawn from Rome when charged with tyrannical conduct and opposing the distribution of corn to the starving plebs; he then led a Volscian army against Rome, from which he was turned back only by the entreaties of his mother Veturia and his wife Volumnia (491 B.C.); he

was then put to death by the Volscians. The sources of Dionysius 8, 62 and other evidence show that the story did not arise from the misinterpretation of any monument (especially the temple of the *Fortuna Muliebris*, reputedly built where Coriolanus' womenfolk had met him). Nor was it a fiction invented either to glorify some patrician family, or in imitation of some incidents in Greek history (although some details may have been borrowed from the stories of Achilles or Themistocles), or, finally, to provide an example of some legal customs and institutions. Rather, the legend reflects the period when Rome suffered severely from famine and Volscian pressure.

Mommson, *Rom. Forsch.* II, 113 ff.; E. T. Salmon, *CQ* 1910, 96 ff.; D. A. Russell, *JRS* 1903, 21 ff.; Ogilvie, *Comm. Latr.* I-5, 314 ff. P. T.

CORITANI, a British tribe occupying part of the eastern midlands (Leics., Notts., Lincs.); the coins (formerly attributed to the Brigantes) and other remains suggest a Belgic aristocracy ruling indigenous inhabitants. The tribe, having been under pressure from the Catuvellauni, probably welcomed the Roman advance. A *civitas Coritanorum* was created with *caput* at *Ratae* (Leicester) (*Rav. cosm.* 92, Ptolemy, *Geography* 2. 3. 20); part of its land was reserved for the fortress of Legio IX (later II *Adiutrix*) at Lindum (q.v.), and subsequently used for a *colonia*. A Coritanus, M. Ulpianus Novantico, is recorded on a diploma of 106. Industries included horse-raising, and the production of iron and building-stone.

A. L. F. Rivet, *Town and Country in Roman Brit.* (1964), 148 f.; D. F. Allen, *The Coins of the Coritani* (1962). S. S. F.

CORN. Among the cereals used for human or animal food, maize was unknown in antiquity, and rice (*ῥιζα*, *oryza*) remained confined to medicinal use. Rye (*ῥιζα*, *secale*) and oats (*βρόμος*, *avena*) were 'northern' grains, which, though known, made little impact in the Mediterranean world. Millet (especially 'common' millet; *κέγχρος*, *miliun*) was grown, but mainly as a fodder and emergency crop. The main grains throughout were wheat and barley. In Italy, where barley (*hordeum*) was grown largely for fodder, the husked species of wheat, known as *far* and eaten as porridge (*puls*), were dominant in early times (especially the tetraploid emmer; the hexaploid spelt was primarily a 'Gallic' grain) and survived in ritual use (*mola salsa*). But as baked bread began to establish itself they gradually gave way to the 'naked' species (*tritium*), which alone are suitable for baking, since husked grain required parching before it could be freed from its husks. But even among the naked wheats the tetraploid species (especially *tritium durum*), which are still grown there but are now used mainly for 'pasta', were more common than the hexaploid *tritium vulgare*, the Roman *siligo*, which comprises all modern bread wheats. In Greece, on the other hand, the husked wheats (*ζεία*, *δλυνα*) appear to have been unimportant, and it was barley (*κριθή*), ground into groats (*ἀφίτρα*) and 'kneaded' into *μαῖζα*, that yielded some of its early dominance to naked wheat (*πυρός*), ground into flour (*ἀλευρα*) and eaten as bread; but barley (also used in ritual as *οὐλαί*) never wholly lost its importance. Throughout the ancient world naked wheat finally came to be known as 'corn' (*σίτος*, *frumentum*) in the sense of 'staple grain'. See also ANNONA.

CORN SUPPLY, GREEK. Cereals, especially wheat, were the staple in the Greek diet (see FOOD AND DRINK). Given the terrain and its limited technology, the growth of population (q.v.) created a supply problem already in

the archaic period, which remained permanently acute and was intensified by war or natural disaster. On the mainland of Greece and in the islands a few regions, particularly Boeotia and Thessaly (q.v.), were fully self-sufficient; even the Peloponnese imported some corn, at least in war-time (Thuc. 3. 86. 3). The main sources were southern Russia, Egypt, Cyrene (q.v.), and Sicily (q.v.). In the fourth century B.C. Athens imported annually more than a million bushels (or twice that on another interpretation of Dem. 20. 31-2).

Even Athens, for all her silver resources (see LAURIUM), had to employ her political influence and power to maintain her corn supply, openly so when her empire gave her full control of the Aegean Sea in the fifth century B.C. (e.g. Tod, no. 61). In the fourth century she managed by diplomacy, notably with the Bosphorus (Crimea).

There were also substantial internal controls. In Athens (the only state for which there is any detailed information) corn supply was on the agenda of the main Assembly meeting in each prytany (Arist. *Ath. Pol.* 43. 4); there were special supervisory officials, *sitophylakes* (q.v.), and various regulations prohibiting corn exports and stimulating imports. In view of the evident tensions which the subject aroused (e.g. Lys. 22; Dem. 20; [56]), it is curious that the trade was left largely to foreigners and metics (q.v.). From the late fourth century B.C. on, special purchasing officials, *sitonai*, are attested in a number of states.

CORN SUPPLY, ROMAN, see ANNONA.

CORNELIA (1, *PW* 407), the second daughter of Scipio Africanus, married Ti. Sempronius Gracchus (q.v. 2). Of her twelve children only three reached maturity: Sempronius, who married Scipio (q.v. 11) Aemilianus, and the two famous tribunes Tiberius and Gaius Gracchus (qq.v. 3 and 4). After her husband's death she did not remarry (she refused an offer by Ptolemy VII Physcon) and devoted herself to the management of her estate and the education of her children. Traditions vary about how far she encouraged or attempted to restrain the political activities of her sons, but she did check Gaius' attack on Octavius (q.v. 2). Some of her letters were known to Cicero, who admired their style, but the authenticity of two fragments preserved in MSS. of Nepos has been much disputed and must be regarded as uncertain, although many have taken them to be genuine. She was cultured, with pronounced philhellenic interests, and after her sons were killed she continued to entertain many guests at her home at Miscenum.

Plut. *Tiberius and Gaius Gracchus* J. Carcopino, *Autour des Gracques* (1928), 47, 107; H. Försch, *Die politische Rolle der Frau* (1935), 56; G. Corradi, *Cornelia e Sempronius* (1946); on the letters see also H. Last, *CAH* ix 50 n. 1 and bibliography there. A. E. A.

CORNELIA (2, *PW* 417), the cultured daughter of Metellus (q.v. 11) Scipio, married P. Crassus (q.v. 5) in 55 B.C. and in 52 Pompey. After Pharsalus she accompanied him to Egypt, where she saw him murdered. She returned to Italy. G. W. R.

CORNELIUS (1, *PIV* 18), GAIUS, quaestor of Pompey and friend of Gabinus (2) (qq.v.), whom he supported as his colleague in the tribunate (67 B.C.). He tried to introduce various reforms, but met with stiff resistance from the Optimates interests that he threatened, and achieved little of importance except for a law requiring a praetor

to abide by his edict (q.v.) in administering justice (which had hitherto not been compulsory). Attempts to accuse him of *maiestas* led to a trial in 65; but Cicero successfully defended him, no doubt in order to please Pompey.

Asconius, *In Cornelianam*. W. McDonald, *CQ* 1929, 196 ff. F. B.

CORNELIUS (2, *PW* 369) **SEVERUS**, Augustan poet. Of his hexameter poem on the Sicilian War of 38–36 B.C., perhaps part of a longer *Res Romanae*, Quintilian says (10. 1. 89) that if he had maintained the level of the first book he would have been second only to Virgil; Seneca (*Suas.* 6. 26) quotes a passage of twenty-five hexameters on Cicero's death. The nature of the 'carmen regale' ascribed to him by his friend Ovid (*Pont.* 4. 16. 9; cf. 4. 2. 1) is unknown. *Cf.* *AETNA* (3). C. J. F.

CORNELIUS (3, *PW* 168) **LABEO** (? second half of 3rd c. A.D.) wrote a (lost) history of Romano-Etruscan religion.

CORNIFICIUS (1, *PW* 8), **QUINTUS**, of recent senatorial family, was an orator and poet and a friend of Catullus and Cicero (cf. *Cat.* 38. 1, *Cic. Fam.* 12. 17–30). He wrote a lost epyllion *Glaucus. As quaestor pro prietore* in 48 B.C. he recovered Illyricum for Caesar and helped to defend it against the Pompeian fleet. Praetor (47 or 45), in 46 he went to the East, perhaps as governor of Cilicia; presently, however, Caesar assigned him to Syria and the war against Bassus (q.v.); what he did in this regard is not known. In the summer of 44, probably by Caesar's appointment, he went as governor to Africa Vetus, and continued to hold it for the Senate in disregard of the pretensions of Calvisius (q.v.) Sabinus. In 43 the Triumvirs proscribed him and assigned the province to T. Sextus (q.v. 1), governor of Africa Nova, who eventually defeated and killed him near Utica (42).

F. L. Gantet, *Philol.* 1894, 132 ff.; Syme, *Rom. Rev.*, see index; Schanz-Hosius 1. 108 ff.; *FPL* 90. T. J. C.

CORNIFICIUS (2, *PIV* 5), **LUCIUS**, a friend of Octavian, in 43 B.C. prosecuted M. Brutus for the murder of Caesar. In 38 he was one of Octavian's naval commanders in the war against Sextus Pompeius. In 36 he was cut off with three legions at Tauromenium, but extricated them and after a perilous march joined Agrippa at Tyndaris. He was consul in 35, and later proconsul of Africa, triumphing on 3 Dec. 32. He rebuilt the temple of Diana on the Aventine, and used to commemorate his march of 36 by riding to his dinner engagements on an elephant.

Syme, *Rom. Rev.*, see index; Platner-Ashby, 140 f. T. J. C.

CORNIFICIUS (3), by some regarded as the author of *Rhetorica* (q.v.) *ad Herennium*, cannot be certainly identified among several Cornificii.

CORNOVIL, a tribe of western Britain (Staffs., Cheshire, Shropshire), with *caput* at Viroconium (q.v.). Legionary fortresses existed in their territory at Viroconium and later at Deva, and auxiliary forts also were long maintained, whether because of tribal unrest or as a protection against the Welsh. Perhaps because of this rural insecurity few villas occur, the resources of the *civitas* being concentrated at Viroconium. Industries include salt, copper, and lead workings. The *Notitia* records a *cohors I Cornoviorum* at Newcastle.

A. L. F. Rivet, *Town and Country in Rom. Brit.* (1964), 150 f.; J. A. Richmond in Foster and Alcock, *Culture and Environment* (1963), 251 ff. S. S. F.

CORNUTUS (1), **LUCIUS ANNAEUS**, born c. A.D. 20 at or near Leptis, as a freedman of Seneca, or of one of his

relatives, assumed the name Annaeus, and became a teacher of philosophy and rhetoric at Rome, c. A.D. 50, including Lucan and Persius among his pupils. Persius dedicated to Cornutus his fifth satire, and in 62 bequeathed him a sum of money, which he refused to accept, and his library. In collaboration with Caesius Bassus, Cornutus edited the posthumous poems of his disciple, omitting any passage which might appear to contain allusions to Nero. He was exiled in 63, 64, or 65, the cause is a matter of dispute, as is the question whether he later returned to Rome and resumed his literary activity. Cornutus was equally versed in Greek and Latin literature and wrote on Aristotle's logic (in Greek), and on rhetoric, the poetry of Virgil, etc. (in Latin). His one extant work (unless he wrote *Octavia*—see V. Cioffi, *Rm. Fil.* 1937, 246 ff.) is the *Ἐπιδημιή των κατὰ τὴν Ἑλληνικὴν Θεολογίαν παραδιδόμενων*, or Summary of the Traditions concerning Greek Mythology; in this, he expounds, mainly following Chrysippus, the principles of Stoic criticism of myths, which he explains allegorically. In the Middle Ages scholia on Persius and Juvenal were wrongly attributed to him: cf. Teuffel, § 299. 2; Schanz-Hosius, § 551. Christ-Schmid-Stahlin n°. § 518.

TEXES C. Lang (Teubner, 1881). The fragments of Cornutus' minor works collected by R. Keppe, *De L. Annaeo Cornuto* (1900) P. Dechaume, *La Critique des traditions religieuses chez les grecs anciens* (1905); H. Schmidt, *De Cornuti Theologiae Graecae compendii* (Diss. Halle, 1912); J. Tate, *CQ* 1929, 41 ff.; G. Roca Serra, *Bull. Assoc. G. Bude* 1963, 388 ff.; Nock in *PW* Suppl. v. 995 ff., s.v. Kornutus. F. T.

CORNUTUS (2) **TERTULLUS**, **GAIUS IULIUS** (*PW* 196), probably from Perge in Pamphylia, was a friend of the Younger Pliny. His career was: legate of Crete and Cyrene, proconsul of Gallia Narbonensis, a period of quiet under Domitian, *praefectus aerarii Saturni* (A.D. 98–100), *cos. suff.* 100 with imperial approval (Pliny was his colleague in these last two offices), curator of the Via Aemilia (c. 104), governor of Aquitania (111–12), of Pontus-Bithynia (c. 115) and proconsul of Asia (or possibly of Africa) in 117/18. His life illustrates the emergence of the more civilian senatorial careers.

ILS 1024. J. Reynolds, *PCPS* 1963, 1 ff.; S. Jameson, *JRS* 1965, 54 f. H. H. S.

CORONIS, in mythology, daughter of Phlegyas, and mother of Asclepius (qq.v.). While with child by Apollo, she had an intrigue with (or married) Ischys son of Elatus, an Arcadian. Apollo learned this from a crow which brought word to Delphi (Pindar emends the story; Apollo knew it by his omniscience), and sent Artemis to kill Coronis. But when she was on the funeral pyre, he took the unborn child from her womb and gave him to Chiron to bring up (so Hesiod, fr. 123 Rzsch; Pindar, *Pyth.* 3. 24 ff.). The local legend of Epidaurus omits the affair of Ischys and the killing, and says Coronis was also called Aegla (Isyllus, 46 ff.). Apollo turned the crow black for bringing the bad news (*Ov. Met.* 2. 632).

II J. R.

CORRECTOR. Since 'free' cities were technically independent of the governor (see *SOCI*), they were, on the whole, left to run their own affairs by the early Roman emperors. Trajan first sent a praetorian to Achaëa to regulate the state of the free cities, which was apparently unsatisfactory. (Pliny, *Ep.* 8. 24, gives him advice.) Pliny (q.v. 2) himself, though actually governor, had special powers to perform a similar task for the cities in Bithynia (see, e.g., *Ep.* 10. 18. 3), and Cornutus Tertullus (*ILS* 1024) succeeded him. Senior Roman senators with various titles (often *corrector* = *διορθωτής*) soon appear in various eastern provinces, all with a similar mission (e.g. *ILS* 1067; and cf. *HERODES ATTICUS* 1).

In Italy, Domitian seems to have begun serious interference in local government (see *CURATOR REI PUBLICAE*). Officials supervising various regions appear in the second century A.D. (e.g. *ILS* 1040; 2768-9); by the early third we find a consular *corrector Italiae* (*ILS* 1159), later several more, as well as *correctores* of Italian regions, where Diocletian established them as regular governors.

Ruggiero, *Diz. Epigr.*, s.v.

E. B.

CORSICA (*Kúpros*), a rugged island in the Mediterranean off western Italy, consisting mostly of mountains that rise 9,000 feet and fall sheer into the sea on the west. The eastern coast, however, has good harbours. The tradition that Corsica's earliest inhabitants were Iberians mixed with Ligurians is credible but unprovable. About 535 B.C. Etruscans, helped by Carthaginians, expelled the colony which Phocaeans had established at Alalia thirty years earlier. The island, which apparently fell under Etruscan control for some time, later came under Carthaginian influence. By sending expeditions in 259 and 231, Rome ousted the Carthaginians and organized Corsica with Sardinia as one province (subsequently in imperial times, exactly when is unknown, Corsica became a separate province). Rome colonized Mariana and Aleria on the east coast but exercised only nominal authority over the wild interior. Corsica produced ship-building timber, bitter-tasting honey, granite, cattle, the Romans did not work its mines. Vandals, Goths, Ravenna Exarchs, and Saracens successively followed the Romans as masters of the island.

Strabo 5. 223 f.; Pliny, *HN* 3. 80 (number of Corsican towns exaggerated), *Ilit.* 1. 105 f.; Diodorus 5. 11 f.; Theophr. *Hist. Pl.* 5. 8. 1; Seneca's picture of Corsica as inhospitable and unhealthy (*Dial.* 12. 71, *Epigr.* 1 f.) is untrustworthy. Corsica was his place of exile. In general ancient authors seldom mention Corsica. F. Michon, *Mélanges de l'école française de Rome* 1891, 106; F. von Duhn, *Italische Gräberkunde* (1924) 1. 112; E. Pais, *Storia della Sardegna e della Corsica* (1923).

E. T. S.

CORSTOPITUM, a Roman military post near Corbridge, Northumberland. The name, possibly corrupt, is of uncertain etymology (*Corstopitum*, *It. Ant.* 464. 3; *Conelopocarium*, *Rav. Cosm.* 432. 6). Here the road from York to Scotland bridged the Tyne, branching to Carlisle and Tweedmouth. The place began as a Flavian bridge-head fort, with timber buildings and turf rampart (*Arch. Ael.* ser. 4, xv (1900), 255) garrisoned by the *ala Petriana* (Collingwood and Wright, *RIB* 1172). It lay empty when Hadrian's Wall was built, but important buildings were erected in A.D. 139 (*RIB* 1147) and 140 (*RIB* 1148) under Lollius (q.v. 4) Urbicus and in 163 (*RIB* 1149) under Calpurnius Agricola (q.v. 2), presumably connected with the reoccupation of Scotland. Severus and his sons built granaries c. 205 (*RIB* 1151, 1143), a large unfinished courtyard-building (probably a storehouse), and also legionary work-compounds, all restored or altered under Constantius I (c. 297) and Valentinian I (369). Late fourth-century silver plate, gold rings (*CHL* vii. 1300), and a gold coin-board attest prolonged use as an administrative centre.

Arch. Ael. ser. 4, xxxvii, 1959, 10 ff (bibliography to 1958); *ibid.* 59 ff (defences), 85 ff (baths), *ibid.* xxxix, 1961, 37 ff (mausoleum).

I. A. R.

CORTONA (Etr. *Curtun-*), 18 miles south-east of Arretium, was an important Etruscan stronghold with a commanding view of the Val di Chiana. The archaeological evidence does not indicate that it is older than the late seventh century B.C. After the defeat of the Etruscans in 311 B.C. by Quintus Fabius, Cortona and the two other leading cities of the interior, Pisa and Arretium (q.v.), made treaties with Rome. Large stretches of the fifth-century city wall are still extant, as are two earlier tumuli (*meloni*) and a Hellenistic mausoleum (the so-called

'Tanella di Pitagora'). The most notable piece of local figured bronze-work in the Museo dell'Accademia Etrusca di Cortona (founded 1726) is a magnificent fifth-century lamp with sixteen lights, depicting a *gorgoneion*.

A. Neppi Modona, *Cortona etrusca e moderna* (1926); Scullard *Etr. Cities*, 156 ff.

D. W. R. R.

CORUNCANIUS (1), **TIBERIUS**, from Tusculum, consul in 280 B.C., triumphed over Etruscan Volsinii and Vulci and guarded Rome against Pyrrhus' advance. He was the first plebeian Pontifex Maximus (254/3) and an early jurist: 'primus profiteri coepit' (Pompon. *Dig.* 1. 2. 2. 38), i.e. admitted the public, or at any rate students, to his consultations. Thus jurisprudence became professional instead of a mystery.

II H. S.

CORUNCANIUS (2, *PW* 1 and 2), **GAIUS** and **LUCIUS**, formed the Roman embassy to Teuta, the Illyrian queen, in 230 B.C., demanding satisfaction for the murder of Italian merchants by Illyrian pirates; this was refused, and they were themselves attacked, L. Coruncanius being killed. This outrage precipitated the First Illyrian War (Polyb. 2. 8).

Badian, *Stud. Gr. Rom. Hist.* 1 ff.

A. H. McD.

CORYTHUS, the name of several obscure mythological persons, including (1) son of Zeus and husband of Electra (q.v. 2) daughter of Atlas; his sons were Dardanus and Iasius (Iasion), see **DARDANUS**; Servius on *Aen.* 3. 167. (2) Son of Paris and Oenone (qq.v.). His story is variously told; the least unfamiliar account is in Parthenius, 34, from Hellenicus and Cephalon of Gergis. He came to Troy as an ally; Helen fell in love with him and Paris killed him. Nicander, quoted *ibid.*, calls him son of Paris and Helen.

H. J. R.

CŌS, one of the Sporades islands, occupied in Myc. IIIC, then colonized by Dorians, perhaps from Epidaurus, as part of the Doric hexapolis. In the Peloponnesian War it suffered from both Spartans and Athenians. In 366, after internal strife, the townships (*demoi*) were merged in one capital city, on the north-east coast. The island revolted successfully from Athens in 354, but came under the control of Alexander of Macedon. It subsequently oscillated between Macedon, Syria, and Egypt, to find its greatest glory as a literary centre under the protection of the Ptolemies and as the home of Philetas and Theocritus. In the second century Cōs was loyal to the Romans, even before it became a *libera civitas* in the province of Asia. The Emperor Claudius, influenced by his Coan physician Xenophon, conferred *immunitas* on the island. Here in the fifth century B.C. Hippocrates laid the foundations of medical science. The Asklepion and part of the agora have been excavated.

Strabo 14. 657. 8 P-K, *GL* iv F III; W. R. Paton-E. L. Hicks, *Inscriptions of Cōs* (1891), A. Mair, *Nuova collazione epigrafica di Rodi e Cōs* (1925); Herzog, etc., *Cōs I. Asklepion* (1932), A. N. Modona, *L'isola di Cōs nell'antichità classica* (1933); I. Kontes, *Atti dell'ist. d'antich. tou Asklep.* (1956), J. M. Cook-G. Bean, *BSA* 1957, 119 ff.

W. A. L.

COSA, the modern *Ansedonia*, situated on a commanding rocky promontory on the coast of Etruria, 4 miles south-east of Orbetello. Excavation has revealed no trace of Etruscan *Cusi*, which may have occupied the site of Orbetello itself. The surviving remains are those of the Latin colony founded in 273 B.C. (Vell. Pat. 1. 14. 7), to which belong the irregular circuit of walls, of fine polygonal masonry, and the neatly rectangular street-plan. The majority of the individual buildings, including the *arx* and the forum, a basilica and several temples, date from the town's period of maximum prosperity, in the second century B.C. Thereafter it declined rapidly, and

by the first century A.D. had been virtually abandoned in favour of Succosa, on the level ground to the east, beside the harbour and the Via Aurelia.

F. E. Brown, *Am. Ar. Rome* 1951, 7 ff., F. Castagnoli, *ibid.* 1956, 147 ff., F. E. Brown, and E. H. and L. Richardson, *ibid.* 1960, E. T. Salomon, *Roman Colonization* (1969). J. B. W.-P.

COSCONIUS, QUINTUS (1st c. A.D.), a scholar who wrote on grammar and law. His works are lost.

Cf. Schanz *Hosius*, § 196. 2.

COSMAS INDICOPELUSTES, fl. A.D. 540–50, Alexandrian merchant. He travelled in Palestine, Sinai, Ethiopia, and throughout the Red Sea trading area, but, despite the title which he received about the eleventh century, there is no evidence that he visited India. His 'Christian Topography', full of astonishing and curious information, is a naive attempt to base a description of the form of the cosmos on scripture as opposed to pagan science, but is more interested (and competent) in the theology than in geography or astronomy. The unnamed target of Cosmas' polemic is John Philoponus (q.v.), his monophysite contemporary at Alexandria. His own doctrinal sympathies are with Theodore of Mopsuestia, the divine most valued by the Nestorians of Sassanid Persia with whom Cosmas had personal contact.

Ed. E. O. Winstedt (1909). W. Wolska, *La Topographie chrétienne de Cosmas* (1962). H. C.

COSSUS, AULUS CORNELIUS (*PIV* 112), the hero of two alleged wars with Fidenae (437–435 and 428–425 B.C.) of which only the second is probably historical. He won the *spolia opima* (q.v.) by killing Lars Tolumnius of Veii, whose inscribed breastplate he dedicated to Jupiter Feretrius. This inscription was read by the Emperor Augustus, who stated that Cossus performed the feat as consul in 428 (Livy 4. 20). This fact need not (but can) be interpreted as an invention of Augustus designed to block the claim of M. Crassus (q.v. 6) to a triumph. According to other traditions Cossus was military tribune in 437 and *magister equitum* in 426.

Cf. Ogilvie, *Comm. Livy* 1–5, 563 f.

II II S.

COTTA (1), GAIUS AURELIUS (*PW* 96), nephew of Rutilius (q.v. 1) Rufus, was a distinguished orator and, with Drusus (q.v. 2) and Sulpicius (q.v. 1) Rufus, a member of a circle of ambitious young nobles around L. Crassus (q.v. 3). He was exiled by the commission set up by Varius (q.v. 1), but returned with Sulla. Consul in 75 B.C., he had to meet popular discontent and passed a law (rescinding one of Sulla's) which allowed tribunes to stand for higher offices. He governed Cisalpine Gaul, but died before he could triumph. In Cicero's dialogue *De Natura Deorum* he champions the Academic philosophy.

ORF² 286. G. Peil, *Philol.* 1965, 75 ff.

E. B.

COTTA (2), MARCUS AURELIUS (*PH* 107), brother of (1), as consul in 74 B.C. was sent to defend Bithynia against Mithridates (q.v. 6). Attacking the king, he was defeated by land and sea near Chalcidion and had to be relieved by Lucullus (q.v. 2). He continued the war in Bithynia, sacking Heraclea (q.v. 3) after a long siege (Memnon, *FGH*, no. 434, chs. 27–39). Though he paid much of the booty into the Treasury, he was later prosecuted and convicted, perhaps of peculation.

E. B.

COTTA (3), LUCIUS AURILIUS (*PW* 102), brother of (1), as praetor (70 B.C.) helped in the modification of the Sullan constitution by passing a law under which criminal juries were to consist in equal parts of senators, *equites*, and *tribuni aerarii* (qq.v.). In 66 he successfully prosecuted the consuls designate, Autronius and P. Sulla (2; qq.v.),

for *ambitus*, and himself became consul in 65. Despite a reputation for bibulousness, he was elected censor in 64. He supported Cicero both against Catiline and during his exile, but (as a relative of Caesar) was neutral in the Civil War; in 44 he was expected (being a *quindecimvir*) to propose that Caesar should be called king outside Italy as the sacred books were said to require.

E. B.

COTTIUS, MARCUS JULIUS (*PW* 197), son of a native king named Donnus, offered no opposition to Augustus' pacification of the Alpine regions and was recognized as ruler over a number of native tribes with the title of *praefectus civitatum* (*ILS* 94, cf. Pliny, *HN* 3. 138). He erected an arch in honour of Augustus at Segusio (*Susa*) in 7–6 B.C. (*ILS* 94), and improved the road over the Mt. Genève (Ammianus 15. 10. 2). The territory, annexed by Nero after the death of his son, was commonly known as the *Alpes Cottiae*.

R. S.

COTYS, COTYT(T)O (*Kórys, Kory(τ)τώ*, a Thracian goddess worshipped with orgiastic rites (Aesch. fr. 57 Nauck). Her cult was known in Athens in Eupolis' time, and included some rite of washing or dipping, see the fragments of his *Baptae* in *CAF* i. 273 ff. These point to the rites as being practised at the time in Corinth: cf. Nilsson, *GGR* 1². 835.

H. J. R., II. W. P.

CRAGUS, a Lycian god identified with Zeus (Lycophon 542 and schol.), humanized into a son of Tremiles (eponym of the Tremiles or Lycians), after whom Mt. Cragus was named (Steph. Byz. s.v.).

CRANNŌN, a city of Thessaly, commanding a small level area among the low hills which separate the eastern and western plains. The Scopadae, the leading local family, were rivals of the Aleuadae (q.v.), but c. 5th B.C. they were involved in a mysterious disaster and lost much of their influence. The smallness of its plain and the proximity of Larissa checked the development of Crannon. A Pheraean named Deinias became tyrant, probably in the fourth century, and with support from the tyrants of Pherae. In the Lamian War Antipater defeated the Greek confederates near Crannon (322).

H. D. W.

CRANTOR of Soli in Cilicia (c. 335–c. 275 B.C.), philosopher of the Old Academy. Having left his native town for Athens, he became a pupil of Xenocrates, and formed close friendships with Polemon, Crates, and especially Arcesilaus, to whom he left his property on his death. It was under his influence that Arcesilaus abandoned the Peripatos for the Academy (Diog. Laert. 4. 22; 24; 25; 20).

Crantor's commentary on Plato's *Timaeus* was the first of the long line of ancient commentaries on the Platonic dialogues. His work *On Grief* (*Περὶ πένθους*) was much admired by later writers, among them Cicero, who used it as a model for his own *Consolatio*, written on the death of his daughter Tullia; but from what we know of him, Crantor's claim to fame lay in his attention to style, rather than in any great originality of thought.

F. Kavser, *De C. Academicis* (1841, the fragments); *FGP* III. 131–52. E. Zeller, *Plato*, etc., Engl. Transl. (1888), 619 f., K. Buresch, *Leipz. Stud.* 1887, Susemihl, *Gesch. Gr. Lit. Alex.* i. 118 f.

C. J. R.

CRASSUS (1) DIVES MUCIANUS, PUBLIUS LICINIUS (*PW* 72), brother of P. Scaevola (q.v. 2), son-in-law of Ap. Claudius (q.v. 9), and father-in-law of C. Gracchus (q.v. 4). Noble, wealthy, and an eminent lawyer and orator, he was a key figure in the faction that opposed Scipio (q.v. 11) Aemilianus and sponsored Ti. Gracchus (q.v. 3). He took Tiberius' place on the agrarian commission and, acquiring popularity as a Gracchan, was

elected consul and Pontifex Maximus late in life. As consul (131 B.C.) and proconsul he fought against Aristonicus (q.v. 1) and was killed after a defeat (130). He was succeeded by Perperna (q.v. 1). E. B.

A. E. Astin, *Scipio Aemilianus* (1967), see index.

CRASSUS (2), PUBLIUS LICINIUS (PW 61), as tribune (c. 106 B.C.) passed a famous sumptuary law. In his consulate (97) the Senate prohibited human sacrifice. After commanding in Iberia for several years, he triumphed over the Lusitani (93). He fought in the Social War and, as censor (89) with L. Caesar (q.v. 2), enrolled the first of the Italians. In 87 he helped to defend Rome against Marius (whose friend he had probably been somewhat earlier) and Cinna, and killed himself after their victory. His son (4) escaped to Spain. E. B.

CRASSUS (3), LUCIUS LICINIUS (PW 55), outstanding orator and— even more than his rival Antonius (q.v. 1)—master and model of Cicero, who idealizes him, particularly in the *De oratore*, where he is the chief speaker. Born 140 B.C., he was taught by Coelius (q.v. 1) and studied law in the house of the Scaevolae (q.v.), into whose family he married. In his political début he successfully prosecuted C. Carbo (q.v. 1); in the affair of the Vestals (see CASSIUS 4) he defended a relative; and at an uncertain (but apparently later) date he supported the *popularis causa* of the colony of Narbo, which, with Domitius (q.v. 3), he helped to establish (cf. Sydenham, *CRR*, nos. 520 ff.). Quaestor in Asia, he used part of his time there for study and on his return became a leading barrister. In 106 he supported the jury law of Caepio (q.v. 1) in a great speech—using Popular methods for Optimate policies—which became famous but attracted the censure of Rutilius (q.v. 1) on moral grounds. Not prominent in factional strife in the 90s, he became consul in 95 with Q. Scaevola (q.v. 4) Pontifex, and they passed a law against aliens who had been illegally enrolled as citizens (chiefly in the censorship of Antonius and Flaccus (q.v. 5) in 97–96). A little later (it seems) he became an *admiss* of Marius, after defending Caepio (q.v. 2). He governed Gaul, but failed to gain a triumph. In 92, as censor, he quarrelled with his colleague Domitius (q.v. 3); but they agreed in prohibiting the teaching of rhetoric in Latin—a measure in part intended to prevent the path to social advancement and a political career from being widened.

Crassus was the teacher of a new generation of ambitious aristocratic orators (Drusus 2, Sulpicius 1 Rufus, and Cotta 1 q.v.), whom he imbued with his ideas; and he supported Drusus in his tribunate (91), which aimed at putting them into practice. Rallying the Senate behind the tribune, he attacked the consul Marcus Philippus (q.v. 4) in his famous 'swan song'. His death soon after was a disaster for Drusus' cause.

As an orator, he is praised by Cicero for his *gravitas* and dignity. His style was Asiatic, but not to excess, combining rhythm and ornamentation with pure Latinity.

Malcovari, *ORF* 237 ff. Cic. *Brut* and *De Or.*, *passim* 11 W. Scholz, *Der Redner M. Antonius* (1903), 55 L., 94. E. B.

CRASSUS (4) (DIVES), MARCUS LICINIUS (PW 68), son of (2), escaped to Spain in 87 B.C., joined Sulla after the death of Cinna, played a prominent part in the *bellum Sullanum* and made a fortune in the proscriptions. After his praetorship, he defeated Spartacus (72–71); but Pompey, crucifying many fugitives, claimed the credit for the victory, thus making an enemy of Crassus. Reconciled for the moment, they were elected consuls, 70, and greatly modified the Sullan constitution. In the next few years Crassus further increased his fortune: relying on his connexions, financial power, and astuteness,

and helping any eminent or promising man in need, he tried to gain unchallenged *auctoritas*. After 67, disliked by many Optimates and overshadowed by Pompey's special commands, he resorted to unorthodox tactics to gain control of the state machinery and perhaps an *imperium* to match Pompey's. He shielded those involved in the 'first conspiracy' of Catiline (q.v.), assisted Catiline up to his defeat in the elections for 62 (but not in his plans for revolution), supported the ambitions of young Caesar (without detaching him from Pompey), tried to gain the support of the Transpadanes by enrolling them as citizens during his censorship (65—he was foiled in this by his colleague Catulus (q.v. 3)), perhaps sought a mandate to annex Egypt, and hoped to profit by the legislation of Rullus (q.v.). Failing in all his plans, he left Rome before Pompey's return.

He was soon back, opposing Pompey's demands, with Optimate support; but he did not succeed in securing a refund for the Asian *publicum*, in whose over-optimistic bid his interests were involved. When Caesar returned from Spain, Crassus helped him to secure the consulate (59), and Caesar persuaded both him and Pompey to give each other passive (and Caesar active) support. As consul Caesar secured what each of them wanted and received Gaul as his reward. After his departure, P. Clodius (q.v. 1), whom Crassus had aided earlier, exploited the continuing suspicion between Crassus and Pompey and, for his own purposes, drove a wedge between them, as also between Crassus and Cicero. Early in 56, when Pompey seemed ready for an Optimate alliance, Caesar intervened—meeting Crassus at Ravenna and Pompey (perhaps with Crassus) at the so-called Conference of Luca, he arranged for them to be consuls in 55 and have special commands in Syria and Spain respectively after, while he retained Gaul. This was carried out against all opposition; and late in 55 Crassus set out for Syria (despite the solemn curses pronounced by the tribune Capito (q.v. 1)), hoping to regain a military reputation equal to that of his allies by a victory over the Parthians. After some successes and further preparations in 54, he crossed the Euphrates in 53, though deserted by the Armenians; but he was defeated near Carrhae (q.v.) by the Surenas (q.v.) and killed while trying to extricate himself.

Crassus saw the key to success in wealth and a reputation for wealth. Neglecting his early military ability for too long, he finally found unarmed power insecure in the changed conditions of the late Republic and died before he could profit by the lesson. Had he been less unlucky in his war, he might well have played the decisive part in history which he had mapped out for himself.

A. Garzetti, *Athenaeum* 1941, 1, 1942, 12; 1944–5, 1, F. E. Adcock, *Marcus Crassus, Millionaire* (1966) E. B.

CRASSUS (5), PUBLIUS LICINIUS (PW 63) (c. 85–53 B.C.), younger son of the triumvir. He accompanied Caesar to Gaul, first as *praefectus equitum* (58), then as *legatus* (57). In the victory over Ariovistus his resolute handling of the reserve was decisive. In 57 he subdued the coastal Gallic tribes and perhaps explored the Cassiterides (Strabo 3. 175–6). In 56 he defeated the Aquitanians and returned to Rome where he supported the consular candidature of his father and Pompey. His elder brother Marcus as quaestor (54) then served under Caesar in Gaul. Publius in 55 married Cornelia, daughter of Metellus Scipio. He commanded a body of Gallic horse under his father in the Parthian war of 53. His vigorous leadership involved them in heavy losses which he refused to survive. C. E. S.

CRASSUS (6), MARCUS LICINIUS (PW 58) (cos. 30 B.C.), grandson of M. Crassus (4), was at first a partisan of Sex.

Pompeius, then an Antonian. The precise date of his desertion to Octavian has not been recorded; the consulate was probably his reward. Appointed proconsul of Macedonia, he conducted highly successful campaigns in 29 and 28 (Dio Cass. 51. 23 ff.). Having killed a king of the Bastarnae with his own hands, he claimed the *spolia optima*, to the annoyance of Octavian, himself jealously monopolizing military glory. The claim was rebutted on the grounds that Crassus had not been fighting under his own auspices; Octavian may have used as an argument the linen corslet in the temple of Jupiter Feretrius, which purported to show that Cornelius Cossus (q.v.) was consul (not merely military tribune) when he earned the *spolia optima*. The incident may have accelerated the regulation of Octavian's constitutional position (as E. Groag argues, *PW* xiii. 283 ff.). Crassus was permitted to hold a triumph (27), after which nothing more is heard of this ambitious (and perhaps dangerous) *nobilis*. His son by adoption is M. Lucius Crassus Frugi (cos. 14 B.C.).

Syme, *Rom. Rev.*, see index.

R. S.

CRASSUS (7) FRUGI LICINIANUS, GAIUS CALPURNIUS (*PW* 32), of a long and illustrious line, was suffect consul under Domitian, and is possibly to be identified with C. Calpurnius Piso Licinianus, cos. *suff.* early A.D. 87 (W. Hensen, *Acta Fr. Arr.* cxviii, line 67). For conspiring against Nerva, he was exiled to Tarentum. His later plotting against Trajan caused his removal to an island, where, becoming suspect in Hadrian's reign, he was killed by a procurator while trying to escape.

For his tomb inscription, *CIL* vi. 31724, S.H.A. *Had.*; Dio Cassius bk. 68. Stech, *Senatores* (1912), no. 872; Lambrecht, *Senat.*, no. 31. C. H. V. S.; M. H.

CRATERUS (1) (c. 370?–321 B.C.), Macedonian officer of Alexander the Great. Beginning as commander of a *taxis* (brigade) of Macedonian infantry (at the Granicus), he advanced to be senior *taxiarch* (at Issus and Gaugamela), and, after Parmenion's death, virtually Alexander's second-in-command. When the army was divided he frequently held separate commands, and distinguished himself particularly in Bactria and Sogdiana (329–328), and in India at the Hydaspes battle. In 324 he was delegated to lead home the discharged Macedonian veterans, and to replace Antipater as regent of Macedonia and overseer of Greece, a distinction which illustrates Alexander's confidence in him. He was generally recognized as the best soldier on Alexander's staff, and he would certainly have played a commanding part among the 'Successors', had he not been killed in the very first battle, against Eumenes of Cardia, near the Hellespont.

Berve, *Alexanderreich*, no. 446

G. T. G.

CRATERUS (2) (321–c. 255 B.C.), son of Craterus (1) and Phila, Antipater's daughter, was appointed governor of Corinth and Peloponnesus (c. 280), and later viceroy of Attica and Euboea, by his half-brother, Antigonus II, whom he served loyally. In 271 he tried to assist Aristotimus, the Elean tyrant (Plut. *Mor.* 253 a), and in 266 checked Areus of Sparta at the Isthmus (Paus. 3. 6. 4–6).

The *ψηφισμάτων συναγωγή*, a collection of Athenian decrees with a scholarly commentary (*FGH* 342), was perhaps the work of this Craterus.

W. W. Tarn, *Antigonus Gonatas* (1913); *CAH* vii, Hengstson, *Strategie* ii. 347 ff. F. W. W.

CRATES (1), Athenian comic poet, won three victories at the City Dionysia, the first almost certainly in 450 (Hieron. *Chron.* Ol. 82. 2, *IG* ii². 2325. 52); he was an actor before he was a poet (Anon. *De Com.* 7). We have

six titles. *Animals* depicted a situation in which animals refuse to be eaten by men. It seems to have contained a comic prophecy of an era in which all work will perform itself (see METAGENES and PHERECRATES). Aristophanes (*Eg.* 537 ff.) speaks of him affectionately, and Aristotle (*Pol.* 1449^b7) says that he was the first to discard *λαμβική* *idēa* and create plots which were 'general' (*καθόλου*), i.e. to advance beyond the ridiculing of real individuals.

FCG i. 58 ff.; *CAF* i. 130 ff.; *FAG* i. 152 ff.

K. J. D.

CRATES (2) (c. 365–285 B.C.), son of Ascondas of Thebes, Cynic philosopher. Having come to Athens as a young man he first attended the lectures of Bryson of the Megaric School, but was soon converted to Cynicism by Diogenes of Sinope and decided to live henceforth in Cynic poverty. He married Hipparchia, sister of Metrocles of Maronea, having converted both brother and sister to Cynicism. In her company he led a wandering life, preaching the gospel of voluntary poverty and independence, consoling people in distress, and reconciling enemies. He became so universally beloved that people wrote on their doors 'welcome to Crates, the good spirit' (Julian, *Or.* 6. 201 b). He wrote a great many poems, mostly by revising the poems of famous poets so as to give them a Cynic content. His letters were praised for their style, but those which have come down to us are spurious. He is said by Diogenes Laertius (6. 98) to have written tragedies of a very lofty character in which his philosophy was displayed. One fragment expresses cosmopolitan sentiments.

H. Diels, *PPF* 216 ff.; *TCF* 809. 10; Diogenes Laertius 6. 85. 93. E. Schwartz, *Charakterköpfe* ii. 1 ff.; D. R. Dudley, *A History of Cynicism* (1918), 42 ff.; Hoistad, *Cynic Hero and Cynic King* (1948), 126 ff. K. von F. and A. W. P.-C.

CRATES (3) of Mallos, son of Timocrates, was a contemporary of Demetrius of Scepsis (Strabo 14. 679) and Aristarchus. He visited Rome as envoy of Attalus of Pergamum, probably in 168 B.C., when his lectures, during his recovery after breaking his leg in the Cloaca Maxima, greatly stimulated Roman interest in scholarship (Suet. *Gram.* 2). He was the first head of the library at Pergamum, and wrote, *inter alia*, on Homer, Hesiod, Euripides, Aristophanes, and Aratus, usually with a philosophic and antiquarian bias; on Attic; and on 'anomaly'. See also *Anth. Pal.* 11. 218.

The Pergamenes and the Alexandrians were divided on the rival principles of 'analogy' and 'anomaly' in language. Aristophanes and Aristarchus, of Alexandria, in editing Homer sought the correct form (or meaning) of a word by collecting and comparing its occurrences in the text, a procedure more novel in their age than in ours. Further, they tried to classify words by their types of form (cf. our declensions), in order by reference to the type to decide what was correct in any doubtful or disputed instance. Thus in Homer Aristarchus accented *Κάρητος* after *Κάρωτος*, *πέτρων* after *τέτρων*, *οἶων* after *αἰγῶν*; and similarly as to inflexions (see APOLLONIUS (13) DYSCOLUS). Crates, on the contrary, borrowed his linguistic principles from the Stoics, and sought in literature a meaning which he already knew *a priori*. Not only words (see ETYMOLOGY) but literature likewise they thought a *μίμησις* *θείων* καὶ *ἀνθρωπείων* (Diog. Laert. 7. 60), an accurate reflection of truth, and on this basis they carried to ludicrous extremes the allegorical method of interpretation, in order to secure the support of Homer for Stoic doctrines. In such features as inflexion they saw only confusion wrought upon nature's original products by man's irregular innovations and perversions. Cleanthes had named this unruly principle of language *ἀνομαλία*, illustrating it without much difficulty from the Greek declensions. This term and doctrine, and the

allegorical method, were adopted by Crates and his school, to whom, consequently, the Alexandrian classification of forms (Crates seems to have written chiefly on noun anomalies) seemed futile in practice and wrong in principle.

The Alexandrians did valuable work; yet they had inevitable difficulty in deducing their types and rules from the facts: in such discrepancies, and when they proceeded by 'analogy' to adapt the facts to their rules, as even Aristarchus sometimes did, Pergamene criticism was, so far, justified. But neither did the Stoics (and Pergamenes) themselves follow usage *simpliciter*, but only usage controlled by their theory: cf. Diog. Laert. 7. 59.

The controversy gained importance with the growth of purism (see GLOSSA), and its extension from Greek to Latin; it is reflected in Varro's *De lingua Latina*. Compromises attempted by both Greek and Roman scholars left the problem unsettled. 'Quare mihi non inuenuste dici uidetur, aliud esse Latine, aliud grammaticae loqui' Quint. *Inst.* 1. 6. 27.

H. Steinthal, *Geschichte d. Sprachwissenschaft bei den Griechen u. Römern* (1891), 121 ff. H. J. Mette, *Paratresis: Untersuchungen zur Sprachtheorie des Krates von Pergamon* (1952), J. Collart, *Entretiens Hardt*, 9. 119 ff.

CRATEUAS, botanist and physician to Mithridates the Great (111-64 B.C.) to whom he dedicated the plant *mithridatia*, probably the mall, lilaceous *Erythronium Dens-canis* L. (Pliny, *HN* 25, 26, 62). Crateuas was the author of at least two works, both of which are known today only by fragments. (i) A herbal, whose title has not been preserved, in which coloured drawings of plants were accompanied by descriptions and their medical uses (Pliny 25. 4. 8). Dioscorides' *Περὶ ὕλης ἱατρικῆς* was based, in part, on Crateuas' writings and often refers to him. Some of the drawings in the so-called Juliana Amicia manuscript of Dioscorides (Cod. Vindobon. med. gr. 1) may be based on Crateuas' original drawings. This MS. also contains fragments from Crateuas' herbal. (ii) *Ῥιζοτομικόν* (schol. Nic. *Ther.* 681), a pharmacological work which discussed the medical uses of plants with details regarding their 'varieties' (εἶδη) and names.

Dioscorides ed. M. Wellman (1906-14), iii. 119 sq. (fragments); M. Wellman, 'Cratæus', *Abh. Gott. Ges.* 11/1 (1899); *PW* xi. 1644; J. Stannard, 'Dioscorides and Renaissance Materia Medica', *Analecta Medico-Historica* 1 (1966), E. Mioni, *Un ignoto Dioscoride miniato* (1959) J. S.

CRATINUS was regarded, with Aristophanes and Eupolis, as one of the greatest poets of Old Attic Comedy. He won the first prize six times at the City Dionysia and three times at the Lenaea (*IG* ii². 2325. 50, 121). We have twenty-seven titles and over 460 fragments. The precisely datable plays are: *Χειμαζόμενοι* at the Lenaea in 426 (hyp. 1 Ar. *Ach.*), *Satyrs* at the Lenaea in 424 (hyp. 1 Ar. *Eq.*), and *Ilirion* at the City Dionysia in 423 (hyp. 6 Ar. *Nub.*). Three more are approximately datable: *Ἀρχιλόχοι* treats (fr. 1) the death of Cimon as recent, and therefore comes not long after 450; *Διονυσιαλέξανδρος* (see below) attacked Pericles for 'bringing the war upon Athens', and must belong to 430 or 429; and fr. 71 of *Θράτται* suggests that Pericles has just escaped the danger of ostracism (444/3). We do not know when Cratinus died; Ar. *Pax* 700 ff. speaks of him (in 421) as dead, but the context is humorous and its interpretation controversial. One category of titles is especially characteristic of Cratinus: *Ἀρχιλόχοι*, *Διώνισσοι*, *Κλεοβουλῖναι*, *Ὀδυσσεύς*, *Πλούτο*, and *Χίρωνες* (see also TELECLIDES). In *Ὀδυσσεύς* it appears from fr. 144 that the chorus represented Odysseus' crew; it is possible that the 'new toy' of fr. 145 was a model of his ship brought into the orchestra. The play is mentioned by Platonius (*Diff. Com.* 7 and 12) as an example of 'Middle

Comedy' ahead of its time, i.e. as containing no ridicule of contemporaries. There are papyrus fragments of *Πλούτο*, one of which indicates that the chorus explained its identity and role to the audience in the parodos. The hypothesis of *Διονυσιαλέξανδρος* is also largely preserved in a papyrus; in this play Dionysus—as the title suggests—was represented as judging the goddesses and carrying Helen off to Troy; there was a chorus of satyrs, which in the parabasis addressed the audience 'about the poets'. In *Πύτιν* Cratinus made good comic use of his own notorious drunkenness (cf. Ath. 39 c), represented himself as married to Comedy, and adapted in self-praise the compliment paid to his torrential fluency and vigour by Ar. *Eq.* 526 ff.

Cratinus' language and style were inventive, concentrated, and allusive, and Aristophanes was obviously much influenced by him, but Platonius (*Diff. Com.* 14) describes his work as comparatively graceless and inconsequential. It is clear from Ath. 495 a, *HN* ii. 945, and Galen *Libr. Suis* 17 that Cratinus was the subject of commentaries in Hellenistic times.

K. J. D.

CRATIPPUS OF ATHENS, author of a continuation of Thucydides' history at least to Conon's restoration of Athenian naval power (394 B.C.), was a contemporary of Thucydides (Dion. Hal. *Thuc.* 16). We need not dismiss him as a late Hellenistic writer who claimed earlier authority, but rather keep him in the running for identification with the Oxyrhynchus historian (q.v.) whose *Hellenica* evidently continued Thucydides (q.v. 2).

FGH ii A 13, C 2.

A. H. McD.

CRATYLUS, a younger contemporary of Socrates. He pressed the doctrine of Heraclitus to an extreme point, denying to things even the slightest fixity of nature. According to Aristotle he was Plato's first master in philosophy, and Plato drew the conclusion that since fixity does not exist in the sensible world there must be a non-sensible world to account for the possibility of knowledge. Plato in his *Cratylus* makes Cratylus maintain that falsehood is impossible and that all words in all languages are naturally appropriate to the meanings in which they are used, and exhibits him as uncritically accepting Socrates' glib etymologies.

Testimonia in Diels, *Fragmenta* ii. 69-70, D. J. Allan, 'The Problem of Cratylus', *AJP* 1952. W. D. R.

CREMERA, modern *Fossa di Formello* (variously called *Valca* or *Valchetta*), stream flowing past Veni (q.v.) to join the Tiber at Fidenae (q.v.). Three hundred members of the Fabian clan perished on its banks (477 B.C.), after establishing a blockhouse from which to raid Veientane territory.

E. T. S.

CREMONA, a Latin colony, founded in 218 B.C. as a bulwark against Insubres and Boni (qq.v.) on the north bank of the Padus (q.v.) in north Italy (Polyb. 3. 40; Tac. *Hist.* 3. 34). Cremona staunchly supported Rome against Hannibal, although thereby it suffered so severely that in 190 it required additional colonists (Liv. 21. 56; 27. 10; 37. 46). Its territory was confiscated for a colony of veterans c. 41 B.C. (Verg. *Ecl.* 9. 28). However, it continued prosperous until its destruction by Vespasian's troops in A.D. 69 (Tac. *Hist.* 3. 33 f.). Thereafter, although an important road centre, Cremona did not really revive until the ninth century.

E. T. S.

CREMUTIUS (PW 2) CORDUS, AULUS, the historian, writing under Augustus (Suet. *Tib.* 61. 3) and Tiberius, treated the period from the Civil Wars to at least 18 B.C. (Suet. *Aug.* 35. 2). He refused to glorify Augustus, and

celebrated Cicero, Brutus, and Cassius, 'the last Roman'. Prosecuted for treason at the instigation of Sejanus (Tac. *Ann.* 4. 34-5), he committed suicide (A.D. 25). His work was burnt, but copies, preserved by his daughter, were republished under Gaius (Dio 57. 24-4). The Elder Pliny and Seneca used his work.

Peter, *HRRel.* II (1906), cxiii and 87, Syme, *Tactus*, 337.
A. H. McID.

CREON (Κρέων), a stopgap name ('prince', 'ruler') given to several subsidiary figures, as (1) a king of Corinth. Medea and Jason (qq.v.) visited him, and Medea killed him by magic and fled, leaving her children behind (Creophylus ap. schol. *Eur. Med.* 264); the children were killed by the Corinthians. Euripides himself makes her kill Creon's daughter, Jason's betrothed, with a poisoned costume which catches fire when worn, Creon being killed in trying to save her (*Med.* 1136 ff.), and murder her own children (*ibid.* 1273 ff.). (2) An early king of Thebes, sometimes confused with (3). He purified Amphitryon (q.v.) from blood-guilt on his arrival in Thebes, helped him in his campaign against the Teleboans, and afterwards married his daughter Megara to Heracles (Apollod. 2. 57. 70). (3) Brother of Iocasta, see OEDIPUS. He offered her hand and the kingdom to anyone who would rid Thebes of the Sphinx (*Eur. Phoen.* 45 ff.). After Oedipus' fall and again after the death of Eteocles he became king, or regent, of Thebes, see ANTIGONE (1). During the attack by the Seven he lost his son Menoeceus (q.v.). According to the Attic account, Theseus was persuaded to intervene and compel him to grant burial to the bodies of the Seven (*Eur. Supp.*, passim). In Statius (*Theb.* 12. 773 ff.) Theseus kills Creon in the resulting battle. (4) The oldest occurrence of the name is *Il.* 9. 84, where he is father of Lycomedes, commander of part of the Greek outpost; otherwise unknown.

H. J. R.

CRESILAS, Greek sculptor, fl. c. 450-430 B.C.; native of Cydonia, Crete, but active mostly in Athens. His signature appears on five bases of statues, three found on the Acropolis of Athens, one in the Argolid, and one in Delphi. Another inscribed base, found at Pergamum, evidently supported a copy, transported from elsewhere. Among his works mentioned by Pliny (34. 74) is a portrait statue of Pericles, of which the head survives in several Roman copies, two (in the Vatican and the British Museum) inscribed 'Pericles'. On a fragmentary base, found on the Acropolis, appear parts of the names of Pericles and Cresilas, and it probably served to support the original statue. Of his other works, the statue of an Amazon, which he made for Ephesus, in competition with Phidias, Polyclethus, Phradmon, and Cydon (cf. Pliny 34. 53), is probably reproduced in a figure in the Capitoline Museum. Of his Volneratus deficiens, 'a man wounded and dying', the general design is perhaps preserved in a bronze statuette at Modena, in a warrior on a black-figured lecythus in Paris, and in a (considerably restored?) bronze statuette in St. Germain-en-Laye.

G. M. A. R.

CRETE. I. PREHISTORIC, see MINOAN CIVILIZATION.

II. GREEK AND ROMAN. In historical times Crete was predominantly Dorian, but the transition from the Bronze Age may not have been so abrupt; Cnossos remained an important centre, and the 'Eteocretans' may have retained something of the Minoan culture and tongue. Of Homer's 'Crete of the hundred cities' more than fifty are known, Cnossos, Gortyn, and Lyttos being at first the most important, and later Cydonia with them. The island's position on sea-routes to and from Cyprus, the Levant, and Egypt secured it an important place in

the history of the development of archaic Greek art and important innovations were attributed to a Cretan Daedalus. It had a reputation as the home of mercenary slingers and archers, and of lawgivers (see GORTYN for an early code). Aristocratic society persisted in the island and the constitutions (though without kings) resembled closely that of Sparta, which was said to have been derived from the Cretan. The chief magistrates were called *kosmoi*. In the classical period the island lay outside the main currents of Greek history; she refused to aid the defence against Persia in the fifth century. From the middle of the third century her foreign relations centred on the new and unstable league (κοινὸν τῶν Κρηταίων) and the intrigues of Macedon. In 216 the cities accepted Philip V as protector, but strife soon returned both against Rhodes and still more between the cities, especially Cnossos and Gortyn. By this time Crete was reputed a home of pirates second only to Cilicia. These activities were encouraged by Philip, who realized his hope of thereby injuring Rhodes. The pirates supported Mithridates VI of Pontus against Rome, and when M. Antonius intervened to chastise them he was beaten off Cydonia (74); but Q. Metellus with three legions crushed the islanders and destroyed Cnossos (68/67). Crete became a Roman province, and was united with Cyrene (except when the latter was briefly held by Cleopatra Selene). The old league was adapted as a *concilium provinciae*. In the early Empire Roman traders were numerous at Gortyn, where an imperial mint was established. See also ARCHERS.

Inscr. Creticae (ed M. Guarducci, 1935) i-iv, Strabo 10. 474-84, *Arist. Pol.* 2. 10; Polyb. 6. 45-7, Mynsbrugge, *The Cretan Koinon* (U.S.A. 1931); L. van Effenterre, *La Crète et le monde grec de Platon à Polybe* (1948); F. Kirsten, *Die Insel Kreta im fünften und vierten Jdt* (1936); P. Demargne, *La Crète didactique* (1947); F. R. Willets, *Cretan Cults and Festivals* (1955); id., *Ancient Crete, A Social History* (1965) W. A. L.

CREUSA (Κρέουσα), feminine of Creon (q.v.). The best-known 'princesses' who bear this quasi-name are: (1) daughter of Erechtheus king of Athens. She was violated by Apollo and bore a son whom she exposed; Hermes brought him to Delphi, and thence after growing to young manhood he was brought back to Athens by Creusa's husband Xuthus, who supposed him his own son and called him Ion (q.v. 1). He became the ancestor of the Ionians (*Eur. Ion*). (2) Wife of Aeneas and mother of Ascanius; she died in trying to escape from Troy and her ghost warned Aeneas of his future adventures (*Aen.* 2. 651 ff.).

II J R

CRINAGORAS (b. c. 70 B.C.), elegiac poet, of Mytilene, son of Callippus, took part in embassy to Caesar at Rome in 45 B.C., and to Augustus in 26-25 B.C. In Rome he was the friend of Octavia, and there wrote his epigrams nos. 29, 11, and 41. No. 29 is concerned with the marriage of Octavia's stepdaughter to Juba, no. 19 with Tiberius, no. 31 with Drusus. Ep. 24 has been connected with the disaster of Varus. He is more interesting for his connections with others than for his own sake, since his work is usually rhetorical and undistinguished.

TEXT. M. Rubensohn, *Crinagorae Mytilenaei Epigrammata* (1888).
CRITICISM. J. S. Phillimore, *Dublin Review* 1906; E. Norden, 'Das Germanenepigramm des Crinagoras', in *Sitz. Berl. Akad.* 1917, 668 ff.; Cichorius, *Rom. Stud.* viii, 4 ff.
C M B.

CRISA, on a spur close to the modern Chryso, controls the roads from the coast of the Crisaean Gulf to Amphissa and to Delphi. It was a Mycenaean site of some importance, but its greatest prosperity was attained in the seventh century B.C. when it founded Metapontum. In the First Sacred War (see SACRED WARS) Crisa was destroyed and its fertile plain was dedicated to Pythian

Apollo. The name Crisa and the name Cirrha (q.v.) were often interchangeable as our sources show.

P-K, *GL* i. 2. 686 ff. and 715 n. 63.

N. G. L. H.

CRITIAS (c. 460–403 B.C.), one of the Thirty Tyrants at Athens, of an aristocratic family, to which Plato's mother (his first-cousin) also belonged. He was an early associate of Socrates, and of the sophists, and was himself active as a writer (see below). He was implicated in the mutilation of the Hermae, but released on the evidence of Andocides (q.v.). He seems to have played but a small part in the Revolution of the Four Hundred (q.v.). After their overthrow, either in 411 or 407, he proposed the recall of Alcibiades to Athens. In his exile, perhaps a consequence of the second exile of Alcibiades in 406, he went to Thessaly and, according to one story, intrigued with the *penestae* against their masters. On the surrender of Athens in 404 he returned, as a violent pro-Spartan, and was made one of the Thirty (q.v. 1). In Xenophon's narrative he appears as the leader of the extremists, violent and unscrupulous, and the proposer of the execution of his colleague Theramenes; but Aristotle in the *Politics* (1305^b26) makes Charicles the leader. He was killed fighting against Thrasylbulus (q.v.), spring 403. His reputation did not recover after his death; but Plato, much as he disliked the excesses of the Thirty, honoured his memory in his Dialogues.

Critias wrote elegiac poems and tragedies. In later days it was uncertain whether certain plays were the work of Euripides or of Critias (*Vit. Eur.*). A long fragment of the *Stryphus* gives a rationalist account of the belief in the gods, and the *Pirithous*, which is described by Ioannes Diaconus in *Hermogenem*, and of which some fragments are known from papyrus, is probably his work.

Xen. *Hell.* ii. 3–4, *Mem.* i. 2. For his works, see *TGF* 770–5; Diels, *Ursokr.* 88. Powell and Barber, *New Chapters* iii. 148 ff.

A. W. G. and A. W. P.-C., A. A.

CRITIUS, Greek sculptor, fl. c. 480–460 B.C., probably an Athenian. Six statue bases bearing the combined signatures of Critius and Nesiotes have been found on the Acropolis of Athens. One of these gives the name of Epicharinus and may be identical with that which supported the statue of Epicharinus, 'who practised the race in armour', seen by Pausanias (i. 23. 9). The general composition is perhaps preserved in a bronze statuette in Tübingen and on a coin of Cyzicus. The fame of Critius and Nesiotes today rests on the group of the Tyrannicides Harmodius and Aristogiton which they were commissioned to make in 477 B.C. (*Marm. Par.*, Ep. i. 1. 70 f.), to replace those by Antenor (q.v. 2). Copies of these figures have been identified on coins, vases, reliefs, and in full-size statues. The most complete marble copies are in the Naples Museum; fragmentary ones are in the Conservatori, British, and Metropolitan Museums, the Boboli Gardens, etc. A piece of the marble base on which the original bronze group stood has been found in the Athenian agora. Based on a resemblance to this well-authenticated work a number of attributions of extant sculptures have been made to Critius, the best-known being the 'Critius Boy', found on the Acropolis and dating from c. 480 B.C.

G. M. A. R.

CRITO (*Kρίτων*) (1), a contemporary and devoted friend of Socrates, referred to in Plato's *Apology*, *Phaedo*, and *Euthydemus*. In the *Crito* he plans for Socrates to escape from prison. Seventeen (lost) dialogues ascribed to him by Diogenes Laertius are of doubtful authenticity.

CRITO (*Kρίτων*) (2), one of the latest poets of the New Comedy; he won second prize with *Ἐφέσιοι* in 183 B.C. and with *Αἰτωλός* in 167. From *Φιλοπράγμων*, *The Busy-*

body, eight lines are preserved, in which Crito calls the Delians *παράσιντοι τοῦ θεοῦ*.

FCG iv. 537 ff., *CAF* iii. 354 f.

CRITO (3) of Argos, a Neo-Pythagorean philosopher, of whose *Περὶ φρονήσεως* Stobaeus (2, 157–8) quotes 15 lines of Doric prose, about the mind as created by God so as to enable man to contemplate God.

H. Thesleff, *The Pythagorean Writings of the Hellenistic Period* (Acta Academiae Aboensis, humaniora 30, 1 (1965)), 109. D. J. F.

CRITO (*Kρίτων*) (4), physician at Trajan's court c. A.D. 100 (his full name was T. Statilius Crito). We have (in Galen) considerable fragments of his works *Κοσμητικὰ* and *Περὶ τῆς τῶν φαρμάκων συνθέσεως*.

CRITOLAUS (*ΠΙΩ* 3), of Phaselis, head of the Peripatetic school in the second century B.C. His dates are unknown, but he was probably an old man when he took part, with Carneades the Academic and Diogenes the Stoic, in the philosophers' delegation to Rome in 156/5 B.C. He was the successor—though probably not the immediate successor (Wehrli, frs. 1, 3, 4)—of Aristo of Ceos as head of the Peripatetic school, and his period of office marks a reaction against the worldly and rhetorical preoccupations of his predecessors since Lyco, and a renewal of the scientific and philosophical activities of the school. Only fragments, and no titles, of his writings have survived. They show some acquaintance with Aristotelian doctrines, though much of it may be second-hand. His teachings, as far as one can reconstruct them, are essentially Peripatetic, with some traces of Stoic influences. He defended the Aristotelian doctrine of the eternity of the world against the Stoic idea of *ἐκπύρωσις*, and in ethics he held the highest good, in true Aristotelian fashion, to be a composite of the three kinds of goods, those of the soul, those of the body, and external goods. In psychology he taught that the soul was made of the 'fifth essence'—probably a compromise between Aristotelian cosmology and Stoic materialism.

He was a severe critic of rhetoric, and, like Plato, refused to recognize it as a proper art (*τέχνη*). But he recognized the superiority of Demosthenes, and the story that the latter learnt his rhetoric from the *Rhetoric* of Aristotle may have been his invention.

F. Wehrli, *Die Schule des Aristoteles* (1944–50), x. 49 ff., A.-H. Chroust, *Antiquitas Hungarica* 1965, 369 ff. J. G.

CROESUS, last king of Lydia (c. 560–546 B.C.), son of Alyattes. He secured the throne after a struggle with a half-Greek half-brother, and completed the subjugation of the Greek cities on the Asia Minor coast. His subsequent relations with the Greeks were not unfriendly; he contributed to the rebuilding of the Artemisium at Ephesus and made offerings to Greek shrines, especially Delphi; anecdotes attest his friendliness to Greek visitors and his wealth (*Κροίσειοι στατήρες*, but see COINAGE, GREEK). The rise of Persia turned Croesus to seek support in Greece and Egypt, but Cyrus anticipated him: Sardis was captured and Croesus overthrown. His subsequent fate soon became the theme of legend: he is cast or casts himself on a pyre, but is miraculously saved by Apollo and translated to the land of the Hyperboreans or becomes the friend and counsellor of Cyrus.

Herodotus, bk. 1; *FGRIH* 90 (Nic. Dam.) F 65, 68; Paccyphides 3. *British Museum Cat. Sculpture* (1928) i. 1. 38, *Louvre, Vases antiques gr.* 197; G. Radet, *La Lydie* (1893), 206 ff. P. N. U.

CROTON (*Κρότων*), modern *Crotone*. Originally a Messapic settlement (J. Whatmough, *Præ-Italic Dialects* (1933) ii. 258), Croton became an Achaean colony c. 710 B.C. Its situation, near the celebrated temple of Hera

Iacina in the 'toe' of Italy on an indifferent but important harbour, was bracing (Strabo 6. 216 f.; Polyb. 10. 1). Croton became a flourishing city twelve miles in circumference; it founded some colonies (Terina, Caulonia) and dominated others (Lametium, Scylacium). Famous for its doctors, athletes (including Milon, q.v.), Heracles cult, and especially for its Pythagorean brotherhood (between c. 530 and 455), Croton reached its apogee after destroying Sybaris (510). It even sent a ship to the battle of Salamis (Hdt. 8. 47). Shortly thereafter, however, its defeat by Locri and Rhegium (qq.v.) presaged its decline. Although still populous when captured by Dionysius (379), internal, Lucanian, Bruttian, Pyrrhic, and Hannibalic wars ultimately ruined Croton. A Roman colony (194 B.C.) failed to revive it (Diod. 14. 103 f.; 19. 3, etc.; Livy 24. 3; 34. 45).

See the bibliography s.v. MAGNA GRAECIA and add D. Randall-MacIver, *Greek Cities of Italy and Sicily* (1931); P. Lanza, *Croton nella Magna Grecia* (1934); Bérard, *Bibliogr. topogr.* 48. E. T. S.

CROWNS AND WREATHS were awarded by the Romans as decorations for valour; of these the highest was a wreath of grass (*corona obsidionalis*, c. *graminea*) granted to the deliverer of a besieged army. Pliny (*HN* 22. 6 ff.) lists eight recipients, ending with Augustus. Next came the c. *triumphalis* (c. *laurea*), a wreath of bay worn by the *triumphator* (see TRIUMPH), and the c. *ovalis* (c. *myrtea*), a myrtle-wreath worn for an *ovatio* (q.v.). During the Empire, of the awards which were allowed outside the imperial house, one, the c. *civica*, was theoretically open to all ranks, though there is no certain instance of its conferment after the reign of Claudius. It was a crown of oak-leaves and awarded for saving the life of a fellow soldier. Later, it was revived by Septimius Severus as a crown of gold (c. *civica aurea*) and given to centurions. Other decorations were awarded on a fixed scale and some were confined to particular ranks. Men below the centurionate were eligible for the lesser decorations of *torques*, *armillae*, and *phaleræ* (necklaces, bracelets, and embossed discs worn on the corselet). Centurions could have these and the c. *vallaris* or the c. *muralis*, crowns awarded to the first man over the enemy's rampart or over the wall of a besieged town. A *primipilus* (q.v.) might be awarded the c. *aurea*, a plain gold crown, besides the *hasta pura* or silver spear-head. Officers of higher rank could receive the *vexillum*, a small standard mounted on silver, the *hasta pura*, and *coronæ* according to a sliding scale. A mere *tribunus militum* was eligible for the c. *aurea*, a *legatus* of quaestorian rank might have the c. *vallaris* or c. *muralis* as well, and a *legatus* of praetorian rank all three. *Legati* of consular rank alone seem to have been awarded the c. *classica* (c. *navalis*, c. *rostrata*), a wreath decorated with a ship's prow, which was given for a naval victory.

Parker, *Roman Legions* 228 ff.

G. R. W.

CRUCIFIXION appears to have been a form of punishment borrowed by the Romans from elsewhere, probably Carthage. As a Roman penalty it is first attested in the Punic Wars. It was normally confined to slaves (*servile supplicium*), and later in the Empire to *humiliores*; it was not applied to soldiers, except in cases of desertion. Constantine the Great abolished the penalty (not before 314). The method of execution admitted variations, but the general practice was to begin with flagellation of the condemned, who was then compelled to carry a cross-beam (*patibulum*) to the place of execution, where a stake had been firmly fixed in the ground. He was stripped and fastened to the cross-beam by nails or cords, and the beam was drawn up by ropes until the man's feet were clear of the ground. The beam was then fastened to the upright. Some support for the body was provided by a ledge

(*sedile*) which projected from the upright, but a foot-rest (*suppedaneum*) is rarely attested, though the feet were sometimes tied or nailed. Death probably occurred through exhaustion: this could be hastened by breaking the legs (*crurifragium*). A military guard was normally posted at the place of execution. After removal of the body the cross was usually destroyed. G. R. W.

CTESIAS (late 5th c. B.C.) of Cnidos, Greek doctor at the Persian court who assisted Artaxerxes at the battle of Cunaxa, and was sent as envoy to Evagoras and Conon, 398 B.C. Author of a far from trustworthy history of Persia (*ἱεστικά*) in twenty-three books, written in Ionic, of a geographical treatise (*ἱερίδος*) in three books and of the first separate work on India (*Ἰνδικά*).

J. Gilmore, *Fragments of the Persica of Ctesias* (1888), *FGH III C* 688. G. L. H.

CTESIBIUS, inventor (fl. 270 B.C.), was the son of a barber in Alexandria, and employed by Ptolemy II. He was the first to make devices employing 'pneumatics', i.e. the action of air under pressure. His work on the subject is lost, but descriptions of some of his inventions are preserved by Philon (2), Vitruvius, and Heron (qq.v.). These include the pump with plunger and valve (Vitr. 10. 7; Heron, *Pneum.* 1. 28), the water-organ (Vitr. 10. 8), the first accurate water-clock (Vitr. 9. 8. 4 ff.) and a war-catapult (Philon, *Belop.* 43). No great theoretician, Ctesibius was a mechanical genius, some of whose inventions were of permanent value. It is probable that many of the basic ideas in the works of Philon and Heron on mechanical devices derive from him.

A. G. Drachmann, *Ktesibius Philon and Heron* (Copenhagen, 1938) G. J. T.

CTESIPHON, on the river Tigris, c. 60 miles above Babylon. Founded as a Parthian military camp opposite the Hellenistic Seleucia (q.v. 1), it became the winter residence of the Arsacids. After the destruction of Seleucia (A.D. 165) it was the chief city in Babylonia. Artaxerxes made it the capital of the new Sassanian Empire, and his successors built palaces and added new suburbs. In 636 the 'seven cities' of Ctesiphon were taken by the Arabs. Part of the fortifications still stand, and the impressive ruins of a Sassanian palace.

M. Streck, *Alte Orient* xvi. 3/4 (1917); Hongmann, *PIV*, Suppl. iv. 1102 ff.; O. Reuther, *Antiquity* 1929, 434 ff.; J. H. Schmidt, *Syria* 1934, 1 ff. M. S. D.

CUICUL (modern *Djemila*), a mountain-town lying between Cirta and Sitifis on the main road linking Numidia and Mauretania. Originally a *castellum*, dependent on Cirta, it became a colony under Nerva. In the second century A.D. it received an influx of romanized Berbers; agricultural prosperity developed and many public buildings were erected; its best-known citizen was Claudius Proculus, governor of Numidia (A.D. 208-10). Its extensive ruins include a Christian basilica, baths, theatre, baptistery, Caracalla's arch, and a temple of the gens *Septimia*.

A. Ballu, *Rev. Africaine* 1921; Y. Allais, *Djemila* (Paris, 1918); L. Lascu, *Djemila* (Algiers, 1953); P. Monceaux, *Civilisation chrétienne* (1923). Excavation reports in *Libya* 1953 and subsequent years. W. N. W.

CULLEO, QUINTUS TERENTIUS (*PW* 43), a senator, captured by the Carthaginians and released by Scipio in 201 B.C.; to show his gratitude he marched in Scipio's triumphal procession in a freedman's cap. As *tribunus plebis* in 189 (or 188) he carried a measure to enrol sons of freedmen in the rustic tribes. As praetor (187) he examined the evidence of unlawful registration by Latins on the citizen

roll. The statement (Antias, apud Livy) that he was chairman of a special *quaestio* set up to try L. Scipio belongs to a false account of the procedure then adopted. He served on commissions to Africa in 195 and 171.

H. H. S.

CULTURE-BRINGERS. All folklore (see Stith Thompson, A 500 ff.) contains stories of persons, divine or human, who introduced mankind in primitive days to the arts, religious observances, etc. Greek tradition is no exception. Prometheus (q.v.) is the great culture-hero of Attic belief (Aesch. *PV* 442 ff.); Cadmus (q.v.) introduces letters; Triptolemus, by direction of Demeter (q.v.), teaches men to plant corn. Similar Latin stories are late and artificial; for examples, see JANUS, SATURNUS. Gods figure occasionally in this capacity (Athena invents horsemanship, Dionysus introduces the vine, etc.). Lists of such inventors are late, but common, see Kremmer, *De catalogis heurematum* (Diss. Leipzig, 1890). H. J. R.

CUMAE, Italy's earliest Greek colony, founded on the coast near Naples by Chalcis, traditionally in 1050, actually c. 750 B.C., in fertile territory inhabited in pre-Hellenic times but now deserted. After its foundation Greek civilization spread further in Italy (A. Blakeway, *JRS* 1935, 135). Cumae soon acquired wealth and power. From 700 to 500 it exercised wide dominion and colonized Neapolis, Dicaearchia (= Puteoli), Abella, distant Zancle (= Messina), and possibly Nola (qq.v.). Cumae is inseparably associated with the Sibyl whose oracular cavern still exists (*Aen.* 6); but its first real personality is Aristodemus (q.v. 2), who repulsed the Etruscans. In 474 Cumae with Syracusan aid crushed Etruscan power in Campania, but was itself conquered by Sabelli (q.v.) c. 421 and became an Oscan city (Diod. 11. 51; 12. 76). Subsequently coming under Roman control it obtained *civitas sine suffragio* in 338 and *praefecti Capuam Cumas* in 318. It staunchly supported Rome in the Hannibalic and Social Wars, discarded Oscan for Latin in 180, and ultimately obtained full citizenship. But, as Puteoli rose, Cumae, despite repeated colonizations and the erection of villas nearby, declined. However, its inaccessible citadel was still strategically important in Belisarius' time.

CUNAXA, northward from Babylon, was the scene of the battle between Cyrus (q.v. 2) the younger and Artaxerxes II (401 B.C.). Artaxerxes' scratch army—he had only two satraps with him besides Tissaphernes—consisted of perhaps 30,000 infantry (Xenophon's estimate of 900,000 is ridiculous), but at least 6,000 horse. Cyrus, who had brought only 2,600 horse, had failed before he started. Tissaphernes, with Artaxerxes, was in the centre with a strong cavalry force; Cyrus put his 10,400 Greek hoplites under Clearchus on his right instead of opposite Tissaphernes, and took the centre himself with only 600 horse; Ariaeus with Cyrus' Asiatic troops was on the left. Clearchus routed the infantry of Artaxerxes' left, but neglected to turn against his centre; while he uselessly pursued the beaten infantry, Tissaphernes threw in his cavalry, killed Cyrus, outflanked Ariaeus who fled, and gained a decisive victory.

W. W. Tarn, *CAH* vi. 7; A. Boucher, *L'Anabase de Xénophon* (1913) pt. 1, ch. 8. W. W. T.

CUNEOBEL(L)INUS, son of Tasciovanus, king of the Catuvellauni at Verulamium. Perhaps as a result of the *clades Variana* in A.D. 9, he moved (in defiance of Caesar's

treaty) against the Trinovantes and made Camulodunum his capital, where he established his mint. Later he conquered Kent and could be regarded as 'rex Britanniarum' (Suetonius, *Calig.* 44. 2). Camulodunum (Lexden Heath, near the later colony) became a notable centre of Roman imports, and his coins bear Latin inscriptions and emblems of mythology. About A.D. 40 a quarrel with his son Amminius, who fled to Rome, prompted Caligula's abortive demonstration. He died before 43; and a mound at Lexden Heath may be his grave (*Archaeologia* 1926-7, 241 ff.). He was prominent in medieval fable, whence Shakespeare derived the material for 'Cymbeline'.

CUPIDO AMANS, a short anonymous Latin poem, third century A.D., in 16 hexameters.

Anth. Lat. (Riese) 240. Duff, *Minor Lat. Poets*.

CURATOR. A *cura* was originally not an office, but a duty forming part of an office; thus the *cura annonae* was (normally) the aediles' task, the *cura morum* the censors'. A *cura varium* (or of individual *vae*) is mentioned in connexion with various magistracies and by the late Republic we find it occasionally entrusted to a *privatus* with some experience. The first major independent *cura*, however, was the *cura annonae* of Pompey (q.v.) in 57 B.C. This *cura* was later conferred on Augustus, and others (notably a *cura morum*) were offered to him, as perhaps to Caesar before him. But Augustus, in accordance with a general tendency to empty the regular magistracies of content, instituted boards of *curatores* (with previous experience as magistrates) to take charge of administrative tasks like the *annona*, the roads, and the Tiber (qq.v.). Such *curatores*, both in Rome and in municipalities, became common under the Empire. The title is also used for the presidents of organizations like Conventus and Clubs (qq.v.).

Ruggiero, *Diz. Epigr.*, s.v.

E. B.

CURATOR REI PUBLICAE (or **CIVITATIS**, etc.). Officials of the central government supervising city affairs appear in the East under Trajan (perhaps even under Domitian): their office is not yet distinguished from that of *corrector* (q.v.) and terminology overlaps. In the second century A.D. they become more common, are normally called *λογισται* and seem to be chiefly in charge of the finances of one city, or at most two or three. In Italy and the West, the early emperors sporadically interfered in local government of citizen communities: when 'elected' local magistrates, they would govern through a prefect. A praetorian *curator* of colonies and *municipia* is found under Domitian (*ILS* 1017), and from the time of Trajan we frequently find men supervising cities, sometimes several towns concurrently or in succession. In western provinces they appear more gradually in the second century. Appointed by the Emperor (often on local recommendation), they are usually of senatorial or equestrian standing. Municipal notables appear quite early and become common under the Severi. Their duties come to embrace most aspects of local government. After Diocletian the office became municipal (though important men could be chosen to honour a town) and lost much of its power to the regional governor.

Ruggiero, *Diz. Epigr.*, s.v., and (for Africa) C. Lucas, *JRS* 1940, 56 ff. F. B.

CURETES, (1) a people hostile to the Calydonians (*Il.* 9. 526). (2) Semi-divine beings (Hesiod, fr. 198 Rzach, calls them *θεοί*) inhabiting Crete, who protected the infant Zeus by dancing about him and clattering their

weapons so that his cries were not heard (Callim. *Jov.* 52 ff., and many authors). The origin of the legend is plausibly derived from the Cretan rite (see J. Harrison, *Themis*² (1927), 1 ff.; Nilsson, *Minoan-Mycenaean Religion*² (1950), 475 ff.) of a ceremonial (not provably a dance) in honour of Zeus Kourous. They are often confused with the Corybantes attendant on Rhea (see Rose, *Handb. Gk. Myth.*, 171). See further H. Jeanmaire, *Couroi et Courètes* (1939), and for the religious confraternity bearing this name at Ephesus in and after the time of Strabo, Ch. Picard, *Éphèse et Claros* (1922), 279 ff., etc. H. J. R.

CURIA (1) was the most ancient division of the Roman People, already existing under the kings. The *curiae* were thirty in number (ten for each Romulean tribe). Some bore local names (L'orientis, Velensis), others personal ones (L'itia). They were probably composed of families, who were, originally at least, neighbours. Probably both patricians and plebeians were always included (Dionysius 4. 12. 20). The head of the *curia* was the *curio* who was at least 50 years of age and was elected for life; the head of the college of the *curiones* was a *curio maximus*, who until 210 B.C. was always a patrician: details of their election are uncertain. The *curiae* were probably the basis of the oldest military organization and certainly the elements of the oldest Roman assembly (see COMITIA). Each *curia* had its own meeting-place called after the *curia*. The *curiae* had a special devotion for Iuno Quiritis: the Fornacalia and the Fordicidia were their most famous festivals. A comparable subdivision of the tribe is to be found at Iguvium (Umbria).

Curia was also the name given to the assembly-places of many other corporations, and especially to the senate-house (see below). As a voting section of the citizens the *curia* is attested in Latium (Lanuvium) and in many Italian and provincial *municipia* and *coloniae*, both of Latin and Roman status. It was especially common in Africa. During the Empire *curia* was also the usual name for the municipal senates, to which the elections of the magistrates were transferred from the people. It was largely constituted from ex-magistrates chosen for life (at least in the West) and in the Late Empire turned into a hereditary caste, called the *curiales*, whose lives and property were under the control of the state as security for the collection of taxes. See also CURIALIS, DECURIONES.

Droits Ant.* 1954, 462 ff.; P. de Francisci, *Primordia Civitatis* (1950), 572 ff.; A. Momigliano, *JRS* 1963, 108 (with bibliography). For the *curiae* in *municipia* W. Liebenow, *Städteverwaltung im römischen Kaiserreich* (1900), 214 ff.; Mommsen, *Juristische Schriften* i. 303 ff.; Jones, *Later Rom. Emp.* II. 724. A. M.

CURIA (2), the Senate-house of Rome, situated on the north side of the Comitium (q.v.) in the Forum and ascribed to Hostilius. It was restored by Sulla in 80 B.C., burnt after the death of Clodius in 52, and rebuilt by Faustus Sulla. Julius Caesar began a new building on a slightly different site in 44, forsaking the old orientation by cardinal points, which was restored by Domitian in A.D. 94, and later by Diocletian after the fire under Carinus in 283. The Caesarian plan, always retained, was a sumptuous oblong hall (25.20 × 17.61 m.), with central door facing a magistrates' dais and with lateral marble benches. The hall was separated from the record-office (*secretarium senatus*) by an atrium or chalcidicum, dedicated by Domitian to Minerva. Diocletian's building, of tile-faced concrete coated with imitation stucco blockwork, was preserved to full height as part of a church and restored in 1935-7.

Nash, *Pict. Dict. Rome* i. 301 ff.

I. A. R.

CURIALIS, member of a city council (*curia*), or son or descendant of one in the male line. City councillors, or decurions (q.v.), had tended during the Principate to become a hereditary class, since only the richest citizens could bear the financial burden involved and normally property descended from father to son. From the middle of the second century wealthy citizens became increasingly reluctant to serve on the council, but were compelled to do so if legally nominated. Many exploited various exemptions. Roman senators and members of the equestrian service were excused local office and so were farmers of state lands or taxes, shippers serving the *annona*, doctors, professors, and other categories. From the time of Diocletian the government made increasing efforts to prevent these exemptions from being misused, and in particular to forbid *curiales* to obtain honorary offices. The government's efforts, however, were not very effective, and the curial class was gradually drained of its wealthier members.

Jones, *Later Rom. Emp.* 737 ff.

A. H. M. J.

CURIATIUS MATERNUS, senator, poet, and dramatist, at whose house the scene of Tacitus' *Dialogus* is laid. He speaks there as champion of poetry. His (lost) *praetextae*, *Domitius* and *Cato*, belong to Vespasian's time. On his origin, see Syme, *Tacitus*, appendix 90.

CURIO (1), GAIUS SCRIBONIUS (*PW* 10), after early forensic activity and an unsuccessful tribunate (90 B.C.), served under Sulla in the East and later enriched himself in the proscriptions. Consul in 76 B.C., he opposed Scinius (q.v.), then fought in Macedonia as proconsul and triumphed (73). He supported Verres (q.v.) and was active in the courts and in politics in the 60s and 50s, consistently opposing Caesar, but defending Clodius (q.v. 1) and hence often hostile to Cicero, who wrote a pamphlet attacking him and later (needing his help) wanted to deny authorship. He died in 53 (see Cic. *Fam.* 2. 2). E. B.

CURIO (2), GAIUS SCRIBONIUS (*PW* 11), son of (1), moved in the circle of Clodius (q.v. 1) and Antonius (q.v. 4), but in the 50s B.C. was on the Optimist side with his father, and was implicated in the affair of Vettius (q.v. 3). He was quaestor in 54, tribune in 50 (elected as an enemy of Caesar, who had offended him). Resentful at the Optimates' opposition to his own schemes, alarmed at the drift to civil war (which they encouraged), and bribed by Caesar with a vast sum, he carried a disarmament resolution in the Senate by a large majority and, when it was ignored, joined Caesar at the end of his tribunate. After negotiating on his behalf, he served under him in 49, hoping to win Cicero to his cause; after occupying Sicily he crossed to Africa, where, after initial successes, he was defeated and killed by Juba (q.v. 1).

W. K. Lacey, *Hist.* 1961, 318.

E. B.

CURSES. A curse is in general a wish, expressed in words and with magical effect, that evil may befall a person or persons or, sometimes, the curser himself.

1. The Greek word *ἀρά* reflects a prehistoric stage of Greek religion, signifying the address to supernatural forces, prayer as well as curse (personified as *Ἀρά*, secondarily combined with Erinyes, goddess of revenge; cf. *ἀρητήρ* in the *Iliad*). Originally the curse (just as its opposite, the blessing) worked by its own inherent quality (*mana*), the power of its magic formula (see MAGIC); this may be spoken or written or both; it may also be accompanied or symbolized by action (cf. the modern Greek *φασκέλωμα* and the Italian *il fico*, etc.), the gesture and the intonation intensifying the emotional character of the curse. The curse was always a powerful weapon in the

hands of the weak and the poor, as also against unseen or unknown foes. So we often meet with such imprecations (*dirae*) in funeral inscriptions against those who violate graves (especially in Asia Minor). Numerous leaden tablets (magic nails, amulets, etc., cf. the magic papyrus), inscribed with imprecatory formulas or words or signs, testify to the popularity of cursing (*ἀναθεματίζω*), resorted to in all centuries by all sorts of people on any provocation (in the 4th c. B.C. even by well-to-do Athenians). When the tablets are buried in tombs, not only the spirits of the dead are invoked, but also the infernal deities, Persephone, Hades, Erinyes (cf. *Il.* 9. 453 ff.); elsewhere Hermes, Gaia, Demeter (at Cnidos), Hecate, and all sorts of demons are favourites (cf. the Roman *devotio*: see s.v.). Especially to be noted are the 'hereditary curse', infectious through generations (cf. Aeschylus' *Oresteia*), and the curse, uttered in vain, that returns to the curser, destroying him and his family (cf. *SIG*³ 41. 14). The *ἀpai, dirae*, developed into a special literary genus (cf. Sophron, Ovid's *Ibis*, Horace *Epod.* 10; Tib. 1. 5. 49 ff.). Later Christians might use ancient curses in inscriptions, simply prefixing a cross.

II. In the development of human society and ethics the curse plays an important role, just as does the oath (the two being often combined, cf. *Il.* 3. 279). The curse, expressed by the community through its representatives (magistrates, priests), had an enormous effect (cf. the blessing or curse uttered by parents or dying people). The culprit ('infecting' his countrymen, as Plato puts it, *Leg.* 9. 881 e 5) was thus in the position of a man guilty of sacrilege, and so the legal powers could enforce their rights even in cases where only the gods could help. Enemies and traitors were cursed, just as those who removed landmarks or maltreated guests and suppliants. The curses of the Bouzygai at the Athenian Bouphonia (see SACRIFICE § 2) may illustrate how ethical principles might be enforced by cursing the offenders, and 'public curses' were as terrifying to the Greeks (cf. the *dirae Traie*, *SIG* 37-8) as to the Romans (cf. Crassus on his departure for the Orient, Plut. *Crass.* 16). The weakening of the fear of the old gods already recognizable in official use in the third century B.C. reduced the importance of the curse, but we can still see its effect in ecclesiastical ritual.

S. E.

CURSUS HONORUM. As the Roman magistracies developed and the relative degrees of responsibility were established, it was natural that normally they should be held in ascending order of importance. This custom became increasingly inflexible. The basic pattern, after preliminary military service, was quaestorship-praetorship-consulship-censorship. If the tribunate of the *plebs* and the aedileship were held, the former usually and the latter always followed the quaestorship. For various reasons neither tribunate nor aedileship could be made obligatory, and the consulship was probably only a *de facto* prerequisite for the censorship; but in or soon after 107 B.C. tenure of the praetorship became a legally necessary qualification for the consulship. Omission of the quaestorship, already rare, was prohibited by Sulla. This *certus ordo magistratum* acquired further rigidity from the *lex annalis* (see VILLIUS). In the early Principate the pattern was extended. The vigintivirate became a prerequisite for the quaestorship, and all except patricians were obliged to hold either the tribunate of the *plebs* or the aedileship. Between vigintivirate and quaestorship the

military tribunate was usually held; this is often thought to have been an obligatory step in the *cursus* (cf. esp. Suet. *Aug.* 38. 2), but either it was not so or exemptions were frequent. Provincial governorships and the new non-magisterial posts (see CURATOR and PRAEFECTUS) were normally held at fixed points within the framework, though variations in these facilitated flexibility in careers. A similar *cursus* developed for equestrian careers (see EQUITTES), especially for the senior prefectures, but it was always subject to greater variations than the senatorial *cursus*. A *cursus* was observed also in municipal magistracies.

A. Astin, *The Lex Annalis Before Sulla* (1958); Mommsen, *Rom. Staatsr.* 1st 536; E. Burley, *Proc. Brit. Acad.* 1953, 197. A. E. A.

CURTIUS (*PW* 7, 9), the hero of an aetiological myth invented to explain the name of *Lacus Curtius*, a pit or pond in the Roman Forum, which by the time of Augustus had already dried up. Three Curtii are mentioned in this connexion: (1) a Sabine Mettius Curtius who fell from his horse into a marsh while fighting against Romulus; (2) C. Curtius, consul of 445 B.C. who consecrated a site struck by lightning; (3) and most important, the brave young knight M. Curtius who, in obedience to an oracle, to save his country, leaped armed and on horse-back into the chasm which suddenly opened in the Forum.

Ogilvie, *Comm. Lat.* 1-5, 75 ff. For the *Lacus Curtius* see Platner-Ashby 310 f.; Nash, *Pict. Dict. Rome* 1 542 ff. P. T.

CURTIUS (4) **MONTANUS** was prosecuted under Nero for his satiric poems, and excluded from holding any public office (*Tac. Ann.* 16. 28; 29; 33). In A.D. 70 he attacked M. Aquilius Regulus in a fierce speech in the Senate (*Tac. Hist.* 4. 42). He became one of Domitian's advisers (*Juv.* 4. 107).

CYBELE (*Κυβέλη*; Lydian form *Κυβήβη*, *Hdt.* 5. 102), the great mother-goddess of Anatolia, associated in myth, and later at least in cult, with her youthful lover Attis (q.v.). Pessinus in Phrygia was her chief sanctuary, and the cult appears at an early date in Lydia. The queen or mistress of her people, Cybele was responsible for their well-being in all respects; primarily she is a goddess of fertility, but also cures (and sends) disease, gives oracles, and, as her mural crown indicates, protects her people in war. The goddess of mountains (so *Μήτηρ ὄρεα*; Meter Dindymene), she is also mistress of wild nature, symbolized by her attendant lions. Ecstatic states inducing prophetic rapture and insensibility to pain were characteristic of her worship (cf. especially Catull. 63).

By the fifth century Cybele was known in Greece, was early associated with Demeter (H. Thompson, *Hesp.* 1937, 206) and perhaps with a native *Μήτηρ θεών*, but except possibly for such places as Dyme, Patrae (Paus. 7. 17. 9; 20. 3), and private cult associations at Piraeus, where Attis also was honoured, it is likely that the cult was thoroughly hellenized. Cybele was officially brought to Rome from Asia Minor in 205-204 (for the conflicting legends see Graillet, op. cit. *infra*, ch. 1), but under the Republic, save for the public games, the Megalesia, and processions (*Lucr.* 2. 624 f.), she was limited to her Palatine temple and served only by Oriental priests (Dion. Hal. *Ant. Rom.* 2. 19. 3-5). After Claudius admitted Attis to public status, the priesthood was opened to citizens, and was henceforth controlled by the *XVviri sacris faciundis* (see QUINDECIMVIRI). The cycle of the spring festival, while not fully attested till A.D. 354, began to take form then. The rites began on 15 Mar. with a procession of the Reed-bearers (*cannophori*), and a sacrifice for the crops. After a week of fastings and purifications, the festival proper opened on the 22nd with the bringing of the pine-tree, symbol of Attis, to the temple.

The 24th was the Day of Blood, commemorating the castration and probably the death of Attis. The 25th was a day of joy and banqueting, the Hilaria, and after a day's rest the festival closed with the ritual bath (*lavatio*) of Cybele's image in the Almo. The rubric for the 28th (*Initium Cauni*) is apparently unrelated. The relation of this spring festival to the Hellenistic mysteries of Cybele is uncertain. Of the later mysteries, in which Attis figured prominently, we again know little. The formulae preserved (Firm. Mat. *Err. prof. rel.* 18; Clem. Al. *Protr.* 2. 15) mention a ritual meal; the carrying of the *κύβητος*, a vessel used in the *taurobolium* to receive the genitals of the bull; and a descent into the *παστός*, probably an underground chamber where certain rites were enacted.

The ritual of the *taurobolium* originated in Asia Minor, and first appears in the West in the cult of Venus Calecta (i.e. -is) at Puteoli in A.D. 134 (*ILS* 4271, but cf. 4099 of A.D. 108). From the Antonine period, numerous dedications to Cybele and Attis record its performance in this cult 'ex vaticinatione archigalli' (i.e. with official sanction), on behalf of the Emperor and the Empire. From Rome the rite spread throughout the West, notably in Gaul. It was performed also on behalf of individuals, and was especially popular during the pagan revival, A.D. 370-90. In the rite, the recipient descended into a ditch and was bathed in the blood of a bull, or ram (*criobolium*), which was slain above him (Prudent. *Perist.* 10. 1011-50). It was sometimes repeated after twenty years, one late text (*ILS* 4152) has 'taurobolio crioboluo, in aeternum renatus' (a concept possibly borrowed from Christianity), but in general the act was considered rather a 'thing done' for its own value than as a source of individual benefits.

A belief in immortality was perhaps part of the cult from early times, and the after-life may at first have been thought of as a reunion with Mother Earth. Later, Attis became a solar god, and he and Cybele were regarded as astral and cosmic powers; there is some evidence that the soul was then thought to return after death to its celestial source.

Thanks to its official status and early naturalization at Rome, the cult spread rapidly through the provinces, especially in Gaul and Africa, and was readily accepted as a municipal cult. Its agrarian character made it more popular with the fixed populations than with the soldiery, and it was especially favoured by women.

Cybele is generally represented enthroned in a *naïskos*, wearing either the mural crown or the *calathos*, carrying a patera and tympanum, and either flanked by lions or bearing one in her lap.

I. R. W.

CYCLADES, the islands regarded as circling round the sacred isle of Delos. They enjoyed a flourishing and individual culture in the Early and Middle Bronze Age, and from the seventeenth century several were settled from Minoan Crete. After 1400 they fell within the Mycenaean sphere and continued inhabited after the decline of the Mycenaean cities of the mainland. About 1000 B.C. Ionic-speaking settlers from continental Greece occupied these islands. In the eighth century Eretria exercised control over some of them, as did the tyrants Pisistratus (Athens), Polycrates (Samos), and Lygdamis (Naxos) in the sixth; but no power could protect the islanders from the invading Persian fleet in 490. After the Persian Wars the islanders entered an Athenian

League centred at Delos (478-477), and Athens soon became mistress of the Cyclades. They were also enrolled in the second Athenian League (378-377), but the triumph of Philip of Macedon ended Athenian hegemony. Antigonos of Macedon founded a League of Islanders with headquarters at Delos. In the prolonged struggle between Macedon and Egypt in the third century the Cyclades often changed masters; late in the century they suffered from Cretan piracy and the rivalries of Pergamum, Rhodes, and Syria. In the Mithridatic War the islands were reduced by Archelaus (88), nor was tranquillity restored until the triumph of Augustus.

CYCLOPES (*Κύκλωπες*), gigantic one-eyed beings of whom at least two separate traditions existed. In Homer they are savage and pastoral; they live in a distant country, having no government or laws. Here Odysseus (q.v.) visits them in his wanderings and enters the cave of one of them, Polyphemus, who imprisons him and his men and eats two of them morning and evening, until they escape by blinding him, while in a drunken sleep, and getting out among the sheep and goats when he opens the cave in the morning (*Od.* 9. 106 ff.). Polyphemus is son of Poseidon, and the god, in answer to his prayer for vengeance, opposes the home-coming of Odysseus in every possible way, bringing literally to pass the curse that he may return alone and find trouble when he arrives (*ibid.* 532-5). Out of this, or by conflation of it with some local legend, grows the story of the amorous Polyphemus ('Theocr. 11 and elsewhere). He lives in Sicily (one of many identifications of Homeric myth with later known western places) and woos Galatea (q.v.).

But in Hesiod (*Theog.* 149) the Cyclopes are three, Brontes, Steropes, and Arges ('thunderer, lightning, bright'), who make thunderbolts and in general are excellent craftsmen; they are like the gods except that they have but one eye each, and are sons of Earth and Heaven. They often appear (as Callim. *Dian.* 46 ff.) as Hephaestus' workmen, and often again are credited with making ancient fortifications, as those of Tiryns, and other cities of the Argolid (schol. Eur. *Or.* 965). There they are called *ἐγγεργάστορες*, simply 'workmen' (Williamowitz-Moellendorf, *Glaube der Hellenen* (1931-2), i. 277). Schol. Hesiod. *Theog.* 139, makes these builders a third kind of Cyclopes.

II J R

CYCNUS, (1) a son of Ares, a brigand, waylaying and robbing those who brought tithes to Delphi (Arguments 2 and 3 to [Hesiod], *Sc.*). According to that poem, Heracles and Iolaus met him in company with Ares himself in the precinct of Apollo (58). Clad in his armour, the gift of the gods, and drawn by Arion (q.v.; 120), Heracles asked Cycnus to let him pass, then, as he would not, engaged with him, encouraged by Athena (325 ff.), killed him, and then, when Ares attacked him, wounded the god in the thigh. Pindar (*Ol.* 10. 15) says Heracles fled before Cycnus, which the scholiast explains, quoting Stesichorus, as meaning that he at first fled before Ares. He also says that Cycnus' object was to build a temple of skulls to Apollo. (2) Son of Poseidon. He was killed by Achilles before Troy, according to several authors from the *Cypria* on. Ovid (*Met.* 12. 83 ff.) adds that he was invulnerable and Achilles choked him to death; Poseidon then turned him into a swan (*κύκνος*). (3) King of Liguria, kinsman of Phaethon (q.v.); mourning for his death, he also became a swan (Hyg. *Fab.* 154. 5). (4) Son of Apollo, a handsome boy. Because a much-

tried lover left him, he drowned himself in a lake, ever after frequented by swans, into which he and his mother, who also drowned herself, were turned (Antoninus Liberalis 12).

H. J. R.

CYLON, an Athenian nobleman; winner of the *diaulos* at Olympia, perhaps in 640 B.C. He married the daughter of Theagenes (q.v. 1), tyrant of Megara, and with his help and a few friends seized the Acropolis at Athens, with a view to a tyranny, in an Olympic year (632?). The masses, however, did not follow him, and he was besieged. He himself escaped; his friends surrendered and, though suppliants at an altar, were killed. Hence arose the *áynos*, or taint, which attached to those said to be responsible, especially to Megacles the archon and his family, the Alcmaeonidae (q.v.).

A. W. G.

CYME, the most important and powerful of the Aeolian cities on the seaboard of Asia Minor, occupying a site of natural strength midway between the mouths of the Caicus and the Hermus, and facing north-west towards Lesbos. Its history is a record of external domination, by Persians (though Cyme participated in the Ionian Revolt, and belonged to the Delian League and the second Athenian League), Seleucids, Attalids, and Romans. A severe earthquake devastated the city in A.D. 17. Hesiod's father came from Cyme to Boeotia. Its most distinguished son was Ephorus (q.v.). The inhabitants were famous for their easy-going temperament.

D. E. W. W.

CYNAETHUS of Chios, according to schol. Pind. *Nem.* 2. 1, was chief among the later, spurious Homeridae (q.v.), composed the Homeric Hymn to Apollo (cf. *Ath.* 22 b), and was the first to recite Homer at Syracuse (c. 504 B.C.). How much fact this report contains is debatable.

H. T. Wade-Gery, *Essays in Greek History* (1958), 17 ff.

M. I. W.

CYNEGEIRUS, brother of Aeschylus, fought and fell at Marathon (490 B.C.) in a bold attempt to seize a Persian ship by the stern. This exploit was immortalized in the Painted Portico (c. 460), and was variously elaborated by historians (e.g. the source of Justin 2. 9. 16 ff.) and rhetoricians (e.g. Polemon).

P. T.

CYNICS (*κυνικοί*), followers of the principles of Diogenes of Sinope, who had received the nickname of *κύων* (dog) because he rejected all conventions, tried to live on nothing, and advocated and practised shamelessness (*ἀναιδέεια*). Since Antisthenes had probably influenced the philosophy of Diogenes, many considered and still consider him the real founder of the sect.

The Cynics were never organized in a school like the Stoics, Epicureans, Peripatetics, etc., and had no elaborate philosophical system. Since therefore everybody was at liberty to adopt those of Diogenes' principles which appealed to him and to neglect the rest, there has been and still is much argument as to who was a true Cynic and who was not. The variety was greatest during the century following the death of Diogenes. His most faithful disciple Crates of Thebes preached the gospel of simplicity and independence, and comforted many in those troubled times by demonstrating that he who needs next to nothing, renounces all possessions, and keeps aloof from social entanglements, can live happily in the midst of war and disorder. Onesicritus adapted Cynic philosophy to the life of a soldier or sailor, and compared Diogenes' principles with those of the Indian ascetics. Bion of Borysthenes and Menippus imitated

Diogenes' caustic wit in their satirical writings. They were the first to mingle Cynicism with Hedonism. Cercidas derived theories of social reform from Cynic doctrines. Crates and Teles originated the type of Cynic who wandered all over Greece with stick and knapsack, teaching and preaching.

After having flourished in the third century B.C., Cynicism gradually faded out in the second and first centuries B.C., retaining only some literary influence (Melager of Gadara). It was revived in the first century after Christ. The beginnings of this revival are unknown; but under the reign of Vespasian and his successors the Orient and Rome swarmed with Cynic beggar philosophers (Dio Chrys. 32. 10). Educated men like Dio himself, however, also adhered to Cynic principles; and the contrast between the true Cynic and the depraved Cynicism of the beggar philosophers became a commonplace in the literature of the Empire (Dio, Lucian, Julian). While the aristocratic opposition to the emperors was connected with Stoicism, middle-class criticism was sometimes voiced by Cynics who contrasted their ideal of the philosopher king with the actual conduct of the emperors. They therefore were frequently banished from the capital.

Outstanding among the Cynics of the first and second century after Christ were Demetrius, Dio, Demonax, Peregrinus Proteus, Oenomaus of Gadara, Sostratus, and Theagenes. Only very few Cynics of the following centuries acquired any renown. The last one mentioned by name is Sallustius, who lived at the end of the fifth century (*Suda*, s.v.; *Dam. Ind.* 342^a 27 ff.). But the Cynic beggar philosophers are frequently alluded to in literature up to the sixth century.

K. VON F.

CYPARISSUS (*Κυπάρισσος*), i.e. Cypress, in mythology son of Telephus (q.v. 1), a Cean (Ov. *Met.* 10. 106 ff.), who grieved so much at accidentally killing a pet stag that the gods turned him into the mournful tree, or a Cretan, who was so metamorphosed while fleeing from the attentions of Apollo, or Zephyrus (Servius on *Aen.* 3. 680).

H. J. R.

CYPRIAN (THASCIUS CAECILIUS CYPRIANUS), c. A.D. 200–58. Son of rich parents possibly of senatorial rank, he became bishop of Carthage (248) soon after baptism and was quickly beset by Decius' persecution (250), for which his writings are a major source. His letters and tracts, from which much of the old Latin Bible can be reconstructed, deal mainly with difficulties within the Christian community resulting from the persecution, especially the terms and proper authority for restoration of apostates and the avoidance of a split between the rival advocates of laxity and rigour. In 256–7 his theology led to a split with Rome, whose Bishop Stephen recognized the baptism of Novatian's community (since 251 separated on rigorist grounds). In Valerian's persecution (257) he was exiled to Curubis, and on 14 Sept. 258 executed at Carthage, the authorities treating him with the respect due to his class. More an administrator than a thinker, he writes with the effortless superiority of a high Roman official, liking correct procedure and expecting his clergy and *plebs* (and in practice his episcopal colleagues) to accept his authority. He speaks of bishops as magistrates, *iudices vice Christi*, and his language finds many analogies in Roman law. His application of juridical categories to the conception of the church permanently influenced Western catholicism. His *Life* by his deacon Pontius, the earliest Christian biography, aims to show

him as the equal of the glorious martyr Perpetua, pride of African Christianity.

CYPRIOI SYLLABARY, the system of writing native to Cyprus between the beginning of the seventh and the end of the third century B.C. It is also known as the Classical Syllabary, to distinguish it from the undeciphered Cypro-Minoan scripts found in the island from 1550 to 1050 B.C. and themselves derived from the Cretan Linear A. Undoubtedly descended from these—from which, however, it is separated by a lacuna covering the whole of the Cypro-Geometric period—the Classical Syllabary is subdivided into Paphian, confined to Paphos and archaic Curium, and the Common Cypriot of the rest of the island. It is exclusively the vehicle both of the Cypro-Arcadian dialect and of the still unintelligible Eteo-Cypriot language. Of some 800 texts now known to us, quite the most celebrated is the Bronze Tablet of Idalion. The syllabary now consists of fifty-six signs, five vowels (without distinction between the long and the short) and fifty-one combinations of consonant and vowel. The Cypriot Syllabary was deciphered by G. Smith in 1871.

O. Masson, *Inscriptions Chypriotes Syllabiques* (1961). T. B. M.

CYPRUS is an island in the Levant some 50 miles south of Cilicia Tracheia. Its extreme measurement is 140 by 60 miles. It is shaped like the skin of an animal, with the neck pointing towards north Syria. Excavations have revealed a distinctive Neolithic culture of high quality, which began before the outset of the sixth millennium B.C. with a preceramic phase, closed about 2300 B.C. with the chalcolithic. In the Early Bronze Age intruders from western Anatolia arrived in such strength that the earlier culture was speedily submerged; prosperity increased, more particularly on the north coast, and the beginnings of urbanization can be detected. Contacts with Asia Minor and Syria were superseded in the Late Bronze Age by Aegean influences: the first Mycenaeans arrived towards the end of the fifteenth century, traders and colonists established themselves during the fourteenth, soon after the middle of the thirteenth massive immigration, extending throughout the island to both town and country, caused the native culture, hitherto distinct, to become fused with the Mycenaean. All the main elements of Mycenaean life have now been found, except Mycenaean architecture, tomb-types and road-systems. The mining and smelting of copper, attested for the Early Bronze Age, were extensively practised. Enkomi, predecessor of Salamis (q.v.), appears to have been the chief Mycenaean city, and its close connexions with Syria are illustrated by finds at Ras Shamra (Ugarit). Among Aegean imports were two modes of syllabic writing called Cypro-Minoan, of which the earlier has been ascribed to the sixteenth century. These scripts, which have not been deciphered, survived in the Cypriot Syllabary (q.v.) as a vehicle for Greek down to about 200 B.C. Inscriptions also prove the survival into the Hellenistic age of a non-Greek tongue. The native name of the island in Mycenaean times seems to have been Alashia, as in the Hittite and Egyptian texts; but *Kypros* is attested by the Pylos tablets of the thirteenth century. Egyptian connexions, constant in the Late Bronze Age, may indicate a temporary domination in the fifteenth century.

Cyprus was not directly affected by the Dorian invasion and no Dorian settlement was made in the island—although its neighbour Rhodes was completely dorianized;

nor is it likely that its population received any reinforcement in the Age of Migrations. The Greek stock, which took root in the Mycenaean period, should therefore be exclusively Achaean. That this was in fact the case is proved by the survival of Achaean dialect forms (mostly as Arcadian) in the Cypriot Greek of the Classical age. The survival of the Bronze Age scripts also testifies to the absence of any drastic change at the beginning of the Iron Age. But Cyprus had some share in the general changes of the time, and about 1000 B.C. Iron Age peoples from Syria appear to have immigrated: Cypriot art was again altered and deeply modified. Towards the close of the ninth century Phoenicians from Tyre colonized the ancient Greek city of Citium, the Kittim of the Bible; and their influence, although never profound, reached a climax in the fourth century, when much of central Cyprus came within their control. The island was known to Homer, but not intimately. By 709 Cyprus had passed under Assyrian overlordship. More than half a century of independence, however, preceded annexation by Amasis, it would seem, shortly after 570; and until 525 it was ruled by Euclthon of Salamis as governor for the Egyptians. Each Cypriot city retained, however, a semi-autonomous kingship; these kingdoms went back to the Bronze Age, and they continued down to Ptolemaic times.

In 525 Cyprus fell to the Persians under Cambyses. In 498 a Cypriot rising in sympathy with the Ionian Revolt was crushed. After the Persian Wars Cyprus was briefly liberated by Cimon, but the island did not again enjoy freedom from Persian overlordship and the Phoenicians whom this favoured until Evagoras of Salamis, one of the greatest of Cypriots, organized in 411 a wider movement of philhellenism. Persian control, re-established after the fall of Evagoras, was conceded by Greece in 387 at the Peace of Antalcidas. In 351 the nine kings of Cyprus engaged in a revolt which seems to have been short-lived. In 333 the island declared for Alexander, and in his capture of Tyre its fleet was a decisive factor. On Alexander's death Cyprus passed first to Antigonus and then to Ptolemy. By him the kingships which had survived from Mycenaean times were suppressed and the cities furnished with the democratic institutions of the Greek city-state—a form of government to which they did not take readily. The island remained under the Ptolemaic dynasty for nearly two and a half centuries. It was annexed by Rome in 58 B.C. and attached to the province of Cilicia. Presented by Caesar to Cleopatra in 47 but reclaimed by Augustus after Actium, Cyprus was ceded in 22 B.C. by him to the Senate, to become a minor senatorial province. Such it remained until the reforms of Diocletian.

CYPSĒLUS, tyrant of Corinth c. 657–625 B.C., son of Ecton, who traced descent from the pre-Dorian Lapithi, and Labda, a lady of the Dorian clan of the Bacchiadae, overthrew the long-established oligarchical rule of the Bacchiadae at Corinth. He soon obtained the support of the Oracle at Delphi, which issued *vaticinia post eventum*; for instance, that his career was foretold and that he escaped destruction by the Bacchiads only through being hidden as a babe in a jar (*cypsele*). Herodotus calls him bloodthirsty, but later writers contrast his mild rule with that of his son Periander. He had no bodyguard; probably his severity was confined to rival aristocrats while the

masses supported him. The fine local pottery (late Proto-corinthian and early Corinthian) was exported (especially to the West) in immense quantities throughout his reign. On the route to Italy and Sicily he founded the colonies of Leucas, Ambracia, and Anactorium. The earliest Corinthian coins may go back to him, as may also some of the dedications made by his house at Olympia and Delphi.

P. N. U.; N. G. L. H.

CYPSELUS, CHEST OF, a chest of cedar-wood decorated with figures in ivory, gold, and wood, exhibited at Olympia in the temple of Hera. It is said to have been the one in which the infant Cypselus (q.v.) was hidden, and afterwards to have been dedicated by either Cypselus or his son Periander. Nothing of this famous chest survives, but Pausanias' long description of the decorations (5. 17. 5) suggests that they were in the style of the vase-paintings of that time, i.e. of the seventh to sixth century B.C. The shape of the chest was doubtless that of the *kihotoi* that appear on Greek vases from the sixth century down. A contemporary dedication by the Cypselids is the inscribed gold bowl in the Boston Museum.

S. C.; G. M. A. R.

CYRANIDES (*Βίβλοι κυρανίδες* or *κουρανίδες*), a Greek work, in four books, on the magical curative properties of stones, plants, and animals. The name is of uncertain origin. If *κυρανίδες* is its original form, this may mean 'inscribed on columns' (from a Coptic word)—that being the account the work itself gives of its history; if *κουρανίδες*, it means 'queens among books'. The compilation may be ascribed to the first or second century A.D., though part of it may go back to the Hellenistic age. It describes itself as the work partly of Cyranus king of Persia and partly of Harpocration (the medical and astrological writer).

Ed. C. E. Ruelle in F. de Mély, *Les Lapidaires de l'Antiquité et du moyen âge*, II (1898) 91.

W. D. R.

CYRENAICS, the 'minor Socratic' school founded at Cyrene by Aristippus (q.v. 1 and 2), which became the pioneer of Epicureanism. The chief other members were Theodorus, Hegesias, and Anniceris. The main tenet of the school was the treatment of the pleasures of the senses as the end of life. The school seems to have come to an end c. 275 B.C.

G. Giannantoni, *I Cirenaici* (1958), E. Mannebach, *Aristippi et Cyrenaeorum Fragmenta* (1961).

W. D. R.

CYRENE, the great North-African city, situated some miles inland in the fertile territory called after it Cyrenaica. This area lies roughly midway between the Egyptian Delta to the east and Tunisia to the west, but deserts and great distances cut it off from the other civilized regions of Africa, and its natural contacts are northward, with Crete and Greece. The ancient site has been extensively explored archaeologically, so that the city's material remains are well known from its earliest days down to the seventh century A.D.; they contribute richly to our knowledge of ancient art, architecture, and epigraphy.

Cyrene was founded from Thera in c. 630 B.C., under the leadership of Battus. Its foundation is perhaps better known than that of any other Greek colony of the archaic period, in spite of some legendary contamination, because we have not only an exceptionally full account in Herodotus (4. 150–8), but also, it seems, the substance of the actual decree of Thera arranging for the colonization, preserved in a fourth-century inscription of Cyrene (*SEG* ix. 3). These sources reveal the arrangements appropriate to a forced colonial expedition made necessary by food shortage.

The city prospered greatly and received further settlers from Greece more than once; it founded other cities itself in the neighbouring region, as Barca, Euesperides. Cyrene's territory was rich in corn, wool, oil, and silphium (trade in this medicinal plant became a monopoly of the Battiad kings); the horses were famous. Battus and his successors (the Battiads) ruled as kings for about 200 years, though not without political strife; see Hdt. 4. 159–64. During this time they beat off an Egyptian attack (c. 570), but submitted to Cambyses in 525 and formed part of Darius' empire. Cyrene regained its independence, probably between 479 and 474, and sheltered the Athenian survivors from the Egyptian Expedition (c. 455). The Battiad monarchy ended, probably c. 440, when Arcesilaus IV was deposed and a democratic reform took place, with extension of citizenship and tribal reorganization on Cleisthenic lines.

Cyrene submitted to Alexander the Great, but a period of confusion and civil war followed his death (323), when a Spartan leader captured and lost the city. This enabled Ptolemy to send Ophellas (q.v.) to subdue the whole country. It was probably at this time that the 'Ptolemaic' constitution was introduced, known to us from an inscription (*SEG* ix. 1: cf. M. Cary, *JHS* 1928, 222 ff.; others would date it later, e.g. even c. 265 B.C.). It established a liberal oligarchy, with a privileged citizen body of 10,000, two councils, and a popular court of perhaps 2,101; Ptolemy was permanent *strategos*. After a brief revolt by Ophellas (312–309) and a popular rising (c. 306) Ptolemy reconquered Cyrene and installed as governor his stepson Magas who continued to act for him until 274 when Magas married Apama, daughter of Antiochus I of Syria and declared his independence. However, he was reconciled with Ptolemy II before his death in 253. At this time, it seems, the cities of Cyrenaica sent for two philosophers, Ecdelus and Demophanes (q.v.), who devised a federal constitution for all the cities: they probably also established the port of Cyrene as a separate city, named Apollonia. Cyrenaica still remained under Egyptian control until the Roman Senate assigned it as a separate kingdom to Euergetes, brother of Ptolemy VI Philometor (163): when the brother became king in Egypt as Ptolemy VII Euergetes (145), Cyrenaica was again united to Egypt. On his earlier imperpetrative will of 154, bequeathing Cyrene conditionally to Rome in the event of his early death, see *JHS* 1933, 263 ff. In fact he left it to his illegitimate son Ptolemy Apion, who in turn bequeathed it to Rome (96) which annexed the royal land but left the cities free. Disorders led Rome to establish it as a regular province in 74, to which Crete was added in 67. After Antony had temporarily granted it to his daughter Cleopatra Selene, Augustus re-established it, with Crete, as a regular senatorial province (cf. CYRENE, EDICTS OF).

Cyrene suffered much devastation from the Jewish revolt in the reign of Trajan, and Hadrian brought in fresh colonists. In the Later Empire, Cyrene and the other cities of the Pentapolis (q.v.) were hard pressed by nomadic tribes from the desert.

A. J. G. and B. H. W.

CYRENE, EDICTS OF, five edicts of Augustus, discovered in an inscription of Cyrene, published in 1927. The first four belong to 7–6 B.C. and apply to the senatorial province of Cyrenaica and Crete alone; the fifth

(which introduces a *senatus consultum*) belongs to 4 B.C. and applies to the whole Empire. The documents definitively prove that Augustus received an *imperium maius* over the senatorial provinces and demonstrate the emperor's ably balanced policy towards the provincials.

In the first edict Augustus establishes the procedure that criminal cases involving a capital charge against a Greek should be tried by mixed Graeco-Roman juries of a certain census, unless the accused prefers to have an entirely Roman jury. The system is modelled on the *quaestiones perpetuae* of Rome. Roman citizens except Greeks who had received Roman citizenship are not allowed to be accusers in cases involving murders of Greeks. The second edict approves the conduct of the governor towards some Roman citizens. The third establishes that the provincials who have obtained Roman citizenship should continue to share the burdens of their original Greek community unless they had special privileges. Under the fourth, all legal actions between Greeks, other than capital ones, were to have Greek judges, unless the defendant preferred Roman judges. The fifth edict communicates a SC which establishes that charges of extortion can be examined by five senatorial judges, after a preliminary examination by the whole Senate. This marks a beginning of the judicial function of the Senate.

CYRIL OF ALEXANDRIA (d. A.D. 444), bishop from 412 after his uncle Theophilus. He continued Theophilus' suppression in Egypt of all error (paganism, Judaism, heresy), though his monks probably had not his approval for their murder of Hypatia (q.v.) in 415. Polemic in his Old Testament commentaries presupposes the continuing vitality of pagan cult in Egypt. He replaced the Isis-cult at Menuthis by translating thither relics of SS. Cyrus and John. About 435-40 he wrote twenty books (only 1-10 extant in full) refuting Julian (q.v. 1) point by point, so that his refutation is the principal source for reconstructing Julian's work, besides containing many quotations from Porphyry, Hermes Trismegistus (qq.v.), and other pagan sources. In 430-1 his zeal for orthodoxy and the honour of Alexandria led him to attack Nestorius of Constantinople, who was deposed at the council of Ephesus (431). But the resulting schism between Antioch and Alexandria could be healed (433) only by cautious concessions on Cyril's part, and in the controversy between the 'monophysites' and the defenders of the 'two-nature' Christology of the council of Chalcedon (451) both sides were able to appeal to his statements, the interpretation of which became an issue in theological debate under Justinian.

Ed. Migne, *PG* lxxviii-lxxvii; J. Quasten, *Patrology* 3 (1960), 116 ff. II. C.

CYRIL OF JERUSALEM, bishop from c. A.D. 350, d. 386. His twenty-four catechetical lectures are a basic source for liturgical history and for the topography of fourth-century Jerusalem. He wrote with a strong sense that he presided over the mother of all churches whence the faith had spread to the West, and advanced the ecclesiastical status of his see despite fierce opposition from the provincial metropolis, Caesarea.

Ed. W. K. Reischl and J. Rupp (1848-60); J. Quasten, *Patrology* 3 (1960), 362 ff. H. C.

CYRUS (1) (*Kurash*), son of Cambyzes and descendant of Achaemenes, the founder of the Achaemenid Persian

Empire (559-529 B.C.). According to a legend of his birth and upbringing (Hdt. 1. 107-30), he was related to Astyages, king of Media (denied by Ctesias, *Persica* exc. 2). Heir only to the throne of Anshan, he soon challenged his Median overlord. Capturing Astyages, he entered Ecbatana in 549 B.C. Thenceforward the Persians became the ruling race, though their kinsmen the Medes still held privileged positions in the State. Cyrus' defeat of Croesus of Lydia (Hdt. 1. 71 ff.) gave him Asia Minor, that of Nabonidus Babylonia, Assyria, Syria, and Palestine. Campaigns in the north and east extended his boundaries over almost all the Iranian plateau. The extent of his conquests is known from the lists of peoples subject to Darius. This vast empire he administered with wisdom and tolerance. In the conquered territories he was welcomed as a liberator; he respected their customs and religion, honouring Marduk at Babylon and freeing the captive Jews to build their temple in Jerusalem. To the Greeks he became a model of the upright ruler.

There are conflicting legends of his death (Xen. *Cyr.* 8. 7. 2 ff.; Hdt. 1. 204 ff.); it is probable that he died in battle. His grave is at Pasargadae (Strabo 15. 730; Arrian, *Anab.* 6. 29. 8).

The best sources for Cyrus are the official cuneiform records: F. H. Weissbach, *Keilschriften der Achämeniden* (1911).

CLASSICAL SOURCES: Hdt. bk. 1; Ctesias, *Persica* bks. 7-9; Xen. *Cyropaedia* (a fanciful biography).

MODERN WORKS: J. V. Prášek, 'Kyros der Grosse', *Alte Orient* xiii 3 (1912); F. H. Weissbach, *PW* Suppl. iv (1924), s.v. 'Kyros (6)'; W. Fälsch, 'Kyros', *BN* 1964. See also under ACHAEMENIDISM.

CYRUS (2) II, younger son of Darius II and Parysatis, and his mother's favourite. He was given an overriding command in Asia Minor in 408 B.C. when he had barely come of age. In Sardes he met Lysander; their friendly co-operation meant victory for Sparta in the Peloponnesian War. Cyrus was summoned to the court in 405 on his father's fatal illness, but Arsaces, the elder brother, succeeded as Artaxerxes II, and only Parysatis' influence saved Cyrus when accused of treason by Tissaphernes. On his return to Asia Minor he began to gather mercenaries (amongst whom Xenophon enlisted), ostensibly for an expedition against Persia. In the spring of 401 he set out with some 20,000 men; his true destination was not revealed until the army struck the Euphrates at Thapsacus. At Cunaxa (q.v.), some 45 miles from Babylon, Artaxerxes made his stand. Cyrus' deficiency in cavalry proved fatal, and he lost his life in a desperate attack on his brother's bodyguard. He had youthful faults of impetuosity and superficiality, but his personal charm, his energy, and his gift of leadership, were the qualities of a potentially great ruler.

Xenophon, *Anabasis* and *Hellenica*; Ctesias, *Persica*. F. H. Weissbach, *PW* Suppl. iv (1924), s.v. 'Kyros (7)'. D. E. W. W.

CYTHERA, an island off Cape Malea (Peloponnesus) with rich *murex* deposits, which attracted an early Minoan colony (MM II-LM I). Perhaps c. 550 B.C. Sparta seized it from Argos, installing a garrison and governor (*Κυθηροδίκης*); its inhabitants became *perioikoi* (q.v.). An obvious strategic threat to Sparta, 'better sunk beneath the sea' said Chilon (q.v.), it was captured by Nicias (q.v. 1) and held for Athens from 424 to 421 and again from 393 to 386. Lost to Sparta in 195 (see LACONIA) it was restored by Augustus in 21 B.C.

In myth it was the birth-place of Aphrodite (Hes. *Theog.* 192).

P.-K, *GL* iii. 2. x (a); *Arch. Rep.* 1963-4, 25 f.; 1964-5, 27; 1965-6, 21 f. W. G. F.

CYZICUS, a Milesian colony traditionally founded in 756 B.C. and refounded in 675 (a date corroborated by finds of early pottery), on the island of Arctonnesus,

among a Myso-Phrygian population. The site rivalled Byzantium in defensibility and commercial importance. The island could be joined to or cut off from the mainland at will; it sheltered two harbours, and practically all the shipping of the Propontis came to Cyzicus to avoid the inhospitable northern shore. Its coinage of electrum staters, called *Cyzicenes*, became famous everywhere.

Cyzicus was a member of the Delian League, to which it gave the largest annual contribution from the Hellenistic region, 9 talents. It was the scene of Alcibiades' naval victory over the Spartans in 410. It preserved much of its commercial importance in the fourth century, and continued to do so in the Hellenistic age, when it cultivated especially good relations with the Attalid kings. Under Rome it remained a free city and was rewarded

with an increase of its already large territory for its courageous resistance in 74 to Mithridates. Loss of freedom for a time and some diminution of territory followed the killing of Roman citizens, probably trade rivals, in 20 B.C. Further outbreaks caused definitive loss of the privilege in A.D. 25. Hadrian built a huge temple at Cyzicus, probably giving the city at the same time the titles of *metropolis* and *neocorus*. Later emperors gave aid after earthquakes. An earthquake in the reign of Justinian (6 Sept. 543) gave him a chance to use the marbles of Cyzicus in Saint Sophia.

D

DACIA was situated in the loop of the lower Danube, consisting mainly of the plateau of Transylvania, but extending in a wider sense eastward to the Sereth and north to the Vistula. The Dacians were an agricultural people, but under the influence of Celtic invaders in the fourth century B.C. they absorbed Celtic culture and developed the gold, silver, and iron mines of the Carpathians. From c. 300 B.C. they traded with the Greeks, who frequently confused them with the Getae (q.v.), by way of the Danube; from the second century they also had relations with the Greek cities of Illyria and with Italian traders. Their chief import was wine.

The separate Dacian tribes were united by Burebistas (q.v.) c. 60 B.C. and under him they conquered Celtic and Illyrian peoples to the south and west, threatening the Roman province of Macedonia. After his death the power of Dacia declined because of internal struggles. For a time the Dacians were regarded as a serious threat. Caesar was planning a campaign against them before his death (Suet. *Div. Jul.* 44. 3). Some years later Octavian (App. *Ill.* 23) also fearing a possible alliance between Antony and the Dacians, sought a marriage alliance with Cotiso, one of the rival Dacian kings (Suet. *Aug.* 63). Under Augustus the Dacians caused few problems, but their military power revived under Decebalus (q.v.) with victories over Oppius Sabinus (85) and Cornelius Fuscus (86). After a Roman victory at Tapae (south-west Transylvania) Domitian made peace, recognizing Decebalus as a client ruler. Conquest of Dacia was effected by Trajan in the First and Second Dacian Wars (101-2, 105, cf. Cass. Dio 58. 6-14). Decebalus' stronghold Sarmizegethusa (Gradisteia Muncel south of Orăştie) was taken and destroyed. These campaigns are depicted on the spiral frieze of Trajan's Column (see FORUM TRAIANI).

Roman Dacia comprised most of Transylvania, but it did not reach to the Theiss in the west or extend, initially at any rate, beyond the Aluta (*Olt*) in the east. Under Hadrian the province was twice subdivided, into *Superior* and *Inferior* in 118-19, while part of *Superior* was detached to form *Porolissensis*, probably in 124 (cf. *JRS* 1961, 66 f.). A further reorganization occurred probably in 168 when the three provinces (*Tres Daciae*) were placed under one governor.

There was a great influx of people from other provinces into Dacia, especially from the Illyrian and the eastern provinces. Some came as skilled miners, e.g. the Dalmatians at Alburnus Maior (*Roxia Montana*: cf. *CIL* iii. 921 ff.). Cities developed; the most important were the

coloniae at Sarmizegethusa and Apulum. As a result of the Gothic invasions (mid third century) Dacia was abandoned under Aurelian (270). In the fourth century Dacia was the name of provinces along the south bank of the lower Danube (cf. *Not. Dign.*, index).

DAEDALUS, a legendary artist, craftsman, and inventor of archaic times. He has a significant name, for artful works were called *daídala*. His father (Paus. 9. 3. 2) Eupalamos or 'Skillhand' was descended from Erechtheus (Pherecydes, *FG III* i. 146). Daedalus was born in Athens, but had to leave the city because he killed his nephew Perdix who surpassed him in skill (*Suda*, s.v. *Πέδρυκος* *ἱερὸν*). He went to Crete, where he made the cow for Pasiphaë, the labyrinth for the Minotaur, a dancing ground (*χορός*), a small wooden statue of Aphrodite, and the famous thread for Ariadne. Enraged by the aid that Daedalus had rendered to Pasiphaë, King Minos imprisoned him and his son Icarus, but Daedalus constructed two pairs of artificial wings and flew away. He crossed safely to Sicily; Icarus, however, approached the sun too closely so that the wax of his wings melted and he drowned in the Aegean Sea.

In Sicily Daedalus was protected by the Sicilian king, Cocalus; Minos, who arrived in pursuit of him, was suffocated in a steam bath (constructed by Daedalus?) by the daughters of Cocalus (A. C. Pearson, *Fragments of Sophocles* (1917) ii. 3). Daedalus had constructed in Sicily a reservoir for the river Alabon, a steam-bath at Selinus, a fortress near Agrigentum, and a terrace for the temple of Aphrodite on Mt. Eryx (Diod. 4. 78 after Antiochus).

Daedalus was also considered the inventor of carpentry and of such things as the saw, the axe, the plumb-line, the auger, and glue. He also invented the mast and the yards of boats (Pliny, *HN* 7. 198). As tangible evidence of his skill a folding chair was shown in the temple of Athena Polias on the Acropolis (Paus. 1. 27. 1). His skill in metalwork was attested by the golden honeycomb in the temple of Aphrodite on Eryx. A multitude of archaic temples and archaic statues, especially wooden ones in

Greece and Italy, were believed to be by his hand (Overbeck, *Antike Schriftquellen* (1868), 119). He first made figures which had open eyes, walked, and moved their arms from their sides, whereas earlier works had their feet closed and their arms fixed to their sides (*Suda* Δαιδάλου ποιήματα). Several later archaic artists were considered pupils of Daedalus, and a demos of the *phyle* Cecropis in Attica was named the Daedalids.

The legend of Daedalus unites many heterogeneous elements. Certain features seem to go back to Cretan and Dorian tales, others betray an Attic origin. The propensity of the Greeks to recognize their own gods and legends in foreign countries enabled them to recognize works of Daedalus in architecture and sculpture of the natives in Sicily, Sardinia, and even in the pyramids of Egypt (Diod. 4. 30; 1. 97; Paus. 10. 17. 3). Since the name of Daedalus had come to stand for art of extremely archaic character, any very archaic statue was easily ascribed to Daedalus. The notion of uncanny superhuman skill inherent in the character of Daedalus accounts for such folkloristic traits as the legend of living statues (Pind. *OL.* 7. 52; Eur. *Hec.* 836; F. Brommer, *MDAI* 1950, 86). The chronology of the Daedalids being faulty (Robert, *Archäologische Märchen* (1886)), it is not possible to determine the lifetime of Daedalus from ancient authors. It is also controversial whether a historical artist Daedalus gave the impetus to the formation of the legends, or is a purely mythological figure representative of accomplished craftsmanship.

Daedalus is represented on vases, gems, and in sculpture in Greece (J. D. Beazley, *JHS* 1927, 222) and Etruria (G. M. A. Hanfmann, *AJArch.* 1935, 189 ff.), and in Roman wall-painting and sculpture usually with Icarus or Pasiphae.

DAIMACHUS of Plataea (first half of 4th c. B.C.), perhaps the first of several Boeotian writers of Hellenica, is Ephorus' source for early Boeotian history, and is important if Jacoby rightly assigns to him the *Hellenica* from Oxyrhynchus (q.v.); *Gött. Nachr.* 1924, i), whose author shows a close knowledge of Boeotian affairs. A younger Daimachus wrote *Ἰνδικά* a century later.

FGH in A. 65 and 66.

G. L. B.

DAIMON (δαίμων). In Homer this word, which means 'allotter' (of fate, cf. Dem. 18. 208), may be applied to one of the great gods, but its use has peculiar features. It has no feminine form and rarely a plural (this is frequent in later literature). It has been observed that, whilst the Homeric poet in his own narrative constantly refers to the anthropomorphic gods, in the words which he puts in the mouth of his personages the cause of events is ascribed not to these but to a *daimon*, or a general phrase, *θεός τις*, *θεοί*, *Ζεύς*, is used: these phrases, however, are never exactly equivalent to *daimon*. *Daimon* appears to correspond to the supernatural power, the mana, not as a general conception but in its special manifestations, and always with the overtones of a personal agent. *δαμόνους* is 'strange', 'incomprehensible', even 'uncanny'. As *daimon* refers to the lot of a man, the word comes sometimes near the significance of 'fate', *σὺν δαίμονι, πάρος τοι δαίμονα δώσω*. An expression occurring in tragedy, *ὁ παρῶν δαίμων*, proves that the old reference to a special manifestation was not forgotten, although a general sense is frequent in later writers, e.g. in the compounds *ὀλβιοδαίμων*, *εὐδαίμων*, *κακοδαίμων*. Heraclitus says: *ἦθος ἀνθρώπων δαίμων* 'a man's character is his fate', but 'fate' is not quite a correct translation. Finally people spoke of a good and

an evil *daimon* of a man, which follows him through his life. The application of the word to cult gods is extremely rare, but it was appropriate to less well-defined gods. Hesiod calls the deceased of the Golden Age 'wealth-giving' *daimones*, and Aeschylus in the same sentence calls the ghost of Darius *δαίμων* and *θεός*. Thus the word seemed to be appropriate to lesser gods. Since Plato *daimones* were conceived as beings intermediate between gods and men, and Xenocrates allowed that they were of a mixed nature, and that *ἡμέραι ἀποφράδες* (see *ΑΠΟΦΡΑΔΕΣ*) and festivals involving mourning, fasting, or improper language belonged to beings of this nature—an idea developed by Plutarch (R. Heinze, *Xenocrates* (1892), 167 f.). Finally, Christianity which made the pagan gods evil beings impressed upon the word the significance which 'demon' now has in common language.

DALMATIA, a Roman province on the east coast of the Adriatic north of Epirus, took its name from the Delmatae, a warlike Illyrian tribe, partly Celticized, who inhabited the region behind Salona (q.v.). At one time they were subject to the Illyrian kingdom (see *ILLYRICUM*) but revolted from Gentius and maintained their independence after his defeat by the Romans (168 B.C.). Because of their attacks on Roman allies they were invaded by the Romans in 156-155 B.C. and their capital Delminium (*Zupanic*; cf. Patsch, *PW*, s.v. Delminium) was destroyed. More campaigns against them were made in 118-117 and 78-77; in 51 they defeated troops sent against them by Caesar and during the Civil War they sided with the Pompeians and defeated Caesar's legates Q. Cornificius and A. Gabinius (48-47 B.C.). In 46, however, they submitted through a threat of invasion by Caesar himself. After further fighting under P. Vatinius (45-44), Octavian conquered most of their territory (34-33). After more disturbances (16 B.C.), they were attacked by Tiberius (11-9 B.C.), and finally conquered in the great Illyrian rebellion of A.D. 6-9, led by the Daesitiates of Bosnia (*Bellum Delmaticum*, *ILS* 3320). Probably in A.D. 9 Illyricum was divided into two imperial provinces, *Illyricum superius* and *inferius*, known by the Flavian period as Dalmatia and Pannonia (q.v.). The Roman province of Dalmatia included Illyricum south of the Save and reached eastward almost to the Danube. It was governed by *legati Augusti pro praetore* of consular rank who resided at Salona, of whom one Camillus Scribonianus (q.v. 1) revolted in A.D. 42. Following the reforms of Gallienus (mid third century), the senatorial legates were superseded by equestrian *praesides*. Under Diocletian Dalmatia was divided into *Dalmatia*, with capital at Salona, and *Praevalitana* or *Praevalis*, capital Scodra; the former was in the *dioecesis Pannoniarum*, the latter in *dioecesis Moesiarum*.

Mitteilungen aus Bosnien und der Herzegovina IV (1896)-XII (1912)). On governors see A. Jagenteufel, *Die Statthalter der römischen Provinz Dalmatia von Augustus bis Diocletian* (Öst. Akad. der Wiss., Schriften der Balkankommission, Antiqu. Abteil. XII, Wien, 1958). A. Herz, *Untersuchungen zur Militärsgeschichte der römischen Provinz Dalmatien* (1939); G. Alföldy, *Bevölkerung und Gesellschaft der römischen Provinz Dalmatien* (Budapest, 1965); J. J. Wilkes, *Dalmatia* (1969). F. A. W. S.; J. J. W.

DAMASCUS was the capital of Demetrius III and Antiochus XII, under whom it issued municipal coins (some under the name of Demetrias, which the city received during Demetrius' reign). Menaced by the Ituraeans, it invited Aretas III, (q.v.), king of Nabataea,

to protect it in 85 B.C., but was independent in 69. Annexed by Pompey in 64, it was granted by Antony to Cleopatra, reannexed by Octavian, granted by Gaius to the Nabataean kingdom, and finally annexed c. 62. It was made a colony by the Emperor Philippus. It derived its wealth from the caravan trade, from its woollen industry, and from the multifarious products of its territory, which included not only its own fertile oasis but from 24 B.C. a large (formerly Ituraean) area up to Mt. Hermon. The main surviving monument is the *peribolos* wall of the temple of Zeus Damascenus, the Semitic god Hadad.

C. Watzinger and K. Wulzinger, *Damaskus* (1922). A. H. M. J.

DAMASTES of Sigeum, a contemporary of Herodotus and pupil of Hellanicus (q.v.), wrote on *Events in Greece* (he mentioned a Persian visit of Diodotus, a *strategos* in 433–432 B.C.); on *Poets and Sophists*; on *Peoples and Cities*; on the *Ancestors of those who fought at Troy*; his *Periplus* was based on Hecataeus (q.v. 1). Strabo (1. 3. 1) criticized Eratosthenes for trusting him. Only scanty fragments survive.

FlHG ii. 64–67; FGrH i, no. 5.

J. L. M.

DAMNATIO MEMORIAE. This formed part of the penalty of *maiestas* (see *PERDUELLIO*). It implied that the *praenomen* of the condemned man might not be perpetuated in his family, that images of him must be destroyed, and his name erased from inscriptions. Bad emperors were not exempt from such a fate. Nero (Suet. *Nero* 49) and Didius Julianus (Dio Cass. 73. 17) were declared *hostes* and condemned to death by the Senate in their lifetime. In other cases the Senate voted a posthumous *damnatio memoriae* (which included *rescissio actorum*). Claudius prevented the Senate from condemning the memory of Gaius (Dio Cass. 60. 4. 5); but formal decrees were passed after the deaths of Domitian (Suet. *Domit.* 23), Commodus (*Vita* 20), and Elagabalus (*Vita* 17).

E. Vittinghoff, *Der Staatsfeind in der rom. Kaiserzeit* (1936).

J. P. H.

DAMNUM INIURIA DATUM. Some cases of unlawful damage to property were dealt with in the XII Tables, e.g. damage committed by quadrupeds or in violation of agricultural interests (illicit cutting of trees or crops, grazing on another's pasture, and the like). But these were only special provisions; general rules on this matter were first laid down by a statute of unknown date (probably of the 3rd c. B.C.), *Lex Aquilia*, which introduced civil liability for wilfully or negligently killing or injuring another man's slave or beast (belonging to a herd), and for damage done to other kinds of property by burning, breaking, or destroying. The interpretation of jurists and the praetorian edict considerably extended the narrow provisions of the law to other kinds of damage, enlarged the circle of persons qualified to sue—the *lex* admitted only the owner of the damaged thing—and reformed the manner of assessing damages. The title IX. 2 of the *Digest* demonstrates how fertile was the contribution of the classical jurisprudence in the evolution of these doctrines.

H. F. Jolowicz, *Law Quarterly Review* 1922; D. Daube, *ibid.* 1936; F. H. Lawson, *Negligence in the Civil Law* (1950).

A. B.; B. N.

DAMOCLES, courtier of Dionysius I. When he excessively praised the tyrant's happiness, the latter symbolically feasted him with a sword hung by a hair over his head (Cic. *Tusc.* 5. 61, and *passim*).

DAMON (1), Pythagorean from Syracuse, famous for his friendship with Phintias (not Pythias). An oft-told story: Phintias, sentenced to death by Dionysius (I or II), and

reprieved, comes back at the last moment to save Damon who had gone bail for him.

DAMON (2), Athenian, one of the earliest and most important Greek writers on music, a pupil of Prodicus and tutor of Pericles, much esteemed by Socrates and Plato. Plato ascribes to him (*Resp.* 400 a–c) views about the ethical effects of various rhythms, and Plato's own views about the ethical effects of different scales can probably also be traced to Damon (*Resp.* 424 c). Much in Aristides Quintilianus is probably due to him. He is said to have invented the 'relaxed Lydian' mode (ἡ ὑπεραιμένη Ἀλδιανή).

¹ Testimonia and fragments in Diels, *Fragmenta* II 1. 381–4; F. Lasserre, *Plutarque de la Musique* (1954), 74 ff.

W. D. R.

DAMOPHILUS, a celebrated painter and modeller. Pliny says that he and a certain Gorgasus 'united both arts in the decoration of the temple of Ceres at Rome near the Circus Maximus' (*HN* 35. 154). The temple was dedicated in 493 and this is early evidence of a Greek artist in Rome. He should probably not be identified with the painter Demophilus of Ilumera, who was said to have taught Zeuxis (q.v.) (*ibid.* 61) or with Demophilus the author of a treatise on proportion (Vitruv., bk. 7 praef.).

O. Vossberg, *Kunstgeschichte der römischen Republik* (1941), 15 ff.

T. B. L. W.

DAMOPHON (2nd c. B.C.), sculptor, of Messene, repaired Phidias' Zeus at Olympia. Made statues of gods and goddesses for Messene, Aigion in Achaia, and Megalopolis, and large groups for Messene, Megalopolis, and Lycosura in Arcadia. The last comprised Demeter and Despoina enthroned, Artemis, and a Titan Anytus. The heads of Demeter, Artemis, and Anytus and part of Despoina's veil have been discovered (Winter, *KB* 373. 1–4). The style is academic in its reminiscences of the fifth and fourth centuries. The veil accurately copies contemporary textiles. Other works have been attributed to Damophon on grounds of style.

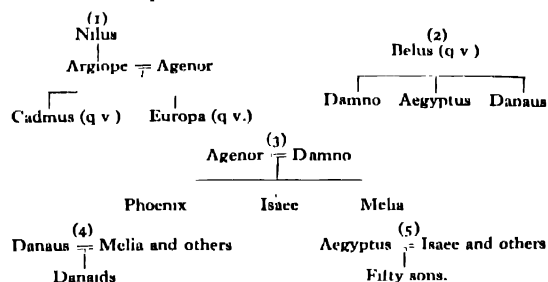

Overbeek, 745, 1557–64; Lippold, *Griech. Plastik* 350; Bieber, *Sculpt. Hellenist. Age* 158, the veil, A. J. B. Wace, *AJArch.* 1914, 107, other works, A. W. Lawrence, *Later Greek Sculpture* (1927), 121.

T. B. L. W.

DAMOXENUS, New Comedy poet, foreign to Athens, as his name signifies; he mentions Epicurus, and Adaeus of Macedon who perished at Cypsela, 353 B.C. Fr. 2, a cook philosophizes; fr. 3, a handsome youth plays ball.

FGC iv. 529 ff; CAF iii. 348 ff

DANAUS. The following genealogy, artificial but not very late (it is due to Pherecydes, fr. 21 Jacoby), shows the relationships of Danaus.

Since the names Aegyptus, Danaus, and Phoenix are simple eponyms of the Egyptians, Danai, and Phoenicians, the artificial nature of the whole is clear; but it may be taken as representing the historical theory of the day. Stubbings (*CAH* 2², 14. 11 ff.) argues for Danaus as

a Hyksos refugee and founder of the Shaft grave dynasty at Mycenae. Danaus' direct ancestry is:

Belus Agenor

This adds the eponym of North Africa to the complex; this detail is as old as Aeschylus, *Supp.* 313 ff.

Of Danaus' daughters, only two are named in any old source (the lists in Apollod. 2. 16-20 and Hyg. *Fab.* 170 are late and artificial). These are Amymon (q.v.), and Hypermetra. Of Aegyptus' sons, only Lynceus has a real name; the rest are given names in the above lists. The two fathers quarrelled; to settle the dispute Aegyptus was desirous that his sons should marry Danaus' daughters, while Danaus and his offspring were strongly opposed. (This has no sociological significance, see Rose in *Folk-Lore* xxvii. 226 ff.) As the weaker party, Danaus and his family fled to Argos, where they claimed help and shelter from their kin; the story, with numerous subsidiary details, is in Apollodorus (2. 12 ff.), Pausanias (2. 16. 1 ff.; 19. 3-7; 25. 4; 37. 1-2); Hyginus (*Fab.* 168 ff.). The oldest parts of it doubtless go back to the *Danaids* (Rose, *Handbook of Greek Lit.* (1964), 60) and much is due to the Aeschylean trilogy of which the *Suppliants* is the surviving part. Aegyptus' sons pursued them, and Danaus consented to the marriage, secretly instructing his daughters to kill their husbands on the wedding night. Except Hypermetra, who spared her husband Lynceus and helped him to escape, they obeyed him. Danaus imprisoned Hypermetra, but finally, perhaps through the intervention of Aphrodite (Aeschylus, fr. 44 Nauck), released her.

So far the story is fairly consistent in its main outlines, though many details differ in different authors. It now divides into three main accounts. (a) Lynceus returned, killed Danaus and his daughters except Hypermetra, and became king and ancestor of the royal Argive line (schol. Eur. *Hec.* 886). (b) The daughters were purified by Athena and Hermes (Apollod. 22) after burying the heads of their husbands in Lerna, their bodies outside the city, a strange detail never satisfactorily explained. Danaus married them off by offering them as prizes in a foot-race (Pind. *Pyth.* 9. 112 ff.). (c) They were punished in Hades by being set to fill a leaky jar with water (Plato), *Axiochus*, 371 e, and often later, as Hor. *Carm.* 1. 11. 22 ff.). Here again, no generally accepted explanation exists.

Campbell Bonner, *Harv. Stud.* 1902, 129 ff.

H. J. R.

DANCING. From earliest times, the dance played an important role in the lives of the Greeks, and was sometimes regarded by them as the invention of the gods. It was generally associated with music and song or poetry in the art called *μουσική*, and frequently made use of a body of conventionalized gestures, *χειρονομία*. The dance had a place in religious festivals, in the secret rites of mystery cults, in artistic competitions, in the education of the young, and even in military training, especially in Sparta. People danced at weddings, at funerals, at the 'naming-days' of infants, at harvests, at victory celebrations, in after-dinner merrymaking, in joyous *κῶμοι* or dance processions through the streets, in animal mummery, and even in incantations. However, there is no evidence for anything like the 'ballroom' or 'courting' dances of modern times. Performances by professional dancers were enjoyed, especially at dinner-parties, but such dancers were almost all slaves and courtesans.

Among particularly famous dances of the Greeks were the *γέρανος* (a nocturnal serpentine dance the name of which is probably derived from the root **ger-*, 'to wind', and not from the word for 'crane'); the pyrrhic and related dances by men and boys in armour; the *παρθένειον*, a song-dance performance by maidens; the *ὕπνορχημος*, a lively combination of instrumental music, song, dance, and pantomime; the skilful 'ball-playing' dance; and the uproarious *ἀσκολιασμός*, performed on greased wine skins. In the worship of Dionysus the wild *ὄρειβασία*, or 'mountain-dancing' of frenzied women, apparently borrowed from the East, had in early days produced something akin to dance mania; but by classical times it was toned down into a prepared performance by a *θίασος*, or group of trained devotees.

In the Athenian theatre, the *τυρβασία* of the cyclic choruses, the lewd *κόρδα* of comedy, the stately *ὑμνέλια* of tragedy, and the rollicking *σίκυον* of the satyr play were distinctive. The actors in the *φλύακες* plays of Magna Graecia apparently at times burlesqued the dignified dances of the religious festivals.

In the first century B.C. a new type of dance performance was introduced by the *pantomimi* Pylades and Bathyllus. It was a highly stylized portrayal, usually by one dancer, of a legend or mythological story, the performer changing his mask and costume to represent each character in turn. He was assisted by a chorus of singers and an orchestra. Still later, elaborate dance spectacles similar to that described by Apuleius (*Met.* 10. 29-34) were staged, sometimes in arenas.

The Romans were much more restrained than the Greeks in their use of the dance. Some of them, including Cicero (*Pro Mur.* 6. 13), openly expressed contempt for dancers. There are records of a few ancient dances used in religious ceremonies—e.g. the leaping and 'three-foot' dances (*tripudia*) of the armed Salii and the Arval Brethren, and the 'rope dance' of maidens in honour of Juno (Livy 27. 37. 12-15). Etruscan and Greek dancers, from the fourth century B.C. on, exerted some influence, and the introduction of various Oriental cults brought noisy and ecstatic dances to a disapproving Rome. Dancing by professionals, usually slaves, often furnished entertainment at dinner-parties. With the coming of the *pantomimi*, popular interest in the dance became almost incredibly great. As the Empire advanced, public dance performances were increasingly erotic and sensational, and they were finally suppressed under the influence of the Church.

L. B. L.

DANUVIUS, the Roman name for the *Danube*. Originally it referred to the upper course of the Danube only, the part below the Iron Gates being known as *Ister* (q.v.). The upper course of the Danube remained unknown to the Greeks. Herodotus (2. 33) said that its source was in Pyrene (the Pyrenees?), Ephorus in the 'Pillar of the North' (the Alps?), Timaeus in the Hercynian Forest (q.v.), Timosthenes in a Celtic lake, Apollonius Rhodius in the Rhipaeian Mts. (q.v.). The identity of the Danuvius and the Ister was first asserted by Sallust (fr. 3. 79 M.), probably as a result of Octavian's Illyrian expedition in 35 B.C. In 16 B.C. Tiberius discovered the real sources, and in 13-12 the bend of the middle course (Strabo 7. 289). Strabo described the Danube with considerable accuracy and Ptolemy knew its windings (*Geog.* 3. 8. 3; 8. 7. 2).

Cary, *Geographic Background* 273 ff., 301 ff.

E. H. W.

DAPHNE ('laurel'), in mythology, daughter of a river-god (Ladon, generally; Peneus, Ov. *Met.* 1. 452; but

Phylarchus and Diodorus of Elaea made her daughter of Amyclas, eponym of the town Amyclae, Parth. 15). Apollo loved her, and, as she would have none of him, pursued her; fleeing from him, she prayed for help and was turned into the tree bearing her name. II. J. R.

DAPHNE, a park near Antioch, dedicated by Seleucus I to the royal gods, especially Apollo. It contained their temples, which were served by priests appointed by the Crown, and a theatre, stadium, etc., where the kings celebrated games in their honour. Daphne was famed for its natural beauties and was a favourite and not very reputable pleasure resort of the Antiochenes. Pompey enlarged its area, and it appears under the Principate to have been the property of the emperors, who had a palace there in the fourth century and protected its famous cypresses. The Antiochenes, however, celebrated their Olympia in its precincts. A theatre and several villas and baths have been excavated.

Antioch on the Orontes II (1938), ed. R. Stullwell A. H. M. J.

DAPHNIS, in mythology, a Sicilian shepherd. According to Stesichorus (ap. Aelian, *VII* 10. 18) and Timaeus (ap. Parth. 29) he was son or favourite of Hermes, and loved by a nymph, Echenais, who required of him that he should be faithful to her. This he was, till a princess made him drunk and so won him to lie with her. Thereupon the nymph blinded him; he consoled himself by making pastoral music, of which he was the inventor, or it was first invented by the other shepherds, who sang of his misfortunes; the language of our sources is ambiguous. But Theocritus 1. 66 ff. tells allusively a different story. In this, apparently, Daphnis will love no one, and Aphrodite to punish him inspires him with a desperate passion. Sooner than yield to it he dies of unsatisfied longing, taunting and defying her to the end, mourned by all the inhabitants of the country, mortal and immortal, and regretted by the goddess herself.

II. J. R.

DARDANI, a warlike Illyrian tribe, which was in its eastern parts intermingled with Thracians, in the southwest of Moesia Superior. The Dardani first appear as a united nation under a king in 284 B.C. Their frequent raids harassed the kingdom of Macedonia as well as the later Roman province. They were fought by Sulla (85 B.C.), Appius Claudius Pulcher (78-76), C. Scribonius Curio (75-73); after unsuccessful campaigns under Antonius Hybrida (62) and L. Calpurnius Piso (57) the troops of M. Antonius engaged the Dardani (39); finally, they were subdued by M. Licinius Crassus (q.v. 6) apparently without fighting (29 or 28). Although the Dardani were recruited into the Roman army (for *alae* and *cohortes Dardanorum* cf. indexes of *CIL* xvi and Dessau *ILS*) they were never completely pacified and in the second century Marcus Aurelius is said to have made soldiers out of the 'bandits of Dardania' (*vita Marci* 21. 7).

C. Patsch, *Sitz. Wien* 214. 1 (1932), and (on the *latrones*) *Wiss. Mitt. Bos. Herceg.* 1902, 123 ff.; N. G. L. Hammond, *B.S.A.* 1966, 239 ff. F. A. W. S.; J. J. W.

DARDANUS. In *Iliad* 20. 215 ff. we have the genealogy Zeus-Dardanus-Erichthonius-Tros, and thereafter

But as Priam is regularly called *Δαρδανίδης*, which by Homeric usage is either son or grandson of Dardanus, this passage is probably an interpolation. Later authors give two accounts of Dardanus. (a) He was a Samothracian, son of Zeus and Electra and brother of Iasion; either because he was driven out by Deucalion's flood (Lycophron 72-73 and schol.) or because Iasion was killed by the thunderbolt for assaulting Demeter (Apollod. 3. 138, a later form of the old ritual myth in *Od.* 5. 125 ff.), Dardanus left Samothrace and came to the mainland; for another account, see Diodorus Siculus 5. 48-49. (b) He and Iasius (Iasion) lived originally in Italy, their real or reputed father being Corythus (q.v. 1); either the brothers separate, Iasius going to Samothrace and Dardanus to the Troad, or Dardanus kills Iasius. Servius on *Aen.* 3. 167 mentions three other accounts, that he was an Arcadian, a Cretan, and a native of the Troad. The constants are that he was Electra's son and founded Dardania. H. J. R.

DARES OF PHRYGIA, priest of Hephaestus at Troy (*Iliad* 5. 9) and reputed author of a lost pre-Homeric account of the Trojan War (Aelian, *VII* 11. 2). A supposed Latin prose translation survives, *Dareti Phrygii de Excidio Trojae Historia* (5th c.?), with an alleged dedication by Sallust to Cornelius Nepos. It has little merit, but was widely used by medieval writers on the Trojan War. See DICUYS CRETENSIS.

TEXT. F. Meister (Teubner, 1873).

G. C. W.

DARIUS I (OP *Darayavaush*), Achaemenid king of Persia, 521-486 B.C. He came to the throne after overthrowing a usurper, Gaumata the Magian, who was impersonating Bardiya (Smerdis), the dead brother of Cambyses (Hdt. 3. 68 ff.). The first years of his reign were spent in quelling revolts in Persia, Babylonia, and the Eastern provinces. By 519 order was restored, and Darius could undertake the reconstruction necessitated by the recent anarchy. His division of the Empire into provinces governed by satraps (q.v.) was retained with little change throughout the Achaemenid period and even later. The true successor of Cyrus, his organization was framed to centralize authority while allowing to each province its own form of government and institutions. He was a worshipper of Ahura Mazda, but showed a wise tolerance towards the religions of his vassals. His financial reforms created a new national economy based on a yearly fixed tax. His campaigns were designed to consolidate the frontiers of the Empire; he developed commerce, building a network of roads, exploring the Indus valley and the Mediterranean, and connecting the Nile with the Red Sea by canal.

In 512 Darius penetrated into Europe on a punitive expedition against the Scythians. A revolt of the Greek cities in Ionia was suppressed (499-494); he then prepared to punish the Greeks for their interference. Storms off Mt. Athos checked this expedition (492), and a third, undertaken after further preparation, ended in a Greek victory at Marathon (490 B.C.). Darius died soon after.

DARIUS II, son of Artaxerxes I, ruled over Persia 424-405 B.C. On his father's death he emerged triumphant from a dynastic struggle. His subsequent misgovernment, due in part to the influence of his consort and half-sister Parysatis, who proved much the stronger character, gave rise to a succession of abortive revolts, in Syria, in Lydia (before 413), and in Media (410). More serious was the loss of Egypt in 410. These set-backs were partially balanced by the successful intervention of

Persian diplomacy, directed by Tissaphernes, Pharnabazus, and Cyrus, in the Peloponnesian War.

D. E. W. W.

DARIUS III (c. 380–330 B.C.), a collateral of the Achaemenid house, was raised to the throne in 336 by the vizier Bagoas, who met the same death at Darius' hands as he had himself inflicted on Artaxerxes III and Arsēs. In Alexander's invasion Darius was outgeneralled and outfought at Issus and Gaugamela, his defeats being aggravated by his personal cowardice. He attempted to rally the Eastern provinces, but was hunted down in 330, and his own followers, who had previously deposed him in favour of Bessus, stabbed him to death on Alexander's approach.

D. E. W. W.

DASCYLUM, seat of the Persian satrap of Hellespontine Phrygia, close to *Δασκυλίτις λίμνη* and famous for its hunting park (Xen. *Hell.* 4. 1. 15; *Hell. Oxy.* 17. 3; Strabo 575). The site has recently been identified by excavations at Hisartepe near Ergili, at the south-eastern corner of Lake Manyas, which therefore must be *Δασκυλίτις λίμνη*. Hisartepe was the source of several Græco-Persian relief sculptures now in Istanbul Museum, and its situation accords with Xenophon's description. The excavations produced Greek pottery of the early seventh century B.C. onwards, Greco-Persian reliefs and tomb-stelæ, and Achaemenid clay seals of Xerxes' reign.

The site at Eşkel Limanı, on the Sea of Marmara east of the mouth of the River Rhyndacus, is not the satrap's seat, as was previously thought, but may be the Dascylum of the Athenian Tribute Lists.

DEA DIA, a corn-goddess worshipped by the Frates Arvales; chief festival in May.

Henzen, *Acta fratrum Arvalium* (1874), 3 ff.

DEAD, DISPOSAL OF. Cremation and inhumation were the only native methods in the classical cultures, others being known (e.g. *Illdt.* 2. 86–8; *Ap. Rhod.* 3. 202–7 and Nymphodorus ap. scholast, *ibid.*), but not normally practised. It does not appear that these two methods corresponded to different eschatological beliefs. In some cases they arose from racial difference (some Iron Age people in Italy cremated, others inhumed), but even this is not invariable (Homer's people always cremate, but seem to be descended from the inhuming Mycenæans). In the Roman Empire considerations of economy or convenience had a good deal to do with the choice (see A. D. Nock, *Harv. Theol. Rev.* 1932, 357), and this may well have been true elsewhere. The essential thing was apparently to cover the body, burned or not, with earth (three handfuls will do for a ceremonial burial, *Hor. Carm.* 1. 28. 35, which is wholly Greek in tone; Antigone scatters a thin coating of dust over Polyneices, *Soph. Ant.* 255–6); the Roman definition of a buried body was one of which no bone showed above ground (Q. Mucius Scaevola ap. *Cic. Leg.* 2. 57, see the whole passage), or in a vault of some kind, such as a natural or artificial cave. Such constructions often held a number of bodies, e.g. *columbaria* (q.v.) used in imperial Rome and many earlier erections; pits in the earth, when used, varied considerably in size, pattern, and the number of corpses they contained.

2. This covering cut off the dead from the sight of the celestial gods, with whom they had no more to do (see *Soph. Aj.* 589, and its imitation in *Verg. Aen.* 11. 51), thus avoiding pollution or offence of them and their altars (cf. *Soph. Ant.* 1016 ff.). It was also a kindness to

the departed, who were generally held to need burial in order to admit them to the lower world (e.g. *Il.* 23. 71 ff.; *Aen.* 6. 325–*Od.* 24. 1 ff. is abnormal and such passages as *Aen.* 2. 646, *Lucan.* 7. 819 are philosophical, not popular). Hence it was a universal act of piety to bury, or at least allow the burial of, any dead person, friend or foe; to be left unburied was the lot of certain criminals after execution (at Athens, *Plat. Resp.* 4. 439 e, with Adam's note; traitors were so used, e.g. *Soph. Ant.* 26 ff., imitated by *Aesch. Sept.* 1013 ff. (a spurious passage); *Soph. Aj.* 1047 ff.; Roman law regularly allowed the burial of executed criminals, *Dig.* 48. 24, with occasional exceptions, *Tac. Ann.* 6. 20. 2). Suicides were sometimes given abnormal burial, or even none (Athens, see *Aeschines* 3. 244, hand of corpse buried separately; Rome, 'cautum fuerat in pontificalibus libris ut qui laqueo uitam finisset, insepultus abiceretur', *Servius* on *Aen.* 12. 603; but this certainly was not regularly observed).

3. A regular funeral (*ταφή*, *funus*) was carried out as follows, omitting local, national, and chronological differences (see below). After the body had been bathed (e.g. *Il.* 7. 425; *Aen.* 6. 219), dressed (in clothes such as might have been worn in life, not in a shroud), and laid on a couch, it was lamented by the relatives and others present (excess in this respect was forbidden in classical times, e.g., by the XII Tables 10. 4 Bruns) and then carried to the place of burning or inhumation (*ἐκφορά*, *exsequiae*), attended by a more or less large crowd. The pyre, if the body was burned (*πυρά*, *rogus*), was often, in archaic Greece and under the Empire in Rome, an elaborate structure, and the amount of grave-gifts burned with the body or placed in the tomb might be very large, though customs varied enormously, the classical tendency being towards moderation in this respect also (see, e.g., *Plutarch, Solon* 21, XII Tables 10. 2 Bruns). The ashes, in a case of cremation, were placed in a vessel, the shape, material, and size of which varied in different times and places; for an unburned body a coffin (*σῆμα* or *λάρναξ*, *capulus*) would normally be used, while later the stone sarcophagus, often elaborately carved, became very popular with those who could afford it. In either case, body and container would be put in one of the receptacles already described. If the body could not be found, a funeral would still be held, a dummy of one kind or another being sometimes used (example in *JHS* 1936, 140). The tomb, then and at intervals afterwards, became the centre of family ritual directed towards the dead.

4. Of the differences in funeral practice above referred to, the following are the most interesting and important. In the Heroic Age of Greece, as described by Homer (especially *Il.* 23, funeral of Patroclus), the whole ceremony was most elaborate. This may be due, as regards some details, to the fact that Achilles (q.v.) retains some of the manners of an earlier time. Achilles himself, as chief mourner, is fasting and unwashed (43 ff.) till the rites are completed. The body lies in state and is formally bewailed by the women (19. 282 ff.; cf. 24. 664 and 710 ff., the mourning for Hector). In a hot climate the ceremony probably did not last long; in the *Iliad* both Patroclus and Hector are miraculously kept from decay (19. 29 ff.; 23. 184 ff.), and the lying-in-state continues for several days. When the pyre is complete, the body is brought to it by a procession of warriors in full armour, and is covered with hair shorn from the mourners' heads; Achilles, as chief mourner, holds the head of the corpse during the procession, and he and some others keep watch over the pyre till morning. Then heasts are slaughtered and their fat laid about the body, together with other food-offerings and sacrifices of horses, dogs, and human beings, presumably to attend the dead in the next world (127 ff.). After the pyre has burned, the ashes are quenched with wine and the bones collected and put in

an urn (237 ff.). A barrow of earth is then heaped above them (245 ff.), which was often marked by a post or other such object (331). Both the barrow and the post were called *σῆμα*, the former also *τύμβος*.

5. Of the funerals of the Minoan and Mycenaean ages we know nothing, but the tombs varied very much in size, elaboration, and number and value of offerings buried with the dead (see e.g. M. P. Nilsson, *Minoan-Mycenaean Religion*¹ (1950), 257; H. Schliemann, *Mycenae and Tiryns* (1878), 41 ff., 88 ff.). Nor is it known whether it was the custom then to have the elaborate games after the funeral proper which are described in Homer (*Il.* 23. 259 ff.). Every contestant receives a prize of some sort, and some of them were the property of the dead; thus possibly represents a compromise between burying all his goods with him and allowing them to be inherited.

6. In the classical Greek period some remnant of the ancient magnificence was still to be seen in public funerals, especially those given at Athens to citizens killed in war (Diod. Sic. 11. 33. 3; Thuc. 2. 34), on which occasion a speech in their honour was made by one of the leading men (*ἐπιτάφιος λόγος*).

7. In Rome the funeral of a prominent man of good family, whose ancestors had held public office, was a remarkable ceremony. After the wailing (*conclamatio*) the corpse was laid out, fully dressed (in official robes, if he himself was or had been a magistrate), on a bed in the *atrium*, feet to the door. The household was *funesta*, i.e. in a state of taboo, not to be approached by, e.g., a pontiff, and to mark it as such, cypress or pitch-pine was hung outside the door. This condition lasted till a certain time after the funeral, when the heir formally swept out the pollution of death from the house with a special sort of broom (Festus, 68. 8 ff. Lindsay). The corpse was escorted to the place of inhumation or cremation, not only by living relatives and the general public, who were formally invited to attend, but by his dead kin, represented by actors or other suitable persons wearing their *imagines* (q.v.) and official robes. There were also professional mourning women, *praeſtae*, who sang a dirge, *nena* (q.v.), and musicians, often so noisy as to make the din almost proverbial (Hor. *Sat.* 1. 6. 43). The origin of all this was probably Etruscan; for details and references, see Marquardt, *Privatleben*² (1886), 2, 346 ff. In the case of a son, the funeral might be conducted at night with very little ritual, in which case the household did not become *funesta* (Rose in *CQ* 1923, 191 ff.). For Roman funerals, see further LAUDATIO FUNEBRIS, GLADIATORS.

8. Both Jews and Christians objected to cremation, which thus became ultimately extinct, and the latter in early times to elaborate sepulchres, hence the simple *loculi* or niches characteristic of the catacombs. Later they, when able to afford it, fell in with the common use of sarcophagi. See above, § 3.

Dar-Sag., s.v. 'funus', D. S. Robinson, *Excavations at Olynthus*, xi (1942), G. Karo, *An Attic Cemetery* (1941). Forthcoming books on Greek and Roman burial customs by D. Kunz, J. Boardman, and J. M. C. Toynbee in the series 'Aspects of Greek and Roman Life'.
H. J. R.

DEAE MATRES, deities known from Gallo-Roman monuments and inscriptions widely spread in the Celtic regions of the Roman Empire, but especially concentrated in the Rhineland and adjacent areas. *Matronae* is one certain alternative name, and there is a wide range of epithets, many incorporating tribal or local names, e.g. *Matres Treverae*. The most usual portrayal is of three seated women, in flowing robes with large hats, holding baskets of fruit or provisions of some kind. This is the triad presentation of the territorial nature and mother goddess; single figures with similar attributes are known under such names as Rosmerta, Maia, and Sirona (see

also EPONA). The cult of the *Matres* was brought by the army to Britain where, as in Ireland, local goddesses in triple form had long been established.

L. Hahl, *Bonner Jahrb.* 1960, 9 ff.; A. Ross, *Celtic Britain* (1967). See bibliography under RELIGION, CELTIC.
T. G. E. P.

DECAPROTI (δεκάπρωτοι) first appear in A.D. 66 and become common throughout the Eastern provinces of the Roman Empire in the second and early third centuries; the office was abolished in Egypt and probably elsewhere in A.D. 307–8. *Decaproti* were probably in origin a finance committee of the city council, concerned with civic revenues and endowments. By the second century they were collecting imperial taxes and levies, and in the third this was their chief function; in Egypt they were responsible for the imperial land revenue. They were liable to make good deficits from their own property. Normally ten in number, the board had a varying membership, sometimes increasing to twenty. They were elected, and probably held office for five years.

E. G. Turner, *JEG Arch.* 1936, 7–19.

A. H. M. J.

DECARCHIES, (1) the committees, usually of ten oligarchic, pro-Spartan citizens, installed by Lysander (q.v.) after the Peloponnesian War in cities detached from the Athenian Empire. Possessing full executive powers, and sometimes supported by a garrison under a Spartan commander (see HARMOST), they collected their cities' share of the war-tax levied by Sparta (*Ath. Pol.* 39. 2). The Thirty Tyrants (q.v. 1) and the Ten at the Piraeus are the best-known examples. Many decarchies, especially in the Asiatic cities, were abolished in the reaction against Lysander (403–402 B.C.); the rest fell after the Spartan defeat at Cnidus (394) or by the King's Peace (386). (2) The same name was given to the governments instituted by Philip II of Macedon in the Thessalian cities in 344.

R. E. Smith, *CPhil* 1948, 145 ff.; D. Lotze, *Abh. Sachs. Akad.* 1964, 68 f.
A. M. W.: W. G. F.

DECEBALUS, king of the Dacians, acquired prominence through his war against Domitian (A.D. 85–9) and organized his realm. Though defeated by Roman armies, he was able to secure a favourable peace from Domitian when the revolt of the German and Sarmatian allies beyond the Danube imperilled the whole frontier, namely recognition, a subsidy, and the loan of skilled artisans. The growth of his power seemed dangerous to Trajan, who made war upon him and, after two campaigns (101–2), imposed fairly stringent terms of peace. Decebalus, it is said, did not abide by them: war began again in 105 with a serious Dacian incursion into Moesia. Trajan now resolved to make an end and convert Dacia into a Roman province. The land was invaded, Sarmizegethusa, the capital, was taken. Decebalus, hunted down, evaded capture by suicide (106).

R. S.

DECELEA, a small Attic deme with its centre at Tatoi on the foothills of Mt. Parnes, had a view over the Attic plain as far as Piraeus. It was occupied by the Spartans from 413 to 404 B.C. as a permanent garrison on Attic soil. There are slight remains of a fortification, but they cannot be identified positively as the Spartan fort.

Thuc. 7. 19, 27–8; A. Milchhöfer, *Karten von Attika* (1883) vii–viii, 2 ff.; Θ. 'Α' Ἀρβανιτοπούλου, *Δεκέλεια* (1958).
C. W. J. E.

DECEMPRIMI, the ten senior members of the local council of a Latin or Roman municipality, formed with the yearly magistrates a group which in times of crisis represented the community in dealings with the central government. They are mentioned in the republican period only, but in the fully developed Empire a similar

group of *decaproti* (q.v.) emerges as specially liable to Rome for the collection of the imperial taxes. The connexion between the two groups is obscure. See DECURIONES. A. N. S. -W.

DECEMVIRI was the name given to several Roman magistracies held by ten men:

(1) *Decemviri stitibus iudicandis* judged suits to decide whether a man was free or a slave. It is doubtful whether they are to be identified with those *iudices* whose *sacrosanctitas* was declared together with that of the tribunes (Liv. 3. 55). They are first definitely attested in a document c. 130 B.C. By Augustus they were probably made additional presidents of the centumviral tribunal. See CENTUMVIRI, VIGINTISEXVIRI.

(2) *Decemviri sacris faciundis* kept the Sibylline books. Originally *duoviri*, they were increased to *decemviri* in 367 B.C. to include plebeians, and in Sulla's time to *quindecimviri*.

(3) *Decemviri legibus scribundis*. Tradition records that in 451 B.C. the Roman constitution was suspended and complete power was entrusted to ten patricians to prepare a code of laws. They prepared ten tables of law, and a new college of *decemviri* was appointed for 450 to complete the work. Although the new board included plebeians, it composed two additional tables which were unfavourable to the plebeians (e.g. codifying the prohibition of intermarriage between the Orders). It was dominated by Ap. Claudius (q.v. 3) and retained office until the murder of Verginia (q.v.) led to its resignation. The ancient constitution was restored and the consuls of 449 published the Twelve Tables. The substantial authenticity of the tradition (apart from the single episodes) depends on the reliability of the *Fasti*, which is difficult to deny. Further, since tradition pictures the second decemvirate as hostile to the plebeians, it would have hardly invented the plebeian *decemviri*. Thus both colleges may be accepted, though this is a very controversial conclusion. The Twelve Tables (q.v. for the content) represent a compromise between patricians and plebeians. It is doubtful whether the decemvirate was contemplated as a provisional magistracy or as one designed to replace permanently the consulate and tribunate. The majority of patricians and plebeians, however, were probably unfavourable to the second *decemviri*, fearing their tyrannical tendencies.

Zeitschr.* 1917, 1; J. Elmore, *CPhil.* 1922, 128 ff.; Beloch, *Rom. Geschichte* 236 ff.; U. von Lohmow, *Das Römische Volk* (1955), 286 ff.; Ogilvie, *Comm. Livy* 1. 5, 451 ff.; R. Werner, *Der Beginn der röm. Republik* (1963), 280 ff. (On the *stitibus iud.* G. Franciosi, *Labeo* 1963, 163 ff. See also TWELVE TABLES. A. M.

DECIDIUS SAXA, LUCIUS, described by Cicero as 'ex ultima Celtiberia' but deriving from Italian and probably Samnite stock (compare the proscribed Cn. Decidius defended by Caesar), was admitted to the senatorial career by Caesar, becoming tribune of the plebs in 44 B.C. He had previously been a centurion or an equestrian officer. An Antonian partisan, Saxa commanded along with C. Norbanus the advance-guard of the Caesarians in the campaign of Philippi. Later governing Syria for Antony, he was defeated and killed in the Parthian invasion (40).

R. Syme, *JRS* 1937, 127 ff.

R. S.

DECIUS (1), GAIUS MESSIUS (PW 9) QUINTUS, Emperor A.D. 249-51, a native of Pannonia, but connected on his mother's side with an old Italian family, was city prefect before being appointed by Philip to restore discipline in the Danubian armies. His troops, however, forced him to assume the purple and Philip was subsequently

killed by his own men. In 250 the Carpi invaded Dacia, the Goths, under Kniva, Moesia. Decius was defeated near Beroea. The following year, in an attempt to intercept the Goths on their way home, he and his son Herennius were defeated and killed at Abrittus.

Decius was a staunch upholder of the old Roman traditions; his assumption of the additional surname of Trajan indicates an attitude favourable to the Senate. His persecution of the Christians resulted from his belief that the restoration of state cults was essential to the preservation of the Empire. There were many apostates and martyrs, but the death of Decius cut short the persecution (see CHRISTIANITY).

Zosimus 1. 22-23; Zonaras 12. 20. K. Gross, *RAC* 3, 611 ff. H. H. W.

DECIUS (2, PW 15) MUS, PUBLIUS, performed heroic but probably legendary feats as military tribune in the First Samnite War (343 B.C.; Livy 7. 14 f.). During his consulship (340) a battle with the Latins, somewhere in Campania (E. Pais, *Storia di Roma* (1926-7), iv. 196), made him famous. Actually Decius may not have been present (Beloch, *Röm. Gesch.* 374); he was popularly believed, however, to have ensured Rome's victory by solemnly 'devoting' himself and the enemy to the gods below and then charging into the enemy ranks to his death (Livy 8. 9) - an exploit more probably to be attributed to his son. For the possibility of his Capuan origin see J. Heurgon, *Capoue préromaine* (1942), 260 ff.

E. T. S.

DECIUS (3, PW 16) MUS, PUBLIUS, son of (2) above, consul in 312, 308, 297, 295 B.C.; censor in 304. Duris, a contemporary, mentions his death at the battle of Sentinum (q.v.) in 295 (see Diod. 21. 6. 2). Later tradition (Livy 10. 28) insisted that this was another case of *devotio* (see preceding article); in fact, if any *devotio* is historical, it is probably his (but see Beloch, *Röm. Gesch.* 440). Even so, the real hero of Sentinum probably was his colleague, Fabius (q.v. 3) Rullianus.

E. T. S.

DECIUS (4, PW 17) MUS, PUBLIUS, son of (3) above, consul 279 B.C. Pyrrhus defeated him at Ausculum. The story that he, like his father and grandfather, 'devoted' himself in the battle is unknown to most ancient authorities and should probably be rejected (Plut. *Pyrrh.* 21; Dion. Hal. 20. 1).

E. T. S.

DECIUS (5, PW 9) SUBULO, PUBLIUS, a dissolute man, but a good orator, moved in Gracchan circles and, as tribune in 120 B.C., unsuccessfully prosecuted Opimius (q.v.). Accused *repetundarum* (119), he was acquitted, no doubt owing to his connexions among the *equites* (q.v.), who thus first demonstrated their new power. Praetor in 115, he was humiliated by the consul M. Scaturus (q.v. 1). He probably died soon after. His son (apparently) was adopted by a relative of Saturninus (q.v. 1), becoming C. Appuleius Decianus, and, remaining loyal to Saturninus after his death, had to go into exile in Asia (98 or 97).

E. Badian, *JRS* 1956, 91 ff.

E. B.

DECLAMATIO as a technical term for the form of rhetorical training which consisted of exercises on invented themes came into use in the later part of Cicero's lifetime. Such exercises had been part of the stock-in-trade of the Greek rhetorical schools of the third and second centuries B.C. (and had an ancestry in earlier rhetorical and philosophical training) and in Cicero's youth the use of them was already part of the recognized technique of the training of the orator in Rome: his own rhetorical handbook *De Inventione* and the anonymous treatise *Ad Herennium* give many examples. The Greek

schools had distinguished between *théōis*, abstract general themes, and *υποθέσεις*, themes related to particular persons or situations; in Latin usage these terms were rendered respectively by *quaestiones* (e.g. 'an uxor ducenda?', 'an accedendum ad rem publicum?') and *causae* (e.g. the case, cited by Cic. *de Or.* 2. 100, of a man who contravenes a law forbidding a foreigner to climb the city wall and thereby repels an enemy attack and saves the city).

In the period following Cicero's death the practice of declamation acquired a new status and a new importance which may reasonably be connected with the changed conditions of the Principate. The courts still offered employment to the workaday advocate, but with the restriction of free political life the opportunity for the type of oratory by which the great advocates of the Republic, Cicero, Calvus, or Hortensius, had won their reputation had disappeared; the elevation of the declamation to be a genre in its own right, cultivated for its own sake, could provide an ambitious speaker with a new avenue to public attention. The declamation now had two recognized forms, one deliberative and the other forensic, denoted by two new technical terms. In the *suasoria*, an historical or mythological personage was given advice on his course of action in a particular situation: e.g. 'Should Sulla resign the dictatorship?' (Juv. 1. 16), 'Should Cato commit suicide after Utica?' (Pers. 3. 45), 'Should Alexander cross the Ocean?' (Sen. *Suas.* 1). In the *controversia* (this term, which in earlier usage had referred to the issue on which a case turned, was extended to denote the whole exercise) an invented legal case was argued on both sides before an imaginary jury. Though the ostensible purpose of the *controversia*, as of the *causa* in Cicero's day, had been practice in the handling of a case and the acquiring of resource and effectiveness in presenting it, the themes were drawn from an unreal romantic world of unlikely situations, of tyrants and tyrannicides, wicked stepmothers, erring Vestal virgins, pirate chiefs and their daughters, identical stepbrothers and sons disinherited twice over, and for the most part the points of law argued (though some may have been suggested by historical incidents or by Greek codes) were not those which a pleader could expect to encounter in the business of a Roman court. On these far-fetched and often complicated themes the professional declaimer and his pupils (the term *scholasticus* is applied to both) exercised a tortuous subtlety in the *divisio*, the analysis of the issues, and a fantastic ingenuity in the invention of *sententiae* (q.v.), neat and pointed observations, epigrams or paradoxes, in the contrivance of *colores*, the complexions or twists given to a case by way of extenuation or insinuation, in the use of rhetorical figures, and in the manipulation of the *locus communis* and the *descriptio*, the purple passage of moralizing or local colour on the vicissitudes of fortune or a storm at sea. We have a large number of examples of the genre in the collection of excerpts made (with comments) by the Elder Seneca under the title of *Oratorum et Rhetorum Sententiae Divisiones Colores*, which represents the rhetoricians of his own lifetime (he quotes from more than a hundred of them), and in the two collections of complete declamations spuriously attributed to Quintilian. The speaker's aim was not persuasion but the applause which was accorded to novelty, however extravagant, and ingenuity, however perverse; far from preparing the pupil for the realities of the courts, the technique tended rather to disable him. What had been in Cicero's time a practical exercise and a private activity, confined to the school or, at most, a circle of friends, became a public performance and a fashionable entertainment. The exhibitions given by the rhetoricians and their pupils were attended not only by students and their parents but by the literary society of

Rome: in Seneca's reminiscences we find such visitors to the schools as Pollio, Agrippa, Maecenas, and Augustus himself.

The declamation had its critics: the Elder Seneca deplores the bad taste, lack of discipline, and self-advertisement which it encourages, Tacitus its superficiality and unreality (*Dial.* 28 ff.); Petronius puts into the mouth of his hero Encolpius a lively exposure of its absurdities (*Sat.* 1-2); Quintilian pleads for the restoration of its proper function of 'iudiciorum consiliorumque imago' (2. 10. 1-12). But its influence was pervasive and its vogue lasted long. The schools of the developing provinces took it over from Rome; the declamations of Seneca's contemporary Gallo were being studied as classics in the time of St. Jerome, and the declamatory tradition left its mark on the Christian apologists. Its strangest legacy is in the medieval collection of tales known as the *Gesta Romanorum*, in which some of its romantic extravaganzas reappear as light reading for the monastery.

Bonner, *Roman Declamation in the Late Republic and Early Empire* (1949); A. D. Leeman, *Oratoris Ratio* (Amsterdam, 1963), 224 ff.; A. Gwynn, *Roman Education* (1926), 155 ff. C. J. F.

DECLAMATIONES PSEUDO-QUINTILIANAE, two sets of rhetorical pieces ascribed by the MSS. to Quintilian. (1) The so-called *declamationes maiores*, nineteen in number, were already by the fourth century A.D. circulating under the name of Quintilian, as quotations in Servius prove: and there is evidence that they were 'edited' by scholars of that period. It is generally supposed that these highly coloured declamations can hardly be from the hand of Quintilian (see *Inst.* 2. 10. 4 f. for his views on unreal declamations), but date and authorship remain quite uncertain. (2) The *declamationes minores* are the last 145 of a collection originally numbering 388. Each has a *thema* and short treatment of it; their derivation from some rhetorical school is ensured by the frequent presence of *sermones*, giving a master's hints on the treatment of the *controversia*. That the master was Quintilian is unprovable, though not impossible; the doctrine is not unlike that of the *Institutio* (Ritter in his edition, 512-14, lists parallels), though, here too, the themes may be too highly coloured to be Quintilianic.

TEXTS. *Quintilian quae feruntur declamationes XIX maiores*, ed. G. Lehnert (1905). *M. Fabii Quintiliani declamationes quae supersunt CXLV*, ed. C. Ritter (1884).

COMMENTARY. P. Buttmann (Leyden, 1720). For attempts to date the declamations see Schanz-Hosius II 756 f. S. F. Bonner in *Fifty Years of Classical Scholarship* (ed. Platnauer, 1954), 373. M. W.

DECUMA. In Italy one-tenth of the grain harvest (one-fifth of the fruit harvest) on *ager publicus* (q.v.) was paid to the Roman Treasury; it was farmed out by the censors to *publicani* (q.v.). In Sicily, all land not made *ager publicus* (and then treated accordingly) or belonging to free cities (see SOCIUM) was *decumanus*: the tithes previously paid to Carthage and Syracuse were appropriated by Rome. Sardinia seems to have been under a similar system (we do not know for how long). In Sicily (where the *Verrines* give detailed information for the late Republic) the tithe was sold to contractors at Syracuse in accordance with the law of Hieron (q.v. 2), extended by the Romans to the whole province and adapted by the law of Rupilius (q.v.); the purchasers made individual contracts (*pactiones*) with the farmers, under the supervision of the governor. In 75 B.C. the sale of the tithe for fruits was transferred to Rome. A further *decuma* could be requisitioned against pay; the details are not clear, but it gave rise to chicanery and exploitation. The Asian tithe, under the law of C. Gracchus (q.v. 4), was sold in Rome by the censors. The

immense amounts needed for this contract led to the growth of the powerful companies of *publicani* (q.v.). Collection seems to have been through *pactiones* with individual cities. Pompey probably extended this system to the provinces he organized. Caesar converted the Asian tithe into a fixed *tributum* (q.v.), payable directly and assessed at two-thirds the tithe. In Sicily a *tributum* had taken the place of the tithe by the time of Augustus and in other provinces the development was similar.

J. Carcopino, *La Loi d'Hieron et les Romains* (1914). E. B.

DECURIONES, the local councillors of the fully developed Roman municipal system, both in colonies and municipalities, whether Latin or Roman. They were recruited from the ex-magistrates and by censorial appointment at the quinquennial census, holding office for life. The qualifications were those required for the magistracies and included criteria of wealth, age, status, and reputation. The minimum age-limit of twenty-five was frequently neglected, minors of influential families being elected *honoris causa*. The *decuriones*, whose number varied with the size of the municipality, formed the *consilium* of the magistrates, and in practice controlled the public life of the community. Local administration and finance, the sending of deputations and petitions to Rome or to the provincial governors, the voting of honorary decrees and statues, fell to them, since the popular assemblies played little part except at the magisterial elections. The *decuriones* were also responsible for collecting the imperial taxes due by their municipality, and personally liable in case of default, a liability which became an intolerable burden in the later Empire and led to the breakdown of the municipal system. The *decurionate* became an hereditary inescapable *munus* of the wealthy, who degenerated from a ruling class to a tax-collecting caste, known as *curiales* (q.v.). For bibliography see **MUNICIPIUM**. A. N. S.-W.

DEDICATIO, the other side of *consecratio* (q.v.). Strictly speaking, only one who is himself in touch with *res sacrae*, in other words a priest expert in the ways of the gods, can consecrate anything; hence we do not hear, for instance, that M. Horatius Pulvillus consecrated the Capitoline temple, but that he dedicated it. But the owner (State or individual) of a *res profana* can if he chooses give it to a god, as he might to another human being or another State. This giving to a god, or removing from the secular (*noa*, *profanus*) sphere into the sacred (*tabu*, *sacer*) being accomplished in due form, the object, which a moment before anyone might handle, because it was a common thing, now becomes charged with *numen*, and to have anything to do with it requires more or less precaution and observance of proper ritual. Thus, a block of carved stone is in itself unremarkable, but if it has been dedicated to a god for use as an altar, it is impiety to touch it save in the performance of an act of worship, usually sacrifice (Hor. *Carm.* 3. 23. 17).

Though only objects dedicated and consecrated by permission or direction of the State could in Roman law be really *res sacrae* (see **CONSECRATIO**), in practice anyone might privately dedicate, e.g., a chapel on his own property to such gods as he chose to worship, though occasionally a non-Roman cult was prohibited by decree of the Senate or other competent authority. H. J. R.

DEDICATIONS. I. GREEK. In the early period of Greek literature dedication, in the modern sense, of literary works did not exist. When Hesiod, Theognis, and Empedocles addressed poems to Perseus, Cyrenus, and Pausanias, their intention was not that of a modern dedicatory, to gratify the dedicatee or obtain a *cachet* from his name. The person addressed was no more than a

target for the arrows of instruction or exhortation. Nor, obviously, do the *Epinicians* of Pindar come into account here. The first Greek to dedicate a book seems to have been Dionysius Chalcus, who in the middle of the fifth century B.C. dedicated his poems to a friend (Ath. 15. 669 d-e). In the fourth century Isocrates (*To Nicocles*) and perhaps Theophrastus (Ath. 4. 144 e) adopted the practice, which became extremely common in the Hellenistic age. Thus Archimedes addressed his *Psammites* to Gelon, Apollonius of Perga the first three books of his *Conica* to Eudemus, the last five to Attalus I. Diogenes Laertius actually finds it 'arrogant' in Chrysippus to 'write so many books and dedicate none of them to a king' (7. 185), and mentions (4. 38) the only king to whom Arcesilaus did not dedicate anything. In the Roman period of Greek literature the practice remains frequent. Notable examples are the literary treatises of Dionysius of Halicarnassus (some in the form of letters) and the anthologies of Meleager and Philippos (*Anth. Pal.* 4. 1-2). J. D. D.

II. LATIN. There are various degrees of explicitness in Latin literary dedication, but no system. In general, epic and history avoided a dedicatory address—but there are exceptions. Motives vary from flattery of a monarch to a friendly gesture, from desire to honour a patron to need to instruct a pupil.

Catullus dedicated his poems to Cornelius Nepos (it is, however, uncertain how much of the extant collection was covered by that address) and Horace dedicated *Odes* 1-3 to Maecenas: both collections are prefaced by a poem written specially for the purpose (the same may be true of *Epistles* 1. 1). Virgil dedicated the *Georgics* to Maecenas. But, in *Epodes* and *Satires* 1, a poem which addresses Maecenas simply comes first in the collection, as the letter to Augustus begins *Epistles* 2. Propertius casually addresses Tullus in a way that scarcely suggests dedication. A programmatic poem, without address, opens Horace *Odes* 4, but other odes address individuals. The *Eclogues* have no dedication (nor does the first poem address anyone), though single *Eclogues* are addressed to Asinius Pollio, Alfenus Varus, and Cornelius Gallus. Lucretius, appropriately to a didactic work, addresses Memmius almost as a pupil, as Horace in the *Ars Poetica* addresses the sons of Piso. Dedications were not necessary (Persius prefaces his collection by an angry poem in scasons on inspiration; Juvenal by no address at all), especially in the case of epic: yet Lucan addresses Nero and Valerius Flaccus Vespasian. Statius (in his *Silvae*) and Martial used prose letters to introduce and dedicate some of their books.

The same lack of system can be seen in prose works: Cicero dedicated a number of his rhetorical and philosophical works to friends and contemporaries with an interest and reputation in those fields. Livy felt no obligation to address an individual, but Velleius Paterculus dedicated his work to M. Vinicius and Valerius Maximus to Tiberius. Sallust does not address any individual, nor Tacitus—except in his *Ciceronian dialogus de oratoribus*. The social status of the writer, the nature of the work, the writer's immediate circumstances, his random whim or fancy—any, or all, of these may explain a dedication, or the lack of it.

R. Graefenhain, *De more libros dedicandi ap. scr. Graec. et Rom. obvio* (1892); F. Stephan, *Quomodo poetae Graecorum Romanorumque carmina dedicaverint* (1910); J. Ruppert, *Quaestiones ad hist. dedicationis librorum pertinentes* (1911). G. W. W.

DEDITICII were individuals, communities, or nations which made a formal, unconditional surrender of themselves, their property, territory, and towns to the Roman State. *Deditio* was usually performed by defeated enemies who preferred to throw themselves on Rome's mercy—

editio in fidem—rather than suffer total sack and destruction—*expugnatio*. But any community which wished to place itself under the total protection of Rome could surrender by *editio*. *Dediticii* were regarded as suppliants and usually treated with generosity. They had no political rights and were *cives nullius certae civitatis*, until Rome settled their future status, either by restoring to them the right of self-government, *leges et iura*, and recognizing them as ordinary *peregrini* (q.v.), or even by granting them the status of a *civitas libera* (see SOCII) or, on occasion, full treaty rights (see FORDUS). *Deditio* is not itself a form of treaty-alliance, nor is it normally a permanent status, although the *Lex Aelia Sentia* (A.D. 4) placed slaves of ill repute who were given their liberty in the category of *dediticii* instead of granting them Roman citizenship.

Livy, *passim*, esp. bks. 1-10; Caesar, *BCall.*, *passim*; A. Heuss, *Klio*, Heft xxxi (1933); E. Tauler, *Imperium Romanum* (1933); A. H. M. Jones, *Studies in Roman Government and Law* (1960), 129 ff.

DEIANIRA (Δηάνειρα), in mythology, daughter of Oeneus and wife of Heracles. He first heard of her from Melaeus's ghost in Hades, according to Bacchylides 5. 170. He won her in combat from Achelous (cf. AMALTHEA), and on the way home he entrusted her to the centaur Nessus to carry across a river; Nessus tried to assault her and Heracles killed him with one of his poisoned arrows. Dying, he gave Deianira some of his blood, assuring her it was a potent love-charm. Years later, when she had borne Heracles several children, he brought Iole home from Oechalia; Deianira, to regain his affection, smeared the blood on a garment and sent it him. The poison caused his death, whereat she killed herself. See Sophocles, *Trachiniae*.

H. J. R.

DEIOTARUS, tetrarch of western Galatia, attacked by Mithridates (q.v. 6), became a loyal Roman ally in all the wars in Asia from Sulla to Pompey, who, in his Asian settlement, greatly increased Deiotarus' territory. The Senate, perhaps adding more to it, gave him the royal title. Pompey also increased the territory of Deiotarus' son-in-law, Brogitarus, chief of the Trocmi in eastern Galatia. In 51 B.C. Deiotarus put his forces at the disposal of Cicero and Bibulus (qq.v.). In the Civil War, after following Pompey, he joined Caesar after Pharsalus and assisted Calpurnius (q.v. 2) in his Pontic campaign, seizing the rest of Galatia. Caesar made him give up some of his gains, and on Caesar's final return to Rome (45) Deiotarus' enemies raised complaints about him, and his friend Cicero defended him in an extant speech. On Caesar's death, he reoccupied his lost territories, bought recognition from Antonius (q.v. 4), but then joined Brutus (q.v. 5). Before the final battle at Philippi he deserted to the Triumvirs and escaped punishment, dying peacefully in 40. He had organized two legions on the Roman model, one of which later became XXII Deiotariana.

F. E. Adcock, *JRS* 1937, 12 ff.

E. B.

DEIPHOBUS (Δηϊφόβος), in mythology, son of Priam; he plays a fairly prominent part in the fighting in the *Iliad*, and in the *Odyssey* is associated with Helen (5. 276), and the hardest fighting at the capture of Troy is about his house (8. 517-20). All later authors say he was married to Helen after Paris' death.

H. J. R.

DEIPHONTES (Δηϊφόντης), in mythology, a descendant in the fifth generation of Heracles. He married Hynetho, daughter of Temenus king of Argos, and was favoured by him above his own sons, who therefore murdered their father and strove with Deiphontes, with

results variously described by different authors (collected by Stoll in Roscher's *Lexikon*, s.v.).

H. J. R.

DELIAN LEAGUE, THE, is the modern name given to the great alliance formed in 478-477 B.C. against the Persians. In 478 the Greeks, led by Pausanias the Spartan regent, campaigned in Cyprus and secured Byzantium; but Pausanias abused his power and was recalled to Sparta. At the allies' request Athens accepted the leadership, the Peloponnesians were content to withdraw from overseas responsibilities, and a new alliance was formed. The sacred island of Delos, a traditional Ionian festival centre, was chosen as headquarters. Athens provided the commander of the allied forces and determined which cities were to provide ships and which money; the treasurers also, ten *hellenotamiai*, were Athenians, and the Athenian commander Aristides was responsible for the first assessment. But at the outset policy was determined at meetings on Delos at which every member had an equal vote. The nucleus of the alliance was formed by the Ionian cities of the west coast of Asia Minor, the Hellespont and the Propontis, and most of the islands in the Aegean. Chios, Samos, Lesbos, and some of the other states with a naval tradition provided ships; the remainder brought annual tribute to the treasury at Delos. Every member took an oath of loyalty which was permanently binding.

At first the original objectives were vigorously pursued. Persian garrisons were driven out of Thrace (except at Doriscus on the Hebrus) and the Chersonese, Greek control was extended along the west and south coast of Asia Minor, new members joined until there were nearly 200. A climax was reached when Cimon, commanding 200 Athenian and allied ships, destroyed the Persian land and sea forces at the mouth of the Eurymedon (c. 466). But meanwhile situations were developing which had not been anticipated. Carystus in Euboea was forced to join (c. 472), Naxos was not allowed to secede and had to accept a dictated settlement (c. 467), and in 465 the rich island of Thasos revolted because Athens was encroaching on her economic interests on the mainland. Thasos had to surrender in 462 and stiff terms were imposed, but a large colony of Athenians and allies, who had settled on the Strymon to exploit the riches of the area, was wiped out by the natives. There was clearly a danger that Athens would use the alliance increasingly in her own interest, but fighting against Persia was soon resumed. In 460 a strong force sailed to Cyprus and was soon diverted to Egypt to support Inaros, a Libyan prince who was leading a revolt against Persia. At first the joint forces were highly successful and the Persians were blockaded in Memphis, but strong Persian reinforcements reversed the situation and in 454 the Greeks had to capitulate. Meanwhile Athens had involved herself in war with the Peloponnesians. She now abandoned her offensive on the mainland and concentrated on maintaining control over her allies. The treasury was moved from Delos to Athens for greater security and disaffection among the allies was firmly suppressed. Cimon, who had been ostracized in 461 when his policy of good relations with Sparta was discredited, was specially recalled and, after negotiating a five years' truce with Sparta, he led another strong force to Cyprus. But after initial successes he died, the fleet returned, and war with Persia was not resumed.

The death of Cimon made it easier to reverse Athenian policy and, though the evidence is not satisfactory, it is highly probable that peace was negotiated by Callias at the head of an Athenian embassy. The main terms were that the Persian fleet was not to sail west of Phaselis, nor outside the Euxine; Persian satraps were not to attempt to force back Athenian allies into the Persian Empire; and

the Greek cities of Asia were to be autonomous. The alliance of 478-477 had been primarily directed against Persia; the peace was followed by an unsettled period in the Aegean and political conflict in Athens. Pericles, now the recognized champion of the people, encouraged the Athenians to convert the alliance into an empire. He first invited the Greeks of the mainland and of the east to a congress at Athens to discuss common problems, particularly the rebuilding of temples destroyed by the Persians, and the policing of the seas. Sparta led a movement for abstention, the congress was not held, and Athens made the vital decisions herself. The alliance was not dissolved, tribute was to continue, and the reserve brought from Delos was used for the rebuilding of Athenian temples. Discontent among the allies was forcibly suppressed and the policy of imposing small Athenian garrisons and political residents which was begun in or even before the 50s was further developed. It was probably now that Athens enforced the use of her own coins, weights, and measures on the allies and required them all to bring standard offerings of cow and panoply to the Great Panathenaic festival which was held at four-year intervals. Cleruchies (q.v.) of Athenians were settled in allied territory, partly for the benefit of poorer Athenians, but also to add to Athenian security. The first known was at Andros in 450, together perhaps with Naxos and Euboea (? Carystus): the Chersonese was settled by Pericles in 447. By now only Chios, Samos, and Lesbos contributed ships, the rest paid tribute and had no effective means of resisting. The allies no longer took part in discussions of policy. In Athenian official language the 'allies' had now become 'the cities which the Athenians control'.

Athens was able to suppress her allies when they revolted; she had more serious trouble from the mainland cities over which she had gained control in the 50s. Boeotia, conquered in 457, revolted in 446 (or 447), and a small Athenian force, underestimating the danger, was overwhelmed at Coronea. This defeat was followed by the revolt of Megara, and also of Euboea, and, with the expiry of the truce, the Spartans brought a Peloponnesian army into Attica. Pericles who had taken the main Athenian army to Euboea returned and was able to negotiate a Spartan withdrawal as a preliminary to peace. In 446-445 the 'Thirty Years' Peace was agreed, in which Athens renounced her ambitions on land, but was free to consolidate her empire. Euboea was now crushed and bound more closely to Athens and in Athens Thucydides (q.v. 1), son of Melesias, who had opposed Pericles' policies, was ostracized. In 440, however, there came a severe shock when Samos challenged the right of Athens to interfere in a quarrel with Miletus. An attempted political settlement failed and a fierce war followed. Samos surrendered after a long siege and had to give up her fleet, pull down her walls, and pay a heavy indemnity. Athens had no more trouble from her allies until war with the Peloponnese seemed imminent. When war broke out she had a firm control, she was able to enforce regular tribute payment except in the less accessible areas of Caria, and she was able to demand that allied cases involving the major penalties of death, exile, loss of rights, and property confiscation should be heard at Athens. The people's courts played an increasing part in the control of empire.

Sparta, posing as the liberator of Greece, expected large-scale revolt from Athens; she was disappointed. Several of the smaller cities in Chalcidice had established their independence in 432 by settling inland at Olynthus, and in 428 Lesbos revolted and drew against herself a large Athenian force; but there was no general movement and Lesbos was crushed. Athens was able in 425 to increase the tribute assessment to a total of nearly 1,500

talenta (the original assessment is said to have been 460 talents), and to use Milesians and other allies in her expeditions. In 415 when Melos refused to join her alliance, Athens reduced the island, put to death the men, and enslaved the women and children, an episode long remembered as the most ruthless act of Athenian imperialism. When the Athenian fleet and army were lost at Syracuse revolt spread more widely. Euboea was lost in 411, Thasos, Chios, and other Ionian cities broke away and appealed for help to Sparta, but even now some cities remained loyal and in most of those that revolted there was a pro-Athenian party. The reasons are complex. Most important was the Athenian championing of democracy. When revolts had been crushed Athens had usually imposed democracies; Sparta was the traditional champion of 'the better elements'. Liberation by Sparta might mean government by a narrow oligarchy. Athens also, in spite of the curtailment of liberties, had brought positive benefits to many of the poorer cities. Piracy had been suppressed to the great advantage of trade, and the Athenian navy offered well-paid service, particularly attractive to the islanders. The city of Athens, especially after the great building programme of Pericles, was a magnet to the leading men in the cities, and the poorer classes found more consideration and more opportunities for employment in Athens than in any other Greek city.

The allies did not in fact make a substantial contribution to the defeat of Athens, and when Sparta took Athens' place the cities soon had reason to regret the change. In less than thirty years they were again eager to unite under Athenian leadership, this time against Spartan aggression. But in 377 Athens repudiated cleruchies, garrisons, political domination, and other aspects of her rule that had been especially resented in the fifth century.

ANCIENT SOURCES: Hill-Meiggs-Andrewes, *Sources for Greek History* (1951), index, 354 ff.

MODERN LITERATURE: H. Nesselhauf, *Untersuchungen zur Geschichte der Delisch-Attischen Symmachie* (Klio, Beiheft xxx, 1913), *ATL*, vol. III. More concisely in general histories of Greece: N. G. Hammond² (1967), J. B. Bury² (1951), *CAH* v. R. M.

DELLIUS (*PW* 1), QUINTUS, joined first Dolabella (q.v. 3), then Cassius (q.v. 6), then Antonius (q.v. 4), who used him on many missions, and finally (just before Actium) Octavian—hence called *desultor bellorum civilium* by Valerius Messalla (q.v. 3), whose own record was rather similar. He wrote an account of Antony's Parthian War, which is a source of Plutarch's account in his *Antony*.

E. B.

DELOS, a small island (less than 2 square miles) regarded as the centre of the Cyclades. According to legend the birthplace of Apollo and Artemis, it was from earliest historical times sacred to Apollo, who was honoured by song, dance, and games in a festival (*panegyris*) to which came men and women from the islands and coasts of the Aegean as early as the eighth century (cf. *Homeric Hymn to Apollo*). The island had once been occupied, according to Thucydides, by Carian sea-rovers, who were driven out by Minos of Crete. The pre-Hellenic inhabitants, of whose occupation stone huts on Mt. Cynthus and in the plain afford evidence, were displaced by colonists from continental Greece before c. 1000 B.C., and the island was already famous in the *Odyssey*. Its history proper begins in the sixth century, when Pisistratus of Athens, to further his control of the Cyclades, purified Delos, and the Samian tyrant Polycrates extended his patronage to it. Delos was important as the centre of an Ionian amphictiony.

When the invading Persian fleet arrived in 490 Datis respected the sanctuary. In 478-477, when a maritime league was formed to ensure Greek independence,

Delos was naturally chosen as seat of the common treasury (see DELIAN LEAGUE). On the removal of the treasury to Athens (454) Delos came under more direct Athenian control, but did not pay tribute. In 426 Athens again purified the island, and Nicias inaugurated a quinquennial festival ('Delia') in a *theoria* of great pomp, possibly in 418/17 to inaugurate also the new temple of Apollo built by the Athenians. After the Peloponnesian War Athenian control of Delos was interrupted until the formation of Athens' second maritime league (378/7), when the administration of the Delian temples was re-organized under Athenian officials called Amphioktes (cf. 'Sandwich Marble', *IG* II². 1635, relevant to the financial period 377-373). When Athens lost her sea power, her administration of Delos stopped (314).

Henceforth for a century and a half the sanctuary was administered by local officials known as *hieropoioi*, while Egypt and Macedon contended for hegemony of the Aegean. During this period Delos enjoyed the usual institutions of a city-state. For the supervision of the temple of Apollo, and all edifices within his *temenos*, the *ekklesia* entrusted its powers to the *hieropoioi*, who ranked next to the Archon, the head of the State. The first political relationship of the free Delians was with the League of Islanders (i.e. inhabitants of island-cities of the Aegean), the formation and protection of which are attributed by some to the Ptolemaic kings. The federal treasury—perhaps the seat of the League—was at Delos, where federal festivals were from time to time instituted in honour of the Hellenistic princes who happened to be paramount in the mid Aegean. The stoas of Antigonos Gonatas and Philip of Macedon were notable buildings of the third century. Delian monuments of this period reveal the pretensions not only of the Egyptian and Macedonian, but also of the Pergamene and Syrian kings. Early in the third century Delos was a centre of the corn trade of the Aegean; buyers came from Macedonia and other northern places. A foreign colony was growing up, foreign banking firms were flourishing; the occurrence of Italian names indicates commercial bonds with southern Italy. Delos enjoyed a kind of neutrality (see Landlaw, *A History of Delos*, app. B); but at last she presumed to support Perseus of Macedon against Rome, and after his defeat at Pydna Rome handed over the island to her ally Athens, who removed the old inhabitants and sent her cleruchs to replace them (166), who in turn were later transformed into a cosmopolitan population. To damage Rhodian trade, Delos was made a free port.

In the third great period of Delian history the chief annual magistrate of the Athenian colony bore the title *Epimeletes*. After a servile outbreak (of unknown date), the cleruchy was, it is argued, dissolved; there was a wider organization of the Athenians and foreign traders. Already there existed guilds (*koina*) of Italian residents (*Hermiaistai*, or *magistres Minquri* sc. Mercurii, and others); the function of the Delian magistri has been much debated; it is improbable that there was a *conventus civium Romanorum*, as alleged by A. Schulten and E. Kornemann. There were also powerful Oriental guilds (e.g. the *Poseidonastai* of Berytus), and trade guilds (e.g. the Oil-Sellers). Traders' vessels filled the Sacred Harbour and the Merchant Harbour to the south, and slaves constituted one of the chief commodities of exchange. Decline, however, set in after Archelaus, general of Mithridates of Pontus, sacked the island in 88; and in 69 the pirates, allies of Mithridates, attacked Delos, now a Roman naval centre, and enslaved the inhabitants. After Pompey suppressed the pirates some measure of prosperity returned to the island; a legatus of Lucullus, C. Valerius Triarius, repaired the town and built a wall to protect the inhabitants; and there is evidence of a Jewish colony. Before the end of the first century, however, the

trade-routes had altered, and Delos began to be abandoned both as entrepôt and as cult-centre. When Julius Caesar planted a colony of Romans on the old site of Corinth the fate of Delos was sealed, though a small group of inhabitants lingered on in the early Christian era.

The archaeological exploration of Delos, carried on by the French School (Athens) since 1873, first by A. Lebègue, then by Th. Homolle and many others, has been recorded contemporaneously in the *Bulletin de Correspondance Hellénique*, and since 1909 definitively in *Exploration archéologique de Délos*. It has revealed the remains of public buildings—temples, colonnades, theatre, gymnasium, etc., of agoras, and of warehouses and private dwellings of the second century B.C.; these, with a wealth of inscriptions, make a notable addition to the knowledge of Greek and Graeco-Roman civilization. The inhabited areas were on the sheltered western side, the sanctuary of Apollo (*Délos* XII) being close to the Sacred Harbour and south of the Sacred Lake and the celebrated Lion Terrace (*Délos* XXIV); further to the south were the theatre quarter (*Délos* VIII) and the docks, quays, and warehouses (cf. *BCH* 1916, 5 ff.). North-west of the sanctuary was the Pillared Hall (Salle Hypostyle, *Délos* II, II bis), unique in Greek architecture and perhaps some sort of exchange. The most ancient worship may have centred on the sanctuary of Artemis, the site of which, identified in 1929, is nearer to the Sacred Harbour; here was found a very ancient treasure of gold, ivory, and bronze (cf. *BCH* 1947-8, 148 ff.). Some stress the importance of the temple of Leto in primitive times (e.g. Bethe, *Hermes* 1936, 351 ff., *ibid.* 1937, 190 ff.; *Die Antike* 1938, 81 ff.). The discoveries at the Artemision in 1946 gave rise to Gallet de Santerre's examination of Delos in pre-history and the problems of settlement on Mt. Cynthus and in the western plain respectively. The splendour of the *hieron* of Apollo eclipsed that of all others; to quote Homolle, among the temples of Greece there is none, not even the Parthenon, whose administration can be as minutely studied and as surely known as that of the temple of Apollo at Delos. Conditions regarding the letting of temple landed property, and the granting of temple loans, were defined as early as the fourth century in a document known as the Sacred Contract (cf. *Hermes* 1926, 86 ff.). Below Mt. Cynthus clustered on terraces the sanctuaries of the oriental gods (*Délos* XI, XVI). Delian records refer to a public gymnasium, and to palaestras, the identification of which is a matter of dispute (*Délos* XXV; *BCH* 1952, 562 ff.).

Evidence of the wealth and importance of foreign traders in the later second century B.C. is derived from the so-called Agora of the Italians (Schola Romanorum, *Ἰταλικὴ Πόλις*), the largest building of Delos and unique in the Greek world (*Délos* XIX; cf. *BCH* 1881, 390 ff.; 1884, 113 ff.); also from the 'Establishment of the Poseidonasts' of Berytus (*Délos* VI). The cosmopolitan character of the population at the end of the second century is indicated in an ephebe list of 119/18 (*BCH* 1931, 438 ff.). Thanks to the wealth of inscriptions it was possible to undertake prosopographical studies of the Romans and Italians on Delos (*BCH* 1884, 75 ff. (Homolle), *ibid.* 1912, 5 ff. (Hatzfeld); *Rev. Ét. Grec.* 1916, 188 ff. (Lacroix)). Also, the economic situation of the island with reference to commodities, prices, and wages in the period of independence has been the subject of particular investigation (e.g. G. Glotz, *J. des Savants* 1913, 16 ff., 206 ff., 251 ff.; *Rev. Ét. Grec.* 1916, 281 ff.). Valuable information was derived from the examination of stamped amphora handles (*BCH* 1952, 514 ff.).

In the course of the excavations a wealth of objects relating to daily life was found (*Délos* XVII), but few artistic bronzes among them. There is a fine collection

(Delos Museum) of lamps of black and red clay ranging in date from the fifth century to the early Christian era (*BCH* 1908, 133 ff.). There is a large collection of terracotta braziers (ibid. 1905, 372 ff.; ibid. 1934, 203 ff.; ibid. 1961, 474 ff.), and of terra-cotta figurines (*Délos* xxiii). Vases range from the earliest periods to the Attic red-figure period, the finest having been recovered from the older temple of Hera (*Délos* x); cf. *BCH* 1911, 350 ff.—archaic vases; ibid. 1913, 418 ff.—relief vases). Wall paintings and mosaics have survived, the former useful in assessing domestic cults (*Délos* ix). Some mosaics are very elegant, notably those in the House of the Masks (*Délos* xiv) and the House of Dionysus and House of the Dolphins (*Prot. Mon. et Mém.* xiv).

Of the architectural adornment of the island, the theatre apart, little remains. Much marble sculpture was found, ranging in date from Naxian work of the seventh/sixth century to commonplace productions of the first century. Many portrait statues of the Graeco-Roman period are extant (*Délos* xii), some of Hellenistic princes and some of official Romans (e.g. C. Billenus (*Délos* v. 41 ff., pl. 60)). There remain *in situ* the base and torso of the famous archaic and colossal statue of Apollo (Déonna, *Les Apollons archaïques*, 191 ff.), offering of the Naxians, as were the impressive lions (of Naxian marble) guarding the Processional Way leading to the Sacred Lake.

The detailed publications are those of the *Exploration archéologique de Delos* (in twenty-five volumes, 1900–61). The inscriptions are in *IG* xi and in *Inscriptions de Delos*, 1926–50. There is a selection in *Choix d'inscriptions de Delos* 1 (Textes historiques ed. P. Durrbach, 1921).

DELPHI is situated on the lower southern slopes of Parnassus, some 2,000 feet above the Gulf of Corinth. It attained importance at an early date and some have accepted the idea of a special connexion with Crete (cf. *The Delphic Hymn to Apollo*, 391–9, 514–23, for Apollo's Cretan priests, *Κρήτες ἀπὸ Κνωσὸς Μυωκόου*, and J. DeFradas *Les Thèmes de la propagande delphique* (1954), 55 ff.), which is hardly supported by any volume of finds at Delphi, and may be due rather to memories of Cretan greatness as a centre of culture and ritual. Middle Helladic and later pottery has been found on the site, which also has the remains of Mycenaean houses. Subsequently Corinth seems to have played some part in the development of the oracle to judge from the pottery found, not unrelated to the activity of that city in western colonization and Apollo's function as Leader.

For the history of the oracle, see the following article. The sanctuary consisted of a *temenos* enclosed by a wall. Inside it were the monuments dedicated by the States of Greece to commemorate victories and public events, together with some twenty 'treasuries' a small theatre, and the main temple of Apollo (q.v., §4) to which the Sacred Way wound up from the road below.

Tradition claimed (cf. *The Hymn to Apollo*, 295–6) Trophonius and Agamedes as the builders of the first temple of Apollo. There may have been others before the building which was destroyed by fire in 548 B.C. This destruction led to a reorganization, architectural rather than religious, of the *temenos*, involving the construction of the Polygonal Wall below the temple platform and the destruction of buildings and treasuries of which only architectural and sculptural elements now survive (cf. the Sicyonian *monopteros*). The great new temple was completed in the last decade of the sixth century with the aid if not the donations of the Athenian family of Alcmaeonidae then living at Delphi in exile. This new temple (partly described in the *Ion* of Euripides) was destroyed by an earthquake in 373. A new temple was built by subscription, its pedimental sculptures being made by two Athenians, Praxias and Androsthenes. This building survived until Roman times and was repaired by Domitian. The physical organization of the oracle, the cleft in the rock and the emanations from it, together with the position of the *adyton* or Holy of Holies where the Pythia gave her responses have been the subject of much controversy (cf. P. Amandry, *La Mantique apollinienne à Delphes* (1950), 201 ff.). The supposed *omphalos* (q.v.), the reputed centre of the earth, turns out to be the top of a pillar from the *iconostasis* of a church (*BCH* 1951, 210 ff.). A marble *omphalos* of Roman period has been found.

The sanctuary was attacked by the Persians in 480 and by the Gauls in 279, but suffered little damage. Nero despoiled it of 500 statues. Julian attempted a revival of the sanctuary, but the oracle announced to him its own decline, and in A.D. 390 it was finally closed by Theodosius in the name of Christianity. Excavations were begun by French archaeologists in 1880, when the village of Kastri was removed from the site to its present position.

Apart from the revelation of the main buildings of the enclosure and the remains of numerous memorials mentioned by Pausanias (such as the base of the Serpent Column commemorating Plataea and Lysander's memorial for Aegospotami), there have been notable finds of sculpture: the very archaic metopes of the Sicyonian *monopteros* and the metopes of the Athenian Treasury, the frieze of the Siphnian Treasury, pedimental sculptures of the 'Alcmaeonid' temple, important for sculptural chronology, the bronze Charioteer, and the remnants of the memorial set up by a Thessalian dynast the originals of which may be by Lysippus. Fragments of gold relief and ivory carving in the archaic style, including some heads of considerable size with inlaid eyes, which may have come from some work of art in these precious materials, were found buried under the Sacred Way.

Below the modern road and the Castalian Spring (the earlier form of which has recently been established) are public buildings (palaestra, etc.), the archaic temple of Athena Pronaia, and the fourth-century Tholos, in the area called the Marmarai, where he also boulders which have fallen from the cliffs above (the Phaeiadiades).

F. Poulsen, *Delphi* (1920); E. Bourguet, *Les Ruines de Delphes* (1914), P. de la Coste-Messelière, *Au musée de Delphes* (1936); Pierre Buret, 'Geomorphologie de la région de Delphes', *BCH* 1959, 258 ff. S. C.; R. J. H.

DELPHIC ORACLE, in classical times the supreme oracle of Greece, presided over by Apollo. Its site was supposed to be the centre of the earth, marked by the sacred navel-stone (*omphalos*, q.v.). It had been a holy place from remote antiquity (remains of pre-Greek sacrifices have been found), and the presiding genius was originally an earth-spirit. Apollo was recognized by the Greeks themselves as a late-comer (Aesch. *Eum.* 1 ff., etc.). Aeschylus' account emphasizes the peaceful nature

of the transfer to Apollo, but the legend of his killing a chthonian monster (*Hymn. Hom. Ap.*, Eur. *IT* 1244 ff.; see also J. E. Fontenrose, *Python: a Study of Delphic Myth and its Origins* (U.S.A. 1959)) suggests a different and more plausible tradition; the ecstasies and sex of the Pythia may be due to the original chthonian nature of the cult (but cf. K. Latte, *Harv. Theol. Rev.* 1940, 9 ff.).

2. Responses were given by the Pythia, who may have been originally appointed as a young virgin, but in later times at least was elderly (see Parke-Wormell, 35), in a state of frenzy induced by means not now ascertainable with certainty. Faith in the power of the god to take possession was complete, and the consequent emotional suggestion would doubtless add powerfully to the effect of such practices as chewing bay-leaves (Apollo's plant) or drinking holy water. Excavation has rendered improbable the post-classical theory of a chasm with mephitic vapours. The riddle of the prophecies is not entirely soluble. Efficient accumulation and use of information can account for much, but there remain exceptions, whose explanation will always be a mystery. After purification and sacrifice, inquirers approached the oracle in an order determined partly by lot. Right of precedence might be granted as a privilege (*ἡρωικὴ ἐξουσία*, Farnell, *Cults* iv. 214 n.). A male prophet put their question and interpreted the Pythia's answer, commonly in verse. Advice was sought both by private individuals (e.g. concerning marriage, childlessness, commercial enterprises) and States. Slaves were manumitted by dedication to the Delphic god.

3. In religion Delphi gave answers on all questions of cult, fostering the worship of Olympian and local deities impartially and adopting a generally conservative attitude on religious questions. The best way to worship was 'according to ancestral custom' or 'the City's custom' (Parke-Wormell, 321). It seems, however, to have welcomed Dionysus with whose ecstatic worship Delphic prophecy has been thought to have much in common—and assisted in the propagation of his cult. At Delphi itself Dionysus was received into partnership, his grave was shown in the inner sanctuary, and for three winter months Apollo was believed to hand over the shrine to Dionysus and retire to the far north. The trieteric festivals of Dionysus at Delphi were orgiastic, and women were officially sent from the Greek States (including Athens) to take part in them. An authority on all cult-practices, Apollo was above all the god of *katharsis*, especially purification after homicide, from which the primitive conception of automatic *miasma* never entirely disappeared.

4. Politically, Delphi came to the fore in the great period of colonization, its advice being regularly sought on the choice of site and patron deity. Tradition assigned many laws of Greek cities also to the god, e.g. the constitution of Lycurgus at Sparta. Other political prophecies, with a few striking exceptions difficult to explain, suggest extensive knowledge of the situation and a leaning to conservatism which did not exclude attempts (not always successful) at a politic adaptation to changing conditions. Thus in spite of aristocratic sympathies, Delphi is said to have foretold the power of most of the tyrants (Pisistratus is an exception). It favoured Croesus until his fall, discouraged Greek resistance to Persia, was pro-Spartan in the Peloponnesian War, supported Philip of Macedon.

5. Questions of individual morality, which were left untouched by the city-states, deeply interested the oracle, and it seems to have shown great firmness on moral issues. It sponsored the notion that purity was a matter, not only of ritual, but also, and primarily, of the spirit, and that the intention might be more important than the deed. (Cf. esp. the story of Glaucus, *Hdt.* 6. 86, and

other examples in Parke-Wormell, ch. viii.) In this it reached the high-water mark of religious ethic in pagan antiquity. The famous exhortations carved on the temple, though not especially exalted in tone, were also moral precepts—'Know thyself' and 'Nothing too much'.

6. The importance of Delphi is above all that it provided a meeting-place for the otherwise isolated city-states of Greece. The unique position and universal prestige which it enjoyed, and which were necessary if it was to discharge this function, cannot now be completely accounted for, but besides the impressiveness of its prophetic method (as contrasted with 'sane' procedures like the inspection of victims or the flight of birds), one may mention the attraction of its famous Panhellenic Pythian games (founded after the First Sacred War about 590 B.C.) and its connexion with a powerful religious league of northern States, the Delphic Amphictiony (see AMPHICTIONIES). The early history of the Amphictiony is obscure, but it seems certain that its original centre was further north, and Delphi was probably not included until the middle of the seventh century. In the fifth century, with the recognition of Delphi as a common centre of worship, the Amphictionic Council became representative of the Greek states as a whole (Parke-Wormell, 177 f.). Macedon was admitted to membership after the assistance given by Philip against the Phocians in the Third Sacred War (355-346 B.C.).

7. In Hellenistic times the influence of Delphi and of the League rapidly declined, though the new kings thought it due to their royalty to flatter the oracle, which was still a centre of information for the Greek world. Delphi was seized by the Aetolian Confederacy about 300 B.C. and suffered later from barbarian invasions. Its treasure was unscrupulously used by Sulla. Under the Roman Empire it enjoyed a somewhat artificial revival in Hadrian's time, but astrology provided an alternative source of prophecy and there were rival oracles. The decline of Delphi was already almost complete when Christianity became the official religion under Constantine.

On the general subject of oracular prophecy, see ORACLES; DIVINATION.

For a full account of the Delphic oracle and bibliography, see H. W. Parke and D. E. W. Wormell, *The Delphic Oracle* (2 vols., 1956), and its review by W. G. Forrest in *CR* 1958, 67 ff.

W. K. C. G.

DEMADES (fl. 350-319 B.C.), Athenian politician. A brilliant orator and diplomat, who recognized that Athens must come to terms with Macedon and did not scruple to stand in Macedonian pay, he rendered good service after the battle of Chaeronea, when he checked the intransigence of the Athenian people, rebuked Philip's insolence, and secured honourable terms of submission for Athens. After Philip's death he survived an impeachment by Hyperides, and when Alexander marched into Greece he again mediated between Athens and Macedon (335). During Alexander's absence in the East he remained in power, together with Phocion; he prevented Athens from supporting King Agis III (q.v.) against Macedon, and he procured the dedication of Alexander. Accused of receiving a bribe from Harpalus (q.v.), he offered no defence and was fined; and after Alexander's death he was disfranchised. Reinstated in 322 to avert Antipater's attack on Athens, he used his influence to procure the deaths of Demosthenes and Hyperides. In 319 he was detected by Cassander in an intrigue with Antigonos, and was summarily executed by him while on an embassy to Macedonia. Nothing survives of his speeches (which were not committed to writing) except some picturesque phrases, e.g. 'Macedon without Alexander would be like the Cyclops without his eye'.

A fragment 'Υπὲρ τῆς δωδεκαετίας, included in the oratorical Corpus, is certainly not by Demades.

P. Treves, *Athenaeum* 1933, 105 f.; *Rend. Ist. Lomb.* 1958, 327 f. N. G. L. II.

DEMARATUS, a Eurypontid king of Sparta, c. 510–491 B.C. He obstructed his colleague Cleomenes I (q.v.) on the invasion of Attica (c. 506), and again when he prevented the arrest of the medizing party at Aegina (491). Dethroned on a false charge of illegitimacy by Cleomenes, he fled to King Darius. He accompanied Xerxes in 480, presumably in hopes of recovering his throne from the Persians, if victorious, and repeatedly warned him (according to Herodotus) that Sparta would undoubtedly resist him. Rewarded for his services with four cities in Asia Minor, he resided there until his death, many years later.

A. M. W.

DEMETER (Δημήτηρ), the Greek corn-goddess, identified in Italy with Ceres (q.v.). It seems certain that the last two syllables of her name mean 'mother', but the first is more difficult. The ancient explanation, that *δη-* is a by-form of *γη-* and she is the 'earth-mother', breaks down owing to the absence of evidence of any such by-form of that or any other word beginning with *γ*. More likely, especially in view of Nilsson's demonstration (see below) that her most famous cult turns wholly on the processes connected with corn, is the suggestion of Mannhardt (see Farnell, op. cit. infra, 20 f.) that it is to be connected with *ζεῖα*, spelt, although this also is dubious, seeing that the form *δηαί* is attested (by Hesychius, s.v.) only as the Cretan for 'barley', and Demeter is not particularly connected with Crete, and the Dorian and other dialects call her *Δαμάτηρ*, indicating an *a*, not an *e* in the original form of her name.

Of her functions, however, there is no doubt. She is the goddess who governs the fruits of the earth, especially, though not quite exclusively, bread-corn. She would appear to have thrown off very early a younger double of herself, the 'Virgin' (*Kόρη*), who is regularly (not quite invariably) worshipped with her, and seems to be essentially the power which is in the corn itself and appears and disappears with it. Being thus connected with very important happenings at the surface of the earth, it is in accordance with a common tendency of Greek and other religions that she should become associated also with the depths of the earth; so Demeter becomes in mythology the mother-in-law, Kore (Persephone) the wife, of the death-god. It may reasonably be conjectured that originally the latter was the consort, not of Hades, but of Pluton, god of the wealth (especially the wealth of corn) which the earth produces. The story, first found in the Homeric Hymn to Demeter, is that Hades carried off Kore; Demeter, after vainly searching for her daughter, wandered to Eleusis and there was received, in disguise as an old woman, into the house of Celeus the king, to nurse his son. She put the child in the fire every night to burn his mortal nature away, but was interrupted by Metanira, Celeus' wife, and so hindered from making him immortal as she had planned. She then revealed herself to the Eleusinians, who built her a temple. Meanwhile Zeus, to persuade her to come back to Olympus and to let the earth bring forth, had Kore returned to her; but Kore, as she had eaten some pomegranate-seeds in the other world, could not return entirely, but spends some part of every year underground. As Nilsson (*ARW* xxxii, 79 ff.) points out, the myth agrees well with the historical celebration of the Eleusinian Mysteries (see ELEUSIS, MYSTERIES) and with Greek climatic conditions. The Great Mysteries are in Boeotia, 16–17 and 19–22, and connected with the return of Kore; the time is early autumn, when the fields are grow-

ing green again after the drought of summer. The Lesser Mysteries of Agrae are in Anthesterion; it is spring, and they lead up to the summer harvest and the following period of dryness, during which Kore, the young corn or seed-corn, is indeed under the earth, stored away in the great grain-jars. That the ritual of the Mysteries (which, at Eleusis, are even older than Demeter, being pre-Hellenic) had to do with the death and rebirth of the corn and that in time hopes of human immortality came to be read into this ritual is fairly clear, but the details remain extremely obscure (see bibliography below). Eleusis claimed to be the centre from which knowledge of agriculture sprang, Demeter having sent Triptolemus the Eleusinian to teach the rest of mankind (Callimachus, *Cer.* 20. 2; *Ov. Met.* 5. 645; and many authors and representations in art).

Of other festivals of Demeter, one of the most famous and widely spread was the Thesmophoria (q.v., to Demeter Thesmophoros, 'bringer of treasures'; and see THEBES 1). In Athens it was held on Pyanopsion 11–13, and consisted of a series of rites, largely magical, performed by women for the fertility of the soil; connected with it was the ritual of the Scirophoria (q.v.), on Scirophorion 12.

In Arcadia Demeter appears as the consort of Poseidon (probably in his capacity of 'earth-holder' or husband of Earth, *γαιήχολος*, see POSEIDON). The Black Demeter of Phigalia and the Demeter Erinyes of Thelpusa were both said to have been mated with Poseidon in horse-shape, and the former was shown horse-headed (Paus. 8. 25. 4 ff., 42. 1 ff.), while it was doubtful if the child she bore was a foal or the local goddess Despoina. That a darker side of her nature was stressed here is clear from her titles. However, even the normal Demeter could be very formidable, since being a giver of plenty she could also bring famine. When Erysichthon (q.v.) offended her it was insatiable hunger that was his punishment. Another trace of her tendency to become a goddess of the depths of the earth and not simply of the corn is shown in the Athenian use of *Δημήτρεωι*, 'Demeter's people', as a euphemism for the dead (Plut. *De fac.* 943b).

Since she is a mother-goddess, the question who her husband is was never consistently answered. In Arcadia (see above) he was Poseidon; according to Hesiod (*Theog.* 912–13) Zeus was Persephone's father; a story, probably a very old ritual myth, in the *Odyssey* (5. 125 ff.) says that she lay with Iasion (cf. DARDANUS) in a ploughed field, and that when Zeus heard of it he killed Iasion with the thunderbolt. To be the consort of a mother-goddess is very dangerous, cf. ANCHISES. Hesiod adds (ibid. 969 ff.) that their child was Plutos (q.v.). This is characteristic for all such goddesses, the important thing is that they should be fertile, not that they should be wives.

Demeter is shown in archaic and classical art with Triptolemus, Persephone, or both, or awaiting Persephone's return. She carries a sceptre, ears of corn, or torches, and is often difficult to distinguish from Persephone.

Farnell, *Cults* iii, 29 ff.; L. Deubner, *Attische Feste* (1932), 40 ff.; Nilsson, *Feste* 311 ff.; *GGU* 12. 456 ff. J. Béquignon, 'Demeter deesse acropolitaine', *Rev. Arch.* 1958, 149 ff. H. J. R.

DEMETRIAS, a city of Magnesia on the Gulf of Pagasae. Formerly located below Mt. Pelion, it is now proved to have adjoined Pagasae on the western shore of the inner bay. Demetrius Poliorcetes founded it c. 293 B.C. by a 'synoecism' of many small Magnesian towns; he built massive fortifications and made the best use of an admirable site, so that it became important as a military and commercial centre. Though occupied by a Macedonian garrison as one of the 'fetters of Greece', it

enjoyed some measure of self-government. Liberated from Philip V by Rome, Demetrias supported the Actonians and Antiochus in 192-191. It was then regained by Philip and remained in Macedonian hands until the overthrow of Perseus. Its fortifications were partly demolished, and, although the principal city of the Magnesians League, it gradually declined.

The adjacent sites of Demetrias and Pagasae have been more thoroughly investigated by archaeologists than any in the interior of Thessaly.

F. Stahlin and E. Meyer, *Pagasa und Demetrias* (1934); *PW* Suppl. ix. H. D. W.

DEMETRIUS (1), writer of Old Comedy (Diog. Laert. 5. 85). His *Σκεδία* may be assigned to c. 400 B.C.

CGF i. 264-6, *CAF* i. 795-6.

DEMETRIUS (2) (5th/4th c. B.C.), sculptor, of Alopecce. Made realistic portraits of Corinthian general Pelliclus; Lysimachus, priestess of Athena Polias in Athens; Simon, Athenian Hipparch. The realistic style can be seen on some contemporary Attic vases and on coins of Cyzicus.

Overbeck nos 897-903; Lippold, *Griech. Plastik* 226, D. M. Lewis, *BSA* 1955. 4. T. B. L. W.

DEMETRIUS (3) of Phalerum (b. c. 350 B.C.), son of Phanocrates, Athenian Peripatetic philosopher and statesman, began his political life in 325/4 and was probably elected *strategos* for many of the next few years. He escaped death as a pro-Macedonian in 318, and Cassander made him absolute governor at Athens, where he held power for ten years. As *nomothetes* he passed comprehensive legislation under Theophrastus' influence (317/16-316/15); military and other service was limited, various forms of extravagance were curbed, measures were taken to regularize contracts and titles to property and *nomophylakes* were set up. When Ptolemy took Athens (307), Demetrius fled to Boeotia, and was later librarian at Alexandria (297). He died in disgrace under Philadelphus.

Works: moral treatises, popular tales, declamations, histories, literary criticism, rhetoric, and collections of letters, fables, and proverbs. Though an outstanding orator, Demetrius produced mainly a superficial amalgam of philosophy and rhetoric. He assisted his fellow Peripatetics, and under him Athens enjoyed peace.

FGH II B 228, F. Wehrh, *Demetrius von Phaleron* (1940). W. S. Ferguson, *Hellenistic Athens* (1911). E. Bayer, *Demetrius Phalerensis* (1942). S. Dow and A. H. Travis, *Hesp.* 1943, *PW* Suppl. xi, 514 ff. I. W. W.

DEMETRIUS (4) I of Macedonia, *Poliorectes* (336-283 B.C.), son of Antigonus I (q.v.), married (321) Antipater's daughter Phila, and became a leading warrior in an age of war. His first important campaign (317-316) was against Eumenes (q.v. 3); his first independent command, against Ptolemy, ended in disaster at Gaza (312). Nevertheless he became henceforth the brilliant instrument of his father's policy of reuniting Alexander's Empire. His best performances were in Cyprus (306), which he won from Ptolemy by the naval victory of Salamis, and in Greece (307 and 304-302), where his harnessing of the Greek instinct for political freedom in his revived 'League of Corinth' achieved more than many victories. His famous siege of Rhodes (305) was a failure, and would have been unimportant politically had it succeeded; it repays study as a military *tour de force* and an apt expression of 'the Besieger's' personality.

The defeat of Ipsus and the death of Antigonus (301), for which Demetrius by his impetuosity was partly to blame, destroyed Antigonus' Empire in Asia, and reduced Demetrius' power to a precarious thalassocracy. But he kept a foothold in Greece, and after Cassander's death

(297) and the murder of two kings and the queen-mother, he had (through Phila) the best claim to the throne of Macedonia, and he was accepted as king by the army (294).

He was always a conqueror rather than a ruler, and age taught him no wisdom. While he established his control over Greece (293-289), he planned to regain his father's Empire in Asia. He possessed the finest man-power and the greatest fleet; but the Macedonians, who wanted peace not war, deserted to Lysimachus and Pyrrhus (qq.v.) when they simultaneously invaded Macedon; and Demetrius had lost his kingdom (288). He led into Asia no 'Grand Army', but a small force of mercenaries (287). He was trapped in Cilicia and surrendered to Seleucus (285), who hospitably encouraged him to drink himself to death (283). 'Bonis intus malos euentus habuit.'

Diodorus, bks 10, 20, Plutarch, *Demetrius* W. W. Tarn, *CAF* vi, ch. 18, vii, ch. 3. G. Eklkeles, *Demetrius der Stadteroberer* (1941); P. Treves, *Riv. Fil.* 1931, 73 ff., 355 ff. G. T. G.

DEMETRIUS (5) 'the Fair' (ὁ καλός), son of Demetrius (4) Poliorectes, and half-brother of Antigonus Gonatas. He was sent by Antigonus to take Cyrene from Ptolemy II (c. 255 B.C.). He gained Cyrene without opposition, but was murdered soon after at the instance of Berenice II (q.v.). M. C.

DEMETRIUS (6) II of Macedonia (c. 276-229 B.C.), son of Antigonus II and Phila, defeated Alexander of Epirus and dethroned him in 264 (Just. *Epit.* 2. 11). On succeeding Gonatas (see ANTIQONUS 2) in 239 he divorced Stratonice, Antiochus I's daughter, who had no male issue, and married an Epirote princess, Phthia, also called Chryseis. (His marriage to Nicaea, Alexander of Corinth's widow, was probably unconsummated: Plut. *Arat.* 17.) In 239-238 the Aetolian Confederacy, which sought to annex Epirote Acarnania, united with Achaea against Macedon ('Demetrian War'). Active at first in the west, Demetrius saved Acarnania, but lost Attania; he assisted Argos against Achaea, and detached Boeotia, part of Phocis, and Opuntian Locris from Aetolia; and his general Bithys defeated Aratus, probably in 237-236. About this time, however, the Epirote monarchy was overthrown and the new republic joined the Confederacies; Demetrius allied himself with Agron of Illyria to protect Acarnania, but was called north by a Dardanian invader. Defeated, he died in 229, leaving one son, Philip, by his wife Phthia.

A shadowy figure, Demetrius by his lack of vigour brought the Macedonian monarchy to a low ebb.

Plut. *Aratus*, Just. *Epit.* 28 V. Costanzi in *Saggi di storia antica offerti a G. Beloch* (1910), Beloch, *Griech. Gesch.* iv, P. Treves, *Rendiconti Accademia Lincei* 1932, M. Feyer, *Polybe et l'histoire de Bouth* (1942), 83 ff. F. W. W.

DEMETRIUS (7) of Pharos (d. 214 B.C.) betrayed Coreya to Rome (229) and became a dynast in north-west Illyria. He helped Antigonus at Sellasia (222). In 220, breaking the treaty with Rome, he sailed past Lissus, to ravage the Aegean islands. Pursued by the Rhodians, he sold his assistance against Aetolia to Macedon. When expelled by the Romans (219), he fled to Philip V, whose anti-Roman policy he mainly inspired. In 215 he urged Philip to seize Ithome, and later perished in a rash expedition against Messene. Polybius (3. 19. 9) characterizes him as foolhardy, and wholly without judgement.

Polybius (the only reliable account). Cf. Walbank, *Polybius*; M. Holleaux, *Rome et la Grèce* (1921); Hadian, *Stud. Gr. Rom. Hist.* 1 ff. F. W. W.

DEMETRIUS (8) I of Bactria (c. 200-185 B.C.), son and successor of Euthydemus I (q.v.), annexed Arachosia and Drangiana to his kingdom. According to some scholars

he advanced as far east as Pataliputra (*Patna*) and 'consciously imitating Alexander' he 'intended, following his ideas, to make of his empire a kind of partnership of Greek and Indian, typified by his bilingual coinage'. But evidence for his far-reaching conquests and other achievements is lacking and the bilingual coins are now accepted to be the issues of a Demetrius contemporary which Eucratides I. Demetrius-in-Arachosia (somewhere between Seistan and Ghazni), mentioned in Isidore's *Parthian Stations*, perhaps owes its origin to Demetrius I. His silver coins bear his portrait wearing elephant scalp on the obverse and Heracles standing on the reverse.

W. W. Tarn, *The Greeks in Bactria and India*² (1951); A. K. Narain, *The Indo-Greeks* (1957). A. K. N.

DEMETRIUS (9) (c. 180-165 B.C.), probably related to Antimachus I, was an early contemporary of Eucratides I. He is the first among the Indo-Greeks to issue bilingual coins, with Greek and Kharosthi characters. A Demetrius known as king of 'India' in the classical sources must be identified with him.

A. K. Narain, *The Indo-Greeks* (1957).

A. K. N.

DEMETRIUS (10) I SOTER of Syria (187-150 B.C.), second son of Seleucus IV. As a hostage in Rome he saw the kingdom pass first to his uncle (Antiochus IV) and then to his cousin (Antiochus V). In 162 he escaped and won the throne for himself. He crushed the rebel general Timarchus in the east and reconquered the insurgent Jews in Palestine (161). His ability made him feared by neighbouring Powers and suspect to Rome (though the Senate had recognized his title in 160). He died in battle against a pretender, Alexander Balas, whom the kings of Pergamum and Egypt had suborned against him.

H. Volkmann, *Klio* 1925, 373 ff.

G. T. G.

DEMETRIUS (11) II NICATOR of Syria (c. 161-125 B.C.), eldest son of Demetrius I, reigned 145-139 and 129-125. In 141 he made war upon Parthia, but was captured, and did not obtain his release until 129. His reign well illustrates the difficulties of the later Seleucids. He won his kingdom from one pretender, lost part of it almost immediately to a second, and was finally murdered after losing the remainder to a third.

G. T. G.

DEMETRIUS (12) of Scepsis in the Troad (b. c. 214 B.C.), grammarian, archaeologist, and polymath, wrote sixty books on the sixty-line Trojan catalogue (*Il.* 2).

DEMETRIUS (13) **IXION** (2nd c. B.C.), a grammarian, contemporary with Aristarchus, who seceded from Alexandria to Pergamum and disputed Aristarchan textual principles. He also compiled an Atticist Lexicon.

DEMETRIUS (14) **LACON** (2nd c. B.C.), Epicurean, pupil of Protarchus of Bargylia and younger contemporary of Zeno of Sidon. He criticized Carneades' attack on the possibility of proof, and expounded Epicurus' doctrine of time.

Ed. W. Cronert, in *Kolotes u. Menckemos* (1906), 100, and V. de Falco (1923). W. D. R.

DEMETRIUS (15) (probably 2nd or 1st c. B.C.) compiled in Greek a short guide to letter-writing which enumerates twenty-one types of letter, with one or two examples of each type (ed. V. Weichert, 1910).

DEMETRIUS (16) of Magnesia (fl. 50 B.C.), friend of Atticus, wrote in Greek on concord (*Περὶ ὁμονοίας*),

and on homonymous towns and writers; much of his biographical detail was transmitted to Diog. Laert.

FHG iv. 382.

DEMETRIUS (17). The treatise *Περὶ ἑρμηνείας*, 'On Style', is traditionally ascribed to Demetrius (3). This is most unlikely to be right. The author probably belongs to the late Hellenistic or early Roman period, though no indications are decisive. The distinctive feature of the book is that it treats of four types (*χαρακτήρες*) of style, adding the *δευὸς χαρακτήρ* to the traditional *μεγαλοπρεπής*, *ἰσχνός*, and *γλαφυρός* (see LITERARY CRITICISM IN ANTIQUITY § 6). Much of the material is Peripatetic; the examples come from poets and historians as well as orators, and among the orators Demosthenes has not the dominant position which later rhetoric usually assigns to him. Many minor fourth-century figures are quoted; this has been thought to indicate an early date, but the same is true of Rutilius Lupus' treatise on figures (C. Halm, *Rhetores Latini Miores* (Leipzig, 1863), 3 ff.), which is an abridgement of the younger Gorgias (q.v. 2, first century B.C.). Particularly noteworthy parts of *Περὶ ἑρμηνείας* are the sections on letter-writing (§§ 223-35) and on *χάρις* (in the chapter on τὸ γλαφυρόν, §§ 128-89).

EDITIONS L. Radeimacher (1901); W. Rhys Roberts (1902).—See also D. M. Schenkeveld, *Studies in Demetrius On Style* (Amsterdam, 1964).

TRANSLATIONS W. Rhys Roberts (Loeb, 1927); T. A. Moxon (Everyman, 1934); G. M. A. Grube (1961; with extensive introduction and notes). D. A. R.

DEMETRIUS (18) of Tarsus (late 1st c. B.C.), a grammarian, one of the characters in Plutarch's *De defect. orac.*, where he is said (c. 2) to be on his way home from Britain to Tarsus. Perhaps identical with a Demetrius who dedicated two tablets with Greek inscriptions, now in the York Museum; and possibly also Demetrius (17). See W. Rhys Roberts, in Loeb *Demetrius*, 272 ff.

DEMETRIUS (19) the Cynic lived in Rome under Gaius, Nero, and Vespasian, and belonged to the strongly anti-monarchical branch of the Cynic school. He was exiled to Greece under Nero (A.D. 66) but returned in the time of Vespasian.

DEMETRIUS (20) of Troezen (probably 1st c. A.D.) wrote works on literary history (*Ath.* 1. 29a). The only known title is that of his work on philosophers, *Κατὰ σοφιστῶν* (Diog. Laert. 8. 74).

DEMINUTIO CAPITIS. Loss or change of status. The term is first found in Cicero (*Top.* 4. 18, 6. 29) but is no doubt older. 'Caput' is a common legal word for the individual as such or as the member of a group, and hence for his status. Civil capacity in Roman law depends on three elements: freedom (*libertas*), Roman citizenship (*civitas*), and membership of a Roman family (*familia*). The loss of one of these three produces *capitis deminutio*: see PATRIA POTESTAS. Classical Roman law sometimes distinguishes three degrees of *deminutio capitis*. (a) *Maxima*, when the individual loses his freedom and therefore also his citizenship and family rights. This occurs by capture in war (but see POSTLIMINIUM) or, later, as a punishment. (b) *Media* (or *minor*), when he loses citizenship and family rights, usually as a punishment, as in the case of *aquae et ignis interdictio* (see EXSILIUM) or *deportatio* (see RELEGATIO). (c) *Minima*, when he loses family rights (*mutatio familiae*) by *adoptio* or *adrogatio* (see ADOPTIO), *emancipatio* (q.v.), entry into *manus* (q.v.). Terminology, however, varies. A given kind of *capitis deminutio* does not always entail all the same results, and the term sometimes refers to the event producing the effects and sometimes simply to the effects themselves.

The three-fold division is best regarded as a convenient but loose classification of the effects. The importance of a change of family lies in the breaking of agnatic ties and therefore the loss of rights of inheritance and guardianship (qq.v.); but the reforms of the Praetor and of Justinian, with their emphasis on cognatic relationship, progressively removed these effects (see INHERITANCE, LAW OF; ADOPTIO; GUARDIANSHIP). It may also result in extinction of debts, of personal servitudes (see SERVITUDES), failure of a will, etc. *Capitis deminutio* does not invariably result in a loss of status. A person adopted from one family to another remains in the same status; one who is emancipated achieves a higher status. But there is a loss of rights in the original family.

GAIUS I 158-64; 2 145, 3 151; Ulp. *Epit.* 11. 9-13, *Inst. Inst.* 1. 10, *Dig.* 4 5 P. Desserteaux, *Études sur la formation historique de la capitis deminutio* 1 (1909), II (1919-26), III (1928); W. W. Buckland, *A Text-Book of Roman Law* (1903), 135 ff.; M. Kaser, *Jura* 1952, 48 ff.

DEMIOURGOI (δημιουργοί), 'public workers', are in Homer such independent craftsmen as metal-workers, potters, and masons, and also seers, doctors, bards, and heralds (though not beggars! *Od.* 17. 383). Plato and Xenophon use the word *thous*. But in pre-Solonian Athens they comprised all who gained their livelihood other than from the soil, perhaps including wage-earners. They enjoyed a short-lived right of supplying two of the archons (580 B.C.) (*Arist. Ath. Pol.* 13. 2); they do not subsequently appear as a separately organized class. As the highest, often eponymous officers, *demourgoi* appear in several States; though perhaps of greatest antiquity in Elis and Achaea, they are most often mentioned in Dorian records. Their exact function varied from State to State. In the Achaean Confederacy they formed a council of ten, who assisted the general; the Arcadian Confederacy imitated this organization, based originally on local representation, as also in Elis, where the *demourgoi* formed a special caste. *Demourgoi* appear in the Argolid, Megarid, Messenia, Thessaly, Delphi, Locris, Phocis, Crete, and several Aegean islands; examples from Cilicia, Pamphylia, and Pisidia date from Roman times.

Evidence mainly epigraphical. V. v. Schoeffel, *PH.* s.v. 'Demourgoi'; M. Guarducci, *Ric. Fil.* 1930, k. Musakawa, *Hist.* 1957, 385 ff. F. W. W.

DEMOCEDES of Croton (6th c. B.C.), one of the most famous physicians of his time, practised first in Aegina and Athens, then at the court of Polycrates of Samos. After the murder of Polycrates in 522 B.C. he won much favour at the court of Darius, but later returned to Croton; on the defeat of the aristocrats by the democrats under Theages he fled to Plataea. He married a daughter of the wrestler Milon.

Testimonia in Diels, *Vorsokr.* II i. 110-12.

W. D. R.

DEMOCHARES (c. 360-275 B.C.), Athenian orator and democratic statesman, who rose to power after the expulsion of Cassander's agents in 307. During the 'Four Years' War' against Cassander (307-304) he fortified Athens and made an alliance with Boeotia. Exiled at a date which cannot be securely determined, he returned in Diocles' archonship (288-287?), and recovered Eleusis from Macedon. He secured financial aid from Lysimachus, Antipater, and Ptolemy; and in 280-279 (archon: Gorgias) had a decree passed honouring Demosthenes, his uncle. Sincere and patriotic, he was handicapped by doctrinaire political views.

His written works consisted of Speeches, and a History, mainly of Athens, in over twenty-one books, rhetorical and lacking in objectivity.

F. Jacoby, *FGH* II 75; *Lives of X Orators*, 851 (decree passed by Demochares' son Laches, 271-270); W. S. Ferguson, *Hellenistic Athens* (1911); Beloch, *Griech. Gesch.* iv. 2, 445. F. W. W.

DEMOCRACY (δημοκρατία, the 'rule of the people'). This term becomes common with Thucydides and Aristophanes, but is known to Herodotus (6. 43), and is presumed by Aeschylus (*Supp.* 604). The germs of Greek democracy grew from the fact that the *polis* (q.v.) derived from the old assembly of the armed people, and always preserved some traces of that origin. Beginning with Thersites (*Il.* 2. 212), there were always movements against the rule of the noble and the rich, as the lower ranks of free people tried to win full citizenship. The development towards democracy may be first perceived in Hesiod and Solon. The suppressed and exhausted demos found leaders in tyrants or lawgivers, and during the sixth and fifth centuries B.C. many city-states achieved a more or less democratic constitution, especially under the influence of Athens where Cleisthenes (q.v.) had created the essential foundations of democracy. He used the expression for equality, *isonomia*, for democracy itself. Athens became the most perfect and by its power the most influential democracy. Its ideal form is proclaimed by the Periclean Funeral Speech (*Thuc.* 2. 35 ff.), its leading ideas were law, freedom, and equality.

The sovereign authority in democracy was the Assembly, which decided by majority. The principal task of the council (see *BOULE*) and the magistracies (q.v.) was to prepare measures and to carry them into effect. In the Assembly and popular courts almost the whole people participated, and as council and magistracies were continually changing their personnel, the people became the actual ruler. Every citizen had full liberty of speech (*παρρησία*), but even the most extreme democracy could not dispense with leadership. During most of the fifth century it was in the hands of aristocratic *strategoi* (q.v.), in the fourth century government was controlled by unofficial and irresponsible leaders ('demagogues'). That was one of the reasons for the decline of democracy. Other reasons were: the ease with which the Assembly could make and unmake laws, the strong individualism arising from the very ideals of freedom and equality, and the general mistrust of any person who grew powerful. Political philosophers always regarded democracy, and especially its 'deviation', ochlocracy, as a bad constitution.

DEMOCRITUS of Abdera, b. 460-457 (Apollodorus ap. Diog. Laert. 9. 41); this date is more likely than the others mentioned (470-460 Thrasyllos, 500-497 Eusebius), because it agrees best with Democritus' own words, quoted from the *Mikros Diakosmos* by Diog. Laert. 9. 41, that he was forty years younger than Anaxagoras. According to the same source he wrote his *Mikros Diakosmos* 730 years after the fall of Troy; Ferguson argues that the only possible one of the traditional dates for this is Ephorus' 1135—giving 405 B.C. for Democritus' work. Tradition is unanimous that he lived to be very old (e.g. Lucian *Macrob.* 18 says he was 104). His father was a substantial citizen of Abdera in Thrace, called Hegesistratus, Athenocritus, or Damasippus. The story (Diog. Laert. 9. 34) that Xerxes left some magi behind, after he had been entertained by Democritus' father in Abdera, and that Democritus learnt 'theology and astrology' from them, must be a legend, since the magi would have had to stay about thirty years (moreover, the same story is told of Protagoras, Philostr. *VS* 1. 10. 1). Democritus is said to have travelled to Egypt to learn geometry, to Persia, the Red Sea, to India, and Ethiopia—and to Athens, 'but no one knew me' (fr. B. 116, quoted by Diog. Laert., who also says that Demetrius of Phalerum denied the story of this visit). In later antiquity he was known as 'the laughing philosopher' (γελαστικός), probably because

of his ethical ideal of 'cheerfulness' (*eûthymîa*). There is a legend that he blinded himself—Tertullian (*Apol.* 46 d) typically says it was to prevent his desiring women—but Plutarch (*de curios.* 521 d) denies it.

As his teachers tradition mentions Leucippus (q.v. 3) and, less confidently, Anaxagoras (q.v.) and an unnamed Pythagorean (Diog. Laert. 9. 34 and 38). He referred to Protagoras (*ibid.* 42); probably Protagoras (q.v.) was much older than Democritus, and the story (Philostr. *VS* 10) that Democritus taught him must be wrong. Plato never mentions him by name, but almost certainly took account of his views in the later dialogues (see Hammer-Jensen, Wilpert, *op. cit.*). Aristotle refers to him frequently in many connexions and with great respect.

WORKS. Diog. Laert. 9. 46–9 mentions seventy titles, arranged in tetralogies (with some exceptions) by Thrasyllus and classified as follows: Ethics, Physics, Unclassified, Mathematics, Music (which includes philosophical and literary criticism), Technical, and Notes (*ὑπομνήματα*). The later history of these books is unknown; only small fragments survive today; even Simplicius in the sixth century seems to have relied on summaries.

It seems impossible to separate the contributions of Leucippus and Democritus to the atomic theory; the most sustained of recent efforts to do so, by C. Bailey, is marred by mis-statements of the evidence. Aristotle and Theophrastus refer most doctrines to both or either of them indiscriminately. Aristotle's account of the origin of the theory (*Gen. Corr.* A 8) correctly relates it to the Eleatics. The Eleatics argued that what is real is one and motionless, since empty space is not a real existent; for motion is impossible without empty space, and plurality is impossible without something to separate the units. Division of what is real into units in contact, i.e. with no separating spaces, is ruled out because (a) infinite divisibility would mean there are no real units at all, and (b) finite divisibility is physically inexplicable. Against these arguments, says Aristotle, Leucippus proposed to rescue the sensible world of plurality and motion by asserting that empty space, 'the non-existent', may nevertheless serve to separate parts of what does exist from each other. So the world has two ingredients: being, which satisfies the Eleatic criteria by being 'full', unchanging, and homogeneous, and non-being or empty space. 'The pieces of real being, since it is their characteristic to be absolutely indivisible units, are called atoms. They are said to be solid, invisibly small, and undifferentiated in material; they differ from each other in shape and size only (perhaps also in weight), and the only change they undergo is in their relative and absolute position, through movement in space.

By their changes of position the atoms produce the compounds of the changing sensible world. Compounds differ in quality according to the shape and arrangement of the component atoms, their congruence or otherwise (i.e. their tendency to latch together because of their shape), and the amount of space between them. 'The motion of atoms is an original, unexplained property (Melissus had criticized Empedocles and Anaxagoras for their theories of the origin of motion); changes of motion occur through random collisions, though certain patterns are recognizable, such as the whirl or vortex, which has the effect of sorting out the atoms by size and shape. Our world is not unique but one of an indeterminate number. A world is produced by accident out of the infinitely numerous atoms moving through the infinite void; and the atomists produced an account of the evolution of progressively more complex stages of organization, including human cultures (traces in Diodorus 1. 7–8; and see Lucretius, book 5).

The soul, which is the cause of life and sensation, is made of fine round atoms, and is as perishable as the

body. Perception takes place through the impact of *eîdōla* (films shed from the surfaces of sensible objects) upon the soul-atoms through the sense-organs. Perceptible qualities are the product of the atoms of the sensible object and those of the perceiving soul. There is a distinction between 'dark knowledge' (*γνώμη σκοτή*) of sensible properties which exist only 'by convention', and 'genuine knowledge' (*γνώμη γνησίη*) of atoms and void. The senses provide clues, but they have to be interpreted to provide real knowledge.

Many fragments of Democritus deal with ethics, but they are mostly very short and hard to fit together to make a consistent and comprehensive doctrine. His ethical ideal seems to include the idea that the soul-atoms should be protected from violent upheavals; well-being (*eûestō*) which leads to cheerfulness (*eûthymîa*) is a matter of moderation and wisdom (B 191). It is important not to let the fear of death spoil life, and to recognize the limits to which man is necessarily confined (B 199, 203). Pleasure is in some sense the criterion of right action, but there must be moderation in choosing pleasures (B 189, 207, 224, 231). In social ethics, Democritus was apparently prepared to link his view of contemporary society with his theory of the evolution of human communities; he saw that a system of law is by nature necessary for the preservation of society, and that citizens must make positive contributions to their society. Some fragments show that he was a democrat (B 251, cf. B 255).

Little is known (though much is written) about the mathematics of Democritus. A high reputation has been accorded to him on the strength of a tribute paid by Archimedes (*Method*, *Intro*) though it is withdrawn elsewhere (*Sphere and Cylinder*, 1). He must have been a diligent biologist, for Aristotle quotes him often.

Democritus is a figure of great importance who has suffered through the triumph of his opponents, Plato, Aristotle, and the Stoics, in the following centuries. He defended the infinite and perishable universe, efficient or 'mechanical' causes, and the atomic theory of matter, as opposed to the finite and eternal cosmos of Aristotle, teleology, and the continuous theory of matter. 'The best brains preferred his opponents' arguments, and Epicurus and Lucretius were his only influential followers. Great honour was paid to him by post-Renaissance scientists but by then his books were lost.

DEMODOCUS, the minstrel of Alcinous (q.v.), blind but very gifted (*Od.* 8. 44-5; 62-4). He sings of the loves of Ares and Aphrodite (*ibid.* 266 ff., if genuine), is sent an honourable portion of meat by Odysseus at Alcinous' feast (474 ff.), and makes him weep with his songs of the Trojan War (521 ff.).

H. J. R.

DEMOI (δῆμοι), generally villages like *κῶμαι*, but in Athens, where they are best documented, and in certain other states, e.g. Eretria, Cos, and Rhodes, they also acted as the smallest political divisions. This role they received at Athens from Cleisthenes (q.v. 1), who used them as the cornerstone of his fundamental arrangement of the citizenry into ten *phylai* (q.v.) or tribes, thirty *trittyes* (q.v.), and as many as 150 demes (later about 170). He divided the demes into three groups: those of the town, or approximately the extent of modern Athens, Piraeus, and the coast as far as the airport; those of the interior; and those of the coast. Each tribe included demes from these three regions,¹ and within a tribe the demes from each region constituted a trittys.

Because the demes were originally natural townships and within Athens itself probably natural wards, they varied greatly in size. The differences were reflected in the Council of 500 where each deme was represented according to its population; the number of a deme's representatives was not vitally affected by movement since after the initial registration under Cleisthenes membership became hereditary and did not depend upon residence. Acharnae (q.v.), the largest, sent twenty-two members to the *boule* (in the fourth century) and may have provided 1,200 hoplites; Halimous had three representatives and scarcely a hundred members; many were still smaller.

The demes maintained lists of their own members, every Athenian being registered in his familial deme at the completion of his eighteenth year, and on these registers all citizens depended for recognition of their citizen rights, though a rejected applicant might appeal to a dicastery. They also kept records of all properties held within their territory and of the metics, who, unlike citizens, were enumerated strictly in their place of residence. They could thus furnish the State with the censal and cadastral information necessary for such institutions as *ephebeia*, *eisphora*, and *liturgies* (qq.v.).

The demes were also corporations with strong local associations; they performed certain police duties; they could hold land, had cults and officials; they held meetings, presided over by the *demarchos*, at which the demesmen passed measures ordering their own affairs. Being almost microcosms of the State, they provided an Athenian citizen with a basic experience and understanding of the meaning of responsible government and civic duty.

C. W. J. E.

DEMON (fl. c. 300 B.C.), author of an *Atthis* in at least four books. The fragments all belong to the period of the kings and suggest an antiquarian rather than historical interest, perhaps influenced by the Peripatetics and comparable with Ister. The work was criticized by Philochorus.

FGH III B. 327, and see under ATTHIS.

G. L. B.

DEMONAX of Cyprus (2nd c. A.D.), Cynic philosopher, known only by the life of him ascribed to Lucian. He was of good family but elected to live in poverty; his teachers were Epictetus, Timocrates of Hieraclea, Agathobulus, Demetrius. He avoided the grossest excesses of

the Cynic school; he admired Socrates and Aristippus as well as Diogenes. He cannot be credited with any independent philosophical views. He starved himself to death when nearly 100 years old.

W. D. R.

DEMOPHANES and **ECEDELUS** (not Megalophanes and Ecdemus, as Plut. *Phil.* 1; cf. Ziegler, *Rh. Mus.* 1934, 228 f.) (3rd c. B.C.), two Megalopolitans, followers in exile of Arcesilaus of the Athenian Academy, and renowned for their services to the republican cause, in 251 B.C. helped Aratus to liberate Sicyon, and about the same time had the tyrant Aristodemus murdered, thus freeing their own city. They were also called in to establish a federal constitution in Cyrene, either by Demetrius the Fair (q.v. 5), or, less probably, after his assassination (c. 250). They were later famous as Philopoemen's teachers.

F. W. W.

DEMOPHON (Δημόφων), in mythology, son of Theseus and brother of Acamas (q.v.). He and his brother, being shadowy figures, are often confused, both being lovers of Laodice and Phyllis. His part in the Trojan War is the doublet of his brother's. While returning he stayed in Thrace and there met Phyllis, a princess who fell in love with him. He left her, promising to return when he had settled affairs at Athens, but she, weary with waiting, hanged herself and was turned into an almond-tree, which put forth leaves when Demophon came at last and embraced it (Servius on Verg. *Ecl.* 5. 10; Hyg. *Fab.* 59; Ov. *Her.* 2). The Athenians claimed to possess the Palladium (q.v.), which came somehow into Demophon's hands (*Suda*, s.v. ἐπὶ Παλλάδι; Clem. Al. *Protr.* 36, 15 ll. Stahlin).

On representations of Demophon in art, see under ACAMAS

H. J. R.

DEMOSTHENES (1) (d. 413 B.C.), son of Alcisthenes, Athenian general. After an unsuccessful invasion of Aetolia in 426 he won two brilliant victories against a Peloponnesian and Ambraciot army invading Ampholochia. In 425 his occupation of Pylos led to a most valuable success, the capture of a body of Spartan hoplites on the adjacent island of Sphacteria. He surprised Nisaea in 424, but failed to take Megara, and in a triple attack on Boeotia, for which he was perhaps responsible, he was unable to land troops at Siphiae, since the enemy was forewarned. He was not again entrusted with a major command until 413 when he was sent to reinforce Nicias at Syracuse. After failing to regain Epipolae by a night attack, he urged withdrawal from Syracuse, which was delayed until the Athenians lost control of the sea and were driven to attempt escape by land. The rearguard, led by Demosthenes, surrendered on the sixth day, and he was subsequently executed.

Demosthenes apparently had no political ambitions and enjoyed no political influence. He showed inventiveness in trying to break the military stalemate produced by Periclean strategy, but his plans tended to be too elaborate. He was a skilful tactician and an inspiring leader.

Thucydides, bks. 3, 4, 7. M. Treu, *Hist.* 1956, 420 ff.

H. D. W.

DEMOSTHENES (2) (384-322), the greatest Athenian orator. When Demosthenes was 7 years old his father died, leaving the management of his estate to his brothers, Aphobus and Demophon, and a friend, Therippides. The trustees mismanaged the business, and Demosthenes at the age of 18 found himself almost without resources. He claimed his patrimony from his guardians, who spent three years in attempts to compromise. In the meantime, he was studying rhetoric and legal procedure under Isaeus (q.v. 1); at 21 he brought a successful action against his guardians, but two more years elapsed before he

received the remnants of the property. By now he was engaged in the profession of *logographos* and the reputation gained in private cases led to his being employed as an assistant to prosecutors in public trials. From 355/4 onwards he came more and more to devote himself to public business. It is not clear how far Demosthenes' sympathies were engaged in his first public trials, the prosecutions of Androtion (q.v.) and Leptines in 355 and of Androtion's associate, Timocrates, in 353: *Against Androtion* and *Against Timocrates* he wrote for Diodorus, and in any case the political tendency of the trials is unsure; *Against Leptines* Demosthenes did deliver himself, and, since Leptines' law was defended by Aristophon (q.v.), it is possible that all three trials centred on his policy and that Demosthenes was one of his opponents. This would be consistent with the policy he supported in *On the Symmories* in 354/3: a rumour came that the Great King was preparing to attack Greece, as he had threatened to do in 356/5, and Demosthenes, arguing that the city was not properly prepared, opposed the advocates of war, certainly not the Eubulus (q.v. 1) group, possibly that of Aristophon. In 353/2 he turned on Eubulus: *On the Syntaxis* seems directed partly against the allocation of surpluses to the *theorika* (q.v.)—at § 30 he sneers about the public works of Eubulus—and partly against the policy of abstaining from all but essential military enterprises.

For the next few years Demosthenes was regularly on the losing side. Early in 352 in *For the Megalopolitans* he argued in favour of promising to support Arcadia, if Sparta carried out her plan of exploiting Thebes' preoccupation with the Sacred War: since Athens based her policy on concord with Phocis and Sparta, the decision to do no more than give a guarantee to Messenia was probably right. A few months later Demosthenes wrote *Against Aristocrates* for use in the attack on a proposal to honour Charidemus (q.v.) in gratitude for his offices in the cession of the Chersonesus (q.v. 1) by Cersobleptes (q.v.): the speech is notable both as a source of information about the law of homicide and also for the manner in which it regards Cersobleptes, not Philip, as the real enemy in the north. In late 352 Philip's attack on Cersobleptes carried him very near the Chersonesus, and Demosthenes' eyes were opened. In early 351 he delivered the *First Philippic* which pleaded for more vigorous prosecution of the war for Amphipolis: his proposals were not accepted; deeper involvement in the long fruitless struggle may have seemed to endanger the power to defend the vital areas of Thermopylae and Chersonesus. Late in 351 in *On the liberty of the Rhodians* he urged support of the Rhodian demos against the oligarchs supported by the Carian dynasty: but the Persian attack on Egypt prompted caution, and Demosthenes' arguments were far from strong. In mid 349 Olynthus (q.v.), which had by then lapsed from Philip's alliance, was attacked by Philip and appealed to Athens for help: in the three *Olynthiacs*, delivered in quick succession, Demosthenes demanded the fullest support and, in the last, an end to the law assigning surpluses to the *Theorika*; again he scathingly alluded to the works of Eubulus. There is, however, no reason to suppose that the three expeditions voted were not supported by Eubulus or indeed that they satisfied Demosthenes, and there are some reasons for thinking that the implementation of his proposals could have brought even greater disaster than the loss of Olynthus. Early in 348 the party of Eubulus involved the city in a costly and inconclusive intervention in Euboea to prevent the island falling into the control of those hostile to Athens: Demosthenes later claimed to have been alone in opposing the expedition; either he was not truthful or he had taken a curious view of Athens' interests. One consequence of his opposition to Eubulus

was that he became embroiled in an absurd wrangle with Midias, a prominent supporter of Eubulus, who had slapped his face at the Dionysia of 348: the case was settled out of court and the speech *Against Midias* was never delivered.

In mid 348 before the fall of Olynthus Demosthenes successfully defended Philocrates (q.v.) when he was indicted under the *Graphe Paranomon* (q.v.) for his proposal to open negotiations with Philip, and in 347/6, when Demosthenes like Aeschines (q.v. 1 for all the events of 346) was a member of the *boule* (q.v.), the partnership continued and Demosthenes played a leading part in securing acceptance of the Peace of Philocrates. On the two embassies to Macedon he cut a poor figure before Philip and got on badly with his fellow ambassadors, but the decisive moment came after the second embassy's return in the assembly on 16 Scirophorion, when it was known that Philip had occupied the Gates and that Phocis could not be saved. Demosthenes was shouted down and Aeschines made the speech to which Demosthenes constantly recurred. What Demosthenes wanted that day is not clear: if he did want the city to denounce the new peace, to march out to support Phocis attacked by the Macedonians and Thessalians from the north and the Thebans from the south, his judgement was seriously awry. From that day Demosthenes determined to undo the Peace, but shortly after in *On the Peace* he counselled caution, and for the moment contented himself with the attack on Aeschines from which he was forced to desist by the successful countercharge against his own associate, Timarchus.

The year 344 brought Demosthenes his opportunity to attack the Peace. Rumours reached Athens that Philip was preparing to intervene in the Peloponnese in support of Argos and Messene, and Demosthenes went on an embassy to those cities to warn them of the dangers of consorting with Philip: Philip protested, and shortly after Demosthenes' return the embassy of Python and all Philip's allies protested against his misrepresentations, and offered to turn the Peace into a Common Peace; first reactions were favourable, but in the assembly Hegesippus (q.v. 1) succeeded in having the status of Amphipolis referred to Philip—an oblique way of sabotaging the whole affair—while Demosthenes' contribution was the *Second Philippic* in which he denounced Philip as not worth an attempt at negotiation. (The alternative reconstruction would deny this conjunction and put Python's embassy in early 343.) In mid 343, after the success of Hyperides' (q.v.) prosecution of Philocrates, Demosthenes judged the moment suitable to resume his attack on Aeschines: *On the false embassy* sought to exploit the support of Eubulus' party for continuing the Peace and to suggest that Aeschines was really responsible for Philip's use of the peace negotiations to intervene in Phocis in 346. With the support of Eubulus and Phocion (q.v.) Aeschines was by a narrow margin acquitted. With the final collapse in early 342 of proposals to amend the Peace, Philip began to intervene directly in Greece, and amidst mounting hostility to Macedon Demosthenes went on an embassy to the Peloponnese to set about the organization of an Hellenic alliance for the war he was determined to have. For the moment his efforts came to little, but in 341 in *On the Chersonese* and shortly after in the *Third Philippic* he defended the aggressive actions of Diopithes against Cardia by arguing that, since Philip's actions already amounted to war, it was absurd to heed the letter of the Peace. Not long after he delivered the *Fourth Philippic* (of which the authenticity was long doubted but is now widely accepted); in it Demosthenes appears so confident of his control that he dismissed the Theoric distributions in words inconceivable in 349, and he successfully demanded an appeal to Persia

to join in attacking Philip. In 341/40 he also formed an alliance with Byzantium, and by autumn 340, when Philip finally declared war and seized the Athenian corn-fleet, Demosthenes was in full charge of the war he had sought, though he was unable to restrain Aeschines from his unwise intrusion at Delphi into the rivalries of Central Greece (see AESCHINES 1). In mid 339 he moved the suspension of the allocation of surpluses to the *theorika*, and with Thebes unlikely to side with Philip after having expelled the Macedonian garrison from the Gates, Demosthenes could expect not to have to face Philip in Greece. The sudden seizure of Elatea threw Athens into horrified perplexity, but Demosthenes proposed and effected alliance with Thebes, which he later pretended always to have wanted, and Athens and Thebes fought side by side at Chaeronea in autumn 338.

Demosthenes was present at the battle, and returned so quickly to organize the city's defences that Aeschines could accuse him of running away. He provided corn, repaired the walls, and was so much the man of the hour that he was chosen to deliver the Funeral Oration for 338 (which has not survived). With Philip in Greece, the people looked to Demosthenes and he successfully met the frequent attacks on him in the courts. In 337/6 he was Theoric Commissioner, and Ctesiphon proposed that he be crowned at the Dionysia (q.v.) for his constant service to the city's best interests: perhaps encouraged by the opening of the Macedonian attack on Persia, Aeschines indicted Ctesiphon, but with the changing events of the next few months he preferred for the moment to let the case lapse. Demosthenes, hoping that the death of Philip was the end of Macedonian domination in Greece, sought to foment troubles for his successor, but Alexander quickly marched south and Demosthenes had to accept the new monarch. In 335 Demosthenes actively aided the Thebans in their revolt and narrowly escaped being surrendered to Alexander. From then on he seems to have looked to Persia to accomplish the liberation of Greece: such at any rate seems to be the meaning of the many charges of receiving money from the Persians. Demosthenes gave no support to Agis at any stage and, when Persia was crushed at Gaugamela and the revolt of Agis collapsed, Athens was left in disastrous isolation. Aeschines seized the opportunity to renew his attack on Demosthenes through Ctesiphon. The case was heard in mid 330, and Demosthenes defended his acts in *On the Crown*, which is his masterpiece. He declined to fall into the trap of discussing recent events and with supreme art interspersed his discussion of events long past with lofty assertions of principle. Fewer than one-fifth of the jury voted for Aeschines, and he retired to Rhodes. Demosthenes was left in triumph, and the city settled down to acceptance of Macedonian rule, until in 324 word reached Greece that at the coming Olympia Nicanor (q.v. 1) was to make public a rescript ordering the restoration of exiles. Since this would affect the cleruchy on Samos, an agitation began which was to end in the Lamian War. Demosthenes led a deputation as *architheoros* to protest. Subsequently he engaged in the discussion at Athens about divine honours for Alexander, having also taken the lead in dealing with the sudden appearance of Harpalus (q.v.) by proposing first that Harpalus be kept prisoner and his money stored on the Acropolis, and later that the Areopagus investigate the losses. It is difficult to assess Demosthenes' policy in this year: he may have foreseen the new uprising under Leosthenes (q.v.) and planned to involve Athens, but, since the especial ally of Leosthenes was Hyperides, who led the attack on Demosthenes in the prosecution of early 323, Demosthenes appears to have been at odds with the war-party. Equally unsure is his guilt in the Harpalus trial: the Areopagus declared him guilty of appropriating 20 talents, and he was found

guilty and fined 50 talents, but, even if he did take the money, he may have intended to use it in service of the State; the whole affair is most obscure. He retired into exile, and lent his support to Hyperides in the creation of the alliance for the Lamian War. He was then recalled to Athens, but after the Macedonian victory at Crannon in 322 he left the city again, and was condemned to death by the decree of Demades (q.v.). Pursued by the agents of Antipater (q.v. 1), he committed suicide in Calauria (322).

Modern opinions of Demosthenes' political importance have varied greatly, often in discernible relation to contemporary events (cf. Knipping, *Amer. Hist. Rev.* 1921, 657 ff.). He has been lauded as a solitary champion of liberty and censured as the absurd opponent of progress. With the latter view English scholars have, happily, had little sympathy, but the high esteem in which the works of Demosthenes have been rightly held as works of art has tended to obscure the possibility that, while his devotion to liberty is one of the supreme monuments of liberty, his methods and his policies were not the best suited to attain their end, and that those of his opponents, which we must largely infer from his attacks, were no less directed to maintaining the city's power and independence, and perhaps more apt.

Demosthenes has much to say about Philip's success being due to bribery and was convinced that his own opponents had been corrupted, but in his obsession with this dubitable view he seems blind to the real problem of his day, which was how Greece could be united to counter effectively the military power of the new national state so far greater than the power of any single city-state. There was much to be said against Demosthenes' determination to involve the full military resources of Athens in a war in the north, in particular that in such a war Athens stood to gain most and the other Greeks would not unite for that result. For the defence of Greece itself against invasion there was a real hope of uniting the cities in a Common Peace, and this appears to have been the policy of Demosthenes' opponents. There was perhaps more enthusiasm than judgement in his military assessments, and since the defeat of Chæronea appears to have produced a Greece that could never wholeheartedly unite in a war of liberation, it is possible that, if such a decisive battle was inevitable, his opponents might have united Greece for it more effectively. But the situation of Greece was tragic, and Demosthenes was certainly of heroic stature.

Private law-court speeches (δίκαι). The series of private speeches begins with those against Aphobus and Onetor (363–362), in which Demosthenes claimed recovery of his property from his guardians, and continues throughout his life (*Against Dionysodorus*, 323–322). Several private speeches attributed (perhaps wrongly) to Demosthenes were delivered on behalf of the Apollodorus who was his opponent in the *For Phormio*. The speech *For Phormio* (350) and the first *Against Stephanus* (349); the second *Stephanus* is undoubtedly spurious) raise a question of professional morality. Pasion, the banker, appointed his chief clerk Phormio trustee for his sons; the elder son, Apollodorus, subsequently claimed a sum of money allegedly due to him, but Phormio proved that the claim had been settled some years previously. Apollodorus then prosecuted Stephanus, one of Phormio's witnesses, for perjury. If, as Plutarch states, Demosthenes wrote *Stephanus A* as well as *For Phormio*, he was guilty of a serious breach of faith, for while the earlier speech extols Phormio's character, the later one contains insinuations against him. The evidence for the authenticity of *Stephanus A* is, however, inconclusive (Paley and Sandys II, xxxix–1; Pickard-Cambridge, *Demosthenes*, 220–4). Aeschines asserts that Demosthenes showed to Apollodorus a speech composed for Phormio, but this may be

a misrepresentation of some attempt by Demosthenes to act as mediator.

The subjects of the private speeches include guardianship, inheritance, claims for payment, bottomry-loans, mining rights, forgery, trespass, assault, etc. In the *Calicles* (which has flashes of humour, seldom found in Demosthenes) the plaintiff alleges that the defendant has flooded his land by blocking a watercourse; in the *Conon*, a brilliant piece of writing, combining Lysianic grace and Demosthenic force, some dissolute young rowdies and their father are summoned for assault.

Demosthenes had many rivals in his lifetime; but later critics considered him the greatest of the orators. His claim to greatness rests on his singleness of purpose, his sincerity, and his lucid and convincing exposition of his argument. In many instances he produces a great effect by the use of a few ordinary words. In his most solemn moments his style is at its plainest and his language most moderate. A master of metaphor, he uses it sparingly, and hardly at all in his most impressive passages. His style varies infinitely according to circumstances; sometimes as simple as Lysias, now polished like Isocrates, again almost as involved as Thucydides, he follows no scholastic rule; long and short periods follow each other, or are mingled with passages in the running style not according to any regular system. Thus his carefully prepared utterances give an impression of spontaneity. Such was his control of language that he was generally able to avoid hiatus (q.v.) without any dislocation of the order of words. He had an instinctive aversion to a succession of short syllables, and even tribrachs are of comparatively rare occurrence.

DEMOSTHENES (3) of Bithynia (? 2nd c. B.C.), epic poet, author of *Bithyniaca*.

FGH in 699.

DENTATUS (1), LUCIUS SICCUS (*PW* 3) or SICINIUS, called by ancient writers 'the Roman Achilles', was a legendary embodiment of the civic and military virtues of the plebeians in their struggles against both patricians and external enemies. Since the chronology of his largely fictitious career was unknown, Dentatus was later connected with the Decemvirs, by whose leader, Appius Claudius, he is said to have been treacherously murdered (449 B.C.).

Ogilvie, *Comm. Livy* 1-5, 475 f.

P. T.

DENTATUS (2), MANIUS CURIUS (*PW* 9), Roman plebeian hero, consul in 290, 284 (*suffectus*), 275, 274 B.C.; censor in 272. After ending the Samnite War (290),

he conquered Sabines (q.v.) (290), Senones (284), Pyrrhus (275), Lucani (274). He triumphed in 290 (the sources incredibly say twice) and 275. About 280 Dentatus partly drained Lake Velinus and in 272 commenced Rome's second aqueduct (*Anio Vetus*). He died in 270. The rhetorical accounts of his humble birth, incorruptibility, and frugality resemble the tales told of C. Fabricius (q.v.), Lucius, and derive largely from Cato who idealized him.

DENTISTRY in antiquity was part of general medicine; diseases of the teeth were explained and treated in accordance with the theories on other diseases. The operative technique was excellent (the Hippocratic treatment of the fracture of the mandible is famous); extractions were performed at an early date. The methods of preserving the teeth, however, consisted mainly of medicinal and dietetic means; fillings for that purpose were unknown. Loose teeth were fastened with gold wire (Hippocrates, *II. ἀφθρον* 32; *The XII Tables* 10. 8). Toothache being considered a chronic disease and one of the greatest torments (Celsus 6. 9), hygienic prescriptions were extensively advocated. Cleansing of the teeth with tooth-powder, the tooth-pick (*dentiscalpium*), chewing (σχιρίζειν τοὺς ὀδόντας) were recommended in addition to innumerable remedies against bad breath, a favourite topic of Latin epigrammatists. False teeth were set, but only by technicians, the artificial teeth being carved from ivory or other animal teeth. Such prostheses, used by the Etruscans and Romans, served primarily to hide physical defects and to correct deficiencies of speech, but had probably to be removed before meals. Physicians and dentists refrained from making prostheses, either on account of their technical insufficiency, or because their importance for the process of digestion was not appreciated.

L. I.

DERCYLLIDAS, a Spartan commander sent out in 411 B.C. to procure the revolt of Abydos and Lampsacus (qq.v.) from Athens. Dercyllidas achieved both goals, though Lampsacus was recovered almost immediately by Athens. Appointed harmost of Abydos, Dercyllidas was slandered by the Persian satrap Pharnabazus to Lysander (q.v.) in 407 and publicly disgraced. However, in 399 he was dispatched to Asia Minor in succession to Thibron to make war on Pharnabazus and Tissaphernes. Concluding an armistice with Tissaphernes, he campaigned against Pharnabazus and won over most of Aeolis, securing nine cities and a vast treasure in no less than eight days. During a truce which was concluded between the belligerents Dercyllidas crossed to the Thracian Chersonese, where he strengthened the Greek cities by building a wall across the isthmus to keep out the Thracians. In 397 he was ordered by the ephors to attack Tissaphernes, and obtained an offer of peace terms. But the Persians began to equip a fleet, and in 396 Agesilaus (q.v.) took over Dercyllidas' forces, though he employed him as one of three commissioners sent to Tissaphernes during a diplomatic exchange. After this Dercyllidas appears to have returned to Sparta, but in 394, he was sent to Amphipolis to inform Agesilaus of a Spartan victory at Corinth in the Corinthian War, and from there was sent on to the Hellespont to report the news to the allied Greek cities in the area. He was subsequently reappointed harmost of Abydos, and after the battle of Cnidus, succeeded in holding Abydos and Sestos loyal to the Spartan alliance despite the efforts of

Pharnabazus to win them over. An efficient general and a bachelor fond of adventures abroad, Dercyllidas showed a considerable amount of unscrupulousness and cunning, and for this reason was nicknamed Sisyphus, though the achievement of Agesilaus somewhat dimmed his own successes.

DE REBUS BELLICIS, an anonymous treatise addressed to the Emperors Valentinian I and Valens (A.D. 364-75). The author explains plans for reforming the imperial financial policy, the currency, provincial administration, the army, and the law. He describes a number of machines with which he believes that the army should be equipped; and coloured illustrations of these machines survive in the MSS.

Text in E. A. Thompson, *A Roman Reformer and Inventor* (1952). E. A. T.

DESTINATIO (lit. 'marking out') became a technical term during the Principate of Augustus denoting a new stage in the election of consuls and praetors. As is now revealed by the Tabula (q.v.) Hebana, a Lex Valeria Cornelia of A.D. 5 assigned an important preliminary role in such elections to a select assembly comprising senators and all the *equites* enrolled in the judicial decuries. This body met on the Palatine, voted in ten units (increased to fifteen in A.D. 19 and to twenty in A.D. 23), and reached a corporate decision. The candidates whom it chose were known as *destinati*. Details of procedure given in the Tabula Hebana prove (1) that the number of *destinati* never exceeded the number of places to be filled, and (2) that the vote of the select assembly was succeeded by a vote of the full assembly on the Campus Martius. *Destinatio*, therefore, did not in theory guarantee election (cf. the non-technical use of the term in Livy 39. 32. 9), but, like the vote of the Republican *centuria praerogativa* (q.v.), it may frequently have done so in practice. In A.D. 15 freedom of choice was probably withdrawn from the full *comitia*, but the view that the *destinatio* procedure was also reduced at this time to a ceremonial formality is difficult to reconcile with the detailed modifications made to procedure in A.D. 19 and is not warranted by Tacitus' statement that elections were transferred to the Senate (*Ann.* 1. 15). It is probable that the *equites* soon voluntarily ceased to attend the select assembly through lack of interest. The hypothesis that they were deliberately included in the first instance in order to facilitate the election of *novi homines* does not stand up to analysis.

DETESTATIO SACRORUM. A patrician, if *sui iuris*, had certain rites belonging to his *gens* (*sacra gentilicia*) to perform. If, therefore, he wished to become legally the son of a member of another *gens* (*arrogatio*) or cease to be a patrician (*transitio ad plebem*), he must, after investigation by the pontifices to make sure that the rites of his own *gens* did not become extinct, attest before them and the *comitia calata* that he renounced them. This was called *detestatio sacrorum*.

DEUCALION (*Δευκαλίων*), name of several mythological persons, the only important one being Prometheus' son, the Greek Noah. When Zeus flooded the

earth in wrath at the sins of the Bronze Age, or of Lycaon (q.v. 3), he and his wife Pyrrha, daughter of Epimetheus, by Prometheus' advice built an ark (*ἀρκα*, Apollod. 1. 47) and floated in it till the waters subsided. When their ark grounded, they were advised by a message from Zeus or an oracle from Themis to throw their mother's bones over their shoulders. Realizing that this meant the stones of the earth, they did so, and those thrown by Deucalion became men, those thrown by Pyrrha, women (*Ov. Met.* 1. 318 ff.; Apollod. 1. 46 ff.). They became the parents of Hellen (q.v.; *ibid.* 49). H. J. R.

DEVA, the river *Dee*, whence the name was applied to the legionary fortress at its mouth, modern Chester. Some early occupation c. A.D. 50 can be inferred, but the legionary fortress with earth bank and timber buildings dates from 74-8 and was used first by II Adiutrix and XX Valeria Victrix, subsequently by the latter alone. Timber was replaced by stone with stone wall c. 100. Chester was damaged c. 300 and was perhaps abandoned with the disappearance of Legio XX in 367. An extramural amphitheatre and civil settlement, possibly with colonial status, are known.

DEVOTIO. It was open to a Roman general, if the battle was going against him, to vow (*deuovere*) himself and the enemy's army with him to Tellus and the Manes (Livy 8. 9. 4 ff.). He wore his ceremonial costume (*toga praetexta*), with his head covered (*velato capite*) and his feet on a weapon (*telum*, probably a spear or javelin; perhaps to bring himself into direct contact with Mars, cf. Mars Hasta). One hand touched his chin (? cf. the dedicant holding the door-post of the temple he dedicates, see *CONSECRATIO*). He then recited after a pontifex a formula of prayer asking for victory and the destruction of the enemy. At the end of this, he said: *legiones auxilium hostium mecum deis manibus Tellurique deuoveo*. Then, girt with the *cinctus Gabinus* (see *GABII*), he sought death among the enemy. He might, however, substitute for himself any soldier from a legion (*ibid.* 10. 11), presumably with a corresponding change of formula. If he or his substitute was killed, the gods had clearly accepted the vow and must therefore accept the rest of it. If the substitute was not killed, but the victory won, an image at least 7 feet high must be buried in his place; if the general was not killed, he could never again offer sacrifice acceptably. The enemy must not get the weapon on which he had stood. Cf. s.v. *DECIUS* (2) *MUS*.

H. J. R.

DEXIPPUS, PUBLIUS HERFENNII (fl. c. A.D. 253-76), Athenian sophist and statesman, published a *Χρονική ιστορία* to A.D. 269-70 in twelve books, a history of the *Diadochi* in four books, and *Εκθύρα*, a work on the Gothic Wars from A.D. 238 to Aurelian, preserved largely in Zosimus. In rhetorical composition and in style he follows Thucydides.

FGH ii A, 452; C, 304

A. H. McD.

DIADEM (*διδάγμα*), reputedly invented by Dionysus (Diod. 4. 4. 4), was originally any band wound about the head (esp. by priests, etc.). Later it denoted particularly the purple band with white decorations worn by Persian kings round the tiara. This was adopted, in the form of a white band with decorated edges, by Alexander and his successors as an emblem of royal power. As such it was refused by Julius Caesar in 44 B.C. and avoided by Roman Emperors until Constantine made it (as a purple

band fitted with jewels and pearls) a regular part of the insignia of the reigning Augustus and Augusta.

A. Alföldi, *Röm. Mitt.* 1935, 1 ff.; H. W. Rutter, *Diadem und Königsherrschaft* (1965). L. A. M.

DIADOCHI (Διάδοχοι, 'Successors'). This term was applied in a special sense to the more important of Alexander the Great's officers who ultimately partitioned his Empire, viz. Antigonus I, Antipater, Cassander, Lysimachus, Ptolemy I, Seleucus I (qq.v.). The 'age of the *Diadochi*' represents a period extending from Alexander's death (323 B.C.) at least to the battle of Ipsus (301), which ended the efforts of Antigonus I (q.v.) to reassemble the whole Empire under his own rule, and perhaps to the battle of Corupedium (281), which fixed the main political boundaries of the Hellenistic world for the next century. G. T. G.

DIAGORAS, lyric poet, of Melos. Though Eusebius-Jerome gives his *floruit* as 466 B.C., he seems to have been active in the last quarter of the fifth century (Ar. *Av.* 1071 ff., *Nub.* 828 ff.). Renowned for his atheism (Cic. *Nat. D.* 1, 2, 63), he disparaged the Mysteries (schol. Ar. *Av.* 1071; Lys. 6, 17), was condemned to death, and fled (Diod. Sic. 13, 6). Fragments, perhaps from *Encomia*, show no trace of atheism, and the story was that he lost his faith because the gods did not punish a man who broke his oath (Sext. Emp. *Pyr.* 9, 53).

DIALECTIC. If Aristotle really said that Zeno discovered dialectic (Diog. Laert. 9, 25), he was inaccurate. Zeno set the example of exploring the consequences of an hypothesis, and Socrates set the example of seeking truth by question and answer alone; but the creator of the notion of dialectic was Plato (*Resp.* 531-9, and Adam's commentary, esp. ii. 168-79). He regards it as the highest of human arts, by which men attain the greatest insight into the best things. It deals solely with the unseen, not even using the visible as an aid. Its only medium is speech, the responsible use of question and answer in the pursuit of truth. He represents it sometimes as the synopsis of the one in the many and the many in the one, by which we define realities and discern which fall under which; sometimes as the exploration of the consequences of an hypothesis, by which we render our opinions more systematic. Once he suggests that dialectic can ultimately overcome its hypothetical character and reach the 'unhypothesized beginning' (*Resp.* 511 b). For Aristotle (see *Top.* 1, 1-2 and *Soph. El.* 34) its hypothetical character makes it inferior to deduction from premises known to be true. Nevertheless, it has its uses: (1) ultimate premises, which cannot themselves be deduced, can sometimes be made evident by exploring the consequences of their denial, and that is hypothetical thinking; (2) dialectic provides good training; (3) even winning the argument is worth something, and Aristotle's handbook of dialectic, the *Topics*, gives disproportionate attention thereto.

R. Robinson, *Plato's Earlier Dialectic* (1953), 69 ff.; papers of the Third Symposium Aristotelicum, *Aristotle on Dialectic* (1968). R. R.

DIALECTS, GREEK. From the inscriptional evidence it appears that each of the Greek city-states possessed and used in its public documents its own individual dialect. This multitude of dialects falls into three distinct groups: (1) Attic-Ionic, spoken in Attica, the Ionic colonies on the southern seaboard of Asia Minor, and certain islands; (2) Aeolic in Lesbos and the neighbouring mainland and,

with an admixture of West Greek elements, in Thessaly and Boeotia; (3) Arcado-Cyprian, which is not employed in extant literature; (4) West Greek comprising (a) North-West Greek in Phocis, Locris, Elis, and Aetolia, and (b) Doric in the Peloponnese and the Doric colonies in various islands and Magna Graecia.

(1), (2), and (3) have common characteristics which set them off as a group ('East Greek') from (4). (2) and (3) have much in common, and they may be classed together as 'Achaean'. To this group belongs the language of the Linear B texts from the Bronze Age palaces of Cnossos, Pylos, Mycenae, and Thebes, with a closer resemblance to (3). There are difficulties in the way of regarding 'Mycenaean' as the ancestral form of both (1) and (3).

The decipherment of Linear B brought support to the hypothesis that the isolation of Arcadian from Cypriot and the mixed character of Cretan Doric were due to the movement of Dorian tribes into the Peloponnese and Crete after the end of the Bronze Age. It was once believed that the distribution of the dialects reflects three successive invasions of Greek-speaking peoples into the Balkan peninsula, but modern dialect geography suggests that the comparatively slight differences between the dialects could easily have evolved in a relatively short time once the different Greek tribes had settled in their respective localities.

The dialects of the literary texts are not identical with those that appear in the inscriptions. This is not due merely to MS. corruption but to the strict literary formalism that forced a Greek writer to use the traditional language of the genre he was practising in preference to his native dialect. The dialect was, in fact, regarded as an integral part of the particular art form. Thus the epic dialect, arising from a fusion of Aeolic and Ionic elements, was utilized by all writers of Greek epic down to Byzantine times. The elegy was a creation of the Ionians. Yet because the hexameter was traditionally wedded to the epic dialect, it is this dialect (in an Ionized form) that appears in elegy whether by Ionians like Archilochus and Callinus, the Laconian Tyrtaeus, the Athenian Solon, or the Megarian Theognis. Similarly the choric ode was developed among the Dorians; consequently Pindar, a Boeotian, Bacchylides, an Ionian, and the Attic dramatists must give their language at least a Doric flavour. It was because of this traditionalism in language that only few of the Greek local dialects achieved literary rank, and even these few discard much that would have seemed narrow and provincial. In this respect, too, Greek art idealized; the language itself represents a compromise between individual and local peculiarities.

EPIC POETRY dialect is basically Ionic, the most characteristic features of which are the change of *ā* to *η*, the *ν* *ephelestikon*, the pronouns *ἡμεῖς*, *ὑμεῖς*, *ἐγώ*, the particle *ἄν* and the infinitive in *-ναι*, and verbal forms in *-σαν* (*ἔδσαν*, *ἔλσαν*, etc.). It contains, further, numerous Aeolic elements such as *ἄμμε*, *ὑμμε*, etc., datives in *-οισι*, genitives in *-οιο*, infinitives in *-μεν(αι)* and the particle *κε*. The dialect exhibits, further, features from different chronological stages of the language, and there can be little doubt that so composite and artificial a language is a product of a long poetical tradition which passed from an Aeolic to an Ionic sphere.

The language of Hesiod is practically identical with that of Homer. He has a few Aeolisms absent from Homer which may come from his native Boeotian—*αἰνῆμι*, *τριηκόντων*, etc. We find, further, Dorisms derived possibly from Locris, where he settled: *τέτορα*, *ἦν* 'they were', acc. plur. *-ās* and participles like *δῆσας*. The epic dialect exercised a strong influence on all subsequent poetry, which constantly exhibits such features as *-οιο*, *-οισι*, the omitted augment, and the inconsistent treatment of *φ*.

MELIC POETRY. The intensely personal character of this genre precluded any rigid formalism of language. The poems of Sappho and Alcaeus are written in their native Lesbian dialect. Characteristic are the *o* in *σπρότος*, *βροχέως*, etc., the diphthongs in *αὔως*, *ναύοις*, *χεύατο*, etc., the diphthong which appears after the loss of *ν* before *ς* (*παῖσα*, *λίπυσα*, and the acc. plur. *ἀπάλαις*, *στεφάνοις*, etc.), the double consonants in *ἔμμι*, *ἕμμε*, *σελάννα*, *φαινώς*, etc., datives in *-εσσι*, infinitives in *-μεναι*, and the *-μι* conjugation of contracted verbs (*κάλημι*, etc.). It would be absurd to attribute hyper-Aeolisms to native speakers. It follows that *φαῖμι*, *Κρονιδαις*, and the like are later corruptions.

Anacreon of Teos used his native Ionic with but few Aeolicisms or epicisms (*πεπύγισσι*, *οἰχάνοιο*, *δακρυόεσσα*, etc.).

Corinna of Tanagra wrote in Boeotian. Characteristic are *εοι-ω* (*ἐκόςμουν*), preservation of *ϕ* (*ῥάδομη*), verbal forms in *-νθι* and *-νθη*, *ἰώνη* for *ἰγώγη*, *τύ, τίν, τεοῦς* for *σύ*, etc. and *βανά* = *γυνή*. The text in our version appears with the later orthography (*αι-η, η-ει, ει-ι, οι-υ*). The usual epic features are present.

For the CHORIC ODE the traditional dialect was Doric, the chief characteristics of which are the retention of *ā* and *ϕ*, the preservation of the group *τι* (*δίδωτι*, *τίκται*, etc.), aorists in *-ξ* (*ἔδικαξα*), the article *τοί, ταί*, 1st person plur. in *-μες* (*φέρομεν*), futures in *-σεω*, and the particle *κα*. Alcman, though he writes in the language of Sparta, nevertheless avoids certain local peculiarities such as the change of the intervocalic *-σ* to *h* (*Πολυδάη*). In view of the influence of Lesbian Melic poetry on the choric ode it is not surprising that Apollonius (*Protr.* 107. 13) describes Alcman as *συνεχῶς Αἰολίζων*. Aeolic features are *ἔμματα*, *κλενά*, *ἔχουσα*, etc. Epic influence is apparent in *ἔδμεναι*, *παῖδασσι*, the free augment, etc. As with Corinna, the orthography of our text has been modernized: *αἰός* (*θεός*) embodies a change of *θ* - *ς* first attested in the fourth century B.C.

The language of other poets of this genre (Stesichorus, Ibycus, Simonides, Bacchylides, Pindar) has no such close connexion with a local dialect. It is an artificial creation, a mixture, varying with the individual author, of Aeolic, Ionic, and epic elements with the basic Doric, which is progressively reduced to a few representative elements, such as *ā*, genitives like *Κρονιδᾶ*, *Μουσᾶν*, and verbal forms like *πιδάσονται*.

IAMBIC and TROCHAIC poetry were written in Ionic. Hipponax, in particular, and his imitator Herodas, used an especially popular variety containing many non-Hellenic words. Solon, however, apart from quotations and reminiscences of epic and Ionic poetry, used his native Attic dialect. This dialect appears, further, in the trimeters and tetrameters of Attic drama. It has been suggested that the few Doric elements present indicate a possible Doric origin of this particular art form.

COMEDY. Both Epicharmus and Sophron employed the popular dialect of Syracuse, where the common Doric was infused with local peculiarities such as *ψίν* (*σφίν*), *κίκαρι* (*κεράννιμι*), *κάρων* (*κρέσσαν*). Even so popular a genre, however, did not wholly escape the influence of epic and tragedy.

PASTORAL POETRY. The dialects affected by Theocritus (epic in *Id.* 12, 22, and 25, Lesbian in 28-30, and 'choral' Doric in 16-18 and 24) have that combination of the learned and the artificial that we expect from an Alexandrian poet. Even the fuller Doric, in which the majority of the idylls are written, has been designated as 'salon-Doric'. For while it contains the common Doric features enumerated above, its artificiality is revealed by hyper-Doric forms like *φιλάσω*. The dialect contains a few more locally restricted Dorisms such as the acc. plur. in *-ος*, *ἐντί* = *εἰστί*, infinitives in *-εν*, and the second person sing. in *-ες* (*σπιδῶδες*), which may derive from the Doric

of Sicily or Cos. The usual epic elements are present (see above). Aeolic colouring is given by the predominance of participial forms in *-οῖσα*, but *γελαιοῖσα* is hyper-Aeolic for *γέλαισα*.

EPIGRAM. The earliest inscriptional epigrams were written in the local dialects, so that even the Ionian Simonides composed the epigrams he wrote for Doric cities in a conventional Doric. The local peculiarities of the epigrams have often been obscured in the tradition: thus the MS. version of the epitaph on the Corinthians who fell at Salamis contains the words *ποτ' ἐναίομεν*, whereas the stone itself presents the Doric *ποκ' ἐναίομεν*. The poets of this genre drew largely on Homeric material in composing their hexameters, but the oldest epigrams exhibit fewest traces of this influence. It is noteworthy that even such borrowings assume a native guise: thus *Ποσειδάωνι ἀνακτι* appears in a Corinthian epigram as *Ποτειδάρωνι φάνακτι*. The evidence of the Linear B texts shows that the internal digamma in the god's name is a 'hyper-form'.

PROSE. A prose literature was first developed in Ionia, and Ionic became the language of historical and scientific prose; representative names are Hecataeus of Miletus, Antiochus of Syracuse, Hellanicus of Mitylene, and Hippocrates of Cos; even the Athenian Thucydides gave his history an Ionic flavour by avoiding local Attic peculiarities such as *ττ* and *ρρ*. The early *λογογράφοι* wrote in a simple unadorned Ionic. Herodotus, however, was a more self-conscious artist and dignified his native Ionic with archaic speech forms—uncontracted verbs, iterative imperfects (*ποιέεσκε*), and the numerous epic expressions which earned him the epithet 'Ομηρικώτατος'.

Our estimate of the Homeric elements in the dialect of Herodotus must be linked with an examination of the textual tradition, for our MSS. present a picture of his dialect which can hardly be authentic. We find hyper-Ionic forms like *Κροισῶν*, and suspicion is cast on the genuineness of the uncontracted verb forms by impossibilities such as *κίεται*, which is a false resolution of *κείται*. Moreover, the fact that another hyper-form *νοῦσος* is identical with the Homeric form, where it is metrically conditioned, whereas the derived verb, which does not occur in Homer, has the normal form *νοσέω*, suggests that the text of Herodotus was corrupted at an early date by editors ignorant of the Ionic dialect, who 'ionized' his language while regarding the Homeric epics as a source of early Ionic. Thus, they took the omission of the augment to be an Ionic trait. This led to curious misunderstandings. The augmented imperfect of *ὄραω*, for instance, was **ἤγοραον*, which in Ionic would appear as *ἐώρων*. The editors ionized this by omitting the first vowel, so that the MSS. present the impossible *ῶρων*, the true unaugmented form being *ὄρων*. Ionic, further, was distinguished from Attic by the crasis of *ο + α* > *ω*: thus *ἑωυτῶ* contrasts with the Attic *ἐαυτῶ*. It is perhaps to a false generalization of this equivalence of *ωω* and *αυ* in the respective dialects that we owe the Herodotean *θῶνμα*. At any rate, this form never appears in the inscriptions, which present, on the contrary, examples of *θαύμων*, *θαύμασις*. Similarly the extension of the form *αὐτέων* to the masculine and neuter rests on a misunderstanding of the relationship of the true Ionic feminine form *αὐτέων* to the contracted Attic *αὐτῶν*. Both rest on an early *αὐτάων*, which in primitive Ionic would appear as *αὐτήων*.

THE Κοινή. The liquidation of the independent city-states and the political unification of Greece encompassed the destruction of the ancient dialects and their absorption into a new common language. Xenophon, who passed his life among Greeks of different origin and dialect, epitomizes this process and may be regarded as the first writer of the *κοινή*. It was in this common language that the Septuagint and the Greek New Testament

were written. In the first century the archaist revival we know as Atticism strove to approximate the language of prose literature to that of classical Attic. In spite of numerous revolts this archaistic literary language has maintained itself against the increasingly divergent popular language, so that the modern Greek must learn the *καθαρεύουσα* which he writes in addition to the *δημοτική* which he speaks.

DIALECTS, ITALIC. Latin together with Oscan and Umbrian as well as the dialects of various mountain tribes of central Italy, Marsi, Marrucini, Hernici, Vestini, etc., forms the Italic branch of the Indo-European family of languages. This excludes, in the north, Celtic, Ligurian (now generally considered Indo-European, cf. Kretschmer, Kuhn's *Zeitschr. f. vgl. Sprachforschung*, 38. 108), and Venetic (of Illyrian origin); in central Italy, Etruscan (q.v.); and, in the south, Messapian (probably Illyrian in descent). But the term Italic Dialects is more commonly confined to Oscan and Umbrian, the two chief non-Latin dialects of the group. Oscan inscriptions have been found in Samnium, Campania, Apulia, Lucania, Bruttium, but Pompeii, and more recently Capua, have furnished most. The earliest are coin-legends of c. 450-350 B.C., while the latest are graffiti from the walls of Pompeii after the first earthquake in A.D. 63. Most are written in the Oscan alphabet, which is derived through Etruscan from Chalcidic Greek. But a few, including the longest, the *Tabula* (q.v.) Bantina, are in the Latin alphabet, while others from south Italy are in Greek. Oscan was more than a mere *patois*. While Latin was still confined to Rome and Latium, Oscan was the chief language of central Italy. Our knowledge of Umbrian is derived almost entirely from the *Tabulae* (q.v.) Iguvinae, a more extensive document than any representing any other dialect save Latin. Some of the tablets are written in the Umbrian alphabet, also derived through Etruscan from Greek, the rest in the Latin alphabet. The following are some of the main features which distinguish Osco-Umbrian from Latin.

(a) PHONOLOGY

- (i) *qu gu* appear as *p, b* (Latin *qu, u*): O. *pis*, U. *psi* (= quis). O. *bivus* (= vivi).
- (ii) Syncope of short medial vowels: O. *actud* (= agito).
- (iii) *nd > nn*: O. *upsannam* (= operandam).
- (iv) *s* retained before nasals: O. *fisnam* (= fanum), U. *sesna* (= cena).
- (v) *bh, dh > f*: O. *tfei, U. tefe* (= tibi).
- (vi) *kt > ht, pt > ft*: O. *Uhtavis* (= Octavius), O. *scifitas* (= scriptae), U. *scelito* (= scriptum).
- (vii) *ks > ss, s*: O. *destrst* (= dextra est).

(b) MORPHOLOGY

- (i) First decl. genit. sing. ends in *-ās* (cf. *paterfamilias*), also nomin. plur.
- (ii) Second decl. genit. sing. ends in *-eis*; dat. sing. in *oi*; nomin. plur. both nouns and pronouns in *-ōs*; genit. plur. only in *-ōm*.
- (iii) Third decl. genit. sing. in *-eis* (from *i* stems); accus. sing. of consonantal stems in *-om* (from *o* stems); in the nomin. plur. consonantal and vocalic stems are kept distinct, the former ending in *-ēs* with syncope of

the *e*, the latter in *-ēs* as in Latin: O. *humuns* (= homines) but *tris* (= tres).

(iv) In the verb, moods, tenses, voices are like Latin, but

- (a) Present infin. active ends in *-om*: O. *ezum*, U. *erom* (= esse).
- (b) Future indic. has *-s-* (it is a short vowel *s-* aorist subjunctive): O. *deuast* (= iurabit), U. *ferest* (= feret).
- (c) Future perfect has *-us-*: O. *dicust* (= dixerit), U. *benust* (= venerit).
- (d) Characteristic of the perfect is an *-f-* type: O. *aikdafed* (= decrevit). Oscan has also a *-it-* perfect, and Umbrian an *-l-* and *-nkt-* perfect, but the *-vi-* and *-s-* types of Latin are lacking.
- (e) A peculiar third sing. subjunctive passive is e.g. O. *sakrafir*, U. *ferar* (= feratur).

(c) SYNTAX

The syntax is very similar to the Latin with some differences in case-usage. Thus

- (i) The locative is quite common: O. *eisei terei* (= in eo territorio).
- (ii) Genitive of time: O. *zicolum XXX nessimum* (= in diebus XXX proximis).
- (iii) The genitive of respect is much less restricted than in Latin.

(d) VOCABULARY

There is a considerable number of words in Osco-Umbrian which do not appear at all or in the same form in Latin, though they can be paralleled in other Indo-European languages:

- e.g. *her-* (= velle): O. *herest*, U. *heri*. Cf. *χαίρω*.
touta- (= civitas): O. *toutad praesentid* (= populo praesente).
medes- (= ius): O. *meddiss*, U. *mersto* (= iustum). Cf. *modus*.
hontro- (= inferus): O. *huntruiss* (= inferis), U. *hondra* (= infra).
ner- (= vir): O. *nerum* (genit. plur.), U. *nerf* (accus. plur.). Cf. *Nero*.
pur- (= ignis): U. *pure-to* (= ab igne). Cf. *πῦρ*.
ais- (= sacer): O. *aisuss* (= sacrificus). Cf. Etrus. *aisar* (= dei), L. *aestimo*.

Peculiar to Oscan are, e.g.:

- deua-* (= iurare) connected with **deiyo* (= deus).
egmo- (= res): O. *egmazum* (genit. plur.).
eituam- (= pecuniae). Also in Marrucian.
felhuiss (= muros). Cf. *τεῖχος*: same root as L. *figo*, *figura*.
puklum (= filium). Also Paelignian *puclois* (= pueris).
tunginom (= sententiam). Cf. L. *tongere* and Engl. 'think'.

Peculiar to Umbrian are, e.g.:

- anouihimu* (= induitor). Same root as L. *induo*, *exuo*.
gomia (= gravidas). Cf. L. *gemo* and *γέμω*.
nertru (= sinistro). Cf. *νέπτερος*.
uend- (= vertere): U. *ahauendu* (= avertito). Cf. Engl. 'wind'.

Many words are used in a sense either unknown in Latin or passing out of use. Thus

- O. *kasit* (= caret) means *deceit, oportet*.
O. *castrous* (= castrum), U. *castruo* means *fundus*.
O. *carneis* (= caro), U. *karu* means 'portion', cf. *καίρω*.
But Umbrian also has the meaning 'piece of flesh'.
U. *emantur* (= accipiantur) shows the original meaning of Latin *emo*, 'take', found in compounds *adimo*, *demo*.

O. urust (oro) is used in the technical sense 'plead, argue': cf. Festus 'orare antiquos dixisse pro agere'.

DIALOGUE, GREEK. Diogenes Laertius (3. 48) defines a dialogue as 'a discourse consisting of question and answer on some philosophical or political subject, with due regard to the characters of the persons introduced and the choice of diction'. It is essentially a *μίμησις*, an artistic reproduction of 'good talk' or informal discussion in which, while a single theme is pursued, some digression and inconsequence is permissible and proper; the theme must be of more than topical interest, though it usually arises out of the experiences of particular persons at a particular time.

The most important source of dialogue was the actual conversation of Socrates with all and sundry; yet the *Σωκρατικός λόγος* is foreshadowed in the incorporation of quasi-philosophical conversations in the narrative of Herodotus and Thucydides, notably that between Solon and Croesus (Hdt. 1. 30-2) and the Melian Dialogue (Thuc. 5. 85-113). The influence of Attic Drama is also plain, and the affinity to dialogue of the Mimes of Sophron is recognized by Aristotle.

The earliest Socratic dialogues may have been simply notes taken by those who talked with or listened to Socrates (cf. Pl. *Th.* 142-3); later these developed into freer *μιμήσεις* in the hands of Plato, Xenophon, Aeschines (of whom considerable fragments survive), and other disciples. Plato's dialogues differ widely in literary merit: some show supreme dramatic power and artistry; in others the dialogue form becomes almost a convention, the chief speaker (sometimes an unnamed 'stranger') a mouthpiece for Plato's own teaching, and the interlocutors otiose. Of the earlier works Jaeger's saying is true, that 'his desire was to show the philosopher in the dramatic instant of seeking and finding, and to make the doubt and conflict visible'; for such an aim dialogue was wholly suitable.

Aristotle's dialogues, extant only in fragments, won him high literary fame in antiquity. Most were written before the death of Plato. Although some fragments show Aristotle still retaining the Socratic technique of question and answer, his usual method was probably that of long expository speeches, like those in Cicero's dialogues, with the leader (sometimes Aristotle himself) summing up.

After a long and almost total eclipse, dialogue reappears with Plutarch and Lucian. Some fourteen genuine dialogues of Plutarch survive, philosophical or semi-philosophical in character. His best work lacks Plato's depth and dramatic power, yet has a quiet charm and illuminates for us the interests of contemporary cultured society. In Lucian the influences of Socratic dialogue, the New Comedy, and Menippus combined to stimulate a genius unique amongst ancient writers. Though he employed many other forms, his fame rests principally on his satiric dialogues, brilliant exposures of every sort of dogma, prejudice, and humbug. In the twilight of classical antiquity dialogue is still represented in the work of Julian and Synesius.

DIALOGUE, LATIN. The art of dramatic dialogue

early attained a high proficiency in Rome, especially in the comedies of Plautus and Terence, the Roman public being quite keen to appraise the quick give and take of conversation, as is shown by the popularity of the *altercationes* in forensic rhetoric (Cic. *Brut.* 164). Dialogue played a considerable part in the *Satura* from the time of Ennius, one of whose *saturae* seems to have been a dialogue between *Mors* and *Vita*; and many satires of Lucilius, Horace, and Persius are largely dialogue, though it plays a smaller part in Juvenal. Prose dialogue at Rome began with M. Junius Brutus, who composed his three books *De Jure Civili* in the form of dialogues with his son (Cic. *De Or.* 2. 224). These, like Cicero's, and the Roman dialogue generally, followed the Aristotelian rather than the Platonic model: the principal part in each dialogue was played by one interlocutor (sometimes the author himself) who expounded his view dogmatically in long speeches, the part of the other characters being reduced to a minimum. Each dialogue was preceded by a *mise en scène* giving the place and the occasion of, with the names of the participants in, the conversation. Cicero's long series begins with the political dialogues, *De Republica* and *De Legibus*, proceeds to the rhetorical dialogues (namely *De Oratore* and *Brutus*), and ends with the philosophical and theological *Academica*, *De Fimibus*, *Tusculanae Disputationes*, *De Divinatione*, *De Natura Deorum*, etc. While Cicero's dialogues reproduced the conversation and manners of high society, a less polished, though not more Roman, stratum was represented in Varro's dialogue *De Re Rustica*. Seneca's *dialogi* are dialogues only in name. Tacitus' *Dialogus* resumes the Ciceronian tradition in its discussion of the decline of oratory. Minucius Felix used the dialogue form in his *Octavius* in the interest of Christian polemic (a use which persisted till the time of St. Augustine); in form and setting he is to some extent indebted to the *Atticae Noctes* of Aulus Gellius (q.v.). Macrobius (q.v.) used the dialogue form in a work deeply indebted in material to Gellius, though in form he depends closely on Plato, as he says himself (*Sat.* 1. 1. 7). The *De Consolatione* of Boethius (q.v.) is a dialogue between the author and Philosophy.

DIANA (root DI, cf. Zeus, Iup-iter; probably 'bright one', which says nothing for or against ancient and modern theories of her identity with the moon), an Italian goddess anciently identified with Artemis (q.v.). Altheim (*Griechische Götter in alten Rom* (1930), 93 ff.) supposes her cult actually derived from that of Artemis Orthia, through Etruria, but see A. E. Gordon in *TAPA* 1932, 177 ff.; *Californica Publ. in Class. Arch.* ii, 1934, 4 ff. Her cult was widespread; see Birt in Roscher's *Lexikon* i, 1003-4 for details. One of her most famous shrines was on Mt. Tifata near Capua (Vell. 2. 25. 4 and elsewhere in literature, supported by much inscriptional evidence); the name Tifata means 'holm-oak grove' (Festus, 503. 14 Lindsay), which suits Diana's character as a wood-goddess (see below) excellently. Most famous of all was her ancient cult near Aricia (on the shore of the volcanic lake known as *Speculum Dianae*, below the modern Nemi, i.e. *nemus*). Her temple stood in a grove, which was recorded as dedicated to her by Egerius Baebius (?) of Tusculum, *dictator Latinus* (Cato, *Orig.* 2, fr. 21 Jordan). It was therefore an old religious centre of the Latin League and it is probable, though direct proof is lacking, that the foundation of her temple (probably preceded by an altar) on the Aventine, traditionally by Servius Tullius (Livy 1. 45. 2 ff.), was an attempt to transfer the headquarters of this cult to Rome, along with, what Livy mentions (*ibid.* 3), the headship of the

League. See further REX NEMORENSIS, and for the Massiliote and Ephesian connexions of the Aventine temple, see ARTEMIS.

That she was largely a goddess of women is shown by the processions of women in her honour at Aricia (Prop. 2. 32. 9-10; Ov. *Fasti* 3. 268-9), also by the character of many of the votive offerings there, which have clear reference to children and childbirth; see further Frazer on Ovid, *ibid.* 267, Wissowa, *RK* 248. That she is a moon-goddess (see Preller-Jordan, *Römische Mythologie*² (1881-3), i. 312) is an idea resting on no real evidence (cf. JANUS). Warde Fowler (*Rel. Exper.*, 235) plausibly calls her a 'wood-spirit', for certainly she is commonly worshipped in wooded places. The central idea of her functions would seem to have been fertility, especially human, though probably not confined to that; for the development of such a deity into one of political importance, cf. Juno and Hera.

At Aricia she was associated with Egeria (q.v.), and Virbius, an obscure male deity (Ov. *Met.* 15. 544; Servius on *Aen.* 7. 84 and 761; see HIPPOLYTUS 1). Identifications with foreign deities are common all over the West.

In general see Latte, *RR* 169 ff. Aventine temple: Platner-Ashby, 149 f., and for its date and political significance, A. Momigliano, *Rendiconti dei Lincei* 1962, and *JRS* 1963, 106. Temple at Mt. Tifata: J. Heurgon, *Capoue preromaine* (1942), 299 ff. A. de Franciscis, *Archivio storico di Terra di Lavoro* (1956), 301 ff. H. J. R.

DIATRIBE. For examples of the *διατριβή* in Greek, characteristic of the Cynic and Stoic schools, see EPICETUS 2, TELES. A large number of Roman writers, even when not professed philosophers, imitated the Greek *διατριβή*. Cato in his speeches resorts to the polemic methods of the popular moralists of Greece. In Lucilius the employment of diatribist writings is above all literary. On the other hand, Varro's satires are so much akin to Menippus' works that they can be in their general features reconstituted, thanks to comparison with the dialogues of Lucian, another successor of Bion's disciple. Even Cicero in the *Tusculans* and *Cato Maior* presents long passages inspired by the opponents of systematic philosophy—by Ariston of Chios in particular. From this epoch of soul-stirring moral crisis, the popular preachers in their harangues to Roman crowds had recourse to the arsenal of themes belonging to the diatribe. Horace mocks them, but he willingly admits that his own satires are *Bionei sermones*; and his independence of thought does not debar him from using the same weapons. Among his contemporaries one must segregate the disciples of Q. Sextius (q.v. 2), founder of a sect which was rather original in spite of the eclectic character of its doctrine. Its ascetic vegetarianism is based, not on Pythagorean metaphysical conceptions, but on reasons of empirical ethics and hygiene which rest diatribic themes on the exercise of the will. Fabianus, an important 'Sextian', had an enormous influence upon the schools of rhetoric.

The elegiac poets and the prose-writers (especially Livy) who urge a return to the simplicity of ancient times found, like the fabulist Phaedrus, in this tradition, rejuvenated in accordance with the Roman spirit, those moralizing *loci communes* which appeared suitable to the needs of their period.

Seneca's works mark the point of departure for a fresh evolution, a neo-Stoicism in which, thanks to him, the diatribe makes its formal re-entry into philosophy. Notwithstanding manifold inconsistencies, Seneca towards the end of his life becomes more and more faithful to the moral principles which he had borrowed from Bion and Ariston. If Lucan and Persius return to orthodox Stoicism, Juvenal, the last of the great Roman

satirists, is especially influenced by *rhetoires* whose diatribist themes he develops at length.

Among Christian writers Tertullian shows what profit the advocates of the new religion could draw from this pagan tradition.

Brandt, *Tertullians Ethik* (1928). O. Weinreich, *Zeitschrift für Kirchengeschichte* 1942, 39 ff., L. Radermacher, *Weinen und Lachen* (1949), 115 ff. A. O. (transl. J. W. D.)

DICAEARCHUS, a Greek from Messana, who lived most of his life in the Peloponnese, especially at Sparta; pupil of Aristotle and contemporary of Theophrastus. Fl. c. 326-296 B.C. Fragments only survive of his works:

I. POLITICAL. (i) *Bíos 'Elláδος*, the first attempt at a universal history of culture, from the Golden Age to Dicaearchus' time. (ii) *Πολιτεῖαι* (*Constitutions*) of Pellene, Corinth, Athens, and Sparta. (iii) *Τριπολιτικός*, perhaps a delineation of a 'mixed' constitution, containing elements of monarchy, aristocracy, and democracy. Probably this and others of Dicaearchus' work were in dialogue form. (iv) *'Ολυμπιακός* and *Παναθηναϊκός*, both probably in form political orations. (v) *Περὶ τῆς ἐν Ἰλλυρὶ θυσίας*, on Alexander's sacrifice before the battle at the Granicus.

II. BIOGRAPHY AND LITERARY HISTORY. (i) *Bíos*, on the lives and writings of Plato and other philosophers. (ii) *Π. Ἀλκαίου*, probably a biography and an exegetical commentary. (iii) Works on Homer, titles unknown. (iv) *'Υποθέσεις τῶν Σοφοκλέους καὶ Εὐριπίδου μύθων* (see HYPOTHESIS). (v) *Π. μουσικῶν ἀγώνων*, on competitions in music and poetry. The last three works were important sources for later scholars, containing much information about Homer and the Dramatists.

III. PHILOSOPHICAL. (i) *Π. ψυχῆς*, a dialogue on the corporeal nature and mortality of the soul, apparently consisting of two parts, *Λεσβιακός* and *Κυρηνθιακός*. (ii) *Π. φθορᾶς ἀνθρώπων*, maintaining that man is destroyed more by man than by natural disasters. (iii) A work on future things, title unknown, but apparently not identical with (iv) *Π. μαντικῆς*. (v) *'Η εἰς Τροφονίου κατάβασις*, 'Descent into the Trophonian Cave', including immoralities of priests therein. (vi) Letter (? philosophical) to Aristoxenus.

IV. GEOGRAPHICAL. *Περίοδος γῆς*, cartography (and description?) of the known world, establishing for geographers a main parallel of latitude from the Straits of Gibraltar to the Himalayas and the assumed eastern Ocean; it included perhaps 'Measurements of Mountains in Greece', whose heights Dicaearchus over-estimated.

Dicaearchus was a learned, fertile, and remarkably versatile author, of an original and genuinely scientific turn of mind. He influenced many subsequent writers, including Eratosthenes, Cicero, Josephus, and Plutarch. Cicero, who admired him greatly (*Att.* 2. 2. 6; 13. 31; *Tusc.* 1. 77), took him as the exemplar of the *bíos πρακτικός*, Theophrastus as that of the *bíos θεωρητικός*.

FGH ii. 225 ff.; GGM i. 97 110, 238-43. F. Wehrli, *Dicaearchos* (1944), Thomson, *Hist. of Anc. Geog.* 134, 142, 153 ff.; PW Suppl. xi. E. H. W.

DICAEOTENES, a tragic poet, probably of the latter half of the fifth century B.C., wrote a *Medea* and a *Cyprians* (Aristotle, *Poet.* 16, mentions the recognition scene).

TGF 775-6.

DICING with six-sided dice (*κύβοι*, *tesserae*) or four-sided knucklebones (*ἀσπράγαλοι*, *tali*; natural or manufactured from, e.g., ivory) was a popular amusement in both Greece and Rome, either by itself or in association with board games. In Rome, where even Emperors (esp.

Claudius) were keen players, high sums were often staked; and dicing was officially illegal except at the Saturnalia. *Tesserae* may have been used in varying numbers, but *tali* were normally used in fours, the best (though statistically not the rarest) of the thirty-five possible throws being when each showed a different face (prob. = *Venus*). *Canis* was the worst throw with both *tali* and *tesserae*, but its precise nature is uncertain. Cheating, sometimes with loaded dice (μεμολυβδωμένοι), was not unknown, and to help prevent it the dice-box or 'tower' was soon introduced. Finds of ancient dice, which include an Etruscan pair, are not uncommon.

PW, s.v. *lusoria tabula* (Lamer), xiii, 1900 ff., esp. 1933 ff.

L. A. M.

Dicta Catonis ('Dionysius', sometimes added to Cato's name, remains a puzzle), the title given to a versified handbook of morality, partly pagan, partly Christian, which, dating in its original form probably from the third century A.D., was widely studied in the Middle Ages and translated into many European languages. The title 'Cato' was perhaps an unknown author's or compiler's recognition of Cato the Elder as the first moralist of Rome.

The collection consists of (a) its most important part, four books of hexameter *Disticha* (288 lines); (b) preceding them, 57 *breves sententiae* in prose; (c) four short *prae-fationes*, that to book 1 being in prose, the rest in hexameters; (d) 16 additional lines from the Zurich and Verona MSS. of 'Cato'; (e) 78 single lines (*Monosticha*), besides a considerable number of lines of Catonian origin (Baehrens thought 52) in a *carmen monostichon* constituting rules for life, *Praecepta Vivendi*, and two short poems, possibly Catonian, *De Musis* and *Eptaphium Vitalis Mimi*. Baehrens accepted the ascription of the *Praecepta* to Columbanus, but its affiliation is rather with a poem ascribed by Dümmler to Alcuin (205 lines published by Dümmler, *MGH, Poet. lat. aevi Carolini* i. 275, 1880). This ascription Boas supports with proofs in *Alcuin und Cato* (1937), reprinting Dümmler's text with marginal notes to indicate borrowings from *Disticha* and *Monosticha*. Alcuin, he believes, used, not the medieval vulgate of 'Cato', but a fragment of the same family as the Veronese fragment.

The collection has bequeathed many debatable questions, e.g. which are the oldest parts, the prose or the verse? whether or not there once existed a larger *Corpus Catonianum*? how much is pre-Christian? what alterations were made by a Carolingian recension?

The maxims, not without worldly cunning and selfishness, inculcate on the whole a homely morality: they represent, as proverbs do, the experience of the past, traceable sometimes to Greece, though occasionally the influence of Horace or Ovid appears. The final couplet of the *Disticha* (4. 49) emphasizes the terseness aimed at.

DICTATOR. The dictatorship, which is found as a permanent office in other Latin states, was added to the Roman constitution soon after the expulsion of the kings to provide a temporary, extraordinary magistracy in military—and later domestic—crises, *rei gerundae causa*. Any connexion with Etruscan or Oscan magistracies is obscure (see MDDIX). Originally a major colleague of

the consuls, known as *praetor maximus*, the dictator soon became completely independent, holding undivided authority of military character, not subject to veto or appeal, both abroad and at Rome. Twenty-four lictors indicated his quasi-regal power, which, however, was rather a concentration of the consular authority than a limited revival of the kingship. The dictator was not elected by the people, but nominated by a consul on the Senate's proposal. A *lex curiata* confirmed the nomination. After 361 B.C. *consulares* were normally selected, earlier the 'best man' was chosen. The dictator (who was also known as *magister populi*, master of the infantry) immediately appointed a *magister equitum* (q.v.) as his subordinate. Other magistrates remained in office but were subject to the dictator, who held his post for six months at most, the length of a campaigning season, or else retired when his particular task was done. This time limit rendered the dictatorship comparatively useless outside Italy, and its importance declined in the third century. Dictators were increasingly employed for minor purposes—holding elections or celebrating festivals or fixing the 'sacred nail', etc.—and popular agitation, long unsuccessful, was able by 300 B.C. to subject the dictatorship to *provocatio* (q.v.). Despite a revival during the invasion of Hannibal it was never again employed for its original purpose after 216 B.C., perhaps because of senatorial jealousy of independent authorities. After 202 B.C. even the dictators with limited competence were no more appointed. Later dictatorships (see SULLA 1, CAESAR 1) differed widely from the original in scope and purpose.

Livy bks. 1–25 and Dion Hal. *passim*, Polybius etc. Art. 'Dictator' in PW with 'Magister Equitum', ibid. Suppl. v (lists), Mommsen, *Röm. Staatsr.* ii. 141 ff., Helloch, *Röm. Gesch.* 75 ff., A. DICTYS CRETENSIS, a Cretan of Cnossos, companion of Idomeneus at Troy, and reputed author of a Trojan War diary, actually composed perhaps in the second or third century A.D. (*P.Teb.* ii. 268). This work, supposedly discovered during Nero's reign, was translated into Latin prose by L. Septimius (4th c.?) and with Dares (q.v.) formed the chief source drawn upon by medieval writers on the Troy-saga.

TEXT. W. Eisenhut (Teubner, 1958).

G. C. W.

DIDACTIC POETRY includes under one name many works which have little in common, except that their subject-matter is not love or war but science, philosophy, or some art or craft. The Greeks hardly regarded it as a separate genre, but classed it under the general head of *ἐπη*. For works of this nature see the articles on HESIOD, the Pre-Socratic philosophers, MENEKRATES (2), ARATUS (1), NICANDER, MARCELLIUS (9), MANETHO, DIONYSIUS (9) PERIEGETES, OPIAN. For Latin works see LUCRETIUS, CICERO (1), (*Prognostica*), VARRO (3), MACER (2), VIRGIL (*Georgics*), OVID (*Halieutica*), GRATTIUS, MANILIUS (3), GERMANICUS (*Phaenomena*), COLUMELLA (book 10), NEMESIANUS, TERENCE PANUS, SERENUS (2), CARMEN DE FIGURIS, CARMEN DE PONDERIBUS, AVIENIUS.

DIDASCALIA. The word means primarily the 'teaching' of a play or dithyramb to the chorus which was to perform it by a poet or the professional trainer employed, and then, more generally, the production of the play or dithyramb. (In Plutarch and other late writers the term may also be applied to the group of plays performed.) In the plural *Διδασκαλίας* refers to the records of performances, including the names of victorious tribes, *choregoi*, poets, actors, and flute-players for each year, and of the plays performed at the Dionysiac festivals; it appears that the name of the true author was recorded

when a play was produced in another name, but see Schol. Eur. *Andr.* 445. Aristotle's lost works included one book entitled *Διδασκαλίας* and one book of *Νίκαι* *Διονυσιακαὶ δοτικαὶ καὶ Ἀθηναίαι*. These must have been completed from the official records; it is not known whether these were engraved on stone from the first or not; but it is generally agreed that the inscriptions, of which large fragments remain (*IG* ii². 2318–25, with some other scraps), and which were probably engraved in the third century or late fourth century B.C., were based on the work of Aristotle so far as this went, and brought up to date afterwards; and that Aristotle was also the source from which the scholars of Alexandria and Pergamum (Athenaeus 306 e) (including the authors of the Hypotheses to the plays in our manuscripts) must have drawn; it is not known how far his researches went beyond the official records, nor in what year his record began. The inscription numbered *IG* ii². 2318 probably carried the record back to 502 B.C. or a few years earlier, and is generally thought to correspond to Aristotle's *Nikai*; the other inscriptions are likely to have drawn upon his *Διδασκαλίας*.

See E. Reisch in *PW* v. 1 (1903), s.v. 'Didaskaliai'; A. Wilhelm, *Urkunden dramatischen Aufführungen in Athen* (1906); E. Capps, *Introduction of Comedy into the City Dionysia* (1903), and arts. in *AJPhil.* 1899 and 1900, *AJArch.* 1900, and *Heb.* 1943; Pickard-Cambridge, *Dramatic Festivals of Athens* (1953), ch. 2; G. Juchmann, *De Aristotelis didascalus* (1909). A. W. P.-C.

DIDASCALIAE at Rome. Plautus' *Stichus* and *Pseudolus* (in A), Terence's plays and Donatus' commentary thereon are prefaced by brief remarks concerning first performance, games at which performed, presiding magistrates, producer, composer, and type of music, Greek original, order of play in author's works, consuls of the year, etc. They were often incomplete; varying in different manuscripts; source unknown; nevertheless of fundamental importance.

See Schanz-Hosius, 105.

W. B.

DIDIUS (1, *PW* 5), TITUS, as colleague of Norbanus (q.v. 1, tribune 103 B.C.), vainly tried to intercede against his prosecution of Caepio (q.v. 1). Praetor in Macedonia, he triumphed in 100 or 99. Consul with Q. Metellus Nepos (98), he helped to pass the *lex Caecilia Didia*, which, after the troubles of 100–98, established procedure for valid legislation and gave the Senate power to decide on contested validity: among other provisions, an interval of three *nundinae* was imposed between promulgation of a law and voting on it, and 'tacking' unrelated measures in a single bill was forbidden. He then commanded in Spain against the Celtiberians and by treacherous massacres gained the rare honour of a second triumph (93). A legate in the Social War, he was killed in June 89. E. B.

DIDIUS (2, *PW* 8) **JULIANUS**, MARCUS, a rich senator, was chosen by the praetorians after a mock auction of the Empire to succeed Pertinax on 28 Mar. A.D. 193, in preference to the latter's father-in-law Flavius Sulpicianus. He promised to restore the memory of Commodus, whose disloyal prefect Laetus was executed. But his election was unpopular with the masses and above all with the provincial armies; within a few weeks Septimius Severus was proclaimed Emperor at Carnuntum and Pescennius Niger in the East. The praetorians went over to the former and upon their direction the Senate deposed Julianus, who was murdered in his deserted palace on 1 June A.D. 193.

Herodian 2. 6–13; Dio Cassius bk. 73; *B.M. Coins, Rom. Emp.* v, lxix. 11–18. H. M. D. P.; B. H. W.

DIDO, legendary daughter of a king of Tyre, known by Virgil as Belus; she is said to have had the name of Elissa at Tyre, and to have been [called Dido (? 'The

Wanderer')] at Carthage. Her husband, called Sychaeus by Virgil, was murdered by her brother Pygmalion, now king of Tyre, and Dido, escaping with some followers to Libya, there founded Carthage. At this point legends diverge. The older story, narrated by Timaeus, was that in order to escape marriage with the king of Libya (Iarbas in Virgil) Dido built a pyre as though for an offering and leapt into the flames. The Roman form of the story, which gained currency at the time of the Punic Wars and was probably followed by Naevius and Ennius, brought Aeneas to Carthage, but Varro, who adopts it, makes Dido's sister Anna, not Dido herself, perish for love of Aeneas. The story contained in the first and fourth books of the *Aeneid* may have been invented by Virgil himself. Aeneas, shipwrecked on the coast of Libya, is brought by Venus to the palace and entertained by Dido, who falls in love with him. After a while Aeneas departs, warned by Mercurius to leave Carthage and pursue his destiny, and Dido throws herself on the pyre. Ovid in *Heroides* 7 presents Dido's lamentation in a rhetorical form. Modern sentiment has reviled Aeneas' treatment of Dido, but his desertion of her in obedience to divine command is an essential element in his 'piety' (see AENEAS 1).

For the sources see A. S. Pease, *Verg. Aen.* 4 (1935), 14 ff.

C. B.

DIDYMA, oracular sanctuary of Apollo 10 miles south of Miletus. It was in the hands of the priestly clan of Branchidae, by which name it was commonly known, and was, with Delphi, the most cosmopolitan of Greek oracles; it received gifts from Pharaoh Necho and Croesus. The archaic temple, from which little survives, was destroyed by the Persians, probably in 494 B.C.; and in 480 the Branchidae were removed by Xerxes to Sogdiana, where their descendants were massacred by Alexander the Great. The cult statue of Apollo Phileios by Canachus was also carried off, but it was restored by Seleucus I. Thereafter the cult was administered by the Milesian State, with an annually elected *prophetes* and other officials. The building of a new temple over 350 feet long was commenced c. 300 B.C.; of unconventional design, with a raised stage-like chamber behind the *pronaos*, and a sunken hypaethral *sekos* which contained a dainty shrine, it is one of the most magnificent ruins of the ancient world. The Didymeia ranked among the great games of Roman times.

Inscriptions and architecture (T. Wiegand) *Didyma* (1941–58); G. E. Bean, *Aegean Turkey* (1906), ch. xi. J. M. C.

DIDYMUS (1) (c. 80–10 B.C.) belonged to the school founded at Alexandria by Aristarchus (q.v. 2) and himself taught there. A scholar of immense learning and industry (cf. his nickname *Χαλκέντερος* and *Βιβλιολάθας*, the latter because of occasional self-contradictions due to his having forgotten what he had said in earlier books), he is said to have written 3,500 or 4,000 works. His importance for literary history consists primarily in his careful compilation of the critical and exegetical work of earlier scholars. He was not an original researcher, but rather a discriminating variorum editor and a scrupulous transmitter of learning that might otherwise have been lost.

WORKS: 1. He sought to reconstitute lost recensions by Aristarchus of the Homeric text by the comparison of copies and by the examination of Aristarchus' commentaries and special treatises. His results were much used by the scholiasts. 2. Commentaries, with abundant mythological, geographical, historical, and biographical information, on Homer, Hesiod, Pindar, Bacchylides, Choerilus, Aeschylus, Sophocles, Ion, Euripides, Achaëus, Cratinus, Aristophanes, Phrynichus, Eupolis, Menander, Thucydides, Antiphon, Isaeus, Isocrates, Aeschines,

Demosthenes, Hyperides, Dinarchus. Much of the oldest scholia to Pindar, Sophocles, Euripides, and Aristophanes is ultimately derived from Didymus. A papyrus fragment of his commentary on Demosthenes' *Philippics* illustrates well his compilatory method. 3. Lexicography: *Λέξεις τραγικαί* and *Λέξεις κωμικαί*. These collections formed a valuable source for scholiasts and lexicographers, e.g. Hesychius. *On Corrupt Expressions, On Expressions of Doubtful Meaning, Metaphorical Expressions, On Proverbs*, a chief source of the extant works of the *Paroemiographi* (q.v.). 4. Grammar: *On Orthography, On Analogy among the Romans, On Inflections*. 5. Literature and antiquities: *On Lyric Poets, Σένη ιστορία* (on myths and legends), *Miscellany* (*Σύμμικτα συμψυακά*), *On the Axones of Solon*, works on the death of Aeneas, the birthplace of Homer, etc., and a polemic against Cic. *Rep.*, which was answered by Suetonius; but this last may be by his namesake Claudius Didymus.

Commentar zu Demosthenes* (1904); A. Korte, *Rh. Mus.* 1905; P. Foucart, *Mémoires de l'Institut National de France* 1909; M. van der Valk, *Researches on the Text and Scholia of the Iliad* 1 (1961), 536 ff. J. F. I.; R. B.

DIDYMUS (2), **CLAUDIUS**, the Younger (1st c. A.D.), an Atticist lexicographer, wrote on the incorrect diction of Thucydides (*Περὶ τῶν ἡμαρτημένων παρὰ τὴν ἀναλογίαν Θουκυδίδου*), abridged the *Attic lexicon* of Heraclion of Ephesus, and wrote a monograph comparing Latin with Greek. P. B. R. F.

DIEKPLUS (*διέκπλους*), a naval manoeuvre which the Greeks apparently borrowed from the Phoenicians in the Persian Wars. The ships of one line, feinting to ram the galleys of the opposing line, swept between them (*διεκπλεύσαντες*), damaging their oars or rudder-oar, and circled about to strike the helpless craft in the rear. To prevent this, a fleet was drawn up in two lines, either in file, as at Artemisium (U. Wilcken, *Hermes* 1906, 103 ff.), or in staggered formation, as at Arginusae (Xen. *Hell.* 1. 6. 29). With the heavier ships of Hellenistic times, the insertion of *lembi* in the lines (Polyb. 16. 4. 8 ff.), and the Roman reliance on boarding (ibid. 1. 22. 3, 51), the *diekplus* was less often used.

H. T. Wallinga, *The Boarding-Bridge of the Romans* (Groningen, 1956) C. G. S.

DIES FASTI, NEFASTI. On the Roman calendar (see **CALENDARS**) certain days were marked *F*, meaning *fas* or *fastus*, literally 'days of speaking', when the formal words necessary to transact legal business might be spoken, i.e. the courts were open and the day was not a festival. Others were *N*(*efasti*), when for one reason or another legal business might not be done (properly speaking, it was not impossible, but to do it was a *vitium* and must be expiated by a sacrifice). See Varro, *Ling.* 6. 29 ff. for other classes of days: *C*(*omitialis*), when public assemblies might be held; *F**N*(*dotercius*) or *intercursus*, lawful during the pause in the middle of the sacrificial ritual; *Q*(*uando*) *S*(*tercus*) *D*(*elatum*) *F*(*as*), 15 June, when the shrine of Vesta (q.v.) was cleansed; *Q*(*uando*) *R*(*ex*) *C*(*omitiauit*) *F*(*as*), 24 Mar., 24 May, when the *rex* (q.v.) *sacrorum* had certain formal duties. On existing calendars, the sign N^o, probably *nefas*, *feriae publicae*, is used somewhat erratically for many of the *dies nefasti*. *Dies religiosi* are any days, whether *nefasti* or not, supposed to be unlucky, e.g. the anniversary of Cannae. H. J. R.

DIETETICS was originally the regulation of life for those who were training for the games, and this type of

dietetics was practised as long as games were held. In the fifth century Herodicus of Selymbria, Plato says (*Resp.* 406 a), tried to heal the sick by prescribing a certain regimen; from then on dietetics became an established means of treating patients, like surgery or pharmacology.

Still more important than dietetics for athletes and the sick was that for the healthy as advocated by Greek physicians. If diseases due to a disturbance of the bodily balance can be healed by diet, it must be likewise possible to prevent diseases by a diet which preserves this balance undisturbed. Such prevention is the more necessary since the bodily balance is constantly changed by whatever a person does, eats, or drinks, by exercises and the seasons; it must be constantly restored so as to avoid the danger of falling into disease at almost any moment. The healthy no less than the sick, it was therefore claimed, should fall under the permanent supervision of the physician.

For their dietetic rules the physicians determined with minute accuracy the quality of all factors influencing the body from without or within. They regulated with great care every detail of life according to the necessities of health alone, and without paying any attention to the demands of business activities, politics, or normal life. They admitted that the poor had to content themselves with what was possible for them, but wanted the rich, who alone had the means of living a healthy life, to do so, even if it meant giving up everything else. Strange as it seems, people accepted this medical philosophy, believing as they did that health is the greatest blessing in this life of uncertainty and change. Such ideas became the more plausible, at least for the upper classes who were not restrained by any considerations of occupation, especially since political independence was gradually destroyed in the city-states. Yet even among the poor dietetic measures in as far as they could be applied were very common.

There can be no doubt that the demand of physicians on the healthy was responsible for much nervousness. People became too conscious of their bodies; besides, they were unable to endure sudden and unforeseen changes, and in addition tended to remain aloof from all useful activity, a consequence deplored by philosophers and statesmen. Yet it was not until Greek medicine was transmitted to the Romans that a certain change took place. The Romans insisted that the healthy man could do whatever he pleased, for otherwise he could not fulfil his duties as a citizen; dietetics they thought only good for weaklings and scholars. In the Roman Empire, however, even this opposition was overcome. With the rise of autocratic government and the beginning of the archaistic movement the Greek conception won the day and its reign was uncontested until the heathen ideal of bodily health vanished before the new God.

ANCIENT SOURCES. Hippocrates, *Περὶ διαίτης ἀγενεῖς*; *Περὶ διαίτης* bks. 1-4; Galen, *Υγιεινόν*, bks. 1-6; Philostratus, *Περὶ γυμναστικής*.

MODERN LITERATURE. General, L. Edelstein, *Die Antike* (1931). Relation to gymnastics, I. Englert, *Studien z. Gesch. d. Med.* (1929). Medical content, J. Marcuse, *Diätetik im Altertum* (1899); W. W. Jaeger, *Paideia* (U.S.A. 1944), III. 3 ff., 44 f., overemphasizes the educational value of dietetics as of medicine in general. For the strong opposition to the dietetics ideal and its reasons see L. Edelstein, 'The Relation of Ancient Philosophy to Medicine', *Bulletin of the History of Medicine* 1952, 307 ff. A compromise between Greek and Christian ideas was attempted by some early Church fathers (A. Decker, *Kenntnis und Pflege des Körpers bei Clemens von Alexandria*, 1936). Greek dietetics, despite its general similarity with Hindu medical dietetics, lacks the emphasis which the latter puts on 'the knowledge of the long and perfect life' (H. A. Zimmer, *Hindu Medicine*, U.S.A. 1948, lxviii f.). The counterpart of the Hindu dietetics of the soul practised by the priest (Zimmer, op. cit., xliii) among the ancients is the ethical dietetics taught by philosophers. L. E.

DIEUCHIDAS of Megara (4th c. B.C.) wrote annals of Megara (*Μεγαρικά*), and ascribed the recension of Homer to Solon.

FGH iii. 485; J. A. Davison, *CQ* 1959, 216 ff.

DIFFERENTIAE, distinctions between words of similar form (*ora, hora*) or meaning (*metus, timor, pavor*) formulated by rhetoricians and grammarians as an aid to correct diction. The earliest Latin examples are in the ps.-Ciceronian *Rhetorica ad Herennium* and Varro's *De Ling. Lat.* Many *differentiae* were discussed by miscellanists (Suetonius in his *Prata*, Aulus Gellius), by lexicographers (Verrius Flaccus, Nonius especially in book 5), and by grammarians. Anonymous lists compiled from various sources were sometimes attributed to great names (*Diff. Catonis*, etc.) and many items were incorporated in glossaries. Many *differentiae*, however, do not correspond with the actual usage of Latin authors.

G. Brugnoli, *Studie sulle Differentiae Verborum* (1955). Schanz-Horsus, § 1121.

DIGESTA, a title applied by the classical jurisprudence to treatises on the law as a whole (see JURISPRUDENCE), and by Justinian to the main part of his codification, published after the first Codex and *Institutiones*. An alternative name for this part of Justinian's work was *Pandectae*, a counterpart of Greek origin to the Latin name formed from *digerere*. By the constitution of 15 Dec. 530, beginning with the words 'Deo auctore', the Emperor initiated the work by giving instructions to his minister of justice Tribonianus (q.v.) for its composition by the collection of passages from the works of classical jurists. Precisely three years later the collection was published by the Constitution 'Tanta', which contains precious indications on the origin and formation of the work, but nothing on the method by which the editorial commission (five professors and eleven advocates under the presidency of Tribonian) accomplished their task. The *Digesta* came into force on 30 Dec. 533. They contain excerpts from works of jurists of more than three centuries; the earliest is Q. Mucius Scaevola (q.v. 5), and the latest are Modestinus, Hermogenianus (qq.v.), and Charisius, but 95 per cent. of the work is taken from authors of the period between A.D. 100 and 250. Justinian records that two thousand books with three millions of lines were read by the compilers for this purpose, but only a twentieth, 150,000 lines, were selected. A not quite accurate list of authors and works excerpted (*Index Florentinus*) is annexed to the best MS. of the *Digest*, preserved at Florence. The collection is divided into fifty books, the books into titles with headings taken chiefly from, and arranged in the order of, the praetorian edict. The excerpts ('fragments') vary in length from a few words to several thousand, but each has an *inscriptio* indicating its author and the work from which it is taken.

It was certainly a strange idea of the Emperor or his counsellors to construct a code of existing law by compiling passages written three to five centuries before, and presenting them as his own opinion (const. 'Omnem' 6: 'omnia nostra facimus'). The compilers, moreover, did not restrict themselves to collecting legal rules and formulations of a general character: they copied passages with historical reminiscences, etymological observations, quotations taken from Homer, polemics and divergent opinions, precious of course from a historical point of view, but superfluous and embarrassing in a work which according to a strict order of Justinian should have been a codification, since the jurists' opinions were to be considered as current and valid law. The task of the compilers was very difficult; the mosaic compilation of more than 9,000 fragments could not produce a perfect result; repetitions and contradictions were unavoidable (though strictly forbidden by Justinian) in such an enormous work, completed in less than three years. Another reason for the insufficiency of the work was the order of the Emperor that the compilers might alter and improve any-

thing that seemed to them 'superuacuum uel imperfectum uel minus idoneum' (const. 'Tanta' 10). Such alterations in the classical texts, by omission, addition, or substitution, are called 'interpolations' ('emblemata Triboniani'). The simplest merely suppress references to institutions which had been abolished or had become obsolete, such as *mancipatio* (q.v.) and *res mancipi, in iure cessio* (see DOMINIUM), *dotis dictio* (see MARRIAGE), *fiducia* (see SECURITY), or else replace them by modern terms. Sometimes the need for compression leads to the conflation of several passages into one or to the omission or abbreviation of arguments so as to produce an unintelligible or chaotic text. On the other hand, superfluous additions were made in explanation of a word or a rule. But a great number of interpolations were far from being merely formal alterations, as when the classical decision was restricted to special matters of fact or changed into an opposite one in conformity with the new law of imperial constitutions of post-classical times, and with reforms of Justinian himself, or under the influence of new legal doctrines and ideas. It is clear that such a method sometimes brought confusion into the precise constructions of the classical jurists.

The detection of interpolations engaged the attention of the humanist lawyers of the sixteenth century, but it was only in the sixty years beginning c. 1880 that the attempt to distinguish by this means the 'classical' from the 'Byzantine' law became the chief interest of scholars. In the first four decades of this period a number of criteria for the identification of interpolations were proposed and much of undeniable validity was achieved. Thereafter, the uncritical application of increasingly subjective criteria, particularly in the field of language and style, led to exaggerated claims which left few texts unscathed. There was, moreover, a failure to distinguish between merely verbal interpolations and those which effected a substantial change in the law; and the concentration on the search for interpolations led to an excessively clear-cut distinction between the classical law and the law of Justinian to the exclusion of the possibility of the texts' having been altered and edited in the interval. These and other considerations have led in recent years to a diversion of interest in other directions, and in particular to the examination of the fate of the texts in the post-classical period and the related study of the 'vulgarization' of the law in this period and the identification of a classical revival in Justinian's time and immediately before. And within the classical law there has been a greater readiness to recognize divergences and developments.

MODERN EDITIONS. Mommsen, *Digesta Iustiniani* (2 vols. 1866, 1870); Mommsen, P. Krueger, *Corpus iuris civilis* 1 (16th stereotyped ed. 1954). A pocket-edition by Bontante, Fadda, Ferrini, Riccobono, Scialoja contains some useful suggestions (vol. 1, 1908; vol. II, 1931). Important works of reference: A. Guarnieri-Citati, *Indice delle parole e frasi ritenute interpolate* (1927), Suppl. in *Studi Riccobono* 1 and *Festschrift für P. Koschaker* 1 (1930). *Index Interpolationum quae in Iustiniani Digestis inesse dicuntur* (initiated by L. Mitteis and edited under the direction of E. Levy and E. B.; B. N.

DIKASTERION (δικαστήριον) was the ordinary Greek term for 'lawcourt'. In Athens until the beginning of the sixth century B.C. all verdicts were given by magistrates (see ARCHONTES) or by the Areopagus (q.v.) or the *ephetai* (q.v.). Solon (q.v.) seems to have instituted a system by which an assembly of citizens (*hehaia*, q.v.) heard appeals against magistrates' verdicts, or authorized the imposition of penalties above certain limits. The next stages of development are obscure, but presumably appeals became so usual that magistrates practically ceased to give verdicts and the assembly did not have time to hear all the cases referred to it. A system of juries was therefore

set up, in which each jury consisted of a number of citizens who tried a case on behalf of all the citizens.

2. For the period after the middle of the fifth century we have fuller information. Volunteers for jury service (who had to be over 30 years old) were called for at the beginning of each year, and a list of 6,000 jurors for the year was drawn up. To encourage volunteers, each juror received a small fee for each day on which he sat to try a case. This payment was introduced by Pericles (q.v.), who probably fixed it at 2 obols; it was raised to 3 obols not later than 425. Since the payment was less than an able-bodied man would earn by an ordinary day's work, one of its effects was that many of the volunteers were men who were too old for work. This state of affairs is satirized by Aristophanes in the *Wasps*.

3. The number of jurors who formed a jury varied according to the type of case, but was usually several hundred. In one trial it is said to have been 6,000. In the fourth century odd numbers (e.g. 501) were used, to avoid a tie in the voting, but there is no evidence for odd numbers in the fifth century. It is not known what method was used in the fifth century for allocating jurors to courts. By the early fourth century a system of lot was used for this purpose, and later in the century a more complicated system of lot (described in detail in Arist. *Ath. Pol.* 63-6) was introduced. The aim was to prevent bribery by making it impossible to know beforehand which jurors would try which case.

4. Each trial was arranged and presided over by a magistrate or group of magistrates. Different magistrates had responsibility for different types of case. The (eponymous) *archon* (see ARCHONTES) had charge of cases concerning family and inheritance rights. The *basileus* had charge of most cases connected with religion. The *polemarchos* (q.v.) had charge of cases concerning non-Athenians. The *thesmothetai* (q.v.) had charge of a wide variety of cases; in general any type of public case which did not clearly fall within the province of another magistrate came to them. The *strategoi* (q.v.) had charge of cases concerning military and naval service. The *hēndeka* (q.v.) had charge of cases of theft and similar offences. Many types of private case were the responsibility of the *eisagogeis* or of the Forty, and there were several lesser boards of magistrates with responsibility for particular types of case, such as the *apodektai* and the *nautodikai* (q.v.).

5. In the fifth century and the first half of the fourth each magistrate sat regularly in the same court. The *heliaia* (q.v.) was the court of the *thesmothetai*, the Inserted Court (τὸ Παράβυστον) was the court of the *hēndeka*, and the Odeum (q.v.) was probably the court of the *eisagogeis*. Other courts were the New Court (τὸ Κανόν), the Court at Lykos (τὸ ἐπὶ Λύκῳ), the Kallion, the Triangular, Greater, and Middle Courts (τὰ Τριγώνων, τὸ Μετῶν, τὸ Μέσων), and the Painted Portico (ἡ στοὰ ἡ ποικίλη). In Aristotle's time magistrates no longer sat regularly in the same courts, but were allocated to courts by lot each day. Distinct from all these courts were the Areopagus (q.v.) and the other special homicide courts (see ΕΠΗΤΑΙ), in which a different procedure was followed.

6. When anyone wished to bring a prosecution, he gave his charge to the appropriate magistrate. It was the responsibility of the accuser to deliver the summons to the accused. The magistrate held an inquiry (ἀνάκρισις), at which he heard statements and evidence from both parties. Some trivial cases could be decided by the magistrate forthwith, but generally the purpose of the inquiry was simply to satisfy him that the case should be taken to court.

7. At the trial the magistrate presided, but he did not give directions or advice to the jury, and did not perform the functions of a modern judge. The accuser spoke first,

and the accused afterwards. If either party was a minor, a woman, or a non-citizen, the speech was made by the nearest adult male relative or patron; but otherwise each party had to speak for himself, unless clearly incapable, though he might deliver a speech written for him by a professional speech-writer, and he might call on friends to speak too in his support. In the course of his speech he could request to have laws or other public documents read out to the court. He could also call witnesses. Until some date in the first half of the fourth century, witnesses gave their evidence orally, and might be questioned by the speaker who called them (but not cross-examined by his opponent). Later in the fourth century witnesses gave evidence beforehand in writing, and at the trial merely signified assent when their statements were read out. Women, children, and slaves could not appear in court as witnesses, but a written record of a slave's statement could be produced as evidence if the statement had been made under torture. A certain length of time (varying according to the type of case) was allowed for each party to make his speech, the time being measured by a water-clock.

8. When the speeches of the parties were over, the jury heard no impartial summing-up and had no opportunity for discussion, but voted at once. In the fifth century each juror voted by placing a pebble or shell in an urn; there was one urn for condemnation and one for acquittal. In the fourth century each juror was given two bronze votes, one with a hole pierced through it signifying condemnation and one unpierced signifying acquittal, and he placed one in a 'valid' (bronze) urn and the other in an 'invalid' (wooden) urn; this method helped to ensure that the voting was secret and that each juror cast only one vote. When all had voted, the votes were counted, and the majority decided the verdict. A tie meant acquittal. There was no appeal from the jury's verdict.

9. For some offences the penalty was laid down by law, but for others the penalty had to be decided by the jury. In such cases, when the verdict had been given against the accused, the accuser proposed a penalty and the accused proposed another (naturally more lenient). Each spoke in support of his proposal, and the jury voted again to decide between them. Penalties regularly imposed were fines or damages, confiscation of property, confinement in the stocks, partial or total disfranchisement (see ATIMIA), exile, or death. Long terms of imprisonment were not imposed.

10. The chief fault of the Athenian lawcourts was that a jury could too easily be swayed by a skilful speaker. Most jurors were men of no special intelligence or legal experience; yet, without expert advice or guidance, they had to distinguish true from false statements and valid from invalid arguments, and they had to interpret the law as well as decide the facts. It says much for the Athenians' alertness and critical sense that the system worked as well as it did. The advantages were that the large juries were hard to bribe or browbeat, and that the lawcourts and the people were as nearly as possible identical, so that an accused man felt that he was being judged by the Athenian people, not merely by some government official or according to an obscure written rule. Thus the institution of popular juries was one of the Athenians' greatest democratic achievements.

DIKE (1) (*Δίκη*), personification, mostly literary, of Justice. One of the Horae (Hesiod, *Theog.* 902), she reports to Zeus the wrong-doings of men (*Op.* 256 ff.), and similar ideas occur in later authors. In Aratus (*Phaen.* 96 ff.), she is the constellation Virgo, who finally left the earth when the Bronze Age began; some (as *Ov. Met.* 1. 149–50) call her Astraea in this connexion. In art she is sometimes shown punishing Injustice (see Paus. 5. 18. 2; cf. von Sybel in Roscher's *Lexikon* i. 1019). She catches an evil-doer (Eur. *Heracles* 941); will not suffer a murderer to live (Acts xxviii. 4), perhaps from popular (pagan) belief. Cf. Schrenk in G. Kittel, *Theologisches Wörterbuch zum Neuen Testament* ii. 180 ff. H. J. R.

DIKE (2) (*δίκη*) in Athenian law was the general term for 'case'. The principal distinction was between public cases (*δίκαι δημόσιοι*) and private cases (*δίκαι ἰδίαί*). But often, confusingly, the term *dike* without qualification was used for private cases only, in contrast with *graphe* and other types of public case.

2. The following distinctions may in general be made between public and private cases. (a) A private case concerned a wrong or injury done to an individual. A public case was brought for an offence which was regarded as affecting the community as a whole. For some offences, which could be regarded as either public or private, both types of case were legally permitted. (b) A private case could be brought only by the person who claimed that he had suffered wrong or injury. A public case could be brought by any citizen, unless disqualified. (c) In a private case damages or compensation might be awarded to the accuser. In a public case any fine or penalty was paid to the State. However, to encourage public-spirited citizens to prosecute offenders on behalf of the State, financial rewards were given to successful accusers in certain kinds of public case (notably *phusis* and *apographe*; see 3 (f) and (g) below). This had the unintended effect of encouraging the rise of *sykophantai* (q.v.). (d) To deter *sykophantai* penalties were imposed, in most kinds of public case, on an accuser who dropped a case after starting it, or who failed to obtain at least one-fifth of the jury's votes: he had to pay a fine of 1,000 drachmas, and he suffered partial disfranchisement (see *ATIMIA*), so that he could not bring similar prosecutions in future. These penalties did not apply in private cases.

3. The commonest kind of public case was *graphe* (q.v.). Sometimes this term was loosely used of any kind of public case, but more often the following special types of public case were distinguished from it. (a) *Eisangelia* (q.v.). Prosecution was initiated by denunciation to the *boule* or *ekklesia*, which might either decide to try the case itself or refer it to a lawcourt. (b) *Proboule*. The accuser made a denunciation to the *ekklesia*. The *ekklesia* voted on it, but this hearing did not constitute a trial; if the accuser proceeded with the case, a trial was held subsequently in a lawcourt. This procedure was used against men accused of being *sykophantai* or deceiving the people of Athens, and also against those accused of violating the sanctity of certain festivals. The speech of Demosthenes *Against Meidias* relates to a case of this type. (c) *Apagoge*. The accuser began proceedings by arresting the accused and handing him over to the appropriate magistrates, usually the Eleven (see *HENDEKA*). This procedure was used especially against thieves caught in the act and against persons caught exercising rights to which they were not entitled. The speeches of Antiphon *On the Murder of Herodes* and Lysias *Against Agoratus* concern cases of *apagoge*. (d) *Endeixis*. The accuser made a denunciation to the magistrates, who arrested the accused. This procedure too was used against persons accused of exercising rights to which they were not entitled. The case of Andocides *On the Mysteries* is the

best-known example. (e) *Ephegesis*. The accuser led the magistrates to the accused, and they arrested him—a procedure very similar to *endeixis*, and used for the same type of offence. (f) *Phusis*. This name was given to cases against men who broke regulations concerning trade or mines, guardians who mismanaged their wards' property, and some others. If the prosecutor won the case, he was rewarded with half of the fine exacted or property confiscated. (g) *Apographe*. The accuser listed property which he alleged was due to the State and was being withheld. If he won the case, he was rewarded with three-quarters of the property recovered. Several surviving speeches were written for this type of case, e.g. Lysias *On the Property of Aristophanes* and [Demosthenes] *Against Nicostratus*.

In addition, a case arising from an accusation made at a *dokimasia* (q.v.) or a *euthyna* (q.v.) was similar to a public case in some respects.

4. A special type of private case was *diadikasia*. This was used when a right (e.g. to claim an inheritance) or an obligation (e.g. to perform a trierarchy) was disputed between two or more persons. Its distinctive feature was that there was no accuser or accused: all the claimants were on equal terms. When there was only one claimant for an inheritance, so that no trial was necessary, the formal award to the claimant was called *epidikasia*.

5. Homicide cases (*δίκαι φόρου*) were treated differently from others. If a person was killed, his relatives (see *ANCHISTEIS*) were required by law to prosecute the killer. The prosecution followed a special procedure of proclamations, pre-trials, and oaths. The trial was not held in an ordinary law court, but at one of several special open-air courts, with the Areopagus (q.v.) or the *ephetai* (q.v.) as the jury.

DINARCHUS (*Δεινάρχος*) (c. 360–c. 290), the last of the 'ten orators'. A Corinthian by birth, he lived at Athens, and studied under Theophrastus. Being a *metoikos*, and therefore debarred from public speaking, he composed a large number of speeches for others. The first of these was written c. 336, but he did not come into prominence till c. 324, when he wrote a speech against Demosthenes in the Harpalus affair (see *DEMOSTHENES* 2). He prospered particularly after the death of Alexander, when, as his biographer Dionysius of Halicarnassus remarks, the other orators having been executed or banished, there was nobody left worth mentioning. Under the oligarchy established by Cassander, 322–307 B.C., he was active and prosperous, but on the restoration of democracy in 307 he retired to Chalcis in Euboea, where he lived till 292. Returning to Athens, through the intercession of Theophrastus, he was robbed of a large sum of money by his host Proxenos, and brought the latter to justice. Nothing is known of his life after this, nor the date of his death.

WORKS. Of sixty speeches which Dionysius considered genuine we possess only three—*Against Demosthenes*, *Against Aristogiton*, and *Against Philocles*, which are all connected with the affair of Harpalus. The authenticity of the first of these was doubted by Demetrius, but it is very similar to the others in style and matter. Three other speeches, *Against Boeotus II*, *Against Theocritus*,

and *Against Mantitheus*, which appear in the Demosthenic Corpus, have sometimes been ascribed to Dinarchus.

Dinarchus marks the beginning of the decline in Attic oratory. He had little originality, except some skill in the use of new metaphors; he imitated his predecessors, especially Demosthenes (Hermogenes, *Id.* 2. 11 calls him κριβινός Δημοσθένης, 'a small-beer Demosthenes'), but developed no characteristic style of his own. He knew the technique of prose composition and had command of all the tricks of the orator's trade. He was competent up to a point, but his work is careless and lacking in taste. Thus, the arrangement of his speeches is incoherent; his sentences are long and formless, certain figures of speech, e.g. epianalepsis and asyndeton, are ridden to death, and his invective is so exaggerated as to become meaningless. Numerous examples of minor plagiarisms are collected by Blass (*Att. Ber.* 3 iii. 2. 318-21); in particular, a passage about Thebes in *Demos.* 24 is based on Aeschines 1. 133, and *Aristot.* 24 is suggested by Demosthenes 9. 41.

For general bibliography, see ATTIC ORATORS.

TEXT Blass (Teubner, 1888). Index, see ANDROCIDES.

TEXT AND TRANSLATION. J. O. Burtt, *Minor Attic Orators* ii (Loeb). J. F. D.

DINON (Δίνων rather than Δείνων) of Colophon, father of Cleitarchus (q.v.), wrote a history of Persia in at least three *syntaxis* (perhaps Assyria, Media, Persia), certainly down to Artaxerxes Ochus. Following Ctesias' *Περσικά*, it represents the trend towards the romantic Alexander-histories. Widely read, it is used in Plutarch's *Artaxerxes*.

DIO (1) COCCEIANUS, later called Chrysostomos (c. A.D. 40–after 112, Greek orator and popular philosopher. Born of wealthy family in Prusa in Bithynia, Dio began a career as a rhetorician at Rome, but soon fell under the spell of the Stoic philosopher Musonius. Involved in a political intrigue early in the reign of Domitian, he was banished (*relegatus*) both from Rome and from his native province, and spent many years travelling through Greece, the Balkans, and Asia Minor as a wandering preacher of Stoic-Cynic philosophy. Rehabilitated by Nerva, he became a friend of Trajan, but continued to travel widely as an epideictic orator. He later retired to his family estates in Bithynia, became a notable in the province, and was prosecuted before the proconsul Pliny in connexion with a public building contract.

Of the 80 speeches attributed to him, two are actually the work of his pupil Favorinus. Many are display-speeches, but others, e.g. those delivered before the Assembly and Council at Prusa, deal with real situations. His themes are varied: mythology, the Stoic-Cynic ideal monarch, literary criticism, popular morality, funeral orations, rhetorical descriptions, addresses to cities, etc. He sees himself as a teacher of his fellow men, and his stock ideas are the Stoic concepts of *φύσις*, *ἀρετή*, and *φιλοανθρωπία*. His language and style are atticist, though he avoids the extreme archaism of some of his contemporaries of the Second Sophistic, and often aims at an easy, almost conversational style, suggestive of improvisation. Plato and Xenophon are his main models. Dio idealizes the Hellenic past, and feels himself the heir to a long classical tradition, which he seeks to revive and preserve. His Stoic-Cynic philosophy has lost its erstwhile revolutionary élan, and become essentially conservative, though he still insists on the philosopher's right to free speech and criticism. His Greek patriotism is in no way anti-Roman. Like his contemporary Plutarch, he reflects the attitudes and culture of the upper classes of the eastern half of the Empire, who were beginning

to reach out to a share in political power. He gives a vivid and detailed picture of the life of his times.

TEXT: H. v. Arnim (1893-6); G. de Budé (1915-19).

TEXT AND TRANSL.: J. W. Cohoon, H. L. Crowley (Loeb, 5 vols, 1932-51).

STUDIES: H. v. Arnim, *Leben u. Werke des D. von Prusa* (1898); W. Schmid, *Der Attizismus in seinen Hauptvertretern*, 1 (1887), 72 ff.; M. Cytowska, *De Dionis rhythmo oratorio* (1952); J. Moling, *D. u. die klassischen Dichter* (1959); R. MacMullen, *Enemies of the Roman Order* (1967), 46 ff.

R. B.

DIO (2) CASSIUS (*Cassius Dio Cocceianus*) of Nicaea (Bithynia), son of Cassius Apronianus, governor of Cilicia and of Dalmatia, entering the Senate under Commodus, became praetor (A.D. 194), *consul suffectus* (about 205), and consul for the second time with Alexander Severus in 229. Besides a biography of Arrian and a work on the dreams and portents of Septimius Severus, he wrote a Roman history from the beginnings to A.D. 229, of which books 36-54 (68-10 B.C.) are fully preserved, 55-60 (9 B.C.-A.D. 46) in abbreviation, 17, 79-80 in part. Xiphilinus (11th c.) epitomized from book 36 (missing Antoninus Pius and M. Aurelius' first years); Zonaras (12th c.) gives the tradition of books 1-21, 44-80 in books 7-11 of his *Ἐπιτομή Ἱστοριῶν*, following Xiphilinus from Trajan.

The narrative, which took ten years to prepare and twelve years to write, appears to be based on republican annalistic tradition, Livy or Livy's sources (from 68 to 30 B.C.), imperial annalistic tradition, and for contemporary events his own high authority. Unreliable about republican institutions and conditions, from Caesar onwards he used his constitutional experience, at first colouring events with his ideas of imperial absolutism (cf. Maecenas' speech in 52. 14-40), but later handling his material with full knowledge. Annalistic in arrangement, although modified to meet requirements of subject-matter, his narration concentrated on political aspects, in the manner of Thucydides, giving a rhetorical narrative in Atticist style.

A. H. McD.

DIOCLES (1) (d. after 408 B.C.), Syracusan democrat opposed to Hermocrates (q.v.). He remodelled the Syracusan constitution; because his legislation was later thought obscurely phrased, and as after his death he received hero-worship, some scholars envisage an archaic hero-lawgiver distinguishable from the demagogue.

Diodorus bk. 13. W. Hüttl, *Verfassungsgeschichte von Syrakus* (1929), 85 ff.

A. G. W.

DIOCLES (2), Athenian comic poet, 'contemporary of Sannyrion' (q.v.) 'and Philyllus' (q.v.) according to the *Suda*, i.e. c. 400 B.C. We have six titles and fourteen fragments. He was also credited with the invention of a percussion instrument.

FCG i. 251 ff., CAF i. 766 ff., FAC i. 896 ff.

K. J. D.

DIOCLES (3) of Carystus, according to Pliny the second physician after Hippocrates in time and fame, a contemporary of Aristotle (384-322 B.C.), lived at Athens. He was the first physician to write in Attic, avoiding hiatus. His books dealt with animal anatomy, physiology, actiology, symptomatology, prognostics, dietetics, botany. The fragments show the influence of the Sicilian school of which his father, Archidamus, was also an adherent, and of Empedocles (four humours, importance of the heart, the pneuma), of Hippocrates (the body considered as organism), of Aristotle (methodological concepts and terminology). Diocles' originality, it seems, consists in uniting these different trends. That in the details of scientific research he was independent is certain.

TEXT. Fragments, M. Wellmann, *Die Fragmente d. sizilischen*

Arzte (1901); M. Fränkel, *D. Carysti fr. quae supersunt*, Diss. Berl. (1840).

LITERATURE. General discussion, Wellmann, loc. cit., and *PW* v. 802; F. Heilmann, *MH* 1955, 158 ff.; F. Kudlien, *Sudhoffs Archiv* 1963, 456 ff. W. Jaeger, *D. v. Karystos* (1938), points to Aristotelian influence and argues for a later date of Diocles than had formerly been assigned; the date 340–260 B.C. (Jaeger, *Sitz. Berl.* 1938) seems too late; cf. review of Jaeger's book by L. Edelstein, *APPhil* 1940. Cf. also F. Heilmann, op. cit.; F. Kudlien again makes Diocles an older contemporary of Aristotle but has not refuted all the arguments that speak for influence of the latter upon Diocles. L. E.

DIOCLES (4), mathematician (? c. 200 B.C.), wrote a work, important in the history of conic sections, *On Burning-Mirrors* (*περὶ πυρκαϊῶν*). It is preserved only in a defective Arabic translation and in two long extracts by Eutocius (*Comm. in Arch.* Heiberg², iii, 66 ff., 160 ff.). The first solves the problem of finding two mean proportionals ('doubling the cube'), the second a problem propounded by Archimedes which amounts to a cubic equation.

The unpublished Arabic text is in Chester Beatty MS 5255.

COMMENT. Heath, *Hist. of Greek Maths* 1, 264 ff.; ii, 47 ff.

DATE. Hitherto it has been supposed that Diocles is later than Apollonius, since the quotations by Eutocius contain references to the *Conics*. But from the antiquated terminology reflected by the Arabic version it seems probable that he wrote between Archimedes and Apollonius. G. J. T.

DIOCLES (5) of Magnesia (it is not known which Magnesia), a younger friend of the Cynic Meleager of Gadara, therefore probably born c. 75 B.C. He must have lived part of his life in Cos. He is mentioned only by Diogenes Laertius, who describes him as the author of an *Ἐνδομῆ* (compendium) *τῶν φιλοσόφων*. Diogenes makes large use of this work, but Nietzsche went much too far in describing Diogenes' work as simply an epitome of that of Diocles. (See DOXOGRAPHERS.) W. D. R.

DIOCLES (6), Greek rhetor of the Augustan age, whose declamations betrayed moderate Asianist tendencies.

Sen. *Controv.* 7, 1, 26.

DIOCLETIAN (GAIUS AURELIUS VALERIUS (*PW* 142) DIOCLETIANUS), originally named Diocles, a Dalmatian of low birth, who rose to be commander of the Emperor Numerian's bodyguard. Chosen by the army near Nicomedia in November A.D. 284 to avenge his master's death, he struck down the praetorian prefect, Aper. He then marched westwards to defeat Numerian's brother, Carinus, at Margus (early 285). He at once chose Maximian, an old comrade, to be his Caesar and sent him to Gaul to suppress the Bacaudae (insurgent peasants). Quickly victorious, Maximian was raised to the rank of Augustus early in 286.

The frontier situation was serious; Diocletian fought the Alamanni (288/9), Sarmatians (289 and 292), Saracens (290, in which year also Tiridates III was established as Roman nominee on the throne of Armenia), and was engaged against a serious revolt in Egypt (292/3). In the West, Carausius, admiral of the Channel fleet, revolted in 287 to escape condemnation for neglect of duty, seized Britain and a part of northern Gaul, and frustrated all attempts to reduce him. The Emperors were forced to leave him in peace, but did not recognize him.

In view of the many difficulties of the government, Diocletian in 293 established his famous 'tetrarchy'. Himself Augustus in the East he took Galerius to be his Caesar, while to Maximian, Augustus in the West, was assigned Constantius Chlorus. The two Caesars were bound to their Augusti by marriage with their daughters. Constantius blockaded Bononia (*Boulogne*) and wrested it from Carausius, who was soon afterwards murdered by his assistant, Allectus. A great expedition in 296 under Constantius and his praetorian prefect, Asclepiodotus, destroyed Allectus and recovered Britain. In 298 Constantius gained a spectacular victory over the Alamanni at

Langres. Maximian in 297 crossed to Africa and defeated the troublesome confederacy of the Quinquegentanei. In Egypt a fresh revolt broke out under Domitius Domitianus and Achilleus in 296, but was suppressed by Diocletian in person at Alexandria in 297.

Taking advantage of the situation, the Persian King Narses expelled Tiridates from Armenia. Diocletian summoned Galerius from the Danube frontier where he had been engaged against the Carpi. Defeated in the first campaign in 297 near Carrhae, Galerius brought up reinforcements and in 298 won a complete victory. The peace treaty consolidated Roman Mesopotamia and added seven small satrapies north of the upper Tigris to the Empire; Armenia and Iberia again became dependent on Rome. All trade between the two empires was directed through Nisibis.

In 303 Diocletian visited Rome for the first time, to celebrate his *Vicennalia*. A collapse in health the following year almost cost him his life, and on 1 May 305 he abdicated with Maximian, leaving Constantius and Galerius Augusti in West and East respectively, with Severus and Maximian Daia as their Caesars. His years of retirement were spent at Salona (where remains of his palace survive), broken only by a return to public life, in 308, to help Galerius to re-establish order in the government at the Conference of Carnuntum. Diocletian died in 316, saddened by the civil wars, the collapse of his system of imperial succession, and the persecution of his kindred by Maximian Daia and Licinius.

Diocletian's genius was as an organizer, and many of his administrative measures lasted for centuries. The tetrarchy was an attempt to provide each part of the Empire with a ruler and to establish an ordered, non-hereditary succession. It broke down when his dominating personality was removed, but for most of the fourth century more than one Emperor was the rule. To raise the dignity of the imperial office Diocletian assumed an oriental court ceremonial and seclusion; he took the name Jovius and called Maximian Hercules to emphasize their quasi-divine authority. Each member of the tetrarchy had his own staff (*comitatus*), and was often on the move in his territory, though Nicomedia, Treviri, and Sirmium often provided the imperial residence, while Rome was of lesser importance.

In order to ensure more detailed supervision of affairs, many provinces were divided, the number probably being doubled. All provinces except Asia and Africa and the divisions of Italy were governed by equestrian *praesides* who had judicial, financial, and executive powers. In the later part of his reign, Diocletian began an important reform, separating military from civil power in the frontier provinces; a number of provincial armies were put under the command of *duces*, thus leaving the *praesides* to concentrate on their civilian duties. To supervise the *praesides*, Diocletian grouped the provinces into twelve units called dioceses (see DIOCRISIS), each under a *vicarius* (equestrian), who was technically a deputy of the praetorian prefects, of which each member of the tetrarchy had one. Senators were almost excluded from both military and civil commands.

Diocletian's conception of imperial defence was conservative; he made little or no effort to increase the size of the élite field army (*comitatus*), which had been formed in the late third century. Instead, a massive programme of building and reconstruction of defensive works was undertaken on all frontiers, and these defences were to be held by sheer force of numbers; the number of soldiers in the Roman army was perhaps nearly doubled.

The increase in the size of the army and the administration was a heavy burden on the resources of the Empire. Diocletian introduced a new system of taxation to take into account the depreciation of money values and

to regularize arbitrary exactions in kind. It was based on the *iugum*, the unit of land and the *caput*, the human unit, and was revised every fifteen years (*indictio*). The greater part of the State's revenue and expenditure was now in kind. He attempted to create a unified currency but could not establish confidence in it. In 301 he tried to halt the rapid rise in prices by the *Edictum de pretiis* which fixed maximum prices and wages. In spite of savage penalties it soon became a dead letter as goods disappeared from the market.

10. Diocletian was an enthusiast for what he believed was the old Roman religion, tradition, and discipline, which he held could reinforce imperial unity. Many legal decisions show his insistence on the maintenance of Roman law in the provinces where no doubt it had been neglected in the preceding decades. This policy formed the background to the persecution of the Christians undertaken in 303, possibly on the insistence of Galerius, less prudent than his Augustus. Four edicts were issued before the abdication and enforced with varying degrees of severity, most harshly in Palestine and Egypt. Diocletian's administrative measures did much to preserve the unity of the Empire for another century; they were completed by Constantine, who was also able, however, to introduce a number of innovations.

DIODORUS (1) of Sinope, New Comedy poet, brother of Diphilus (q.v.); a family monument (*IG* ii². 10321) suggests that he became an Athenian citizen (see Webster, *Later Greek Comedy* 152). He seems to have had two plays produced at the Lenaea of 288 (*IG* ii². 2319. 61, 63), and to have been a comic actor at Delos in 284 and 280 (*IG* xi. 105. 21, 107. 20). Fr. 2, the parasite's divine rites.

FCG iii. 543 ff.; CAF ii. 420 ff.; G. M. Silakis, *Studies in the History of Hellenistic Drama* (1967), 26. W. G. A.

DIODORUS (2) **CRONUS** of Iasos (fl. c. 300 B.C.), one of the masters of Megarian dialectic. Among his pupils were Zeno of Citium and Arcesilaus, both of whom owed much to him. He repeated the arguments of Zeno of Elea against the possibility of motion; his most famous argument, the *κρυπτεῖναι*, was directed against the possibility of that which is not actual, and played a considerable part in controversies over free will.

P.-M. Schuhl, *Le Dominateur et les possibles* (1960). W. D. R.

DIODORUS (3) **SICULUS** of Agyrium, flourished under Caesar and Augustus (to at least 21 B.C.), wrote (c. 60–30 B.C.) a World History, his *Βιβλιοθήκη*, in forty books from the earliest times to Caesar's Gallic War (54 B.C.). He began with an *ἀρχαιολογία*. book 1 Egypt, book 2 Mesopotamia, India, Scythia, Arabia, book 3 North Africa, books 4–6 Greece and Europe (1–5 fully preserved, 6 fragmentary); books 7–17 covered from the Trojan War to Alexander the Great, books 18–40 from the *Diadochi* to Caesar (7–10 fragmentary, 11–20 fully preserved, 21–40 fragmentary). The narrative reproduces in its successive parts the tradition of Hecataeus, Ctesias, Ephorus, Theopompus, historians of Alexander (including Aristobulus and Cleitarchus), Hieronymus, Duris, Dyllius, Philinus, Timaeus, an early Roman annalist, Polybius, Posidonius. This material was added to the framework of a chronographical work, dependent on Apollodorus. Despite his universal conception of history and his aim of writing for the Graeco-Roman world, his work is undistinguished, with confusion arising from the

different traditions and chronologies, a compilation only as valuable as its authorities, but thus valuable to us.

TFXIS. I. Bekker (1853–4), L. Dindorf (1866–8), F. Vogel–C. T. Fischer (1888–1906); C. H. Oldfather et al. (1917–), Loeb). Tarn, *Alexander* 63 ff.; G. T. Griffith in *Fifty Years of Class. Scholarship* (ed. M. Platnauer, 1954), ch. 6. A. H. McD.

DIODORUS (4) of Alexandria (*PW* 53), mathematician and astronomer (1st c. B.C.), wrote a work, *Analemma*, on the construction of plane sundials by methods of descriptive geometry. Only the section on the determination of the meridian from three shadow-lengths survives, in Latin and Arabic versions, but later treatments of the subject are found in Vitruvius, Heron, and Ptolemy's *Analemma* (see MATHEMATICS § 7). The work was important enough for Pappus (q.v.) to write a commentary on it (iv. 246 Hultsch).

ANALEMMA: Proclus, *Hypotyposis*, 112 Manitius; *Anth. Pal.* 14. 139. The method of determining the meridian is preserved and identified as 'Diodorus' by al-Birūnī (see F. S. Kennedy in *Scripta Mathematica* 1950, 251 ff.). The same method is given (without author) by Hyginus, *Geometrici Veteres* ed. Lachmann (Berlin, 1848), 1.189 ff. (see Mollweide in *Monatliche Correspondenz* 1813, 396 ff.). The 'analemma construction' is found in Vitruvius, q. 8. 8–10 and Heron, *Dioptra* 35. Other works by Diodorus are referred to in *Comm. in Aratum* ed. Maass, 30 ff. (astronomical) and Marinus, *Comm. in Euclidis Data*, *Eucl. Opp. Omn.* vi. 234, 17 (mathematical). G. J. T.

DIODOTUS (1) **I**, satrap of Bactria-Sogdiana under Antiochus I and II, rebelled in 256–255 B.C., the fifth regnal year of Antiochus II, and declared his independence. He used the coin-types of Antiochus II, but substituted sometimes his name and sometimes his portrait for those of Antiochus. He also issued, towards the end of his career, coins with his own name, type—'Zeus hurling thunderbolt'—and portrait. A unique coin with the title 'Soter' may also be attributed to him. He died c. 248 B.C. and was succeeded by his son Diodotus II (q.v.).

A. K. Narain, *The Indo-Greeks* (1957).

A. K. N.

DIODOTUS (2) **II**, (c. 248–235 B.C.), son of Diodotus I. Some of his coins bear the name of Antiochus but mostly they have his name, portrait, and type. The Parthians entered into an alliance with him.

A. K. Narain, *The Indo-Greeks* (1957).

A. K. N.

DIODOTUS (3), Stoic, teacher of Cicero c. 85 B.C., lived later in Cicero's house. He died c. 60 and made Cicero his heir.

DIOECESIS. To facilitate the control of the provincial governors by the central bureaucracy Diocletian divided the Empire (including Italy) into twelve dioceses, each administered by a *vicarius*. These *vicarii* were officially deputies of the praetorian prefects (*agens vices praefectorum praetorio*). After Constantine, the prefects ruled directly the dioceses in which their seats were located. The proconsuls of Asia, Africa, and Achaia, were not subject to vicarial authority. The Diocletianic dioceses were Britain, Gaul, Viennensis, Spain, Africa, Pannonia, Moesia, Thrace, Asiana, Pontica, and Oriens. Italy was in practice divided between the *vicarius Italiae* in the north and the *vicarius in urbe Roma* in the south. Few changes occurred till the decline of the diocesan organization in the fifth century. See VICARIUS.

Jones, *Later Rom. Emp.* 47 f., 373 ff.

B. H. W.

DIOGENES (1) of Apollonia (prob. Phrygian, not Cretan Apollonia), son of Apollonhemis and younger (?) contemporary of Anaxagoras (cf. Diog. Laert. 9. 57; fl. c. 440 or 430 B.C.), was an eclectic philosopher, carrying on the Ionian tradition with additions from Anaxagoras and Leucippus. Little is known of his life. He almost

certainly visited Athens, where his views aroused prejudice and were parodied by Aristophanes in the *Clouds* (423 B.C.).

WORKS: *On Nature* (*Περὶ φύσεως*), from which Simplicius quotes extensive fragments. Others cited, *Against the Sophists* (i.e. Cosmologists), a *Meteorology*, and *The Nature of Man*, are mere titles.

Diogenes revived the teaching of Anaximenes, whom he could scarcely have 'heard' (D.L. *ibid.*), that the primary substance is Air, endowing it with mind or intelligence, divinity, and all-disposing power. Its infinite transformations are effected by rarefaction and condensation. Diogenes argued that if things in the world, including Empedocles' elements, are to be affected by one another, they must be differentiations of the same underlying substance (fr. 2). Air is also the principle of soul and intelligence in living creatures, and essentially alike in all; it differs, however, in degrees of warmth for different species and individuals. Diogenes' physiological theories of generation, respiration, and the blood are important in the history of medicine, and Aristotle has preserved his account of the veins (*Hist. An.* 511^b30 f.). His cosmology follows traditional lines, with its flat round earth, but bears some resemblance to that of Anaxagoras. The heavenly bodies are pumice stones filled with fire. But he is no mere reactionary: like the Hippocratic writers he displays the scientific interest in details typical of his age. See also ANATOMY AND PHYSIOLOGY § 2.

DIOGENES (2) (c. 400-c. 325 B.C.), son of Hicetas of Sinope, ὁ κύων, founder of the Cynic sect. According to some authors (Diog. Laert. 6. 20-21) he came to Athens as an exile after he and his father, who had been in charge of the mint in Sinope after 362 (*Recueil général des monnaies grecques de l'Asie mineure*, 193), had been accused of παραχαράττειν τὸ νόμισμα. At Athens he lived in extreme poverty and continued παραχαράττειν τὸ νόμισμα in a metaphorical sense, by rejecting all conventions. Whether he was a personal disciple of Antisthenes (D.L. 6. 21 and *passim*) is doubtful on chronological grounds. But he seems to have been influenced by his philosophy, since there are many similarities in outlook, and since the originality of Diogenes apparently consisted more in the way in which he applied his philosophy in everyday life than in his theories as such.

His main principles were the following: Happiness is attained by satisfying only one's natural needs and by satisfying them in the cheapest and easiest way. What is natural cannot be dishonourable or indecent and therefore can and should be done in public. Conventions which are contrary to these principles are unnatural and should not be observed.

From this there results in practical life self-sufficiency (αὐτάρκεια), supported by ἀσκήσις (training of the body so as to have as few needs as possible), and shamelessness (ἀναιδέα). Mainly on account of the latter quality Diogenes was called κύων (dog), from which appellation the name of the Cynics is derived.

He illustrated his simple principles by pointed utterances and drastic actions. He probably wrote dialogues and tragedies, the latter in order to show that the tragic heroes could have avoided misfortune by following his principles. But many of the works attributed to him by later authors were spurious.

Although Theophrastus described his way of living and his disciple Metrocles collected anecdotes about him, the tradition about his life is obscured by the fact that

soon after his death he became a legendary figure and the hero of pedagogic novels (Eubulus, Cleomenes) and satirical dialogues (Menippus, Bion). The tradition on his philosophy was obscured by the tendency of the Stoics to attribute their own theories to him because they wanted to derive their philosophy from Socrates through the succession Antisthenes, Diogenes, Crates, Zeno.

It is uncertain whether Diogenes lived in Corinth for many years (so D.L. 6. 74; Dio Chrys. 8. 4; Julian, *Or.* 7. 212), and how, when, and where he died, since the tradition is conflicting.

His disciple Crates spread his philosophy. Diogenes had great influence on later literature through his caustic wit. He is stated (D.L. 6. 73, 80) to have written tragedies in which his doctrines were expounded, but the plays named as his were also ascribed to others. They were probably never acted.

Diogenes Laërtius 6. 20-81; tragic fr. in Nauck, *TGF* 807-9. E. Schwartz, *Charakterköpfe* (1904), ii. 1 ff.; K. von Fritz, *Philol. Suppl.*-Ud. xviii. 2; *Studi di Filologia Class.* n.s. v. 133 ff.; D. R. Dudley, *A History of Cynicism* (1937), 17 ff.; F. Sayre, *Diogenes of Sinope* (1938); R. Hoistad, *Cynic Hero and Cynic King* (1948). K. von F.

DIOGENES (3) of Seleucia on the Tigris, commonly called Diogenes of Babylon (c. 240-152 B.C.), pupil of Chrysippus, succeeded Zeno of Tarsus as head of the Stoic school. He visited Rome in 156-155 and greatly stimulated interest there in the Stoic creed. His most famous pupil was Panaetius, and his main influence was on the grammatical doctrine developed by the school. Works: *Περὶ φωνῆς τέχνη*; *Διαλεκτική τέχνη*; *Περὶ τῆς Ἀθρηνᾶς*; *Περὶ μαντικῆς*; *Περὶ τοῦ τῆς ψυχῆς ἡγεμονικῆς*; *Περὶ εὐγενείας* (all lost).

Testimonia and fragments in von Arnim, *SVP* iii. 210-43. M. Pohlenz, *Die Stoa* (1948-55), i. 180 ff., ii. 91 ff. W. D. R.

DIOGENES (4) of Tarsus, Epicurean of uncertain date, but probably identical with the author of a book on ποιητικὰ ζήτήματα (who fl. c. 150-100 B.C.).

DIOGENES (5) of Oenoanda (near modern Incekler in Turkey), an Epicurean of the second century A.D., was unknown before the discovery, in 1884, of parts of an inscription set up at his expense to proclaim the philosophy of Epicurus.

Diogenes, who was dying of a heart disease, issued his manifesto 'out of compassion' for his fellow men. In the Epicurean tradition he wished them to be freed from superstitious fear and to discover the true source of ἀταραξία. Though much of the text remains still buried, the published fragments include sections on Epicurean Physics and Ethics, an attack on ψευδοδοξία and the doctrines of rival philosophies, thoughts on old age, some original sayings of Epicurus, and Diogenes' testament. Part of the *Physics* is in the form of a letter (*Περὶ ἀπειρίας κόσμων*) written from Rhodes, where Diogenes may have been connected with an Epicurean school. Another epistle, from a son to his mother, was attributed by Cousin to Epicurus himself (*BCH* 1892, 68 ff.; cf. R. E. Philippson, *PW Suppl.* v (1931)).

Text: J. William (Leipzig, 1907, with comm.); A. Grilli (Milan, 1960); C. W. Chilton (Leipzig, 1967).

STUDIES. Ueberweg-Fraechter, *Grundriss* 578 f.; C. W. Chilton, *AJArch.* 1963, 285 f.

DIOGENES (6) **LAERTIUS**, also called Laërtius Diogenes, author of an extant compendium on the lives and doctrines of the ancient philosophers from Thales to Epicurus. Since he omits Neoplatonism and mentions no philosopher after Saturninus, he probably lived in the first half of the third century A.D. Nothing whatever is

known of his life, not even where and with whom he studied philosophy.

After an introduction on some non-Greek 'thinkers', such as the Magi, and some of the early Greek sages, he divides the philosophers into two 'successions' (see PHILOSOPHY, HISTORY OF), an Ionian or Eastern (I. 22-VII) and Italian or Western (VIII), and ends with the 'sporadics', important philosophers who did not found successions (IX-X). This arrangement disperses the Presocratics in books I, II, VIII, and IX.

In X. 138 Diogenes speaks of giving the finishing touch to his entire work; but the book is such a tissue of quotations industriously compiled, mostly from secondary sources, that it could have been expanded indefinitely. Diogenes usually drew his material on any one philosopher from more than one earlier compilation, depending by preference on such writers as Antigonius of Carystus, Hermippus, Sotion, Apollodorus of Athens, Sosicrates of Rhodes, Demetrius and Diocles of Magnesia, Pamphila, and Favorinus, all of whom were themselves industrious compilers. Thus Diogenes' material often comes to us at several removes from the original. Fortunately, he usually names his sources, mentioning over 200 authors and over 300 works by name. As a rule he changes sources continually. Hence his reliability and value also change from passage to passage. For example, his account of Stoic doctrine (VII. 39-160) is reliable and his long quotations from Epicurus are invaluable when separated from the inserted marginalia that sometimes interrupt the sense. But some lives, as Heraclitus', are mere caricatures, and some summaries of doctrine are vitiated by philosophic distortion: for instance, Aristotle's doctrines are viewed through Stoic, perhaps also Epicurean, eyes.

Diogenes also wrote some wretched poetry, which he quotes more than two score times and of which he published a separate edition, not extant (I. 39).

He may have been a Sceptic, for he shows Sextus Empiricus' impartiality towards all schools. He includes praise of Epicurus and the Cynics, addresses part of his work to a woman interested in Platonism (III. 47) and another part to a person interested in Epicurus (X. 29); and once he speaks of a Sceptic as 'our Apollonides' (IX. 109). Any or all of these passages may, however, have come from Diogenes' sources.

TEXTS. H. Heubner (1828); C. G. Cohet (1850, with Latin trans., on app. crit.); O. C. T., H. S. Long (1964). DIOGENIANUS (1), Epicurean. Eusebius quotes many passages from his polemic against Chrysippus' doctrine of fate. His date is unknown, but he probably belongs to the second century A.D., when the polemic of the New Academy against Chrysippus was at its height.

Ed. A. Gercke, *Jahrb. für klassische Philologie*, Suppl. 14. 748.

W. D. R.

DIOGENIANUS (2), of Heraclea, of the age of Hadrian. Besides geographical indexes, a collection of proverbs, and other works, he compiled in five books an alphabetically arranged epitome of the Lexicon of Pamphilus as abridged by Vestinus. This epitome was used by Hesychius, who refers to it under the title of *Περὶ ὀνομάτων*, by Photius and other Byzantine lexicographers, and by the scholiasts on Plato, Callimachus, and Nicander.

Edition, E. L. von Leutsch and F. G. Schneidewin, *Paroemiographia* 1. 177, n. 1. Norden, *Hermes* 1892, 625. R. Reitzenstein,

Geschichte d. griech. Etymologika (1897), 417 ff.; K. Latte, *Hesychii Alexandrini lexicon* i (1953), x. u ff. P. B. R. F., R. B.

DIOMEDES (*Διομήδης*), in mythology (1) a Thracian, son of Ares and Cyrene, king of the Bistonians (Apollod. 2. 96). To capture his man-eating horses was the eighth labour of Heracles (q.v.).

(2) Son of Tydeus (q.v.), and Deipyle, daughter of Adrastus (q.v.; Hyg. *Fab.* 69. 5 and often). He took a prominent part in the Trojan War, wounding Aphrodite and Ares by help of Athena, and overcoming a number of the foremost Trojans (*Il.* 5. 1 ff.), but behaving chivalrously to his hereditary guest-friend Glaucus the Lycian (q.v.; *ibid.* 6. 119 ff.). He and Odysseus raid the Trojan camp, killing Rhesus (q.v.; *ibid.* 10. 219 ff.). Throughout the poem, and especially in the second half, he is the author of wise and bold counsels. His part in the expedition of the Epigoni against Thebes (cf. ADRASTUS) is mentioned in the *Iliad* (4. 406, cf. Apollod. 3. 82 ff.). In the post-Homeric Trojan cycle he is conspicuous. He shared with Odysseus in the murder of Palamedes (q.v.; Paus. 10. 31. 2, quoting the *Cypria*). He and Odysseus brought Philoctetes from Lemnos, (*Hyg. Fab.* 102. 3; cf. PHILOCTETES). The same pair stole the Palladium from Troy (Hesychius and the *Suda* s.v. *Διομήδης ἀνάγκη*, from the *Little Iliad*). Two other cycles of his adventures are: (a) In Calydon; his grandfather Oeneus having been robbed in old age of his kingship by the sons of Agrius, Diomedes killed them all but two, gave the throne to Oeneus' son-in-law Andraemon, and brought Oeneus to the Peloponnesus (Apollod. 1. 78). (b) After the return from Troy he found his wife Aegialeia unfaithful, came to Italy, where his companions were turned into birds (Stith Thompson, *Index* 88), and finally received heroic or divine honours after his death or disappearance (Farnell, *Hero-Cults*, 289 ff.). Diomedes is not a favourite figure in art, but is shown sometimes from the early fifth century, in combat with Aeneas or Hector, and in scenes from the Doloneia and the theft of the Palladium, generally in company with Odysseus (Brommer, *Vasenlisten* 2, 287 f., 305 f., 334). H. J. R.; C. M. R.

DIOMEDES (3) (late 4th c. A.D.), grammarian, who wrote an *Ars grammatica* in three books (ed. Keil, *Gramm. Lat.* i. 290-529). His work is of value because, though he rarely mentions his sources, he clearly relied upon earlier grammarians who discussed and illustrated the usages of Republican authors. Parallels between his work and that of Charisius (q.v.) seem to indicate that he borrowed from his contemporary.

Schanz-Hosius, § 834.

J. F. M.

DION (c. 408-354 B.C.), brother-in-law and son-in-law of Dionysius I, was in an influential position at his court and that of his successor. Impressed by Plato's teaching when that philosopher visited Sicily in 389, he tried to make Dionysius II an example of the 'philosopher king'; but, suspected of aiming to supplant him, he was forced into exile. Residing in Athens, he was closely associated with the Academy. In 357, after Dionysius' hostility had intensified, he led a small expedition to Sicily and succeeded in liberating Syracuse. But, as a member of the tyrants' family and oligarchic by political disposition, he lost his hold on popular enthusiasm; the Syracusans preferred his lieutenant Heracleides, who had won a great victory over Dionysius' admiral Philistus. Dion withdrew to Leontini, but was recalled when Dionysius counter-attacked. Once the danger was over, his discord with Heracleides revived, and Dion finally had him assassinated. Dion's rule became increasingly authoritarian, despite his alleged attempts to govern on Platonic

principles, and in 354 he was murdered at the instigation of his follower and fellow Academic Callippus.

Historical tradition, based chiefly on his Platonic connections, has been generous to Dion. A capable soldier, he lacked resolution and foresight, and the political circumstances of post-liberation Syracuse proved too much for him.

See also DIONYSIUS I, DIONYSIUS II, PLATO (1).

H. Herve, *Dion* (1956); Renata von Scheliha, *Dion* (1934)—an especially laudatory treatment; H. D. Westlake, *Durham University Journal*, N.S. vii (1946), 37 ff. A. G. W.

DIONE (Διώνη), consort of Zeus at Dodona, Farnell, *Cults* i. 39, who conjectures that she is the local form of the Earth-Mother; but her name is simply a feminine of Zeus (cf. Cook, *Zeus*, ii. 350 and note 6), which suggests rather a sky-goddess. Nothing definite is known of her cult (which was practically confined to Dodona and Athens, where it was introduced in the late fifth century); if the original consort of Zeus, she was ousted by Hera (q.v.), and from Homer (*Il.* 5. 370) on she is one of his mistresses or secondary wives, mother of Aphrodite, or even Aphrodite herself. H. J. R.

DIONYSIA. Many festivals of Dionysus had special names, e.g. the Anthesteria (q.v.), the Lenaea (q.v.), etc.; the latter are, however, in inscriptions styled Διονύσια τὰ ἐπὶ Ἀθηναίων or ἐπιλήναια Δ. (Arist. *Ath. Pol.* 57; *IG* ii. 1496 A, b 105, 1672, 182) and the term Dionysia was given to such festivals at which dramatic performances took place. With the great and ever increasing popularity of the drama, Dionysia were instituted almost everywhere; their origin is found in Athens. Athens had (a) τὰ κατ' ἀγρούς, (b) τὰ ἐν ἄστει or τὰ μεγάλα Δ. The rustic Dionysia were celebrated in Poseideon and the city Dionysia in Elaphebolion.

(a) Rustic Dionysia are known from many Attic demes (those at Piraeus and at Eleusis being apparently specially important) through inscriptions, but only because of the dramatic performances which took place at them, and these are obviously borrowed from the city Dionysia. Fortunately Aristophanes gives a vivid description of the procession at the merry rustic festival (*Ach.* 247 ff.). First comes the daughter of Dicaeopolis as *kanephoros*, then two slaves carrying the phallus, and last Dicaeopolis himself singing an obscene lay in honour of Phales. Plutarch, *Non posse suavi vivi sec. Epic.* 1098b, mentions the cries and the riot at the rustic Dionysia. A special feature was the ἀσκολιασμός, youths balancing on a full goat-skin; see ΑΣΚΟΛΙΑΣΜΟΣ. There are remains of theatres at Thoricus, Rhamnus, and Icaria.

(b) The City Dionysia were celebrated in honour of Dionysus Eleuthereus. This god was introduced into Athens by Pisistratus from the village of Eleutherae in the borderland between Attica and Boeotia. A temple was built to him on the southern slope of the Acropolis, and a second temple was erected close at hand, probably in the last years of the fifth century B.C. The orchestra where the dramatic performances took place was adjacent; the stone theatre was built by Lycurgus about 330 B.C. The fact that tragedy has its origin in this cult does not necessarily contradict the commonly accepted opinion of Aristotle that tragedy arose from the dithyramb and the *satyricon* (i.e. a primitive impersonation by satyrs). At Eleutherae Dionysus was called μελαναιγίς, 'he who is clad in a black goat-skin', and a myth tells of a duel between Xanthus and Melanthus in which Dionysus appeared.

The City Dionysia was a great festival to which people flocked from all parts. The statue of Dionysus was brought to a temple in the Academy and, coming hence, the god made his epiphany with much pomp; phalli were

carried in the procession, which went to the temple on the southern slope of the Acropolis where sacrifices were performed. Inscriptions give the information that, after the sacrifice, the ephebes carried Dionysus into the theatre by torchlight in order that he might be present at the dramatic performances (M. P. Nilsson, *JDAI* 1916, 336 ff.; P. Stengel, *ibid.* 340 ff.). When the theatre was filled with people the surplus of the State revenues was carried through the orchestra and the sons of men who had fallen in war were given panoplies.

The performances at the City Dionysia comprised lyric choruses sung by men and boys as well as tragedies and comedies. The Marmor Parium, ep. 43, gives the information that Thespis performed the first drama ἐν ἄστει at a date which is mutilated, but must fall between 536 and 532 B.C.; the *Suda* says 535. Comedy was introduced later, a few years before the Persian Wars (see COMEDY, OLD). For the very important but badly mutilated inscriptions which enumerate the victories see A. Wilhelm, *Urkunden dramatischer Aufführungen (Sonderschriften des österreichischen archäologischen Instituts vi)* (1906).

DIONYSIUS (1) I (c. 430–367 B.C.), tyrant of Syracuse, was originally an adherent of Hermocrates (q.v.). After the Syracusan failure to relieve Acragas in 406, he induced the assembly to elect new generals, himself among them. Later he supplanted his colleagues, obtained a bodyguard, and was regularly re-elected *strategos autokrator*. But he failed to halt the Carthaginian advance, and was faced with an aristocratic revolt. In this situation he negotiated an unfavourable peace with Carthage, overcame the domestic opposition, and converted Ortygia into a personal stronghold. With his power consolidated he prepared to meet the Carthaginians on better terms, and enlisted large forces of mercenaries and armaments-workers. Meanwhile he destroyed Naxos (q.v.), planted settlers of his own in Leontini and Catania, and extended his control over many of the native Sicels.

Reopening hostilities in 397 he captured Motya (q.v.) after a notable siege, but next year Himilco (q.v. 2) advanced to Syracuse, defeating Dionysius' fleet and besieging the city. Dionysius averted a Syracusan uprising and, helped by Peloponnesian intervention and plague among the Carthaginians, overcame the crisis. A further Carthaginian attack in 392 was repulsed, and he was able to make an advantageous peace. The war also strengthened his hold on the interior of Sicily, and by 390 the island was divided into Syracusan and Carthaginian 'empires', separated by the River Mazarus. The phrase 'archon of Sicily', appearing in Athenian documents concerning him, seems to be a *de facto* statement of his position, not an official title.

He next intervened in Italy. In alliance with Locri and the Lucanians he defeated a coalition of Italian Greeks at the River Elleporus (388) and destroyed Rhegium (386). His victories, and good relations with Taras, gave him effective control over most of Magna Graecia, and by friendship with Alcetas of Molossia and by colonizing Issa he brought his influence to the Adriatic. Fortified by this increase of empire he again made war on Carthage (382), but was heavily defeated at Cronium (375?) and ceded territory beyond the Halycus. A third war, begun in 368, brought him to Lilybaeum and was in progress when he died.

In Greece his close relationship with Sparta was an important factor in the political situation. The Athenians tried vainly to counter it, and in 387 and 373 his inter-

vention seriously affected them. In 368/7 an alliance between Dionysius and Athens was finally achieved, but the tyrant died as soon as it was made.

His rule brought prosperity to Syracuse, but was expensive. Magnificent silver coinage went to pay his mercenaries, and many subterfuges to keep his treasury filled are reported. Although his government is traditionally considered oppressive (a tradition partly due to Plato, whose visit to his court was not a success), there is nothing to show that he was unpopular with the bulk of the Syracusan people. He fancied himself a tragic poet; but though he won the Athenian Lenaea in 367 with his *Ransoming of Hector* (an award which perhaps had political overtones) his plays are generally regarded as poor. His possession of Aeschylus' desk and the pen, writing-tablets, and harp of Euripides did not apparently add to his inspiration.

He married (1) Hermocrates' daughter, who committed suicide in 405, (2) Aristomache of Syracuse and Doris of Locri simultaneously. His successor was the eldest son of the last-named. He was a tyrant in the grand manner. If his character had few attractive features, the success of his rule in its combination of vigour, skill, and panache was and remains impressive.

K. F. Stroheker, *Dionysius I* (1958); A. G. Woodhead, *The Greeks in the West* (1962), 89 ff.; for the tragedies see Nauck, *TGF* 793 ff. A. M.; A. G. W.

DIONYSIUS (2) II, eldest son of Dionysius I (q.v.), succeeded his father in 367/6 B.C., when about 30 years of age. He made immediate peace with Carthage, and the first decade of his reign passed undisturbed save within the court, where rival factions contended for influence over an inexperienced ruler. While maintaining his father's empire Dionysius lacked his military ambitions and political shrewdness. He welcomed philosophers to his court, and himself wrote poetry and philosophic studies. His chief minister was the historian Philistus (q.v.). The attempt of Plato to turn him into a philosopher-king miscarried, and resulted in the repudiation of both Plato and Dion (q.v.) (366/5 B.C.). A further visit by Plato in 361 only widened the breach.

During Dionysius' absence in Italy (357/6) in connexion with two newly founded colonies in Iapygia, Dion seized Syracuse, although Ortigia resisted until 355. Dionysius held Rhegium till c. 351 and Locri till 347/6, when he recovered Syracuse. But by 344 he was blockaded on Ortigia by Syracusan rebels under Hicetas of Leontini, assisted by a Carthaginian fleet. He surrendered to the recently arrived Timoleon (q.v.), whom he probably thought he could use against his enemies; but he was held for a time at Catana, and then shipped to Corinth where he lived many years, a famous object-lesson on the fate of tyrants.

H. Berve, *Dion* (1956), Renata von Schellha, *Dion* (1934); Glenn R. Morrow, *Plato's Epistles* (1962) A. G. W.

DIONYSIUS (3), AELIUS, an important Atticist lexicographer, of the age of Hadrian. He compiled ten books of *Ἀττικά λέξεις*. See PAUSANIAS (4).

DIONYSIUS (4) THE AREOPAGITE, an Athenian mentioned in Acts xvii. 34 as converted at Rome by St. Paul's preaching. Of the works ascribed to him, (1) *Περὶ τῆς οὐρανίας ἱεραρχίας*, (2) *Περὶ τῆς ἐκκλησιαστικῆς ἱεραρχίας*, (3) *Περὶ θεῶν ὀνομάτων*, (4) *Περὶ μουσικῆς θεολογίας*, (5) 10 letters, (6) a Liturgy, the four first-named are a daring fusion of Christianity with Neoplatonism, and had an enormous influence throughout the Middle Ages. They are certainly not by St. Paul's Dionysius; they draw on Proclus (q.v.) and probably date from c. 500. It has been conjectured that the ascription of them to the Areopagite is due to confusion between him

and another Dionysius (? Dionysius of Rhinocolura, c. 370), but it is arguable that the author deliberately tried to pass them off as the work of a contemporary of St. Paul.

Ed. Migne, *PG*, vols. 3, 4.

W. D. R.

DIONYSIUS (5) of Byzantium (fl. c. A.D. 175), a Greek. Of his *Ἀνάμνησις τοῦ Βοσπόρου*, 'Voyage up the (Thracian) Bosphorus', part of a Latin translation survives (Pierre Gilles, *de Bosp. Thrac., Libri III*).

GGM 11. 1 ff.; Gk., C. Wescher, 1874.

DIONYSIUS (6) CHALCUS (5th c. B.C.), poet, so called after his introduction of bronze currency into Athens; he took part in the colonization of Thurii (Plut. *Nic.* 5), wrote sympotic elegies, some of which began with a pentameter (Ath. 602c), of a somewhat riddling character, with notable metaphors.

TFX1 Diehl, *Anth. Lyr. Graec.* 1. 1, 88–90. Criticism, R. Reitzenstein, *Epigramm und Skolion* (1893), 51; Wilamowitz, *Hell. Licht.* 1. 97. C. M. B.

DIONYSIUS (7) of Halicarnassus, rhetor and historian, who lived and taught at Rome for many years from 30 B.C. His enthusiasm for all things Roman finds its clearest expression in his *Roman Antiquities* (*Ῥωμαϊκὴ Ἀρχαιολογία*) which began to appear in 7 B.C. The first ten of the twenty books survive; in its complete form the work went down to the outbreak of the First Punic War. A moralizing history, a panegyric, and a vast exercise in *μῦθους*, it is also a work of careful research and a valuable supplement to Livy. Dionysius regarded it as his masterpiece, and it exemplifies the literary theories he taught. These are to be found in his *scripta rhetorica*, especially: (i) *περὶ μῦθου*, of which only fragments survive, in which the judgements on individual authors coincide largely with those in Quintilian 10. 1; (ii) a series of discussions of the orators (Lysias, Isocrates, Isaeus, Demosthenes); the preface to this collection (*περὶ τῶν ἀρχαίων ῥητόρων*) explains Dionysius' distaste for 'Asiatic' rhetoric (*Μυσὴ ἢ Φρυγία τις ἢ Καρικόν τι κακόν*), his hopes for an Atticist revival, and his consciousness that this happy change is due to the sound taste of the Roman governing class; (iii) a group of occasional works: *On Dinarchus*, *On Thucydides*, two letters to Ammaccus (one on Demosthenes' alleged indebtedness to Aristotle, the other again on Thucydides), and a letter to Cn. Pompeius on Plato, of whose 'dithyrambic' style Dionysius (like Caecilius and unlike Longinus) was very critical; (iv) *περὶ συνθέσεως ὀνομάτων*, the only surviving ancient treatise on word-arrangement and euphony, perhaps the most interesting and most difficult of his works: the detailed critique on *Odyssey* 11. 593–6 in ch. 20 is a fascinating example of his technique.

Dionysius makes great use of traditional critical categories (*χαρακτῆρες λέξεως*, *ἀρεταὶ λέξεως*, see LITERARY CRITICISM, § 6) and, especially in the books on the orators, frequently gives the impression of 'awarding marks' on inflexible principles; he is none the less an acute and sensitive stylistic critic, and he understood the importance of linking historical study of the orators with the purely rhetorical and aesthetic.

Antiquitates, ed. C. Jacoby (1885–1925). E. Cary (Loeb, 1937–50); *Opuscula*, ed. H. Usener–L. Rademacher (1890–1929). W. Rieu Roberts, *Three Literary Letters* (1901); *On Literary Composition* (1910). S. F. Bonner, *The Literary Treatises of Dionysius: a study in the development of critical method* (1939). D. A. R.

DIONYSIUS (8) of Heraclea on the Pontus (c. 328–248 B.C.) studied under Heraclides Ponticus, Menedemus, and Zeno, and became one of the most voluminous writers of the Stoic school. He also wrote poetry (including a tragedy, *Παρθενοπαῖος*) and was an admirer and imitator of Aratus. An attack of illness in old age led him

to abandon the Stoic creed that pain is not an evil and to adopt the view that pleasure is the end of life (hence his nickname *ὁ μεταθέμενος*). He starved himself to death.

Testimonia in von Arnim, *SVF* 1 93-96.

W. D. R.

DIONYSIUS (9) 'PERIEGETES' ('The Guide'), Greek author, in Hadrian's time (?), of *Περιήγησις τῆς οἰκουμένης* in 1,185 hexameters (for schoolboys?), describing in pseudo-epic style the known world chiefly after Eratosthenes, taking little account of subsequent discoveries: land, elliptic (east-west), three continents; ocean, with inlets; Mediterranean; Libya; Europe; islands; Asia. Lost works attributed to Dionysius: *Βασσαρικά* = *Διονυσιακά*; *Λιθικά* (on gems); *Ὀρνιθιακά*; *Γιγαντιάς*.

GGM 11 xv ff., 103 ff.; A. Garzya, *Dionysii Ixeuticon* (Teubner, 1967, prose-parafrase of the *Ὀρνιθιακά*), E. H. Bunbury, *Hist. Anc. Geog.* (1879) ii 480 ff., PW v 915-25. Thomson, *Hist. Anc. Geog.* 228 f., 302, 304, 329 f. E. H. W.

DIONYSIUS (10) of Philadelphia, reputed author of an extant poem, *Ὀρνιθιακά*, which may, however, be by Dionysius Periegetes.

Ed. F. S. Lehrs, *Poetae Bucolici et Didactici* (1851).

DIONYSIUS (11) of Samos, Hellenistic 'cyclographer', published a *κύκλος ιστορικός* in seven books, a mythographical romance or, perhaps more probably, a mythological handbook.

FGH 1. 15.

DIONYSIUS (12) SCYTOBRACHION, an Alexandrian grammarian of the second or first century B.C., who appears to be cited also as Dionysius of Mytilene (or Miletus), wrote a mythological romance, Euhemeristic in tone and claiming authority by false reference to old writers. He treated of the Argonauts, followed here by Diodorus (books 3-4), the Trojan War, Dionysus and Athena, and the Amazons, and wrote *Μυθικά πρὸς Παρμένωνα*.

FGH i. 228, 500.

A. H. McD.

DIONYSIUS (13) of Sinope, Middle (?) Comedy poet. The learned cook provides humour in one piece (fr. 2).

FCG iii. 547 ff.; CAF ii. 423 ff.

DIONYSIUS (14) of Thebes, poet, teacher of Epaminondas (Nep. *Epam.* 2), regarded by Aristoxenus (ap. Plut. *De mus.* 31) as a practiser of the old style of music.

DIONYSIUS (15) surnamed **THRAX** (c. 170-c. 90 B.C.), son of Teres, of Alexandria, was a pupil of Aristarchus and later a teacher of grammar and literature at Rhodes, where his pupils provided him with the silver for a model to illustrate his lectures on Nestor's cup (Athenaeus 489, 492, 501). His only surviving work is the *Τέχνη γραμματική*, an epitome of pure grammar as developed by the Stoics and Alexandrians (see GRAMMAR). The work is essentially Alexandrian, but there are traces of Stoic influence. It defines grammar as an *ἐμπειρία*, but includes *ἀναλογία* (see CRATES (3) OF MALLOS) among its parts; classifies accents, stops, letters, and syllables; defines the parts of speech, with lists of their qualifications (cases, moods, etc.), and subdivisions, if any, giving examples; and concludes with some paradigms of inflection. There is no treatment of syntax in the work. It had, however, an immediate vogue which lasted until the Renaissance, and its authority was continued in the catechisms derived from it which then took its place. Latin grammar early fell under its influence (see, e.g., Remmius Palaemon), and through Latin most of the modern grammars of Europe are indebted to it. Through

Syriac and Armenian adaptations its influence spread far beyond Europe. An immense corpus of commentary grew up in Hellenistic, Roman, and Byzantine times around Dionysius' brief text.

EDITION. Uhlig, in Teubner's *Grammat. Gr.* (1883).

SCHOLIA. Hilgard, same series (1901). R. H. Robins, *Ancient and Medieval Grammatical Theory in Europe* (1951), 36 ff.; V. de Benedetto, *Ann. della Scuola Normale Superiore di Pisa* 1958, 109 ff.; 1959, 87 ff. P. B. R. F.; R. B.

DIONYSIUS (16) (? 2nd c. A.D.), a Greek, son of Calliphron, author of *Ἀναγραφή τῆς Ἑλλάδος* (for schoolboys?); 150 feeble iambs survive: preface (acrostics); Ambracia-Peloponnesus; [gap]; Cretan cities; Cyclades and Sporades Islands.

GGM 1. lxxx, 238-43.

DIONYSUS, the god much more of an emotional religion than of wine (q.v.). He is rarely mentioned in Homer, for, like Demeter, he was a popular god who did not appeal to the Homeric knights, but the myth that Lycurgus persecuted him and his nurses is told (*Il.* 6. 130 ff.). From Hesiod (*Theog.* 940 ff.) on, his parents are Zeus and Semele (q.v.).

The general opinion, shared by both ancient and modern authors, that he came from Thrace is well founded. His cult was widely spread in Thrace (see RELIGION, THRACIAN), and the Thracian and Macedonian women were especially devoted to his orgia. The myths of invasions of Boeotia and Attica by Thracians are not to be wholly disregarded. They may be ascribed to the very beginning of the last millennium B.C., and the Thracians may have brought the cult to Greece. However, there was a certain connexion between Dionysus and Minoan religion, and the occurrence of his name in isolation on Linear B tablets suggests that he was not unknown in Greece in primitive times. Our legends may describe a revival or reintroduction. Boeotia and Attica were its chief seats; in the Peloponnese it is less common. Myths, e.g. of Pentheus and the daughters of Minyas, prove that it swept over Greece like wildfire and that the cause was its ecstatic character which seized chiefly on the women. They abandoned their houses and work, roamed about in the mountains, whirling in the dance, swinging thyrsi and torches; at the pitch of their ecstasy (see ECSTASY) they seized upon an animal or even a child, according to the myths, tore it apart, and devoured the bleeding pieces (Farnell, op. cit. *infra*, 302 ff.). This so-called omophagy is a sacramental meal; in devouring the parts of the animal the maenads incorporated the god and his power within themselves. Dionysus was sometimes believed to appear in animal form; he is called 'bull', 'bull-horned', etc. He himself and his maenads are clad in fawn-skins. Sometimes it is told that the maenads wore masks. The mask was characteristic of his cult; his image sometimes consisted of a mask and a garment hung on a pole, but these masks are human. This feature reminds us of primitive customs and is important with regard to the fact that the drama has its origin in the cult of Dionysus. The descriptions of his orgia referred to, in which the votaries are depicted as capable of all kinds of miracles, possessed by the god, enjoying communion with wild life, vegetable and animal, and able to overcome any human resistance (e.g. Eur. *Bacch.* 680 ff.), are mythical and literary, but votaries did in fact bear the god's name, *bakchoi* (Pl. *Phaed.* 69 c). Orgia of a milder kind were celebrated in historical times on Mt. Parnassus by official cult associations of women, and there is a trace of the omophagy in a State cult. The frenzy of the orgia was tamed by Apollo, who admitted Dionysus at his side at Delphi and brought his cult into the gentler forms of State religion.

Ancient authors say, however, that Dionysus also

came from Phrygia. The Phrygians, who were a Thracian tribe, believed that Dionysus (cf. Phrygian *Diounsus*: W. M. Calder, *CR* 1927, 160 ff.) was bound or slept in the winter and was free or awake in the summer. They knew also of a child-god. This Dionysus is apparently a god of vegetation. His other name, Bacchus, is a Lydian word. It is remarkable that the Dionysiac festivals of the Lenaea (q.v.) and the Anthesteria (q.v.), the spring festival in which Dionysus made his epiphany coming from the sea, are common to all Ionians, whilst other festivals of Dionysus are isolated. At Delphi Dionysus was venerated as a child in a winnowing fan and awakened by certain rites. It seems that Dionysus in a somewhat changed form came from Asia Minor across the sea. Thus Dionysus was a god of the vegetation, not of the crops but of the fruit of the trees including the vine. The phallus which was carried in the Dionysiac processions belongs to him as a god of fertility; he is never represented as phallic himself, but the Sileni and Satyrs who surround him are; they are daemons of fertility. This Dionysus was the god of wine, but wine has no great place in his cult in the early age, especially not in the orgia. The festivals of viticulture are few and rarely attributed to him, and we find him connected with a variety of plants—corn (Diod. Sic. 4. 4. 2), trees (Farnell, 96, 118 ff.), figs (Ath. 3. 78c; Hesychius s.v. *οὐκάρης*), ivy (Eur. *Bacch.* 106 etc.). On Attic vases he is, however, constantly represented with a drinking-horn, or a cantharus, and vine-branches. As time went on, he was more and more thought of as the god of wine, and we hear of wine-miracles in certain festivals.

A point of view particularly emphasized by some scholars is that he was the Lord of souls. The opinion of Rohde that the belief in immortality was introduced into Greece by Dionysus is now abandoned. While others, e.g. Miss Harrison, refer to the fact that the Anthesteria was devoted to the dead, these rites have nothing to do with Dionysus; the connexion had no intrinsic reason. Other similar festivals are too little known. But among the mystics Dionysus was associated with the Nether World, an idea which perhaps originated among the Orphics, in whose doctrines Dionysus had a great place. Thus Dionysus was introduced into mysteries other than the old orgia, but no one of them can be proved to be of old origin. Such mysteries became very popular in the Hellenistic and even more in the Roman age. In spite of the opinion of Cumont, these late mysteries of Dionysus seem to owe more to Greek than to Oriental tradition. That the idea of a happier life in the other world prevailed in them is proved by the fact that sarcophagi are often decorated with Dionysiac myths (see below). Dionysus was an ever popular subject of myths and stories in classical literature. Not to speak of his early adventures in escaping from Hera's jealousy (see *ATHAMAS*), his campaigns in the East are known to Euripides: their extension to India is modelled after those of Alexander the Great; they were celebrated in a voluminous epic by Nonnus at the end of antiquity. See *BACCHANALIA*, *MAENADS*.

Dionysus first appears in art in the early sixth century, and is thereafter exceedingly popular, especially in vase-painting: alone; with satyrs and nymphs or maenads; escorting Hephaestus to Olympus; sailing his vine-ship; with Semele, Ariadne, or Oenopion; drinking with Heracles. On the monument of Lysicrates he turns the pirates to dolphins; on Roman sarcophagi his eastern triumph is popular. In archaic art he is always bearded and robed; later often naked and young. The birth from Zeus' thigh and the handing of the baby to the Nymphs are shown on some fifth- and fourth-century vases.

The late mysteries: Cumont, *Rel. or.* 195, *AJArch.* 1933, 232 ff.; Rose, *Handb. Gk. Myth.* 149 ff.; W. K. C. Guthrie, *The Greeks and their Gods* (1950), ch. 6, 11. Jeanmaire, *Dionysos* (1951, speculative) M. P. Nilsson, 'The Bacchic Mysteries of the Roman Age', *Harv. Theol. Rev.* 1953, 175 ff. M. P. N. and H. J. K., C. M. R.

DIOPHANTUS of Alexandria (date uncertain, between 150 B.C. and A.D. 280) was the first Greek to make any approach to an algebraical notation. He wrote *Ἀριθμητικά* in thirteen books, six of which survive, and a tract on Polygonal Numbers. A third work, *Πορίσματα*, is lost, but some propositions in the theory of numbers are quoted from it in the *Arithmetica*. Diophantus works with numbers purely arithmetically and not geometrically as did classical Greek mathematicians. His work is in a tradition going back ultimately to Babylonian mathematics (see also *HERON*), but probably contains much that is original. In the preface to the *Arithmetica* he defines 'species' of numbers, which are, besides units (denoted by *Μο* for *μονάδες*), the various powers up to the sixth of the unknown quantity, for which he appropriates the word *ἀριθμός* denoted by the symbol *ς*. Its powers he denotes by *ΔΥ* (for *δύναμις*, square), *ΚΥ* (for *κύβος*, cube), etc. He has a symbol *Λ* for *minus*, denoting *λείψας*, a 'wanting', contrasted with *ὑπαρξίς*, 'forthcoming' or *plus*. Minus, he explains, multiplied by a plus gives minus, minus by minus, a plus. Expressions containing more than one 'species' he arranges according to powers, first the positive terms, then the negative terms all together. He shows how to solve simple and quadratic equations; he does not recognize negative roots of equations or negative numbers standing by themselves. His problems are mostly indeterminate or semi-determinate equations (single or simultaneous) of the second degree, and his methods are extraordinarily varied and ingenious; his object is always to find a solution in positive numbers (not necessarily integral as generally required in modern indeterminate analysis). The typical sort of problem solved is this: to find three numbers such that the product of any two of them *plus* their sum, or *plus* any given number, is a square. It was Diophantus' work which led Fermat to take up the theory of numbers, in which he made his world-famous discoveries.

CRITICAL TEXT, with Latin translation and scholia, by P. Tannery, (Cteubner, 1893, 1895).

TRANSLATIONS: T. L. Heath, *Diophantus of Alexandria* (1910, adapted, good commentary). French, P. Ver Eecke (1926); German, G. Wertheim (1890), A. Czwalina (1952).

On Diophantus' date see Jakob Klein in *Quellen und Studien zur Gesch. d. Math.* B3 (1916), 133 n. 23.

COMMENT: Heath, *Hist. of Greek Math.* ii. 440 ff.

T. H.; G. J. T.

DIOS wrote a history of Phoenicia cited by Josephus (*AJ* 8. 147-9; *Ap.* 1. 113-15).

DIOSCORIDES (1) (fl. 230 B.C.) has about forty epigrams in the Greek Anthology (q.v.), some based on the work of his predecessors Asclepiades (2), Callimachus (3), and Leonidas (2) (qq.v.). Eight deal with famous poets; many are paradoxical anecdotes. The rest—save one hate poem (*Anth. Pal.* 11. 363)—are lively love poems in the sharpest epigrammatic style.

Gow and Page, 1463 ff.

G. II.

DIOSCORIDES (2) **PEDANIUS** (1st c. A.D.) of Anazarbus, army physician, was well versed in pharmacological literature and had studied the subject of his interest from early youth in extensive travels before composing his book; he was ambitious as expert rather than as writer. All this he tells us himself. He lived under Claudius and Nero (41-68); Erotianus mentions him.

WORKS: 1. *Π. ὕλης ἱατρικῆς*, books 1-5, almost 600 plants, nearly 1,000 drugs. 2. *Π. ἀπλῶν φαρμάκων*, or *Εὐπόριστα*, books 1-2.

The *Materia medica* is a conscious attempt to give a system, not an alphabetical list of drugs. Remedies from the vegetable, animal, and mineral kingdoms are described in careful subdivisions. The observation is minute, the judgement sober and free from superstition. Dioscorides' book superseded all earlier literature and became the standard work of later centuries, in the East no less than in the West. See ROTANY § 6; MEDICINE, 1 (J).

TEXT *Materia medica*, M. Wellmann, i-iii (1907-14), contains both works, Wellmann's proof of genuineness of the second work (*Die Schrift d. D. Π. ἀπλῶν φαρμάκων*, 1914) not wholly convincing. Certainly spurious, *Π. θαλασσιῶν φαρμάκων*, *Π. ἰσθμίων*, K. Sprengel, in C. G. Kühn, *Medici Graeci* xxvi (1870); *De herbas femininis*, H. F. Kistner, *Hermes* 1896, list of plant synonyms, Wellmann, *Hermes* 1898.

DIOSCURI (Δῖοσκούροι, Attic -κοροί), the Sons of Zeus, a title (*Hymn. Hom.* 33. 1, of uncertain date; *Ildt.* 2. 43. 2; and often in Attic authors; not in any early passage) of the Tyndaridae (cf. TYNDAREUS), Castor and Polydeuces (latinized Pollux). They are the brothers of Helen, *Il.* 3. 237 ff., where it is apparently stated that they are dead, but cf. *Od.* 11. 300 ff., where they are 'alive' although 'the corn-bearing earth holds them', and the author explains that they are honoured by Zeus and live on alternate days, 'having honour equal to gods'. Here and in Hesiod they are sons of Tyndareus and Leda; later, as in Pindar (*Nem.* 10. 80), Polydeuces is son of Zeus, his twin Castor of Tyndareus, and at Polydeuces' request they share his immortality between them, living half their time below the earth, the other half in Olympus. The Homeric hymn (*supra*) makes them both sons of Zeus, and an account of which there is no certain mention earlier than Horace (*Sat.* 2. 1. 26) makes them both born from an egg, like their sister (see HELEN). They had a cult in Lacedaemon, where they were symbolized by the *dokana*, two upright pieces of wood connected by two cross-beams (Plut. *De frat. amor.* 478 a-b), and in many other States, chiefly but not exclusively Dorian (Argos, Athens, Dorian colonies in Sicily, etc.). See ANAKES.

The chief events in their mythology are three. When Theseus kidnapped Helen they made an expedition to Attica, recovered her, and carried off Aethra (q.v. for references). They took part in the Argonautic expedition, and on it Polydeuces distinguished himself in the fight against Amycus (q.v.). Their final exploit on earth was the carrying off of the two daughters of Leucippus, the Leucippides, Phoebe and Hilacira. Thereupon the nephews of Leucippus, Idas and Lynceus, pursued them (Pind. op. cit. 60 ff., who makes it a cattle-raid; Theoc. 22. 137 ff.). In the resulting fight Castor and both the pursuers were killed; the sequel of the shared immortality has already been mentioned, but some ingenuity seems to have been spent in determining whether they have since been always together or always separate, one being in Hades while the other is in Olympus (Rose, *Handb. Gr. Myth.* 248, note 4). They are often identified with the constellation Gemini (as Ps.-Eratosthenes 10), and are connected with stars as early as Euripides (*Hel.* 140). Of the miracles attending their cult, the most famous is that connected with the battle of the Sagra, which gave rise to the Roman story

of their appearance at Lake Regillus (Cic. *Nat. D.* 2. 6). The Locrians, being at war with the Crotonians, appealed for help to Sparta and were told that they might have the Dioscuri, whom they accepted. In the battle, which resulted in a complete victory for them, two gigantic youths in strange dress were seen fighting on their side (Justin 20. 3. 8; *Suda* s.v. ἀλγθέστερα τῶν ἐπὶ Σάγγῳ).

It is a still unsettled controversy whether they are in origin heroes of more than usual celebrity and popularity (they received divine honours here and there) or heroized ('faded') gods. In favour of the former view it may be urged that the earliest evidence (Homer, Hesiod fr. 94. 13, 27, and 31 Rzsch) knows nothing of their being anything more than important human beings, honoured after death as several others of their kind were; that they do not become more than heroes till relatively late and even in late traditions and theologizings retain much of their human origin, becoming stock examples of the possibility of transcendent human virtue attaining superhuman rank (as Horace, *Carm.* 3. 3. 9). For such a career a close parallel can be found in that of Heracles (q.v.). On the other side, however, can be cited a not inconsiderable list of divine twins, the most celebrated being the Sanskrit Āçvins. These are often connected with horses; the Dioscuri are on occasion λευκόπῳλοι, 'riders on white steeds', and Castor especially is a notable horseman. They not uncommonly have astral connexions, such as we have seen the Dioscuri have, though not very early and possibly only through one of their most picturesque functions, that of saviours of those in peril from storms at sea. In this capacity they appear as twin lights of St. Elmo's fire, which it would not be a hard thing to confuse mythologically with stars; see, for instance, Pliny, *HN* 2. 101. Certainly they are not infrequently seen in art with stars over the curious round caps which they wear. Moreover, possible traces of other twin gods have been discovered elsewhere in Greece, as for instance the Theban pair, Amphion and Zethus (see AMPHION), who are also sons of Zeus. But it cannot be said that these arguments are cogent as against the earlier date of the Homeric and Hesiodic passages; the original divine nature of the twins is no more than a possibility.

There is but one important identification of the Dioscuri with other figures; they tend to be confused with the Cabiri (q.v.). See, for some very interesting monuments connected with this and similar cults, F. Chapouthier, *Les Dioscures au service d'une déesse* (1935); in these, they (or deities identified with them) are grouped on either side of Helen. The connecting link is the common function of rescuing mariners.

In art they appear before the middle of the sixth century on metopes of the Sicyonian building at Delphi, with the Argo, and rustling cattle with Idas. In Attic black-figure they are shown with Tyndareus and Leda. Later the most popular subjects are: the Rape of the daughters of Leucippus; as Argonauts; at the Theoxenia; at the delivery to Leda of Nemesis' egg containing Helen. See also CASTOR and POLLUX.

Farnell, *Hero-Cults* 175 ff., and Nilsson, *GGR* 12. 406, for their cult and the controversy as to their origin. Roscher's *Lexikon*, s.v.; in art, Brummer, *Vasenlisten* 2, 360 ff. H. J. R.; C. M. R.

DIOSCURIDES or **DIOSCORIDES** (1st c. B.C. or A.D.) is reputed to have written *On Customs in Homer*, in which he is said to have interpolated the Homeric text, *On the Life of Homer's Heroes*, *Recollections* of sayings of famous men, *The Spartan Constitution*, *On Institutions*. But these may not be the work of one Dioscurides. Lengthy fragments survive in Athenaeus, Plutarch, and others.

PHG ii. 192 ff. R. Weber, *Leipziger Studien* ii (1888).

J. F. L.; R. B.

DIOTIMA, legendary priestess at Mantinea and teacher of Socrates; Plato in *Symp.* 201 d puts in her mouth his metaphysics of love. It is impossible to say whether Plato's fiction had any basis in fact, since we have no independent testimony.

DIOTIMUS (fl. 3rd c. B.C.) has a few epideictic and sepulchral poetic inscriptions in the Greek Anthology: *Anth. Pal.* 7. 173 is a good specimen of his quiet pathos. Gow and Page, 1719 ff. G. H.

DIOTOGENES, the nominal author of Pythagorean treatises on Holiness and on Kingship, is otherwise unknown. His *Ἡερί βασιλείας* defines the king as god's lieutenant on earth and the embodiment of law; it draws on an eclectic tradition and has been variously dated between early Hellenistic times and the second century A.D.

Stobaeus, I. 93. 4. 79-81 W-H (*Ἡερί δαωτητος*); 4. 263 70 W-H (*Ἡερί βασιλείας*). See ECPHIANUS. G. T. G.

DIPHILUS of Sinope, brother of Diodorus (q.v. 1), New Comedy poet, born c. 360-50 B.C., lived most of his life at Athens, but died at Smyrna probably at the beginning of the third century (the reference to him in Plaut. *Mostell.* 1149 is useless for establishing his death date: see M. Knorr, *Das griechische Vorbild der Mostell. des Plaut.* (1934), 7 f.). Wrote about 100 plays, winning three Lenaeon victories (*IG* II². 2325. 163). About sixty titles are known, mostly typical of New Comedy; the nine or so with a mythical connexion (e.g. *Danaides*, *Theseus*) need not all have been mythological burlesques: some could have taken their titles from a man aping a myth hero (cf. Ath. 10. 421 e on *Herakles*), others from a divine prologue (e.g. *Heros*). An unusual title is *Ἀληταίχης*, which was altered to *Στρατιώτης* when the play was rewritten, presumably for a second production (Ath. 11. 496 f: the two titles appear as separate entries in the Piraeus book catalogue; *IG* II². 2363). Diphilus' reference to 'gilded Euripides' (fr. 60: cf. the parody in fr. 73) suggests gentle ridicule shot with admiration. Many interesting fragments: fr. 17, the nationality of one's guests is important to a cook (cf. fr. 43); fr. 38, unfilial conduct of Ctesippus, son of Chaereas; frs. 69, 70, Archilochus and Hipponax anachronistically become Sappho's lovers; fr. 91, a vivid description of an unattractive woman.

A play of Diphilus was the original of Plautus' *Rudens*; the *Κληρούμενοι*, of Plautus' *Castina*; the *Συναποδνήσκοντες* of Plautus' lost *Commorientes* (Terence, *Ad.* 6, used a scene omitted by Plautus); and possibly *Σχεδία*, of Plautus' *Vidularia*. Although Diphilus' originals may have been completely remodelled in the Roman adaptations, certain characteristics common to all these latter can doubtless be attributed to the Greek poet: a delight in lively theatrical effects, with clearly contrasted scenes and characterization perhaps less sensitive than that of Menander.

FRAGMENTS. FGG IV. 375 ff.; CAF II. 541 ff. INTERPRETATION AND CRITICISM. A. Marigo, 'Difilo Comico', *Stud. Ital.* 1907, 375 ff.; G. Coppola, *Aene e Roma* 1924, 185 ff.; W. H. Friedrich, *Euripides und Diphilos* (1953); Webster, *Later Greek Comedy* 152 ff. W. G. A.

DIPLOMA, a pair of small bronze tablets recording the privileges granted to a soldier on discharge. These *diplomata militaria*—the term is modern—of which well over 200 are extant, were given to auxiliaries and *classarii* from the time of Claudius, and to members of the praetorian and urban cohorts from the time of Vespasian. The latest known is of A.D. 306. Down to about A.D. 140 the auxiliary and marine received personal citizenship, the legalization of his past or future marriage, and civic rights for his descendants. After this date, no doubt

because the citizenship was already held by many in the *auxilia*, the form for them was brought into line with that of the *diplomata* granted to the praetorians. Citizenship was still given to those requiring it, but this privilege was not extended to existing children; the grant of *conubium* remained, as it was necessary for the marriage of a citizen with a peregrine.

The legionary did not normally receive a diploma. The only exceptions to this rule are the two *Adiutrices* legions recruited from *classarii* in A.D. 68-9, and some soldiers of *X Fretensis* who were non-citizens enlisted in the same crisis. Two *diplomata* are extant, both of the third century, which were issued to members of the *equites singulares* (q.v.).

CIL xvi (texts of *diplomata*; ed. H. Nesselhauf). Konrad Kraft, *Zur Rekrutierung der Alen und Kohorten an Rhein und Donau* (1951), 106 ff. H. M. D. P.; G. R. W.

DIPYLON, a double gateway in a city-wall, the most famous example being at Athens in the Pottery Quarter (Cerameicus). The gateway comprised a rectangular courtyard open on the land side, closed by two double doors on the city side; each corner was enlarged to form a tower; a fountain-house adjoined the gateway on the city side. The complex dates from the time of Themistocles, but was rebuilt in the third century B.C. Through the Dipylon passed a broad road leading from the Agora to the Academy. A similar though smaller gateway 75 metres to the south-west protected the passage of the Sacred Way leading to Eleusis. Between the two gates stood the Pompeium, the marshalling place for the Panathenaic Procession (early 4th c. B.C.). From the eleventh century B.C. onward the area was the principal burial-ground of Athens. Bordering the road outside the Dipylon proper were the tombs of those who fell in war; here Pericles delivered the Funeral Oration. Nearby lay Harmodios and Aristogeiton, Cleisthenes and Pericles. The Sacred Way also was bordered by tombs of leading Athenian families and by small sanctuaries relating to the dead.

W. Judeich, *Topographie von Athen* (1931), 135 ff., 400 ff. G. Gruhens, *Arch. Anz.* 1904, cols. 384 ff. H. A. T.

DIRGE in Greek literature. The ancient critics seem to have distinguished between two kinds of dirge, the *ἐπικήδειον* sung actually over the dead body (Procl. ap. Phot. *Bibl.* 321^a30), and the *θρήνος*, a song sung in memory of the dead (Ammon. *Diff.* 54). The difference does not seem to have been observed by the Alexandrian editors of the lyric poets, and the Dirges of Simonides (frs. 7-12) and of Pindar (frs. 114-23) may well have included both kinds. The earliest evidence for such dirges is in *Il.* 18. 50-1, 314-16, 24. 472-4. In these a company laments, but the leader has a special part as *ἐξαρχος*.

E. Reiner, *Die rituelle Totenklage der Griechen* (1938), and H. Friber, *Die Lyrik in der Kunsttheorie der Antike* (1936), I. 38 f., II. 53 f.

For the dirge in Latin literature, see EPICEDUM, NENIA. C. M. B.

DISCUS (*δίσκος*), a flat circular piece of stone or metal, somewhat thicker in the centre. Extant specimens vary in weight from 3 to 15 pounds and in diameter from 3 to 12 inches, but many of these were dedicatory offerings rather than athletic implements. In throwing the discus, the athlete first swung the discus back in his right hand with a straight arm and turned his body to the right so that the left shoulder pointed in the direction of the throw. He then threw the discus with an underarm pull. The style varied in detail with the weight of the discus used. Throwing the discus was always an event for heavy men and it would seem that at the Olympic Games a heavy discus was used. The *balbis*, from which the throw was made, was a space defined by lines in front and at the

sides but not at the back. The method of throwing is illustrated in vase-paintings and by statues, notably the *diskobolos* of Myron.

R. L. H.

DISSOI LOGOI (labelled by H. Stephanus *Διαλέξεις*), a short surviving sophistic work written in Doric about 400 B.C., perhaps in Cyprus, perhaps at Cyrene. The contents have no originality; they are reminiscent now of Protagoras, now of Hippias, now of Gorgias, and confirm Plato's account of the ethical relativism characteristic of the Sophists.

Ed. Diels, *Vorleser.*¹¹ n. 405-16.

W. D. R.

DITHYRAMB. The origin of the word *δithyrambos* is not known, though it is almost certainly not of Hellenic origin. It first appears in Archilochus (fr. 77), who calls it the song of Dionysus and says that he, under the influence of wine, leads others in singing it. It was, then, from the beginning a choral song to Dionysus, though it need not yet have had any very definite form. It was reduced to order by Arion at Corinth c. 600 B.C., when it was sung by a regular choir and made to treat a definite subject. From Corinth it was brought to Athens by Lasos of Hermione (*Suda* s.v. *Λάσος*), and it soon became a subject for competition at the festivals of Dionysus. The first victor is said to have been Hypodocus of Chalcis in 509-508 B.C. (*Marm. Par.* 46). Hence till about 470 B.C. it attracted poets of great eminence such as Simonides, who won fifty-six prizes (fr. 79), Lasos, Pindar (frs. 60-77, not all for Athens), and Bacchylides (Odes 15-21). At this period it was composed like other choral odes, with regular strophe and antistrophe. The surviving fragments do not suggest any close connexion of their subjects with Dionysus or any special Dionysiac spirit, though the large element of narrative in them may be due to Arion's example. But about 470 B.C. its character began to change. The change, associated with the names of Melanippides, Cinesias, Philoxenus, and Timotheus, was largely musical, and since no note of their music survives, it is hard to estimate what happened. In the main the music seems to have become more important than the words and to have led to a degeneration of the text. A protest against this movement is to be seen in some lines of Pratinas (fr. 1). Other elements in the change were the abolition of the correspondence of strophe and antistrophe, the introduction of solo-songs, and the development of a pompous, affected language. The movement continued into the fourth century in the hands of Polyidus and Telestes. After the fourth century the dithyramb seems to have lost its importance, even at Athens, though before 300 B.C. the State took charge of the expenses of production. Inscriptions from Delos, from 286 to 172 B.C., show that at the Delian Dionysia and Apollonia competitions were still held, as they were at Miletus in the third century and at Teos and Samos in the second. Polybius (4. 20) notes that the Arcadians commonly sang dithyrambs in his time. The habit lasted in Athens into the imperial age, though no fragments of importance survive.

Pickard-Cambridge-Webster, *Dithyramb*, 1 ff.

C. M. B.

DIVERBIUM, dialogue in a comedy as distinct from *cantica* (q.v.).

DIVINATION (*μαντική*). Prediction by supernatural means of future events and interpretation of past occurrences is found throughout Greek and Roman civilization, showing contacts at various points, such as necromancy, prophecy, extispicy, or astrology, with Oriental cultures. The present account sketches Greek and Roman uses together, and for the sake of brevity neglects much of their chronological development.

2. Our most important ancient source, Cicero's *De Divinatione*, in 1. 11 and 2. 26 (possibly after Posidonius), divides the art into natural (or intuitive) and artificial (or inductive) types. This distinction is generally valid for Greek and Roman civilization, but originally all divination arises from one root: it is based on a concept that the soul of the prophet is in open contact with the whole world around him (see *MAGIC*).

3. Of Natural Divination no form seems more primitive than dreams, often mentioned from Homer onward. These might either be understood by the dreamer or require professional interpreters, whose lore, based partly on empiricism but chiefly on supposed resemblances (Arist. *Div. Somn.* 2. 464^{bb}), was preserved in practical dream-books, such as the *Onirocritica* of Artemidorus and Astrampsychus, or discussed in theoretical works, like Aristotle (op. cit.), Synesius, *De Insomniis*, and Macrobius, *Comm. in Somnium Scipionis*. A specialized form is incubation (q.v.; *ἐγκοίμησις*), practised at health-shrines, like those of Asclepius, by persons desirous of cures, and hence called iatromancy. Necromancy, or evocation of spirits of the dead, is already well developed in *Od.* 11, but though long employed, especially at certain localities (*psychomantia*), it was less respectable than most other methods. Related to it are varieties in which forms of the dead or of gods or demons appear on the surface of liquids or on mirrors.

4. Very important is prophecy (*vaticinatio*), in which the *vates* acts as the medium or mouthpiece (*προφήτης*) of a divine or demonic power possessing him, the process being related to poetic inspiration (cf. Plato, *Phaedr.* 244 a-b), and known as *ἐνθουσιασμός*; cf. [Arist.] *Probl.* 30. 1. 954^a34-8. *μαντική* is almost certainly related to *μαίνομαι* and, being *ἐνθεός*, implies *ἐκστασις* in the sense of 'not being yourself'. This ecstatic or 'frenzied' type of prophecy is greatly elucidated by the observations of modern abnormal psychology. Like telepathy and clairvoyance and like the ventriloquists (*ἐγγαστριμύθη*), the freer forms of prophecy, such as those of the shadowy Bacis (q.v.) and Musaeus (q.v. 1), seem hardly to have become institutionalized, but with the Sibyls (q.v.) and the oracles (q.v.), e.g. Delphi (q.v.), Dodona (q.v.), Lebadea, Oropus, and Ammon (q.v.), prophetic power became resident at fixed sites, where a succession of media regularly answered consultants. See, however, *PROPHECIES*.

5. Artificial divination may be roughly divided into prognostications from animate beings or from plants, and those from lifeless objects. Its oldest type is perhaps augury (see *AUGURES*) or the observation and interpretation of the number, species, flight, cries, eating, and other symbolic acts of birds. It was common in Greece from the time of Tiresias, Melampus (Porphyrus, *Abst.* 3. 3), and Calchas (*Il.* 2. 308-32), and at Rome was entrusted to the college of augurs (see *AUSPICUM*). Auguries might be deliberately sought (*impetrativa*) or offered to men unsought (*oblative*; cf. Serv. *Aen.* 6. 190), a variety of the former type more convenient for military use being the Roman observation of the sacred chickens. Similar features might be noted in the case of other animals, especially from their chance appearances during a journey (*evodia*; cf. A. S. Pease on Cic. *Div.* 1. 26). Still more important were indications derived from human beings, e.g. from their involuntary motions or twitchings (*παλμός, salisatio*), from sneezing, and from the large class of omens, where man is merely the tool of a temporarily possessing, superhuman, power (e.g. *Od.* 18. 112-17). Most important, during a long period and over a wide geographic range, is extispicy (or haruspicy), based on observation of the entrails—especially the liver (hepatoscopy) of sacrificial animals, for which see *HARUSPICES*. Predictions were also derived from miraculous growths

and actions of plants, e.g. of 'birth-trees' (see Donat. *Vit. Verg.* p. 2 Brummer), the residence of an 'external soul'.

6. Divination from lifeless objects has varied forms. The classification by Varro (ap. schol. Dan. *Aen.* 3. 359; *Isid. Etym.* 8. 9. 13) into four elemental groups (*geomantis, aeromantis, pyromantis, hydromantis*) is suggestive but unduly formal. Numerous are above all the uses of lots (cleromancy), in which a divine power guides the fall of dice or knuckle-bones (astragalomancy) or the drawing (often by the hand of an innocent child) of inscribed *sortes* from some receptacle. This practice was often localized at particular sites, such as Claros, Praeneste, Antium, the fountain of Clitumnus, and Patavium. The inscribed lot is naturally later in origin than the introduction of writing, and from it was perhaps derived bibliomancy, or the random consultation of books to discover prophetic advice. The great poets were often no used (rhapsodomancy), perhaps as being themselves divinely inspired. Thus we find the *sortes Homericæ*, the *sortes Vergilianæ*—eight cases in the *Augustan History* alone—and, with the Christians, the *sortes Publicæ*.

7. The interpretation of weather-signs (as in Aratus 733) approaches more nearly to empirical science, yet many unusual meteorological phenomena (storms, meteorites, aurora borealis, etc.) and many arising from the earth (earthquakes, faulting, etc.), as well as teratological births of men and beasts (see above), were called *ostenta, portenta, monstra, prodigia* (q.v.) (Cic. *Div.* 1. 93), and considered precursors of social, political, or dynastic changes. Such were recorded in priestly records (especially at Rome) and used as sources by various historians (e.g. Livy, from whom Julius Obsequens, by a reverse process, compiled his *Prodigiorum liber*). For the vast field of astrology in its various forms, increasing with the Oriental influences following the conquests of Alexander, see ASTRONOMY.

8. Popular belief at most periods commonly accepted older, socially or politically established, forms of divination, though many looked askance upon others as charlatany; and we may remember the famous gibe of Cato that a haruspex could not but laugh on meeting a colleague. Some philosophers also accepted the art with little question, but Xenophanes, the Epicureans, Carneades, and others rejected it, and Panaetius expressed doubts of its reality. Some Peripatetics admitted intuitive but disallowed inductive divination (Cic. *Div.* 1. 5, 113; 2. 100), but most Stoics (notably Posidonius) vigorously defended both types, basing their justification upon the powers of gods, fate, and nature (Cic. *Div.* 1. 125), or upon the doctrine of *συμπάθεια*. Mystics in the second century of our era, and later, attempted to revive interest in the Delphic oracle, which was in Cicero's time (*Div.* 1. 37-38; cf. Plut. *De Pyth. or.*; *De def. or.*) already in neglect, and various collections of oracles, with infiltration of Christian elements, date from this period. Yet after a fitful respite, during which apologists like Origen attacked pagan divination as the work of malign demons, Theodosius, in the fourth century, by a series of edicts forbade various mantic rites, and though these sometimes survived under Christianized guise the prestige of the pagan divination was at an end.

DIVISIO, which had other rhetorical and logical connotations, was, in the vocabulary of the *controversia*, a skeleton plan of the argument. Students would have this dictated by their master (Quint. 2. 6. 1); a grown declaimer might sketch it before he declaimed (Sen., *Contrav.* 1. pr. 21). Seneca (q.v. 1) in his collection of *controversiae* regularly extracts the skeleton for us (e.g. *Contrav.* 1. 7. 11 'fere hac usi sunt divisione'); the full declamation would clothe the bones in flesh (Ps.-Quint. *Decl.* 270 *sermo*). Perhaps declaimers did not always insert a formal division in their declamation; when they did, it would naturally follow the *narratio*, as did the *partitio* in judicial oratory (Quint. 4. 5).

M. W.

DIVITIACUS (1) (1st c. B.C.), an Aeduan Druid, leader of the philo-Roman party. After the defeat of his tribe by Ariovistus (c. 61 B.C.) he appealed unsuccessfully for help at Rome. He regained influence against his brother Dumnorix by supporting Caesar (58), whom he urged in the name of the Gallic tribes to expel Ariovistus. In 57 he assisted Caesar by attacking the Helvetii and secured favourable terms for them.

Caesar, *BGall.* 1. 16-20; 31-2; 2. 5-15, Cic. *Div.* 1. 41. 90.

DIVITIACUS (2), king of the Suessiones c. 100 B.C. and overlord of other tribes in both Gaul and Britain.

Caesar, *BGall.* 2. 4. 7.

C. E. S.

DIYLLUS of Athens, a son of the athidographer Phanodemus, and author of a universal history (*Ἰστορίαι*) in twenty-six books including that of Sicily for the period 357-297 B.C. The first part began with the Sacred War and overlapped and enlarged Ephorus' narrative down to 341, and the second and third parts continued with increasing detail until the death of Cassander, 297. Diyllus was one of the major sources of Diodorus and was considered a satisfactory authority by Plutarch.

FGrH II A. 73.

G. L. B.

DOBUNNI, a British tribe with Belgic aristocracy ruling an indigenous population. The coins, at first uninscribed, show affinity with those of Commius (q.v.) of the Atrebatas; later, inscribed coins record the following rulers: *Anted-rig, Eisu, Catti, Conux, Corio*, and *Boduocus*. By emending Dio's *Βοδοώνων*, otherwise unknown (60. 20), to *Δοβούνων* it can be suggested that part of the tribe (under Boduocus) made its peace with Claudius. An auxiliary fort was placed at Cirencester and another at Gloucester (*see GLEVUM*) where later (49) a fortress for Legio XX was established. The *caput civitatis* was created at Cirencester (Corinium) on the evacuation of the military in early Flavian times and a very large forum-and-basilica was built (550-345 feet). Two inscriptions (*RIB* 114, (Cirencester) and 2250 (Kenchester)) attest local self-government.

Corinium became the second city in Britain in size (240 acres within its third-century walls), and in the fourth century was very probably promoted capital of *Britannia Prima* (*RIB* 103). The *civitas* included the iron-working district of the Forest of Dean; its wealthy villas, including some of the largest in Britain (Woodchester, Chedworth, etc.), attest the prosperity of its agriculture which was primarily engaged on beef and wool.

DODONA (Δωδώνη), a sanctuary of Zeus (under the cult-title of Naïos) in Epirus, famous as the centre of an oracle. It is first mentioned in the *Iliad* (16. 233) where the prophets, the Selli (Σελλοί) are described as 'of unwashed feet and sleeping on the ground'. In the *Odyssey* and elsewhere in early mythology it appears that the responses of the oracle came from a sacred oak. Also a dove was associated with the tree and was described as having spoken originally to reveal its sanctity. When Herodotus visited Dodona in the mid fifth century B.C. the oracle was operated by three priestesses instead of the Selli. Strabo (probably wrongly) attributed the change to the introduction of the cult of Dione. In later times the priestesses were themselves called doves (πελειάδες). The new method of consultation was for the inquirer to write his question on a leaden strip which was folded and put in a jar before being extracted by the prophetess. Numerous specimens of questions have been found; a few from States, but mostly from private persons vividly revealing their domestic or professional problems. In the late fifth and fourth centuries the oracle was consulted occasionally by such states as Athens and Sparta which found it a convenient alternative to Delphi. In the reign of Pyrrhus, Dodona was made the religious centre of his kingdom and the festival of the *Naia* was developed. The sack by the Aetolians in 219 B.C. was followed by a restoration, but the sanctuary never really recovered from the Roman ravaging of Epirus in 167 B.C. The festival of the *Naia* was revived and lasted till the third century A.D. Late legends also explained the oracle as conveyed by the murmur of a sacred spring or the echoes of a brazen gong. The magnificent theatre beside the sanctuary has recently been restored.

ANCIENT SOURCES. (a) Inscriptions, the consultants' questions are published in Collitz, *Dialekt-Inschriften*, 1557-98, and in SIG³, 1160-6, and those recently found in Παρισιὰ (1929 ff.), *Πανεπιστημιακή Χρονικά* (1935), and *Ἐργον* (1954 ff.). (b) Literature. Hom. *Il.* 16. 233-5, *Od.* 14. 327 f., 19. 296 f., *Ildt.* 2. 55-7, Strabo 327-9 and bk. 7, frs. 1-3 (Jones).

MODERN LITERATURE: Excavation reports in C. Carapanos, *Dodone et ses ruines* (1878), and in the periodicals listed in (a) by D. Evangelides and S. I. Dakaris, full summary of results by the latter in *Ἀρχ. Ἐφ.* 1959 (1964); Nilsson, *GGR* 1st, 423 ff., Hammond, *Epirus*; H. W. Parke, *The Oracles of Zeus* (1967). H. W. P.

DOGS. From earliest times in Greece and Italy, the dog was domesticated for hunting, guarding the house and flocks, and as the companion of man. Odysseus' hound, Argos, who, at the age of 20, signified the approach of strangers by pricking his ears, but showed his recognition of his master by wagging his tail and dropping his ears in affection, was bred for hunting wild goats, deer, and hares (*Od.* 17. 201-327). Homer mentions shepherds' dogs also (*Il.* 10. 183; 12. 303) and Hesiod the sharp-toothed watchdog (*Op.* 604).

The ancients knew many types of dogs. In Greece, the mastiff-like Molossian from Epirus was used mainly as a sheepdog and a watchdog (Arist. *HA* 608^a, Lucr. 5. 1063 ff., Hor. *Epod.* 6. 5). The best-known hunting dog was the Laconian, a type subdivided by Xenophon into Castorian and the smaller Vulpine, believed to have been originally a cross between dog and fox. Points and faults of physique and habit, breeding and training are described in detail (Xen. *Cyn.* 3-4; 7). It was also used as a sheepdog (Varro, *Rust.* 2. 9, Hor. loc. cit.). The Cretan hound, famous for its agility and powers of tracking, may have been the cross between the Molossian and the Laconian which Aristotle describes (loc. cit.).

All these types were introduced into Italy, where there were also native breeds, the Umbrian, a sheepdog and hunter, noted for its keen nose (*vinidus Umber*—Verg. *Aen.* 12. 753), but lacking in courage, the Salentine, a sheepdog (Varro, loc. cit.) and the shaggy-coated Etruscan, lacking speed, but keen-nosed. In hounds,

monochrome coats were regarded as a sign of poor breeding, but Columella (*Rust.* 7. 12. 3) recommends an all-white dog for the shepherd, to avoid mistaking it for a wolf in the half-light, and an all-black guard dog for the farm, to terrify thieves in daylight and to be less visible to intruders at night.

From Gaul came the *vertragus*, a type of greyhound, swift-footed and used for coursing (Mart. 14. 200. 1) and from Britain a small shaggy terrier of poor appearance but great courage (Grattius, *Cyn.* 174 ff.). In the late Empire, *Scottici canes*, Irish wolfhounds, were imported as a novelty for the *ludi* of A.D. 393 (Symmachus, *Epist.* 2. 77). For pet dogs see PETS.

J. M. C. Toynbee, 'Deasts and their names in the Roman Empire', *PHSR* 1948, 24 ff. S. W.

DOKIMASIA, the examination of candidates for office at Athens, before the *thesmothetai* (except candidates for the *boule*, who were examined by the outgoing *boule*). Men already chosen, whether by lot or by vote, but primarily the former, were formally interrogated to ascertain whether they were eligible: e.g. whether they were 30 years old; whether (in the case of certain offices at certain periods, e.g. the archonship: see ARCHONTES) they belonged to a particular census-class; and whether they were not precluded from one office, because they had held it before, or were holding another, or through being under some form of *atimia* (q.v.). A. W. G.

DOLABELLA (1), GNAEUS CORNELIUS (*PW* 134), after serving under Sulla, became consul in 81 B.C. and later governor of Macedonia, triumphing in 78. Caesar unsuccessfully prosecuted him *repetundarum*. E. B.

DOLABELLA (2), GNAEUS CORNELIUS (*PW* 135), praetor in 81 B.C. As proconsul (80-79), he plundered Cilicia with the help of his legate Verres (q.v.), who later helped to convict him *repetundarum*. He lost his possessions, went into exile, and is not heard of again.

On the Republican Dolabella, see E. Badian, *PHSR* 1965, 48; E. S. Gruen, *AJPhil* 1966, 385. E. B.

DOLABELLA (3), PUBLIUS CORNELIUS (*PW* 141), born c. 80 B.C., prosecuted Appius Claudius (q.v. 12) in 50. He commanded a Caesarian fleet in the Adriatic (49), and fought at Pharsalus, Thapsus, and Munda. As tribune for 47 (after adoption by a plebeian) he provoked serious riots in attempting to carry a law for the cancellation of debts. In 44 Caesar, despite Antony's opposition, undertook that Dolabella should become consul in his own place when he left for Parthia: on his death Dolabella associated himself with the assassins and assumed the vacant consulship, Antony not now demurring. In April his drastic suppression of Caesar-worshippers delighted Republicans: but his appointment by the Assembly to the governorship of Syria for five years apparently made him a Caesarian again. Reaching Asia in Jan. 43, he took Smyrna by surprise and killed Trebonius (q.v.); on the news, the Senate declared him a public enemy. He proceeded to Syria to face Cassius, but was forced to take refuge in Laodicea; on its capture he committed suicide (July).

Dolabella was notorious for his dissipation and chronic insolvency; hence, it seems, much of his political conduct and his marriages to Fabia and Tullia (q.v. 2): Cicero found him an uncomfortable son-in-law. Augustus' friend Dolabella was probably his son by Fabia and father of no. 4; his two sons by Tullia, born in 49 and 45, probably both died in infancy.

T. Rice Holmes, *The Roman Republic* (1923) iii. 516; Syme, *Rom. Rev.*, see index; M. Polignano, *Rend. Linc.* 1946, 240 ff., 444 ff. G. W. R.; T. J. C.

DOLABELLA (4), PUBLIUS CORNELIUS (*PW* 143), probably grandson of no. 3, was consul in A.D. 10, and (14 to c. 20) *legatus pro praetore* in Dalmatia, where he kept the legions quiet in 14 and built or rebuilt a number of military roads from Saloniae (q.v.) to the legionary camps and the mountainous country beyond. In 23/24, as pro-consul of Africa, he ended the war against Tacfarinas (q.v.). His descendants held consulships in 86 and 113.

T. J. C.

DOLICHENUS, JUPITER, local god or Baal of Doliche, now Tell Duluk, in Commagene. Originally a Hittite-Hurrite god of thunder and fertility, he formed with a consort a divine pair which, romanized as Jupiter Dolichenus and Juno, was carried westwards by soldiers, slaves, and merchants. With their twin acolytes the Castores, they gained popularity during the second and third centuries A.D. in many western military centres and at Rome. Dolichenus, now a god of the Universe, embraced the heavens, safety, success, and military triumph. He is generally depicted wearing Roman military costume, standing on a bull, and holding a thunderbolt and double-axe. See SYRIAN DEITIES.

The evidence, entirely archaeological, is discussed by P. Merlat, *Jupiter Dolichenus* (1960). For his temple on the Aventine in Rome, see Nash, *Pict. Dict. Rome* 1 521 ff.

M. A. R. C.

DOMAINS. (a) CIVIC. Most cities owned land corporately. Some was acquired by conquest, some by escheat, some by confiscation. When cities came under Roman rule, conquest was ruled out, and escheated and confiscated estates normally went to the Roman People. The cities, however, continued to acquire the land, chiefly by gifts and bequests; though cities could not inherit under Roman law, they probably could do so under peregrine law (till A.D. 212), and legacies were legalized by Nerva; moreover, *fideicommissa* were doubtless always valid. The domains owned by a city did not necessarily lie within its territory; Arpinum owned land in Cisalpine Gaul and Cos estates in Cyprus. The rent from domains was often an important part of the civic revenues.

(b) IMPERIAL. The nucleus of the imperial domains was formed by the estates of successive Emperors, which normally passed to their successors. They were enlarged by a vast flow of bequests not only from friends, dependents, and freedmen, but from strangers: some emperors refused to accept bequests from persons unknown to them, but others were so grasping as to quash wills under which they did not benefit. Furthermore, the estates of persons condemned for *maiestas* were sometimes bestowed on the emperor; by the second century this was probably the regular practice. In Egypt the imperial domains were, from the Flavian period, managed by a special department (*λόγος οὐσιαστικός*) separately from the public lands. In other imperial provinces, where there were only scattered public domains, they and the imperial estates were probably administered by the same staff. In the public provinces the Emperor's procurators, who at first managed only his estates, later, perhaps under the Flavians, assumed control of public lands; at this date the domains in Africa were grouped in *regiones* and *tractus*. Public and imperial domains were thus assimilated (except in Egypt) and were both included in the *patrimonium*.

(c) ROYAL. Alexander and the Successors claimed to own the land of their kingdoms, excluding the Greek cities. This theory was most vigorously exploited by the Ptolemies in Egypt. They granted lands, it is true, to the gods in perpetuity, to their friends for life, and to their soldiers at first on a life and later on a hereditary tenure, and they even granted private possession in perpetuity

of some land. But they seem to have maintained their title to the land which was granted (*γῆ ἐν ἀφέσει*), and the rest, the royal land (*γῆ βασιλική*), they exploited directly by rack-renting it to the peasants. In Cyrenaica also the Ptolemies seem to have claimed ownership of all the land save the territories of the Greek cities. The Seleucids also made grants of land to their friends and soldiers, but they did not generally disturb tenures, but merely levied the customary dues from the natives. They gradually alienated the *χώρα βασιλική* by gifts and sales to cities, or to individuals with permission to incorporate the land in cities; by founding new cities; and by recognizing native communities as cities. When the Attalids succeeded to Seleucid Asia Minor, they probably found little royal land. The Bithynian and Cappadocian kings owned extensive royal lands. The Macedonian and other European kings, on the other hand, possessed little—probably only family estates and the territories of communities which had been conquered and destroyed.

(d) SACRED. Many gods owned land; especially in Egypt and Asia Minor. These were probably acquired in the main by gifts and bequests; partly perhaps by the foreclosure of mortgages, for the gods, controlling large reserves of cash, engaged extensively in money-lending. In Egypt the sacred lands were administered by the Crown under the Ptolemies, and the Roman government maintained the system. In Asia Minor the sacred lands were often managed by the high priests of the god, some of whom were independent dynasts or subject only to the suzerainty of the Crown. In cities the sacred lands were generally administered by public magistrates, and with the spread of cities the independent temples of Asia Minor mostly passed under municipal control.

A. H. M. J.

DOMINIUM. In early Roman law ownership of things was closely connected with the power over persons: the rights of a *pater familias* over wife and children were similar to those over slaves and cattle; they all derived from his sovereign position as head of the *familia* (see PATRIA POTESTAS). It may be that in the early law private ownership was confined to movables, title to land not being as clearly distinguished as it later was from possession (see POSSESSIO): in the early proceeding (see VINDICATIO, SACRAMENTUM) both parties asserted ownership, and the issue was therefore one only of relatively better title, whereas in the *vindicatio* of the classical law the plaintiff asserted, and had in some way to prove, ownership.

Proof of ownership was to some extent facilitated by the method of acquisition by prescription known as *usucapio*: a person who acquired a thing in good faith from a non-owner by a transaction (*iusta causa*, *iustus titulus*, e.g. sale) which would normally transfer ownership, became owner after one year (if the thing were a movable) or two years (if immovable), provided that the thing had at no time been stolen (see FURTUM). *Usucapio* had also another application. Ownership of *res mancipi* (see MANCIPATIO) could be transferred only by *mancipatio* or *in iure cessio* (a kind of collusive *vindicatio* (q.v.) preserved in its primitive form). If, however, the thing were simply delivered, the recipient could become owner by *usucapio* after one or two years. Until then the holder (who was only in *via usucapiendi*) was unprotected by the old *ius civile*, but the praetors later intervened to enable him to retain and if necessary to recover the thing (see VINDICATIO). In this way, a kind of praetorian ownership developed (Gai. *Inst.* 2. 40). The holder of a *res*

mancipi acquired by delivery was said to have it in *bonis* (bonitary owner); he is put by the praetor for almost all purposes in the position of the full civil law ('quiritary') owner (*dominus ex iure quiritium*). The holder of a thing acquired from a non-owner in the conditions set out above (*bonae fidei possessor in via usucapiendi*) is protected against everyone except the *dominus ex iure quiritium* or the bonitary owner. The distinction between *res Mancipi* and *res nec Mancipi* was finally abolished by Justinian, and bonitary ownership disappeared with it.

Dominium was in principle unlimited, but was subjected from the earliest times to restrictions in the public interest by legislation and by the censors (q.v.), and in the private interest by *servitutes* (q.v.). Provincial land belonged to the State (Gai. *Inst.* 2. 7), and could not be owned by individuals (unless by special grant of *ius Italicum* it had been assimilated to land in Italy). The distinction was, however, technical rather than practical since the interest of individuals in such land was effectively protected. (See also EMPHYTEUSIS.)

DOMITIAN (TITUS FLAVIUS (PW 77) DOMITIANUS), son of the Emperor Vespasian, was born 24 Oct. A.D. 51. At the time of his father's rebellion against Vitellius in 69 he was in Rome, and in December was besieged on the Capitol with his uncle Flavius Sabinus (q.v. 3). He escaped, and on Vitellius' death was saluted as Caesar and was temporarily at the head of affairs. This brief taste of power, which abruptly ended with Vespasian's arrival in 70, may have coloured Domitian's outlook. He had dreamed of heading a Germanic invasion and of rivaling his brother's exploits; instead, he found himself condemned to a position of inferiority. Vespasian intended him to succeed the childless Titus, and he held two ordinary consulships (73 and 80) and five suffect consulships; yet neither under Vespasian nor under Titus did he exercise any real power.

The effect on Domitian's character was probably unfortunate. When he succeeded Titus in 81 he seems to have been an embittered man, determined to exert his powers to the full. His reign falls into two halves. Down to the rebellion of L. Antonius Saturninus (q.v. 3) in 88 he avoided bloodshed and ruled firmly but equitably; afterwards he became more and more ruthless, until his reign culminated in a Terror (93 to 96).

Domitian accentuated the absolutist tendencies of Vespasian. He was consul ten times during his Principate (with seven successive consulates in 82-8). He wore the dress of a *triumphator* even in the Senate and was accompanied by twenty-four lictors. He habitually exercised the right of *adlectio*, using it to draft distinguished *equites* and provincials into the Senate, while in 84 or 85 he became *censor perpetuus*. This was a serious blow to the Senate, whose composition he now completely controlled. He only consulted it perfunctorily, relying for advice on the *consilium principis*, in which senators and *equites* served equally. In fact Domitian broke the spirit of the Senate, compelling it to vote as he willed, and, after 88, bringing back all the horrors of *maiestas* and *delatio*. This may have been partly caused by financial embarrassment, though, as his major expenses occurred before 93, it may be argued that revenge was at least as important a motive. The increase of legionary pay from 225 to 300 *denarii* annually, military campaigns, extensive public works and buildings, such as the temple to Jupiter on the Capitol, the temple to Jupiter Custos on the Quirinal, and his magnificent Alban villa, in addition

to *congiaria* amounting in all to 225 *denarii* a head, all helped to swell expenditure.

In foreign policy Domitian aimed at strengthening existing frontiers, and his much-maligned campaign against the Chatti in 83 was a successful attempt to annex Mt. Taunus and complete the line of defence from Main to Neckar. In 85 the Dacian king Decebalus defeated and killed Oppius Sabinus, legate of Moesia. Another defeat followed in 86 or 87 and the Roman general Fuscus (q.v.) was slain and an eagle captured. In 88 the Roman forces won a victory at Tapae; but under pressure from a defeat of the Pannonian army, which he was leading in person, at the hands of the Marcomanni and Quadi, Domitian made an honourable peace with Decebalus and returned to Rome to triumph in 89. The Sarmatians invaded again in 92, and Domitian, taking the field in person, won some success. The only other serious fighting was that of Agricola (q.v. 1) in Britain; Agricola was recalled in 84, possibly because Domitian was jealous of his success.

In administration of the Empire Domitian showed himself careful and efficient, choosing good governors and punishing bad ones. Procurators and freedmen were strictly controlled, and exaction of taxes was severe but fair. Domitian also made attempts to raise the general standard of morality, and, as censor, strictly enforced the laws against immorality, suppressed castration, and checked theatrical licence. In 83 he executed three Vestal Virgins for immorality. In 90 the Chief Vestal, Cornelia, was condemned to be buried alive.

Domitian's strictness on the question of public morality accorded ill with the sensuality of his private life, a point emphasized by his opponents among the aristocracy and 'philosophers'. Other causes of his unpopularity were his attempt to impose Greek refinement on the Romans, his virtual suppression of the Senate, and the Oriental flattery of himself which amounted, at least unofficially, to an assumption of divine honours. Earlier Domitian had treated this opposition with comparative indifference, but in his later years, feeling that he could trust nobody, he turned to persecution. The philosophers were twice banished from Italy (probably 89 and 95). Many plots were made, though our authorities give the most flimsy reasons for Domitian's executions. The fact that the Emperor was childless increased both his own suspicion and the hopes of the plotters; until he executed him in 95, Domitian had destined the two sons of Flavius Clemens (q.v.) as his heirs; what he intended to do afterwards we do not know.

A vicious circle was thus set up; every unsuccessful plot caused more executions, which in their turn led to another plot. Finally the Emperor's own wife, Domitia (see CORNULO), feeling herself insecure, joined with the two praetorian prefects and some of the court officials in a plot which succeeded, and Domitian was murdered on 18 Sept. 96. It is almost certain that his successor Nerva (q.v. 1), who was adopted by the Senate on the same day, was privy to the conspiracy. The army, or at least the praetorian guard, was resentful at the murder.

Suet., *Dom.* (ed. J. Janssen, 1919), is a fairer source than most; see also Tac., *Ann.* (esp. 39-43), Dio 67, Pliny, *Pan.*; and for flattery Martial's earlier books and Statius, *Silvae*. M. McCrumm and A. G. Woodhead, *Select Documents of the Principates of the Flavian Emperors* (1961). Among recent works (for which S. Gsell, *Essai sur le règne de l'empereur Domitien* (1896), laid a foundation which is still invaluable) see K. von Fritz, 'Tacitus, Agricola, and the Problem of the Principate', *CPhil.* 1957.

R. L. J.; G. E. F. C.

DOMITIANUS, TITUS FLAVIUS (PW 78), son of Flavius Clemens (q.v.) and Flavia Domitilla; he and his brother were adopted by Domitian and received respectively the names of Domitian and Vespasian. Their tutor was Quintilian.

A. M.

DOMITILLA, FLAVIA (PW 227), Domitian's niece, was accused with her husband, the consul Flavius Clemens (q.v.), in A.D. 95 of atheism, probably because she favoured Christian (though others would say Jewish) rites. She was exiled. The early-Christian Coemeterium Domitillae on the Via Ardeatina is somehow connected with her. Eusebius 3. 18, which refers to Domitilla as a niece of Clemens, is probably a simple mistake, not evidence for another person.

H. Leclercq, *Dict. d'arch. chrétienne* iv 1401, P. Styger, *Die rom. Katakomben* (1933), 63 ff. A. M.

DOMITIUS (1, PW 18) **AHENOBARBUS**, GNAEUS, plebeian aedile (196 B.C.), praetor (194), and consul (192) in Gaul. In the absence of Scipio Africanus he was in effective command at Magnesia. He may have been in Greece in 169-168 and 167, but this Domitius was more probably his son, consul in 162. A. H. McD.

DOMITIUS (2, PW 20) **AHENOBARBUS**, GNAEUS, as consul (122 B.C.) and proconsul in Transalpine Gaul defeated the Allobroges and Arverni (qq.v.) in two great battles in the Rhone valley, once with the help of Fabius (q.v. 8). He treacherously seized the Arvernian king Bituitus and later led him in his triumph (c. 120). He built stone trophies in Gaul to commemorate his victories and began the Via Domitia (q.v.), perhaps establishing a garrison at Narbo (q.v.) to guard it; and he probably made treaties with the defeated tribes. His censorship (115, with L. Metellus Diadematus) was marked by unusual severity. He died c. 104. E. B.

DOMITIUS (3, PW 21) **AHENOBARBUS**, GNAEUS, son of (2), concerned (with Crassus, q.v. 3) in founding the colony of Narbo (cf. Sydenham, *CRR*, nos. 520 ff.), kept up his inherited Gallic connexions. Tribune in 104 B.C., he was not co-opted to a priesthood in his father's place; he unsuccessfully prosecuted Scaurus (q.v. 1) — whom he blamed for this — and passed a law transferring the election of priests of the four major colleges from the colleges themselves to the *minor pars populi* (seventeen tribes drawn by lot). Elected Pontifex Maximus, soon after he became consul (96), and censor (92) with Crassus (q.v. 3), with whom he quarrelled violently, but agreed in forbidding rhetorical teaching in Latin. He died soon after. E. B.

DOMITIUS (4, PW 27) **AHENOBARBUS**, LUCIUS (cos. 54 B.C.), husband of Cato's sister Porcia, supported Verres (Cicero then calls him 'princeps iuuentutis' — *Verr.* 2. 1. 139) and resisted Manilius (q.v. 2) in 66 B.C. Relentlessly hostile to the 'Triumvirate', in 58 (as praetor) and in 56 he specifically threatened Caesar's position in Gaul, the scene of his grandfather's victories; he thus precipitated the conference of Luca, which postponed his consulate to 54. In 49 the Senate granted him Gaul, but his march northwards, unsupported by Pompey, ended in capitulation at Corfinium, though by Caesar's clemency he survived to defend Massilia and to fall at Pharsalus. Domitius mobilized clients from the Marsi and Paegni, and tenants from the great estates which Sullan bounty had given him. But his pretensions could make him ridiculous (Cic. *Fam.* 8. 14. 1), and he shared the brutality of his *gens* (Suet. *Nero* 2).

G. E. F. C.

DOMITIUS (5, PW 23) **AHENOBARBUS**, GNAEUS, was with his father, (4) above, at Corfinium in 49 B.C. and like him dismissed unhurt by Caesar. In 44 he accompanied M. Brutus to Macedonia, and in 43 was condemned (perhaps unjustly: Suet. *Nero* 3, App. *BCiv.* 5. 261) for participation in the murder of Caesar. From 44 to 42 he

commanded a fleet in the Adriatic against the Triumvirs, but he joined Antony before the treaty of Brundisium, was formally reinstated in his civic rights, and governed Bithynia from 40 to 35 or later. In 36 he took part in the Parthian expedition and in 35 supported C. Furnius, governor of Asia, against Sextus Pompeius. He was consul in 32; early in the year he and Sosius (q.v. 1) fled to Antony. He opposed the personal participation of Cleopatra in Antony's war with Octavian, and went over to the latter before Actium, already suffering from a fever which proved fatal. He left one son (Domitius 6).

Syme, *Rom. Rev.*, see index.

G. W. R.; T. J. C.

DOMITIUS (6, PW 28) **AHENOBARBUS**, LUCIUS (cos. 16 B.C.), the husband of Antonia, the elder daughter of M. Antonius and Octavia, the Princeps' sister. Alleged to have been proud, bloodthirsty, and addicted to chariot-racing, he was aedile in 22, when he behaved arrogantly to the censor Plancus; proconsul of Africa (12); legate of Illyricum between 7 and 2, when he marched from the Danube to the Elbe, setting up an altar to Augustus on the farther bank of the latter river. The direction of his march is uncertain. Next, in command of the army of Germany, he constructed the causeway across the marshes between the Rhine and the Ems known as the *pontes longi*, after which nothing more is heard of him until his death in A.D. 25 (with obituary notice, *Tac. Ann.* 4. 44).

Syme, *Rom. Rev.*, see index.

DOMITIUS (7, PW 66) **MARSUS**, Augustan poet, acknowledged by Martial as one of his models (1 *praef.*; 2. 77; 5. 5. 6; 8. 56. 24). To light poetry he added an epic *Amazonis* (4. 29. 8). Quintilian 6. 3. 102 ff. gives some information about a work of his on *urbanitas*, on which see E. S. Ramage, *CPhil.* 1959, 250 ff.

Baehi *FPR*; Morel, *FPL*, Schanz-Hoerius ii* 174 ff.; H. Hardon, *La Litt. lat. inconue* ii (1956), 52 ff. J. W. D.; G. B. A. F.

DOMUS AUREA (Golden House) was the name given to the residence built by Nero after the great fire of A.D. 64. It linked the palace on the Palatine with imperial properties on the Esquiline and included new palatial buildings and landscaped gardens covering the valley between the Palatine, the Caelian, and the Oppian, about 125 acres in all. The main block of new buildings was on the southern slope of the Oppian, and there was a large ornamental lake where the Colosseum (q.v.) now stands. As befitted its situation in a royal park, the main wing of the palace (now covered by the courtyard and reservoirs of the baths of Trajan) followed Hellenistic landscape architecture, with frontal colonnade and angular planning, permitting different vistas to be enjoyed. The treatment, however, is domestic when compared with the Flavian palace on the Palatine. The main entrance was from the Roman Forum along the new Via Sacra (q.v.) reaching a vestibule which housed a colossal bronze statue of Nero, on the site of Hadrian's Temple of Venus and Roma.

DONATISTS. The Donatists were members of a puritanical Church of the Martyrs in fourth- and early fifth-century Roman Africa. Their schism from the African Catholics derived from the events of the Great Persecution (303-5). Whereas in the East the authorities' primary demand was the performance of sacrifice by Christian clergy, in Africa it was the surrender of the Scriptures. Those who complied, however, were dubbed *traditores* or 'surrenderers'. The death of Mensurius, bishop of Carthage (311), accentuated divisions, since

more moderate Christians accepted that the Church on earth must be a 'mixed body' containing both righteous and sinners. Behind the ecclesiastical dispute lay cultural and economic divisions between the more urbanized and latinized Proconsular Africa and the more rural and native Numidia and Mauretania. Thus, when the archdeacon Caecilian was elected bishop in Mensurius' stead by the Carthaginian Christians, a strong party called in the Numidians in opposition. These dissidents first elected Majorinus, and on his death a Numidian cleric, Donatus of Casae Nigrae (on the borders of the Sahara) as rival bishop.

Meantime, Constantine had ordered the return to Caecilian of confiscated church property, and also exempted Caecilian's clergy from a number of fiscal burdens. The opposition therefore appealed to Constantine for arbitration by Gallic bishops as to who was rightful bishop of Carthage, but he commissioned Miltiades, bishop of Rome, himself an African, to convoke an episcopal tribunal. This decided for Caecilian (Oct. 313), but the Donatists now asserted that one of Caecilian's consecrators, Felix of Aphthunga, had been a *traditor* and therefore incapable of performing a valid consecration. While their complaints were again rejected at the Council of Arles (Aug. 314), it was not until Feb. 315 that Felix was cleared, and only in Nov. 316 that Constantine decided that Caecilian was lawful bishop. By then Donatus' church had won wide acceptance throughout Africa, but apart from a precarious foothold in Rome the movement did not spread outside Africa. Here, despite the exile of Donatus by Constans (q.v.) in 347, the Donatists remained the majority church until c. 400. Their theologians included Macrobius, Donatist bishop of Rome, and Tyconius. Their support of the revolt of Firmus (372-5) left them unscathed, but an internal schism (392-3), and the failure of Gildo's revolt (398), laid them open to counter-attack by St. Augustine and the African Catholics. A series of imperial rescripts banned the movement (405), and in 411 a great conference of over 500 bishops at Carthage, presided over by the imperial commissioner Marcellinus, went against them. Years of persecution followed, ended only by the arrival of the Vandals in 429. Donatism, however, survived and re-emerged in strength in Numidia at the end of the sixth century. It may have persisted into the Moslem period.

Theologically the Donatists were rigorists, following the tradition of Tertullian (q.v.) and Cyprian (q.v.), holding that the Church of the saints must remain holy, and that sacraments dispensed by a *traditor* were not only invalid but infected the recipients. They combined puritanism with zeal for martyrdom which in this epoch included an expression of protest against inequitable social and economic conditions. Extremists, drawn from *coloni* and seasonal workers in Numidia and Mauretania, became known as Circumcellions, perhaps through their association with the shrines of martyrs (*cellae*). They extended the martyr's traditional *agon* against the Devil, represented by persecuting authorities, to the Devil exploiting the poor through the agency of landowners. The Donatist leaders also accepted a theory of Church-State relations which, despite their appeals to Constantine (313) and Julian (361), practically equated the Roman Empire with the apocalyptic image of Babylon.

Donatism produced its own art forms, but not, so far as is known, a Bible in a language other than Latin. With the Coptic and Syrian Churches, it represents the general tendency towards cultural and religious groupings by regions which characterized both halves of the Empire from the late third century onwards.

The chief sources are Optatus, *De Schismate Donatistarum* (ed. C. Ziwsa, CSEL, xxvi), written c. 305 and 385, Augustine, *Anti-Donatist*

works (CSEL, li, lii, and liii), and the *Gesta* of the Conference of Carthage in 411, Migne, PL xi, 1223-1438. Some Donatist *Acta Martyrum* are published in PL viii, and early documents by H. von Soden, *Urkunden zur Entstehungsgeschichte des Donatismus* (1913). D. Voelter, *Der Ursprung des Donatismus* (1883); L. Duchesne, *Mélanges d'arch.* 1890, 500 ff.; P. Monceaux, *Histoire littéraire de l'Afrique chrétienne* iv-vii (1912-23); A. DONATIVUM, a supplement to the regular pay of a soldier in the legions and the praetorian and urban cohorts. Originally a share of booty, donatives were paid in money to commemorate a joyful event, or left by emperors in their wills. After Claudius each new accession was the occasion for a donative. The amount granted to each praetorian was at the death of Augustus 250 *denarii*, to the *urbanicianus* 125, and to the legionary 75. These amounts coincided with those of a *stipendium* (q.v.) at the time. Gradually, however, because of the political importance of the Guard, the differences became disproportionately greater. When Hadrian adopted L. Aelius Caesar, the praetorians got 5,000 *denarii* each, the urban troops 2,500, and the legionaries apparently only 225. (The annual pay at the time for these three branches of the army was, in *denarii*, 1,000; 500; 300.) A similar distribution of five times their annual pay was made to the praetorians by Marcus Aurelius on his accession.

A. von Domaszewski, 'Der Truppensold der Kaiserzeit', *Neue Heidelberger Jahrbücher* (1900); M. Durry, *Les Cohortes prétorienne* (1938); A. Passerini, *Le coorti pretorie* (1939), 114 ff. H. M. D. P.; G. R. W.

DONATUS (1), AELIUS, the most famous grammarian of the fourth century A.D., who numbered amongst his pupils the future St. Jerome. He wrote two *artes* and commentaries on Terence and Virgil. (i) The *Ars minor* (ed. Keil, *Gramm. Lat.* iv. 355-66), intended for beginners, deals, in the form of question and answer, with the eight parts of speech. (ii) The *Ars maior*, or *secunda* (ed. Keil, *ibid.* 367-402), is more comprehensive and includes the *ratio et virtutes orationis*. These works became favourite school-books in the Middle Ages. (iii) The extant Terence commentary (which omits the *Heautontimorumenos*) is not in its original form but is apparently a (6th c.) compilation made from two copies found in the margins of Terence MSS. P. Wessner (ed. 2 vols., 1902-5) prints the commentary as found in our manuscripts; H. T. Karsten (ed. 2 vols., 1911-12) attempts to restore the original form. In this work Donatus owed much to Aemilius Asper (q.v.). (iv) Of the Virgil commentary only the preface (ed. Wölfflin, *Philol.* 1867, 154) and the 'Life' of Virgil with an introduction to the *Eclogues* (ed. J. Brummer, *Vit. Verg.* 1912; C. G. Hardie, O.C.T. 1954) are extant. But the commentary of Servius (q.v.) contains much material derived from it, and the so-called Servius Danielis is claimed to be virtually Donatus (cf. E. K. Rand, *CQ* 1916, 158 ff.). Some of the more learned notes in glossaries (e.g. the *Liber Glossarum*) may also come ultimately from Donatus' commentary. See also SCHOLARSHIP, LATIN, IN ANTIQUITY.

Schanz-Hosius, § 832.

J. F. M.

DONATUS (2), TIBERIUS CLAUDIUS (late 4th c. A.D.), wrote a continuous (but tedious) commentary (*Interpretationes Vergilianae*) in twelve books on the *Aeneid* (ed. H. Georgii, 2 vols., 1905-6), in which he deals with the poet's thought, style, rhetoric, and learning. It has no clear affiliation with earlier or contemporary commentators and is mentioned by no later writer.

Schanz-Hosius, § 248. 3.

J. F. M.

DORIANS, the last of the northern invaders into Greece (c. 1100–1000 B.C.), who settled especially in Elis, Laconia, Argos, Corinth, Sicyon, Epidaurus, Megara, and Aegina, and crossed the seas to occupy Crete, Melos, and Thera, and the south coast of Asia Minor. Greek tradition associated the invasion with the return of the Heraclidae and traced the route of invasion from Doris (q.v.) via Delphi (where the priesthood came of Dorian families) to Naupactus, whence the invaders crossed by sea into Peloponnesus. As they spoke a dialect of Greek, it is probable that they were of related stock to the earlier invaders and had previously inhabited the fringes of the Mycenaean world, being at that time already organized in the three tribes commonly found later in Dorian communities, the Hylleis, Dymanes, and Pamphyli. The area whence the invaders came was probably Epirus and south-west Macedonia.

Culturally the Dorian invaders were inferior to the Mycenaeans; bringing little with them except the iron slashing sword and long bronze clothing-pin, they ended Mycenaean civilization, plunging Greece into the Dark Age, out of which the Greek *polis* or city-state emerged. In the Orientalizing and Archaic periods the Dorian element contributed largely to the development of Greek art in architecture, pottery, sculpture, and choral lyric. They possessed a restraint and architectonic power which blended with Ionic grace in Athens to produce the acme of Greek art. Politically the Dorians split into two main channels; at Sicyon, Corinth, Argos, and Aegina the Dorian conquerors gradually lost their monopoly of franchise and became merged in the subject people; but Sparta and Crete retained a peculiar political form, in which the subject-peoples were serfs and dependents, while the franchised Dorians constituted a ruling military class, with a special organization of men's clubs.

V. R. d'A. Desborough and N. G. L. Hammond, 'The end of Mycenaean Civilization and the Dark Age', *C.A.H.* II. xxxvi, Hammond, *Epirus*, 370 f. N. G. L. H.

DORIEUS, a younger half-brother of the Spartan king Cleomenes I (q.v.). Jealousy and discontent drove him to lead a colonizing expedition to Cynops on the north African coast (near modern *Tripoli*), whence the Carthaginians expelled him after three years. Returning to Sparta he next founded a settlement in west Sicily near Heraclea Minoa, where, before long, he and most of his followers were killed by the joint forces of Segesta and the Phoenicians. He had previously taken part with Croton in the destruction of Sybaris (510 B.C.).

Dunbabin, *Western Greeks*, 348 ff.; A. Schenk Graf v. Stauffenberg, *Hist.* 1960, 181 ff. A. M. W.; W. G. F.

DORIS, a small area in central Greece enclosing the headwaters of the Cephissus. Its small plain, containing the Tetrapolis of Pindus, Erineus, Boeum, and Cytinium, is traversed by the route from Malis to Phocis which turns the defences of Thermopylae and was used by the Persians and Galatians. The Dorians of Peloponnesus, and the Spartans particularly, claimed Doris as their metropolis (Tyrtaeus, fr. 2); possibly during the invasion period a section of Dorian invaders halted there. Represented on the Amphictyonic Council, Doris was championed by Sparta (Thuc. 1. 107). In the fourth century it fell into the power of Onomarchus and later of Philip. Fourth-century walls are extant at Cytinium.

P-K, *GL* 1. 2. 657 ff.

N. G. L. H.

DOROTHEUS of Sidon (1st or beginning of 2nd c. A.D.), an astrological poet who had great vogue with the Arabian astrologers.

Ed. (along with Manetho) H. Koehly (1858); V. Stegemann, *Die Fragmente des D.* (1939–43).

DOSIADAS, author of a poem called *Βρομός* because of its shape, preserved in *Anth. Pal.* 15. 26 and manuscripts of Theocritus, written in mixed metres and purporting to be a dedication by Jason, in extremely obscure, allusive language. The poem is a *παίγνιον* like the *Syrinx* of Theocritus and seems to come from the same circle and age.

Text. Powell, *Coll. Alex.* 175–6 with notes; U. von Wilamowitz-Moellendorf, *Huculor Graeci*, 152–3.

CRITICISM. Wilamowitz, *De Lycophronis Alexandra* (1884), 12 ff. C. M. B.

DOSITHEUS (1) of Pelusium (fl. c. 230 B.C.), pupil of the astronomer Conon. He continued a connexion between the Alexandrian astronomers and Archimedes which had begun with the latter's studies in Alexandria; Archimedes dedicated several of his books to Dositheus. Observations by him on the time of appearance of the fixed stars (some of them made at places further north than Alexandria) and on weather-signs are recorded in the *Paraepigma* of Geminus and elsewhere. He wrote a work *Πρὸς Διόδωρον* in which he discussed Aratus' *Phaenomena* and Eudoxus' researches, and a work on the calendar, *Περὶ τῆς Εὐδόξου ὀκταετηρίδος*. W. D. R.

DOSITHEUS (2), surnamed *Magister* (possibly late 4th c. A.D.), grammarian, whose bilingual *Ars grammatica* (ed. Keil, *Gramm. Lat.* vii. 376–436; J. Tolkien, 1913) was intended for Greeks who wished to learn Latin. The Latin part was probably based on the *Ars* of Commianus, and the Greek (now interspersed with the Latin) was originally interlinear. Under Dositheus' name there are also preserved in various forms the remains of a bilingual school-book now known as the *Pseudo-Dositheana Hermeneumata* (ed. G. Goetz, *Corp. Gloss. Lat.* iii). Originally it contained twelve sections: vocabularies, *Hudriam sententiae*, *fabulae Aesopae*, *de manumissionibus*, *narratio de bello Troiano*, etc. The contents are of various dates (some possibly 3rd c. A.D.) and have value for the light they throw on social life.

Schanz-Hosius, § 846.

J. F. M.

DOSSĒN(N)US (Hor. *Epist.* 2. 1. 173) probably identical with Manducus, the guzzler in *Atellana* (q.v.).

DOXOGRAPHERS, designation of those ancient authors who wrote on the doctrines of philosophers.

This type of literature was inaugurated by Aristotle, who used to discuss the views of his predecessors in the introductory chapters of his systematic works. His disciple Theophrastus was the first to write a special work on the subject. He collected the doctrines of the Pre-Socratics in sixteen books (*φυσικῶν δόξαι*) and arranged them according to topics, the first book dealing with the first principles (*περὶ ἀρχῶν*), the last (most of which is preserved) with the theory of sense-perception. The works of the Hellenistic authors who wrote on the lives (*περὶ βίων*) and of those who wrote on the succession of the philosophers (*περὶ διαδοχῶν*) contained doxographic elements. This is especially true of the history of philosophy (*Ἐπιδρομή τῶν φιλοσόφων*) of Diocles (q.v. 5) of Magnesia. Some of this material has found its way into the work of Diogenes Laertius.

Arius Didymus, the teacher of Augustus, wrote a summary (*ἐπιτομή*) of the doctrines of the Stoics. A complete doxography of the philosophy of the pre-Christian era was composed by Aetius (q.v.).

Doxographi Graeci ed. H. Diels (1879); Burnet, *EGP* 33 ff.; Kirk-Raven, *Presocratic Philosophers*, 1 ff. K. von F.

DRACO (*Δράκων*), according to Athenian tradition, was a lawgiver who introduced new laws in the archonship of Aristaechnus (perhaps 621/20 B.C.). This was the first

time that Athenian laws were put down in writing (Arist. *Ath. Pol.* 41. 2). According to one account (Arist. *Ath. Pol.* 4) he established a constitution based on the franchise of hoplites (q.v.), but elsewhere he is only said to have made laws against particular crimes. The penalties were very severe: when asked why he specified death as the penalty for most offences, he replied that small offences deserved death and he knew of no severer penalty for great ones; and the fourth-century orator Demades remarked that Draco wrote his laws in blood instead of ink (Plut. *Sol.* 17). Solon (q.v.) repealed all his laws except those dealing with homicide.

Such was the tradition current in Athens in the fifth and fourth centuries. At that period no one doubted that the homicide laws then in force were due to Draco; this is shown by references in Attic speeches, and also by an inscription of 409/8 which contains part of the current law and describes it as 'the law of Draco about homicide' (IG¹ 1. 115).

Modern scholars have treated the tradition with varying degrees of scepticism. Some have doubted whether Draco existed at all. The hoplite constitution is generally regarded as spurious (being perhaps an invention of fifth-century oligarchic propagandists), but many accept that Draco introduced laws about homicide and other offences. Details of his laws cannot now be known; it cannot be assumed that the homicide laws current in the fifth and fourth centuries had remained unaltered since his time.

Hignett, *Hist. Athen. Const.* 305 ff.

D. M. M.

DRACON of Stratonicea, in Caria, predecessor or contemporary of Dionysius Thrax; author of a number of works on grammar, metric, and particular lyric poets (Sappho, Alcaeus, and Pindar), cited in the *Suda*. The extant *Περὶ μέτρων ποιητικῶν* ascribed to him (ed. G. Hermann, 1812) has been shown to be a sixteenth-century forgery.

J. D. D.

DRACONTIUS, BLOSSIUS ARMILIUS, a Christian, a lawyer and *vir clarissimus*, well trained in rhetoric, lived in Carthage towards the end of the fifth century A.D. For eulogizing in verse the Roman Emperor he was imprisoned by Gunthamund, the Vandal king, but subsequently released. His secular works, marked by unrestrained rhetoric, consist of a collection of short hexameter poems entitled *Romulea*, including rhetorical exercises, epithalamia, and mythological epyllia (*Hylas*, *De Raptu Helenae*, *Medea*); the anonymous *Orestis Tragoedia*, now proved Dracontian, probably belongs to this collection. The Christian poems, written in prison, comprise (a) a short elegiac poem of repentance addressed to the king (*Satisfactio*), (b) *De Laudibus Dei* in three books of hexameters; this, his chief work, shows some poetic imagination, appeals by its personal interest, but is marked by digressions, repetitions, and lack of unity. Dracontius displays a considerable knowledge both of Scripture and of classical Roman literature. Though he is well versed in the poetic diction, exhibiting numerous echoes of the classical poets, his language is often harsh and obscure, the syntax audacious, and the prosody faulty. That the anonymous *Aegritudo Perdiciae* is Dracontian cannot be proved.

EDITIONS: F. Vollmer, *MGH* xiv (1905), *PLM* v¹ (1914). *Introductio, text, trans., and commentary of (1) Satisfactio*, by Sister M. St. Margaret (U.S.A. 1936); (2) *De Laudibus Dei*, by J. F. Irwin (U.S.A. 1942). Teuffel, *Gesch. d. römisch. Lit.* (1913-20) iii⁶, 466 ff.; Schanz-Hosius, iv. 2, 58 ff.; F. I. E. Raby, *Christian Latin Poetry* (1953), and *Secular Latin Poetry* (1957; with bibliography), D. Romano, *Studi Draconziani* (1959). A. H. -W.; F. J. I. R.

DRAMA, ROMAN. HISTORY: see the articles on LIVIUS ANDRONICUS, NAEVIUS, PLAUTUS, ENNIUS, PACUVIUS,

ACCIIUS, CAECILIUS, TERENCE, TRABEA, ATILIUS, AQUIL(L)IUS (1), TURPILIUS, TOGATA FABULA, TITINIUS, AFRANIUS, ATTA, ATELLANA FABULA, MIMUS, VARIUS RUFUS, ASINIUS POLLIO, SENECA (2).

2. **THEATRE AND STAGE:** Rome's first stone-built theatre was constructed in 55 B.C. by Pompey, it seated perhaps 9,000 (though Pliny says 40,000). A previous attempt, actually started in 155 B.C., was frustrated by the consul P. Scipio Nasica, reportedly on moral grounds. Previously the stage had been wooden and the seating temporary—that there was seating is proved by the decree allocating the front rows to senators, in 195 B.C. (Livy 34. 54. 3). The stage had three doorways, and at either end an open passage led into the projecting wing. The doors never seem to have been used to reveal action within to the spectators; all action took place outside (hence the fixed convention of speaking back into the house to set the circumstances of the action, e.g. opening of *Miles*), and a complicated scene like *Most.* iii. 2 (690-857) will have taxed the producer's ingenuity considerably. By convention, entrance or exit right was to or from the centre of the town (the market-place), and left was to or from the harbour or country. The word *angiportus* seems to have been a relative term for a street leading from a longer street (so it could be side-street, lane, or alley-way). Occasionally characters take concealment in the *angiportus* or make their escape by it; in this sense it seems to have been a notional alley-way between the stage-houses, not actually represented on the stage, but again notionally reached through one or other of the doors or exits. Much of the action, like this, took place by agreed conventions, so that, e.g., a character in concealment and eavesdropping on a speech or dialogue did not need to be really in hiding but simply standing at the back of the stage. Actors wore costumes and masks so that gestures became very important, and were a series of conventional signs of their own.

This is a very brief summary of a highly complex and controversial subject: for details and for later developments the following works should be consulted: C. E. Duckworth, *The Nature of Roman Comedy* (1952), 79 ff.; M. Bieber, *The History of the Greek and Roman Theatre* (1961); W. Beare, *The Roman Stage* (1904), 159 ff. and appendices G. W. W.

DRESS. There are three striking points of difference between ancient and modern dress. Firstly, in both Greece and Rome women's dress in outward appearance was very similar to men's, and a Greek wife could, and often did, wear her husband's cloak out of doors. Secondly, there was very little fashionable alteration in the garments worn by both sexes, and none of our present-day bewildering changes in the body contour. Thirdly, wearing apparel was usually home-made and the same piece of homespun cloth could serve as a garment, a blanket, or a shroud.

2. The two garments worn in Greece by men and women alike were the tunic (*χιτών*) and the cloak (*ἱμάτιον*). The tunic had two main varieties, the Ionic made of linen, the Doric usually made of wool. The Doric tunic of women, often called a peplos (*πέπλος*), was in Athens the earlier kind of women's dress. It was simply a rectangle of cloth, in length rather more than the wearer's height, in breadth about twice the span of her arms. It was sometimes decorated with elaborate figured patterns (see also **WEAVING**). Before wearing, it was first folded over along the upper edge so that the overlap would reach to the waist. It was then placed around the body, and fastened on the shoulders—in earlier times, at least, with large pins. It was sleeveless. As the tunic hung from the shoulders, openings for arm-holes were left on each side; the lengthier opening along the one side could be sewn up, or pinned. The peplos might or might not be secured at the waist with a girdle. The Ionic tunic of women was of

much lighter stuff. It was a long and very wide cylinder, sewn up at the sides, and was usually worn with a girdle. The upper edges were often caught at short intervals along the arm with brooches, or by stitches, to form long, full sleeves. Under either type of tunic women might wear the *στροφίον*, a soft band around the body, below the breasts. In early times men customarily wore the long Ionic *χιτών*. Later they adopted (except for ceremonial and religious occasions) a Doric *χιτών*, similar to that of the women, but of knee-length or even shorter. It was pinned on the shoulders; for active exercise or for hard work it took the form of the *ἑλαμῖς*, fastened on the left shoulder only, with the right arm left free. The cloak (*ἱμάτιον*) of both men and women, for outdoor wear, was essentially a rectangular piece of stuff, woollen or linen. It could be draped according to individual taste, sometimes in very elaborate folds, but it was usually drawn away from one shoulder. Young men often wore a short flowing cape-like cloak (*χλαμῦς*) for riding (see also *ἱππεῖς*).

3. Roman women customarily wore an under-tunic — *tunica interior* — a short shirt-like garment, with or without sleeves. With it could be worn a *strophium* or *mamillare*, a soft leather band beneath the breasts. Over the tunic the unmarried woman wore the girded *tunica exterior*, reaching to the floor. A married woman wore instead the *stola*, a long, full garment, half covering the feet when the *stola* was girded up into folds under the breast. There was a coloured border around the neck of the *stola*, and around the lower edge of the garment there was an *instita*, which may also have been a coloured border. Usually the *stola*, like the Greek Ionic *χιτών*, had sleeves formed by means of fastenings at intervals along the arms. Both matrons and unmarried women made use of the *palla*, a rectangular piece of stuff like the Greek *ἱμάτιον*, worn only out of doors, and draped as the wearer wished. The men of Rome wore a *tunica* resembling the Greek *χιτών*, and an outer garment, the *toga* (q.v.), which they probably adopted from the Etruscans, but which became the distinctive badge of Roman citizenship.

4. At first the *toga* was worn alone next to the skin, but later one or more tunics underneath became usual — Augustus in cold weather wore four — and at all times the tunic was the usual indoor dress. The tunic of a senator had a broad purple stripe, *latus clavus* (q.v.), running from each shoulder to the hem, front and rear; that of the knight had two narrow stripes, *angustus clavus* (q.v.). There were, however, other garments worn on special occasions. The *synthesis* was a light brightly coloured garment especially suited for banquets; the *lacerna* an open mantle, fastened by a brooch on the shoulder, used in cold weather; the *paenula*, a sleeveless cloak, with a hole for the neck and a hood attached, used especially by travellers.

5. The Greeks had a broad-brimmed hat (*πέτασος*) for men, and a flat-brimmed one with high peaked crown for women, but seldom wore them; the conical cap (*πίλος*) of workmen, sailors, and travellers seems to have had a wider use. They had sandals, slippers, soft shoes, and boots; of the latter, one type (*κρηπίδες*) was worn by soldiers. At home the Greeks often went barefoot. Roman coverings for both head and feet were much like those of the Greeks. They had two special kinds of boot, the *caliga*, a heavy marching boot for soldiers, laced on the instep and secured by thongs, and the *calceus*, made in the case of senators of red leather with an ivory crescent and with thongs wound round the legs and tied in front.

A. J. H. Wace and Lady Evans in *Cambridge Comp. Gr. Stud.* (1911), L. M. Wilson, *The Clothing of the Ancient Romans* (1938); Lady Evans and E. B. Abrahams, *Ancient Greek Dress* (1964).
F. A. W.; L. B. L.

DRUSILLA, JULIA (*PW* 567) (born probably in A.D. 16),

the second daughter of Germanicus and Agrippina. She was married to L. Cassius Longinus (*cos.* A.D. 30) and afterwards to M. Aemilius Lepidus the son of either Paullus (q.v. 5) or Lepidus (q.v. 5). Her name, like her sisters', was compulsorily included in vows and oaths after the accession of her brother Gaius. She was his favourite sister, and it was rumoured that their relations were incestuous. She was named as Gaius' heir during his illness (late 37), but died in 38. Public mourning was enforced throughout the Empire and, though there was no precedent in Roman history for the consecration of a woman, she was consecrated as Panthea, probably on the anniversary of Augustus' birthday.
J. P. B.

DRUSUS (1), MARCUS LIVIUS (*PW* 17), probably a descendant of Paullus (q.v. 1) and Salinator, as tribune (122 B.C.) combined with the consul Fannius (q.v.) in exploiting the People's reluctance to extend the citizenship as a weapon against C. Gracchus (q.v. 4). He proposed the establishment — never carried out — of large citizen colonies and the exemption of Latins from corporal punishment, and brought about Gracchus' defeat in the tribunician elections. Consul (112) and proconsul, he fought in Macedonia, triumphing in 110. Elected censor (109) with Scaurus (q.v. 1), he died in office, whereupon Scaurus was forced to abdicate.

H. C. Boren, *CJ* 1956, 27.

E. B.

DRUSUS (2), MARCUS LIVIUS (*PW* 18), son of (1), grandfather of Livia (q.v.) and for a time brother-in-law and friend of Caepio (q.v. 2). Eldest of a circle of ambitious young nobles around L. Crassus (q.v. 3), to whom he owed his oratorical training and some of his ideas, he was brilliant, hard-working, and arrogant. Having been quaestor and aedile, he became tribune (91 B.C.) after the conviction of his uncle Rutilius (q.v. 1), and, with the help of Crassus and Scaurus (q.v. 1), proposed a solution for all the major political problems: 300 *equites* were to be raised to the Senate (where their influence would be minimal) and criminal juries chosen from the enlarged Senate; colonies and land distributions were to provide for the poor; and the Italians were to be enfranchised. The ruling oligarchy was intended to get the credit and reap the political benefit, and the *equites* (in particular) were to be eliminated as a political force. Extreme oligarchs and factional enemies (led by Marcus Philippus (q.v. 4)), *equites* led by Caepio (with whom he had quarrelled), Italians unwilling to give up *ager publicus* as the price of citizenship, and probably Marius, whose political future was threatened, combined against him. After Crassus' death Philippus gained the upper hand and had the laws already passed invalidated. Drusus himself was assassinated. The commission of Varius (q.v. 1) and the Social War were the immediate consequences.

E. Badian, *Hist.* 1962, 225 (with recent bibliography).

E. B.

DRUSUS (3), NERO CLAUDIUS (*PW* 139), second son of Ti. Claudius Nero (q.v. 3) and Livia (q.v.), was born in 38 B.C. about the time of her marriage to Octavian. His *praenomen* was originally Decimus. After Nero's death in 33 he was brought up by Octavian. In 19 he was permitted to stand for magistracies five years before the legal minimum ages, and in 18 he was quaestor. In 15 with Tiberius he subdued the Raeti and Vindelici (see *RAETIA*). In 13 he was left in charge of the Three Gauls by Augustus: he organized a census and on 1 Aug. 12 dedicated an altar to Rome and Augustus at Lugdunum (q.v. 1). Augustus apparently considered him his best general, since he entrusted the invasion of Germany to him. Drusus applied himself to the task in four successive campaigns (12–9). He used as his chief base first Vetera, then Mogontiacum (qq.v.); he also built a number of

auxiliary forts beyond the Rhine. In 12, after routing the Sugambri, he sailed from the Lower Rhine, along a canal dug for the purpose (*fossa Drusiana*), through the lakes of Holland into the North Sea, won over the Frisii (q.v.), took Borkum, defeated the Bructeri (q.v.) in a naval encounter on the Ems, and invaded the country of the Chauci (q.v.), where his ships were stranded by the ebb-tide; with Frisian help he got away safely. He began the year 11 in Rome as urban praetor, then subdued the Uspetes, and after bridging the Lippe marched through Sugambrian territory into that of the Cherusci (q.v.), as far as the Weser. After celebrating an *ovatio* (q.v.) in Rome he renewed the war in 10 with the title of proconsul, attacking the Chatti (q.v.); and returned to Rome with Augustus and Tiberius. In 9 as consul he fought the Chatti, Suebi, Marcomanni (qq.v.), and Cherusci, and reached the Elbe; but died in summer camp after illness brought on by a fall from his horse. Tiberius, hastening from Ticinum, reached him before his death.

Drusus' expeditions had been extremely audacious, and the Senate bestowed on him and his descendants the surname of Germanicus: but his military achievements were more apparent than real. He was popular, and considered to hold Republican sentiments. He was buried in the mausoleum of Augustus; a cenotaph was also built at Mogontiacum. An unknown poet wrote for his mother the *Consolatio ad Liviam* (q.v.). He married Antonia (q.v. 3); their children were Germanicus, Livilla, and Claudius.

L. Schmidt, *Gesch. d. deutschen Stämme* i² (1938), 93 ff.; K. Christ, *Drusus und Germanicus* (1956). On the circumstances of his birth, *PIR*² C 857. Iconography. L. Fabbrini, *Bollettino d'Arte* 1964, 304 ff. A. M.; T. J. C.

DRUSUS (4) **JULIUS** (*PW* 136) **CAESAR** (c. 13 B.C.—A.D. 23), the son of Tiberius (later Emperor) and Vipsania. He married Claudia Livilla (Livilla), sister of Germanicus. He was successful in suppressing the mutiny of the Pannonian legions after Augustus' death, was consul in A.D. 15, and commanded in Illyricum A.D. 17–20, celebrating a triumph on his return to Rome. He was consul again in 21, was given the *tribunicia potestas*—and therefore indicated as Tiberius' prospective successor—in 22, but died in the next year, poisoned—it was later suspected—by his wife, who had been seduced by Sejanus. He was popular, though dissolute and cruel, and his relations with Germanicus (q.v.) were friendly, in spite of mischief-makers. His son Tiberius Gemellus was put to death by the Emperor Gaius; his last-known male descendant (through his daughter Julia) was Rubellius Plautus, who was murdered by Nero's orders in 62. J. P. B.

DRUSUS (5) **JULIUS** (*PW* 137) **CAESAR** (A.D. 7–33), as second of the surviving sons of Germanicus and Agrippina, was regarded, after the deaths of his father in 19 and of Drusus, son of Tiberius, in 23, as a likely successor to Tiberius after his elder brother Nero. Sejanus secured his arrest in 30 (a year after Agrippina and Nero were arrested), and he died, imprisoned in the palace, in 33. J. P. B.

DRYOPE, in mythology, daughter of Dryops (q.v.). Apollo possessed her by a trick and she had by him a son, Amphiaraus, who became king of the city so called. Her mortal husband was Andraemon, son of Oxylius. The nymphs, who had long been her playfellows, finally carried her off and made a spring and a poplar appear where she had been; she became the nymph of the spring, and her son built a sanctuary for the nymphs. So far Nicander in *Ant. Lib.* 32. Ovid, *Met.* 9. 330 ff., says that while suckling Amphiaraus she wanted flowers for him to play with and by mishap plucked lotus-flowers, which were the nymph Lotis transformed. The plant

trembled and bled, and when Dryope tried to run away she turned into a lotus-tree. H. J. R.

DRYOPS, eponym of the Dryopes; his parentage is variously given, and the history of his people, allegedly Pelasgian, i.e. pre-Hellenic, obscure, but they are stated to have emigrated widely (from the Spercheus valley to Parnassus, the Argolid, Arcadia, etc.); hence perhaps the differing stories which make him the son of gods or men belonging to several of these regions. Cf. *DRYOPE*.

Weizsäcker in Roscher's *Lexikon*, s.v.; J. E. Fontenrose, *Python* (U.S.A. 1959). H. J. R.

DUCENARIII. Augustus, probably in A.D. 4 (Dio 55, 13), added to the three existing *decuriae*, or jury panels, all filled by members of the equestrian order, a fourth decury from the *ducenarii*, i.e. citizens resident in Italy who had a census rating of 200,000 HS or more, half the property qualification of the *equites*. To the new decury he entrusted cases of minor importance (*Suet. Aug.* 32). Caligula added a fifth decury (*Suet. Gai.* 16).

In the Principate the equestrian officials of the imperial service came to be graded in categories as *sexagenarii*, *centenarii*, *ducenarii*, and later *trecenarii*. These grades referred to their salaries of 60,000, 100,000, 200,000, and 300,000 sesterces respectively. See *PRO-CURATOR*.

In the Late Empire *ducenarius* remained a grade of the equestrian order, the ranks being now *egregii*, *centenarii*, *ducenarii*, *perfectissimi*, and finally *eminentissimi*, the praetorian prefects. Rank was not confined to holders of office: their ranks and privileges were retained by past holders, and honorary grants became increasingly common. The result was that with inflation of the numbers of rank-holders the prestige of the ranks diminished. The *egregiatus*, the lowest grade, was most affected, and it may be significant that it is last recorded in 324. The *perfectissimatus* was divided into three grades.

While the former army ranks continued to be used in units whose traditions went back to the Principate, in the new formations of the field-army new ranks were adopted. The non-commissioned officers were, in ascending order, *circitor*, *biarchus*, *centenarius*, *ducenarius*, *senator*, *primicerius*. Payment was now mainly in units of rations (*annonae*), of which the *centenarius* received 2½ and the *ducenarius* 3½. The *centenarius* is stated by Vegetius (ii. 8) to have been named from the number of men under his command.

Military ranks were adopted by the civil service of the Late Empire, which prided itself on being a *militia*. The majority of the ranks employed were survivals from the army of the Principate, but the new series of grades in the field-army, including *ducenarius*, was used also, e.g. by the *agentes in rebus*, the imperial couriers.

H. G. Pflaum, *Les Procurateurs équestres sous le haut-empire romain* (1950). *Les Carrières procuratoriennes équestres sous le haut-empire romain* (1960 1); A. H. M. Jones, 'The Elections under Augustus', *JRS* 1955, 151. (*Studies in Roman Government and Law*, 40 ff.); *Later Rom. Emp.* 8: 525 f.; 530; 578; 583 f.; 599; 634. G. R. W.

DUCETIUS, a Hellenized Sicel who for a brief period welded the native communities of eastern Sicily into a formidable union, aiming with a Sicel federation to conquer the Siceliot Greeks. He helped the Syracusans to overthrow their ex-tyrants' mercenaries (461 u.c.), and established a capital at Menaeum near Caltagirone (c. 454), later moving to Palice. He captured Inessa and Morgantina (q.v.), and later defeated a Syracusan-Acragantine force; a dedication at Olympia (*SEG* xv. 252) perhaps commemorates his victory. Next year the tables were decisively turned. Ducetius appeared alone at Syracuse as a suppliant, was spared and sent in exile to Corinth. In 446 he returned as founder of *Cale Acte*,

perhaps under Syracusan auspices. His intentions thereafter remain obscure, and were in any case frustrated by his death c. 440. With him died all real hope of a permanently strong native power in Sicily.

Diod. Sic. bks. 11-12. A. G. Woodhead, *The Greeks in the West* (1962), 82 f., D. Adamesteanu, *Κίρκαιος* 1962, 167 ff. A. G. W.

DULIUS (PW 3), GAIUS, consul (260 B.C.), censor (258), and dictator to hold elections (231). As commander of Rome's newly created fleet Duius liberated Segesta and defeated the Carthaginian fleet off Mylae in Sicily, thanks largely to the adoption of the *corvus* (260). He celebrated the first naval triumph. In the Forum a column (*columna rostrata*) was erected, ornamented with the bronze beaks (*rostra*) of the captured vessels with a laudatory inscription, of which a copy (or restoration) of imperial times exists (*ILS* 1. 65. A. Degrassi, *Inscr. Ital.* 13. 3. 69, *ILLRP*, n. 319. Cf. a briefer eulogium, *ILS* 55, *Inscr. Ital.* 13. 3. 13). Duius was escorted through Rome by night with torches and music, a Greek rather than Roman honour. From the booty of Mylae he built a temple to Janus in the Forum Holitorium. H. H. S.

DUMNONII, a tribe in south-west Britain (Devon, Cornwall, part of Somerset), apparently formed from diverse Iron Age groups. After an initial military occupation a self-governing *civitas* was created in Flavian times with *caput* at Isca (q.v., *Exeter*) (*It. Ant.* 486, 8 and 17, *Rav. Cosm.* 16). Villas are few and Romanization concentrated in Isca. The population was perhaps mainly cattle-raising, but from the mid third century the tin of Cornwall, famous in pre-Roman times, was re-exploited; and milestones attest road construction from Gordian III down to Constantine. Two inscriptions (Collingwood and Wright, *RIB* 1843-4) attest work on Hadrian's Wall by a *corvée* of the Dumnonii. In the post-Roman period Celtic Christianity and independence were long maintained under the princes of Dumnonia.

H. O'N. Hencken, *Archaeology of Cornwall and Scilly* (1932), chs. 4-7. A. Fox, *Roman Exeter* (1952), A. L. F. Rivet, *Town and Country in Rom. Brit.* (1964), 153 ff., A. Fox, *South West England* (1964), chs. vii-ix. S. S. F.

DUMNORIX, brother of Divitiacus (q.v. 1) and leader of the anti-Roman party among the Aedui. He conspired in 61 B.C. with Orgetorix, the Helvetian. He acted against Caesar, who only spared him at Divitiacus' request. Ordered in 54 to accompany Caesar to Britain, he refused but was cut down in attempting to escape.

Caesar, *HGall* 1. 3. 9; 18-20, 5. 6-7.

C. E. S.

DUOVIRI NAVALES. First chosen by the Roman people in 311 B.C., after the annexation of Campania (Livy 9. 30. 4), the *duoviri navales* 'for repairing and equipping the fleet' were thereafter elected or appointed, apparently at irregular intervals as need arose, until c. 150 B.C. This post was created for the defence of the Italian coasts; it played no part in Rome's great wars, for the ordinary squadron of a *duovir navalis* comprised only ten warships (Livy 40. 18. 7-8).

J. H. Thiel, *Roman Sea-power before the Second Punic War* (1954), 9 ff. C. G. S.

DURIS (1), potter and vase painter in Athens, working 510-465 B.C. Known from two potter's and thirty-eight painter's signatures. Painted red-figure cups, etc., including *ὄπλων κρίσις* (Vienna), Eos and Memnon (Paris). A fine but slightly mannered artist, who continues into the early classical period.

Beazley, *ARV* 425.

T. B. L. W.

DURIS (2) (c. 340-c. 260 B.C.), son of Scacus (Paus. 6. 13. 5), tyrant of Samos, historian and critic, a pupil of Theophrastus.

WORKS: (1) Various writings on literature, music, and painting, anecdotal in character. (2) *Samian Chronicle*, two books mentioned. (3) *Histories* ('*ἱστορίαι* or *Μακεδονικά* (Ath.); '*Ἑλληνικά* (Diog. Laert.)); at least twenty-three books, becoming increasingly fuller, and covering from 370 to c. 280. (4) *History of Agathocles*: four books cited (excerpts, Diod. Sic. books 19-21). Duris' historical influence was small: careless of style, he aimed at sensationalism and emotional impact.

FGRII ii A 76. K. von Fritz, *Entretiens Hardt* iv, 85 ff.; F. W. Walbank, *Hist.* 1960, 216 ff., L. Ferrero, *Miscellanea di studi Alessandrini* A. Rostagni (1963), 68 ff. F. W. W.

DUROTRIGES, a British tribe in Dorset and surrounding areas, whose pre-Roman coinage suggests a Belgic aristocracy ruling an indigenous population with close contacts with Armorica. The tribe offered heavy resistance to the Roman advance by Legio II Augusta commanded by Vespasian, and much of its territory may have become an imperial estate. The *caput* of the *civitas* was probably Durnovaria (*Dorchester*), but later the area was divided, the *Durotriges Lindinienses* being centred on *Ilchester* (Landinis). *RIB* 1672-3 record work by a *corvée* of the latter on Hadrian's Wall. The *civitas* was largely agricultural but important stone quarries were exploited at Ham Hill. Christian mosaics are known from the villas at Frampton and Hinton St. Mary.

D. F. Allen in *Iron Age in S. Britain* 97 ff. (coins); R. E. M. Wheeler, *Maiden Castle* (1943), I. A. Richmond and J. W. Brailsford, *Had Hill* (1968); C. F. C. Hawkes, *Arch. Journ.* 1947, 27 ff.; C. E. Stevens, *Proc. Somerset Nat. Hist. and Arch. Soc.* 1952, 188; J. M. C. Toynbee, *JRS* 1964, 1 ff. (Hinton). S. S. F.

DUX, a title sometimes given during the third century A.D. to an officer performing duties above his rank (e.g. *primipili* as *duces legionum*). With the separation of civil and military authority which was begun by Diocletian, the military command of some frontier zones was given to equestrian *duces*. This reform was probably completed by Constantine: henceforth military and civil command were only occasionally united. Under Valentinian I the *duces* were regularly given senatorial status.

R. GROSSE, *Römische Militärgeschichte*, 8 ff.; 152 ff. Jones, *Later Rom. Emp.* 44, 144, 608 ff. H. M. D. P.; G. R. W.

DYEING, like fulling (q.v.), with which it was sometimes combined, was commercially practised throughout antiquity. Dyestuffs (*φάρμακα*, *medicamina*), among which purple (q.v.) always ranked highest, were derived either from vegetable substances, such as madder-root, whortleberry, saffron, reseda, and gall-nuts, or from insects or molluscs (e.g. cochineal and purple). Textiles were usually dyed before spinning; and the main 'immersion' in the vat (from which dyeing was called *βάπτειν*, *tingere*) was normally preceded by washing with detergents and often also by steeping in a mordant solution (*πρόστυμμα*) to produce bright, even, and fast colours. There were guilds of dyers both in Ptolemaic Egypt and in Rome (*infectores*), where in imperial times dyeing became a luxury trade. Quotations from Hellenistic textbooks (*βαφικά*) survive in Pliny, *HN* 9. 136-8, and in 'chemical' papyri.

H. Blümner, *Technologie der Gewerbe und Künste* i² (1912), 225 ff.; Forbes, *Stud. Anc. Technol.* iv, 99 ff. (with full bibliography); J. I. Miller, *The Spice Trade of the Roman Empire* (1969). L. A. M.

DYRRHACHIUM (modern *Durazzo*), originally the name of the headland under which the city of Epidamnus was situated, became the name of the town itself c. 300 B.C. (it first appears on coins of the 5th c.). The city

passed successively through the hands of Cassander and Pyrrhus. In 220 it was besieged by the Illyrians, but was delivered and occupied by a Roman force. It served, together with Apollonia (q.v.), as a base for the Roman armies in Greece and the Balkan lands, and in 148 became the terminal point of the northern fork of the Via Egnatia (q.v.). In 48 Pompey made Dyrrhachium into his main base on the Adriatic, and he beat off an attack by Caesar

on his entrenched camp nearby (Caesar, *BCiv.* 3. 41–72). After the battle of Actium Octavian drafted evicted partisans of Antony from Italy to Dyrrhachium. (See also EPIDAMNUS.)

R. J. Beaumont, *JHS* 1976, 166 ff.; articles in *Buletin për shikimet shqiptare* 1957, 1, *Buletin i Universitetit Shtetëror të Tiranës, Seria shkenctat shqiptare* 1958, 4, 1959, 2, 1962, 2, and *Studia Albanica* 1966, 1.

E

EBURACUM (Ἐβόρακον, Ptol. *Geogr.* 2. 3. 10; 8. 3. 7; Eboraci, *Cod. Iustinian.* 3. 32. 1; S.H.A. *Severus* 19, etc.; *JRS* 1921, 102; *CIL* vii. 248; Eburacum, *It. Ant.* 466. 1, etc.; *Eboracen(sis)*, Collingwood–Wright, *RIB* 674; *Ebur(acensis)*, *RIB* 648), modern York on the Ouse. Here, on the east river-bank, lay the fortress of Legio IX Hispana, founded during the campaigns of Cerialis in A.D. 71–4, and rebuilt by Agricola c. 79 and under Trajan in 108 (*RIB* 665). In 122 Legio VI Victrix replaced the Ninth. The fortress wall was partly rebuilt late in the second century and again more thoroughly after Pictish invasions a century later. It was the seat of the northern command and capital of Lower Britain (*CIL* xiii. 3162); Severus and Constantius I died there. The *canabae* lay east of the Ouse; the mercantile settlement west of the river became a *colonia* before 237, with trade connexions extending to Bordeaux (*RIB* 674, 678; *JRS* 1921, 102), and a bishopric before A.D. 314.

S. N. Miller, *JRS* 1925, 176 ff.; 1928, 61 ff.; S. Wellbeloved, *Eburacum* (1842); I. A. Richmond, *Arch. Journ.* 1946, 74 ff.; *R. Com. Hist. Mon. York*, vol. i, *Eboracum* (1962). I. A. R.

ECBATANA (Agbatana, OP *Hangmatana*, modern *Hamadan*) in northern Media, on the Iranian plateau. Traditionally founded by Deioces (Hdt. 1. 98) as the capital city of the Median Empire, it became the summer capital of the Achaemenid Empire, and like Susa and Babylon a royal residence (Strabo 11. 522–4; Xen. *Cyr.* 8. 6. 22). Alexander captured Ecbatana in 330 B.C. and plundered a vast sum from the treasury (Strabo 15. 731). It remained a royal residence in Parthian times. The site has not yet been systematically excavated; the palace and fortifications are described by Herodotus (1. 98), by Polybius (10. 27. 6 ff.), and others.

A Guide to Hamadan (Tehran, 1954).

M. S. D.

ECHECRATES of Phlius (fl. c. 367 B.C.), pupil of Archytas and Eurytus, was one of the last members of the Pythagorean school, and survived to the time of Aristoxenus. In Plato's *Phaedo*, Phaedo recites to Echechrates, apparently in the Pythagorean *συμπόσιον* at Phlius, the account of Socrates' last discourses and death. Plato is said to have visited Echechrates at Locri.

Testimonia in Diels, *Vorsokr.* 1. 443.

W. D. R.

ECHIDNA, i.e. 'Snake' in mythology, a monster, child either of Phorcys and Ceto or of Chrysaor and Callirhoe daughter of Oceanus (Hesiod, *Theog.* 295 ff., where it is not clear which parents are meant). She was half-woman, half-serpent, mated with Typhon (q.v.), and bore Orthus (Geryon's hound), Cerberus, and the Hydra (see HERACLES), the Chimaera (q.v.), and, by Orthus, the Sphinx and the Nemean lion.

H. J. R.

ECHION (Ἐχίων, 'snake-man'), (1) one of the surviving Sparti, see CADMUS; he married Agave and begat

Pentheus (q.v.). (2) Son of Hermes and Antianeira, daughter of Menetus. He and his twin brother Erytus joined the Argonauts (q.v.; Ap. Rhod. 1. 51 ff.). Their home was Pangaeon (Pind. *Pyth.* 4. 180) or Alope (Apollonius). They joined the Calydonian boar-hunt (Ov. *Met.* 8. 311).

H. J. R.

ECHO (Ἠχώ). There are two mythological explanations of echoes, neither very early. (a) Echo was a nymph vainly loved by Pan, who finally sent the shepherds mad and they tore her in pieces; but Earth hid the fragments, which still can sing and imitate other sounds (Longus 3. 23). (b) See NARCISSUS (1).

H. J. R.

ECLECTICISM, a type of approach to philosophy, which consists in the selection and amalgamation of elements from different systems of thought. Eclecticism in the full sense first began in the second century B.C., coinciding with a general decline in the originality of Greek thought. The traditional opposition between the major schools of philosophy tended to give way to a recognition of the real similarities between them; the Academic Antiochus of Ascalon, for example, held that the doctrines of the Old Academy, the Peripatos, and the Stoa were in essence indistinguishable. Panaetius and Posidonius incorporate elements of both Platonism and Aristotelianism into Stoic teaching, and Cicero and Seneca follow a similar trend, in abstracting ideas from various different Greek philosophers and attempting to fit them to the Roman context. But the prime examples of systematic eclecticism are the Neoplatonists, in whose works the doctrines of Platonism, Aristotelianism, and other earlier systems meet to form a new unity.

E. Zeller, *A History of Eclecticism in Greek Philosophy* (Engl. Transl. 1883).

C. J. R.

ECLOGA (ἐκλογή), originally a selection, and so sometimes a fine passage from a work (Varro ap. Charisium 120. 28 K.: cf. Cicero's *eclogarii*, *Att.* 16. 2. 6; equivalent to his *ἀνθ.*, *ibid.* 11. 1). *Eclogae* is common in the wide sense of *brevia poemata* (schol. *Crug.* Hor. *Sat.* 2. 1). Suetonius (*Vit. Hor.*) calls Hor. *Epist.* 2. 1 an *ecloga*, and grammarians gave the name to the *Epodes*. Pliny, *Ep.* 4. 14. 9, thinks it suitable for his own sportive hendecasyllabics; Statius (*Silv.* prefaces to books 3 and 4) calls some of his *Silvae* by the term, and Ausonius his poem *Cupido cruci adfixus*. Its most famous application is to Virgil's *Bucolics*. It may not be Virgil's own title, though it has some MS. authority, and Suetonius seems to know it when recording certain *Antibucolica* (*Vit. Verg.*). Applied to the pastorals of Calpurnius and Nemesianus (see PASTORAL POETRY, LATIN), it was perpetuated in Carolingian and Renaissance usage.

J. W. D.

ECPHANTIDES, Athenian comic poet and contemporary of Cratinus (q.v.), won four victories at the City

Dionysia (*IG* ii². 2325. 49), but we have only two titles and five fragments.

FCG i. 12 ff.; *CAF* i. 9 ff.; *FAC* i. 12 ff.

K. J. D.

ECPHANTUS, a Pythagorean from Syracuse (or Croton; Iamblichus, *VP* 267), taught that the world is spherical and consists of monads moved by ψυχή or νοῦς and directed by πρόνοια. A treatise *On Kingship* is falsely attributed to him; it regards the king mystically as a mirror of god and essential part of a divinely ordered society. This work has been variously dated between the early Hellenistic period and the second century A.D.; but neither content nor analysis of syntax and vocabulary furnishes a decisive criterion.

Vorsokrat i. 442 ff. Stobaeus, iv. 244-5, 271. 9 W-II (περὶ βασιλείας); ed. L. Delatte, *Les Traités de la royauté d'Éphante, Diotopène et Sthenodas* (1942); E. R. Goodenough, 'The political philosophy of Hellenistic kingship' *YCIS* 1928, 55 ff.; Tarn, *Alexander* ii. 409 ff. G. T. G.

ECSTASY (ἐκστασις). In classical and good Hellenistic Greek this word and the corresponding parts of ἐξίστημι describe either a pathological condition, madness or unconsciousness, or, colloquially, the state of being 'beside one's self' with anger, etc. (LSJ, s.vv.); Aristotle, *Mem.* 451^a9, is a very dubious contrary instance. Later they signify a trance-state in which the soul, quitting the body, sees visions, as Acts x. 10; xxii. 17 (SS. Peter and Paul respectively have symbolic revelations). A state of this sort is clearly meant to be induced by the ritual of *PGM* iv. 475 ff.; cf. Dieterich, *Mithrasliturgie*², 2 ff. (the magician mounts up to heaven). The loftiest application of the word is to the Neoplatonic union with deity, Plotinus, *Enn.* 6. 9. 11. Contrast ἐκθουσιασμός, in which the subject's body is possessed by a god. See further Hopfner, *Offenbarungszauber* ii, pars. 79 ff.; 102, and Fr. Pfister, *Pisciculi Franz Joseph Dölger dargebracht* (1939), 178 ff.; the word is characteristic of transcendental sects and philosophies. H. J. R.

EDESSA (modern *Urfa*, from the native *Urhai*, whence also Gk. Ὀρρομή, Lat. *Orr(h)et*), capital of Osroene (q.v.), favourably situated in a ring of hills open to the south and surrounded by a fertile plain. It was founded as a military settlement by Seleucus I and acquired the Macedonian name Edessa. Later its official title as a city was Antiochia beside Kallirhoe. When Osroene asserted its independence, traditionally in 132 B.C. during the break-up of the Seleucid Empire, Edessa became the royal residence. From the time of Pompey, who made a treaty with Abgar II and allowed him an enlarged Osroene to rule over, Edessa played an ambiguous role in the wars and tensions between Rome and Parthia. Its sympathies were often with the Arsacids when prudence dictated compliance with Rome. Captured and sacked in A.D. 116 and again by L. Verus, it eventually became a Roman colony (Cass. Dio 77. 12), and thereafter issued a copious coinage. Christianity reached Edessa early, and the town became the most important bishopric in Syria. At the court of Abgar IX was Bardesanes (Bar Daisân) who was converted to Christianity (c. 180) but later was regarded as a heretic; he was not a Gnostic but taught an astrological fatalism. Edessa was several times besieged and more than once captured by the Sassanid Persians; Heraclius recovered it, but in A.D. 638 it fell to the Arabs. It had long been a centre of literary productivity in the Syriac language, the local form of Aramaic. The population of Edessa was predominantly Semitic and had closer affinities with its Iranian than with its more Hellenized western neighbours. Mosaics in the tombs of its aristocratic families vividly reflect their social habits.

EDICTUM. The higher Roman magistrates (*praetores*, *aediles*, *quaestores*, *censores*; in the provinces the governors) had the right to proclaim by edicts the steps which they intended to take in the discharge of their office (*ius edicendi*). Such edicts were put up in the Forum on an *album* (q.v.). Legally they ceased to be binding when the magistrate left his post (normally after a year), but customarily they were confirmed by his successors, so that for the most part the rules laid down in the edict remained continuously valid (*edictum tralaticium*). Among the magisterial edicts that of the *praetor urbanus* was of special importance for the development of the private law. The province of the *praetor*, as of all jurisdictional magistrates, was in form merely to apply the existing *ius civile*, but in his edict he was able, apart from providing model *formulae*, to promise new actions and other remedies and thus in substance to create a mass of new rules (*ius praetorium*, *honorarium*). In the formulation of his edict, and in its administration during his year of office, the praetor would rely on the advice of jurists (*see JURISPRUDENCE*). It was no doubt this indirect professional control which enabled the edict to play its vital formative function in the private law (*see LAW AND PROCEDURE*, ROMAN II. 4). On the order of Hadrian, the jurist Salvius Julianus (q.v.) composed a revised edition of the praetorian edict (c. A.D. 130), which was confirmed by a *senatus consultum*. It thus acquired a permanent form and the praetors lost the right to alter it. The edict of the *aediles* (q.v.) *curiales* (concerning principally market sales of slaves and animals) was perhaps annexed to it. The later classical jurists wrote extensive commentaries on Hadrian's edict, which were freely excerpted by the compilers of Justinian's *Digesta* (q.v.), and the edict has been largely reconstructed on the basis of these excerpts (O. Lenel, *Edictum perpetuum*¹ (1927)). A. B.; B. N.

EDUCATION. I. THE EARLY PERIOD. Little is known of the training of children in the pre-classical period, but the myths preserve the traditions of Chiron (q.v.) and of Phoenix (q.v. 1) as ideal educators, teaching their pupils all the then known skills. The educational ideal of Phoenix was the 'speaker of words and doer of deeds' (*Il.* 9. 443). But the Mycenaean provided technical instruction for scribes and poets, the latter developing, for the purposes of improvised recitation, the techniques of the stock episode, the catalogue and the verbal formula for recording the details of religious ritual as well as geographical and historical fact. The study of history, as recorded in the poetry, was thus an early element in education. The art of writing *may* have perished in the collapse of Mycenaean civilization, but poetry survived as the major educational instrument, preserving the traditions of the people, while its techniques continued to be taught and transmitted to culminate in the epics of Homer (q.v.), and ultimately to be transformed by the sophists (q.v.) and their forerunners into the techniques of prose rhetoric, which formed the most typical stream of the whole of ancient education.

II. SPARTA. Certain Dorian states like Crete (q.v.) and classical Sparta (q.v.) practised a totalitarian and militaristic form of education. Sparta had been a leader of culture, but in classical times its educational system was entirely adapted to the purposes of maintaining military strength. From the age of 7 the child was entirely under the control of the State, living in barracks away from parents. The aim of education was to produce efficient soldiers, and though their training included music and how to read and write, physical education received first priority. Girls, too, were educated in the interests of the

state, to be the future mothers of warriors. For them, too, gymnastics and sport were emphasized, though dancing, singing, and music were not neglected.

III. CLASSICAL ATHENS. 1. *Elementary Education.* The introduction of alphabetic writing (see ALPHABET) into Greece in the second half of the eighth century implies the development of schools for its instruction, but these could have been originally professional schools of poets, priests, and scribes. Evidence for common elementary schools is much later. The traditions relating to Tyrtaeus (q.v.) in about 650 B.C. and the school laws of Solon (q.v.) of 594 B.C. are not well authenticated, but the institution of ostracism (q.v.) presupposes widespread literacy by the time of Cleisthenes (q.v. 1). There is mention of schools among the allies of the Mytilenaeans in about 600 B.C. (Ael. VH 7. 15), at Astypalaea in 496 B.C. (Paus. 6. 9. 6), at Chios in 494 B.C. (Hdt. 6. 27), at Troezen in 480 B.C. (Plut. Them. 10), and at Mycalessus in 413 B.C. (Thuc. 7. 29), and the general picture presented by the literary record, though queried by some scholars, is confirmed by Attic vase-paintings of the period.

There were three branches of elementary education, normally but not necessarily taught in different establishments. The *grammatistes* taught reading, writing, and arithmetic as well as literature, which consisted of learning by heart the works of poets, selected because of their value for moral training (Homer being the chief author studied); the *kitharistes* taught music and the works of lyric poets; the *paidotribes* gymnastics, games, and deportment. The pupil would normally start with the gymnastic lesson, then proceed to the lyre-school and finish the day with letters, but this sequence was not rigid, and as education was private, fee-paying, and not compulsory, parents might choose not to educate their children in all three branches. A training in letters would be a minimum of schooling. Girls, too, as we see from the vase-scenes, might receive an education in all three branches as well as in dancing, though not normally in the same schools as the boys and possibly not to the same extent. Boys were always accompanied to school by a *paidagogos*. The head teacher was normally a freeman enjoying the same social status (and receiving similar remuneration) as a doctor or any other democratic worker. The assistant masters might be slaves or freemen. Discipline was firm both at home and at school. The symbol of the *paidotribes'* power to punish was his forked stick, that of the other teachers the *narthex*; but for actual formal punishment in the schoolroom during the classical period the sandal was used, though other methods are attested for later times. There is no evidence of formal, written examinations, but pupils were regularly tested by recitation and were expected to give public proof of knowledge or skill in the regular public literary, musical, or athletic competitions, all of which are illustrated in vase-scenes. Despite the popularity of sport and contrary to much modern opinion, there was little real harmony between the intellectual and cultural sides of education. Xenophanes, Euripides, and Epaminondas opposed the athletic ideal which Pindar, Aristophanes, and Xenophon supported, while Plato, Isocrates, and Aristotle did not exclude but subordinated the physical to the intellectual. The schools themselves competed for the pupils' time and fees.

2. *Higher Education.* After elementary school a boy might enter a professional school of law or medicine or enrol in one of the schools of rhetoric or philosophy, or in courses offered by itinerant sophists either for personal culture and civic efficiency or in order to become a tertiary teacher himself. Some of these higher schools prescribed propaedeutic courses (as geometry for Plato's Academy) and thus was born secondary education. The most famous higher schools were Isocrates' school of

rhetoric, founded about 390 B.C., Plato's Academy (q.v.) with its scientific, mathematical, and philosophical curriculum founded soon after, and Aristotle's Lyceum (see ARISTOTLE § 2) founded in 335 B.C.

3. *The Great Educators.* The sophists were itinerant teachers, claiming, each in his own way, to train pupils for civic efficiency. They believed in the power of knowledge to form human character, they offered wide curricula, they belonged to the liberal, democratic tradition of Greek education, they were progressive and pragmatic in their views and methods and they sought to enhance and transmit the cultural heritage against which Socrates (q.v. 1) and Plato (q.v. 1) so violently reacted. Socrates is said to have been in his younger days the head of a scientific school, but his chief importance for education rests upon his equation of virtue with knowledge and on his 'Socratic' method of teaching. Plato sets forth in the *Republic* and in a less extreme form in the *Laws* an ideal state of a totalitarian mould and a corresponding system of education in which everything, including most forms of literature and art, which does not serve the ends of the state, is rigidly excluded. The *Timaeus*, which was virtually the only Plato known to the Middle Ages, provided for them the rationale for the *Quadrivium*, which, however, derives ultimately from Hippasus. In his early works he strongly opposed the teaching of rhetoric, but later allowed it to be taught in the Academy alongside the scientific and other studies. In his concept of a school in permanent buildings staffed by specialists sharing a unified and integrated curriculum was born the idea of the secondary school, while in founding the Academy he may be said to have invented the University. Xenophon (q.v. 1) too was anti-sophistic (as was the fashion of fourth century educational thought), but he advocated a purely practical non-intellectual type of curriculum, with specialist teachers for each age group and the training of character through toil, and through the imitation of great examples. Isocrates (q.v.) restored the old tradition, which Socrates and Plato had tried to suppress, and he owes much to the sophists in curriculum and teaching method. His path to the teaching of civic efficiency and of morality was through rhetoric, to which the other subjects of his curriculum were subservient. Amongst these ancillary subjects, which included, significantly, the study of history, he distinguished between useful, or cultural, and purely disciplinary subjects (like eristic and mathematics). He sought to oust the poets from their pre-eminent position in the curriculum by developing equivalent forms of composition in *prose*. His standpoint on the place of physical education in the curriculum has already been noted. The other main controversy among educational thinkers concerned the relative importance for learning of nature and nurture, of heredity and environment. The old aristocratic view—of Pindar, for example—was that heredity was all-important. The sophists had reconciled the claims of the two factors and Socrates and Plato had made grudging concessions to their view. Isocrates, though he vacillated at times, yet on the whole presented a balanced view, with due recognition of the claims of teaching. Aristotle (q.v.) taught rhetoric in the Academy, became the tutor of Alexander and founded the Lyceum, the greatest research institute of antiquity.

4. *Teaching Methods.* The methods of private tuition at home, individual attention in a group situation, and group instruction are all attested in our sources, not only for letters and music but also for gymnastics (Plato, *Polit.* 294 d e). Memoriter learning and testing by recitation were common techniques.

Pedagogic skill was most highly developed in rhetorical teaching. Pupils memorized commonplaces, stock situations, and stock phrases together with sample passages like Gorgias' *Funeral Oration* as material for future

'improvisation'. They were trained in the psychology and techniques of persuasion and in the art of arguing both sides of cases. Both the sophists and Isocrates supplemented this training by curricula furnishing a wide background of general knowledge (see RHETORIC, GREEK).

The sophists developed the 'long' and the 'short' forms of discourse. The former corresponds to the lecture method, which even Socrates and Plato, though preferring the dialectic (q.v.) method and the seminar, frequently employed. The 'short' form is a dialectic or question-and-answer method, in which, unlike the Socratic method, the respondent makes a real contribution to the argument. This method was developed by Isocrates into a seminar technique of group discussion and group criticism. The Socratic method, which seems to depend for its rationale on the Theory of Ideas (see PLATO 1) and which proceeds, after reducing the pupil to a state of *aporia* (or puzzlement), to bring to light knowledge lying dormant in the pupil's soul, is well illustrated in the geometry lesson of Plato's *Meno*. The 'play-way' method was recommended by Plato in the teaching of elementary arithmetic, but in general Plato was hostile to any form of experimentation in scientific teaching. The 'activity' method is advocated by Xenophon (q.v. 1) in the *Cyropaedia* where pupils learn justice by practising it in real life group situations.

IV. HELLENISTIC EDUCATION. 1. The pattern of education somewhat incompletely established by classical Athens was brought in the early years of the Hellenistic era to a definitive form which endured with but slight changes to the end of the ancient world. The greater attention paid to the education of the common man is reflected in the many separate philosophical treatises on education by such thinkers as Aristippus, Theophrastus, Aristoxenus, Cleanthes, Zeno, Chrysippus, Clearchus, and Cleomenes. The Hellenistic school was well integrated with society, participating in community rites and ceremonies and welcoming parents and citizens to its functions.

2. *Organization.* The State exerted more legislative control over education. Though schools were normally still run as private enterprises, the trend towards public ownership is exemplified in Teos, Miletus, Delphi, and Rhodes, where private benefactors had established foundations for the payment of teachers' salaries. Most cities provided at least one gymnasium (q.v.) for the purposes of education. Such gymnasia were designed to accommodate not only physical training but also teachers of literature, philosophy, and music. A public library was usually close by to complete the academic complex. The *gymnasiarchos* (q.v.) was a state official elected for one year to control the gymnasium as a whole and to supervise all aspects of the education (whether public or private) of the *epheboi* (q.v.) and the *neoi*. He might be expected to subsidize the school's finances from his own pocket, to buy oil for the athletes, and even to pay the salaries of one or more of the teachers. The increasing financial burdens of the office led to its decay in imperial times to a mere liturgy with wealth the only qualification. The *paidonomos* had similar duties in respect of elementary education. An important duty of both officers was the organization of the regular public competitions for both public and private schools which were the ancient substitute for the public examination and which were designed to facilitate the task of pupil promotion, to test the efficiency of the teacher, and to serve as the basis of the award of prizes for both teacher and pupil. Class loads tended to be high, as the recorded complaints of teachers indicate. The two most significant administrative developments in this period were the concentration of all educational activity for each age level into one building, and the division of the pupils into clear-cut

educational age groups—*paides* (up to 14), *epheboi* (15–17), and *neoi* (18 and over). Girls, too, were educated at all age levels. In some cases they came under the control of the same officials as the boys and shared the same teachers, occasionally perhaps even the same classrooms. In other cases separate state officials were responsible for them. At Athens the term *epheboi* (q.v.) had a different meaning than elsewhere and *neoi* was not an educational term. Education remained private but the general pattern no doubt was similar. The ephebic institution for the 18-plus group was military in character until towards the end of the second century B.C. when its programme came to include humane studies.

3. *Elementary Education* continued the classical pattern with but little change.

4. *Secondary Education* had originated in Athens from the preparatory courses required for entry to the higher schools. While still retaining this function it also became now an extension of general education for all pupils. Physical education and music continued, but of greater significance is the extension of elementary literary education to the secondary level, combining, in many instances, with mathematics and science to form the ancient ideal of *enkyklios paideia* (see ENCYCLOPAEDIC LEARNING) or 'general education'. This, of course, looks back to the syllabi of Hippias and Isocrates and forward to the medieval *Seven Liberal Arts*. There was, however, a constant tendency for literary studies to push out all the others. Homer and the other classics were studied in minute detail according to a rigidly formalized lesson plan. In later times the study of grammar (in the modern sense) and composition, and preliminary rhetorical material became common.

5. *Higher Education.* From the secondary school of the *epheboi* a youth was promoted at the age of 18 to the school for the *neoi*, in which gymnastics and music combined with literary and philosophical studies. These tertiary schools may, as Nilsson says, have influenced the Athenian *ephebic institution* (see EPHEBOI). Their standards were not high and for really serious higher education a youth must go to one of the great centres of learning—to Athens, Pergamum, and Rhodes for philosophy and rhetoric, to Cos, Pergamum, or Ephesus for medicine, to Alexandria for the whole range of higher studies (see MUSEUM).

6. *The Teachers.* Teachers, in the municipal systems, were elected by the people for one year at a time and supervised by the *gymnasiarch* and *paidonomos*. There were three grades of literary teacher—*grammatist* (elementary), *grammaticus* (secondary), and *rhetor* or *sophist* (tertiary). To compensate for the shortage of efficient teachers the *paidonomos* might engage skilled itinerant teachers for short periods. Ordinary teachers received but little more pay than a skilled workman, salaried state teachers being better off than private ones. The music teacher received most, then the literary teacher, then the *paidotribes*. A good teacher might expect to receive gifts, prizes at the competitions, and in some cases exemptions from taxes. Highly qualified teachers as well as state educational officials were amply rewarded. Some contemptuous references to teachers are recorded, but generally they were well respected, as is clear from many funerary monuments.

V. ROME. 1. *The Old Education.* The pupil was trained in *gremio matris* until the age of 7. The father then personally assumed responsibility for the boy's education, teaching him his letters, manly exercises, and the use of weapons as well as moral and social conduct and a knowledge of the laws. The boy accompanied his father everywhere, to ceremonies, social occasions, even to the Senate. With the assumption of the *toga virilis* at about the age of 16 came the *tirocinium fori* during which he was attached to some notable citizen for political experience, to be

followed by the *tirocinium militiae* for his military training. This old aristocratic system of parental training and political apprenticeship, so favoured by such reactionaries as Cato (q.v. 1), persisted right into imperial times.

2. *Schools.* The evidence is scant, but elementary Latin schools must have existed from earliest times under Greek and Etruscan influence. Writing was known and Etruscan teaching alphabets have survived. The references to Verginia's attendance at school in 449 B.C. (Livy 3. 44. 6; Dion. Hal. 11. 28) and to schools at Falerii and Tusculum (Livy 5. 27; 6. 25) at the time of Camillus, if doubtfully authentic, do at least imply a long tradition of schooling. Plutarch (*Quaest. Rom.* 59) cannot be correct in saying that Spurius Carvilius (q.v. 2) was the first 'to open a letter school'. With the aristocratic hellenizing tendencies of the third and second centuries B.C. a system of Greek primary and secondary schools developed. These in turn created a demand for Latin secondary schools which could not develop until there was a Latin literature to teach—a want soon satisfied by Livius (q.v. 1) Andronicus' translation of the *Odyssey* and later by the *Annales* of Ennius. The programme was enlarged in 26 B.C. when Q. Caecilius (q.v. 3) Epirota introduced the study of Virgil and 'other new poets'. Tertiary education ran a similar course. Greek rhetoric, already taught at Rome in the second century B.C. and stimulated by the lectures of Crates (q.v. 3) of Mallos in 168 B.C., later generated Latin rhetoric when in 95 B.C. Plotius Gallus founded a Latin rhetorical school. Despite the inhibiting legislation of 92 B.C. the *Rhetorica ad Herennium* (q.v.) appeared between 86 and 82 B.C. as the first Latin textbook of rhetoric. There thus arose two parallel systems of education, one Greek, one Latin, using similar material and methods and sharing the same students. To be 'learned in both tongues' was the badge of culture. Two noteworthy features of Roman education were the exclusion of physical education from the schools and the inclusion of girls in the benefits of education. Education was to become predominantly literary and rhetorical but these studies lent themselves readily to moral training, an ideal never absent from Greek or Roman education.

3. *Teachers.* (a) The *litterator* or *ludi magister*, like the Greek *grammatistes*, offered an elementary education in reading, writing, and arithmetic for boys and girls from about 7 to 11 years of age. (b) The Romans adopted the Greek custom of assigning *paedagogi* to their children. In some cases these helped with the teaching. (c) The *grammaticus* taught grammar and literature and general subjects to the 12 to 15 age group as a general education and as a preparation for rhetoric. Originally he taught rhetoric too and a demarcation dispute persisted until the first century A.D., but the two professions were properly distinct. The typical lesson plan consisted of *praelectio* or preliminary explanation by the master; *lectio* or reading aloud by the pupil of the passage previously prepared and perhaps memorized; *enarratio* by master or systematic word by word explanation (by question and answer method) of details of word-endings, grammar, mythology, history, science, or general knowledge; and *iudicium* or final aesthetic judgement. Though expert teachers of mathematics, science, and music existed, these were for potential specialists only and it was the *grammaticus* who taught all the subsidiary subjects in the school. Normally this was done incidentally in the literature lesson as the subject-matter arose in the course of the *enarratio*. (d) The *Rhetor*. With the decay of political oratory under the Empire the emphasis in rhetorical education shifted to the training of pupils, who entered these schools at about the age of 16, for the career of advocate. The Latin rhetorical schools followed the Greek methods based on the formula: *inventio, dispositio, elocutio, memoria*. The pupil was introduced to his subject by a preliminary set

of exercises (*progymnasmata* (q.v.)), and then mastered the art of declamation (see *DECLAMATIO*) with its division into *suasoriae*—deliberative rhetoric—and *controversiae*—legal rhetoric. As with the *grammaticus* general knowledge and moral behaviour were taught incidentally. For more advanced instruction a scholar would go abroad, preferably to Athens. Rhetorical teaching has been criticized by both ancient and modern writers for the unreality of its themes and for its irrelevance to real life. But recent scholarship has shown that many of the actual themes and most of the principles involved were very relevant to the practice of law in the imperial courts. The training certainly fitted the student for participation in the practice of public declamation, which was a very real feature in the cultural life of the time. The difficulty of the themes he had to grapple with provided excellent mental training and the experience of sustaining the classroom themes was a good basis for the thrust and parry of advocacy in the courts. In addition rhetorical studies were regarded as good preparation for administration and thus led to a career in the public service. (e) *Law Schools.* At first law was taught by the *tirocinium fori*, but with the development of legal theory there arose a class of legal experts (*iurisperdentes* (see *JURISPRUDENCE*)), who might be consulted on points of law by advocates and others, and who accepted pupils. Under the Empire they were granted official recognition and by the second century regular law schools were conducted by them in conjunction with their consultative practices. Rome's most original contribution to education was her law schools.

4. *State Control.* Though Athens, not Sparta, set the pattern for subsequent education, yet some measure of State support and control was to prove necessary for the spread of educational opportunity. The Troezenian decree and so-called Solonic laws (which may properly belong to the beginning of the fourth century) are early examples of State interference. The trend was continued in the Hellenistic State officials and the municipal schools founded on private benefactions. In Rome early State interest is revealed by the decrees of 173, 161, 154, and again of 92 B.C. expelling tertiary teachers. Though the Roman State did not ever institute special educational magistrates on the Hellenistic model, the Emperors exercised the same control through their ordinary powers as well as by granting immunities and privileges to, and conferring honours on, teachers, and by acting as 'benefactors'. Caesar attracted Greek teachers to Rome by granting them citizenship, while Augustus exempted them from his expulsion decree (Suet. *Caes.* 42. 2; *Aug.* 42. 3). Vespasian instituted the first chairs of Greek and of Latin rhetoric at Rome, to the latter of which he appointed Quintilian. Trajan gave the *munus educationis* to 5,000 needy children. Hadrian extended this benefit and also was the founder of the Athenaeum (q.v.). Marcus Aurelius created a chair of rhetoric and four chairs of philosophy at Athens. Public municipal schools were endowed by benefactors (as in Hellenistic times) and direct intervention by the Emperor or his delegates in such matters as choice of teachers and salary scales became common in the late Empire. Julian (q.v.) forbade Christians to teach in A.D. 362 but the ban was lifted in 364. And in 529 Justinian closed the Neoplatonist schools in Athens (see *NEOPLATONISM*). A proper national system of education never did develop, but with increasing State control education became constantly more widespread.

VI. Education as we know the term began in Greece where the basic theoretical and practical issues were first clearly enunciated and debated, where after much experimentation effective teaching methods were developed and curricula established and where the main lines of future educational development were laid down. Mathematical and scientific studies found a place in the curricula

but the main emphasis was always on humane studies based on the traditional literature. Some few thinkers sought an ideal harmony of mind and body which was never fully realized in practice even in Greece and much less in Rome. Rome perfected the Greek methods and appropriated and handed on the Greek culture, but her original contribution was the systematic study of legal theory and the foundation of legal schools. The *Quadrivium* of Hippias (and of Plato) — arithmetic, astronomy, geometry, and music, and the *Trivium* of grammar, rhetoric, and dialectic deriving ultimately from the sophists and Isocrates, were the curricula inherited by the Middle Ages and designated by Martianus Capella as the *Seven Liberal Arts*. From beginning to end the ideal of the 'speaker of words' was never lost and the whole educational structure culminating in the elaborate methods of advanced rhetoric was designed to produce effective public speakers. Of all the lessons which the modern, democratic school has learnt from Greece and Rome, this is the one it has learnt least effectively.

F. A. G. B.

EETION (Ἑτιών), name of eight different mythological persons (see Schultz in Roscher's *Lexikon*, s.v.). The only well-known one is the father of Andromache (q.v.), king of the Cilician city of Etbea. Achilles captured and plundered the city, killing Eetion and his sons, but giving him honourable burial (*Il.* 6. 414 ff.).

H. J. R.

EFFATUS (AGER, LOCUS). An augur (see AUGURES) who marked out a *templum* on the ground was said *liberare effatus* that space (see Servius on *Aen.* 1. 446), that is to free it (from profane use, cf. *Livy* 5. 54. 7) by the use of the proper words. But *effari* was used of marking off land for other purposes; the ground on which Rome (and presumably other cities regularly founded) stood was *ager effatus* (Gellius 13. 14. 1).

Latte, *RR* 42.

H. J. R.

EGERIA (etymology uncertain, whether from *egero*, cf. *infero* : *inferus*; or connected with the gentile name Egerius, and if the latter, whether the goddess or the *gens* is prior), a goddess, probably of water, worshipped in association with Diana (q.v.), at Aricia (Verg. *Aen.* 7. 762–3), and apparently with the Camenae (q.v.) outside the Porta Capena in Rome (Juvenal 3. 17 and Mayor ad loc.). Women with child sacrificed to Egeria for easy delivery (Festus, 67. 25 Lindsay; Wissowa, *RR* 100, 219, 248 f.; cf. Altheim, *Griechische Götter*, 127; A. E. Gordon, *Univ. of California Publ. Class. Arch.* ii, 1934, 13 f.). She was said to have been Numa's consort and adviser (*Livy* 1. 21. 3 and often); cf. NUMA.

Latte, *RR* 170.

H. J. R.

EGG (in ritual). Eggs play no great part in ancient ritual. They occur in chthonian offerings (Nilsson in *ARW* xi, 530 ff.), as life-givers (?); an egg is one of the materials used for purifying the ship of Isis (Apuleius, *Met.* 11. 16; not Greek ritual); but they were used for Greek purifications also (Lucian, *Dial. Mort.* 1. 1; *Catapl.* 7), including the so-called Hecate's suppers (schol. Lucian, 125. 24 Rabe); probably in the Greek instances simply as articles of food, either for the impurities to pass into so that they might be thrown away,

as food otherwise tainted might be, or as bribes to the uncanny powers which they might eat instead of anything more valuable. At meals, eggshells were smashed or pierced to prevent sorcerers using them (Pliny, *HN* 28. 19). There was also a form of divination, *ωοσκομία*, by putting eggs on the fire and observing how they sweated or burst; Orpheus was supposed to have written on this (Kern, *Orph. frag.* 333).

H. J. R.

EGNATIUS (1, *PW* 9), GELIUS, Samnite general who organized the coalition of Samnites, Gauls, and Etruscans whose defeat at Sentinum (q.v.) made Rome mistress of central Italy, 295 B.C. (Polyb. 2. 19; *Livy* 10. 21. 29). Egnatius, like the Roman general Decius (q.v. 3) Mus, fell in the battle. The suggestion that Egnatius is only a fictitious composite of two other Samnite generals, Gellius Statius (captured 305) and Marius Egnatius (Social War hero), is unconvincing.

E. T. S.

EGNATIUS (2, *PW* 36) **RUFUS, MARCUS**, of senatorial family, won popularity as aedile (probably 21 B.C.) by organizing a private fire-brigade, and, without observing the legal interval, held the praetorship in the following year. In 19, no less illegally, he presented himself to the consul C. Sentius Saturninus (q.v. 2) as a candidate for the other consulship, which had been left vacant for Augustus and declined by him; Sentius refused to accept his candidature and rioting ensued. Egnatius then plotted to assassinate Augustus on his return from the East, but was detected and executed.

EGYPT UNDER THE GREEKS AND ROMANS.

Egypt had been little affected by Greece before Alexander's conquest. Trade with Greece had mainly consisted in bartering corn for silver at Naucratis, and foreign manufactured articles rarely went up country. Greek mercenaries were employed at times, but did not settle; and travellers like Herodotus and Plato collected information but imparted none. Whether Alexander formed any plans for hellenizing Egypt is unknown: his one foundation there, Alexandria, was primarily a seaport, and he does not seem even to have garrisoned Memphis, the strategic centre of the lower Nile valley, while the south was left to itself. He was formally recognized as king at Memphis, and then passed out of Egyptian history. If he had any scheme, it would doubtless be known to Ptolemy Soter, if to anyone; but how far Ptolemy's organization of Egypt was his own and how far inherited from Alexander can only be guessed.

2. The development of Alexandria as the home of a new Graeco-Egyptian culture was begun by Soter: a typical instance of the syncretism attempted is the conception of Sarapis built up by a committee of theologians. Ptolemais, founded to control Upper Egypt, was more purely Greek in its organization; also reclaimed lands in the Fayûm were given to veterans of the army, providing a reservoir of troops and a guard for the desert frontier. But Hellenism did not spread amongst the natives for many decades; stray references, e.g. to gymnasia in some provincial towns, are the only indications of Greek influence. Ptolemy Philadelphus, less occupied with external policy than his father, could pay more attention to the advancement of culture in Alexandria, and spent money freely in securing Greek writers and artists; but he had to make concessions to Egyptian ideas, e.g. by issuing a copper coinage on the local standard to circulate alongside of the Greek silver. Attempts to introduce Greek practices, e.g. that of Apollonius in farming, were short-lived; the recruiting of Egyptians to be trained in a phalanx in 218 was more

significant of their recovery of position than of the growth of Hellenism. The difference in tone between the decree formulated by the synod of priests at Canopus in 237 and that similarly passed at Memphis in 196 shows the revival of nationalism in religion.

3. The second century B.C. witnessed a gradual supersession of Greeks by Graeco-Egyptians in the Alexandrian official circles. By the reign of Epiphanes most of the Ptolemaic possessions outside Africa, except Cyprus, were lost, isolating Egypt from the Greek political world; and the Ethiopian rulers of Meroë had pushed their frontier down to Philae. The latter probably fostered risings in the Thebaid, and the constant dynastic quarrels of the royal house, which started with the sons of Epiphanes, disturbed the whole country. To these in part the numerous concessions granted to the natives may be ascribed, as bribes for their support; but the Egyptian element at court must also have counted for something in securing them. Polybius seemingly found no pure Greeks even at Alexandria: he described the population as Egyptians, mercenaries, and Alexandrians of mixed stock; and, as there was little to tempt fresh Greek settlers, the Graeco-Egyptians would tend to become more and more Egyptian.

4. Greek influence, in short, was never more than a veneer in the interior of Egypt under the Ptolemies. In Alexandria the Museum maintained a contact with Greek culture, particularly in philosophy, which absorbed some Egyptian elements, but it did not touch the natives; the Greek language was used officially, but the native language persisted, to revive as Coptic; the Greek gods were only known in the country as synonyms for local deities, and in the artificial triad of Sarapis, Isis, and Harpocrates the latter two, who were mainly Egyptian in their attributes, were more generally worshipped than Sarapis. The royal house itself became Egyptianized, in sympathies if not in blood: the monuments relating to it, especially in temples, are predominantly Egyptian; and the whole policy of government was changed accordingly in its orientation.

5. The Roman conquest of Egypt had disastrous results. Augustus treated Egypt as a personal estate, which was exploited without any consideration for the welfare of the inhabitants. The wealth of the land had not been seriously depleted under the Ptolemies: there is little evidence of destitution, and, though the conditions of life outside the towns were primitive, they did not deteriorate. Roman rule was marked by decay for over three centuries: the revenues were spent abroad and capital was drained to Rome, land went out of cultivation, and many of the agriculturists were reduced to vagabondage. It was not till the imperial authority grew weaker in the fourth century that there was any revival of prosperity in Egypt: then large estates of a feudal type were formed in some districts, in others monastic bodies acquired considerable properties—for both of which analogies can be found in Ptolemaic times—and contemporary documents suggest a distinct amelioration in the life of the natives. The changes in the administration of Egypt under the Roman Emperors illustrate this point. Augustus probably intended to keep the existing scheme of organization in being when he conquered the country: certainly many of the Ptolemaic official titles were retained, and the functions of these officials were seemingly little altered; the chief novelty, the Prefect, might be described as a viceroy substituted for a king. But, as the machinery had to be gradually adapted to a new ideal of government, the Ptolemaic civil service lost such independence as it had possessed—for instance, the heads of the former finance department, the *dioecetes* and *idiologus*, became of executive instead of administrative rank, and the presence of an army of

occupation deprived the *epistrategus* of his military powers. In the lower grades of officials, whose main duties were in the collection of revenues for the Emperor, there was a steady trend towards compulsory service: many of the Ptolemaic taxes had been farmed freely, but under the Romans the posts became liturgies. The local magistrates, under various titles—*gymnasiarch*, *exegetes*, *eutheniarch*, *cosmetes*, *agoranomus*—had one common responsibility, that of making up the sum assessed upon their town, if they could not extract it from the collectors, or these from the taxpayers. Septimius Severus attempted to remedy matters by converting the bodies of magistrates into senates, presumably with the idea of increasing the local control; but as the burden on the community as a whole was not lightened, the measure did nothing to check the impoverishment of the country.

6. In Alexandria Roman rule completed the fusion of the Greek and Egyptian elements, which thereafter formed a nationalist opposition to the imperial officials; the gymnasiarchs were usually in the forefront of any popular movement. There was apparently some revival of Greek culture, as shown by the study of Greek literature, and Sarapis worship became more influential. Hadrian may have realized the possibility of improving the condition of the country, by encouraging this tendency, when he founded Antinoöpolis on a Greek model; but though his foundation prospered, his experiment was not repeated, except by Septimius Severus in a summary and ill-considered fashion. Romanization was never attempted: veterans from the army settled sporadically in the country, but they were soon absorbed into the mass of the natives; Latin was hardly ever used, except in official or military documents, or studied; formal mention of the emperors was occasionally made in Egyptian style on temple walls, and Roman festivals were occasionally observed, but in neither case was there any real meaning. In Byzantine times a resident in Egypt might boast of Macedonian descent, or quote Homer; no one showed any knowledge of the existence of Rome. See also PTOLEMY (1).

ANCIENT SOURCES. There is no connected account of any period in the history of Egypt under Greek or Roman rule, and very little first-hand evidence of value, except for passages in Polybius, the later, fragmentary books of Diodorus, and the *De bello Alexandrino*. The scraps of information given by Roman writers are far from trustworthy. The important inscriptions can be found in *OGI* and *IGRM*. The papyri discovered and published during the last fifty years provide the chief material: their evidence is necessarily fragmentary, but they have revolutionized the old views on the social and economic conditions of the country.

An annual survey of inscriptions, from Graeco-Roman Egypt has continued to date. *Chronique d'Égypte* provides information regarding current publications. J. G. M.

EGYPTIAN DEITIES. The chief deities of Egyptian origin worshipped in the Graeco-Roman world were Sarapis, Isis (qq.v.), and Harpocrates (see HORUS). Anubis (q.v.) appears with the group in some places and Ammon, Bubastis, and Osiris (qq.v.) at others. Temples of these deities such as the one at Delos, for instance, might contain among the 'associated gods', in addition to those mentioned, a dozen or more Egyptian, Greek, or syncretized deities. A minor deity of the group was sometimes Bes, an old, crude, comic god much beloved by the common people. The popularity of Bes, Harpocrates, and other minor members of the cult was enhanced by the influence of the pottery industry which sent out from Alexandria many statuettes, jars, jugs, and vases with representations of these deities. In the Hellenistic age most of the foundations of the cult of the Egyptian deities in the Aegean area seem to have become public cults very quickly, and most of their ceremonies and properties came under the regulation and direction of the magistrates of the city-states. In connexion with many of these cults there were societies of *melanephroi* and some system of periodic services was probably carried out. In the later period, especially in the West as, for instance, at Pompeii, the cult was probably served by a professional priesthood, and at many of the temples the old Egyptian mysteries of Osiris were celebrated. Something of the nature of these mysteries is disclosed to us by Apuleius in his *Metamorphoses* (book 11), and Plutarch (*Concerning Isis and Osiris*) shows how they could receive a philosophic interpretation. The cult of the Egyptian deities was one of the last great pagan worship to succumb to Christian pressure. The temple at Alexandria was destroyed about 291, but the cult lingered longer at Philae. The cult seems to have commanded strong interest among official classes in Rome during the fourth century.

EILEITHYIA(E) (*Εἰλειθυία*(ι)), the goddess(es) of birth identified by the Romans with Lucina (see JUNO). She was evidently in origin a local Minoan nursing or mother goddess. Her cavern sanctuary at Amnisus, mentioned in *Od.* 19, 188, has been excavated by Marinatos, showing a continuous cult from the neolithic to the classical periods (*Crete and Mucenae* (1960), 115, and pl. 2). Her name, in the form 'Eleuthia', occurs in a tablet from Cnossus. She has no myth properly speaking, appearing simply as a subordinate figure in various stories of birth, see HERACLES, LETO. She is often identified with, or her name used as a title of, Hera; she is identified also with Artemis (q.v.), owing to that goddess's functions in connexion with childbirth (see, for instance, Farnell, *Cults* i, 247, n. 28c; ii, 567-8, n. 41). She is also on occasion the daughter of Hera (as Pausanias 1. 18. 5 (Crete)), or the partner of Artemis (as Diod. Sic. 5. 72. 5, where

she and Artemis are both daughters of Zeus). At Olympia, she is associated in cult with Sospolis (for whom see Farnell, *Cults* ii, 611; M. P. Nilsson, *Minoan-Mycenaean Religion*² (1950), 503, n. 2). Her cult is widespread and she occasionally develops into a city-goddess.

EINSIEDELN ECLOGUES, two incomplete Latin pastorals (87 hexameters in all) first published in 1869 by Hagen from a tenth-century MS., early products of Nero's reign. In the first a competing shepherd belauds the minstrelsy (Nero's) which eclipses that of Mantua (Virgil's); in the second the shepherd Mystes sings the return of the Golden Age. The authorship, sometimes credited to Calpurnius (q.v. 1) Siculus, remains uncertain. The name of Mystes may be derived from Horace, *Carm.* 2. 9. 10, as that of Glyceria(nus), or be chosen to reinforce the irony at the expense of a purely material and political 'Golden Age'. The poem begins with the same words as Calpurnius' fourth in celebration of the Golden Age, but satiety ('satiata mea gaudia vexat') makes the Golden Age a great bore, 'quod minime reris'. This is an ironical answer to Calpurnius rather than Calpurnius himself. See PASTORAL POETRY, LATIN, § 5.

TEXT: E. Baehrens, *PLM* iii, A. Riese, *Anthol. Lat.* nos. 725, 726; C. Giarratano (with Calp. and Nemes., 1924).

TRANSLATION (with text) Duff, *Minor Lat. Poets*.

SPECIAL STUDY: S. Loesch, *Die Einsiedler Gedichte* (with text, facsimile, 1900) [supports Lucan's authorship, whose works present Stoic parallels to Apollo's praises, *Ecl.* 1. E. Grogg, *PW* iii, 1379, maintains Calpurnius Piso's authorship]; W. Schmid, *Bonner Jahrb.* 1953, 63 ff.; W. Theiler, *Stud. ital.* 1950. J. W. D.; C. G. H.

EIRENAEUS (Lat., Minucius Pacatus), a grammarian of the Augustan age, pupil of Heliodorus the metrist, and cited by Erotian. See also GLOSSA (GREEK).

EIRENE, peace personified. Apart from her appearance as one of the *Horae* (Hes. *Theog.* 902), and a number of mentions in poetry (serious, Bacchylides, fr. 3 Jebb; Euripides, fr. 453 Nauck; semi-serious, Aristophanes, *Pax* 221 ff.), she has no mythology and little cult. At Athens, however, we hear of actual worship of her at a public festival; at the Synoikia (schol. *Ar. Pax* 1019), on Hecatombaeon 16, a sacrifice was offered to her, which the scholiast says was bloodless (perhaps a mere conclusion from the text of Aristophanes there, see Deubner, *Attische Feste*, 37 f.). It dates from the peace with Sparta in 374 (Isoc. 15. 109-11). It was for this occasion that the famous statue of her by Cephisodorus (see Roscher, *Lex.* i, 1222, *CAH*, pls. ii, 80a) was produced: the goddess holds on one arm the infant, Plutus. Two or three times the name is found applied to a heroine or Bacchante (see Roscher, *ibid.*), but not for women till much later.

H. J. R.

EISANGELIA (*εἰσαγγελία*) in Athenian law was a type of prosecution for an offence against the State, often translated 'impeachment'. The accuser denounced the offender to the *boule* (q.v.) or the *ekklesia* (q.v.). Either body might decide either to try the case itself or to refer it to a *dikasterion* (q.v.), or the *boule* (which had no authority to impose any heavier penalty than a fine of 500 drachmas) might refer it to the *ekklesia*.

Eisangelia was used for accusations of treason or of other serious offences for which no different procedure was prescribed by law; it was fundamentally a procedure for dealing with unprecedented or extraordinary crimes. But towards the end of the fifth century B.C. a law (quoted in *Hypereides* 4. 7-8; cf. Dem. 49. 67) was passed listing certain offences for which *eisangelia* was the regular procedure; they included treason, subversion of the democracy, formation of conspiratorial clubs, taking bribes to make proposals contrary to the public interest, and

breaking promises to the State. The procedure could still be used for other offences too, and in the fourth century some quite trivial charges were made in this way.

Well-known cases of *eisangelia* are those against Alcibiades (q.v.) for profaning the Mysteries in 415, and against the generals at the battle of Arginusae in 406 for failing to rescue the shipwrecked sailors. Surviving speeches written for this type of case are those of Lycurgus *Against Leocrates* and Hyperides *For Lycophron* and *For Euxenippus*.

In addition, the name *eisangelia* was given to two other quite distinct types of prosecution: for maltreatment of an heiress or orphan, and for improper conduct of an arbitration.

See DIKE (2).

R. J. Bonner and G. Smith, *The Administration of Justice from Homer to Aristotle* (1930), 294 ff. D. M. M.

EISPHORA, the name of an extraordinary property tax in ancient Greece which is known from Aegina, Athens, Mende, Messene, Miletus, Mytilene, the Koinon of the Nesiotēs, Orchomenus, Potidaea, Siplinus, Sparta, Syracuse, and the Ptolemaic Empire. It was a quantitative land tax in Mende and in Ptolemaic Egypt, a quantitative property tax in Messene, a distributable property tax in Potidaea and fourth-century Athens, and a property tax of some kind in fifth-century Athens and other states mentioned.

Pollux 8. 130—a much-disputed passage which might nevertheless be trustworthy, at least in its dating—recalls a progressive *eisphora* system attributed to Solon. Thuc. 3. 19 (for 428–427 B.C.) and the (perhaps) earlier inscription IG¹. 92 are the first certain sources for an *eisphora* in Athens.

The much-discussed tax was remodelled at Athens in 378–377. The whole taxable capital in the state had to be valued (the amount of the first assessment being 5,750 talents). The taxpayers were divided into *symmoriai* (q.v.) which were financially nearly equal. A certain percentage of the whole assessment ($\frac{1}{10}$, $\frac{1}{5}$, $\frac{1}{2}$, etc.) had to be paid, as the necessity arose. Even fortunes exempt from liturgies (q.v.) had to be assessed for the *eisphora*. Some years after 378–377 the so-called *proeisphora* was introduced, according to which the 300 richest citizens had to pay the whole levy in advance and reimbursed themselves later on from the other taxpayers.

For bibliography see FINANCE (GREEK AND HELLENISTIC), LITURGY, SYMMORIA. R. Thomen, *Eisphora. A Study of Direct Taxation in Ancient Athens* (1964); and of still useful earlier research: A. M. Andreades, *A History of Greek Public Finance* (1933), index, s.v. 'eisphora', 'liturgies', 'symmories'; H. Bolkestein, *Economic Life in Greece's Golden Age* (1958), 144, M. I. EKKLESIA (ἐκκλησία, in some States ἀλία, ἀλίαδα, ἀγορά, ἀπέλλα), the Assembly of adult male citizens summoned (ἐκκλητῶν) as of right, the ultimate authority in most Greek cities, though varying in composition, procedure, and competence with the political complexion of each. In monarchies and oligarchies membership was often subject to qualifications of birth, wealth, and age; meetings tended to be few, summoned at discretion (σύγκλητοι) by the executive or Council, and permitted only to accept or reject proposals on a few issues of general interest such as war, peace, and alliance; to elect magistrates from the

restricted circle of those qualified to stand; and perhaps to judge serious criminal cases on appeal. In a radical democracy all adult citizens could attend; there were frequent statutory meetings besides those specially summoned; free debate and the amendment and initiation of proposals were allowed; and the Assembly's competence was extended to cover the suspension of those magistrates whom it still elected (see SORTITION), the control of all the magistrates and of the Council, the decision on all important political and financial issues, and a share in the actual administration, including even the conduct of wars, and in legislation. Most Assemblies met in the Agora, the general 'gathering-place' also used for the market.

2. At Athens, as elsewhere, the character of the *ekklesia* developed with progress towards democracy. At first it probably decided only issues of peace and war, and formally elected the magistrates; as political tension increased, it may have shared in other important decisions, e.g. to appoint Dracon and Solon as lawgivers and to divide the archonship of 580/79 between the classes (see EUPATRIDAI). Solon may have granted, or formalized, a power of passing decrees or laws; and he supposedly entrusted the people with judicial responsibilities. The earliest attested decrees are those granting Peisistratus a bodyguard (561/60) and abolishing torture (510/09?); the earliest laws passed in the Assembly were perhaps those of Cleisthenes; we know of no judicial acts on its part before its possible condemnation of the exiled Peisistratids (510/09?) and the partisans of Isagoras (508/7). Significant additions to its judicial powers were made by Ephialtes (q.v. 4). Membership may originally have been confined to freeholders; the apparent participation of craftsmen in 580/79 supports the tradition that under Solon's constitution all citizens might attend. Regular statutory meetings, at first one each prytany (see PRYTANIS), almost certainly date from Cleisthenes.

3. The fully democratic Athenian *ekklesia* was open to all adult male citizens over 18. It met on the Pnyx or, from the late fourth century, in the theatre of Dionysus, occasionally in Piraeus; and in the Agora if a ballot was needed. Meetings were summoned by the *boule* (q.v.); there were four statutory meetings in each prytany; extra meetings were called if the *boule* thought fit or the *stratēgoi* (q.v.) demanded it. The chairman of the *boule* for the day presided (see PRYTANIS, PROEDROI). The *boule* prepared the agenda and drafted resolutions (προβουλευματα) which the Assembly debated and could accept, reject, or amend. It could not debate a matter on which there was no *προβούλευμα*, but could require the *boule* to prepare one for the next meeting. To some extent the agenda was governed by law, certain matters coming up regularly once a prytany (continuation in office of magistrates, corn-supply, etc.), others annually (ostracism, review of the laws). Every citizen present had the right to speak (ἀγορεύειν); magistrates had no privileges. Ambassadors and heralds from foreign States might be permitted to address the Assembly. Voting was by simple majority and generally by show of hands (χειροτονία); secret balloting by tribes and a quorum of 6,000 were required in some cases affecting individuals (ἐπ' ἀνδρῶν), viz. some trials, ostracism (q.v.), and grants of citizenship or *adeia* (q.v.). The ballots, except for ostracism, were ψήφοι, pebbles; hence, by extension, any decree was a ψήφισμα. Numerous ψήφισματα are preserved in inscriptions. All have a regular prescript, specifying, in its fullest form, the archon of the year, prytanizing tribe, day and number of the prytany, secretary, chairman, and mover of the decree, which often reproduces the *προβούλευμα* with amendments if any at the end.

4. The scope of the *ekklesia*'s competence has already been indicated. To some extent its activity had been

limited by sortition and the dicasteries (q.v.). Thus it elected only the magistrates for war and a few others, and judged only in cases brought by *eisangelia* (q.v.). Its main work was the making of decrees, and here its competence was manifold and far-reaching. The only restraint it recognized was that of the laws (*νόμοι*); an illegal decree might provoke the *graphe paranomon* (q.v.). In the fifth century the Assembly passed not only laws but also some decrees of general or permanent application tantamount to laws; after 403/2 laws and decrees were kept distinct and the revision of the laws was entrusted to *nomothetai* (q.v.).

5. The *ekklesia* was the embodiment of Athenian democracy. It gave the whole people a direct share in government. In routine matters it relied greatly on the *boule*, but the most important decisions were fully debated. Sometimes a decision was emotional and foolish, but on the whole the Assembly behaved responsibly. It was fairly representative of the people at large: to judge from a hostile estimate (Thuc. 8. 72), the normal peace-time attendance in the fifth century, even if no quorum was needed, was still well over 5,000, a very fair proportion of the citizen-body (see POPULATION, GREEK), considering that many lived in the country. After the Peloponnesian War, when the masses were poorer, payment for attendance was introduced, one obol per meeting at first; by 327 it was six, and nine for the 'principal' meeting in each prytany. The social composition of the meetings varied with circumstances (e.g. the absence of hoplites or sailors on expeditions) and the agenda.

6. So long as the Athenians were free to choose, the *ekklesia* retained its fully democratic character; the timocratic constitutions imposed during the generation following Alexander's death, and after the Roman conquest, involved certain modifications, such as exclusion of the poorer citizens, the abolition of pay, and the extension of election to the archons.

7. For the Spartan Assembly, see APELI AI (1), for federal Assemblies, ACHAËAN CONFEDERACY, AETOLIAN CONFEDERACY, FEDERAL STATES.

EKPHRASIS, the rhetorical description of a work of art, one of the types of *progymnasma* (rhetorical exercise, q.v.). Similar, but shorter, descriptions in verse are common in the *Anthology*. The efflorescence of the representational arts in the second century A.D. gave an impetus to this type of writing, of which Nicostatus of Macedonia (2nd c. A.D., author of an *Eikónes*) is perhaps the first exponent. Lucian's *De Domu* (*Περὶ τοῦ οἴκου*) is on the same lines. In his *Imagines* (*Eikónes*) the beautiful Pantheia is compared to famous works of art. The earliest extant collection is that of Philostratus (q.v. 3), perhaps not descriptions of actual pictures. See also CALLISTRATUS (5) and PAULUS (2).

On the description of works of art in Greek literature, in general, see P. Friedländer, *Johannes von Gaza und Paulus Silentiarius* (1912), 1 ff.

J. D. D.

ELAGABALUS (1), the Baal of Emesa in Syria. His young priest, on becoming Emperor in A.D. 218 (see the following art.), carried to Rome the sacred black stone, or baetyl, of Elagabalus, enshrined it on the Palatine with the Carthaginian Caelestis as its bride, and for a brief period made the 'deus invictus Sol Elagabalus' the chief deity of Rome.

F. R. W.

ELAGABALUS (2, *PW*, s.v. **VARIUS** (10) **AVITUS**) (Roman Emperor A.D. 218–22), born Varius Avitus Bassianus, was a son of Julia Soaemias and grandson of Julia Maesa (see JULIA 7 and 8), and took his name from the sun-god of Emesa, Elah-Gabal, of whom he was hereditary priest. In his fifteenth year he was saluted Augustus at Emesa under the title of M. Aurelius Antoninus, his mother alleging he was the son of Caracalla. After the defeat of Macrinus he spent the winter at Nicomedia and only reached Rome in 219. His chief interest was the advancement of his religion. Two magnificent temples were built for the Sun-god, whose midsummer festival was celebrated by his priest with a ceremonial no less ludicrous than obscene. His mother attended debates in the Senate, and also presided over a 'female senate' which formulated rules of etiquette. Meantime positions of responsibility were given to mere palace servants.

In alarm for her own position and the continuance of the Severan dynasty Maesa induced him to adopt his cousin Alexianus (Severus, q.v. 2, Alexander) as Caesar (221). Jealousy and intrigue ensued till an opportune bribe by Mamaea, Alexianus' mother, induced the Praetorians to murder Elagabalus and his mother (222).

Herodian 5. 5–8; Dio Cassius, bk. 179; S.H.A. K. Gross, *RAC* iv, 987 ff.; K. Hohn, *Quellenuntersuchungen zu den Viten des Helio-gabalus und des Severus Alexander* (1911). Temple in Rome. Nash, *Pict. Dict. Rome* 1. 517 ff. H. M. D. P.; B. H. W.

ELATEA (*Ἐλάτεια*), a Phocian town of strategic importance; commanding the routes from Phocis to Boeotia by the Cephissus valley, from Phocis to Opus on the Euboean Straits, and from Boeotia to Thermopylae over Mt. Callidromus. The most famous citizen of Elatea was Onomarchus (q.v.). Philip II of Macedon occupied it in Sept. 339 B.C., threatening Boeotia a few miles south and Athens which lay three days' march distant; by fortifying the town he blocked all routes from Boeotia northwards. In 305 Cassander, while occupying the same position, was defeated by the Athenians under Olympiodorus (q.v. 1).

N. G. L. H.

ELATUS (*Ἐλατος*, 'Driver', the name of (1) a Trojan ally killed by Agamemnon (*Il.* 6. 33); (2) one of Penelope's wooers (*Od.* 22. 267); (3) the eponym of Elatea (Paus. 8. 4. 2–4); (4) a Centaur (Apollod. 2. 85); (5) a Lapith, father of Polyphemus the Argonaut (schol. Ap. Rhod. 1. 40); father of Taenarus eponym of Taenaron (ibid. 102).

H. J. R.

ELEA (or **ELIA** or **VELIA**), modern *Castellamare di Stabia* (under excavation since 1927), Phocaean colony on the Tyrrhenian coast of southern Italy south of Paestum (q.v.), founded c. 540 B.C. It repelled the Lucani, allied itself with Rome (3rd c. B.C.?), and thereafter enjoyed quiet prosperity. It is chiefly famed for its Eleatic school of philosophers.

PW viii A, 2399 ff.; A. G. Woodhead, *The Greeks in the West* (1962), 65 f.; P. Mingazzini, *Atti e Mem. d. Soc. Magna Grecia* 1954, 3 ff. E. T. S.

ELEATIC SCHOOL (*Ἐλεατικὸν ἔθνος*, Pl. *Soph.* 242 d), a philosophical school represented by Aristotle and the doxographic tradition as having been founded at Elea in Lucania by Xenophanes (q.v.), and by Plato (perhaps jokingly) as having begun earlier still, but now agreed to have started with Parmenides (q.v.) of Elea at the end of the sixth century. There is no close connexion between Xenophanes' monotheism, reached by a critique of Homeric theology, and Parmenides' closely argued proof that what exists is single and indivisible and unchanging. It is Parmenides whose theories are defended by the other major representatives of the 'school', Zeno (1) and

Melissus (1) (qq.v.); Zeno shows paradoxes in the ideas of plurality, divisibility, and change, and Melissus maintains a modified version of Parmenides' conclusions against the pluralism of Empedocles and the atomists. Unlike Zeno, Melissus was not from Elea nor apparently a pupil of Parmenides, and with him the 'school' ended, though Gorgias (q.v. 1) tried his hand at an essay in the Eleatic style. G. E. L. O.

ELECTRA (*Ἠλέκτρα*, Doric *Ἠλέκτρα*), in mythology, (1) daughter of Oceanus, wife of Thaumias, mother of Iris and the Harpyiae (q.v.; Hes. *Theog.* 265 ff.). (2) Daughter of Atlas, one of the Plerads, born in Arcadia (Apollod. 3. 110), usually located on Samothrace (as Ap. Rhod. 1. 916 and schol. there); mother by Zeus of Dardanus (q.v.) and Iasion (Iasius) (schol., *ibid.*). (3) Daughter of Agamemnon and Clytemnestra (qq.v.). She does not appear in Epic, the first certain mention being in the *Oresteia* of Stesichorus (see Vürthem, *Stesichorus' Fragmente und Biographie*, 1919, 46). Where Stesichorus, or his alleged predecessor Xanthus of Lydia (*ibid.*), found the name is quite unknown; one or the other made a bad pun on it in defiance of quantity, interpreting the Doric form as meaning 'unwedded', as from a privative + *λέκτρον*. In Tragedy she becomes one of the central figures of the story. Sophocles (*El.* 12) makes her rescue Orestes (q.v.), then a young child, from the murderers of his father. In the *Chorophorae* of Aeschylus she is unalterably hostile to her mother and Aegisthus (q.v.), welcoming her brother, joining with him in the invocation to Agamemnon's ghost, but not actively helping the killings. Her role in Sophocles is similar, but more developed. In Euripides (*El.*), she is almost a monomaniac from hate and brooding over her wrongs, helps to kill Clytemnestra, and at once goes half-mad with remorse. In his *Orestes* she appears as a desperately faithful nurse and helper to her mad brother, and shares his wild exploits throughout; *ibid.* 1658 and Hyg. *Fab.* 122. 4, she marries Pylades; in Hyginus (*ibid.* 1-3) she meets Orestes and Iphigenia at Delphi and nearly kills the latter, who she thinks has murdered him. The source of this story is unknown, see Rose ad loc. For her appearances in art, see Robert, *Bild und Lied* (1881), 150 ff. It is fairly clear that the development of her story is due to the poets mentioned and their fellows, not to tradition. H. J. R.

ELEGIAC POETRY, GREEK. The Greek elegiac is a development of the epic hexameter in the direction of melic verse by adding to it a so-called 'pentameter', which consists of two 'hemiepes' verses combined into a single line in the form:

— — — — — | — — — — —

The pentameter is a single unity in so far as the final syllable of the first half must be long and hiatus is not allowed between it and the following syllable, but it reveals its construction from two separate parts by the break which is required at the end of the first half and does not allow a word to be carried from one half to the other. The word *ἐλεγείον*, first used by Critias (fr. 2. 3), is connected with *ἔλεος*, and in antiquity there was a popular notion that the elegiac was in some sense a lament, the 'fēbilis elegeia' of Ovid (*Am.* 3. 9. 3). This seems highly unlikely, since most early types of elegiac have no relation to laments. It is more likely that *ἔλεος* is connected with some foreign word for 'flute', such as survives in Armenian *elegn-*, and that the elegiac was originally a flute-song. This is supported by the references to the flute in early elegists such as Archilochus (fr. 123 Bergk), Mimnermus (Strabo 14. 643), and Theognis (241, 533, 825, 943), and by the use of the flute for purposes for

which the elegiac was used, such as military life and convivial occasions. The inventor of the elegiac is not known, and the ancients who ascribed it variously to Archilochus, Callinus, and Mimnermus may have known no more than we do. It makes its first appearance at the end of the eighth century and may have found most of its characteristic uses at an early date. It seems to have started in Ionia, but to have found its way quickly to the mainland of Greece. Its main uses may be classified.

(1) Sympotic. Flute-songs were sung over the wine, and the elegiacs of Archilochus (frs. 1-13), though they belong mostly to camp-life, are of this kind. So, too, is Callinus fr. 1, as its opening words *μέχρις τεῦ κατὰκεισε*; show, though it is full of martial spirit. This type may be seen in all the known fragments of Mimnermus, in the collection ascribed to Theognis, in some short pieces of Anacreon (frs. 96-112), and in poets of the fifth century like Ion of Chios and Critias. To this class belong certain short poems sung in memory of dead men, like the Attic couplet on Cedon (Scol. Att. 23 D), which are sometimes mistaken for epitaphs. (2) Military. Long elegiac poems of an exhortatory kind were addressed to soldiers by Tyrtaeus, and it seems to have been his example which emboldened Solon to use the elegiac as a means for political discussion and propaganda. (3) Historical. Mimnermus told the history of Smyrna in his elegiac *Smyrneis*, Semonides that of Samos, Panyassis that of the Ionian colonization. This type may well have been a development of the first type, since Mimnermus certainly included historical pieces in his *Nanno*. (4) Different from these types was the use of the elegiac for inscribed dedications. Examples are attributed, without certainty, to Archilochus (fr. 16) and Anacreon (frs. 107-8). It is not known why the elegiac was used for this purpose. (5) Epitaphs. The elegiac was also used in inscriptions to commemorate the dead, who were either made to speak in the first person or had something simple said about their name, home, etc. This seems to have become a popular use in the middle of the sixth century B.C., especially in Attica, and may perhaps have been derived from the commemorative elegiac. Both epitaphs and dedications were inscribed without the author's name, and though many are attributed to well-known poets, such as Simonides, the attributions are extremely uncertain. The elegiac epitaph survived for centuries and was still popular in the fourth century A.D. (6) Lament. This use seems to have existed and even to have been popular at an early date in the Peloponnese, since Echembrotus (c. 586 B.C.) was famous for his elegies sung to the flute and for their gloomy character (Paus. 10. 7. 4). No early examples of this kind survive, but perhaps traces of it may be seen in the epitaph on the Athenian dead of Corona (*CQ* 1938, 80-8), in the elegiacs of Euripides (*Andr.* 103-16), and in Plato's lines on Dion of Syracuse (fr. 6). These main types survived until the end of the fifth century, and probably till the end of the fourth. After this the differences between them tended to be obliterated and the elegiac was put to new uses, largely because instead of being composed for a practical end it was often composed as a literary exercise. About 300 B.C. the changes were already apparent, and may perhaps be connected with the names of Anyte and Addaeus; in the next generation, that of Philetas and Asclepiades, there is no doubt about them. With these, and later, authors the elegiac is used in the following new ways: (1) Descriptive. Scenes are described, of country or town life, or even from mythology. This became more and more popular and lasted into the Byzantine age. (2) Love-poems. On the whole this type is very rare in the sixth and fifth centuries, though the second book of Theognis shows its existence. It was a department of the sympotic elegy. It was developed in intensity and intimacy by Plato, and became common at

Alexandria. (3) Imitations of earlier forms, especially of dedications and epitaphs, which were often written just as literary pieces and betray themselves by their lack of exactness in giving names and their occasional confusion of real epitaphs with commemorative elegies. Along with these new forms the old forms survived and were still popular. After comparative inactivity in the fourth century the elegiac developed a new strength in the third, and was one of the forms of poetry most popular with the Alexandrians, who made its rules stricter and polished its technique. In the Roman period it continued its life and had a considerable flowering in the Augustan age, to which Antipater of Thessalonica, Bion, and Euenus belong. The tradition was carried on in the first century A.D. by Antiphilus and Julius Polyaeus, and in the second by the distinguished figure of Lucian. After a century of comparative barrenness there was a considerable revival in the fourth century, when the Emperor Julian used the form and Palladas was the last distinguished pagan to express his feelings in it. Even in the sixth century, when classical Greek was a dead language, it was still used for the composition of elegiacs by such notable poets as Agathias Scholasticus, Paul the Silentiary, and Macedonius. After this outburst in the reign of Justinian it seems to have passed into disuse, though lines attributed to Cometas (*Anth. Pal.* 9. 586) may have been written as late as the reign of Constantine VII (A.D. 911-59).

CRITICISM C. M. Bowra, *Early Greek Elegists* (1928). C. M. B.

ELEGIAC POETRY, LATIN. Ennius (ed. Vahlen², 215 f.) and Lucilius (Books 22-5) used the elegiac couplet for short occasional poems. Its real literary history begins c. 100 B.C. with the epigrams of Valerius (4) Aedituus, Porcius (1) Licinus, and Q. Lutatius Catulus (2) (qq.v.). These pieces, clearly Greek in inspiration (Day, 103 f.), are all concerned with love, and it is predominantly as a medium for love poetry that the elegy was developed during the first century B.C. Catullus' work includes many short epigrams, but his most ambitious and rewarding elegies are the longer poems (65-68) in which Hellenistic structures and techniques are informed by a new, specifically Roman and contemporary approach to love and poetry. What might be called the 'classic' type of love-elegy, the cycle of short poems centred upon the poet's relationship with a single mistress, appears to have originated with Cornelius Gallus (q.v. 3; cf. Ov. *Tr.* 4. 10. 51 ff.): his 'Lycoris', rather than Catullus' Lesbia, was the prototype of Tibullus' Delia, Propertius' Cynthia, Ovid's Corinna, and Lygdamus' Neera. Latin love-elegy is a good example of a literary form almost every feature of which is derived from Greek models but which as a whole has no analogue in Greek literature: as the ancients regarded originality it is an original Roman creation, though not explicitly claimed as such by, e.g., Quintilian, who merely observes (*Inst.* 10. 1. 93) *elegia quoque Graecos provocamus*. Its brief history is the record of an increasing domination of the poet's experience by conventional literary and rhetorical elements: Ovid's *Amores*, in fact, compared with the elegies of Catullus or even Propertius, constitute almost a new kind of love-poetry. Somewhat outside the genre stands the delightful cycle of poems associated with the name of Sulpicia (q.v. 1).

It was natural that the elegiac couplet should be treated in Latin as something of an all-purpose metre, as it was in Greek. Its most versatile practitioner was, of course, Ovid. In the *Heroides*, *Ars Amatoria*, and *Remedia Amoris*, though the genres were formally different, the dominating theme was still love. For the *Fasti* Callimachus and Propertius, for the *Ibis* Callimachus afforded

his models. The *Tristia* and the *Epistulae ex Ponto*, on the other hand, represent what is in effect a new genre, for all the formal allegiance which they owe to the traditional origins of the metre (cf. *Am.* 3. 9. 3 f.). The range of possible applications is also illustrated by the other surviving elegies of the Augustan or immediately post-Augustan period: the elegies of the *Catalepton* (one or two probably by Virgil himself), the *Copa* (see APPENDIX VERGILIANA), the *Elegiae in Maecenatem*, the *Consolatio ad Liviam* (qq.v.), and the pseudo-Ovidian *Nux* (see OVID).

After Ovid the metre was used chiefly for epigrams and short occasional poems. Among the many examples transmitted in the *Anthologia Latina* (q.v.) those attributed to Seneca have a limited historical interest, those attributed to Petronius some poetic merit. The fixed association of the elegiac couplet with the epigram in Latin is largely due to Martial, whose favourite metre it was and who rivals and occasionally even excels Ovid in technical virtuosity. The most remarkable individual elegy of the imperial age is the *De reditu suo* of Rutilius Namatianus (q.v.). Among other poets who made use of the metre Claudian and Ausonius should be mentioned.

The Metre. The elegiac hexameter differs little from the heroic. The special effects appropriate to epic were not often required in elegiac writing, and the general character of the line is smooth and fluent. Of five pentameters by Ennius which survive four end in disyllables, and it may be that this rhythm was the most satisfactory to the Roman ear: certainly, though the epigrammatists mentioned above (§ 1) and Catullus freely admitted words of from three to five syllables to the end of the line, following Greek practice, the disyllabic ending became the rule in Propertius' later poems and in Ovid (however, in *Her.* 16-21, the *Fasti*, and the poems of exile he reverts occasionally to the looser usage). After Catullus elision became both rarer and, when used, less harsh. These developments were undoubtedly dictated by artistic preferences, but Catullus' 'un-Augustan' usages must not be interpreted as evidence of technical incapacity: the occasionally harsh rhythms of, e.g., *Carm.* 76 are part of the designed effect of the poem (cf. Harrison, *CR* 1943, 97 ff.). From the very beginning the Latin couplet, unlike the Greek, tended to be self-contained: genuine enjambment between couplets is extremely rare. For modern Latin verse-writing, from the Renaissance onwards, the strict Ovidian form of the couplet has generally been the preferred model. It is above all ideally suited to pointed expression, conveyed through variation and antithesis: half-line responding to half-line, pentameter to hexameter, couplet to couplet.

E. J. K.

ELEGIAE IN MAECENATEM. Tradition ascribes to Virgil two such *Elegiae* (wrongly combined in the MSS. and divided by Scaliger). As they were written after Maecenas' death (8 B.C.), Virgil (d. 19) cannot be the author. In the former elegy the unknown poet tells us that Lollius (either consul 21 B.C., cf. Hor. *Carm.* 4. 9. 33, or another Lollius) made him write this poem. This elegy defends Maecenas against the charge of weakness and love of ease.

The second elegy contains the farewell words of the dying Maecenas, who expresses gratitude to his friend Augustus.

Their date is disputed. By some they are dated shortly after Maecenas' death; on the strength of *El.* 1. 1-2 many ascribe to the same poet the anonymous *Consolatio ad Liviam*. Others rightly reject this on account of metre and diction, though the Maecenas elegies follow the *Consolatio* in places. As both *Consolatio* and Maecenas elegies borrow from Ovid's *Metamorphoses*, *Tristia*, and *Ex Ponto* (I-III), it is probable that the Maecenas elegies were written after A.D. 13.

ELEMENTS. Hesiod conceived the Universe as a family of divine powers descended partly from the Void (Chaos) but mainly from the Earth. The early Ionian cosmologists saw it as consisting of (Thales, Anaximenes, Heraclitus) or evolved out of (Anaximander) a single divine substance, unhegotten as well as everlasting. Parmenides regarded Nature as the product of the mixture in different proportions of two self-identical 'forms' (*μορφαί*), Light and Night, existing (like all Nature) only 'in belief', and transferred to a Daemon the world-government exercised by the Ionian divine substance (*δαίμων*). These 'forms' Empedocles converted into four real 'roots' (*ρίζωματα*), viz. Earth, Air, Fire, Water, which are the ultimate, exclusive, and eternal constituents combined in different ratios to form the Universe. He thus originated the conception of physical elements.

The atomists illustrated the relation between atoms and objects from that of letters to words, and Antisthenes may have called the simple sensibles in his theory of knowledge *στοιχεῖα* (cf. *Pl. Thet.* 201 c), sc. the 'elements' or ABC of the world. Plato was the first to give the name *στοιχεῖα* to such elements as the Empedoclean 'roots' (Eudem. fr. 31 Wehrli, cf. *Pl. Soph.* 252 b), but he himself held that not these but the geometric figures constituting them are alone genuine physical elements (*Ti.* 48 b; 56 b), and that the One and the Dyad are the *στοιχεῖα* of the Forms. Aristotle (*Metaph.* 43, etc.) defined and classified the usage of *στοιχεῖον*, embracing now, among other things, the elementary demonstrations inherent in all mathematical and logical proof (whence Euclid's '*Elements*'). The physical sense, however, prevailed, though the metaphor was forgotten; so that when St. Paul speaks of 'beggarly elements' (Galatians iv. 9) he refers to natural phenomena, including now heavenly bodies, worshipped as spirits or angels. In Latin Lucretius, continuing the old image of letters for atoms, first translated *στοιχεῖα* by *elementa*; which term Cicero presently adopted to denote the Empedoclean 'roots'.

H. Diehl, *Elementum* (1899).

ELEPHANTINE, on an island below the first cataract of the Nile, had been a military and business frontier station and a religious centre in Pharaonic times; but under the Ptolemies its religious importance was gradually transferred to the island of Philae above the cataract, and the Roman camp and customs station were at Syene, on the east bank of the river. Of the buildings seen by Jomard on Elephantine, the only interesting monument that remains is the Nilometer mentioned by Strabo. Many ostraca, chiefly customs receipts, have been found; also Aramaic papyri containing the records of Jewish mercenaries.

J. G. M.

ELEPHANTS. The ancient world knew the two surviving species of elephant, the Indian or Asiatic (*Elephas maximus*) and the African (*Loxodonta africana*). Subspecies of the former require no mention, but the latter comprises two groups: *Loxodonta africana* or Bush elephant and *Loxodonta africana cyclotis* or Forest. These African varieties differ in structure and habitat, the Forest being considerably the smaller. It is this latter smaller Forest elephant that was known to, and used by, the Ptolemies and Carthage. When during the last century the opening-up of the interior of Africa revealed the Bush elephant, which is larger than the Indian, the ancient writers, who said that the African was smaller than the Indian, were considered to be wrong. But now that the smaller African subspecies has been distinguished, it is clear that they were right: the African elephant known to the ancients was smaller than the Indian. It was found in Ethiopia and the hinterland of the Red Sea, whence the Ptolemies obtained their supply, and in the forests at the foot of the Atlas mountains, which supplied the Carthaginians. The appearance of these elephants is shown on the fine coins minted by the Barcid generals in Spain.

Ivory was known to the Greeks long before the elephant. The Greeks first met the beast as a weapon of war when Alexander in a desperate struggle defeated the 200 Indian elephants of Porus (q.v.) on the Hydaspes (326 B.C.); the Romans first encountered it when Pyrrhus used his Indian elephants ('Lucanian oxen') in his invasion of Italy. Alexander himself did not try to use elephants for battle, but war-elephants were exploited to the full by his successors, particularly the Seleucids and Ptolemies, in their mutual struggles. This was the great age of the war-elephant. When the Seleucids gained control of the sources from which Indian elephants came, the Ptolemies had to look elsewhere and sent large-scale hunting expeditions to Ethiopia, using Indian mahouts to break in these African elephants. When Indians and Africa met in the battle of Raphia (217), the latter were defeated, but they were heavily outnumbered. The Carthaginians (some time before 204) built up a force of war-elephants drawn from the Atlas region. These contributed to their victories over Regulus (q.v. 1) and the Mercenaries, but although in general elephants were effective when used for the first time, they were liable to get out of hand. The Romans gradually took their measure, both the Indians of Pyrrhus and the Africans of the Barcids; finally, Scipio Africanus checked Hannibal's at Zama (q.v.) by leaving lanes in his ranks, while the Indians of Antiochus the Great failed to win him the battle of Magnesia. Seleucids and Numidians continued to make some use of them, but the Romans themselves used them only sporadically for war (e.g. at Pydna, 168, Numantia, 153, Thapsus, 46). Their main use by the Romans was for the arena or ceremonial purposes. The supply during the Empire was kept up by an imperial herd in Latium. Though the Parthians apparently did not use war-elephants, the Sassanids revived their use.

S. Reinach, *Dar.-Sag.*, v v. 'Elephas'; Sir W. Gowers and H. H. Scullard, *Num. Chron.* 1950, 271 ff. H. H. S.

ELEPHENOR, in mythology, leader of the Abantes of Euboea (*Iliad* 2. 540), killed by Agenor (4. 463-70). He is son of Chalcodon in both passages; Hyginus (*Fab.* 97. 10) says his mother was Imenarete, a dubious name. Lycophron 1034 and the schol. there make him survive the Trojan war, previous to which he had gone into exile from Euboea for accidentally killing his grandfather Abas.

H. J. R.

ELEUSINIA, a word signifying games celebrated at Eleusis, never the Eleusinian Mysteries. The games were

celebrated every fourth year (the second of the Olympiad) and on a lesser scale every second year. The prize was a certain quantity of grain from the Rarian field. We know also of a procession and certain sacrifices.

A. Rutgers van der Loeff, *De ludis Eleusiniis* (1903); L. Deubner, *Attische Feste* (1932), 91 ff.

M. P. N.

ELEUSIS, the most important town of Attica after Athens and Piraeus, on a land-locked bay with a rich plain, was a strong prehistoric settlement and remained independent of Athens, with its own kings, perhaps as late as the seventh century B.C. It had a naturally defended acropolis, held by the Thirty Tyrants in 403, and many walls and houses are preserved. Its fame depended chiefly on the mysteries celebrated in honour of Demeter and Persephone, which attracted visitors from all Greece. Work of all periods is visible in their sanctuary; the Mycenaean megaron, cogently identified as the first shrine of the goddesses, was replaced in geometric times by an apsidal (?) temple, then by an archaic temple, and, finally, under Pisistratus, by the magnificent *telesterion*, a square hall with rock-cut seats like a theatre, rebuilt and enlarged by Ictinus. There was much building in Roman times, including the splendid Propylaea finished by Marcus Aurelius. The sanctuary ceased to exist after A.D. 395, a victim of Alaric and Christianity.

C. W. J. E.

ELIS, the plain of north-west Peloponnesus, famed for horse-breeding. It was occupied by a people akin in race and language to the Aetolians, coming in from the north. There are fairly extensive remains of Mycenaean occupation, with a concentration on the lower Alpheus near Olympia and at Olympia itself. In the Catalogue of the Ships (*Il.* 2. 592) the boundaries of Nestor's kingdom extend to the Alpheus. For the problem thus presented and that of the cattle raid in *Il.* 11, see PYLOS in Triphylia and MESSENA. Mycenaean tombs (of LH IIIB-C date) have been found at Dhiassela near the Alpheus (*BCH* 1957, 574 ff.). Sub-Mycenaean and Protogeometric burials occur on the site of the later city of Elis, and what has been described as a 'vast' geometric cemetery near Killini (*BCH* 1957, 568). Of interest is the *τείχος Δυαλαίων* on the Araxus promontory, for its Mycenaean cult and habitation, and the continuity of occupation to Byzantine times. There is also a curious burial mound of Mycenaean date at Samiko, not far from the well-known site of Kakovatos. The Eleans' small neighbours of Pisa, Lepreum, and Triphylia long kept an uneasy independence. Their boundaries with the Arcadians of Hieraea were established by treaty (Iod 5; early 6th c.?). The Eleans presided over the Olympic Games, traditionally set up in 776 B.C.; but they may not have had effective control until two centuries later (see PISA). They lived a country life and had little concern with politics; a council of 90 life-members formed a closed circle within the oligarchy (Arist. *Pol.* 1306^a12 ff.). They were early and loyal allies of Sparta, until in 420 Sparta championed the independence of Lepreum, whereupon Elis joined Athens and Argos; she was punished in 399 with the loss of Triphylia, which after 369 was united with Arcadia. Elis was now for a brief period a moderate democracy. In the third century the Eleans were allies of Aetolia and fought frequent wars with the Arcadians.

The town of Elis on the Peneus was built c. 471, and replaced Olympia as a political centre. It was an open and extensive town, of which considerable remains have been excavated including the theatre (*BCH* 1964, 755).

ELIS, SCHOOL OF, was founded by Phaedon (q.v.; Diog. Laert. 1. 19; 2. 105; 126). Little is known of the members of the school other than its founder.

ELOCUTIO NOVELLA, a phrase used by Fronto (q.v., ed. M. P. J. van den Hout, 146. 15) in writing to his pupil M. Aurelius expressing the modern style of Latin which he advocated. This fresh mode was a reaction against the outworn conventions of the Silver Age and an attempt to combine the virile elements of Early Latin authors with the vigorous current of contemporary speech. Gellius and Apuleius also represent the movement.

J. W. D.

ELOGIUS, QUINTUS, Augustan writer of memoirs cited as a first-hand authority on the Vitellian family by Suetonius (*Vit.* 1).

ELYMAIS (Hebr. *Elām*), a region between Babylonia and Persis, to which the name Susiana (properly the name of the district around Susa (q.v.)) was often extended in Hellenistic times. Elymais is primarily the hill country, Susiana the fertile plain. After Cyrus conquered Elymais and made Susa a principal residence city, Iranian influences gradually prevailed throughout the region. Elymais remained for the most part an autonomous ally rather than a subject of the Seleucid successors of Alexander, unlike Susa itself. Similarly, after the initial conquest by the Parthian Mithridates the Great, kings of Elymais asserted their autonomy. They issued coins, at first with the native name Kamniskires, from the second century B.C. onwards. Autonomy ended with the conquest and annexation of the kingdom by the Sassanid Ardashir (see ARDAXERXES 4).

U. Kahrstedt, *Artabanos III* (1950), 39 ff.; G. F. Hill, *Brit. Mus. Cat. Arabia*, etc. (1922).

E. W. G.

EMANCIPATIO is the release of a *filius* or *filia familias* from family ties and the *patria potestas* by a voluntary renunciation of the *pater familias*. The *emancipatus* became a person *sui iuris* and, if male, a *pater familias* even though he had not yet a family of his own. *Emancipatio* entailed the consequences of a *diminutio capitis* (q.v.) *minima*. It was first made possible by taking advantage of the rule of the Twelve Tables that a father who sold his son three times was deprived of his *potestas* (see PATRIA POTESTAS § 2). The sales (by *mancipatio*, q.v.) were made to a friend, who made two intervening manumissions (which restored the son to the father) and after the third sale either made a third manumission or emancipated the son back to the father for him to make the manumission, the advantage of the latter method being to vest in the father the rights of succession, etc., to the son. Since the Twelve Tables referred only to sons, it was held, illogically, that for daughters or grandchildren one *mancipatio* was sufficient. Justinian finally abolished these formalities and substituted a simple declaration before a magistrate. The Emperor Anastasius had earlier (502) introduced *emancipatio per rescriptum principis*, where the son was absent. Justinian preserved this as an alternative method, applicable to all cases.

A. B.; B. N.

EMBATERION. The *ἐμβατήριον* was properly a marching-tune (Polyb. 4. 20. 12). Hence it was also a marching-song, such as the Spartans sang when under

arms (Ath. 630 f.; schol. Dion. Thrax 450. 27), like the anapaests attributed to Tyrtaeus (*Carm. Pop.* 18-19; cf. Dio Chrys. 2. 59).

EMERITA AUGUSTA (modern *Mérida*), a colony on the *Anas* (*Guadiana*) founded by Augustus in 25 B.C. for veterans of legions V and X. Built rapidly on a grand scale, it was linked with Baetica by a 64-arch bridge and with the north by Augustus' great trunk road, which crossed the *Tagus* by the bridge of Alconétar. Its aqueducts were fed from a large reservoir constructed nearby; Agrippa presented it with a great theatre; its gateway was depicted on its coins. Many monuments partly survive. The colony was reinforced by Otho. It was the premier city of Spain to Asonius, and to the Visigoths a wonder, both for its architecture and for its saint, Eulalia.

M. I II

EMESA, in Syria Apamea, on the Orontes, now *Homs*. It was for long the centre of an Arab sheikhdom. One of these rulers was Sampsigeramus whose friendship with Pompey caused Cicero to poke fun at Pompey as an eastern potentate. Under the Flavians Emesa became Roman, but the dethroned Sampsigerami are still mentioned in inscriptions. Emesa was the native city of Julia Domna, Mamaea, Elagabalus (2), and Severus (2) Alexander (q.v.). When Elagabalus became Roman Emperor (A.D. 217), Emesa began to flourish; it became a metropolis and received *ius Italicum*, and it was famed for its temple of the Sungod Baal and the games. It was conquered by the Arabs in 636.

H. Seyrig, *Syria* 1952, 204 ff., 1953, 12 ff.

II. H. S.

EMONA, modern *Ljubljana* in the upper Save valley, was a city in south-western Pannonia on the main route between north-east Italy and the Danube. Under Augustus it was a legionary base occupied probably by *Legio XV Apollinaris*: on the transfer of this legion to Carnuntum (q.v.) c. A.D. 15 it was settled with a *colonia* of legionary veterans (cf. *CQ* 1963, 268 ff.).

J. J. W.

EMPEDOCLES (c. 493-c. 433 B.C.; 444-441, his *floruit* ap. Diog. Laert. 8. 74, is too late), son of Meton and grandson of the Empedocles who won the horse-race at Olympia in 496, belonged to the aristocracy of Acragas in Sicily. Combining the roles of philosopher, scientist, poet, orator, and statesman with those of mystagogue, miracle-worker, healer, and claimant to divine honours, he acquired legendary fame. Tradition associates him with Pythagoreans, and Theophrastus (ap. D. L. 8. 55) calls him a follower and imitator of Parmenides. He championed democracy at Acragas after 472, declined an offer of the kingship, was later exiled and fled to the Peloponnese, where he recited his *Purifications* at Olympia. He visited Thurii shortly after its foundation (Apollod. ap. D. L. 8. 52). The place and manner of his death, about which there are conflicting stories, are unknown. He died aged 60 (Arist. ap. D. L. 8. 52; 74).

WORKS: two hexameter poems of considerable poetic merit (totalling 5,000 verses), (1) *On Nature* (*Ἐπεὶ φύσεως*), (2) *Purifications* (*Καθαρμοί*). About 350 verses of (1) and 100 of (2) are extant. Other writings are probably wrongly ascribed.

Empedocles' philosophy is the first pluralistic answer to Parmenides. Accepting the Eleatic contention that real being is permanent, he denies its unity and immobility. The All is a spherical *plenum*: within it four ultimate kinds or 'roots' (*ρίζωματα*), fire, air, water, and earth—to which Empedocles assigns divine names—mingle and separate under the contrary impulses of Love (*Φιλία*) and Strife (*Νείκος*), to cause the arising and perish-

ing of 'mortal things'. Generation and decay are nothing save the compounding (in fixed ratios) and dissolution of eternally unchanging 'elements'. Empedocles imagines a World-cycle in which Love, the unifier of unlikes, and Strife, which divides and so joins like to like, alternately predominate. The four stages are: (i) Love controlling the Sphere, with the elements wholly mingled and Strife enveloping it on the outside; (ii) Strife passing in and Love going out; (iii) Strife victorious and the elements completely separated; (iv) Love returning and Strife withdrawing. Our world (cf. Arist. *Gen. Corr.* 334^a6; *Cael.* 301^a14) falls in period (ii): sexual generation has succeeded a phase of 'whole-natured forms' (fr. 62). A corresponding world occurs in (iv), where union in haphazard wise of limbs and organs, originating separately, produces monsters (frs. 57-61). (This interpretation of the World-cycle is not universally accepted: see bibliography.)

Empedocles' cosmology, described by the doxographers, begins with the separating off of the elements, first of all air and fire. His obscure astronomy mingles penetration with *naïveté*. Two hemispheres, a bright and a dark, revolving round the spherical earth, produce day and night. The sun is the rays of the diurnal hemisphere focused back from the earth's surface. More significant are his biological theories of pores and 'effluences' and of vision, later adapted by Plato and Aristotle. He explains sense-perception on the principles of symmetry and 'like perceives like'. The blood round the heart is the organ of thought.

The *Purifications*, *prima facie* a complete contrast to the poem *On Nature*, shows Empedocles in close relationship with the Orphic tradition in Acragas (cf. Pind. *Ol.* 2) and raises the problem of reconciling its doctrine of transmigration with the physical teaching. But the theological and mystical flavour of the cosmological poem, and the remarkable parallels with the religious (exhibited by Cornford and Kranz), point to a possible vindication of the unity and consistency of his thought.

Empedocles' theory of matter is a step on the road to Atomism; and Aristotle, after criticism, incorporates it in his own philosophy. Empedocles was, through his disciple Gorgias, the parent of Sicilian rhetoric, and Galen calls him the founder of the Sicilian medical school. His importance in Greek thought is far-reaching.

EMPHYTEUSIS, in late Roman law a lease in perpetuity or for a long term. It was more akin to ownership than to an ordinary lease, and the Emperor Zeno (c. 480) resolved a controversy by ruling that it was *sui generis*. As regulated by Justinian (*Cod.* 4. 66. 2-4), it was alienable (but the owner could pre-empt or claim a fine) and inheritable; it was protected by a variant of the *vindictio* (q.v.); and it was terminable only for non-payment of rent for three years. It derived from earlier institutions, developed (from Greek models) in the third and fourth century A.D., originally for grants of imperial lands, especially *ius perpetuum*, a perpetual lease of land belonging to the *fiscus* (q.v.), and *ius emphyteuticarium* (*ἐμψυτεύσις*), a long-term lease applicable to lands of the *patrimonium* (q.v.) *Caesaris*. Justinian merged in it the similar institu-

tion of the Principate by which State or municipal land was granted in perpetuity or for a long term at a small rent (*vectigal*—hence the land was called *ager vectigalis*). The tenant had *possessio* (q.v.), and at least in some circumstances a variant of the *vindictio*, but to what extent it had the other characteristics of *emphyteusis* is disputed.

B. N.

EMPORION (modern *Ampurias*), a colony of Massilia on the Spanish coast about 75 miles north-east of Barcelona. A double city, Emporia or Emporiae, was formed by a settlement of the native Indigetes, separated by a wall which the Greeks guarded at night. It was the landing port of Roman expeditions in 218, 211, and 195 B.C. In 45 B.C. Caesar added some legionary veterans, but it was not until Augustus that Emporiae was made a *municipium civium Romanorum*, comprising the Roman, Spanish, and Greek inhabitants. Its coinage represents all three elements. Excavations since 1909 have distinguished the original Massiliote port (Palaeopolis) from the expanded Greek Neapolis and the Roman city. Numerous finds, extending into the Christian period, are housed in the archaeological museum of Barcelona.

M. I. H.

EMPUSA, a Greek boggy-woman, appearing in fantastic forms (see *Ar. Ran.* 288 ff., the scholiast there, and the lexicographers, s.v.). Later demonology took her more seriously: Philostratus (*VA* 2. 4) recommends abusing her if met, whereupon she will flee squeaking; she is an amorous fiend, like a Lamia, who will sooner or later eat her human lover (4. 25); Apollonius rescues a young man from her.

H. J. R.

ENA, SEXTILIUS, a Spaniard from Corduba, who wrote narrative verse on events of the Augustan period (*Sen. Suas.* 6. 27).

See Bachrens, *FPR*, Morel, *FPL*

ENCAUSTIC, the technique of painting on stone or wood with heated wax as a medium for applying colours (Pliny, *HN* 35. 149). Encaustic decoration of architecture and ships preceded its use for pictures. Statues were coloured encaustically, which explains the statement that the technique was perfected by Praxiteles (q.v.); Praxiteles particularly liked those of his statues which were painted by Nicias (q.v. 2). An early fourth-century Apulian vase in New York (G. M. A. Richter, *Handbook of Greek Art* (1956), 395) shows an encaustic painter colouring a marble Herakles. The chief encaustic painters in Pliny's list are Polygnotus, Pamphilus (1), Pausias (qq v.), Aristides (q.v. 2), and Nicias. The majority of the preserved mummy portraits (first to fourth century A.D.) are painted in encaustic on wood and show the combined use of brush and spatula for applying colours.

T. B. L. W.

ENKTESIS. *ἔγκτησις*, *ἐμψασις*, and related words, commonly further defined by the addition of *γῆς καὶ οὐρίας*, are used to describe the right to own real property within a state. Since this right normally belonged only to citizens, it became the practice to make special grants of *enktesis* to foreigners, generally together with other rights and honours such as *proxenia* and even *isopoliteia*.

Examples and formulas are given by W. Larfeld, *Handbuch der griechischen Epigraphik* (1898–1907), I. 520 ff.; II. 794 f.; *StG*, index, Tod II, index.

J. A. O. L.

ENCYCLOPAEDIC LEARNING. In Greece the Sophists were the first who claimed to impart to pupils all the knowledge they might want in daily life. We are especially told of Hippias of Elis (Pl. *Hp. Mi.* 368 b; Cic. *De Or.* 3. 127) that he mastered all the subjects of instruction (*τέχνας*), later on called by Aristotle (*Pol.* 1337^b 15) *ἐλευθερία ἐπιστήμης*, or the branches of knowledge requisite for a freeman. Among them were astronomy, geometry, arithmetic, music, and grammar. When Quintilian (*Inst.* 1. 10. 1) speaks of 'orbis ille doctrinae quem Graeci ἐγκύκλιον παιδείαν uocant', he means the ordinary course of instruction for a pupil before taking up his special subject of study. Notwithstanding the value the Greeks attached to encyclopaedic knowledge, they never got so far as to compose an encyclopaedia.

It was reserved for the practical-minded Romans to lay down in a compilation the results attained by the scientific researches of the Greeks. Shortly after 184 B.C. Cato (q.v. 1) wrote a work for the benefit of his son on medical science, agriculture, and rhetoric, perhaps also on military science and jurisprudence.

Much more important was Varro's encyclopaedia, the *Disciplinae* in nine books on (i) *grammatica*, (ii) *dialectica*, (iii) *rhetorica*, (iv) *geometria*, (v) *arithmetica*, (vi) *astrologia*, (vii) *musica*, (viii) *medicina*, (ix) *architectura*. The first seven books formed the foundations for the so-called seven liberal arts, which as *trivium* (grammar, dialectic, rhetoric) and as *quadrivium* (geometry, arithmetic, astronomy, and music) were still practised in the Middle Ages.

During the reign of Tiberius, Celsus (q.v. 2) composed an encyclopaedia named *Artes* probably containing the subjects agriculture, medicine, military science, rhetoric. Of these only the *libri medicinae* have come down to us. Pliny's *Naturalis Historia* (A.D. 77) is an encyclopaedia of nature and art. The *Prata* of Suetonius (q.v. 2) was rather a collection of 'uaria et miscella et quasi confusanea doctrina' (Gellius, *Praef.* 5) than a real encyclopaedia.

In the fifth century the *artes liberales* were once more treated by Martianus (q.v.) Capella between 410 and 439 in his bizarre work, *De Nuptiis Philologiae et Mercurii*. This encyclopaedia comprises, however, only the first seven *artes* dealt with by Varro. Neither is the book a strictly scientific manual, as Martianus dishes up his only half-understood learning borrowed from various sources in the shape of a Menippean satire, i.e. in prose alternated with poetry. The wedding of Mercury with Philology is the background that serves as a setting to the whole.

Boethius (q.v., c. 480–524) was so far interested in encyclopaedic learning that he made arithmetic, music, geometry, and astronomy the foundation of his purely philosophical works laid down in four text-books.

In the sixth century it was Cassiodorus (q.v.) who wanted to give the monks of his monastery 'Vivarium' a summary of the worldly sciences in his *Institutiones*. Therefore he laid down in seven chapters the seven liberal arts.

Finally, mention must be made of the *Etymologiae* or *Origines* by Isidorus (q.v. 2) of Seville (c. 570–636), an encyclopaedia which, starting from etymology, treated everything briefly that seemed to him worth knowing.

M. Guggenheim, *Die Stellung der liberalen Künste oder encyclopädischen Wissenschaften im Altertum* (1893), Noiden, *Ant. Kunstpr.* 670; *PW* Suppl. VI. 1256.

P. J. E.

ENDELECHIUS, SEVERUS SANCTUS, friend of Paulinus of Nola, and professor of rhetoric at Rome (A.D. 395). The

only work preserved is a poem *De mortibus boum* (A. Riese, *Anthologia* (1894), no. 893), thirty-three Asclepiadic stanzas, naive in content but elegant (though not Horatian: several unrelated rhymes) in form. A dialogue between cowherds, it recommends Christianity as a protection from cattle-plague. The plague mentioned may be that of A.D. 386, the date of composition around 400, and the dramatic setting, and thus the author's home, Gallia Lugdunensis or Aquitania.

W. Schmid, *RAC* 5. 1960.

O. S.

ENDOWMENTS can be divided into two groups, those given to state institutions and public corporations, and the private ones. The first group was called *epidoseis* in Greece, if the givers were citizens. They emerged after the Peloponnesian War, were an important factor in town finances, and were given in money or in kind (especially in grain). There was a difference between 'gifts' and *epidoseis* in Athens; the purpose of the *epidoseis* (cancellation of debts, war expenses, use for public buildings, roads, or libraries, foundation of schools and offices, grain provision, public festivals, distribution of food, etc.) and the terms on which they were to be collected, had to be defined in a published decree.

The private endowments had very different purposes. We hear of donations to temples and synagogues, sacrifices, processions, the making of statues of gods, festivals for kings and Roman Emperors, sacrifices for a dead person or care for his grave, donations and legacies to gymnasia, sports festivals, and clubs. The gifts were often in real estate (land, houses, and even villages). If the donation was intended to last for a long period or for ever, an administrative body had to be appointed and rules laid down specifying how a given capital should be invested and how its interest should be applied.

Many precautionary measures against betrayal of trust were provided (oaths, witnesses, state control, fines and punishment, legal actions, curses, blessings, disavowal of the endowment or its transfer to another body, etc.). Several hundreds of such endowments are known to us, a symbol of the public generosity of the ancients. The economic crisis of the third century A.D. marked the approximate end of these general endowments.

In Roman law only juridical persons of public law were permitted to receive and administer endowments, mainly subdivisions of the *aerarium*, *fiscus*, *patrimonium*, *res privata*, or of municipal exchequers and a few *collegia*. Justinian I, if not one of his predecessors during the fifth century A.D., made endowments under ecclesiastical administration for *piae causae* legal also. The donor had, in all these cases, the right to stipulate for which lawful purposes his endowment was to be used.

See CLUBS (GREEK AND ROMAN), COLLEGIUM, FINANCE (GREEK AND HELLENISTIC).

F. M. H.

ENDYMION (*Ἐνδυμιών*), in mythology, a remarkably beautiful young man, either king of Elis (Apollod. 1. 56 and others) or a Carian (Aristophanes ap. Hesych., s.v.

Ἐνδυμιών); his grave was shown on Latmos (Hesych. *ibid.*, Paus. 5. 1. 5), or at Elis (*ibid.*). Of several tales told of him (see v. Sybel in Roscher's *Lexikon*, s.v.) the most celebrated is that he was loved by the Moon. In the Elean version (Paus. *ibid.* 4) she bore him fifty daughters, evidently the fifty months of an Olympiad; usually (as Apollod., loc. cit.), he sleeps everlastingly, either because Zeus granted it to him as a boon or for some other reason.

H. J. R.

ENIPEUS (*Ἐνιπέος*), god of a river (in Thessaly, or Elis, schol. *Od.* 11. 238, cf. Strabo 8. 3. 32), loved by Tyro, daughter of Salmoneus (q.v.). As she wandered beside it, Poseidon took the form of the river-god and possessed her, making a wave curve over them to hide them. She bore Pelias and Neleus.

H. J. R.

ENNIANISTA, 'an enthusiast for Ennius', a title claimed by a reader (*ἀναινώστης*) who gave a public recitation clamorously applauded in the theatre at Puteoli from Ennius' *Annales*. The incident, recorded by Gellius (18. 5), illustrates archaizing taste in the second century A.D.

J. W. D.

ENNIUS, QUINTUS, born in 239 B.C. in Rudiae in Calabria, a meeting-point of three civilizations: Greek (from Tarentum), Oscan, and Latin (from Brundisium)—so Ennius said he had three hearts (Gell. 17. 17). In 204 B.C. Cato brought him back with him to Rome from Sardinia (Nepos, *Cato* 1, 4) where Ennius was serving with the Roman army. There, like Livius Andronicus, he lectured on poetry (Suet. *de gramm.* 1), but anecdotes tell of his *paupertas* (Cic. *Sen.* 14). In 189 B.C. the consul M. Fulvius Nobilior took him, after the fashion of Hellenistic generals, on his Aetolian campaign (which Ennius celebrated in the *Annales* and in his *Ambracia*, which may have been a play). The son of his new patron, in 184 B.C., took advantage of his position as a *triumvir coloniarum deducendae* and made Ennius a Roman citizen (*Ann.* 377 V. and Cic. *Brut.* 79). Anecdotes connect him with Scipio Nasica (Cic. *de orat.* ii. 276) and Servius Sulpicius Galba (Cic. *Luc.* 51). His influence was great: Caecilius (q.v. 1) was *Enni primum contubernalis* (Jerome on 179 B.C.) and Pacuvius (q.v.) was his nephew. He died in 169 B.C. aged 70 (Cic. *Brut.* 78) and there was a story (no more) that his statue was in the tomb of the Scipios (Cic. *pro Arch.* 22).

Tragedies: some twenty titles are known, of which twelve are Euripidean, perhaps three Aeschylean, none is certainly Sophoclean, and one original was by an obscure contemporary of Euripides (the *Achilles* of Aristarchus: Plaut. *Poen.* 1 ff.). Real possibilities exist in the fragments of Ennius for comparison with Greek originals (e.g. *Alexandros* and *Telephus* from papyrus), especially in the case of *Medea*. Here the changes in Ennius' translation of the nurse's opening speech are interesting: mythology is simplified and explained, so that of the first 54 lines only 34 are translated, and are expanded to fill 7; the fine vivid style of Euripides is made solemn and bombastic with alliteration and assonance. The speech *Med.* 214 ff. has been turned by Ennius into a polymetric *canticum* (scen. 259 ff. V.) and, more important, the great monologue of *Medea* before she slays her children shows dactylic tetrameters in Ennius and has therefore undergone the same treatment (see LIVIUS (1) ANDRONICUS, NAEVIUS, PLAUTUS, and CAECILIUS (1) STATUS). Here and in the translation, e.g., of *Eumenides* 905 ff. (scen. 151 ff. V.), artificiality, a desire for careful patterning of language, and a delight in highflown usages have all contributed to substitute a rather grand formality for the natural ease of the Greek. It is possible to see in the fragments, however, something of the

grandeur of the composition and to understand Cicero's admiration. Apart from these Greek tragedies, Ennius wrote *praetextae*, of which *Sabinæ* (the rape of the Sabine women; it contained a motif taken from Eur. *Phoen.* 571 ff. in scen. 370 ff. V.) is an example and perhaps *Ambracia* (the dactyls of scen. 367 V. could be part of a *canticum*).

Comedies: nothing worth while can be said of Ennius' comedies, of which antiquity saw fit to preserve four separate lines.

Saturae: four books of mixed verse, distinguished carefully by the ancient world (e.g. Diom. *Gramm. Lat.* i. 485, 30 ff.) from the literary form invented by Lucilius (q.v. 1). Some seventy lines are preserved together with a long prose paraphrase of the fable of the crested lark (Gell. 2. 29). The subject of another *satura* was a contest between Life and Death.

Scipio: a special poem celebrating the great Scipio Africanus, probably not a *praetexta*. Excellent group of four lines quoted by Macrobius. *Sat.* 6. 2. 26 (= var. 9 ff. V.). The barbarous hexameter (*sparsis hastis longis campus splendet et horret*: parodied by Lucilius 1190 M.) is quoted from this poem.

Epicharmus: Ennius translated one of the poems falsely attributed to Epicharmus of Sicily. It was on the subject *rerum natura* and the opening was a dream by Ennius (quoted by Cicero, *Luc.* 51).

Hedysphagetica: a composition based on a gastronomic poem of Archestratus of Sicily (end of 4th c. B.C.).

Euhemerus: a prose work based on the *ἱερὰ ἀναγραφὴ* of Euhemerus (q.v.). The remarkable fact about this work is that the deity whose majesty was most seriously infringed was not just a figure of the Greek Pantheon but Jupiter Optimus Maximus, the national god of the Roman State. Extensive fragments are quoted polemically by Lactantius.

Annales: a work of decisive originality especially in its application of the dactylic hexameter to epic; it contained eighteen books and Ennius seems to have been writing it up to the time of his death. The title is based on the public records, the *annales pontificum* (cf. Servius on Verg. *Aen.* 1. 373); its arrangement was on the historical pattern of consular years. The epic opened with a dream in which Homer appeared to Ennius and told him that he was his own reincarnation (6 and 15 V. and schol. on Pers. *prol.* 2); this is symptomatic of the pride which characterized his attitude to his predecessors (book 7 prologue, 213 ff. V.). Book 1 contained the story of the flight from Troy and the founding of Rome down to the death of Romulus; it also contained a famous *conclium deorum* on the Homeric pattern, parodied by Lucilius (q.v. 1). Books 2-3 the story of the other kings; book 6 Pyrrhus; books 8-9 the Punic Wars (but omitting the first Punic War since Naevius had dealt with that); books 10-12 the Macedonian War; book 13 the war against Antiochus 192 B.C. Books 15-18 the Istrian campaign and later events, but the details of these books are irrecoverable (see Gell. 17. 21. 43). Little more than this general outline can now be known of the architecture of the work. Stylistically it followed the lead of Livius Andronicus: archaisms are a very strong element (some, like *endo* for *in* and *induperator*, were metrically conditioned) and in the formation of compounds (like *altivolans*, *altisonus*, *omnipotens*) Ennius followed Naevius rather than Livius; but in the main the work represents the reaction in Latin of a style suitable for epic, remote from prose on the one hand, and from the excessive use of archaic features on the other. Metrically the work legislated for the Latin hexameter and Virgil's metrical practice differs only in refinements of detail. The epic is perhaps the most remarkable achievement in Latin, and is the culmination of a literary activity so varied, both in prose and verse, that

it rivals the achievement of the most distinguished Hellenistic Greek writers. The meagre fragments that survive conceal a most serious loss for the understanding of Latin literature.

ENNODIUS, MAGNUS FELIX (A.D. 473/4-521), of Gaul, bishop of Pavia, author of a biography of his predecessor Epiphanius, a panegyric of Theodoric, letters, model speeches, miscellaneous poems (sacred and secular), and other writings. His work is noteworthy for its combination of pagan and Christian elements; preoccupation with form is dominant.

TEXTS W. Hartel, *CSEL* vi, F. Vogel, *MGH*, *AA* vii. J. Fontaine, *RAC*, s.v. *Ennodius*. A. H. W.

EOS (Ἥως, Ἔως, *Aurora*), the dawn-goddess, a figure of mythology rather than cult. She is daughter of Hyperion and Thea (Hesiod, *Theog.* 372); she drives over the sky in a chariot and pair (*Od.* 23. 246), the horses being Lampos and Phaethon, i.e. Shiner and Bright. In other words, she is an important luminary, but less so than the Sun with his four-horse car. Her stock epithets, especially in Homer, are *ροδόδάκτυλος* (rosy-fingered) and *κροκόπεπλος* (saffron-robed), with obvious reference to the colour of the sky at dawn.

For some unknown reason, she is imagined as very amorous, an aetiological myth (Apollod. 1. 27) attributes this to the jealousy of Aphrodite, because Eos had been Ares' mistress. Hence most of the stories about her consist of kidnappings of handsome men to live with her (? a euphemism for sudden and mysterious death, see E. Rohde, *Psyche* (1907), index under 'Entrückung'). The oldest of these lovers, so far as our documents go, is Tithonus; she leaves his bed to shine (*Od.* 5. 1). In *Hymn. Hom. Ven.* 218 ff. she asks Zeus to make him immortal, but forgets to ask immortal youth for him; so at last he becomes helpless with old age although he talks perpetually, and she shuts him up in a bedchamber. An old, perhaps original form of the story (see J. Th. Kakridis, *Wien. Stud.* 1931, 25 ff.) is that in Hellenistic (fr. 140 Jacoby), that he became a cicada, which chirps ceaselessly. Memnon (q.v. 1) was their son. A quite obscure lover is Clitus, a cousin of Amphiarus (q.v., *Od.* 15. 250). Cephalus (q.v.) is much better known; in Ovid, *Met.* 7. 711 ff., Hyginus, *Fab.* 189. 2-3, it is Eos who suggests to him that he should try Procris' constancy. In Hyginus also (ibid. 5 ff.) Artemis gives Procris the means to be revenged on Cephalus. This opposition between the amorous and the virginal goddess might be suggested by *Od.* 5. 121 ff.; there Eos makes Orion (q.v.) her lover, and the jealousy of the gods finds expression in Artemis killing him with her arrows, an unusual detail, for she regularly kills women, not men.

In art she is generally winged, and is popular from the later sixth century: balancing Thetis at the Psychostasia of Achilles and Memnon or at their fight; or carrying Memnon's body from the field (Brommer, *Vasenlisten*², 259 ff., 290). From the fifth century she is shown pursuing or carrying off Cephalus or Tithonus, not always clearly distinguished (see Caskey-Beazley, *Attic Vase Paintings in the Museum of Fine Arts, Boston* (1931-63), ii. 37 f.). She sometimes appears in a two-horse chariot, going about her business as the Dawn. H. J. R.; C. M. R.

EPAMINONDAS (d. 362 B.C.; date of birth uncertain) was a pupil of Lysis the Pythagorean, but his early

career is otherwise in doubt. Though he co-operated actively in the restoration of Theban power (379–371 B.C.), his individual part is not distinguishable till 371, when he was Boeotarch for the first time. While representing Thebes at the peace negotiations he refused to allow the Boeotian cities to be separately sworn, and consequently Agesilaus with the concurrence of Athens excluded Thebes from the treaty. Epaminondas was one of the commanders who met the invading Spartan army at Leuctra. Here he introduced the variant of a slanting attack by the left wing, which had been strengthened to the depth of fifty men (λοξή φάλαγξ). The crushing defeat of the Spartan army which followed made Epaminondas famous. More than a year later he invaded the Peloponnese (winter 370/69) to help the Arcadians to throw off Spartan control. When this was achieved without fighting, Epaminondas made the first recorded invasion of the Eurotas valley. He pressed home the moral advantage of this operation by establishing Messenian independence. His later invasions of the Peloponnese (369 and 367) had less effect. In 364 he decided to challenge the Athenian supremacy at sea, and led a fleet as far as Byzantium. But when war broke out again in Arcadia he commanded the Boeotians, and after a daring attempt to seize Sparta by surprise, he won an inconclusive victory at Mantinea, where he died of wounds.

The nobility of Epaminondas' character greatly impressed tradition. His political creations, independent Messenia and Arcadia, survived with somewhat different consequences than he had intended. His new strategy ended the military supremacy of Sparta and led to the innovations of Philip II and Alexander.

Plutarch's *Life* (as excerpted by Paus. 9. 13 ff.). H. W. P.

EPAPHRODITUS (1.), Nero's freedman and secretary, helped him to unmask the Pisonian conspiracy and accompanied him in his final flight. He was again secretary (*a libellis*) of Domitian, by whom he was killed (A.D. 95), apparently because he had helped Nero to commit suicide. Epictetus (q.v. 2) was his slave. He is probably not the man to whom Flavius Josephus dedicated his *contra Apionem* and *Jewish Antiquities*.

R. Laqueur, *Der jüdische Historiker Flavius Josephus* (1920), 23 ff.; L. A. Constans, *Mélanges d'arch.* 1914, 383 ff. A. M.

EPAPHRODITUS (2) of Chaeronca (1st c. A.D.) in his youth was a slave of the Alexandrian scholar Archias, who became his teacher. After obtaining his freedom from the governor of Egypt, M. Mettius, he taught at Rome and acquired a large library. He died in the reign of Nerva at the age of 75.

WORKS: Commentaries on Homer's *Iliad* and *Odyssey* (Steph. Byz., s.v. *Λαπίθη*, etc.; *EM* 165. 3, etc.), which dealt with etymology, grammar, and interpretation. Commentaries on Hesiod's *Scutum* (*Etym. Gud.* 36. 13) and Callimachus' *Aetia* (schol. Aesch. *Eum.* 2). *Δέξεις*, probably an etymological work (schol. Ar. *Vesp.* 352). *Ἐπὶ στοιχείων* (schol. Theoc. 1. 117). J. F. L.

EPEIUS (*Ἐπειός*), in mythology, (1) son and successor (as king of Elis) of Endymion (q.v.; Paus. 5. 1. 4). (2) Maker, with the help of Athena, of the Wooden Horse (*Od.* 8. 493). He was son of Panopeus, a poor warrior but an excellent boxer (*Il.* 23. 664 ff.); casts the weight very badly (ibid. 839–40). In Stesichorus (*Ilus Persis*, fr. 1 Vürtheim; Athenaeus, 457a) he is water-carrier to Agamemnon and Menelaus, and Athena pities his hard toil and (presumably) inspires him. This may be local tradition or Stesichorus' invention. H. J. R.

EPHEBOI (*ἐφηβοί*) meant in normal usage boys who had reached the age of puberty and could refer to any age

from 15 to 20. But at Athens it was also used in a technical sense to denote members of the Ephebic College. This institution was founded c. 335 B.C. on the initiative of Epicrates for the more efficient compulsory military training of youths reaching their 18th year. This age-group had always been liable to be called upon for military service but there is no clear evidence of any organized training institution before c. 335 B.C. The people elected a *kosmetes* to take charge of the whole organization and ten (later twelve) *sophronistai* (one from each tribe) to assist him, under the general jurisdiction of the *strategoi* (q.v.). Six teachers were appointed comprising two *paidotribai* (for physical training) as well as four separate instructors in the use of heavy armour, the bow, the javelin, and the catapult. At the end of the first year, which was spent in exercises and on guard duty in Munychia and Acte in common barracks, a review was held and the ephebes were granted a shield and spear by the State. Perhaps it was at this stage that they took the ephebic oath. In the second year they undertook duties in the country serving as *peripoloi*. During the two-year period they were exempt from civic duties and excluded from civic rights such as suing and being sued in the courts (except in certain cases). Thereafter they became full-citizens. After 305 B.C. the training was no longer compulsory and by 282 B.C., if not before, it was reduced to one year. About the same time the number of *paidotribai* was reduced from two to one. The *sophronistai* are mentioned for the last time in 303 B.C., though they do reappear in the time of Hadrian. With the end of compulsion the State no longer paid the ephebes the daily allowance (of 4 obols) and from now on the *ephebia* became an institution for a wealthy élite and numbers declined, though they did increase again later. Teachers probably continued to be paid by the state, but the *kosmetes* had to assume more and more of the financial burden himself, as the office became more and more of a liturgy. From c. 118 B.C. the *paidotribes* became a permanent, not an annual officer. Inscriptional evidence is scanty from about the middle of the third to near the end of the second century B.C., by which time the *ephebia* emerges as an educational institution, still retaining some of its military character, but emphasizing not only civic and religious duties but also philosophy and literature. Indeed, an inscription of 123/2 B.C. (*IG*² 1006) shows that the ephebes attended philosophical lectures in the Ptolemaeum, Lyceum, and Academy. From 118 B.C. onwards foreigners were admitted. The *ephebia* was still flourishing in the second century A.D. but began to decay towards the end of the third.

In other parts of the Hellenistic world the school systems recognized the three age groups of *paides*, *epheboi*, and *neoi* and in this context the *epheboi* are the 15 to 17 age-group (see EDUCATION, § IV. 2). This is Nilsson's interpretation of the inscriptional evidence (which he refers to a younger age-group than other authorities), and on this view there are no ephebic colleges of the Athenian pattern outside Athens. The Hellenistic *neoi* belong to the same age-group as the Attic *epheboi* and Nilsson believes that the programme of the schools for the *neoi*, combining physical (as distinct from military) training with cultural studies was a potent influence on the Athenian *ephebia* of the first century B.C.

Reinmuth, 'The Foreigners in the Athenian ephebia', *Univ. of Nebraska Studies in Lang.* 9, 1929. F. A. G. B.

EPHEMERIDES (*ἐφημερίδες*), diaries, a term applied particularly to the Royal Journal of Alexander the Great, kept by Eumenes (q.v. 3) of Cardia. Its importance as providing official documentation for the early historians of Alexander may have been overrated by many modern

writers. Only Callisthenes seems likely to have had direct access to it, and he may not have needed it much, since he could write using his own notes on events still fresh. That Ptolemy had access to it, writing many years later, is possible, but only just. Almost certainly it was never published in full. The surviving quotations from it, relating mainly to Alexander's drinking habits and to his last illness, tell us little about its scope, and even cast doubts on the authenticity of these excerpts themselves. Nevertheless, it is possible that the military and administrative detail in Arrian's history (and sometimes in that of Curtius Rufus) represent material from the Diary, by whatever channels it may have been transmitted.

Fragments in *FGH* II B i, No. 117 (1927). H. Endres, *Die offiziellen Grundlagen der Alexanderüberlieferung* (1913); C. A. Robinson, *The Ephemerides of Alexander's Expedition* (1932); L. Pearson, *Hist.* 1954, 429 ff. G. T. G.

EPHESIA GRAMMATA, formulae used in learned magic, see Eust. *Od.* 1864, 15. Cf. **MAGIC**, § 6.

EPHESUS, a city at the mouth of the Caÿster on the west coast of Asia Minor, which rivalled and finally displaced Miletus, and owing to the silting up of both harbours has itself been displaced by Smyrna as the seaport and emporium of the trade of the Macander valley. Ephesus was founded by Ionian colonists under the leadership of Androclus, son of the Athenian king Codrus. It had little maritime activity before Hellenistic times, was oligarchic in temper and open to native influences. Ephesus maintained itself against the Cimmerians and also against the Lydian kingdom until its capture by Croesus, who contributed to the construction of the great temple of Artemis and dedicated the columns fragments of which are preserved in the British Museum. Under the Persians Ephesus shared the fortunes of the other seaboard cities; it was a member of the Delian League, but revolted c. 412 B.C. and presently sided with Sparta. The temple was burned down on the night of the birth of Alexander the Great, under whose control the city passed in 334. The city was replanned by Lysimachus c. 294 and passed with the kingdom of Attalus III to the Romans in 133. It had meantime grown to a size and importance rivalled in the East only by Alexandria and the Seleucid capitals, and under the Roman Empire it was the real (though not the titular) capital of the province Asia, and the residence of the proconsul. At this time, as earlier, the Temple treasury acted as a bank, in which deposits were made by cities, kings, and private persons. Acts xix gives a vivid picture of conditions in Ephesus in the middle of the first century A.D. In the provincial reorganization of Diocletian, Ephesus became the metropolis of the reduced province of Asia. The temple and part of the city have been excavated; among the notable ruins uncovered are the Prytaneum (where copies of the cult statue of the Artemisium were found), arcaded streets, baths, gymnasia, temples and churches, and a library, almost all being of Roman imperial times. Among famous citizens were the scurrilous poet Hipponax, the philosopher Heraclitus, Zenodotus and Artemidorus, and the painter Parrhasius.

Enc. Brit. (1964), 'Ephesus', see bibliography; F. Miltner, *Ephesos* (Vienna, 1958); G. E. Bean, *Aegean Turkey* (1966), ch. 7. W. M. C.; J. M. C.

EPHETAI (ἐφῆται) were an Athenian jury, fifty-one in number. Their origin and early history are obscure, but by the fifth century B.C. they seem to have been selected by lot from citizens over 50 years of age, and to have been concerned with homicide cases only. Under the presidency of the *basileus* (see **ARCHONTES**) they sat at the Palladion to try persons accused of unintentional killing, of complicity (βούλευσις) in killing, or of the killing

(whether intentional or not) of a slave, a metic, or a foreigner; at the Delphinion to try persons accused of killing who defended themselves by claiming that the act was committed lawfully; and at Phreatto to try persons accused of a second killing when already exiled for the first. Thus they tried almost all kinds of homicide not considered important enough for trial by the Areopagus (q.v.). A likely exception is the formal trial of unknown killers and of homicidal animals and inanimate objects; these cases were heard at the *prytaneion*, possibly by the *ephetai* but more probably without any jury. The *ephetai* also took part in the procedure for pardoning a man exiled for unintentional homicide if there were no surviving relatives of the killed man. Some scholars have suggested that by the end of the fifth century the fifty-one *ephetai* had been replaced by ordinary heliastic jurors under the same name, but this view has not been universally accepted.

See **DIKE** (2), § 5.

G. Smith, 'Diceasts in the Ephetic Courts', *CPhil* 1924, 351 ff.; R. J. Bonner and G. Smith, *The Administration of Justice from Homer to Aristotle* (1930), 97 ff.; Hignett, *Hist. Athen. Const.* 305 ff.; D. M. MacDowell, *Athenian Homicide Law* (1963), 48 ff., 118 ff. D. M. M.

EP(H)IALTES (Ἐφιάλτης, Ἐπ-), in mythology, (1) a giant; (2) one of the Aloadae (q.v.); also (3) a demon of nightmare. See Rose, *Handb. Gk. Myth.*⁶

EPHIALTES (4), Athenian statesman. About 465 B.C. he led a naval expedition beyond Phaselis (q.v.). Poor, incorruptible, and determined, he replaced Themistocles as the leading politician on the popular side, his principal opponent being Cimon (q.v.). He successfully prosecuted a number of the Areopagites for their conduct in office. He resisted the sending of help to the Spartans in 462 during the helot revolt, on the ground that Sparta was Athens' rival for power. With the help of Pericles, now beginning his political career, he took advantage either of Cimon's absence or of the revulsion of feeling on his inglorious return to pass measures stripping the Areopagus (q.v.) of its more important powers (462/1); but so great was the hatred that he had aroused that he was murdered later in the same year. He was buried in the Ceramicus.

F. Manni, *Rend. Linc.* 1947, 308 ff.; R. Sealey, *CPhil* 1964, 11 ff.; E. Ruschenbusch, *Hist.* 1966, 369 ff. A. W. G.; T. J. C.

EPHIALTES (5), of Trachis, is said to have shown to Xerxes the path by which the Persians outflanked Leonidas at Thermopylae. The Delphic Amphictions set a price on his head (479 or 478), and the Spartans honoured as a hero another Trachinian who assassinated Ephialtes from personal motives (some ten years later, on his return from Thessaly, where he had taken refuge).

P. T.

EPHIPPIUS (1), Middle Comedy poet, named in the *Victors'* List immediately before Antiphanes with one victory (*IG* ii². 2325. 145). Of the twelve known titles, six may indicate myth burlesque; in *Βούσιππος*, Hercules fought drunk (fr. 2). *Ridicule* is frequent: fr. 14, a full-length portrait of an elegant 'hypoplatonic' youth (cf. Webster, *Later Greek Comedy*, 51 f.). Fr. 5 (how a fish larger than Crete is prepared for the table) has an early reference to Celts (Webster, *ibid.* 40 ff.).

FGH i. 351 ff., iii. 322 ff.; *CAF* ii. 250 ff.

W. G. A.

EPHIPPIUS (2), an Olynthian hostile to Macedonia, contemporary with Alexander, wrote a pamphlet of malicious gossip which started the legend of Alexander's excessive drinking.

FGH ii. 126.

EPHORS (*ἔφοροι*, probably from *ἐφορᾶν*, but conceivably connected with *εὐρος*, 'a guardian'), magistrates in several Dorian States (Sparta, Thera, Cyrene, Euesperides, Heraclea Lucaniae). At Sparta they were elected annually by the citizens, and the senior ephor gave his name to the year. Combining executive, judicial, and disciplinary powers, they profited by the scarcity of written laws, and by the fifth century B.C., when they were five in number, they dominated the State (subject only to their rendering account to their successors). Their relationship to the monarchy suggests an origin in some early dispute between kings and aristocracy. Each month they exchanged oaths with the kings, the king swearing to observe the laws, the ephors to support the king. They had a general control over the kings' conduct, could prosecute them before the Gerousia, settle disputes between them, and enforce their appearance before their own board at the third summons. Two ephors accompanied the king on campaign. In administration they negotiated with representatives of other States, convoked and presided over the Gerousia and Apella (qq.v.), gave orders for mobilization and dispatch of the army.

Besides possessing general powers of civil jurisdiction they could depose and prosecute other magistrates. In trials before the Gerousia they both presided and executed the sentences. In disciplinary matters they enforced the Lycurgan *κόσμος* for the citizens, including supervision of the State education; they dealt more arbitrarily with the *perioeci*, and even more so with helots, through the *Krypteia* (q.v.). Briefly abolished by Cleomenes III (227-222 B.C.), the office survived until at least A.D. 200.

Most ancient writers ascribed the creation of the office to Lycurgus (q.v. 2) or to King Theopompus (c. 700 B.C.). A list of ephors was cited by some going back to 754, but they wrongly believed that Theopompus was on the throne in 754, and the list is undoubtedly false. Whether its 'creator' invented the office or merely adapted some surviving primitive Dorian institution remains unclear.

EPHORUS of Cyme (c. 405-330 B.C.), contemporary of Theopompus and a pupil of Isocrates. His various works included a history of Cyme (*Ἐπιχώριος λόγος*), a treatise on style (*Περὶ λέξεως*), and two books (*Περὶ εὐρημάτων*) which aimed at satisfying the demand for popular information on diverse topics characteristic of the period. His importance rests on his universal history (*Ἱστορίαι*) in thirty books. Beginning with the Return of the Heracleidae on the theory that this was the first period of verifiable fact, it reached the siege of Perinthus, 341. Book 30 was added by his son Demophilus to complete the work with an account of the Sacred War. The arrangement was on a subject system (Diod. Sic. 5. 1. 4) merging later into an annalistic framework.

Our knowledge of Ephorus largely depends on the fact that he was the chief source of Diodorus books 11-16, whose abridgement follows him very closely (see fr. 191). He consulted numerous authorities, correcting Herodotus by Ctesias, using a strongly biased Athenian source for the Pentecontaetia, perhaps Hellanicus or Androton, and colouring Thucydides' account of the Peloponnesian War under the influence of fourth-century pamphleteers. He wisely preferred the Oxyrhynchus historian (q.v.) to Xenophon, and consulted Callisthenes and political pamphlets like those of Lysander and Pausanias. Although he failed in criticism of sources and was no military expert, he was, except for Xenophon, the most important historian of the fourth century. His work was known to Polybius, was extensively used by Diodorus

and Strabo, and was one of the sources of Polyaeus, Pompeius Trogus, and Plutarch. His influence lasted well into the Roman Empire. See also HISTORIOGRAPHY, GREEK, § 4.

EPHRAEM SYRUS, c. A.D. 306-73, was born at Nisibis where he lived until Jovian's surrender to the Persians (363) forced him to move to Edessa. He wrote (mainly verse) in Syriac; he could read Greek and was influenced by Hellenistic rhetoric. His 'hymns' contain many historical references, e.g. to the situation at Nisibis, to the sufferings of the Church under Julian and the restoration of church life under the Persians, and to the Arian controversy. Greek adaptations of his verses were current during his lifetime, and the fame he enjoyed is attested by Jerome. A small proportion of his works has been critically edited.

EPIC CYCLE, *ἐπικός κύκλος*, a collection of early Greek epics, artificially arranged in a series so as to make a narrative extending from the beginning of the world to the end of the heroic age. Apart from the *Iliad* and *Odyssey*, we possess only meagre fragments of the poems involved, and our knowledge of what poems were involved is itself incomplete. We are best informed about those that dealt with the Trojan War and related events: there were six besides the *Iliad* and *Odyssey*, and summaries of their contents are preserved in some Homer MSS. as an extract from the *Chrestomathia* of Proclus (see NEOPLATONISM; but some think an earlier Proclus). Apollodorus and Hyginus (see MYTHOGRAPHERS) draw on a related source for their accounts of the Trojan War. Among monumental sources, the 'Tabula Iliac' (IG xiv. 1284) is of particular interest.

2. The poems were composed by various men, mainly or wholly in the seventh and sixth centuries B.C. (Earlier dates given by chroniclers are valueless.) The Cycle is not mentioned as a whole before the second century A.D. But a Trojan Cycle, at least, seems to have been drawn up not later than the fourth century B.C., since Aristoxenus (*Vitae Homeri*, p. 32 Wil.) knew an alternative beginning to the *Iliad* evidently meant to link it to a preceding poem. Indeed, some of the Trojan epics seem designed merely to cover an allotted span of events. Arist. *Poet.* 1459^{ab} criticizes the *Cypria* and *Little Iliad* for their lack of a unifying theme.

3. The cyclic poems (this term by convention excludes the *Iliad* and *Odyssey*) were sometimes loosely attributed to Homer; but Herodotus rejects this for the *Cypria* (2. 117) and queries it for the *Epigoni* (4. 32), and later writers generally use the names of obscure poets or the expression *ὁ τὰ Κύπρια*, etc. *ποιήσας*. The poems seem to have been well known in the fifth and fourth centuries, but little read later; no papyrus fragment of them has been identified. Proclus' knowledge of them is demonstrably indirect.

4. The poems known or presumed to have been included in the Cycle, and the poets to whom they were ascribed, were as follows.

(1) In first place stood a theogony (O.C.T. *Homeri Opera* v. 96-8). Comparison with Apollodorus and *Orphica* indicates that an Orphic theogony was chosen, but doctored.

(2) *Titanomachia*: Eumelus (q.v.) or Arctinus of Miletus.

(3) *Oedipodia* (6,600 lines): Cinaethon of Lacedaemon.

(4) *Thebais* (7,000 lines): Homer (but more often anonymous). Highly esteemed by Pausanias (9. 9. 5), who says

that even Callinus knew the poem as Homer's; but if the name is correct, Callinus may only have alluded to the legend and to 'earlier singers'. On the subject of this and the following poem, see ADRASTUS.

(5) *Epigoni* (7,000 lines): Homer. ('Antimachus' in schol. Ar. *Pax* 1270 might mean Antimachus of Teos, but may be a confusion with the *Thebais* of Antimachus (q.v.) of Colophon. Cited by Herodotus and parodied by Aristophanes. The first line survives, and implies another poem preceding.

(6) *Cypria* (11 books): Homer, Stasinus of Cyprus, or Hegesias of (Cyprian) Salamis. The poem dealt with the preliminaries of the Trojan War (wedding of Peleus and Thetis, judgement of Paris, rape of Helen) and all the earlier part of the war down to the point where the *Iliad* begins. Fr. 1 implies no poem preceding. It was familiar to Herodotus, Euripides, Plato, and Aristotle. The title, τὰ Κύπρια (ἐπη), seems to refer to the poem's place of origin: cf. τὰ Ναυπάρκτια ἐπη, ἡ Φωκαῖα.

(7) *Iliad*. There were alternative versions of the beginning and end which linked it with the adjacent poems (above, § 2; schol. T II. 24. 804).

(8) *Aethiopis* (5 books): Homer or Arctinus. The main events were the deaths of Penthesilea, Thersites, Memnon (qq.v.), and Achilles. The title refers to Memnon's Ethiopianity; there was an alternative title *Amazonia*.

(9) *Little Iliad* (4 books): Homer, Lesches of Mytilene or Pyrrha, Thestorides of Phocaea, Cinaethon, or Diodorus of Erythrae. The suicide of Ajax, the fetching of Philoctetes and Neoptolemus (qq.v.), the wooden horse, Sinon (q.v.), the entry into Troy. (The last part, which overlaps the *Iliu Persis*, is omitted by Proclus, and may have been omitted from the poem when it formed part of the Cycle.) The poem must have acquired the name 'Iliads' independently of the *Iliad*, and then been called 'little' (μικρά) to distinguish it.

(10) *Iliu Persis* (Ἰλίου πέρσις, gen. -ίδος) (2 books): Arctinus or Lesches. The Trojan debate about the horse, Laocoon (q.v.), the sack of Troy, and departure of the Greeks. Aeneas left the city before the sack, not as in Virgil. The same title was given to a poem of Stesichorus.

(11) *Nostoi* (5 books). Homer, Agias (or Hegias) of Troezen, or Eumelus (q.v.). The returns of various Greek heroes, ending with the murder of Agamemnon, Orestes' revenge, and Menelaus' homecoming. The *Odyssey* alludes to these events—so much that it cannot have been intended to accompany the *Nostoi*—and its poet knew Ἀχαιοὶ νόστος as a theme of song (I. 326, cf. 10. 15). Stesichorus also wrote *Nostoi*.

(12) *Odyssey*. Aristophanes of Byzantium and Aristarchus put the end of the poem at 23. 296, and so perhaps counted what followed as part of the *Telegonia*.

(13) *Telegonia* (2 books): Eugammon of Cyrene. An element of romantic fiction was conspicuous here (see ODYSSEUS, § 3). The appearance in a Cyrenean poet of Arcesilaus as a son of Odysseus suggests a sixth-century date (Arcesilas, q.v.), and Eusebius dates Eugammon to 566.

5. Various other early epics were current in antiquity, and some of them may have been included in the Cycle. Their remains are collected by Kinkel in *EGF*.

Kullmann, *Die Quellen der Ilias* (1960).

EPICEDIUM (ἐπικήδειον sc. μέλος, see DIRGE), in Latin literature a poem in honour of a dead person. The term is not found in Latin before Statius; the thing itself

is older, for the *nenia* and *laudatio funebris* (qq.v.) contained its essentials. Strictly speaking, the *epicedium* was a song of mourning chanted over a corpse (*caduere nondum sepulto*, in contrast with ἐπιτάφιος, Serv. ad Verg. *Ecl.* 5. 14), but it came to mean more generally a poem honouring a deceased person, scarcely distinguishable from a θῆνος (see DIRGE). Themes appropriate to the *Consolatio* (q.v.) were naturally also in place in the *epicedium*, despite the different purposes of the two types of poem. There is also a close relation with the metrical epitaphs, several of which (Buecheler, *Carm. Epigr.* 1109; 1111; 1189; 1237) are really *epicedia*.

The constituent elements in the *epicedium* are lamentation and eulogy. Accompanying these (notably in the *Consolatio ad Liviam* or *Epicedion Drusi*, and in Statius) are consolatory reflections—irrevocability of fate, necessity of submission, faith in survival. Other customary features are frequent employment of mythology, apostrophes and invocations, indignation against destiny or the gods, thoughts on the vanity of birth or youth or merit, justification of lament, hope or assurance that the dead will be received in the other world by the *Manes*, finally (in Statius) description of last hours and of obsequies.

The metres are principally the hexameter and the elegiac couplet. Length varies considerably: the shortest pieces are about ten lines long; the longest (*Consol. ad Liv.*) is 474. Their literary worth is also very variable: contrast a masterpiece by Propertius with the poverties of the *Elegiae in Maecenatem*.

See especially: Catullus 101; Verg. *Ecl.* 5. 20-44; *Aen.* 6. 860-86; Hor. *Carm.* 1. 24; Propert. 3. 7; 18; 4. 11; Ov. *Am.* 3. 9; *Pont.* 1. 9; *Consol. ad Liviam* and *Elegiae in Maecenatem* (authors unknown); Mart. 5. 37; 6. 85; Stat. *Silv.* 2. 1; 6; 3. 3; 5. 1; 3; and 5; Auson. *Epiced. in patrem*; *Parentalia*.

Some *Epicedia* semi-parodically concern animals: Catull. 3; Ov. *Am.* 2. 6; Stat. *Silv.* 2. 4 and 5. There are of course Greek models and parallels for this theme; see *Anth. Pal.* 7. 189-216.

EPICHARMUS, a Sicilian writer of comedy, was active during the first quarter of the fifth century B.C., as is clear from his references to Anaxilaus of Rhegium (fr. 98) and to Aeschylus (fr. 214). He was probably a native of Syracuse (our earliest evidence for this is Theoc. *Epigr.* 18 and *Marm. Par.* 71), but other cities laid claim to him; Arist. *Poet.* 1448^a32 is ambiguous, but may mean that the Sicilian Megarians regarded him as their own. Aristotle also says that Epicharmus was 'much earlier than Chionides and Magnes' (q.v.), and if this is true he must have been an established poet during the last part of the sixth century.

The titles and fragments of his plays (now significantly augmented by papyri) indicate that he was particularly fond of mythological burlesque; Heracles and Odysseus were the 'heroes' of many of these burlesques. *Logos* and *Logina* is shown by fr. 87 to have been mythological in character, a fact which could hardly have been guessed from its title. Some titles, like those of Attic comedies, are plurals, e.g. *Islands*, *Persians*, *Sirens*. It is a pity that no fragment enables us to decide beyond doubt how many actors these plays required or whether they required a chorus. The abundance of plural titles constitutes a *prima facie* case for a chorus. Certain fragments (6, 34)

suggest that there *may* have been three actors on stage simultaneously, but this evidence is far from decisive. The scale of his plays is also uncertain. His language is Sicilian Doric, and is as colourful and sophisticated as that of Old Attic Comedy; he uses a variety of metres *κατὰ στίχον*, but there are no lyrics among the extant fragments.

A considerable number of philosophical and quasi-scientific works were attributed to Epicharmus in antiquity. The hard core of these may have been a collection of maxims made from his plays (cf. Theocr. loc. cit.), but as early as the fourth century B.C. the *Pseudepicharmeia* were regarded as forged (Aristoxenus fr. 45 Wehrli), and continued to be so regarded by critical historians, though the less critical treated them without scruple as genuine works of Epicharmus. A certain Alcimus argued that Plato derived much of his doctrine from Epicharmus (Diog. Laert. iii. 9 ff.), but it is hardly credible that the passages cited in support of this allegation were composed early in the fifth century; one of them (fr. 171) appears to parody the technique (*πάνω μὲν οὖν*) of Platonic dialogue. The tradition that Epicharmus was a Pythagorean first appears in Plutarch (*Numa* 8).

EPICRATES, Middle Comedy poet, of Ambracia. In fr. 11 (before 347 B.C.) Epicrates cleverly describes scientific research in botany by Plato and his disciples.

FCG ii. 305 ff.; *CAF* ii. 282 ff.

EPICETETUS (1) (fl. 520–500 B.C.), potter and vase-painter in Athens, known from one potter's and thirty-nine painter's signatures, chiefly on red-figure cups with dainty compositions. One vase signed by Epictetus is attributed to the Cleophrades painter, a successor of Euthymides (q.v.) and a forerunner of the strong style, who painted from 510 to 480; he should perhaps be known as Epictetus II.

Beazley, *ABV* 254, 404; *ARI* 70, 181.

T. B. L. W.

EPICETETUS (2) (c. A.D. 55 to c. 135), of Hierapolis (Phrygia), Stoic philosopher. He grew up as a slave of Epaphroditus (q.v. 1), who allowed him to attend the lectures of Musonius Rufus and later set him free. Epictetus then began to teach philosophy in Rome. When in 89 Domitian banished the philosophers from Rome, he went to Nicopolis (Epirus), where he continued teaching to the end of his life. He acquired a large audience and many distinguished followers, among them Flavius Arrianus (see *ARRIAN*; *cos.* c. A.D. 130), who collected his lectures (*διατριβαί*), probably in eight books, four of which have come down to us, and later published a summary of his philosophy in the famous Manual (*ἐγχειρίδιον*). Through these posthumous publications he had great influence on the Emperor M. Aurelius.

Though Epictetus considered logic useful because it prevents us from being deceived by faulty arguments (Arrian i. 17), he was but little interested in the purely theoretical side of philosophy, except theology. He taught that the universe is the work of God, and that Divine Providence manifests itself in its unity and order.

Contrary to the early Stoics he did not teach for the few and for the self-reliant, but for the many and the humble. He used to say that only he who had become aware of his weakness and his misery could profit from the teaching of the philosophers. He taught the common brotherhood of man. Wrongdoers, he thought, should not be punished as criminals, but pitied, because they are more unhappy than their victims.

Like the early Stoics he wanted to make man free and independent of the vicissitudes of fortune. We must not,

he said, let our happiness depend on things which are not in our power. The only thing which is always in one's power is one's own self and one's will. This we must keep unblemished. We must be indifferent to death, pain, and illness, and even the loss of our dearest relatives must not touch us. For all this not only belongs to the external world, but also happens through Divine Providence, which is always good.

Colardeau, *Étude sur Epictète* (1903), D. S. Sharp, *Epictetus and the New Testament* (1914); M. Pohlenz, *Die Stoa*² (1955–9). K. VON F.

EPICURUS (b. Samos, 341 B.C.; d. Athens, 270 B.C.), moral and natural philosopher. His father, Neocles, a schoolmaster, was an Athenian of the deme Gargettus, who emigrated to the Athenian colony in Samos; his mother's name was Chaecestrate. As a boy he was taught by the Platonist Pamphilus. At 18 he was required to go to Athens to serve as an ephebe; Xenocrates was then head of the Academy and Aristotle was in Chalcis, and Menander was in the same class as Epicurus. He rejoined his family, who had left Samos, in Colophon. At this time or earlier he studied under Nausiphanes, from whom he learnt about the atomist philosophy of Democritus. When he was 32 he moved to Mitylene in Lesbos, and then to Lampsacus on the Hellespont; in both places he set up a school and began to acquire pupils and loyal friends.

He returned to Athens about 307/6, and bought a house, with a garden which became the eponymous headquarters of his school of philosophy. Apart from occasional visits to Asia Minor, he remained in Athens until his death in 270, when he bequeathed his garden and school to Hermarchus of Mitylene.

(The main sources for his biography are those collected by Diogenes Laertius, 10. 1–21.)

2. THE EPICUREAN SCHOOL in Athens consisted of a group of people who lived together on Epicurus' property, secluding themselves from the affairs of the city and maintaining a modest and even austere standard of living, in accordance with the Master's teaching. The company included slaves and women. Contemporary Epicureans often mentioned in the literature were his most devoted companion, Metrodorus of Lampsacus, who died before Epicurus; Leonteus and his wife Themista, also of Lampsacus; Hermarchus of Mitylene, the second head of the school in Athens; and a slave called Mys.

The school was much libelled in antiquity, perhaps because of its determined privacy and also because of Epicurus' professed hedonism. The qualifications which brought this hedonism close to asceticism were ignored, and members of rival schools accused the Epicureans of many kinds of profligacy. In Christian times, Epicureanism was anathema because it taught that man is mortal, that the cosmos is the result of accident, that there is no providential god, and that the criterion of the good life is pleasure. Centuries of prejudice have produced such caricatures as Sir Epicure Mammon, in Ben Jonson's *Alchemist*, and the modern use of the word 'epicure'.

3. WRITINGS. Diogenes Laertius (10. 26) reports that Epicurus wrote more than any one else—about 300 rolls. Most of these are lost, including his thirty-seven books *On Nature*—of which there are a few, much mutilated papyri extant from Herculaneum. Apart from fragmentary quotations, the following three letters and two collections of maxims have been preserved, the first four all in the 10th book of Diogenes Laertius:

(1) Letter to Herodotus: a summary of his philosophy of nature.

(2) Letter to Pythocles: a summary of meteorology (possibly not authentic Epicurus but the work of a pupil).

(3) Letter to Menoeceus: a clear, elementary summary of Epicurean morality.

(4) *Kύρια Δόξαι* (*Ratae Sententiae*, *Principal Doctrines*): forty moral maxims.

(5) *Gnomologium Vaticanum* (*Vatican Sayings*): eighty-one similar short sayings, discovered in a Vatican MS. by C. Wotke in 1888.

Apart from the letter to Menoeceus, and a few of the maxims, Epicurus' surviving writings are needlessly difficult, clumsy, ambiguous, badly organized, and full of jargon. Present-day knowledge and appreciation of Epicurus' system depends very largely on the poem of Lucretius, *De rerum natura*. Although this was written more than 200 years after the time of Epicurus, it appears to contain very little philosophical doctrine which was not taught by Epicurus himself.

4. DOCTRINES. The purpose of philosophy is practical: to secure a happy life. Hence moral philosophy is the most important branch, and physics and epistemology are regarded as subsidiary. (For this tripartition, see Sextus Empiricus, *Math.* 11. 169, and for the comparative evaluation K. A. 11 and Diogenes Laërtius 10. 30.)

(a) *Moral Philosophy*. 'We say that pleasure is the beginning and end of living happily' (Letter to Menoeceus 128). It is a datum of experience that pleasure is naturally and congenitally the object of man's pursuit. Since it is a fact, however, that some pleasures are temporary and partial, and involve pain as well, it is necessary to distinguish between pleasures, and to take only those which are not outweighed by concomitant or subsequent pains. Pain is caused by unsatisfied desire; so one must recognize that those desires which are natural and necessary are easily satisfied; others are unnecessary, and if one views them properly they do not cause distress. The limit of pleasure is the removal of pain; to seek always for more pleasure is simply to spoil one's present pleasure unnecessarily with the pain of unsatisfied desire. Pleasure is not so much the process of satisfying desires, but rather the state of having desires satisfied.

Pleasure of the soul, consisting mainly of contemplation or expectation of bodily pleasure, is more valuable than bodily pleasure. The ideal is *ἀταραξία*, freedom from disturbance. The study of philosophy is the best way to achieve the ideal: by teaching that the soul dies with the body, being made of atoms as the body is, it frees a man from fear of death and life after death; by teaching that the gods do not interfere and that the physical world is explained by natural causes, it frees him from fear of the supernatural, by teaching him to keep out of competitive life in politics and administration (the slogan was *λόθε βιώσας*), it frees him from the distress of jealousy and failure; by teaching him to avoid intense emotional commitments, it frees him from the pain of emotional turmoil.

Epicurean morality was less selfish than it seemed. Starting from the idea of pleasure, Epicurus found a place for most of the conventional virtues (though not for the Aristotelian *μεγαλοπρέπεια* or *μεγαλοψυχία*), and especially for those of temperance and loyalty. The Epicurean communities were famous even among their enemies for the friendship which bound members to each other and to the founder.

(b) *Canonic* was explained in a book (now lost) called *Κανών*, which means 'Straight edge' or 'Rule'. Its subject matter was how to distinguish true from false propositions. It taught that sense-perception, the mechanics of which are explained in the physics, is reliable, in the sense that the mental image formed by means of sensation always corresponds to the physical object which caused the sensation. This physical object is always an *εἶδωλον* (idol)—an extremely fine 'film' of atoms given off from the surface of compounds in the physical world.

In normal sense-perception, a stream of similar *εἶδωλα* proceeding from the surface of an object without intermission activate the soul-atoms of the perceiver in the sense-organs, and the soul-atoms by their motions somehow picture the characteristics of the external object. The picture is retained in the mind as a memory. Delusions occur when single or damaged *εἶδωλα* cause an image to form which looks like those formed by continuous streams of *εἶδωλα*; a man is deluded only by judging it to be one of the latter. Thus Epicurus hoped to answer those who doubted the validity of sense-perception: judgements can be wrong, but sense-perception itself always corresponds accurately with something in the external world; and judgement can be improved by philosophy. (Letter to Herodotus 46–52, Lucretius IV).

(c) *Physics*. Epicurus adopted the atomist theories of Democritus, with some changes which can often be seen as attempts to disarm Aristotle's criticisms of atomism.

Epicurus' metaphysical argument for the existence of unchanging and indestructible atoms and void comes from Leucippus and Democritus, who were themselves responding to the Eleatic school. Arguments about being and not-being show that there must be permanent elements; arguments about divisibility show that there must be indivisibles; the fact of motion shows that there must be void in which the elements move.

Change is explained as the rearrangement of unchangeable atoms. The cosmos itself is a combination of atoms which came together at some point of time by purely natural causes, and it will perish similarly by the dispersal of its component atoms. Our cosmos is one of an indefinite number, past, present, and future.

Gods exist, living a happy life sempiternally in the intercosmic spaces. They take no thought for our cosmos, or for any other; such concern would detract from their perfect Epicurean contentment. It is good for man to respect and admire them, but not to expect favours or punishments from them.

Atoms move naturally downwards, because of their weight, unless they collide with other atoms. All combinations are due to collisions. Since collisions would be inexplicable if only downward motion occurred, it must be that there are deviations from the straight downward path—not large enough to be observable, nor frequent enough to create an unpredictable, random universe. This theory of deviation (*clinamen* or swerve) also accounts for the fact that actions of animals, including men, are not determined wholly by their genetic constitution and their environment (Lucretius 2. 62–332).

Our cosmos developed out of a collection of atoms in space, in which first the sky, air, sea, and earth were separated from each other by natural motions, and later the earth grew vegetation and finally animal species. No gods intervened: natural motions are enough to account for the development of everything in the world. A theory of the survival of the fittest accounts for the apparently purposive features of living things.

Epicurus contradicted the Aristotelian cosmology on all these points: the infinite universe, the plurality of worlds, the perishability of our world, the existence of void, the finite divisibility of matter, the 'evolution' of natural kinds, the rejection of a divine first cause, the rejection of final causes. The Aristotelian world picture gained much wider allegiance, both in antiquity and in the Middle Ages, and it was not until the rise of the 'mechanical philosophy' in the 17th century that Epicureanism again became a serious rival to Aristotelianism.

EPIDAMNUS, a joint colony of Corcyra and Corinth, founded c. 625 B.C. as a port of call on the Adriatic coast and a focus of trade from Illyria. This trade was at first constituted as a monopoly for the benefit of the ruling oligarchy, which further strengthened its ascendancy by restricting industrial pursuits to public slaves. By 435 the commons had nevertheless gained control and expelled the oligarchs; when put under siege by the latter, they invoked the aid of Corcyra, and when this was refused they applied to Corinth. The Corinthians reinforced the democracy with new settlers, but shortly afterwards the city was recaptured by the Corcyraeans. This scramble of Corinthians and Corcyraeans for Epidamnus was a contributory cause of the Peloponnesian War. For the later history of Epidamnus, see *DYRRACHIUM*.

Recent excavations reported in *Bulletin për Shkencat Shqiptare* 1957, 1. 61 ff. M. C.

EPIDAUROS, one of the small States of the Argolic Acte, on a peninsula of the Saronic Gulf. It was originally Ionic, but doricized from Argos (Paus. 2. 26. 1); unlike Argos, it used a 'Western' alphabet. It owed religious dues to Argos (Thuc. 5. 53), but was politically independent, and at one time controlled Aegina (Hdt. 5. 82). Its fame lay in the sanctuary of Asclepius, situated in an inland valley. The great temple of Asclepius (early 4th c.) does not appear to have been preceded on its site by an earlier temple. On nearby Mt. Kynortion Asclepius to some degree replaced his father Apollo, who as Apollo Maleatas from the middle of the seventh century took over the cult of a local hero which appears to go back to Mycenaean and earlier times (Прант. 1948 (1949), 90 ff.). Entered by a propylaeum, the sanctuary contained the great temple with the gold and ivory statue of the seated god by Thrasymedes of Paros, other small temples, porticoes, baths, a gymnasium and palaestra, inns and priests' houses. The chief extant buildings are the *tholos*, a round building of the mid fourth century by Polyclitus the younger, with beautiful Corinthian columns, and one of the most perfect of Greek theatres, which well preserves its fourth-century plan. The building accounts of temple and *tholos* are preserved. Though there are earlier dedications, the buildings and the chief fame of Asclepius belong to the fourth and later centuries. The cult, originally perhaps Thessalian, was transferred from Epidaurus to other towns, notably to Athens and Rome (Paus. 2. 26. 8). The inscriptions recording cures, wrought by sleeping in a dormitory attached to the temple and following the prescriptions of the priests, are important for the history of ancient medicine.

EPIGENES (1) of Sicyon is said (*Suda*, s.vv. *Θίσιος* and *Οὐδὲν πρὸς τὸν Διόνυσον*) to have been the 'first tragic poet', after whom Thespis was either second or sixteenth in the line of succession. He may have composed 'tragic choruses' of the type which Herodotus (5. 67) speaks of as produced at Sicyon in the sixth century B.C., having reference to the sufferings of heroes, but transferred by the tyrant Cleisthenes to the worship of Dionysus.

A. W. P.-C., D. W. L.

EPIGENES (2), Middle Comedy poet, dated before 376 B.C. by his reference to Ilecotomus, king of Caria.

FCG iii. 537 ff.; CAF ii. 416 ff.

EPIGONI (*Ἐπιγονοί*), sons of the Seven against Thebes (see *ADRASTUS*). They were: Alcmaeon and Amphilochoch, sons of Amphiaras; Aegialeus, of Adrastus; Diomedes, of Tydeus; Promachus, of Parthenopaeus; Sthenelus, of Capaneus; Thersander, of Polynices; Euryalus, of Mecisteus. (Apollod. 3. 82; a different list, Hyg. *Fab.* 71.)

H. J. R.

EPIGRAM, *ἐπίγραμμα*, means 'inscription'. Since verse inscriptions were more memorable than prose, the word came to denote a poetic inscription. In and after the Alexandrian period, it also meant a brief poem (usually in elegiac couplets) suggested by a single event, whether grand (the death of a hero) or trivial (the death of a pet grasshopper). The great treasury of Greek literary epigrams is the *Anthology* (q.v.). Many others have been collected from other sources—classical writers, stones, pottery, and papyri. No comparable collections of Latin epigrams exist; and there is as yet (1969) no book on the history of the epigram in Greece and Rome.

GREEK EPIGRAMS. Poetic epigrams were written in classical Greek for over 2,000 years. In the history of this small but interesting form of literature there are five stages.

(1) *Archaic.* The earliest extant inscriptions in verse come from the eighth century B.C.: two lines written on 'Nestor's goblet' from Ischia (*Gymn.* 1956, 36 f.), an imperfect sentence on a Dipylon jug (Friedländer and Hoffleit 53). Thenceforward brief poetic epigrams were placed on graves (ibid. 1, late seventh century), offerings (ibid. 10, 750–650 B.C.), and even road-signs (ibid. 149, citing Pseudo-Plato, *Hipparchus* 228 d–e). At first they were in dactylic hexameter, echoing epic rhythm and phrasing; later, because of its melancholy associations, sententious tone, and compact shape, the elegiac couplet came to predominate. Iambic and trochaic epigrams are found, but are less common. Typically, the archaic epigram was a brief address in which a tombstone or votive tablet (or sometimes the dead man) spoke to the passer-by, giving him the necessary facts with strongly restrained emotion. This control and purpose made the epigram into an art-form.

(2) *Classical.* Epigrams were attributed by Greek critics to famous poets from Homer onwards, although not many were authentic. As far as we know, the first eminent poet to write verse inscriptions was Simonides (q.v.), whose few genuine epigrams have a grave intensity of feeling which is enhanced by their brevity and impersonality. Euripides wrote a fine couplet on the Athenian troops lost in Sicily (Plut. *Nic.* 17). The epigrams attributed to Plato may not all be his (W. Ludwig, *GRBS* 1963); but Aristotle himself composed the inscription for the statue he set up at Delphi to honour his friend Hermias (Diog. Laert. 5. 1. 6). Many verse inscriptions by unknown authors have been preserved from c. 450 B.C. onwards. Their style grew more elaborate and their tone

(partly influenced by tragedy) more emotional; they conveyed more facts than earlier epigrams; but, like the Attic funerary sculptures, they were nobly serene and sincere.

(3) *Hellenistic*. In the new era after Alexander's conquests the epigram was transformed. Poets still wrote real inscriptions in verse; but now they also created and published poems which, though brief and direct, like inscriptions, were never meant to be carved in stone. Several motives encouraged this development. Some poets whose profession it was to compose verse-inscriptions found that field too limited and extended their range of subjects: such was Leonidas (q.v. 2) of Tarentum. Other took to competing with one another or with their 'classical' predecessors in writing epigrams on interesting themes: such were Asclepiades (q.v. 2) and his friends Hedyllus (q.v.) and Posidippus (q.v. 2). Most Alexandrian authors liked experimenting with established patterns and infusing new material into them: so Callimachus' (q.v. 3) address to his dead friend Heraclitus (*Anth. Pal.* 7. 80) is a development of the epitaph. They loved brevity, too (Call. fr. 465 Pf.), and the epigram must be brief (*Anth. Pal.* 6. 327). And, as true lyrical poetry ceased to be created and sung, poets now voiced more of their personal emotions through the elegy and its shorter but more versatile derivative the epigram. The themes treated in books 5, 11, and 12 of the Anthology, love and wine, now grew so popular that they almost dominated epigrammatic poetry. But there were other new departures: fictitious votive and funerary inscriptions (e.g. *Anth. Pal.* 6. 45, 301; 7. 725, 740); short poems on famous men, works of art, natural beauties, or curiosities—called 'epidictic' because they displayed the poet's skill (*Anth. Pal.* 9. 24, 374, 507, 713 f.); a few hate-poems (*Anth. Pal.* 12. 43+11. 275) and some joke-poems (more would be written later); sympathetic sketches of the life of poor folk (*Anth. Pal.* 6. 4, 226); portraits of women (*Anth. Pal.* 6. 353-4); and epitaphs on pet animals, a fancy invented by Anyte (q.v.). Unassuming as their subjects are, the language and style of these small poems are sensitive and the structure of their verse is skilfully varied.

(4) *Graeco-Roman*. In 106 B.C. Alcaeus (q.v. 3) of Messene extolled T. Quinctius Flaminius, the 'liberator' of Greece (*Anth. Pal.* 16. 5). Greek poets now began—in the epigram as in other media—to address Romans and to influence Roman poetry. Among them there was none to compare with Catullus; yet Antipater of Sidon, Erucius, and Zonas wrote graceful epigrammatic poetry, while Philodemus (qq.v.) expressed ardent sensuality in lively colloquial speech (*Anth. Pal.* 5. 46, 132). About 80 B.C. Meleager (q.v. 2) did a great service to literature by publishing a fine anthology of epigrams covering about six centuries, the *Garland*. His own poems often imitated earlier authors, especially Asclepiades, but they were sweetly eloquent. Another *Garland* issued c. A.D. 40 by Philippus (q.v. 7) of Thessalonica contained Greek epigrammatists who wrote after Meleager's time: the most interesting of a dull group is Marcus Argentarius (q.v.). With him the Greek epigram started a new trend, its last important phase of growth. Many of his epigrams are jokes, with an unexpected quip in the last few words—a paradox or a pun. The modern concept of epigram thus created, and strengthened by the drastic humour of the contemporary mime, was worked out by Lucilius, who, like his imitators Nicarchus and Martial (qq.v.), concentrated on wit, humour, and point.

(5) *Byzantine*. The epigrammatists who wrote in the Byzantine era reflected the conflicting spiritual attitudes of their time. Devout Christians, such as St. Gregory of Nazianzus (writing c. A.D. 385), composed poems of unimpeachable orthodoxy, staunch sincerity, and re-

grettable monotony. Others, although doubtless Christian by profession and high in imperial favour, wrote epigrams which were surprisingly pagan in feeling, full of the joy of life and the raptures of love, and closely imitative of pre-Christian models: such was the consul Macedonius of Thessalonica (c. A.D. 550), Paulus Silentiarius, and his friend Agathias (qq.v.), who assembled an important anthology of new epigrams. (For specimens of their light gay poems see *Anth. Pal.* 5. 216-41.) And one notable poet, Palladas (q.v.), although recognizing that the Olympian cults were dead, could not accept the Christian creed, and from his cynical despair produced the last powerful and original poetic epigrams in Greek literature.

LATIN EPIGRAMS. In epigrammatic poetry, as in other fields, the Romans began with a crude but robust tradition of their own, extended and refined it by imitating the Greeks, and then endeavoured, sometimes with success, to outdo their masters. The earliest-known Latin epigrams are funerary inscriptions. The Saturnian epitaphs of the Scipios (*CIL* 1². 7, 9, 10, 11) are not elegant, yet their force and brevity command respect. Ennius, the first great transmitter of Greek thought and style to the Romans, composed a quasi-epitaph—the first extant Latin poem in elegiac verse—asserting his own immortality, and wrote two even more grandiose epigrams glorifying Scipio. Poetic epitaphs on three early poets are recorded by Gellius (1. 24): those on Naevius and Plautus were perhaps written by later admirers, but the naive quatrain of Pacuvius may be his own. The little-known writer Pompius' epigram on himself traced his ancestry back through Pacuvius and Ennius to the Muses. Such poems are in the style of the Roman *elogium*, terse and proud.

Erotic epigrams in Latin appeared in the second century B.C. Gellius (10. 9) admiringly cites amatory poems by Porcius (q.v. 1) Lacinus, Valerius Aeditus, and Q. Lutatius Catulus—all adaptations of well-known Greek themes. Accius is known to have written similar poems, as well as poetic inscriptions in Saturnians for a new temple of Mars; and a cruel satiric epigram on lovers' baby-talk (Morel 42) is attributed to Papinius (= Pompius?). With Catullus (q.v.) both the love-epigram and the invective epigram caught fire and blazed up. For centuries there had been nothing in Greek to match the passionate agony of his *Odi et amo* (Cat. 85) or the bitter contempt of his denunciations of Caesar (Cat. 29, 52, 57, 93). Although he is often called a lyricist, Catullus wrote relatively few lyrics: like the Alexandrians, he chose to pour his emotions into the epigram and the elegy. His friends Calvus and Cinna also composed amatory, and Calvus invective, epigrams: their work is lost, but two humorous poems by Furius Bibaculus survive (Morel 80-1).

Thenceforward the writing of epigrams became extremely popular. The Younger Pliny (q.v., *Ep.* 5. 3) justifies himself for composing such poems by naming over a score of his predecessors, beginning with Cicero (q.v. 1) and closing with Ennius. We hear of epigrams by Brutus, Varro, Maecenas, Julius Caesar, Augustus, Tiberius, and many others: few have survived. Virgil (q.v.) began his career by making epigrams, including a parody of Catullus (*Catalepton* 10 ~ Catullus 4). Ovid (q.v.) too composed epigrams, and introduced some into his longer poems (*Met.* 14. 443-4, *Trist.* 3. 3. 73-6). Martial (q.v.) later cited (1 praef.) as his own models, besides Catullus, three authors of the early Empire whose reputations were partly based on their epigrammatic poetry: Domitius (q.v. 7) Marsus (whose book, named *Hemlock*, must have been satiric), Albinovanus (q.v.) Pedo, and the soldier and statesman Cn. Cornelius Lentulus (q.v. 9) Gaetulicus. Little of their work remains; but from

the same era we have an anonymous collection of Priapea, rather more dirty than witty. Criticism of the emperors was voiced in anonymous epigrammatic pasquinades (see Suet. *D. Aug.* 70, *Tib.* 59, *Nero* 39, *Dom.* 23, and Morel 153-4); and the *probrosa carmina* which brought disaster on their authors ('Iac. *Ann.* 4. 31, 6. 39, 16. 28), if not satires, were epigrams.

The reign of Nero, so fertile in literature, produced original and interesting epigrams by Seneca (2) and Petronius (3) (qq.v.), which have in part survived. The young Emperor himself wrote amatory epigrams, and patronized Lucilius (q.v.), who was perfecting the witty surprise-ending epigram in Greek. Lucilius was followed in the Flavian epoch by Martial (q.v.), most prolific and versatile of all extant epigrammatic poets and the chief model for modern epigrammatists. After him no important innovations were made in form or (until the Christians) in subject. His patron the Younger Pliny prided himself on his own epigrams, which—perhaps through his wish to be true to literary convention—were rather improper; but they have practically vanished. We have the impression that most epigrammatic poetry of the Roman Empire was satirical, comical, or amorous. It is strange to see Plinian *grauitas* still asserting itself in the epitaph written for himself by L. Verginius (q.v. 2) Rufus, who was thrice offered the imperial throne but *imperium adseruat non sibi sed patriae* (Pliny, *Ep.* 6. 10. 4). The sophistication of a later epoch comes out in the light epitaph Hadrian (q.v.) wrote for his horse (*PLM* 4. 126), his bantering exchange with the poet Florus (q.v.; Morel 136), and his playful address (of doubtful authenticity) to his soul in contemplation of death, Morel 137).

The last great pagan Latin poet, Claudian (q.v.), produced some well-turned but conventional epigrams, while Ausonius, like the Byzantine Agathias (qq.v.), wrote some which betray none of their author's Christian faith, being pagan in subject, sensuous in mood. In a remarkable return to the initial function of the epigram, three more devout Christian writers composed poems to be inscribed on objects of religious veneration: Prudentius (q.v.) expounding pictures of biblical scenes (doubtless in a basilica), Paulinus (q.v.) of Nola describing ecclesiastical buildings, and Pope Damasus explaining the holy places of Rome. (On such poetical descriptions see Friedländer and Hoffleit 54.) Though aesthetically undistinguished, these poems are valuable historically. Many hundreds of epitaphs, pagan and Christian, which have survived on stone, use conventional, imitative, often painfully inept verse to convey naive and touching sentiments. The history of classical Latin epigram closes with the poets of the *Anthologia Latina* (q.v.), a group of mediocre sixth-century versifiers writing in North Africa under the Vandals. The least unimportant among them is Luxorius (q.v.), who tried to be a North African Martial; but he and his readers cared only for paradoxes or crudities, and scarcely understood the true beauties of the epigram, concision, deftness, and taste.

See also ANTHOLOGY and the names of individual epigrammatists. G. II.

EPIGRAPHY, GREEK,* is the study of inscriptions written on durable material, such as stone or metal, in Greek letters and expressed in the Greek language. Coin-legends are regarded as falling within the province of the numismatist, painted mummy-labels and ink-written texts on ostraca (fragments of coarse pottery), specially numerous in and characteristic of Egypt, are claimed by the papyrologist, and painted inscriptions forming part of the original decoration of vases are assigned primarily to ceramics, though texts subsequently incised or painted on pottery and the stamps on Rhodian and other amphorae are usually regarded as epigraphical materials. The study covers an area coextensive with the lands inhabited or visited by Greeks who left behind written memorials, and a period of well over a millennium, from the appearance of the earliest extant examples of Greek writing down to the close of the fourth century A.D. or even later, when Greek merges into Byzantine history. The materials are to a large extent scattered in the various places where they were found, though much has been done to collect and protect them in museums in Greece (especially the Epigraphical Museum at Athens and the local collections at Eleusis, Corinth (31), Sparta, Olympia (32), Thebes, Delphi (33), etc.), Asia Minor (30, 42), Egypt (notably at Alexandria (56) and Cairo (57)), and elsewhere; there are important collections, e.g., in Berlin, Paris (55), the British Museum (54), and the Ashmolean Museum at Oxford (127).

2. Epigraphical studies have a very long history (2, 10, 11). Herodotus discusses, in the light of archaic dedications copied by him at Thebes, the Phoenician origin of the Greek alphabet and its later modification under Ionian influence (Hdt. 5. 53-61), and he frequently appeals to inscriptions as historical sources, as do also Thucydides and most of the Greek historians and orators. Philochorus edited a collection of *Ἐπιγράμματα Ἀπτικά* early in the third century B.C., and about the same time Craterus published a *Ψηφισμάτων συναγωγή* with historical commentary, while a century later Polemo of Ilum received the nickname *σθηλοκόπας* for his tireless attention to the inscribed records. The study revived in the fifteenth century with the activity of Ciriaco de' Pizziccoli (Cyrac of Ancona) (126) in copying ancient inscriptions in the course of his travels, and the seventeenth and eighteenth centuries witnessed a dozen attempts to collect the available material in *corpora*. The modern period opens with the travels of Pouqueville, Leake, Gell, Osann, Letronne, and others, August Boeckh's acceptance in 1815, under the auspices of the Berlin Academy, of the task of preparing a new and comprehensive *corpus* on a geographical basis (28), and the issue by J. Franz in 1840 of the first adequate general work on Greek epigraphy (7). Thus were laid the foundations on which scholars have built during the past century, aided by the enhanced

* In this article figures in brackets refer to corresponding items in the appended Bibliography.

opportunities of travel which followed the liberation of Greece, the systematic excavations carried out by Greek and foreign archaeologists on many Hellenic sites—the Acropolis, Corinth (31), Olympia (32), Delphi (33), Delos (29, 38), Gortyn, Priene (44), Miletus, Pergamum (46), Magnesia (43), Sardis (47), and others, of which the most recent and prolific is the Athenian Agora—and the improved technique of decipherment, restoration, and publication, in which the 'squeeze' and the photograph play a valuable part. The most ambitious and fruitful enterprise of this period is that of the Berlin Academy, which, shortly before the completion of Boeckh's great work, embarked on the publication of a series of *corpora*, united in 1903 under the single title of *Inscriptiones Graecae* (29), which was to contain all the Greek inscriptions of Europe; the Vienna Academy undertook the preparation of a *corpus*, of which only the firstfruits have appeared (30), of Asia Minor; and Syrian (49), Bulgarian (36), and Roumanian *corpora* are planned or already begun.

3. Greek epigraphy comprises two main provinces, palaeographical and historical, though there is a certain overlap between them in so far as palaeographical criteria are used for the determination of the provenance and the date of an inscription, and so for its assignment to its historical context.

1. Inscriptions afford by far the earliest extant examples of Greek writing, and are thus invaluable for the study of the origin and development of the Greek alphabet and script (9-13, 24, 25). The persistent tradition which spoke of the Phoenicians and their semi-mythical King Cadmus as those who taught the Hellenes to write is confirmed by the use of the word *φωνικῆς* (Ildt. 5, 58; *SIG* 38. 37) to denote letters, by the 'retrograde' direction of the earliest Greek inscriptions, by the Greek letter-names, by the identical order of the alphabets of Phoenicia (as inferred from the cognate Hebrew) and of Greece (as indicated by many early *abecedaria*, by the numerical values given to the letters, and by the unbroken tradition of the Greek language), and by the striking resemblances between the letter-forms used in the most archaic inscriptions of the Greeks and their Phoenician counterparts, as found, e.g., in the inscription of Ahiaram from Byblos and on the 'Moabite Stone'. The Phoenician alphabet of twenty-two consonants the Greeks rapidly and skilfully transformed (71, 72) into an instrument suited for the representation of their own language, either discarding or giving new phonetic values to letters they did not require, and making further additions, as utility or consistency demanded, at the close of the alphabet, which, as they first learned it, ended with T. In this process of development and adaptation each community or group of communities made its own experiments, and thus a large number of local variations arose (71), but the resultant alphabets fall into four main classes: (1) those of Crete, Thera, and early Melos, in which $\Xi\Phi\chi\psi$ are lacking, (2) those of Attica and certain islands, in which $\Phi\chi$ represent the sounds $\phi\chi$, but $\Xi\psi$ are wanting, (3) the 'Eastern Group', including also Corinth, Argos, and Sicyon, in which $\Xi\Phi\chi\psi$ represent $\xi\phi\chi\psi$ respectively, and (4) the 'Western Group', in which Ξ is not used and $\Phi\chi\psi$ represent $\phi\xi\chi$ respectively. The original 'retrograde' direction of the script gave place to the 'boustrophedon' style, in which the lines run alternately from right to left and from left to right, and this was succeeded by the exclusive use of the left-to-right direction (72). Greek aesthetic sense, notably that of the Athenians, demanded greater simplicity, symmetry, and uniformity in the letter-forms and insisted on their arrangement in straight horizontal lines. Indeed, in the sixth century B.C. the 'stoichedon' style appears, and enjoys, especially at Athens, a long vogue;

in this there is an exact alignment of letters not only horizontal but also vertical (73). Down to the close of the fifth century Athens used an alphabet of only twenty-one letters,

ΑΒΛΔΕΙΗΘΙΚΛΜΝΟΠΡΞΤΥΦΧ,

in which E denotes ε, ει, η, O denotes ο, ου, ω, and H retains its original value as an aspirate; but in 403 B.C. the Milesian alphabet of twenty-four letters was officially adopted in its place, and soon all Greece followed the Athenian lead and used the alphabet

ΑΒΓΔΕΙΗΘΙΚΛΜΝΞΟΠΡΞΤΥΦΧΨΩ.

Since that time the Greek alphabet has neither gained nor lost a letter, though various influences modified their forms. (1) The fourth century witnessed an excessive simplification, due perhaps in part to economic motives, leading to the frequent representation of A or Δ by Λ, of H or N by Π, etc.; but this hampered the reader and proved a passing phase, dying out in the third century. (2) Another temporary fashion was the substitution of rectilinear for curved forms, partly in the engraver's interest and partly because of the archaic appearance of some of the resultant forms. (3) Far more lasting and potent was the tendency towards elaboration of the script, due to a recoil from the old simplicity and a desire to display the designer's ingenuity; this led to the addition of serifs or of 'apices' to the letters, the substitution of Δ for A, and the invention of various ornamented forms, and flourished in the two centuries before and after Christ, but died down c. A.D. 200. (4) Ultimately the influence of the cursive style triumphed, and the epigraphical script became a mere copy on stone of the forms convenient to papyrus or parchment, with its tendency to make the letters taller and narrower, to substitute curved for straight lines, and to reduce or eliminate the necessity of removing pen from paper. We thus reach an alphabet of the type

ΑΒΓΔΕΖΗΘΙΚΛΛΜΝΞΟΠΡCΤΥΦΧΨΩ.

Numbers were either written out in words or indicated by numeral signs. The Greek numeral systems are of two classes, in the first of which there are many striking local divergences. (1) In the acrophonic system (74), illustrated by inscriptions from about 460 to 100 B.C. and used sporadically even later, the initial letters of *πέντε*, *δέκα*, *έκατόν*, etc., stand for the values indicated by those words; I represents the unit; and there are usually compound signs for 50, 500, 5,000, etc. Thus in Attica ΜΧΧΗΤΑ ΔΔΓΓΙ = 12186 and ΤΤΡ [B]ΗΠΗΙIC = 2 talents, 5607 drachmas, 2½ obols. (2) In the alphabetic system, traceable back to the fifth century, widespread in the Hellenistic period and completely dominant by 100 B.C., the letters in their alphabetical order (with the retention of F and Q in their original places after ε and π and the addition of λ after ω) indicate the nine units, nine tens, and nine hundreds, so that ΤQH = 398 and ΜΒΡΠC = 12186. Frequently these alphabetic numerals, which are used for ordinal as well as for cardinal numbers, are distinguished by a superposed horizontal line. Inscriptions also furnish abundant materials for the study of Greek punctuation, ligature, monogram, and abbreviation, which consists in the omission either of the end or of some part of the interior of a word; the latter method of contraction is especially frequent in, but by no means confined to, the *nomina sacra*, e.g. Θ(εός), Χ(ριστός), Κ(ύριε).

II. Even more important than the form of inscriptions is their content. They are historical documents as well as palaeographical specimens, and there is no aspect of Hellenic thought or speech, writing or action on which they do not throw valuable light. Apart from such

outstanding documents as the Attic tribute quota-lists and assessments (110, 111), the law-code of Gortyn (63, 64), the chronological table known as the 'Parian Marble' (65), the poems of Isyllus and Maistas, the Delphic papyrus (87), the cure-records from the Epidaurian Asclepeion, the official autobiography of Augustus in the bilingual *Monumentum Ancyranum* (66, 67), Diocletian's Edict (68, 69), and the philosophical confession of Diogenes of Oenoanda (70), inscriptions with their authentic, first-hand, contemporary records, characterized by extraordinary detail and objectivity, immeasurably enrich our knowledge of the ancient world (4, 5). They offer materials, often the sole materials available, for the study of all the Greek dialects (75-7); they provide uniquely valuable evidence of grammatical and orthographical usage and of phonetic changes (78); they give to the student of Greek literature thousands of dedicatory poems, metrical epitaphs, and other verse compositions (79-87), as well as countless examples of prose and extensive records of dramatic contests and victories (122); they preserve several hymns accompanied by the musical notes to which they were chanted. To the archaeologist they supply hundreds of signatures of sculptors (88, 89), potters, and painters. In the sphere of religion we owe to them a wealth of detailed knowledge of cult titles and ritual laws (94-6), temple organization and finance, priestly appointment and tenure, religious festivals and societies, oracles, confessions and thanksgivings, prayers and curses (97), not to speak of the light they throw upon Jewish and Christian beliefs and practices (16-23). In the political realm they preserve the *ipsissima verba* of laws, decrees (very many of which record the bestowal of citizenship, *πολιτεία* (100), and other privileges) (99), edicts and rescripts (108), treaties (101, 102), arbitral awards (5, 103-4), legal judgements (105), economic and fiscal regulations, financial records (109-12), specifications and accounts relating to public buildings (90-93), boundaries of States or public domains, lists of eponymous or other magistrates, census-surveys, and other documents, confirming, correcting, or supplementing the data derived from literary sources. Finally, in the field of private and social life, where literature is least helpful, inscriptions aid us with their countless records of legal and commercial transactions—contracts, sales, leases, mortgages and guarantees, loans and deposits, wills and endowments (106-7), dowries and manumissions of various types, civil or religious—of clubs and societies (5, 115), schools and scholars, examinations and prizes (116), their thousands of stamped amphora-handles and mercantile inscriptions (112), and their myriads of epitaphs with varying formulae, often revealing interesting local peculiarities (119-21). Even where such inscriptions are of little or no value individually, they frequently serve, taken in large numbers, as the bases of inductions which are of real importance, linguistic or historical.

The fullest epigraphical bibliography is (1) J. I. E. Hondius, *Saxa loquuntur* (1938), 55 ff. Here only a brief selection can be given. On almost every aspect of the study light is thrown by the works of M. Holleaux (esp. *Études d'épigraphie et d'histoire grecques*, ed. by L. Robert, 1938-), L. Robert (esp. *Hellenica* 1-xii, 1940-60), U. von Wilamowitz-Moellendorf (esp. *Kl. Schr.* v. 1 (1937)), and A. Wilhelm (esp. *Beiträge zur griech. Inschriftenkunde* (1909)). Current discoveries and discussions are recorded annually in the *Supplementum Epigraphicum Graecum*, founded by J. I. E. Hondius in 1923 and now edited by A. G. Woodhead, and J. and I. Robert contribute to the *Revue des études grecques* an invaluable critical summary of the epigraphical publications of each year.

EPIGRAPHY, LATIN, the study of Latin texts inscribed on durable objects, usually of stone or bronze. It is concerned both with the form of the inscriptions and with their content, and so impinges on many other fields, e.g. palaeography, philology, history, law, religion. It excludes, but cannot ignore, texts on coins and gems; it has a strong interest in Greek inscriptions of the Roman period; unlike Greek epigraphy, it includes some texts written with pen and ink, e.g. those on *amphorae*.

2. The first-known collection of Latin inscriptions was made c. A.D. 800 and preserved in MS. at Einsiedeln. On this, as on subsequent collections made by early antiquaries, and on the transcriptions of artists who drew ancient monuments, we rely for knowledge of many lost texts; but it must be remembered that these have sometimes been over-imaginatively restored, even forged. Serious study began in the eighteenth century, among its outstanding early exponents being Bartolommeo Borghesi; a great advance was made in the nineteenth, with the plan for a complete corpus of Latin inscriptions, undertaken in Germany, chiefly on the initiative of Th. Mommsen.

3. The oldest of all Latin inscriptions is a craftsman's label on a gold *fibula* from Praeneste, of the late seventh century B.C. (*ILS* 8561), the oldest on stone a religious regulation on a *cippus* from the Forum Romanum, probably of the late sixth (*ILS* 4913). Examples are rare before the third century, not common before the second; the majority are early imperial, but they continue to the end of the ancient world, and after. They come from all parts of the Roman Empire, and are particularly valuable in providing evidence from the provinces as well as from Rome and Italy; the yield from the eastern provinces is small, but from the west, especially Africa, it is large.

4. The texts may be formal documents such as laws, treaties, legal contracts, wills (*acta*), or records of individuals and their activities (*tituli*), whether inscribed in their honour, at their commission, or, quite casually, by themselves (*graffiti*); epitaphs form the largest single group. The earliest show the Latin language at a date well before any surviving literature, the later its development in everyday usage (see LATIN, LANGUAGE, SPOKEN, VULGAR). They give information on governmental policy and administration, on persons and events, and on many aspects of life and thought on which the literary sources are silent or inadequate. The cumulative evidence even of trivial examples may be enlightening; and any text may prove more informative than it appears, if it is considered in its archaeological context. Something of the range may be summarily indicated as follows.

(a) The public *acta* include a series of laws of the Republic and early Empire, e.g. a judiciary law which is probably that of C. Gracchus and the *Lex de imperio Vespasiani* (*FIRA* i. 84 f.; 154 f.); some *senatus consulta*, e.g. much of the s.c. *de Bacchanalibus* of 186 B.C. (*ILS* 18); and many magisterial documents, especially edicts, letters, rescripts, and public speeches of emperors (cf. *ILS* 206, 423, 705, 212). Also noteworthy are the *Fasti* of consuls, local magistrates, and triumphing generals (*Inscriptiones Italiae* xiii. 1) which clarify the chronological framework of Roman history, and the *Calendars* (*Inscriptiones Italiae* xiii. 2) essential to the study of official Roman religion. For the inscribed autobiography of Augustus, see MONUMENTUM Ancyranum.

(b) The *tituli* of men in public life (*ILS* 1 f., 862 f.) present the administrative personnel of Rome, provide lists of the offices and achievements of individuals, often otherwise unknown, tell something of the official in action, his social and personal background, even his ideals and ambitions (cf. the Scipionic epitaphs, *ILS* 1-7). Taken as a whole, they show developments in the administrative system, e.g. from the simple career of a republican senator to its complex imperial counterpart in which the magistracies may be a minor element in a string of appointments created by emperors; they illustrate the emergence of the equestrian civil service and that of the imperial slaves and freedmen; they contain details indicative, e.g., of changes in the sources of recruitment of officials, as from Italy to the provinces, or of significant connexions between families in public life. Laudatory inscriptions also indicate the honours and titles accorded to, the qualities admired in, public men at different periods. Imperial inscriptions provide evidence for the titles and powers of emperors and for their policies and propaganda.

(c) Local government is illustrated by inscriptions containing municipal charters, careers of municipal officials, decrees of local authorities, records of public works and services, with some details of their finances (often supplied by private generosity), occasionally, as at Pompeii, election notices (*ILS* 6044 f.).

(d) Military affairs appear in the inscriptions of units and individual soldiers (*ILS* 1986 f.) which throw light on the organization and deployment of all branches of the armed forces. They reflect in general on foreign policy, in detail on sources of recruitment, terms of service, lines of promotion, the religious and other interests of the men, relations with civilians, prospects on demobilization, especially the prospect of Roman citizenship for men in auxiliary units, for which virtually all our information derives from military *diplomata* (*CIL* xvi).

(e) Religious affairs are documented by a number of dedications and building inscriptions (*ILS* 2957 f.) which show the character and organization of particular cults, the interaction of Roman and provincial cults, the tendency to syncretism, the introduction and development of new cults, especially the imperial cult. There are

also accounts of ceremonies, like that of the Augustan *Ludi Saeculares* with its reference to the *carmen saeculare* of Horace (ILS 5050). Some views on after-life can be found in epitaphs. For Christianity, see below.

(f) Social developments, such as the progress of urbanization and romanization in the provinces, may be traced, e.g., from building inscriptions, the records of local government, changing forms of nomenclature. The history of nomenclature itself, important for its ethnic, social, and political implications, is very largely dependent on epigraphic evidence. There is also information, especially in epitaphs, on family relationships, average age of marriage, expectation of life (calculated roughly from ages at death), social gradings, social mobility, conditions of living in each class. Other aspects of ordinary life are illustrated, e.g., by inscriptions concerning *collegia* (ILS 7212 f.) which refer to club rules and the activities of members, or *ludi* (ILS 5051 f.) which show the popular types of entertainment, the performers, and the attitudes of their fans.

(g) Economic life is illustrated in part by references to crafts and trades on tombstones, but most valuable by the makers' stamps and salesmen's labels on many objects. These may help to show the organization of industries and commerce, both private and under imperial control, and are very often precisely datable (see, e.g., BRICK-STAMPS, SAMIAN WARE). There is also some information on prices and costs, e.g. in building inscriptions, and for a wide range of goods at the end of the third century A.D. in Diocletian's Edict on Prices (CIL iii. 1926 f.).

(h) Christian inscriptions begin as a group barely differentiated from the pagan texts of their time, but develop formulae and other features of their own, especially after the Peace of the Church. The earlier texts are often very humble tombstones or pilgrims' graffiti (cf. Kaufmann, *Handbuch*, 303 f.). Later they include more ambitious items, as, e.g., building inscriptions for churches. The set of verse *elogia* on popes and martyrs, written by Pope Damasus (366-84) and finely cut by Philocalus in letters which may have been especially designed for the purpose, form a landmark in this development of a specifically Christian epigraphic tradition (Kaufmann, *Handbuch*, 327 f.). All told they illustrate the character of early Christian society, the organization of the Church, the survival of pagan features, and the emergence of new ideas, including heresies.

5. Most inscriptions were incised. The more important were cut with care, and, from the late Republic onwards, often with art; lines and letters were painted on to the surface (lines sometimes faintly chiselled), in the more formal cases with mechanical aids, otherwise free-hand; the width and depth of strokes, occasionally also the height, were varied with a view both to legibility and to aesthetics; there was careful attention to the layout and proportions of the text in relation to the context. Incised letters on stone might be picked out in red, on bronze in white. Other methods were, e.g., to fix metal letters to stone by pegs (such letters rarely survive, but see ILS 4921 b for a reference to them in a temple inventory; texts may be deducible from the positions of the peg-holes), to insert letters formed of strips of metal, coloured marble, or mosaic tesserae, to paint them, even to write them with pen and ink.

6. The letters (see ALPHABET, LATIN) were originally very like those of the early Greek alphabet in Italy. By the Augustan period, cutters had developed (i) the formal Latin capital (*scriptura monumentalis*, *litterae lapidariae*, *litterae quadratae*), a carefully designed letter, beautifully adapted to a monumental context and well illustrated on the base of Trajan's Column; (ii) a small, neat capital (*scriptura actuarii*), derived from the brush-painted letters used for ephemeral public notices as illustrated on Pom-

peian walls, and suited for recording long documents, e.g. the laws. Later, a larger version of the brush-painted letter was used on stone for private and some minor public inscriptions (Rustic capitals). Rounded letters (*scriptura uncials*), borrowed from the forms used in papyri and parchments, appear from the late third century A.D., and the cursive hand in common use is frequent at all dates in graffiti, in waxed tablets such as those found at Pompeii (CIL iv. 3340 f.), and also appears occasionally on stone-cut texts of a crude type.

7. In addition the cutters used signs: (i) stops between words and phrases (occasionally syllables), in the form of round dots, squares, triangles, and, later, more elaborate shapes like ivy-leaves (*hederae distinguentes*); (ii) from the Sullan age to mid third century A.D., the *apex*, recalling an acute accent, to mark vowels long by nature; (iii) from the end of the Republic, the superscript bar to mark abbreviations. There was no uniformity of practice in the use of such signs and cutters often misplaced them, being more interested in their decorative value than their significance. For figures, see NUMBERS, ROMAN.

8. Of the cutters we know little, but two workshop advertisements survive, from Palermo (ILS 7680) and Rome (ILS 7679). There are also a few signatures, like that of Aemilius Celer who painted notices at Pompeii (ILS 5145) or Philocalus who cut the inscriptions of Pope Damasus (ILCV 963), and some references to the craft on tombstones.

9. The drafts from which the cutters worked were no doubt often written in cursive letters and difficult to read, which may account for some nonsensical letter-groups in inscriptions. The existence of virtually identical, but quite elaborate funerary texts at widely distant places (cf. ILS 2082 from Rome and 2257 from Burnum) may suggest the existence of handbooks from which an unimaginative client might choose a text. In addition there was heavy use of conventional formulae in all inscriptions and thus often makes it possible to restore damaged texts with confidence. Restored letters are conventionally printed within square brackets [].

10. Most texts were composed with great brevity, though a trend to verbosity is apparent in the fourth century A.D. Space was also saved by abbreviating words, often drastically, by ligaturing letters and, sometimes, by using *sigla* (e.g. 7 = centurion), all of which present difficulties to the modern reader (most handbooks list those in common use). The resolutions of abbreviations and *sigla* are conventionally printed within round brackets ().

11. Some inscriptions are precisely dated by the consular year or an emperor's tribunician year, and even by the day of the month; others can be assigned within more or less exact chronological termini on grounds of content, e.g. prosopography, the use of a particular title, formula, or spelling, and occasionally of the material on which they appear; thus, marble is rare in Rome before the end of the Republic. Letter-forms may be an approximate guide, but are inevitably a subjective one, and liable to mislead because of the idiosyncrasies or gaucheries of the cutters.

EPILYCUS, cited by Athenaeus as a writer sometimes of Old (4. 140a) Comedy, sometimes of Middle (e.g. 1. 28c). The *Κωπυλικός* has a Doric title, and was written partially in Doric.

FCG ii. 887 f.; *CAF* i. 803 f.; Deminaczk, *Supp. Com.* 40.

EPIMELETES. (a) In Greek cities this title was given either to regular magistrates who managed special departments, such as the water supply, the docks, or festivals, or to special commissioners elected for some temporary need, such as the erection of a public building. (b) In Ptolemaic Egypt the *epimeletes* was in the third century the chief financial official of the *nomos* (q.v. 1). In the second century he was subordinate to *ὁ ἐπὶ τῶν προσόδων* and he was sometimes responsible for a part of a nome only. (c) In the Roman period *epimeletes* is often the translation of the Latin *curator*. A. H. M. J.

EPIMENIDES, religious teacher and wonder-worker of Crete. According to Plato (*Leg.* 1. 642 d) he was at Athens, performing religious rites and prophesying, about 500 B.C. Others said that he purified the city after the slaughter of Cylon's associates about 600 B.C. (Arist. *Ath. Pol.* 1, etc.; Diels, *Vorsokr.*⁵ i. 29 f.). With the

variations in date go the legends of his great age (157 or 299), and miraculous sleep of fifty-seven years (Diog. Laert.; Diels, *ibid.* 28). The stories of wanderings out of the body (cf. *Suda*; Diels, *ibid.* 29) rank him with Aristaeas (q.v.), Hermetimus, etc., but his god was the Cretan Zeus, and Plutarch says that the men of the time called him *Κούρης νέος* (Diels, *ibid.* 30). Tradition assigned to him a *Theogony* and a *Cretica*, also *Katharmoi* and other mystical writings.

Sources and fragments in Diels-Kranz, *Vorsokr.*¹ i. 27-37; *FGH* 457. See also Kirk-Raven, *Presocratic Philosophers* 23, 44 f. W. K. G. C.

EPIPHANIUS, c. A.D. 315-403, born in Eleutheropolis, Palestine. He became a monk and in 367 bishop of Salamis (Constantia), Cyprus. He hated Greek culture, attacked the use of images in churches, and violently opposed both Origen's followers and the Arians as heretics adulterating the faith with 'hellenism'. They are the principal villains in his highly informative *Panarion* or 'Medicine-chest' for curing eighty heresies (375). A tract on biblical weights and measures contains important matter on the Old Testament versions.

Ed. K. Holl (1915-33, 3 vols., incomplete); P. de Lagarde, *Symmetria* ii (1880), 150 ff.; R. P. Blake and H. de Vis, *Epiphanius de Genesim* (1934). W. Schneemelcher in *RAC* 5 (1961), 909 ff. H. C.

EPIPHANY. In Homer the gods regularly appear visibly and have dealings with men—fighting, helping, loving (cf. RELIGION, MINOAN-MYCENEA). Poetic or mythical epiphanies, regarded as belonging to the distant past, persist throughout Greek literature, and sometimes serve the ends of religion by giving the *aition* for a living cult, e.g. the Homeric Hymn to Demeter. Even the *märchenhaft* story of Baucis and Philemon suggests this by its ending. Dionysus especially appeared with manifestations of power to compel unbelievers, as in Euripides' *Bacchae*. In historical epiphanies the cult-motive is always prominent. In the famous story of Philip-pides, Pan demands worship at Athens in return for his help (Hdt. 6. 105). Two common types are (i) epiphanies to help or terrify in battle, frequent in Herodotus (8. 64; 8. 36 ff., etc.), and cf. in Roman saga the Dioscuri at Lake Regillus (Dion. Hal. *Ant. Rom.* 6. 13); (ii) healing epiphanies. Asclepius in effecting cures always appeared to the sufferer, usually in a dream (incubation) but sometimes waking, as in the Isyllus-inscription (for which see HYMNS) and SIG 803. Frequent Hellenistic inscriptions record epiphanies connected with the foundation of cults (e.g. the *Soteria* at Delphi; Dionysus 'in the tree' at Magnesia, Kern, *Inscr. von M.* 215 b). The genuineness of the belief cannot be doubted (cf. Acts xiv. 10-12), though cases of fraud were recognized (Pisistratus, Hdt. 1. 60). The term *epiphaneia* was used also to denote miracles in which the deity was not thought to be seen (Dion. Hal. *Ant. Rom.* 2. 68). Deified living rulers were hailed as *θεοὶ ἐπιφανείς*, because their power was felt. In general see F. Pfister in *PW*, Suppl. iv. 277 ff.; A. D. Nock, *JHS* 1928, 38 ff.; cf. also the remarks of Nock in 'A Vision of Mandulis Aion', *Harv. Theol. Rev.* 1934, 53 ff., esp. 67 ff. W. K. G. C.

EPIRUS ('*Ἠπειρος*, 'Mainland'), north-west area of Greece, from Acrocerania point to Nicopolis, with harbours at Buthrotum and Glycys Limen (at Acheron's mouth); bordered on south by Gulf of Ambracia, and on east by Pindus range with pass via Metsovo to Thessaly. Three limestone ranges parallel to the coast and the Pindus range enclose narrow valleys and plateaux with good pasture and extensive woods; alluvial plains were formed near Buthrotum, Glycys Limen, and Ambracia. Epirus had a humid climate and cold winters. In terrain

and in history it resembled upper Macedonia. Known in the *Iliad* only for the oracle at Dodona, and to Herodotus for the oracle of the dead by Acheron, Epirus received Hellenic influence from the Elean colonies in Cassopaea and the Corinthian colonies at Ambracia and Corcyra, and the oracle at Dodona drew pilgrims from northern and central Greece especially. Theopompus knew fourteen Epirote tribes, probably of Dorian and Illyrian stocks, of which the Chaones held the plain of Buthrotum, the Thesproti the plain of Acheron, and the Molossi the plain near Dodona, which forms the highland centre of Epirus with an outlet southwards to Ambracia. A strong Molossian State, which included some Thesprotian tribes, existed in the reign of Neoptolemus c. 370-368 B.C. (*Ἀρχ.* 1956, 1 ff.). The unification of Epirus in a symmarchy led by the Molossian king was finally achieved by Alexander (q.v. 6), brother-in-law of Philip II of Macedon. His conquests in southern Italy and his alliance with Rome showed the potentialities of the Epirote Confederacy, but he was killed in 330 B.C. Dynastic troubles weakened the Molossian State, until Pyrrhus removed his fellow king and embarked on his adventurous career (q.v.). The most lasting of his achievements were the conquest of southern Illyria, the development of Ambracia as his capital, and the building of fortifications and theatres, especially the large one at Dodona (q.v.). His successors suffered from wars with Aetolia, Macedonia, and Illyria, until in c. 232 B.C. the Molossian monarchy fell. An Epirote League with a federal citizenship was then created, and the meetings of its Council were held probably by rotation at Dodona or Passaron in Molossis, at Gitana in Thesprotis, and at Phoenice in Chaonia. It was soon involved in the wars between Rome and Macedonia, and it split apart when the Molossian State alone supported Macedonia and was sacked by the Romans in 167 B.C., when 150,000 captives were deported (see CHAERONS). Central Epirus never recovered; but northern Epirus prospered during the late republican period, and Augustus celebrated his victory at Actium by founding a Roman colony at Nicopolis. Under the Empire a coastal road and a road through the interior were built from north to south, and Buthrotum was a Roman colony. Ancient remains testify to the great prosperity of Epirus in Hellenistic times. See CHAONES, MOLOSSI, THESPROTI.

EPISTATES. (a) At Athens the *ἐπιστάτης τῶν πρυτάνεων*, chosen daily by lot from the *prytaneis*, during his day of office held the State seal and keys, and in the fifth century B.C. presided in council and assembly. In the fourth century he selected the *proedroi* by lot, and from them, also by lot, the *ἐπιστάτης τῶν προέδρων* who presided. Similar *ἐπιστάται* are found in other Greek cities; but sometimes the title is equivalent to the Athenian *prytanes*. (b) In Ptolemaic Egypt the *epistates* was a royal official who administered justice in each *nomos* and sub-district. These officials were distinct from the *ἐπιστάται τῶν φυλακτικῶν* (see POLICE, GREEK). (c) In Ptolemaic Egypt the *ἐπιστάτης ἱεροῦ* was the superintendent, probably appointed by the Crown, of a native temple. (d) In all Hellenistic kingdoms the *ἐπιστάτης* was a high commissioner appointed by the king to control a subject city. He sometimes, perhaps generally, had a royal garrison to maintain public order. He frequently exercised an informal and in theory probably voluntary jurisdiction, settling suits out of court, preferably by arbitration. At Thessalonica and

at Seleucia in Pieria he is known to have possessed a constitutional power of veto over legislation.

On (d), M. Holleaux, *BCH* 1933, 25 ff.; A. Heuss, *Klio* , Beiheft xxix (1937), 23 ff.; 58 ff. A. H. M. J.

EPITADEUS, a Spartan ephor (q.v.), who (probably soon after 400 B.C.) introduced a law authorizing the transfer of property including land by gift or bequest, a method perhaps already much practised in secret. To this measure, and to the wealth accruing to Sparta after the Peloponnesian War, the concentration of the territory of Laconia and Messenia in a few hands (Arist. *Pol.* 2. 1270^a) was mainly due.

D. Asheri, *Athenaeum* 1961, 45 ff.

A. M. W.

EPITAPHIOS, a funeral speech, delivered, according to Athenian custom, by a citizen chosen on the grounds of his high moral and mental qualities (Thuc. 2. 34), at a public funeral of those who had fallen in battle. This practice, unique to Athens (Dem. 20. 141), was continued into Roman times and was clearly a solemn and important occasion, but before Hyperides the only certain names of speakers chosen are those of Pericles in 440 and 431, Demosthenes after Chaeronea, and Archinus at some intervening date.

The conventional form comprised a tribute to the virtues of the dead, a summary of their country's glorious achievements in the past, a consolation to their relatives, and an exhortation to the survivors to imitate their virtues. Thucydides professes to record in full the speech thus delivered by Pericles at the end of the first year of the Peloponnesian War. The speaker follows the usual form, except that, instead of enlarging on past history, he tells of the glories of Athens in her maturity.

As a contrast to the impersonal austerity of Pericles we have the speech of Hyperides on Leosthenes and others who died in the Lamian War (322 B.C.). Hyperides, who was an intimate friend of the dead general, shows deep personal feeling, and a unique feature of this speech is his reference to the hope of personal immortality. A passage in Lycurgus (*Leoc.* §§ 39-40) is in effect a condensed *Epitaphios* on the dead at Chaeronea.

In addition to these genuine speeches we possess a florid fragment by Gorgias and a speech, composed under Gorgian influence, attributed to Lysias, which, though it cannot be referred with certainty to any definite occasion, may well be genuine (see J. Walz, 'Der Lysianische Epitaphios' (*Phylol.* Suppl. 29. 4)). A similar composition attributed to Demosthenes is almost certainly spurious. Finally, Socrates in Plato's *Menexenus* recites a funeral speech which, he affirms, was composed by Aspasia to be delivered by Pericles.

G. Kennedy, *The Art of Persuasion in Greece* (1963), 154 ff.; F. Jacoby, *JHS* 1944, 37 ff.; M. Pohlenz, *Symb. Oslo* 1947, 46 ff. J. T. D.

EPITHALAMIUM, GREEK. The *ἐπιθάλμιον* was strictly a song sung by young men and maidens before the bridal-chamber (Dion. Hal. *Rhet.* p. 247), like the contents of Sappho's Book 7, Theocritus 18, etc. It was distinguished from the *γαμήλιος*, which could be sung at any festival connected with a wedding (Eust. 1541. 49), and from the *ὕμναιος*, the processional song which accompanied the newly wed couple to their home, and is described by Homer (*Il.* 18. 491-6) and Hesiod (*Sc.* 273-80).

H. Färber, *Die Lyrik in der Kunsttheorie der Antike* (1936), i 37 ff., ii 49 ff. C. M. B.

EPITHALAMIUM, LATIN. There are extant some seventeen Latin verse epithalamia. Epithalamia by Calvus, Tigidas, and Ovid are among those that have perished.

The earliest and finest extant examples are the sixty-first and sixty-second poems of Catullus, who also in his sixty-fourth poem recounts the love and marriage of Peleus and Thetis. The influence of Sappho is discernible in Catullus, and her influence, direct or indirect, is sometimes suggested in the later rhetorical epithalamia of epic character. There are single examples by Statius, Ausonius (a cento), Paulinus of Nola, Ennodius, Venantius Fortunatus, and Luxorius (a cento). *Anthologia Latina* (Riese) 742 is an anonymous epithalamium. Claudian, Sidonius, and Dracontius have each left two epithalamia. A few verses by Gallienus are described as an epithalamium (S.H.A. *Gallienus Duo* 11. 8, and *Anthologia Latina* 711). The *Medea* of Seneca contains an epithalamium (56-115) which may well have owed something to one in Ovid's lost play with that title. The *De nuptiis Philologiae et Mercurii* by Martianus Capella is in mixed prose and verse, and a thing apart.

Facoltà di Lett. e Filosofia della Univ. di Napoli*, 1955, 73 ff.; R. Keydell, *RAC* v (1961), 927 ff. G. B. A. F.

EPITHETS, DIVINE. In considering the very numerous surnames or epithets of gods it is necessary first to distinguish between those appearing only as literary (especially epic) ornaments and those known to have been used in cult. Thus we have no proof that Athena was ever addressed in ritual as γλαυκῶπις, it is her stock epithet in Homer, Zeus' pet-name for her (*Il.* 8. 373). It seems unlikely that Ares was prayed to as βροτολογιγός; he is so addressed by Athena (*Il.* 5. 31), which is a very different thing, and it is his stock epithet (as *ibid.* 846). In Latin such ornaments are abundant; thus in Virgil, Mars is *durus* (*Ecl.* 10. 44); *impius* (*G.* 1. 511); *indomitus* (*Aen.* 2. 440); *saeuus* (*Aen.* 11. 153). These are certainly not cult-epithets, and in some cases the name of the god hardly means more than 'war, strife'. The epithet is purely poetical in *Aen.* 9. 717, where he is called *urmpotens*, and in 11. 8 where *bellipotens* is used instead of his name. But there are many border-line cases, hard to decide. We have no instance of Athena being called Pallas in cult, yet it is not easy to suppose that so familiar a name was never used for her by worshippers; Zeus' stock epithet, 'cloud-gatherer', appears in the voc., νεφέληγερέτα, in epic in many places where it is syntactically a nom., strongly suggesting that its form had become fixed by some ancient liturgical phrase, which, however, is quite lost to us. The immediate function of the epithet in epic is often to form with the proper name a convenient metrical unit. Now and then an epithet is used to avoid mentioning an ill-omened name; Hades in Sophocles, *OC* 1606, is Zeus χθόνιος, and in Aesch. *Supp.* 231 he is even Zeus ἄλλος.

2. But coming to those epithets which are guaranteed by their occurrence in liturgical formulae, dedications, and the official names of temples, we may distinguish the following classes. (1) Purely local, meaning that the deity in question is worshipped, or has a temple or altar, at such-and-such a place. Thus Apollo Δήλιος is simply Apollo who is worshipped in Delos, and differs from the Pythian, or any other similarly named Apollo, no otherwise than as Our Lady of Lourdes does from Our Lady of Loretto. Dionysus Κυδαθηναεύς (Dittenberger, *SIG* 109. 16 and elsewhere) is nothing but the Dionysus who has a cult in the Attic deme Κυδαθήναιον. The Bona Dea (q.v.) Subsaxana gives rather the address of her temple

than any characteristic of her own; cf. St. Mary's le Strand, St. Martin's in the Fields. Such titles are of no more than topographical interest. At most they may tell us something of the history of the cult, if the title does not fit the immediate locality; a Demeter Ἐλευσσία worshipped at Pheneos in Arcadia (Paus. 8. 15. 1) manifestly has something to do with the famous cult at Eleusis, and the local legend said as much. In like manner, the vow of a temple to Venus Erucina, i.e. the Aphrodite of Eryx, in Rome (Livy 22. 9. 10) was made by advice of a Sibylline and therefore Greek oracle. (2) Titles indicating association with another god. These are often of some historical importance, and at times puzzling. Apollo Κάπριος (*SIG* 736. 34 and 69) has behind him a history of identification, cf. CARNEA; Athena Ἐφαυσία (*ibid.* 227. 20) need surprise no one, in view of the resemblance of some functions of the two deities; but it is less easy to see why she had a temple at Megara under the title Αἰαντίς (Paus. 1. 42. 4). In Latin these most characteristically take the form, not of an adjective applied to the god's name but of a genitive following it, as in the much-quoted *compreaciones* (q.v.) in Gellius 13. 23 (22). 2, *Luum Saturni, Salaciam Neptuni, Iloram Quirini*, etc. Here in all cases the first of the pair is the less important, and the phrases mean 'Luu (etc.) who is associated with or belongs to the sphere of activity of Saturnus (etc.)', as is now pretty generally agreed. Adjectives are, however, used in the *Tabulae Iguvinae*, as I A 3, *Iuue Krapuui* (*Iouii Grabouuo*), 8, *Trebe Iuue* (*Trebo Iouio*), though the meaning of the first adjective is not certain. (3) Undoubtedly the largest and most important class of epithets, however, have reference to the functions of the god or goddess, either in general or with reference to some particular occasion on which his or her power was manifest. Thus, Zeus has a great number of titles denoting his control of the weather and all that depends on it; he is Βροντῶν, Thunderer, Κεραύνιος, God of the Thunderbolt, Ὀμβριος, Sender of Rainstorms, Ἰέτιος, Rainer, and as a natural consequence Γεωργός, Farmer; also Ὀύριος, God of Favourable Winds, and so forth. Examples may be had from Farnell, *Cults* (index under 'Zeus'), and reference there; the corresponding entry in the index to A. B. Cook's treatise on Zeus would supply abundant instances of every kind of title mentioned in this article. Aphrodite has epithets denoting her power over the sexual life of mankind, as Ἀμβολογήτρα, 'delayer of old age'; her connexion with love whether licit or illicit, for example Πάνδημος 'Goddess of the whole people', in her Athenian worship as a deity of marriage (Farnell, ii. 658), and on the other hand Ἐταίρα and even Πόρνη (*ibid.* 667). These last belong to an extremely curious sub-class in which the characteristics of the worshipper are transferred to the deity; both signify the goddess who is worshipped by harlots. Hera in like manner is called Παῖς, Τελεία, and Χήρα at her three shrines in Stympthalus, in other words Maid, Wife, and Widow (Paus. 8. 22. 2); she naturally received the worship of women of all ages and conditions. The local legend was somewhat at a loss to explain the third title, since Zeus cannot die, and invented a quarrel between the two leading to a separation; clearly the sense of such epithets was no longer remembered when Pausanias wrote.

3. Of epithets referring to a particular manifestation of a god's activity two Roman examples may be given. Mars Ultor (see Platner-Ashby, 220, 329) owed his title to his supposed intervention on Augustus' behalf at Philippi and apparently in the recovery of the standards taken by the Parthians. Jupiter's titles Custos and Conservator (Tacitus, *Hist.* 3. 74) refer *inter alia* to the thank-offerings made him by Domitian after his escape from the Vitellians when they took the Capitol.

4. Epithets having reference to the higher (moral or civic) qualities of a deity are not uncommon, though less so than those which are due to his natural functions. It is to be noted that there is a tendency in later ages to read such qualities into an old title; thus Athena *Ipovaia* at Delphi, so named from the fact that her shrine was in front of the temple of Apollo, had so decided an inclination to become *Ἰπὸνοια* that some manuscripts of Herodotus 8. 37. 2 have been infected by it. As genuine examples may be instanced Apollo *Ἀρχηγέτης* (see APOLLO), Athena *Βουλαία* (of the Senate), Venus Verticordia.

5. Late hymns, for instance those of the Orphic collection, have a strong tendency to heap up epithets, including the most unheard-of and fanciful, e.g. no. 28 (Abel), to Hermes.

C. F. H. Bruchmann, *Epitheta deorum quae apud poetas Graecos leguntur* (Teubner, 1893); J. B. Carter, *De deorum Romanorum cognominibus* (Teubner, 1898) and *Epith. deor. q. a. p. Latinos leguntur* (Teubner, 1902) are useful, but there is room for a large and exhaustive work. H. J. R.

EPITOME (ἐπιτομή). I. GREEK. The production of summaries or abbreviated versions of longer works, especially scientific works, was much practised in the post-classical era. Thus Pamphilus' Glossary was reduced from 95 books to 30, and then to 5. Strabo was often epitomized (*GGM* 2. 529 ff.). Aristophanes of Byzantium epitomized Aristotle's *Historia animalium*, and the epitome was later epitomized by Sopatros. The first two books of Athenaeus and part of the third survive only in an epitome. But the most important of all Greek epitomes is Proclus' prose summary of the *Epic Cycle*, which has come down to us through Photius, and is a most important source for Greek mythology. J. D. D.

II. LATIN. In Rome the rhetorical education of imperial times produced both encyclopaedic scholarship (see QUINTILIANUS), which tempts abbreviation, and compendious works of factual or illustrative information, especially in history: we have Valerius (q.v. 8) Maximus, and Martial knew an epitome of Livy. Short histories, however derivative, might be stylish (see FLORUS); but the trend by the third century A.D. was towards schematic summary. We may note Livy's *Periochae* (q.v.) and the reduction of Pompeius Trogus (q.v.) to Justinus' epitome. While the original authors remained, on papyrus, there was no loss; but during the change to parchment, the taste for epitome limited their chances of survival. Trogus was lost, and only the senatorial traditionalism of the fourth century saved Livy's best books (1-10, 21-45). Concise writing set its fashion. Late historians used the epitome to introduce their accounts of contemporary events (see RUTORIUS 1, FESTUS 3), and it gave Roman background to the Christian interpretation of history (see OROSIUS); likewise in the new biography (see AURELIUS (3) VICTOR, MARIUS (5) MAXIMUS, HISTORIA AUGUSTA.)

Meanwhile practical 'digests' continued, e.g. the grammatical work of Julius (q.v. 6) Romanus, preserved partly by Charisius and Diomedes. Festus (q.v. 2) epitomized Verrius Flaccus (q.v. 8) on Augustan scholarship. Cassiodorus (q.v.) proves the value of this modest transmission of knowledge that would have otherwise been lost.

M. Galdi, *L'epitome nella letteratura latina* (1922). A. H. McD.

EPONA. The name, meaning 'The Great Mare', is that of a Celtic goddess known from a large number of dedications in Roman Gaul, and widespread from Spain to the Balkans, and northern Britain to Italy. The dispersal is due to devotees in the army, but the original cult area was in north-eastern Gaul, and monuments are frequent between the Saône and Seine, around the Mosel and its

tributaries, and east of the Rhine to the *limes*. Alesia was a centre of the cult. The goddess is generally depicted riding on a horse, sometimes with attendant mares and foals, or seated and flanked by horses. In some of the latter instances she holds a basket of provisions, and is thus to be identified with the nature goddesses (cf. *DEAE MATRES*). Epona is mentioned by Juvenal (8. 157), and minor authors. The mare-goddess is found in single and triple form in insular Celtic mythology.

R. Magnen and E. Thevenot, *Épona, déesse gauloise* (1953), for inventory and map. See bibliography & v. RELIGION, CELTIC. T. G. E. P.

EPONYMOI (ἐπώνυμοι) are those who give their name to anybody or anything. They were of three kinds in antiquity. (1) Gods were the *eponymoi* of cities, as Apollo of Apollonia and Athena of Athens. (2) Heroes were the *eponymoi* of tribes, demes, *γένη* or *gentes*, and some other divisions of the populace. When Cleisthenes divided the Athenians into ten tribes, the Delphic oracle chose ten Attic heroes to be their *eponymoi*; forty-two other heroes became the *eponymoi* of the successive years of military service from 18 to 59. (3) In many cities the presiding magistrate was the eponym of the year, as the archon in Athens, the *stephanephoros* in Miletus, the consuls in Rome. J. E. F.

EPOPEUS (Ἐπωπεύς; corrupted to Epaphus by Hyginus, *Fab.* 7. 1; 8. 2-3), the king of Sicyon who protected Antiope (q.v.). He is post-Homeric, first in the *Cypraea*, where a version of his story was told in an episode (Proclus ap. Phot.). Eumelus (in Paus. 2. 1. 1) said that he was son of Alcous the son of Helios, and father of Marathon, the eponym of the Attic region of that name. H. J. R.

EPOREDIA, modern *Ivrea*, founded at the foot of the Alps in north-western Cisalpine Gaul (q.v.) as a Roman colony (100 B.C.) to watch over the Salassi. Controlling the approaches to the *Val d'Aosta* and the Alpine passes, Eporedia became and remained a town of consequence. U. Ewins, *PBSR* 1952, 70 ff. E. T. S.

EPURIUS (*PW* s.v.) **MARCELLUS**, TITUS CLAUDIUS, born of humble parentage at Capua, was praetor A.D. 48, legate of Lycia and proconsul of Cyprus, and *cos. suff.* in 62. After his Lycian legateship in 57 he was prosecuted for extortion, but secured acquittal by bribery and had his accuser exiled. In 66 he was one of the accusers of Thrasea (q.v.) Paetus, and received 5 million sesterces after the condemnation. After the Flavian entry into Rome in 70 he became a champion of the new government, and engaged in fierce controversies with Helvidius (q.v.) Priscus (*Tac. Hist.* 4. 6-8, 43). He was rewarded with the proconsulate of Asia, perhaps with special powers, for three years (70-3), and obtained a second consulate (*suff.*) in May 74. He also held three priesthoods, and was regarded not only as one of the most powerful orators of the age but as an intimate counsellor of Vespasian (*Tac. Dial.* 8, *Hist.* 2. 95). But just before Vespasian's death he was accused by Titus (q.v.) of conspiracy with Caecina (q.v. 3) Alienus, was condemned by the Senate, and committed suicide.

EPULONES, the latest in date of the *quattuor amplissima collegia* of Roman priests. They were first instituted in 196 B.C. (Livy 33. 42. 1), and were then three in number (*tresviri epulones*), the bill for their creation being brought in by C. Licinius Lucullus, then tribune of the *plebs*, who was himself one of the first members. Their business was to organize and supervise the *epulum Iovis* and the similar public banquet which had by that time become a

prominent feature of several festivals, as the *Ludi Romani* (cf. Cicero, *De Or.* 3. 73). They were later increased to seven and continued to be called *septemviri epulones*, although under Caesar their number became ten (Dio Cassius 43. 51. 9).

EPYLLION (ἐπύλλιον, diminutive of ἔπος), a literary type popular from Theocritus to Ovid, was a narrative poem of about 100 to 600 hexameters; the subject was usually taken from the life of a mythical hero or heroine, the love motif being prominent in later epyllia. See THEOCRITUS, CALLIMACHUS (3), EUPHORION (2), CATULLUS (1), VIRGIL, OVID.

M. M. Crump, *Epyllion from Theocritus to Ovid*. (1931) A. M. D.

EQUITES. 1. Origins and Republic. The early history of the cavalry at Rome is overlaid with legend and speculation. The kings are said to have enrolled 300 *celeris* or *trassuli* (later doubled) for the legion (q.v.). They wore loin-cloths, tunics with the *clavus* (q.v.), *trabeae* (short embroidered cloaks), and *mullei* (strapped red shoes); they were armed with lances and their horses were adorned with *phaleræ* (silver disks). Their insignia, in various adapted forms, later became the distinctive attire of patricians, magistrates, and senators. 1,200 *equites* were allegedly added by Servius (q.v. 1). These 1,800 had their horses supplied and maintained by the State (hence *equites equo publico*), drawing on the property of widows and orphans. They had to serve ten campaigns. In the centuriate assembly they formed eighteen *centuriae* (q.v.), later including (it seems) those too old for service. This voting privilege survived in essence as long as the assembly. In the classical Republic these *equites* were enrolled by the censors (q.v.), after financial, physical, and moral scrutiny (*recognitio*). After 304 B.C. (but not regularly in the late Republic) they paraded to the Capitol in the *transvectio* on 15 July. Men of aristocratic birth always had preference for enrolment.

About 400 B.C., men on their own horses (*equites equo privato*) were added to the cavalry. They did not share the voting privilege, but were given at least some of the status marks, of the others. In the third century Roman cavalry proved increasingly ineffective in war and by 200 was largely replaced by *auxilia* (q.v.). But *equites* retained their social eminence and became a corps from which officers and the staffs of governors and commanders were drawn. This new 'equestrian' service was within the reach of any wealthy and well-connected family and the old exclusiveness was undermined. In the 120s senators (but not their families) were excluded from the 18 centuries, and this marks the beginnings of the later *ordo equester* as a separate class in the State. C. Gracchus (q.v. 4), by his law on the Asian tax, gave the wealthiest of non-senators a chance of new enrichment; and his friend Acilius Glabrio (2) turned over the *repetundae* (q.v.) court to (essentially) the same class of men.

The result of all this was a transformation of the *ordo*. By the first century B.C. the wealthiest non-senatorial class (especially the powerful *publicani*, q.v.), from which Gracchan juries were taken and whose sons served on equal terms with those of senators, claimed and increasingly received the title and the privileges of the old *equites*, achieving final recognition in the law of Roscius (q.v. 2) Otho in 67. (In modern works it is they who are customarily designated as *equites*.) The ineffectiveness of the censorship after Sulla (with the sole exception of 70 B.C.) made membership of the *centuriae* difficult to control, and the *equus publicus* disappears from record. These new *equites*, like the post-Sullan Senate, were a disparate class, vastly increased by the enfranchisement of Italy: round a Roman aristocratic core were grouped leading

men from colonies and *municipia*—akin in background—and *publicani* and *negotiatores* (chiefly financiers), many of similar background, but some self-made men. A landed interest (and, of course, free birth) was essential to all of them for social recognition (cf. Cic. *Off.* i. 151). Senators and *equites*, in the late Republic, thus formed a plutocracy sharing both landed and business interests, in a continuous range of proportions.

In social standing, *equites* were almost equal to senators, freely intermarrying even with patrician nobles and gaining entry to the Senate (though not the consulate—see NOBILITAS) if they wanted it (see Cic. *Sest.* 97). But as a class they preferred the pursuit of money and pleasure to political responsibility, and they thus formed the non-political section of the upper class rather than (as in the Empire) an intermediate class. Their history is an important part of that of the late Republic, particularly in view of their control of the *quaestiones* (q.v.) during most of that time. Various *Populares* (first perhaps C. Gracchus) tried to mould them into a political force opposed to the Senate and the *nobilitas*; but their social and economic interests, especially after the enfranchisement of Italy, were basically too similar to permit this. Sulla (q.v. 1), after decimating them in the proscriptions, followed the example of Drusus (q.v. 2) and deprived them of leadership by abducting the most prominent survivors to the Senate, and of power by taking the courts from them. But strengthened by the influx of Italians and by increasing financial power, wooed by Pompey, and largely restored to the courts by the law of L. Cotta (q.v. 3), they rose to unprecedented influence in the 60s, when Cicero and the Senate—aware of the basic community of interests of the two classes—tried to unite them behind the *Principes* in a *concordia ordinum*. Yet, though often united on a single issue (e.g. against threats to financial stability by demagogues or threats to freedom of profiteering by statesmen), sometimes even for a lengthy period, they were too disparate in composition and too non-political to form a stable grouping. Preventing necessary reform (especially in the provinces), they remained a disruptive and irresponsible element with no programme or allegiance, until the Civil War substituted military for economic power. Caesar deprived them of the Asian tithe, but opened a new avenue for them by making prominent *equites* his political and financial agents (see BALBUS 2, OPPIDUS 2). The support of these men, as well as the precedent, proved important to Augustus.

Pliny, *HN* 33. 8-36. A. Alföldi, *Der frühöm. Reiteradel u. seine Ehrenabzeichen* (1952: on this, see A. Momigliano, *JRS* 1966, 16 ff.). H. Hill, *The Roman Middle Class in the Rep. Period* (1952: reviewed by M. Gelzer, *Gnomon* 1953, 319 ff. = *Kl. Schr.* 1 (1962), 222 ff.); M. I. Henderson, *JRS* 1963, 61 ff.; P. A. Brunt, *Second Intern. Conference of Economic History*, 1962 (1965), 117 ff.; C. Nicolet, *L'Ordre equestre à l'époque républicaine*, i (1966). E. B.

2. With the establishment of the Empire the *equester ordo* ceased to be a political force, though, especially under Augustus, individual *equites* played an important unofficial part as advisers of the emperor, and the holders of the major equestrian posts had a steadily increasing importance in the administration of the Empire. The *equites*, in the wider sense (see below) provided the holders both of military prefectures and tribunates and of a wide range of posts in the imperial civil administration (see PROCURATOR), as it developed from its slight beginnings under Augustus.

Augustus, in accordance with his policy of reviving traditional rituals, restored the long-disused *transvectio* of 15 July, while allowing men handicapped by age or ill health to parade on foot, and those over 35 to have the choice of retaining or giving up the (notional) *equus publicus*; the occasion was also combined with a *recognitio* by Augustus of the physical and moral fitness of the *equites*

(Suet. *Div. Aug.* 38-9). Those who took part in this ceremony (more than 5,000 on occasion under Augustus, Dion. Hal. *Ant. Rom.* 6. 13) formed the *turmae equitum Romanorum*, headed by *severi equitum Romanorum*, usually young men of senatorial birth (who before holding the quaestorship were technically *equites*) and, when such existed, by scions of the imperial house with the title *Principes iuventutis* (q.v.). These *equites* formed a distinct corporation which might dedicate statues or play a role in the funeral of an Emperor. They were called *equites equo publico*; the *equus publicus* was granted, and could be removed, at the pleasure of the Emperor. It seems that Emperors also granted the title of *equus equo publico* to some persons, like a boy who died at the age of 9 (*ILS* 1316) or the Spartan C. Julius Spartiatius (*AE* 1927, 2) who almost certainly did not attend the parade in Rome.

Augustus also established four *decuriae* of *iudices* or *selecti* (each of 1,000, but comprising 3,000 men in all, since the fourth was made up of members of the other three) who were of equestrian rank, but, according to Pliny, *HN* 33. 30-3, were not as such called *equites* until A.D. 23. In the *Tabula Hebana* (q.v.) of A.D. 19, however, and presumably in the *Lex Valeria Cornelia* of A.D. 5 which it cites, they are called *equites omnium decuriarum quae iudicior(um) publicor(um) causa constitutae sunt*. The panels were filled by the Emperor—a duty Tiberius neglected while on Capri (Suet. *Tib.* 41)—who also dismissed *iudices* for misconduct (Suet. *Dom.* 83). In theory (Pliny, *HN* 33. 30) no one could be admitted to the *decuriae* who was not of citizen birth. But Livia browbeat Tiberius into appointing a new citizen (Suet. *Tib.* 51) and Claudius found that *peregrini* from some Alpine tribes had actually served on the *decuriae* (*ILS* 206). Owing to the pressure for places—since after a regulation of A.D. 23 membership seems to have conferred the gold ring and the right to sit in the 14 rows—Gaius added a fifth *decuria*. Inscriptions from Italy and the provinces in the first three centuries attest men chosen for the *decuriae* by the Emperor (a minority being also *equo publico*); the appointment was perhaps sometimes a sinecure.

These two groups were small sub-classes within the much wider class of Roman citizens of the requisite census of 400,000 sesterces (Pliny, *HN* 33. 32) and of, normally, free birth. Thus, Strabo records that recent censuses had disclosed 500 men of equestrian census at both Gades and Patavium (Strabo 169; 213) and Josephus mentions *equites* of Jewish origin in Judaea in A.D. 66. Pliny the Younger gave money to his friend Romatius Firmus, a *decurio* (q.v.) of Comum *ad implendus equestres facultates* (*Ep.* 1. 19). The census and free birth seem to have been sufficient conditions for a man to be called *equus Romanus*; but an authorization by the Emperor may have been required. Emperors could certainly remove a man's equestrian rank, or award it to persons not formally qualified, such as centurions or *liberti*. *Primipili* (q.v.) when promoted to military prefectures or tribunes thereby gained equestrian rank.

The possession of equestrian rank in this wider sense (which unlike senatorial status passed only *de facto*, not formally, from father to son) spread widely through the provinces, following the extension of the citizenship—from the very beginning of the Empire in Narbonensis and Baetica, and in the first century and after in Africa and the Greek East; the Danubian provinces, Germany, Gaul, and Britain were little represented, or not at all. It was the landed *bourgeoisie* of the municipalities and Greek cities among whom equestrian rank spread; they were thus qualified to take up equestrian military or civilian posts, but were not obliged to do so, and many remained content with local or provincial offices—which are frequently attested also for those who take up posts in the

Roman service. Prominent provincial families, in which a member has equestrian rank in one generation, often acquire senatorial status in the next generation (e.g. *IGRom.* iv. 910). Similarly, from the Flavian period on, it became increasingly common for equestrian office-holders to be adlected into the Senate by the Emperor.

From the latter part of the second century equestrian officials in the imperial service began to acquire regular appellations of rank—*vir eminentissimus* for the Praetorian Prefects, *vir perfectissimus* for the other Prefects and higher procurators, *vir egregius* for the rest. In the later third century, with a substantial replacement of senatorial governors by *equites*, and then more markedly with the reforms of Diocletian (q.v.), the higher military posts, and almost all administrative posts, passed into the hands of *equites*. During the first half of the fourth century repeated attempts, evidently not entirely successful, were made to confine equestrian rank to office-holders, and exclude *curiales* (q.v.). In the same period the equestrian title *perfectissimus* (*egregius* disappears in the reign of Constantine) was steadily extended to officials of minor rank, eventually being awarded in three grades. By the end of the century this process had been overtaken by a similar diffusion of senatorial honours among officials, and at this point the *equester ordo* ceases to be a recognizable element in the Roman State.

See bibliography above and A. Stein, *Der römische Ritterstand* (1927); H. Petersen, *JRS* 1955, 47 ff.; Jones, *Later Rom. Emp.* 525 ff.; R. Duncan-Jones, 'Equestrian Rank in the Cities of the African Provinces', *PBSR* 1967, 147 ff. F. G. B. M.

EQUITES SINGULARES IMPERATORIS, probably created by the Flavians, were a mounted bodyguard of the Emperor. Chiefly Germans and Pannonians, they numbered at first 500 and later 1,000. Their relationship to the Praetorian guard was similar to that of the *auxilia* to the legions. They had their own camp near the Lateran under the command of two Praetorian tribunes.

ERANOS. In Homer and later authors this word meant a meal to which each partner contributed his share; but from the fifth century B.C. it was mostly a loan, free of interest, given to an individual by a number of friends. Creditors could form a club under an *ἀρχέφανος*, *ἐπ' ἀρχῆς*, or *προστάρης ἐράνων*, who paid out the loan and received it in repayment. Each partner's claim was transferable, and repayment of sums greater than the original loan could be agreed upon, so that an *eranos* could be profitable business. Papyri from Alexandria suggest that this type of loan was often used by Hellenistic Jews to evade the biblical prohibition of interest.

M. I. Finley, *Studies in Land and Credit in Ancient Athens* (1951), index; E. Leidei, *Der Handel von Alexandria* (1933), 82 ff. 185f.; E. Ziebarth, *PW*, s.v.; Seeraub und Seehandel im alten Griechenland (1929), 58; Kl. Pauly, s.v. F. M. II.

ERASISTRATUS of Ceos, physician, lived in Alexandria together with and after Herophilus (first half of the 3rd c. B.C.). His school still flourished in Galen's time; his books were read as late as the fourth century A.D. A scholar and philosopher rather than a practitioner, Erasistratus became more and more interested in scientific research, which included even quantitative experiment; working incessantly, he tried to complete his knowledge and did not shrink from admitting earlier mistakes. On the basis of the Democritean atomism and in connexion with Straton's system he apparently developed original ideas (e.g. that of a discontinuous vacuum); although relying on mechanistic principles of explanation, such as the *horror vacui*, he also believed that nature does nothing in vain. His anatomical studies led to the clear distinction of sensory and motor nerves; in post-mortem

dissections he recognized the changes of the body due to disease; he was interested in comparative anatomy. In physiology he studied the growth of the body and the process of digestion; he theorized on the flow of the blood through the veins and that of the pneuma through the arteries. All diseases he explained by one cause, viz. plethora, repletion of the body through undigested nutrition; yet he did not neglect the local differences of illness nor the constitution of the patient. In therapy he emphasized the dietetic method and violently opposed phlebotomy and purgation.

TRANSLATION AND COMMENTARY. J. F. Dolson, *Proc. Royal Society of Med.*, Section Hist. of Med. (1927), indispensable translation and interpretation of more important fragments.

MODERN LITERATURE. Survey, M. Wellmann, *Pfl.* vi. 333. Quantitative experiment, H. Diels, *Sitz. Berl.* 1803, 101 ff. W. Jaeger, *Hermes* 101, 1, 58 ff., Charles Singer, *Enc. Brit.* 4, s.v. 'Medicine, History of'. On Erasistratus' theory of the heart and the veins see I. M. Lomax, 'Erasistratus, the Erasistrateans and Aristotle', *Bulletin of the History of Medicine* 1964, 395 ff. His research into the nervous system is discussed in its historical context by F. Solmsen, *MH* 1961, 188 ff.

ERATOSTHENES of Cyrene (c. 275–194 B.C.), pupil of Callimachus and Lysanias, after spending several years at Athens, where he came under the influence of Arcesilaus and Ariston, accepted the invitation of Ptolemy 'Euergetes to become royal tutor and to succeed Apollonius Rhodius as head of the Alexandrian Library. The most versatile scholar of his time, he was the first to call himself φιλόλογος. By the Alexandrian specialists he was styled βῆτα (which probably means, not 'second rate' but 'next after the best' specialist in each subject), and περὶ αὐθλοῦ, 'all-rounder', his best work being in geography.

WORKS (known in fragments only). 1. Literary criticism. His most important work in this field was the treatise *On Ancient Comedy*, in at least twelve books; this dealt with literary, lexical, historical, and antiquarian matters, and problems of the authorship and production of plays. His *Καταστερημαί* treated the constellations and their mythology; the extant work of this name is probably not genuine. 2. Chronology. *Χρονογραφία* represented the first scientific attempt to fix the dates of political and literary history. He also compiled a list of Olympian victors. 3. Mathematics, astronomy, geography. Besides investigating arithmetical and geometrical problems (cf. his 'sieve' method of finding prime numbers), he dealt in *Platonism* with mathematical definitions and with the principles of music, and he wrote geometrical works *On Means and Duplication of the Cube*. In his *On the Measurement of the Earth* (probably part of the *Geographica*—see below) he treated mathematical geography, in which he was a pioneer, calculating with a high degree of accuracy the circumference of the earth and, with much less accuracy, the magnitude and distance of the sun and moon. He was the first systematic geographer, and his *Geographica* (*Γεωγραφικά*, three books), in which he sketched the history of the subject and dealt with physical, mathematical, and ethnographical geography, is often mentioned, sometimes disapprovingly, by later geographers, e.g. Strabo. But Archimedes had evidently regarded him as an equal. 4. Philosophy. His essays had perhaps a mainly ethical interest. He wrote also a history of philosophy. 5. Poetry. His short epic *Hermes* described the birth of the god, his youthful exploits, and his ascent to the planets. The short epic *Anterimys* or *Hesiod* dealt with the death of Hesiod and the punishment of his murderers. [Longinus] (*Subl.* 33. 5) praises the elegy *Erigone*, which told the myth of Erigonos and his daughter.

ERECHTHEUM, the third outstanding building on the Athenian Acropolis, begun in 421 B.C. and finished, after a lapse, in 407 B.C.; built of Pentelic marble, with friezes of black Eleusis stone to take applied white marble relief sculpture. Exact details of its construction are known from a contemporary inscription. It is tempting to accept W. Dörpfeld's restoration of the original design as a long rectangular building with projecting porches placed centrally on the sides, but there is no certain evidence of this. The main structure is divided into four compartments: the largest (east cella) has a prostyle-hexastyle Ionic portico; the west end is closed by a wall with engaged columns and corner piers. At this end is a unique and boldly projecting (though small) south feature—the 'porch of the maidens', with draped female figures (caryatids) serving as supports—and, nearly opposite on the north side, a still more boldly projecting porch with Ionic columns (partly reassembled in early twentieth century) standing on a lower level and having the tallest Order of the whole composition. The Erechtheum is remarkable no less for the elegance and elaboration of its decorative detail than for the complexity of its plan.

The temple replaced to some extent the large sixth-century temple of Athena whose foundations can be seen between it and the Parthenon, and both were on the site of the presumed Mycenaean palace. We know from Pausanias (1. 26. 5–27. 3) that the Erechtheum housed a number of ancient cults (this may partly account for its complicated form) and many sacred spots and objects—the venerable image of Athena Polias, a golden lamp made by Callimachus (see CALLIMACHUS 2), a salt well and the mark of Poseidon's trident, an altar of Poseidon and Erechtheus (q.v.), and altars of Butes and Hephaestus. Near the west end of the building were shrines of Cecrops and Pandrosos, and the original sacred olive of Athena.

ERECHTHEUS (*Ἐρεχθεύς*), a fabulous king of Athens, often confused with Erichthonius (see ATHENA) and perhaps identical with him originally. Like him, Erechtheus was son of Earth and reared by Athena, *Iliad* 2. 547 ff., where his worship is mentioned (for which see Farnell, *Hero-Cults*, 11; *Cults* i. 393; iv. 47–52). Cf. *Od.* 7. 80 f., from a comparison of which with the other Homeric passage it would seem that Athena and Erechtheus were honoured together in a predecessor of the historical Erechtheum (the old royal palace?). The chief legend of Erechtheus concerns his daughters, of whom there were three (Eur. fr. 357 Nauck; *Ion* 10 adds a fourth, Creusa q.v. 1). They included Chthonia (Erechtheus' children vary greatly from one account to another, for obvious genealogical reasons); when Eumolpus (q.v.) the Thracian, son of Poseidon and Chione, invaded Attica, Erechtheus inquired of Delphi how he might

win the victory. He was told that he should do so if he sacrificed one of his daughters. Chthonia, therefore, was sacrificed by consent of her mother Praxithea, probably by her own also, the story forming the plot of Euripides' *Erechtheus*, known by its frequent citations in later authors (to those quoted in Nauck, 464 ff. add Hyginus, *Fab.* 46 and 238. 2, and Rose ad locc.). The other daughters killed themselves; Erechtheus' own fate is variously told.

H. R. J.

ERETRIA, a city of Euboea (q.v.). It joined its neighbour Chalcis (q.v.) in trade in Syria, and colonizing in Italy, Sicily, and the North Aegean. In the late eighth century they fought over the Lelantine plain. Aristagoras of Miletus sought its aid for the Ionic revolt against Persia and in the avenging expedition sent by Darius the city was besieged and burnt. About 445 B.C. Athens planted a colony, but in 411 Eretria revolted with the rest of Euboea. A member of the second Athenian League (378-377), it again revolted (349), and subsequently was the victim of Athenian and Macedonian intrigues. In the second Macedonian war Quinctus Flaminius sacked the city, which after the Roman victory was nominally free. Eretria took little part in the struggle of the Greek leagues against Rome, and in the time of Augustus still ranked as the second city of Euboea. Its walls, temple of Apollo, theatre, and some public buildings have been excavated.

IG xii (q.), 11 ff.; *Arch. Δελτ.* 1961/2, 144 ff. for buildings.

W. A. L.

ERETRIA, SCHOOL OF, founded by Menedemus (q.v.) as a continuation of the school of Elis, is mentioned by Diog. Laert. 1. 17-19; 2. 105; 126; Strabo 9. 393; Cic. *Acad.* 2. 129. Menedemus had a large following, but only one follower, Ctesibius, is known by name. The last trace of the school is in the title of a work of the Stoic Sphaerus against it.

W. D. R.

ERGITIUM, mentioned by the Ravenna Cosmography and the Peutinger Table, was a town in the northern Apulian plain between Teanum Apulum (q.v.) and Sipontum. Its site has now been identified at Il Casone, 4 miles south-east of San Severo. The Roman settlement possessed a centuriation system based on 16-actus squares in the area to the north.

G. D. B. J.

ERICHTHONIUS, an Attic hero, usually son of Hephaestus; for the circumstances of his birth, see ATHENA. But Apollodorus (3. 187) says 'some' name Atthis daughter of Cranaus as his mother. Being born, he was taken care of by Athena, who put him into a chest and gave him into the charge of the daughters, or a daughter, of Cecrops (q.v.); Eur. *Ion* 21 ff.; 270 ff., and later authors, as Apollod. *ibid.* 189; Hyg. *Fab.* 166. 4-5; all agree that they opened the chest, which Athena had forbidden them to do, and then out of fright (because the child had wholly or partly serpent form or had a serpent with him) or driven mad by the anger of the goddess, leapt off the Acropolis and so were killed. Or the serpent killed them (Apollod. *ibid.*). This scene is not very common in art, but the birth is a fairly popular subject, see Furtwängler-Reichhold, *Gr. Vasenmalerei* iii. 95 and plate 137. Erichthonius became king of Athens, fostered the cult of Athena (Apollod. *ibid.*), received from Athena two drops of the blood of the Gorgon (q.v.), of which one poisoned and the other healed (Eur. *Ion* 999 ff.), and was the inventor or introducer of sundry things, as chariot-driving ([Eratosth.] *Catast.* 13; Hyg. *Poet. Astr.* 2. 13; hence he is sometimes identified with the constellation Auriga), silver (Hyg. *Fab.* 274. 4). He is often confused with Erechtheus (q.v.).

H. J. R.

ERIDANUS (*Ἠριδανός*), mythical river, having Electrides (Amber-) Islands at its mouth. Named by Hesiod (*Theog.* 338) as a real river, the Eridanus was placed first in unknown northernmost Europe, or in western Europe, flowing into the Northern Ocean. Herodotus (3. 115) and Strabo (5. 215) doubted its existence. Aeschylus called it 'Spanish', meaning the Rhône (see Pliny, *HN* 37. 32).

Greek authors from the time of Pherecydes agreed to identify the Eridanus with the Po, and Roman writers followed suit (since there are no islands at the mouth of the Po, some authors sought these in the east Adriatic). The description of the Eridanus as an amber-river may embody the memory of an early amber-route from Jutland up the Elbe and Rhine (Rhenus) and down the Rhône (Rhodanus) or across the Alps to north Italy (see AMBER).

E. H. W.

ERIGONE (*Ἠριγόνη*), in mythology, (1) daughter of Icarus (q.v.), loved by Dionysus, who approached her disguised as a grape-cluster (Ov. *Met.* 6. 125). When she found her father's body she hanged herself, and the Athenian virgins began to do the same till her ghost was appeased by the αἰώπα and other honours (Hyginus, *Fab.* 130 and *Poet. Astr.* 2. 4; cf. Rose, *Greek Myth.*). (2) Daughter of Aegisthus (q.v.) by Clytaemnestra (q.v.). She was rescued by Artemis from Orestes (q.v.), who had killed her brother Aletes and wanted to kill her, and made a priestess in Attica (Hyg. *Fab.* 122. 3). According, however, to Cinaethon ap. Paus. 2. 18. 6, Orestes had by her an illegitimate son Penthilus.

F. Solmsen, *TAPA* 1947, 242 ff.

H. J. R.

ERINNA, poetess, of the Dorian island of Tēlos (*Suda*, s.v. *Ἠριννα*), who probably lived at the end of the fourth century B.C., not, as the *Suda* says, in the time of Sappho, since her art shows affinities to that of Theocritus, and Asclepiades seems to have edited her work (*Anth. Pal.* 7. 11). Writing in local Doric with a few Aeolisms, she was famous for her *Distaff* (*Ἠλεκάρη*), a poem in 300 hexameters in memory of her friend Baucis. Remains of this on a papyrus have recently been added to the few lines known from quotations, and show that in it Erinna described experiences of girlhood shared with Baucis and lamented her death. The title may refer to the time of spinsterhood which it describes. She herself died at the age of nineteen (*Anth. Pal.* 7. 11. 2). There also survive three epigrams, one dedicatory (*Anth. Pal.* 6. 352) and two inscriptions for Baucis' tomb (*Anth. Pal.* 7. 710 and 712). A line from what seems to have been a Propempticon (fr. 2) is of doubtful authenticity (Ath. 283 d).

TEXT. Diehl, *Anth. Lyr. Græc.* i. 4, 207-13; P. Maas, *Hermes* 1934, 206 ff.

CRITICISM. C. M. Bowra, in *Greek Poetry and Life* (1936), 325 ff. C. M. B.

ERINYES, spirits of punishment, avenging wrongs done to kindred, especially murder within the family or clan (cf. ORESTES, ALCMAEON 1), but also lesser offences (see *Il.* 9. 454, 571; 15. 204), even against those who are no kin but have a claim on our pity (beggars, *Od.* 17. 475, though there it is rather hoped than stated that there are such avengers for them if wronged). They once stop a violation of the course of nature (*Il.* 19. 418), where they silence the horse Xanthus, given human utterance temporarily by Hera (407). Hence the dictum of Heraclitus (fr. 29 Bywater — 94 Diels-Kranz), that if the sun left his course the Erinyes would find him. But these passages go much beyond popular ideas, more in keeping with which are their associations with oaths (*Il.* 19. 259; Hesiod, *Op.* 803-4).

This early connexion of the Erinyes with offences other than manslaying makes against Rohde's theory (*Psyche* i. 270), accepted also by Nilsson (*GGR* i². 100 ff.), that originally an Erinyes is the ghost of the person slain, though this will fit the other facts (close connexion with blood guilt, greater importance of the Erinyes of an elder brother or a parent, doubtful potency of those of a beggar; see the Homeric passages above) very well. It is on the whole more reasonable to suppose that they were from the first curses, actual or conditional, personalized, as Farnell argues (*Cults* v. 438-9), since a curse (cf. *CURSES*) is not a mere form of words but the stirring up of mysterious powers which work automatically when once set going. They are early associated with Earth (Hesiod, *Theog.* 185; cf. *Il.* 19. 259), which helps to explain Demeter Erinyes (cf. *DEMETER*), an earth-goddess, as repository of powers of vengeance. As they regularly work by disturbing the mind (*Od.* 15. 233-4), it is understandable that very similar deities are called *Maniāi* (Paus. 8. 34. 1). Being of the earth, they are often confused with kindlier powers who send fertility, Eumenides, *Σεμαί*, etc.; their cult under their own name is extremely rare (see Farnell, *ibid.* 437 ff.). It is possible that the name Erinyes occurs on a tablet from Cnossos.

E. Wüst, *PW* Suppl. viii.

II. J. R.

ERIPHUS, Middle Comedy poet, as the two mythological titles, *Αἰόλος* and *Μελίβροια*, suggest.

FCG iii. 556 ff.; *CAF* ii. 428 ff.

ERIS, personification of strife (discord, rivalry, competition; there are two kinds, one bad and one good, the latter being emulation between fellow workers, Hesiod, *Op.* 11 ff.). Generally, however, she is definitely Strife. Thus she accompanies Ares in Homeric battle-scenes, as *Il.* 4. 440-1, where she is his sister and companion; *Theog.* 225 ff., she is daughter of Night and mother of Battles, Slaughters, Disputes, Lawlessness, etc.

She emerges into fuller mythical personality in the *Cypria*. Zeus, having decided on the Trojan War, to relieve Earth of the burden of so many human beings (fr. 1 Allen), lets Eris be present at the marriage of Pelcus and Thetis (qq.v.). There she stirs up a quarrel between the goddesses as to which is the most beautiful, this leading to the Judgement of Paris (see *PARIS*) and so to the war. But the details are uncertain; we have no written pre-Alexandrian authority for the 'apple of Discord'. In Hyginus, *Fab.* 92. 1, from a Greek source perhaps about contemporary with the Emperor Claudius (see Rose, *Hygini Fabulae*, p. viii), Eris (Discordia) comes to the door, throws in an apple, and says the most beautiful may pick it up; other authorities (listed by v. Sybel in Roscher's *Lex.* i. 1338. 50 ff.) make her inscribe the apple 'for the fairest'. This is obvious *Märchen* (see *FOLK-TALES*), but when it was added to this myth is unknown.

H. J. R.

ERŌS, god of love in Greek mythology. Eros personified does not occur in Homer, but the Homeric passages in which the word *eros* is used give a clear idea of the original significance. It is the violent physical desire that drives Paris to Helen, Zeus to Hera, and shakes the limbs of the suitors of Penelope (*Il.* 3. 442; 14. 294; *Od.* 18. 112). A more refined conception of this Eros who affects mind and body appears in the lyric poets of the seventh and sixth centuries B.C. Because his power brings peril he is pictured as cunning, unmanageable, cruel (Alcman 36 Diehl; Ibycus 6 Diehl; Sappho 137 Diehl; Theog. 1231); in Anacreon and in vase-paintings he smites the loverstruck one with an axe or a whip (*Delton* 1927-8, 106). He comes suddenly like a wind

and shakes his victims (Sappho, Ibycus); Furtwängler recognized a pictorial equivalent of this image in the Eros who carries off a girl on vases and gems. Eros is playful, but he plays with frenzies and confusion. On the other hand, he symbolizes all attractions which provoke love. He is young and beautiful, he walks over flowers, and the roses are 'a plant of Eros' of which he makes his crown (*Anacreontea* 53. 42). He is sweet and warms the heart (Alcman 101 Diehl). Sappho sums up his essence, calling him 'bitter-sweet'.

Already Hesiod connects Eros with Aphrodite (q.v. § 3 and see *Theog.* 201), but many authorities hold this connexion not to be original. With Himeros and Pothos he is a constant companion of Aphrodite, although he can appear with any god, whenever a love story is involved, e.g. as ἀμφιθαλής at the marriage of Zeus and Hera (A. D. Nock, *CR* 1924, 152).

Hesiod seems to have transformed the Homeric conception of Eros. Although he describes Eros in terms almost identical with Homer as the god who 'loosens the limbs and damages the mind', he also makes him together with Earth and Tartarus the oldest of gods, all-powerful over gods and men. Building on this idea of Eros as a cosmic principle Parmenides found a place for Eros (Diels, *Vorsokr.* i. 243, fr. 13), perhaps as the power which leads contrasts together? This philosophic conception contributed to the Euripidean picture of omnipotent Eros (Ath. 13. 561), took abstruse mythological shape in Orphic cosmogonies (Ar. *Av.* 693), and formed the background for the famous Platonic discussions of Eros in *Symposium* and *Phaedrus*. (J. Stannard, *Phronesis* 1959, 120.)

Hellenistic poets continue the more playful conception of Anacreon and sing the tricks which Eros plays on mortals, the tribulations of those who try to resist him, and the punishments which he receives for his misdeeds. His bow and arrows, first mentioned by Euripides (*IA* 548 f.), play a great part in these accounts. He becomes a humanized genre figure in Rococo style. Frequently a plurality of Erotes is introduced (Ath. 13. 562; *Anacreontea*; *Anth. Pal.*; Ap. Rh. 3. 114). The usage originated because the Greeks drew no sharp distinction between love passion and the god who symbolized it; both could multiply. For the relation of Eros to Psyche see *PSYCHE*. Eros had some old cults and enjoyed much individual worship. He was always the god of love directed towards male as well as female beauty. Hence his images in the gymnasium, his cult by the Sacred Band in Thebes (Ath. 13. 561; 602), and the altar in Athens erected by the lover of Hippias (Ath. 13. 602 d). As a god of fertility Eros is celebrated in the very old cult in Thespieae, and in the joint cult with Aphrodite on the north slope of the Athenian Acropolis. In Thespieae Eros was represented by an aniconic image; in Athens phallic symbols have been found in the sanctuary. In both cults festivals were celebrated; that in Thespieae was called Erotidia. The festival in Athens was celebrated in the spring month of Munichion (O. Broneer, *Hesp.* 1932, 31; 1935, 125). In Philadelphia the worshippers called themselves Erotes after the god. In Athens a procession of Erotes is represented on a relief performing the functions of worshippers. Another cult centre was Parion in Mysia.

In art Eros grows young. He begins as a fairly grown-up boy in the archaic period, is a young boy in classical art, and becomes a playful putto in the Hellenistic age.

Cook, *Zeus* ii. 2, 1039; C. T. Seltman, *BSA* 1923-4, 87; P. Friedländer, *Studii e testi* (1939), 53; W. Strobel, *Eros* (1952); H. Gollub, *Die Metamorphosen des Eros* (1958); H. Chalk, *JHS* 1960, 32; K. Schauenberg, *Antike und Abendland* 1961, 77.

G. M. A. H.; J. R. T. P.

EROTIAN, grammarian and doctor of the Neronian age, compiled an extant glossary to Hippocrates.

ERUCIUS (1) of Cyzicus (fl. c. 40 B.C.), a Greek with a Roman name, is the author of fourteen epigrams in the Greek Anthology. One touching poem about a Greek woman captured by Romans (*Anth. Pal.* 7. 368) may refer to his mother; another (7. 377) expresses bitter hatred for Parthenius (q.v.); a third (6. 96) cites or coincides with a line of Virgil (*Ecl.* 7. 4).

Cichorius, *Röm. Stud.* viii 3.

G. H.

ERUCIUS (2) **CLARUS**, **SEXTIUS**, a friend of the Younger Pliny whose recommendation (*Ep.* 2. 9) gained him the lower senatorial magistracies c. A.D. 97-101. After successful service in the Parthian War and the capture of Seleucia (116) he became suffect consul in 117. After the disgrace of his uncle C. Septicius Clarus, praetorian prefect, in 122, he held no further office until under Pius he became Praefectus Urbi and consul II in 146 when he died. He had literary tastes (*Aul. Gell. N.A.* 7. 6. 12; 13. 18. 12).

H. H. S.

ERYSICHTHON, in mythology, son of Triopas, of Dotion in Thessaly. Wanting timber, he was so misguided as to start cutting down a sacred grove of Demeter, though warned not to do so by the goddess herself in human form. He was thereupon plagued with insatiable hunger, to satisfy which he ruined himself and all his household. Thus far Callimachus (*Cer.* 23 fl.); the tale can be traced back no earlier than Hellanicus (Crusius in Roscher's *Lex.* i. 1373. 56). Lycophron (1303, where see schol.; cf. *Ov. Met.* 8. 847 ff.) says he had a daughter Mestra, granted by her lover Poseidon power to change shape. She was sold in various beast-forms, escaped and came back to be resold, and he lived on the proceeds.

Zachrinski, *Philol.* 1801, 138 ff. = *Hesione* u. 1 ff.; K. J. McKay, *Erysichthon: a Callimachean comedy* (Leiden, 1962).

H. J. R.

ERYTHEIA, 'the red, or blushing, one', i.e. sunset-coloured. Name of (1) one of the Hesperides (q.v.; Apollod. 2. 114); (2) the daughter of Geryon, and also his island (Steph. Byz., s.v.; Paus. 10. 17. 5).

ERYTHRAE (*Ἐρυθραί*), one of the twelve cities of the Ionian League, on the coast opposite the island of Chios. Founded according to tradition by a party from Crete, and later by Ionians under Cnopus son of Codrus, the city was prosperous from the start, but has little individual history. Falling in turn, with the rest of Ionia, under the Lydians and then under the Persians, Erythrae was later a member of the Delian League; her assessment of seven talents is among the highest in Ionia. In the fourth century the city had some dealings with Mausolus, satrap of Caria, but their nature is not known. Pliny observes that the river Aelon at Erythrae had the curious property of causing hair to grow on the body. For the legend of the blind fisherman and the statue of Heracles see Pausanias. 7. 5. 5-8. The ancient name has changed, through the forms *Ritri* and *Litri*, to the present *İdir*; the ruins are not abundant, but the city-wall, over two miles long, is well preserved in part, and the theatre has recently been excavated.

G. E. Dean, *Aegean Turkey* (1966), 153-9.

G. E. B.

ERYX, an Elymian settlement and a mountain (*Monte San Giuliano*: 751 m. above sea-level) above Drepana in west Sicily. An attempt by Dorieus (q.v.) to establish a settlement in the neighbourhood failed. Dependent on Segesta in the fifth century B.C., Eryx was occupied later by the Carthaginians, though temporarily seized by Pyrrhus (278 or 277). Phoenician masons' marks are found on the walls, and Punic legends appear on the

coinage from the fourth century. The Elymian settlement, perhaps on a lower height than the famous temple of Astarte-Aphrodite-Venus (where is the modern town of S. Giuliano), was evacuated in 259 during the First Punic War, and the inhabitants were transferred to Drepana. L. Junius seized both heights and established a fort on the lower slopes to isolate Drepana (249). Hamilcar Barca captured the old town, but not the temple and lower fort (244), thus he failed to relieve Drepana, although maintaining his position until 241. The temple underlies a medieval castle: see *Not. Scav.* 1934, 264 ff.; *JHS* 1936, 218 ff.

H. H. S.

ESQUILINE. The name, in the form **Esquilinae* (from *ex-colo*, cf. *inquinus*), denoted the eastern plateau formed in Rome by *montes Oppius* and *Cispinus*, the *regio Esquilina* being the second of the republican Four Regions (Varro, *Ling.* 5. 49-50). In the Iron Age and much later it was used as a cemetery (von Duhn, *Italische Gräberkunde* (1924), i. 468), ultimately for paupers (*Hor. Sat.* 1. 8. 8-13). It was included by Nero's Golden House and Trajan's *Thermae*. Under Augustus the name was applied to Regio V, outside the republican Wall, containing various gardens and the Sessorium, an imperial residence. The Arch of Gallienus (*CIL* vi. 1106) recalls the *porta Esquilina* of the republican Wall.

I. A. R.

ETEOCLES, (1) an ancient king of Orchomenus, founder of the local cult of the Charites (Paus. 9. 34. 9 ff.). (2) In mythology, the elder son of Oedipus (q.v.). After the blinding and retirement of their father, he and his brother Polynices twice insulted him, once by setting before him certain vessels which had belonged to Laus and once by giving him a portion of meat less honourable than a king should have (Cyclic *Thebas*, frs. 2 and 3, Allen). He therefore cursed them (for conjectural details, see Rose, *Handbook of Greek Myth.*, index), and the curse was fulfilled thus. He and Polynices agreed to reign in alternate years, Eteocles taking the first year. Polynices left Thebes and married Argia (see ADRASTUS). At the end of the year Eteocles would not give up his throne; Polynices returned with the Seven, and the two brothers met and killed each other. See references in Rose, loc. cit.

H. J. R.

ETEOCLUS, son of Iphis, a somewhat obscure Argive hero. At a fairly early stage of the tradition he seems to have replaced Parthenopaeus (q.v.) as one of the Seven against Thebes, cf. ADRASTUS (see Paus. 10. 10. 3). Then Aeschylus (*Sept.* 458) or his authority included both him and Parthenopaeus, apparently so as to be able to leave Adrastus out of the actual assault; hence later writers (as Soph. *OC* 1316 and Eur. *Supp.* 872) use the same list.

See Wilamowitz-Moellendorf, *Aeschylus Interpretationen* (1914) 100.

H. J. R.

ETHIOPIA, the land of the Ethiopians or 'Burnt-Faced Men', was a name usually applied by the Greeks to any region in the far south (but north of the Equator). Under the influence perhaps of Homer (*Od.* 1. 22, etc.), who distinguished between Western and Eastern Ethiopians, Aeschylus (*Supp.* 284-6) made the Ethiopians extend to India, and Herodotus (esp. 3. 17-23; 7. 69-70) distinguished between the woolly-haired Ethiopians (negroes) and the straight-haired ones (primitive Indians). The tendency to confuse Ethiopians with Indians continued throughout ancient times (e.g. in Aesch. *Supp.* 284 ff.). But from Herodotus onward Ethiopia designated especially the lands south of Egypt—Nubia, Sennaar,

Kordofan, and north Abyssinia. This country was visited since 665 B.C. by the Greeks, some of whom penetrated in the wake of Cambyes as far as Korosko, and various Ethiopian peoples became known in Greece by their tribal names. Under the Ptolemies the African coast was explored by sea as far as Somaliland and Cape Guardafui; the Blue and the White Nile and the Atbara were clearly distinguished (see NILE); and the Ethiopian city of Meroe (q.v.) received a veneer of Hellenic culture (Diod. 3. 38 ff.; Strabo 16. 773-4; 785-7). An Ethiopian raid into Egypt (25 B.C.) was repelled by the Romans, who established a frontier area from Assuan and Maharrakah. In the first century A.D. a powerful Ethiopian State arose in Abyssinia (see AXUMIS).

ETRUSCAN LANGUAGE. Etruscan is commonly believed to be an insoluble mystery. The ancients themselves considered that it did not resemble any other known language (Dion. Hal. 1. 30. 2). However, some texts which present an unquestionable affinity with it have been found in Lemnos. It is now sometimes admitted that it did not belong to the Indo-European group of languages, but was a remnant of the prehistoric Mediterranean linguistic substratum, which was broken up and transmuted under the pressure of protracted Indo-European infiltrations, and emerged only where this pressure had been less successful.

We possess some 10,000 inscriptions dating from the seventh century to the time of Augustus. They mostly consist of epitaphs, which generally are comparatively late (third to first centuries B.C.), very short, and stereotyped in phraseology. A few are outstanding for their length, their subject, and sometimes their early date: the liturgical text written on the wrappings of an Egyptian mummy now in Zagreb (1,190 words, second-first century); the tile from Capua (300 words, fifth-fourth century), dealing with funeral ceremonies; the *Cippus Perusinus* (130 words), a legal document, concerning a point of burial rights; the *elogium* on the sarcophagus of a magistrate of Tarquini, relating his career (59 words); a lead plate from Magliano, with names of deities and funeral offerings (70 words). To these and some others must be added now the two inscriptions on sheets of gold leaf (16 and 9 lines), which were excavated in 1964 in Pyrgi (q.v.), the harbour of Caere (*Cerveteri*), together with a Punic inscription on a similar gold sheet and apparently of similar content (11 lines); this find raised great hopes that a bilingual group had been discovered, but the study of these fascinating texts is only at its beginning.

In order to interpret Etruscan inscriptions, three different methods have been used. For many years, Etruscologists presupposed that Etruscan was akin to other better-known languages, and therefore fancied that they could interpret it as connected with e.g., Greek, Latin, Finnish, or Albanian. This etymological method has proved a complete failure, though it can explain a few words, which the Etruscans had borrowed from their neighbours or from commercial contacts. It is generally agreed now that we must rely upon the internal evidence of the records themselves, and nearly all we know of Etruscan comes from the patient effort of linguists who have scrutinized those words and constructions which recur in various contexts. However, this empirical method has recently been supported by a third: since Etruscan civilization itself developed as a part of a common Italic culture, an Etruscan ritual inscription from Cortona may not be altogether dissimilar from, for instance, the Umbrian ritual inscription of Iguvium (q.v.); parallel formulas may have expressed, among con-

porary priesthoods, a certain uniformity of prayer and approach. This comparative method, which naturally has to be carefully checked, has opened new perspectives, especially in the general survey of the inscription of Zagreb.

The Etruscan alphabet is known to us under two aspects: first, theoretical model alphabets of 26 letters inscribed on ivory tablets, terracotta vases, etc., which were perhaps introduced in Etruria by Phoenician merchants; secondly, the alphabets actually used in surviving inscriptions; the archaic ones (seventh-sixth centuries) have 23 letters, the later (fourth-first centuries) 20 letters as the theoretical alphabet contained characters which were not needed by Etruscan phonetics. The Etruscan alphabet in turn provided, with some modifications, the Latin, Oscan, Umbrian, and Venetic alphabets.

In the majority of the oldest inscriptions, words are separated by dots. However, around the middle of the fifth century, and within certain limited districts (south Etruria and Campania), a syllabic punctuation appears. This system, which propagated itself in Venetic and recurs in Lemnian, has been interpreted as an obscure inheritance of earlier contacts with the Aegean world.

Besides proper names, there are about 150 root-words the meaning of which is approximately established. Some were preserved by Greek and Latin authors, like *ais*, plur. *aisar*, 'god'. The funerary inscriptions have provided us with a fair knowledge of the vocabulary of relationship: *clan*, plur. *clenar*, 'son'; *sey*, 'daughter', etc. The verb *lupu* means 'to die'; the nouns *aril*, 'year', and *tir*, 'moon' and 'month'. From the number of the years that the dead had lived we can infer the value of the numerals, while the first six are also found written on dice. There is now an almost general agreement as to their order, *θu*, *zal*, *ci*, *sa*, *max*, *huθ*. Tens were formed by adding *-alx*: thus *ci* (3), *cealx* (30). Names of magistrates have also been identified, e.g. *zilab* = *praetor*; *purθne* (Greek *πρύτανης*?).

The adaptation of Greek mythological names found on mirrors, and the simpler constructions of the funerary inscriptions have laid the basis of our knowledge of Etruscan phonetics, morphology, and syntax. They seem to be dominated by a great variety of rules and anomalous possibilities. The genitive is generally marked, for masculine nouns, by *-s*, for feminine, by *-(a)l*; but masculine nouns ending in a dental or sibilant consonant take the *-(a)l* termination (*arnθ*, *arnθal*), and feminine nouns ending in *-l*, *-a*, *-ua*, *-u* take the *-s* (*ramθa*, *ramθas*). For some nouns a complete paradigm can be drawn: nom. *meθlum* ('nation'); gen. *meθlum-e-s*; loc. *meθlum-tiθ*; dat. *meθlum-e-ri*. A peculiarity of Etruscan morphology is a tendency to the superimposition of suffixes, without changing the meaning: *laris-al-is-la* = *larisal*, 'of Laris'. For verbs also, the value of different endings has become clearer: the stems are often used as imperatives (*tur*, 'to give' and 'give'); the 3rd sing. perfect ends in *-ce* (*turce*, *turuce*, 'he gave'). There are a great number of particles and pronouns (*-c* and *(u)m* = Lat. *que*; *nac*, 'so').

The general impression is that of a language which has never been systematically fixed. Although considerable progress has been achieved in recent years, the insufficiency of our present state of knowledge is illustrated by the difficulty of achieving an accurate translation of the Pyrgi inscriptions, despite the help of a Punic bilingual.

The majority of Etruscan inscriptions have been published in *Corpus Inscriptionum Etruscarum*, which is still in progress: 1 (1893-1902): Fiesole, Volterra, Siena, Arezzo, Cortona, Chiusi, Perugia; II. 1 (1907): Orvieto, Volturni; II. 2 (1923): Populonia, Vetulonia, Vulci; II. 3 (1936): Tarquinia; III. 1 (1912): Faliscan Territory; Suppl. 1 (1911): the inscription of Zagreb. *Testimonia Linguae Etruscae* (1968) by M. Pallottino is a useful collection of 900 inscriptions, with a complete reference system and excellent indexes. New discoveries are published yearly in *Studi Etruschi*. ETRUSCANS (Tyrsenoi, Tyrrheni), the earliest historical occupants of the territories between the Tiber and the Arno (approximately the modern Tuscany) and Rome's principal early rivals for the hegemony of central Italy. They formed a loose confederation of politically independent cities with a common religious centre at Volsinii, and at the height of their power (c. 500 B.C.) they controlled an empire extending from the Po to central Campania; but though a vigorous and cultured people, they lacked the political cohesion of the Romans, by whom they were one by one finally conquered and absorbed.

The oldest Etruscan cities (Caere, Populonia, Rusellae, Tarquinii, Veii, Vetulonia, Volaterrae, Vulci, qq.v.) lay on or within easy reach of the coast, whence Etruscan rule spread inland towards Umbria and the middle Tiber valley (Arretium, Clusium, Cortona, Perugia, qq.v.) and, shortly before 500 B.C., northwards across the Apennines. At its fullest extent northern Etruria was coterminous with the Umbrians and Picens (qq.v.), with the Ligurians, with the Veneti of Ateste (q.v.), and the Golaseccan Iron Age peoples of the southern Alps (see COMUM). In this direction Etruscan power was broken in the late fifth century by the invading Celts (q.v.). The corresponding southward expansion, complete by the mid sixth century (Etruscan Capua was founded c. 600 B.C.), was short-lived. The expulsion of the Tarquins from Rome was followed by the campaign in which Aristodemus (q.v. 2) drove the Etruscans from Campania, and in 474 B.C. Etruscan naval expansion, which at one time achieved control of Corsica, was conclusively checked in a battle off Cumae by the Campanian Greeks and Hieron of Syracuse. During the fifth century the Samnites swept the Etruscans out of Campania; Veii was destroyed in 396 B.C., and by the end of the third century the whole of Etruria was in Roman hands.

Already by the time of Varro and of the Emperor Claudius the Etruscans were a matter for antiquarian speculation, and the broad lines of the modern dispute as to their origins had taken shape. Herodotus (1. 94) believed them to be immigrants from Lydia, whereas Dionysius of Halicarnassus (1. 30), writing under Augustus, maintained they were indigenous. In the past the evidence of Herodotus has been generally accepted, but recently the growing body of archaeological information, with its clear indications of a continuity of native development and absence of identifiably Asiatic features, has led a number of scholars to follow Dionysius in regarding them as indigenous. The discussion turns on three aspects of the subject—the language of the Etruscans, their culture, and their political identity. The conclusions, though related, are not necessarily the same in each case.

The Etruscan language (q.v.) is not a member of the Indo-European or any other identifiable group of languages, and it is still quite uncertain whether it was an autochthonous local survival or an exotic intruder from abroad, or again, if it was an intruder, by whom it was introduced. The evidence of archaeology is more explicit. It is firmly established that the material culture of the historical Etruscans was rooted in, and derived without

any sharp break from, that of the Early Iron Age Villanovan (q.v.) inhabitants of Etruria. Although there were a great many derivative elements, at first from the eastern Mediterranean and later from Greece, there is nothing that could not have been due to purely commercial contacts. Much has sometimes been made of the shift in burial practice from cremation (the Villanovan rite) to inhumation; but it is now evident that this took place within the framework of a single developing culture and does not necessarily imply the arrival of fresh peoples. In its most characteristic material aspects the Etruscan civilization unquestionably took shape on Italian soil.

On the other hand, Etruscan religion and astrology include many elements that seem to derive from the ancient east (see RELIGION, ETRUSCAN); and the rich princely tombs that contain many of the finest oriental or orientalizing pieces (e.g. the Regolini Galassi tomb at Caere, the Barberini and Bernadini tombs at Praeneste) appear with a suddenness suggestive of a new historical situation. These and other similar phenomena have been taken by many to indicate the arrival of a small, alien aristocracy, analogous to the Normans in south Italy or the Turks in Anatolia, whose talents lay in the fields of warfare and political organization rather than of material culture and who have consequently left little direct mark on the archaeological record.

What is beyond question is that, whether the Tyrsenoi were in origin such a conquering minority, or whether they merely represent the sum of the Early Iron Age peoples of Etruria, they had by the end of the seventh century become a single people with a single common language and a single broadly uniform culture, that of the historical Etruscans. Pending the systematic excavation of one of the Etruscan cities, our knowledge of their civilization comes largely from the grave goods and the carved or painted decoration of its cemeteries. Etruscan metalwork was outstanding. Their jewellery displays an extraordinary technical virtuosity and their bronzework, especially their furniture and fine household goods, was widely exported both within the Mediterranean (cf. *Ath.* 1. 28; 15. 700) and to Celtic Europe, major centres of production being Vulci, Capua, and the cities of eastern Tuscany. Surviving masterpieces include the Chimaera of Arezzo and the Capitoline Wolf. Although sculpture in stone was practised wherever local materials were favourable, as in the bas-reliefs of Chiusi and the alabasters of Volaterrae, the principal sculptural medium was painted terracotta, which was widely used for decorating the timber superstructures of temples and even on occasion for life-sized figured groups. The workshops of Falerii, Caere, and Veii in particular were active over large areas of southern Etruria and Latium, including Rome. The magnificent series of tomb-paintings at Tarquinii (also at Chiusi, Orvieto, and Vulci) affords a vivid glimpse of Etruscan life and aspirations: scenes of banqueting, music and dancing, hunting, racing and wrestling, side by side with the grim figures of the underworld in a striking contrast of gaiety and fatalism. In every medium the techniques and much of the vocabulary were borrowed initially (from Greece and from the Orient), but, despite continuous contact with and influence from the Greeks in south Italy, the development is individual and unmistakably Etruscan.

Most of the obscurities of Etruscan history derive from the fact that it reaches us through an alien and largely hostile tradition, recorded when Etruria was already a spent force. Etruria was in fact the civilized power with which Rome was in closest contact during the earliest, formative stages of her own development. Religion, civil institutions, warfare, architecture, art, and engineering, these are some only of the fields in which Rome's debt to Etruria was deep and lasting.

ETYMOLOGICA (Greek). The earliest etymological studies are known only from (usually nameless) reproduction in the philosophers. The first-known title is the *Περὶ ἐτυμολογίας* of Heraclides Ponticus, now lost, as also the *Ἐτυμολογικά* of Chrysippus. Under Atticist influence etymology flourished among the later Alexandrians and under the early Empire, e.g. in the lexica of Erenaeus, Demetrius Ixion, and Caecilius of Calacte. These works were absorbed by Dionysius, Vestinus, Phrynichus, and others of the second century A.D. From them, and from later redactions and conflation, e.g. by Orus, Orion, and Helladius, the Byzantine *Etymologica* are mainly derived. See **ETYMOLOGICUM MAGNUM**.

R. Reitzenstein, *Geschichte d. gr. Etymologica* (1897). P. B. R. F.

ETYMOLOGICUM MAGNUM, an extant lexicon of uncertain date, but used by Eustathius, who became Archbishop of Thessalonica in A.D. 1175, and based mainly on the E. Gudianum (of c. A.D. 1100) and the E. Magnum Genuinum (late 9th c., as yet unpublished), the E. Gud. itself being a conflation of the E.M.G. and the E. Parvum, both of which were completed under the direction of Photius.

E. Magnum: T. Gaisford (1841), R. Reitzenstein, *Gesch. d. griech. Etymologica* (1897), 212 ff. P. B. R. F.

ETYMOLOGY (in Greek and Roman times). Men have always seemed prone to toy with derivations and to see lessons in mere words. Thus in *Od.* 19. 562-7 the gates of *ivory* and *horn* by their very names—in Greek—proclaim the *frustration* and *fulfilment*, respectively, of the dreams that pass through them. Proper names have always been especial objects of such interest. L. Lersch (*Sprachphilosophie d. Alten* (1838-41), 3. 3 ff.) quotes some seventy examples—a selection only—mainly from Homer, Hesiod, Pindar, and Tragedy. Thus Aias is related by Sophocles to αἰδῶν, by Pindar to αἰετός; Laupides connects Zethus with ζήτω. Such play upon personal names continues up to the present day in Greek, and was much practised in late antiquity. (See **ALLEGORY**, GREEK.)

2. Unfortunately, Greek etymology did not remain the sport of amateurs, but was involved in sophistic and philosophical speculations on the origin of everything, including, inevitably, language. Was 'horse', or, it might be, some other—perhaps unrevealed—name, as much a natural property of the animal as its shape and constitution, or was a name only an artificial label by convention attached to this or that? Many of the Greek thinkers adopted the former view, with its consequences. Cratylus, pupil of Heraclitus, said that knowledge of Nature's names was required for real speech; without that utterance was mere noise. Indeed, in his old age, despairing of ascertaining Nature's names, he gave up utterance and used only gestures. Such a theory is paralleled in primitive (and later) practices, when, for example, healing virtues in things are deduced from their names, and the prescription swallowed with as much faith as the medicine: cf. F. S. McCartney, *AJPhil.* 1927, 326; E. R. Iluc, *Travels in Tartary* (1850), i. 75.

3. If, then, words are not mere tokens of sensation and belief, to trace them to their ultimate origins would elucidate not the history of human opinion but Nature's

own ἔτυμος λόγος. From this theory, constantly active though repeatedly challenged, arose a systematic practice of etymology, not only among its adherents. Early examples, with parodies of his own, figure largely in Plato's *Cratylus*, sometimes hitting the truth, if only by accident. Aristotle, who rejected the theory, has derivations: δίκαιον, δικαστής, from δίχα (*lith. Nic.* 1132^a11), μακάριον from χαίρω (*ibid.* 1152^b7), σωφροσύνη (after Pl. *Cra.* 411 c) from σφῆν τὴν φρόνησιν, and (cf. Athenaeus 40 b) μεθύειν from drinking μετὰ τὸ θέειν.

4. The Stoics, accepting the naturalistic theory, sought to relate the apparent chaos of current language to the rule of law hypothetically pervading Nature's works, by four principles stated in the Augustinian *Principia Dialecticae*. Nature forms words (i) κατὰ μίμνησιν, by imitating things, e.g. *stridor*, *clangor*, or their impressions on the senses, as *crux* and *voluptas* are, respectively, unpleasant and pleasant in name (sound) as in fact; (ii) καθ' ὁμοιότητα, e.g. *crura*, which are 'longitudine atque duritia inter membra cetera ligno crucis similiora'; (iii) not from the thing but from something associated with it in one of various relations, viz. (a) *per efficientiam*, as 'foedus a foeditate porci'; (b) *per effecta*, as 'puteus quod eius effectum potatō est'; (c) *per id quod continetur*, as *urbs* from *orbis*; (d) *per id quod continet*, as *horreum* from *hordeum*; (e) by metonymy, as *mucro* for *gladius*; (iv) κατ' ἀντίφρασιν, as 'lucus, quod minime luceat', 'bellum, quod res bella non sit'. The operation of natural law was obscured, so they said, by human irregularity, ἀνωμαλία (see **CRATES** (3) OF MALLOS).

5. The Atticist movement (see **GLOSSA**, **GREEK**) furnished a new impulse for etymologists, and a new aim, viz. to test the admissibility of a word to 'correct use' by relating it to its στοιχείων, which in the derivative had probably suffered loss, accretion, metathesis, crasis, or other mutation. In this connexion a terminology for many such πάθη was evolved; cf. Pseudo-Trypho, *Περὶ παθῶν*. Atticism regarded not the usage of good writers but what was right for them to use (see Phrynichus; *contra*, Sext. Emp. *Math.* 1. 98). Etymology appears with analogy as a touchstone of diction in the Atticist Eirenaeus (early 2nd c. A.D.), and remained one of the criteria of fully developed purism, Greek and Latin. 'Latinitas est incorrupte loquendi observatio secundum Romanam linguam; constat autem, ut adserit Varro, his quattuor: natura (meaning *etymologia*), analogia, consuetudine, auctoritate' (Dion. 430). This new etymology appears in Philoxenus (1st c. B.C.), one of Varro's main sources, and is fully developed in Seleucus (under Tiberius), whose results resemble those of the *Cratylus*, from which he borrows.

6. At Rome (as elsewhere) aetiological etymologies were early popular: 'nomina haec numinum in indigamentis inveniuntur, i.e. in libris pontificalibus, qui et nomina deorum et rationes nominum continent' (Serv. on Verg. *G.* 1. 21). There are also examples in the early poets. Under Greek influences the etymological fashion took firm hold of Latin literature and scholarship, with like results as in Greek: Paullus, s.v. 'miles': 'militem Aelius (i.e. Stilo) a mollitia κατ' ἀντίφρασιν dictum putat: sic ludum ["school"] dicimus, in quo minime luditur' (cf. Quin. *Inst.* 1. 6); cf. Diom. and § 4, *supra*. The taste for etymology grew in late antiquity. Martianus Capella (c. A.D. 420) and Isidore of Seville (c. A.D. 570-636) are among its most enthusiastic practitioners.

7. It would be idle to analyse minutely a practice, popular and highly esteemed, often surprisingly correct and even acute (cf. Pl. *Cra.* 405 c-d), which constantly produced such results as, ἔσπερος, ἀπὸ τοῦ ἔσω περὶ πάντα τὰ ζῷα, and, γραμματική, διὰ τὸ τίκειν καὶ καθαίρειν τὰ γράμματα, and, ἔντερον, παρὰ τὸ ἐντὸς πέειν: so we are told that the (Greek) vowels number seven because there

are seven planets. Neither Greeks nor Romans, early or late, came within reach of a scientific, historical method in etymology. Their rules are but statements of their arbitrary practices, with a multiplication of terminology that did nothing for the advancement of knowledge.

Woldt, *De analogia disciplinae apud grammaticos Latinos* (1911), II Steinthal, *Gesch. d. Sprachwissenschaft bei den Griechen u. Römern* (1891) i. 331 ff. See also under GRAMMAR, GLOSSA (GREEK).

P. B. R. F.

EUANGELUS appears to be a New Comedy poet. One fragment (10 trochaic tetrameters) is preserved of *Ἀνακαλυπτομένη*—a master discusses with a cook the preparations for a wedding-banquet.

FCG iv. 572; CAF iii. 376.

EUANTHIUS (4th c. A.D.), author of a commentary on Terence. The only parts remaining are certain sections of the treatise *De comedia* which is now prefixed to the commentary of Aelius Donatus (q.v.).

Cf. Schanz-Hosius, § 836. i.

EUBOEA, also called Long Island (*Mukris*), since it stretched from the Gulf of Pagasae to Andros. It shared the culture of the Cyclades in the Bronze Age. The chief cities in antiquity were Chalcis and Eretria (qq.v.). Other cities were Histiaea, Geracestus, and Carystus, famous for its marble. In the eighth century Chalcis and Eretria were powerful mercantile cities, who led the islanders to found a trading post at Al Mina (q.v.) in Syria by about 800. They established colonies on the north-west shores of the Aegean and in Italy and Sicily and fought over the Lelantine plain, which lay between them, in the eighth century. Eretrian control of some of the Cyclades passed to Athens, who later compelled Chalcis to cede part of the plain (506). In 490 the Persian general Datis attacked Euboea and captured Eretria and Carystus. Euboean contingents fought the Persians at Salamis and Plataea. Owing to Boeotian intrigues, the whole island revolted from Athens in 446, but it was reconquered by Pericles, who planted cleruchies in it. The cities remained tributary allies of the first Athenian League but revolted in the Peloponnesian War (411). They were enrolled in the second Athenian League (378–377) and incorporated in a Euboean Confederacy (341). After much turmoil, while the Thebans and Philip II of Macedon intrigued against Athens, the whole island came under the control of the Macedonian monarchy, by whose fortunes it was affected for the rest of the third century. In 196 Flamininus, the liberator of Greece, revived the Euboean Confederacy. Euboea was temporarily occupied by Antiochus of Syria (192–191); for aid given to the Achaean Confederacy against Rome the federation was dissolved (146). The island was attached to the province of Macedonia, and fell into decay in the Roman imperial period.

EUBULEUS (*Εὐβουλεύς*), properly a euphemistic title of Hades, 'the good counsellor' (schol. Nic. *Alex.* i and elsewhere); one of a group of Orphic chthonian deities (Kern, *Orph. frag.* 32 c–e). He is humanized into a swineherd (fr. 51), son of Dysaules and brother of Triptolemus, who gave Demeter news of the rape of Persephone; or his swine were swallowed up with Persephone, which is why swine are thrown into chasms at the Thesmophoria (fr. 50).

Nilsson, *GGR* i². 463.

H. J. R.

EUBULIDES of Miletus, dialectician of the Megarian school, taught at Athens. He wrote a lampoon against Aristotle. He is said to have taught Demosthenes dialectic and rhetoric. He is best known for his eristic arguments, of which the most famous are the *ψευδόμενος* and the *σωπότης*; but some of those ascribed to him by Diogenes Laertius are of older date.

AS LOGICIAN W. and M. Kneale, *The Development of Logic* (1962), 113 ff.

W. D. R.

EUBULUS (1) (c. 405–c. 335 B.C.), probably the most important Athenian statesman of the period 355–342. In 355, after thirteen years' struggle to regain Amphipolis and the Chersonese and the brief but disastrous Social War, the imperialistic advocates of war were discredited and the State near bankruptcy. Rising under the aegis of Diophantus of Sphettus, Eubulus by means of his position as a Theoric Commissioner gradually assumed control of the whole of Athens' finances, and raised public and private prosperity to a level probably not attained since the fifth century. An extravagant version of the sort of methods he probably followed is to be found in Xenophon's *De Vectigalibus*, but the most important guarantee of economic recovery was a law which made it difficult for the assembly to draw on the routine revenues of the State for inessential military operations. Thus he was able to employ the annual surpluses on a programme of public works: the distribution of money to the people, *τὸ θεωρικόν*, probably instituted in this period, engaged only a small part of the moneys controlled by the Theoric Commission.

In the wider spheres of policy, to judge from the allusions of Demosthenes, he sought to concentrate Athens' military resources on the defence of the essential interests of Athens and of Greece, and to exclude Philip from Greek affairs by uniting the Greeks in a Common Peace, his chief associates being Midias, Aeschines, and Phocion. The expedition to Thermopylae in 352, the intervention in Euboea in 348, and the attempt to unite the Greeks against Philip in 347/6 (or 348/7) are the chief fruits of this policy. Like almost all Athenian statesmen, he felt himself forced to accept the peace negotiated in 346 by Philocrates and Demosthenes. After Philip used the peace to intervene in Phocis, Demosthenes determined to renew the war, but Eubulus and his supporters sought to maintain and extend the peace. By mid 344 the opposition of Demosthenes and Hegesippus was beginning to weaken Eubulus' influence; in 343 the parties were fairly evenly balanced; but in 342 Demosthenes and the war-party were in full control. No more is heard of Eubulus after Chaeonea, and he may, like Aeschines, have retired from active politics. By 330 he was dead.

See THEORICA. A. M. Andreades, *A History of Greek Public Finance* (1933), index; G. L. Cawkwell, *JHS* 1963, 471.; G. Glotz, *Histoire grecque* iii (1941), index, s.v. 'Eubule'.

G. L. C.

EUBULUS (2), Middle Comedy poet, with six Lenaeae victories (*IG* ii². 2325. 144: the victors' list puts him two places after Anaxandrides, two before Antiphanes (qq.v.)). He composed 104 plays (*Suda*). Some fifty-eight titles are extant, about half indicating mythological burlesque or parody of tragedy (note eleven titles identical with Euripides, a further eight with other tragedians), and parody of 'tragic' language is not uncommon in the fragments (direct parody of Euripides at frs. 26 [his sigmatism], 27, 67). Other notable titles: *Διονύσιος* (fr. 25: a character sketch of the tyrant), *Πορνοβοσκός*, *Σκυτεὺς*, *Σφίγγοκαρίων* (a cook or slave who posed Sphinx-like riddles—a selection in fr. 107), and several that have the name of courtesans: e.g. *Κλεψύδρα*.

There is some metrical variety in the fragments: lyrics in frs. 35, 104 (choric song of the *Στεφανοπώλιδες* of the title?), 112, 139; anapaests in frs. 63, 77, 138; dactylic hexameters (for oracles or riddles) in frs. 28, 107. Several interesting passages: fr. 12 (from the *Λυτιόπη*), in Boeotian dialect; fr. 90, Procris' hound in the lap of luxury; frs. 116-17, the bad women of myth outnumber the good.

FCG i. 355 ff., iii. 203 ff.; CAF ii. 164 ff.; Demiańczuk, *Suppl. Com.* 40 f. D Fedele, *Dioniso* 1947, 137 ff. W. G. A.

EUCLEIDES (1) of Megara (c. 450-380 B.C.), associate of Socrates and founder of the Megarian school. He was present at the death of Socrates and thereafter housed Plato and other members of the circle. Among his pupils were the logicians Eubulides and Stilpon (or Stilpon's teacher) (qq.v.). Cicero puts him in the tradition of Eleatic monism, and this may be connected with the report that he held the good to be one thing, having no opposite but named in many ways—e.g. as God, wisdom (*φρόνησις*), intelligence (*νοῦς*). His positive doctrines are otherwise unknown, but his practice of attacking the conclusion and not the premisses of an opponent's argument is attested and puts him in the 'eristic' tradition which dates from late in the fifth century, rather than in that of the Eleatics or (at his best) Socrates. Hence his leadership of a school of logicians whose contribution to philosophy was minimal but whose interest in logical paradoxes was taken over by the Stoic logicians.

Diog Laert ii 106-12.

G. E. L. O.

EUCLEIDES (2). Athenian archon in 403/2 B.C., which, being the year of the re-establishment of democracy, is very often quoted. From that time Athenian official inscriptions used the Ionian instead of the Attic alphabet, an important fact for epigraphic research though Ionian letters had sometimes been used before at Athens. E. V.

EUCLID (*Εὐκλείδης*), mathematician (fl. c. 300 B.C.), lived under Ptolemy I (306-283) and taught at Alexandria; his fame rests on his great textbook the *Elements*, *στοιχεῖα*, in thirteen books (Books 1-6 on plane geometry, 7-9 on the theory of numbers, 10 on irrationals, 11-13 on solid geometry). This work at once superseded those of earlier writers of *Elements* (Hippocrates of Chios, Leon, Eudoxus (q.v. 1), Theudius). Euclid made full use of his predecessors' work but added much of his own, while altering the whole arrangement. Most of the MSS. contain the recension by Theon of Alexandria, but the Vatican MS. 190 containing an earlier edition was discovered and edited by F. Peyrard (1814-18), and forms the basis of the authoritative text by J. L. Heiberg. Commentaries were written by Heron of Alexandria, Pappus, Simplicius. Fragments of these have come down to us, mostly through the Arabic (an-Nairizi); but most valuable of all is the extant commentary of Proclus on Book 1. The so-called 'Book 14' is by Hypsicles (q.v.): 'Book 15' is an inferior compilation by a pupil of Isidorus (7th c. A.D.).

Of other works by Euclid some belong to elementary geometry: (1) the extant *Data*; (2) the lost *Pseudaria*, *Fallacies* (see Proclus 70); (3) *On Divisions* (of figures), (*Περὶ διαμερέσεων*), extant only in Arabic translation; the proofs of all but four of the propositions are missing.

To higher geometry belong the following: (1) three books of *Porisms* (*Πορίσματα*), (2) *Surface-loci* (*Τόποι πρὸς ἐπιφανείᾳ*), (3) four books of *Conics* (*Κωνικά*). These works are lost, and all we know of them is contained in Pappus (7), on the 'Treasury of Analysis'. Other extant works are: the *Phaenomena*, an astronomical textbook containing 16 or 18 propositions in primitive spherical geometry, partly based on Autolycus' (q.v. 2) *On the Moving Sphere*; *Optics*; *Catoptrica* (not genuine in

its present form). Euclid wrote also on 'The Elements of Music': two works are attributed to him, the *Sectio canonis* (*Κατατομή κανόνος*) and an *Introduction to Harmony*, the former only containing excerpts from the original work, the latter being by Cleonides, a pupil of Aristoxenus. See also MATHEMATICS and MUSIC, § 4.

EDITIONS. *Euclidis Opera Omnia*, ed. J. L. Heiberg and H. Menge (with Lat. trans.), 8 vols. (Teubner, 1883-1916), contains *Elements* (with scholia) (i-v), *Data* (with Marinus' commentary) (vi), optical works (vii), *Phaenomena*, musical works and fragments (viii). A supplement by M. Curius (1899) contains Gerard of Cremona's Latin translation of an-Nairizi (Anaritius). The Arabic text of *On Divisions* was published with French translation by F. Woepcke, *Journal Asiatique* 1851, 233 ff. R. C. Archibald published an English translation from Woepcke's French, with additions, in *Euclid's Book on Division of Figures* (1915). al-Jajjaj's Arabic translation of the *Elements* was published from Codex Leidenensis 399. 1 as far as the beginning of bk. 7 by Besthorn, Heiberg, and others (Copenhagen, 1897-1934).

TRANSLATIONS. *Elements*, T. L. Heath, 3 vols. (1925², repr. New York 1956, with historical introduction and commentary). Iksa. vii ix (French). J. Itard, *Les Livres arithmétiques d'Euclide*, (1961, with commentary). *Data*, C. Thaez (Gierman, 1962). *Optics* and *Catoptrica*, ver Eecke (French, 1938).

COMMENT. Proclus, *Comm. on Elem.* I, ed. Friedlein (Teubner, 1873). French translation by ver Eecke (1948). German by M. Streck (1945). For history of text and editions of the *Elements* see Heiberg, *Litteraturgeschichtliche Studien über Euklid* (1882), and Heath's translation i, introduction. General: Heath, *Hist. of Greek Maths.* i. 354 ff. E. J. Dijksterhuis, *De Elementen van Euklides* (1929, 1931). *Optics*: A. Lejeune, *Euclide et Ptolémée* (1948). *Catoptrica*: Lejeune, *Recherches sur la Catoptrique grecque* (1954), 112 ff. Attempts to restore the *Porisms* were made by Simson, *Opera Quaedam Reliqua* (1776), 315 ff., and Charles, *Les trois livres des Porismes d'Euclide rétablis* (1860). For editions and discussions of various works on mechanics and statics in Arabic and Latin versions which are attributed to Euclid, and which derive in part from early Greek sources, see Moody and Clagett, *The Medieval Science of Weights* (U.S.A. 1952), and Clagett, *Science of Mechanics in the Middle Ages* (U.S.A. 1959). T. H., G. J. T.

EUDEMUS of Rhodes (second half of the 4th c. B.C.), pupil and friend of Aristotle. No account of his life survives, though Simplicius mentions a biography by a certain Damas (in Arist. *Phys.* 924. 13 Diels). He is said to have had a strong claim to succeed Aristotle as head of the Peripatos; but, in the event, Theophrastus was preferred over him. Later, he may have returned to Rhodes to set up his own school; but he remained faithful to the letter of Aristotle's teaching, and evidently continued in close contact with Theophrastus, who shared his conservative tendencies. A fragment of a letter survives, in which he consults him about the interpretation of a passage in Aristotle's *Physics* (Simpl. *Phys.* 923.11).

Eudemus compiled histories of arithmetic and geometry, astronomy, and theology. He also wrote on logic and rhetoric, and possibly on zoology. But we have detailed knowledge only of his work on physics, from which numerous passages are preserved by Simplicius. For the most part it represents a simple paraphrase of Aristotle's *Physics*, though there are occasional points of difference, where Eudemus attempts to reduce Aristotle's treatment to a more rigid scheme.

In the nineteenth century, Eudemus was held to be the author of the *Eudemian Ethics*, a work which is now generally regarded as an authentic part of the Aristotelian corpus.

F. Wehrli, *Eudemos von Rhodos* (1955); L. Spengel, *Eudemii Rhodii Perip. fragm.* (1866 and 1870, not sufficient); U. Schoeche, *Quaestiones Eudemicae* (1931, frs. of and comm. on the first book of the *Physics*). C. J. R.

EUDORUS (1), in mythology, a Myrmidon captain, son of Hermes and Polymele (*Il.* 16. 179 ff.).

EUDORUS (2) of Alexandria (fl. c. 25 B.C.), eclectic philosopher. Chief works (lost): *Διαιρέσις τοῦ κατὰ φιλόσοφον λόγου*; commentaries on *Timaeus*, *Categories*, *Metaphysics*, *Aratus' Phaenomena*; *Περὶ τοῦ Νείλου*. He is reckoned as a Platonist but owed much to Stoicism.

Dörrie, *Hermes* 1944, 25 ff.

EUDOXUS (1) of Cnidos (c. 390–c. 340 B.C.) was an outstanding mathematician and did work of importance in astronomy and geography; he was versatile in 'philosophy' in general. According to the not entirely trustworthy ancient biographical tradition (see especially Diog. Laert. 8. 86 ff.), he was a pupil of Archytas (q.v.) in geometry and of Philistion (q.v.) in medicine; he came to Athens to hear the Socratics when about 23, later spent some time in Egypt studying astronomy with the priests, then lectured in Cyzicus and the Propontis, visited the court of Mausolus, and finally returned to teach at Athens where he was acquainted with Plato; he drew up laws for Cnidos, and died aged 52.

In geometry he invented the general theory of proportion, applicable to incommensurable as well as commensurable magnitudes, found in Euclid Book 5 (scholion in Heiberg, *Euchidis Opera Omnia* v, 280). This greatly helped to assure the primacy of geometry in Greek mathematics (see MATHEMATICS). He also developed the method of approach to the limit (misnamed 'method of exhaustion' in modern works) which became the standard way of avoiding infinitesimals in mathematics. (see MATHEMATICS, § 3). He was thus able to prove that cone and pyramid are one-third of cylinder and prism respectively with the same base and height (Archimedes, *Method* pref.). Of his solution to the problem of doubling the cube nothing concrete is known.

In astronomy he was the first to construct a mathematical system to explain the apparent movement of the heavenly bodies: that of the 'homocentric spheres'. The report on this contained in Simplicius *Comm. on de Caelo* 492. 31 ff. (from which the title of the work is known to have been *Ἡπὶ ταχῶν*) reveals both the high level of mathematics and the low level of observational astronomy of the time: Eudoxus combined uniform motions of concentric spheres about different axes with great ingenuity to produce, e.g., a qualitatively correct representation of the retrogradations of some planets; but the incorporated observational data are both few and crude, and the discrepancies of the results with observable fact often gross (for later corrections see CALLIPPUS and ASTRONOMY). Its adoption in a modified form by Aristotle was responsible for its resurrection in later ages. More practical (and also very influential) was Eudoxus' description of the constellations, with calendaric notices of risings and settings, which appeared in two versions named *ἑορταστικόν* and *φαινόμενα*. The latter is the work of his about which we know most, as it was adapted by Aratus (q.v. 1) for his immensely popular poem of the same name, and the commentary of Hipparchus (q.v. 3) on both is extant (see Manitius' ed. (Leipzig, 1894) 376, for refs. to Eudoxus). Another calendaric work was the *ὀκταετηρίς* ('8-year Cycle'). The papyrus treatise named *Εὐδόξου τέχνη*, though composed much later, contains elementary calendaric and astronomical information probably taken mostly from Eudoxus.

The *γῆς περίοδος*, in several books, was a work of mathematical and descriptive geography.

EUDOXUS (2) of Rhodes (fl. 225–200 B.C.?), historian, perhaps identical with the author of *Ἡερίπλοοι* (*GGM* i. 565), which may have formed a part of Eudoxus' histories.

FGH ii. 79.

EUDOXUS (3) of Cyzicus (2nd c. B.C.), Greek navigator. After 146 B.C. he was sent by Ptolemy Euergetes II of Egypt with a stranded Indian guide to find the sea-route to India; sent again later, he was on his return blown some way down east Africa, consorted with natives, returned to Alexandria with some wreckage there said to be part of a ship of Gades (*Cádiz*), decided that Africa could be circumnavigated, and determined to go round it to India, avoiding Ptolemaic exactions. Having collected cargoes at various ports, he set out from Gades, with music-girls, doctors, and carpenters on board, but was driven aground south of Morocco. Returning, he saw perhaps Madeira, failed to persuade Bocchus of Morocco to help him, cut across land to the Mediterranean, and, with much greater equipment, sailed again down west Africa, and disappeared.

Strabo 2. 68–102. J. Thiel, *Eudoxus von Cyzicus* (1939, in Dutch), Cury-Warrington, *Explorers* 98 ff.; (Pelican) 123 ff.; J. Carcopino, *Le Maroc antique* (1943), 156. Thomson, *Hist. Anc. Geog.* 185; Hlyde, *Greek Mariners* 200 ff., 245 ff. E. H. W.

EUENUS of Paros (5th c. B.C.), poet and Sophist, of whom some twenty elegiac verses and two hexameters have come down. He gave metrical form to the rules of rhetoric and added to current terminology (*Pl. Phdr.* 267 a).

EUETES, said by the *Suda* to have been an Athenian writer of comedy contemporaneous with Epicharmus, but it is likely that the *Suda* is really referring to the similarly named tragedian of about that date.

EUGAMMON of Cyrene (6th c. B.C.), epic poet, author of the cyclic *Telegonia* (see EPIC CYCLE).

EGF 57–9.

EUGENIUS, FLAVUS, usurper A.D. 392–4 in the West. He taught rhetoric at Rome and was a friend of Symmachus who commended him to Arbogast, the Frankish *magister militum*, by whose influence he became *magister scripiti*. When Arbogast secured the death of Valentinian II (392) he proclaimed Eugenius as Augustus, but Eugenius failed to secure recognition from Theodosius or help from Ambrose. Nominally a Christian, he sympathized with the pagan revival and restored the altar of Victory in the Senate-house. In 394 Theodosius defeated him and Arbogast on the Frigidus and Eugenius was killed.

Coinage: Mattingly-Sydenham, *RIC* ix.

H. H. S.

EUGRAPHIUS (early 6th c. A.D.), author of a commentary on Terence (ed. P. Wessner in *Donati Commentum*, iii. 1). His interest is chiefly in the rhetorical qualities and characterization of the plays and often he does little more than paraphrase the text of Terence. He probably knew the commentary of Donatus on Terence and that of Servius on Virgil. The work is found in two versions, one of which contains interpolations.

Schanz-Hosius, § 1117.

J. F. M.

EUHEMERUS (*Εὐήμερος*), of Messene, while in the service of Cassander (q.v.) 311–298 B.C., wrote a novel of travel which was influential in the Hellenistic world. The substance of the novel is known from fragments and from

an epitome by Eusebius (q.v.). Euhemerus described an imaginary voyage to a group of islands in the uncharted waters of the Indian Ocean and the way of life on its chief island, Panchaea. The central monument of the island, a golden column on which the deeds of Uranus, Cronus, and Zeus were recorded, gave the novel its title *Ἱερὰ ἀναγπαφή*, 'Sacred Scripture'. From this moment Euhemerus learnt that Uranus, Cronus, and Zeus had been great kings in their day and that they were worshipped as gods by the grateful people. Earlier authors had written of imaginary utopias but the utopia of Euhemerus was particularly relevant to the position of those Hellenistic rulers who claimed to serve their subjects and on that account to receive worship for their services. The novel could be interpreted according to taste as supporting the traditional belief of Greek epic and lyric poetry which drew no clear line between gods and great men; as advancing a justification for contemporary ruler-cults; or as a work of rationalizing atheism. At the same time Euhemerus was influenced by the beliefs of the wider world which had been opened up by the conquests of Alexander the Great, and his novel reflected the awareness of new ideas in an exciting situation.

The theory of god and man which was advanced by Euhemerus seems to have made little impression on the Greeks, but Diodorus (q.v. 3) Siculus, apparently taking the romance for fact, embodied it in his sixth book, which survives in fragments. In Latin it had more success after the publication of the *Euhemerus* of Ennius (q.v.), and euhemerizing accounts of such mythological figures as Faunus exist. The Christian writers, especially Lactantius, liked to use it as evidence of the real nature of the Greek gods. Euhemerus' name survives in the modern term 'euhemeristic', applied to mythological interpretation which supposes certain gods (e.g. Asclepius) to be originally heroes.

Fragments: edited by G. Némethy (1889), G. Vallauri (1956) and Jacoby, *FGH* 61; see also J. Vahlen, *Ennianae poes. reliquiae* (1903), cxxv f., 223 f. Studies: R. von Pöhlmann, *Gesch. der sozialen Frage* (1925), 293 ff.; P. van Gils, *Quaestiones Euhemericae* (Thesis, Kraków: Heerlen 1902); Nilsson, *GGR* i 272; H. F. van der Meer, *E. of Messene* (Diss., Amsterdam 1948); H. Dorrie, *Abh. Akad. Gott.* 1964, 218 f. H. J. R.

EUMELUS (fl. c. 730 B.C.), Corinthian poet, of the Bacchiad family (see CORINTH). The works ascribed to him are as follows (only fragments survive; all except the first were epics):

1. A *Prosodion* written for the Messenians (see LYRIC POETRY, GREEK, § 2).
2. *Corinthiaca*: a history of the Corinthian kingship from Helios at least as far as Glaucus. A prose version was known to Aristobulus (q.v. 2) and Pausanias.
3. *Bovvovía*. Subject uncertain.
4. *Europia*. Apparently various legends connected with Thebes.
5. The *Titanomachia* (see EPIC CYCLE) was ascribed to Eumelus or to Arctinus.
6. The *Nostoi* (see EPIC CYCLE) seems to be ascribed to Eumelus in schol. Pind. *Ol.* 13. 31.

The authenticity and antiquity of these works has been questioned, but can be defended for the *Prosodion* and *Corinthiaca*.

EGF 185 ff.; FGH iii B 378 ff. with comm. 297 ff.; É. Will, *Korinthiaka* (1955), 124 ff.; C. M. Bowra, *CQ* 1963, 145 ff. M. I. W.

EUMENES (1) I of Pergamum (d. 241 B.C.), the son of Eumenes the brother of Philaetærus (q.v. 2), succeeded Philaetærus as ruler (never king) of Pergamum in 263, when he threw off Seleucid suzerainty with Egyptian assistance. After defeating Antiochus I near Sardes (262), he greatly extended his frontiers, and though he probably lost most of his gains to Antiochus II (c. 258), he maintained his independence till his death. He regu-

larly bought immunity from the plundering bands of the Galatians.

Hansen, *Attalids* 22 ff.; and see under PERGAMUM.

G. T. G.

EUMENES (2) II (d. 160 or 159 B.C.) was the eldest son of Attalus I of Pergamum, whom he succeeded (197). He continued Attalus' policy of co-operation with Rome, and was perhaps mainly responsible for embroiling Rome with Antiochus (196-192), as Attalus had done with Philip V. In the war against Antiochus Eumenes assisted Rome with his fleet, and later stood a short siege in Pergamum; at Magnesia (189) he commanded the right wing with distinction. The peace of Apamea (188) gave him the Thracian Chersonese and most of Seleucid Asia Minor; and he secured these gains by cultivating the goodwill of Rome, which was further shown by the Senate's intervention in his favour, so as to end his wars with Bithynia (186-183) and (though ineffectively) Pontus (183-179). He was naturally the champion of the *status quo* in the East, and hence unpopular with all dissatisfied parties. The 'Third Macedonian War' (171-168), long regarded as 'inevitable', was hastened by his visit to Rome to accuse Perseus (172). Rome's failure to win the war quickly is said to have induced him to negotiate secretly with Perseus; but he cannot have seriously considered reversing a successful policy of thirty years. Nevertheless, he certainly forfeited the Senate's confidence, though it was only transferred to his brother Attalus.

Eumenes was a worthy successor to Attalus I, and carried his policy to its logical conclusion, greatly to the advantage of Pergamum (taking the short view). His ability is unquestioned, and the unfavourable tradition is due partly to this very success, which made him many enemies. His best memorial was perhaps the city of Pergamum itself, which he adorned with a splendid sequence of buildings.

Hansen, *Attalids*, esp. ch. 4.

G. T. G.

EUMENES (3) of Cardia (c. 362-316 B.C.), secretary to Philip of Macedon and to Alexander. He became (330?) principal secretary (*ἀρχυραρχαεύς*), and kept the Royal Journal (see EPHEMERIDES). Some military experience, too, came his way, and on Alexander's death he was immediately appointed satrap of the hitherto unconquered Cappadocia. It was in the wars of the 'Successors' (see DIADOCHI) that he proved himself a born general. He remained steadfastly loyal to the legitimate heirs and to the idea of a united Empire, and co-operated with the regents against the separatist generals. Driven from Asia Minor by Antigonus, he escaped to the Eastern satrapies, where he organized a fresh 'loyalist' front. After the indecisive battle of Paracene (317), Eumenes' fate was decided at Gabiene by the desertion of his picked Macedonian corps. He was executed by vote of the Macedonians of both armies. He was the Themistocles of the period, an able Greek among able Macedonians, their equal in warcraft, their superior in diplomacy, which included skilful management of his Macedonian colleagues by tact, and of his Macedonian soldiers with the aid of an Alexander-cult instituted by him.

Diodorus, bk. 18 *passim*; Plutarch, *Eumenes* Berve, *Alexander*, ch. no. 317; A. Vezin, *Eumenes von Kardja* (1907). G. T. G.

EUMENIUS, born at Autun c. A.D. 264, of Greek origin, a teacher of rhetoric, became Constantius' *magister memoriae* (q.v.) and was subsequently appointed by him to the headship of the school at Autun, a less exalted but more lucrative post. Soon afterwards (298) he delivered a public oration, in which he propounded reasons for rebuilding the war-damaged school, promised to donate his salary to the project, solicited court approval, and lavished

much praise on the emperors. This speech is above the general level of the *Panegyrici* (some unplausibly identified with Eumenius). See PANEGYRIC, LATIN.

É. Galletier, *Panig. Lat.* 1 (1949), 103 ff.; W. S. Maginness, *Greece and Rome* 1952, 97 ff. A. H.-W.

EUMOLPUS, mythical ancestor of the Eleusinian clan of the Eumolpidae, as his son Ceryx was of the *Κήρυκες*. He appears first in the Homeric Hymn to Demeter (184 and 475) as one of the rulers of Eleusis instructed by the goddess in the Mysteries. According to Apollod. 3. 201 ff. he was son of Poseidon and Chione daughter of Boreas (q.v.). To conceal her shame, she threw him into the sea; Poseidon saved him, brought him to Ethiopia, and entrusted him to his daughter Benthescyme. When adult, he married Benthescyme's daughter, but also tried to rape her other daughter, for which he was banished. During his exile he visited Eleusis, where he founded the Mysteries (Lucian, *Demon.* 34), or at least became somehow connected with them (Plut. *De exil.* 607 b). Finally, he succeeded Tegyrus, a Thracian king, but was sent for again by the Eleusinians to help them against Erechtheus (q.v.), in which campaign he was killed. An alternative genealogy, which can be traced back to the late fifth century B.C., made him the son of Musaeus (q.v. 1). See Nilsson, *GGR* 12. 688 n. 4. H. J. R.

EUNAPIUS, Greek sophist. He was born in Sardes c. A.D. 345 and studied there under Chrysanthius and later in Athens under Prohaeresius. When he returned to Sardes he entered the circle of local neo-Platonists, learned theurgy and medicine, and mainly taught rhetoric. An admirer of the Emperor Julian and a convinced opponent of Christianity, he wrote to defend his old faith. His history (now lost except for fragments) continued that of Dexippus (q.v.) and went in fourteen books from A.D. 270 to 404; it was concluded about 414. Owing to its very anti-Christian attitude, it was later republished in an expurgated edition. It is a disputed point whether the new edition was prepared by Eunapius himself. Photius (*Bibl.* 77) saw both editions. We know little about Eunapius' sources except that he used his friend Oribasius' (q.v.) memoir on Julian. His relation to Ammianus is uncertain. He complained about the lack of reliable information on contemporary events in the Western part of the Empire. He was an important source not only to the pagan Zosimus (q.v.), but to the Christians Philostorgius, Socrates, and Sozomenus. The *Lives of the Sophists* written about A.D. 396 are extant. They follow Philostratus' model and on the basis of first-hand information deal mainly with fourth-century Neoplatonists. Eunapius gives an idealized picture in order to compete with the biographies of Christian saints. He died c. A.D. 420.

Fragments of the Histories in *FHG* iv, 7; L. Dindorf, *Hist. Gr. Mm.* 1 (1870), 205. The best critical edition of the lives of the sophists by C. Giangrande (1956) with important introd. Text by W. C. Wright (Loeb, 1922). F. A. Thompson, *Ammianus Marcellinus* (1947), 28 ff. and 174 ff.; id., *A History of Attica* (1948), 16 ff.; W. R. Chalmers, *CQ* 1953, 165 ff.; A. F. Norman, *ibid.* 1957, 120 ff.; A. D. E. Cameron, *ibid.* 1963, 232 ff. A. M.

EUNEOS (Εὐνέως), and **THOAS** (Θόας), sons of Jason and Hypsipyle (q.v.). They came to Nemea while their mother was in captivity there, and were admitted to the house by her; later, they recognized her and took her away (Eur. *Hyps.*, ed. G. W. Bond (1963), 25 and 41).

EUNUCHS, RELIGIOUS, generally self-castrated, were frequently associated with the cult of the Anatolian mother-goddess. The custom probably originated here, rather than with the Semites, among whom it is found as a religious institution chiefly at Hierapolis-Bambyce, where many of the cultural ties were with Anatolia.

Best known are the Galli of Cybele and Atargatis, who were temple attendants or wandering mendicants (cf. *ΜΕΤΡΑΓΥΡΤΙΣ*) rather than priests (Lucian, *Syr. D.* 43); they are seldom mentioned in inscriptions. Though the Archigalli in the West seem not to have been eunuchs, the heads of the cult at Pessinus, the Attis and Battakes, probably were, at least in earlier times. There were eunuchs in the service of Hecate at Lagina (*BCH* 1920, 79; 84), and Strabo (641) says that the Megabyzi, the chief priests of Artemis at Ephesus, were formerly eunuchs.

Many explanations of the practice have been offered, as that the act was intended to increase the fertility of the goddess or to assimilate the worshipper to her. These may have been contributory or secondary ideas, but the basic motive was probably the desire to make oneself permanently pure. Certain rites only the chaste could perform; the eunuch, at least in a negative sense, possesses the purity of a virgin or child (at Ephesus virgins were the colleagues of the Megabyzus). In other words, the importance lay not in the act but in its consequences.

The chief ancient sources are Lucian, *Syr. D.*, Catullus 63, *Anth. Pal.* 6. 217-20, and the texts collected in H. Hepding, *Attis* (1903), and F. Cumont, *L'Égypte des astrologues* (1907), 132 f. A *lex sacra* of Eresus forbidding Galli entrance to a sanctuary, *CR* 1902, 190, the Galli at Rome, J. Carcopino, *Mél. d'Arch. et d'Hist.* (1923) Origins of rite and comparative material: A. D. Nock, *AKW* 1925, L. H. Gray in *ERE*, s.v. 'Eunuch'. F. R. W.

EUNUS, a Syrian slave in Enna, led a slave revolt in Sicily. Calling himself Antiochus, he collected a large army, chiefly of slaves, gained control of much of Sicily and defeated several Roman commanders. He struck bronze coins (see *CAH*, Pls. iv. 2). PISO (q.v. 1), with a consular army, began to retrieve the situation (133 B.C.) and Rupilius defeated and captured Eunus, who died in prison. E. H.

EUPATRIDAI (εὐπατρίδαι), one of the terms (cf. *εὐγενείς, γενναῖοι, γυνώριμοι*) for Greeks noble by birth, i.e. members of named γένη (see GENOS), tracing their descent from heroic times, and, in the aristocratic stage of a city's development, monopolizing the government. They were generally rich landowners. At Athens, in the early sixth century, the Eupatridai appear as one of four distinct classes in the citizen-body, the other three being the 'farmers' (ἀγροικοί, γεωργοί, γεωμύροι), the Demourgoi (q.v.), and the Thetes (q.v.). Of these the farmers and Demourgoi were now beginning to dispute with the Eupatridai the monopoly of office which these had previously enjoyed (see ARCHONTES, AREOPAGUS). In 580/79, by a temporary compromise, the chief archonship was replaced by a committee of ten, of whom only five were Eupatridai (Arist. *Ath. Pol.* 13. 2). Solon (q.v.) ended the controversy by making wealth, not birth or occupation, the criterion of eligibility for office, but the Eupatrid families continued to exercise great influence, to hold certain priesthoods, and to interpret religious law (see EXEGETES). An individual γένος called Eupatridai has been alleged, mainly on the strength of a passage of Isocrates (16. 25). *Εὐπατρίδης* was also used to translate *patricius* (q.v.).

Wülf, *Hist.* 1957, 176 ff., 1959, 1 ff.; R. Sealey, *Hist.* 1960, 178 ff., 1961, 512 ff.; N. G. L. Hammond, *JHS* 1961, 76 ff. A. W. G.; T. J. C.

EUPHANTUS of Olynthus, tutor of Antigonos Gonatas, to whom he dedicated a treatise *Περὶ βασιλείας*. He also wrote contemporary history (*Ἱστορίαι*) and several tragedies.

FGRII ii. 74.

EUPHEMUS, a hero, son of Poseidon, connected with the foundation-legend of Cyrene. Sailing with the Argonauts, he was given a clod (symbol of sovereignty) by Triton as they returned from Libya, and told (in Pindar's account) that if he dropped it into the sea near Taenarum his descendants in the fourth generation would rule in Libya. It fell, however, by Thera, whence, in the seventeenth generation after Euphemus, Battus colonized Cyrene. (Pind. *Pyth.* 4. See EURYPYLUS (3), also Hdt. 4. 150 and Ap. Rhod. 4. 1730.)

In Homer (*Il.* 2. 846) a Euphemus is mentioned as leader of the Cicones, and in Plato (*Phdr.* 244 a) one as father of the poet Stesichorus. According to Hesychius, Euphemus was an epithet of Zeus in Lesbos. H. J. R.

EUPHORBUS, in mythology, a Dardanian, son of Panthoos, who wounded Patroclus (*Il.* 16. 806 ff.), and was afterwards killed by Menelaus (17. 45 ff.). Pythagoras claimed to have been Euphorbus in a former incarnation and to recognize his shield (Hor. *Carm.* 1. 28. 9 ff., and commentators there). H. J. R.

EUPHORION (1), son of Aeschylus, is said (*Suda*, s.v.) to have exhibited plays written by his father but not produced in his lifetime, and to have won four victories with them. In 431 B.C. he defeated both Sophocles and Euripides (Arg. *Eur. Med.*). A. W. P.-C.

EUPHORION (2) (b. c. 275 B.C.—but that date has been challenged as too early), of Chalcis in Euboea, studied philosophy at Athens. In poetry he was a pupil of Archelaus of Thera. After enriching himself by a liaison with the elderly widow of Alexander, ruler of Euboea and Corinth, he was appointed librarian at Antioch in Syria by Antiochus the Great (223–187) and was buried there or at Apamea (the *Suda*).

WORKS. (1) *Verse.* Apart from epigrams (*Anth. Pal.* 6. 279; 7. 651) Euphoriion seems to have confined himself in the main to the composition of epyllia and composite epics, akin to catalogue-poems, on mythological subjects. The *Suda* mentions three works, *Hesiod*, *Mopsopia* or *Miscellanea* (Ἀντακτα), *Chiliades*. The second was a collection of Attic legends, Mopsopia being an old name for Attica. The third guaranteed the eventual punishment of persons who had defrauded Euphoriion of money by a recital of oracles fulfilled after the lapse of 1,000 years. Of the further titles cited in the fragments several are proper names, perhaps those of the addressees. The content of these poems was apparently mythological, as was certainly that of seven others, among which the *Thrax* seems to have been a medley of myths. The *Curses* or *Goblet-thief* was directed against a man who had robbed Euphoriion of such an article and, if fr. 9 belongs to this poem, imprecated on the thief many unpleasant ends recorded in myth; cf. Ovid's *Ibis*. The *Replies* (Ἀντιρρῆσαι) to Theodoridas was also in verse, a poetic epistle. The attribution to Euphoriion of love-legies in the Roman manner is based on a misunderstanding. (2) *Prose.* The following works are cited, *About the Isthmian Games*, *About the Aleuadae*, *About the makers of songs*, a lexicon to Hippocrates.

The scantiness of Euphoriion's surviving fragments makes an estimate of his work difficult. In subject-matter he seems to have preferred the Trojan Cycle, local legends of a gruesome character, and topics of aetiology and geography. His narrative technique consisted in undue amplification of detail and vain repetition, leading up to very summary treatment of the climax (frs. 44, 51; Lucian, *Hist. conscr.* 57). His sentiment was mawkish (fr. 92) and he indulged in childish etymologies (frs. 57, 136). His proverbial obscurity is due partly to the many and difficult mythological references, partly to

his language, of which 'glosses' (cf. *Anth. Pal.* 11. 218, an attack on Euphoriion by Crates of Mallos) and neologisms, including truncated words, formed an important part. His basic vocabulary was drawn from Homer, whom he termed 'untouchable' (fr. 118), but he was also indebted for this and for many themes to Hesiod and others. The papyrus fragments reveal him as a barefaced plagiarist of his immediate predecessors, Callimachus and Apollonius Rhodius. But [Lycophron] in the *Alexandra* is probably Euphoriion's debtor. See also EPHYLLION.

Euphoriion exercised considerable influence on later poets. Among the Greeks, Nicander, Parthenius, Nonnus imitate his language or borrow his themes. At Rome his epyllia (see EPHYLLION) were well known to the generation of Catullus and Gallus (hence *cantores Euphoriionis*, Cic. *Tusc.* 3. 45). Virgil's debt to him for subject-matter is illustrated by Servius. Of extant Latin poems the *Ciris* perhaps reproduces Euphoriion's technique most closely.

EUPHRANOR, sculptor and painter, of the Isthmus; later settled in Athens. Pliny dates him 364 B.C. (by battle of Mantinea). Pupil of the elder Aristides (q.v. 2). His sculptures, some of them colossal, included Paris, Alexander and Philip in chariots, and a Priestess of great beauty. His Apollo Patroos has been found in the Athenian Agora (H. A. Thompson, *Hesp.* 1937, 77). His paintings included Cavalry battle before Mantinea, Theseus with Democracy and Demos, the Twelve Gods. He wrote on symmetry and colours. Critics remarked on his large heads and slim bodies, but he seemed to portray the dignity of heroes and himself called his Theseus 'beef fed', in contrast to the 'rose fed' Theseus of Parrhasius (q.v.).

EUPHRATES, the longest river of western Asia, and the more westerly of the Two Rivers of Mesopotamia. Rising in the Armenian mountains, it flows south-west to the Taurus, then south-east, receiving its three main tributaries the Murat Su, the Balikh, and the Khabur on the left bank. In the alluvial plain of Babylonia, which it inundates yearly, it was in antiquity connected with the Tigris (q.v.) by numerous navigation and irrigation canals. In classical times it was crossed by a number of bridges, e.g. at Zeugma (q.v.) and Babylon. It served as a political boundary between Armenia and Cappadocia, Sophene and Commagene, and Upper Mesopotamia and Syria (Strabo 16. 746–9; Pliny 5. 83; Ptol. 5. 12). The Parthian Empire reached the permanent limit of its expansion westwards at the Euphrates over against Syria in 53 B.C. After the Romans in A.D. 66 recognized the rule of a Parthian Arsacid king over Armenia they began the construction of a military *limes* along the upper and middle course of the river; forts along its right bank guarded for more than 500 years the imperial frontier against first the Parthian, later the Sassanid kings.

EUPHRON, New Comedy poet, dated to the middle of the third century B.C. by his allusion to Nicomedes of

Bithynia (fr. 11. 2). Nine titles are known. Fr. 1, the great discoveries of cooks (see H. Dohm, *Mageiros* (1964), 131 ff.).

FCG i. 477 f., iv. 486 ff.; CAF iii. 317 ff.

W. G. A.

EUPHRONIUS (late 6th–early 5th c. B.C.), potter and vase-painter in Athens, known from seventeen signatures. He signed five red-figure vases as painter (510–500 B.C.), notably Calyx Crater with Heracles and Antaeus (Paris), and Psyche with Hetaerae (Leningrad). Experimented with new positions, character contrast, etc., within ripe archaic conventions. As potter he employed Onesimus and the Pistoxenus painter.

Beazley, *ABV* 403; *ARV* 13, 313, 858

T. B. L. W.

EUPOLEMUS (fl. c. 150 B.C.), a hellenized Jew, wrote *Περὶ τῶν ἐν τῇ Ἰουδαίᾳ βασιλέων*, a popular history of the Jews in a rhetorical style.

FGH iii. 723/4.

EUPOLIS was regarded as one of the greatest poets of the Old Attic Comedy (e.g. Hor. *Sat.* 1. 4. 1). His first play was produced in 429 B.C. (Anon. *De Com.* 10); he won three victories at the Lenaea and at least one at the City Dionysia (*IG* ii². 2325. 59, 126). The datable plays are: *Νουμηνία* at the Lenaea in 425 (hyp. 1 Ar. *Ach.*), *Μαρκᾶς* at the Lenaea in 421 (schol. Ar. *Nub.* 551), *Flatterers* at the City Dionysia in 421 (hyp. 1 Ar. *Pax*), *Autolykus* in 420 (Ath. 216 d), and *Βάντρα* after 424 (fr. 78 refers to Ar. *Eq.*) but before 415 (schol. Aristid. 3. 444 D relates a story which, though untrue, presupposes 415 as the last possible date for *Βάντρα*). *Cities* is to be dated c. 420 B.C.; it has many personal references in common with Ar. *Nub.*, *Vesp.*, and *Pax*. *Δήμοι* must be later than 418 (fr. 110 B [FAC] refers to the Mantinea campaign) and earlier than 406 (fr. 98 shows that the Younger Pericles is still alive); 412 is the most probable date (Körte, *Hermes* 1912, 276 ff.). Eupolis died 'in the Hellespont, during the Peloponnesian War' (*Suda*), some time after 415 (Eratosth. ap. Cic. *ad Att.* 6. 1. 18). We have nineteen titles and over 460 fragments, including substantial papyrus fragments of *Δήμοι* and (if the identification is correct) *Ἰπποπάλτιοι*.

Flatterers ridiculed Callias, son of Hipponicus, for cultivating the company of sophists, and may be regarded as a comic poet's view of the kind of scene described by Plato, *Prt.* 314 ff. *Μαρκᾶς* was an attack on Hyperbolus, comparable with Aristophanes' attack on Cleon in *Eq.* (cf. Ar. *Nub.* 553). In *Δήμοι* great Athenians of the past were brought up from the underworld to give advice to the present. In *Ταξιαρχοί* the luckless Dionysus is subjected to hard military training under Phormio. Eupolis' style was 'bitter and indecent' to the author of *Vit. Ar.* 11 (cf. Anon. *De Com.* 10), 'inventive, powerful, and attractive' to Platonius (*Diff. Com.* 15). The longer fragments do not stand up well to comparison with Aristophanes.

FCG i. 104 ff.; ii. 426 ff., CAF i. 258 ff.; FAC i. 310 ff. (unreliable on *Δήμοι*). K. J. D.

EURIPIDES.

I. LIFE (c. 485–c. 406 B.C.)

1. Euripides was born probably in 480 or 485 B.C. As both the ancient 'Life' and the related biography by Satyrus, of which papyrus fragments are extant, draw many of their 'facts' from Old Comedy, little reliable information can have survived; in particular stories of his domestic misfortunes are suspect. His home was at Phlya, east of Hymettus, and as his family had an ancestral priesthood of Apollo Zosterios it must have been respectable, and if he was challenged to an *antidosos* (q.v.) (Arist. *Rh.* 3. 15) he must have been rich. It is not known

why Aristophanes could raise a laugh by referring to greengrocery in connexion with his mother Cleito. The cave on Salamis in which he used to compose (Philochorus fr. 21) was probably a family property; the habit of solitude which this suggests may be behind the tradition that he was surly and unconvivial (Alexander Aetolus 7). Unlike Sophocles he was not politically prominent, but he went on an embassy to Syracuse (Arist. *Rh.* 2. 6. and schol.) and composed an elegy or epitaph on those who fell in the attack on that city (Plut. *Nic.* 17); he may also have written the epinician ode to celebrate Alcibiades' victory at Olympia in 416 or 420 B.C. (Plut. *Alc.* 11, *Dem.* 1; see Bowra, *Ilist.* 1960, 68). He was clearly involved in the intellectual movement associated with the sophists, whether or not he was personally acquainted, as tradition asserts, with Anaxagoras, Socrates, and others. According to Diogenes Laertius (9. 54) it was at Euripides' house that Protagoras first read his sceptical work on the gods. He is said (Satyr. *Vit. Eur.*, col. 10) to have been persecuted by Cleon for impiety, and his undoubted addiction to books (Ar. *Ran.* 943, etc., Ath. 3 a), when reading was still a highly intellectual pastime, fits the picture. Possibly, though there is no firm evidence, it was the unpopularity caused by his attitudes and associates that caused him to accept an invitation to the court of Archelaus in Macedonia, probably in 408 B.C. There he died not long before Feb./Mar. 406, when Sophocles dressed his chorus in mourning at the Proagon (q.v.) to the tragic performances. That he was torn to pieces by the royal hounds is unlikely in view of Aristophanes' silence.

II. WORKS

2. Euripides first competed at the Dionysia in 455 (*Vit. Eur.* 32) and won his first victory in 441 B.C. (*Marm. Par.* 60); he was victorious again with the *Hyppolytus* in 428 and after his death (? 405) with the *Bacchae* and *Iphigenia in Aulis*, but on only two other occasions; in the 'Life' it is said that he was indifferent to theatrical success. According to the *Suda* he produced tragedies on twenty-two occasions (eighty-eight plays if all were shown at the Dionysia) and wrote ninety-two plays. Not all his plays need have been produced at Athens and in some cases authorship was in doubt; in particular *Peirithous*, *Rhadamanthys*, and *Tennes* were attributed by some to Critias, and although Euripides undoubtedly wrote a *Rhesus* the extant play of this name is not certainly his. Probably seventy-eight plays, including the three claimed for Critias, were known to Hellenistic scholars; among the plays which did not survive the fourth century were several satyr-plays. Some eighty titles are known.

The plays which we possess are of two kinds: (1) a selection of ten plays made about A.D. 200 for use in schools; they may have been contained in a single codex, and they have been transmitted with scholia, though those belonging to the *Bacchae* are lost. They are *Alceste*, *Medea*, *Hyppolytus*, *Andromache*, *Hecuba*, *Troades*, *Phoenissae*, *Orestes*, (*Bacchae*), and *Rhesus*.

(2) The Laurentian MS. (known as L) contains in addition to the select plays, except *Troades*, nine plays numbered in the following sequence: *Helen*, *Electra*, *Heracleidae*, *Heracles*, *Suppliants*, *Iphigenia in Aulis*, *Iphigenia in Tauris*, *Ion*, *Cyclops*, that is to say, taking their Greek titles, one beginning with E, 3 with H, 4 with I and one with K. Such a quasi-alphabetical grouping by first letters is found also in ancient lists of the plays, and it can be taken as certain that what we have here is a sequence of plays in the order of the Alexandrian edition (see Barrett, *Eur. Hipp.* (1964), 50 ff.). This is of great importance since the plays are not selected, but a fair sample of Euripides' work. Without them we should be wholly ignorant of at least one important type of play.

3. The dates of the following plays are known (lost plays in brackets). (*Peliades*) 455; *Alcestis* (with *Cressae*, *Alcmaeon* in *Psophis*, *Telephus*) 438, second prize; *Medea* (with *Philoctetes*, *Dictys*, *Theristae*) 431, third prize; *Hippolytus* 428, first prize; *Troades* (with *Alexander*, *Palamedes*, *Sisyphus*) 415, plays connected in subject, second prize; *Helena* (with *Andromeda*) 412; *Orestes* 408; *Bacchae* and *Iphigeneia in Aulis* (with *Alcmaeon* in *Corinth*) produced posthumously, probably 405; *Phoenissae* (with *Oenomaus*, *Chrysippus*) after 412 and before 408, so also (*Hyppolyte*, *Antiope*); *Rhesus*, if our play is Euripides' work, is earlier than any other extant play (Ritchie, *The Authenticity of the Rh. of Eur.* (1964)).

As the technique of Euripides shows a remarkably steady development, especially in the use of resolved feet in trimeters (Ceadel, *CQ* 1941, 66; Zieliński, *Tragodomenon Libri Tres* iii (Cracow, 1925)), it is possible to arrange the remaining plays in an approximate order with some confidence. Certain lost plays are given a *terminus ante quem* by references in comedy. Most of the following dates should have an error of not more than four years: *Heracleidae* 430, *Andromache* 426, *Hecuba* 424, *Supplices* 422, *Heracles* 417, *Electra* 417 (this play is often dated to 413 because of a supposed reference to the fleet in Sicilian waters l. 1347, but this is less than certain), *Iphigeneia in Tauris* a little before *Helena* of 412, *Ion* a little later; *Cyclops* being a satyr-play is not comparable with the rest, but probably a late work. Earlier than Aristophanes' *Acharnians* of 425 are (*Oeneus*, *Phoenix*, *Bellerophon*, *Ino*, *Thyestes*), than the (*Georgoi*) of 424 (*Cresphontes*), than the *Clouds* ? 423 (*Aeolus*), than the *Wasps* 422 (*Theseus*, *Sithenboia*), than the *Thesmophoriazussae* 411 (*Erechtheus*, *Melampe* the Wise).

4. New papyri continue to throw light on lost plays; for the older finds see D. L. Page, *Greek Literary Papyri* (Loeb, 1942); no. 21, doubtfully attributed to Sophocles, is now known to be from Eur. *Telephus*, see POxy. 27 (1962), 2460; a new frag. of *Cresphontes* 2458 in same volume, also new information especially on the *Aeolus* in the collection of hypotheses (q.v.) 2455, 2457. A fragment of the *Erechtheus* awaits publication.

III. CHARACTER AND CONTENT OF HIS WORK

5. In Euripides' plays the attitude to the myths which are the basis of virtually all Greek tragedy seems to have changed. Here judgement must be more than usually subjective and not all are agreed, but there appears a loss of confidence in the innate significance of the old stories and a readiness to give them an unnatural twist in order that they may fulfil momentarily a new purpose. Jason and Medea, selfish male and passionate woman, belong only intermittently to the heroic world; in the *Hecuba* the demagogues of the fleet are closer at hand behind the scenes than in Sophocles' *Ajax*; in the *Electra* an invented character, Electra's peasant husband, takes a leading part, and Apollo's dubious oracle is flatly rejected; even in the *Bacchae* Dionysus is vindicated amid pious sophistries broadly marked with a fifth-century origin. As Aristophanes makes Euripides claim in the *Frogs* (959), he brings into tragedy the familiar, everyday things of life; and the emotions too are more poignant and less sublime. Instead of developing what is latent in the myth like Sophocles he seems often to impose an alien significance upon it, or to use it as a means of producing brilliant but irrelevant effects. In his later years Euripides used myth almost for pure entertainment in his numerous plays of intrigue. These were a natural development of the revenge play in which a hero, such as Orestes, returns home in secret, is recognized by his friends, and by some stratagem overthrows the usurper. When success includes the murder of a mother, dramatic excitement is subordinate to the moral problem. But Euripides extended the treat-

ment to plots of pure adventure where no moral problem was involved, and diverted his audience with brilliant scenes of recognition, cunningly planned escapes, and salvation snatched from catastrophe. *Iphigeneia in Tauris*, *Helen*, and *Ion* belong to this class and so did many lost plays. They end in unalloyed happiness, and in the *Andromeda* this was accompanied by the wish-fulfillments of triumphant love. Such things must have seemed to many a profanation of myth; really they showed a new kind of sensibility. At the same time the energy of Euripides' lyric narrative and an antiquarian enthusiasm for detail in describing cult and genealogy suggest an anticipation of the Alexandrian spirit. It is not irrelevant that the great age of poetry in Greece ended with the fifth century, and thereafter prose was the medium of serious thought.

6. About Euripides' power of portraying character there is both disagreement and confusion. Obviously he had an interest in states of mind, particularly abnormal ones, and a real power of projecting himself into a situation. Stories of violent or depraved passion clearly attracted him. [Longinus] observed justly that he bestowed his attention especially on madness and love and that he wrote with such vividness that one felt he had been present at the scenes he represented (15. 4-5). Above all he was aware, as perhaps no one had been before him, of the conflict which can arise within men's minds, of the agony caused by conflicting purposes; these are revealed in their heat in *Medea*, in retrospect by Phaedra in the *Hippolytus*, and we know now in the (*Chrysippus*). This analysis of man's predicament has earned him the name of 'irrationalist' (E. R. Dodds, *CR* 1929, 102; *The Greeks and the Irrational* (1951), 186 f.). The same idea is present in the denial that passion is an urge inspired by an external force for which a man is not responsible; cf. *Troad*. 988 'It was your own mind that became Cyprus when you saw him' (of Helen and Paris). This is a title not less deserved than Verrall's 'rationalist'. Yet insights of this kind are only one element in the creation of character, and in spite of unforgettable moments we do not find many whole men or women in Euripides' plays. This is partly because within the narrow limits of a Greek play it is difficult, when situations change rapidly, to indicate at all fully the accompanying changes in states of mind. It may not be incredible that the gentle and pathetic Creusa, as she appears in the first half of the *Ion*, should appear as a potential murderer in the second, but nothing is done to ease the transformation. And it is partly because Euripides was not so much concerned to present life-like characters as to exploit to the full the rhetorical possibilities of every situation. Especially in the set debates of which the plays are full each character makes the best of his case, and it need cause no surprise if in doing so they fail to reveal the inward process of the spirit.

7. It cannot be doubted that Euripides was fascinated by the rapidly developing art of rhetoric—not that Sophocles was indifferent to it, but, as Quintilian said (10. 1. 67), for anyone who wished to prepare himself for speaking Euripides would be far the more helpful. The question arises whether the challenging generalizations in which the plays abound, the persuasive urging of unconventional views, are a product of the born pleader's desire to argue every case, or whether we can detect a point of view which is Euripides' own. It has been generally believed that Euripides was the child of the sophists (in fact he was their contemporary), openly attacking and quietly sapping established religion if not ordinary morality. It is true that a dramatist is unable to speak except through the mouths of others and that his views can never with certainty be identified as those expressed by any of his characters, not even the chorus. Yet *Hecuba's*

'random thoughts' (*Hec.* 603, cf. 800) have little to do with Hecuba. The weight of a play can appear to be on one side rather than another. In the *Hercules Furens* the denial that the innocent can be contaminated and pass on the infection of shed blood is too emphatic to be misunderstood, and so is the repetition of Xenophanes' famous attack on Homer's adulterous gods (1233-4, 1340-6). Both *Hippolytus* and *Bacchae* seem to imply that natural forces, however divine, if conceived as persons, turn out morally inadequate. The tradition of 'the philosopher of the stage', pupil of the rationalist father-figure Anaxagoras, is in agreement with the picture presented by comedy of Euripides as Socrates' crony (*Ar. Ran.* 1491, fr. 37 B; Telecleides fr. 39, 40), intellectually pretentious and unconventional. And apart from the surviving plays the numerous fragments which refer to contemporary speculation in physics and cosmology, wholly unparalleled in the works of any other dramatist, must imply a strong interest in these activities.

Of late it has been denied both that we can hope to know anything about Euripides' opinions and that these opinions were as sceptical as has been supposed (see *Entretiens Haurdt* vi). While some may have identified his position too confidently with that of the more nihilistic sophists, there is little doubt where in general his sympathies lay. Further we may suspect in particular that he was attracted by a vague pantheism resting on a belief in a divine, quintessential aether, as in the system of Diogenes (q.v. 1) of Apollonia. To regard as divine the aether, the material from which soul is fashioned, was by no means in conflict with conventional belief, and Euripides brings the notion into his plays for no apparent reason but that he is interested in it (*Supp.* 533, 1140, *Hel.* 1015, *Or.* 1086, fr. 839, 10, 935 (with *Troad.* 884), 971; cf. *Ar. Ran.* 892). In fact this idea is more emphasized than anything obviously derived from Anaxagoras, though there are traces of his physical doctrines in fr. 783, *Or.* 839, and in the passages cited by Satyrus from the (*Peirithous*), whose authenticity is doubted, probably wrongly (frs. 593, 912).

It is a difficult question how far *Tύχη* (Chance) appears as a force in her own right, independent of the gods or contrasted with them. Usually she represents what is incalculable for man without reference to the question whether she is subject to a divine plan or is a merely random force. In the group of plays sometimes known as the *Tύχη* dramas, especially the *Ion* (Solmsen, 'Gestaltung des Intrigenmotivs in den Trag. des Soph. und Eur.', *Philol.* 1932, 1), coincidences and narrow escapes necessarily give Chance an important part in the action; but at *Hec.* 488 the alternative is squarely put: Is Zeus or Chance supreme? And the *Hercules Furens*, though there is no agreed interpretation of the play, can be read as the blank negation of divine purpose.

8. The events of the last third of the fifth century have left a clear mark on the plays. The noble ode in praise of Athens (*Med.* 824-65) shows the patriotic exaltation with which Euripides entered the period of war; it is maintained in the *Heraclidae*, the celebration of an incident on which Athenian pride loved to dwell, and in the (*Erechtheus*); growing bitterness appears in the ugly denunciation of Spartans and their ways in the *Andromache* (445 ff.); the *Suppluces* too was called by an ancient critic 'encomium of Athens', but the political arguments, at times quite Thucydidean in quality, are balanced with surprising evenness; there may even be a touch of satire in the funeral praises of the outrageous Capaneus. Athena's words at the end are connected with an Argive alliance, actual or prospective. (*Bellerophon*) fr. 286 reveals the naked immorality of power politics. There is wide agreement that the *Troades* was composed with reference, if not to the capture of Melos, to the coming attack on Sicily. Weariness of war shows itself also in the *Helen*

(1151-64). In the numerous intrigue plays written in the last decade of his life Euripides perhaps turned his back on the sad Athenian scene in favour of a more fanciful world, but Delphian Apollo continued to receive hard knocks, especially in the *Ion*, because as a Dorian partisan he could be assailed with comparative impunity. There is an undertone of continuous hostility to demagogues and to the shams and deceptions of politics from the *Hecuba* (254), through the *Suppluces* (726), *Orestes* (885-952), to the *Iphigeneia in Aulis* (337). Like most men of property he doubtless had no love for extreme democracy, and Dionysus' comment on Euripides' claim to have been moved by democratic sentiment 'that is a subject you had best leave alone' (*Ar. Ran.* 952) suggests that his attitude was notorious.

The idea that Euripides was particularly hostile to women can have arisen quite naturally from his fondness for plots in which wicked and licentious women figured; but this fondness is likely to have been the result of his interest in the springs of passion or, as in the incestuous plot of the *Aeolus*, in a problem of ethics, rather than of a belief in the depravity of women; bad men and good women are no rarity in his works. Again his plays contain many highly quotable generalizations about female wickedness, but it was part of the rhetorical technique to put statements about particular cases in general form.

IV. STRUCTURE AND TECHNIQUE

9. Few of Euripides' plays show the mastery of structure which was achieved by Sophocles; only *Hippolytus*, *Iphigeneia in Tauris*, and *Bacchae* approach the highest standard. The *Medea*, which can in fact be performed by two actors, achieves remarkable concentration, but the unmotivated entrance of Aegeus is a blemish. Many complicated plots are handled with dexterity, notably in the *Ion*, but they give no positive impression of grace and symmetry, while some plays, especially the *Andromache*, are conspicuously lacking in coherence. The disconnection of the two halves of *Hercules Furens* seems to be purposely emphasized by the second prologue in the middle of the play, and may be meant to indicate that the incoherence of the drama extends to the universe. The *Troades* would certainly have been assigned by Aristotle to the category of episodic plays, but this was the natural form to produce the effect which Euripides here desired. The *Phoenissae*, a mere pageant of myth, is less successful.

He seems willingly to have sacrificed some continuity for the sake of the advantages secured by his special type of prologue and exodos, or final scene. The first speaker usually states the facts which the audience needs to know, and these in the case of unfamiliar myths may be numerous. Occasionally, as in the *Medea*, some attempt is made to give the character in question a motive for speaking, but usually there is no pretence of dramatic illusion, and as it is often convenient to allude to things which no human being could know the speaker is sometimes a god, in the *Hecuba* a ghost. In the *Troades* an opening dialogue between two offended deities casts a sinister shadow over the victorious Greeks who before long will be reduced to the level of their victims. Had printed programmes been available Euripides would doubtless have begun his plays at the beginning of the action.

No less than eleven of the plays end with the appearance of a deity generally, if not always, introduced aloft by means of the *mechane* or crane. But the purpose is not the proverbial one of cutting a knot which the dramatist is unable to untie, except in the single case of the *Orestes*. Indeed in the *Iphigeneia in Tauris* a tempest is invented purely to give an occasion for Athena to intervene. Usually the divinity does no more than tidy up by announcing the future destinies of the characters; this is sometimes combined with the establishment of some

still-existing cult. In the three plays which end with the epiphany of Athena there is a local or patriotic interest. In addition we must suppose that the operation of the *mechane* supplied an element of spectacle. Only in the *Hippolytus* and the *Bacchae* is the deity an integral part of the play as representing a force which has been dominant in the action, and to some extent in the *Electra* where the Dioscuri condemn Apollo's oracle which commanded the matricide. In two plays, *Medea* and *Herubia*, one of the characters is allowed suddenly to develop prophetic powers in order to perform the function usually allotted to the 'god from the machine', which suggests that these deities are to be regarded as a dramatic convenience providing in addition a little incidental spectacle and not, in general, as evidence for Euripides' religious beliefs. Iris in the second prologue of *Hercules Furens* (822-42) and Athena at the end of the *Ion* are a partial exception to this, since they speak for other deities, Hera and Apollo, who dominate from a distance their respective plays.

10. Euripides' usual style is less elevated and magnificent than Sophocles'. The discrepancy increases in the later plays as the rhythm of the iambs grows more irregular with the frequent use of resolved feet, particularly of two or more in a single line, and with the freer division of the line between speakers. Aristophanes was fond of describing it by the term *λαλία* 'chatter' and by contemptuous diminutives (*Ran.* 91, 954; *Ach.* 398, 447). Aristotle put it more sympathetically (*Rhet.* 3. 2. 5). 'Art is cleverly concealed when a speaker puts together words chosen from the language of ordinary speech, as Euripides does, who was the first to show the way', cf. [Longinus] 40. 3. This is not universally true. Euripides uses at times highly ornamental language, and Aristotle (*Poet.* 22. 7) quotes a case where he adds distinction to a line of Aeschylus by substituting *θαυῶνται* for the more pedestrian *κόβηται*. It is difficult to find sure examples of colloquial usage, for the tone of tragic language could be varied only within narrow limits. In his Messengers' speeches especially he achieves extraordinary vividness. In the *Hercules Furens* and all plays probably subsequent, except the *Electra*, there is a growing tendency to use trochaic tetrameters in place of iambs for the more animated passages.

11. Aristotle stated (*Poet.* 18. 1456^a25) that the Chorus ought to take an active part as in Sophocles, not as in Euripides. In fact the use of the Chorus in Euripides' earlier plays is not strikingly different from that of Sophocles, and even in two late plays (*IT* 1284 ff., *Ion* 747 ff.) they make a notable intervention in the action. But it is true that they tend to become detached spectators and even in the *Bacchae*, where their expression of the beauty and terror of Dionysiac worship is a vital part of the play, they are ignored by the actors whenever more than one is present on stage. But the most marked change in the character of the Chorus, which is manifest in the *Troades* and subsequent plays, is due to innovations in the music (see MUSIC, § 10; Pickard-Cambridge-Webster, *Dithyramb* 38 ff.). The old principle of one syllable to one note was abandoned and, to a considerable extent, the strophic system; in consequence greater skill was required in performance and there was new scope for professional virtuosity, cf. Arist. *Pr.* 19. 15. A papyrus fragment of the *Orestes* with musical notation (Turner, *JHS* 1956, 95) shows *ōs* sung to two notes, and *εἰσελάλουν* in Aristophanes' parody (*Ran.* 1314) refers to the same point. In many of Euripides' later odes we find a structureless cascade of words with much excited repetition; the music is clearly taking charge. It is easy to believe that Euripides encouraged the great innovator Timotheus and wrote for him the prelude to his *Persae* (Plut. *Mor.* 795 d, Satyr. *Vit. Eur.* 39). It is said also that Cephisophon helped Euripides with the composition of

his music (Ar. *Ran.* 944, fr. 580). This new emotional music was particularly suitable for monodies, solo performances which were sometimes ornamental, e.g. *Ion* 82-183, but sometimes replaced an iambic speech at a dramatic climax, e.g. Creusa's startling outburst (*Ion* 859-922). The extreme case is the use of a monody in place of a Messenger's speech (*Orest.* 1369-1502). In the absence of the music, whatever it might mean to us, these often diffuse and vacuous lyrics mark a change for the worse, but there is the occasional triumphant success when it seems that Euripides has widened the existing range of human sensibility as when Ion celebrates the glory of a summer morning at Delphi (*Ion* 82-111) or the Chorus of the (*Phaethon*) describes how the world goes about its business at the rising of the sun (*Supp. Eur.* 70).

12. After his death Euripides became the most admired of the tragic poets and his plays were often revived. Tragedy carried his rhetorical tendencies still further; but his influence was exerted mainly on comedy, perhaps on Middle Comedy in plays of intrigue like Aristophanes' *Coralus*, certainly on New Comedy with its *bourgeois* loves: 'peripeteiai, violations of maidens, substitution of children, recognitions by means of rings and necklaces, these are the very stuff of New Comedy, and it was Euripides who developed them' (Satyr. *Vit. Eur.* col. 7).

EUROPA (Εὐρώπη), in mythology, daughter of Agenor king of Tyre (cf. CADMUS), or of Phoenix (Φοῖνιξ, 'the Phoenician', *Il.* 14. 321): i.e. her father, originally nameless, is later given an appropriate name 'the proud one', first in Herodotus (4. 147. 5). Zeus loved her, and so turned himself into, or sent, a beautiful bull, which swam to the sea-shore where she was playing and enticed her by its mildness to climb on its back. Once there, she was carried away to sea, and landed in Crete. There she bore Zeus two or three children, Minos, Rhadamanthys, and, in post-Iliadic accounts, Sarpedon (in other words, the later forms of the legend reflect a belief, true or false, of a connexion between Crete and Lycia; Apollod. 3. 2 ff.). For their subsequent adventures, see under their names. She was then married to Asterius, king of Crete, who adopted her sons. Zeus gave her the

bronze man Talōs (Ap. Rhod. 4. 1643; cf. ARGONAUTS, TALOS) to guard the island, a hound which never missed its quarry ([Eratosthenes] 33; cf. AMPHITRYON), and a javelin which never missed its mark (ibid., cf. Ov. Met. 7. 681 ff.). These passed afterwards to Minos, thence to Procris (q.v.) for curing a disease which afflicted him, and so to her husband Cephalus. After her death Europa was worshipped as a goddess, her festival being the Hellotia (Nilsson, *Griechische Feste*, 95), i.e. she was popularly identified with some Cretan goddess. For a Cretan myth resembling hers, see Nilsson, *Minoan-Mycenaean Religion*² (1950), 480 f. Also the fayence plaque from Dendra showing a woman seated on a bull has usually been accepted as evidence for some form of this myth in Mycenaean times (see Nilsson, *GGR* 12. 356). The bull became the constellation Taurus ([Eratosth.] 14).

H. J. R.

EUROPE. The name *Εὐρώπη* originally stood for central Greece (*Hymn. Hom. Ap.* 250; 290). It was soon extended to the whole Greek mainland and by 500 B.C. to the entire land-mass behind it. The boundary between the European continent and Asia was usually fixed at the river Don. Homer vaguely knew dark regions of the west and north, but his range of information hardly extended north of Greece or west of Sicily.

The Mediterranean seaboard of Europe was chiefly opened up by the Greeks between 800 and 500 B.C. (see COLONIZATION, GREEK). The Atlantic coasts and 'Tin Islands' were discovered by the Phoenicians (see CASSITERIDES); Pytheas (q.v.) circumnavigated Britain and followed the mainland coast at least to Heligoland. The Baltic Sea was probably not entered by Greek or Roman ships; Scandinavia was almost wholly unknown until quite late during the Roman Empire after the invasions by the Goths; and Thule (q.v.) remained a land of mystery.

The prehistoric amber (q.v.) routes across Europe from Jutland and the Baltic were unknown to later explorers. The Greeks penetrated by way of the Russian rivers as far as Kieff or perhaps Smolensk; central and north Russia remained to them a land of mythical peoples and of the fabulous Rhipaeian Mts. (q.v.); north of the Balkans they located the equally mythical Hyperboreans (q.v.). Greek pioneers ascended the Danube to the Iron Gates, and the Rhône perhaps to Lake Lemman. But Herodotus had only a hazy notion of central Europe, and the Hellenistic Greeks knew little more (see ALPS, IEROCYNIAN FOREST).

The land exploration of Europe was chiefly accomplished by the Roman armies. These completed the Carthaginian discovery of Spain; under Caesar they made Gaul known; under Augustus' generals, M. Crassus, Tiberius, and Drusus, they opened up the Balkan lands, the Alpine massif, and the Danube basin (see DANUVIUS). Roman traders rediscovered the amber route from Vienna to the Baltic, and Trajan revealed the Carpathian lands by conquest (see DACIA). Tiberius and Drusus also overran west Germany to the Elbe, but central Germany remained outside known Europe.

E. H. W.

EUROPUS (*Dura*) on the middle Euphrates, founded as a Seleucid military colony c. 300 B.C. At first mainly Greek in character, it became gradually orientalized; the Arsacids refortified the city, and under Parthian rule it thrived by commerce and agriculture. Occupied by

the Romans in A.D. 165, it became a strongly garrisoned fortress on the Euphrates *limes*, but its prosperity rapidly declined. It was besieged and destroyed by the Sassanids c. A.D. 257.

The importance of Europus is mainly archaeological. Excavation of the material remains has added considerably to our knowledge of life and culture in Mesopotamia under Hellenistic, Parthian, and Roman rule. The discoveries include well-preserved architectural remains, temples of Greek and Oriental gods, a Christian church and a synagogue, public and private secular buildings, and a Roman camp; frescoes and reliefs of great value for the history of art and religion; military equipment; inscriptions, parchments, and papyri including fragments of a Seleucid code, numerous Greek contracts, and important Roman military archives.

Rostovtzeff and collaborators, *Excavations at Dura-Europus, Preliminary Reports* (from 1929) and *Final Reports* of which those already published include parts of vol. iv (Pottery, Textiles, Lamps, Bronzes, etc.), v. 1 (Parchments and Papyri ed. Welles, etc.), vi (Coins, ed. Bellingier) and viii 1 (The Synagogue, ed. Kruehling, etc.), M. Rostovtzeff, *Dura-Europus and its Art* (1938); C. H. Welles, 'The Population of Roman Dura', *Studies . . . in honour of A. C. Johnson* (1951) M. S. D.; E. W. G.

EURYBIADES, a Spartan nobleman, was the first recorded admiral of the Peloponnesian League (481-480 B.C.). Despite the smallness of Sparta's contingent (10 ships at Artemisium, 16 at Salamis), he held chief command over the allied Greek fleet against Xerxes. He gave general support to Themistocles (a ridiculous story alleges that he was bribed at Artemisium), but opposed his scheme to cut off Xerxes' retreat after Salamis by breaking the bridges over the Hellespont. A statue seems to have been erected in his honour at Sparta.

G. B. Grundy, *Great Persian War* (1901), 541 ff.; C. Gutschick, *Klio* 1925, 62 ff. P. T.

EURYCLEIA, Odysseus' nurse, a woman of good family bought by Laertes (*Od.* 1. 429 ff.). She recognizes Odysseus (19. 392 ff.); keeps the maids in their quarters while the Wooers are killed (21. 380 ff.).

EURYCLES, GAIUS JULIUS, son of Lachares of Sparta, who was executed by Antony for piracy, fought at Actium on the side of Octavian, who rewarded him with the Roman citizenship and allowed him to become ruler of Sparta. He exercised a sort of tyranny, and his influence extended over the Eleutherolaconian towns (see LACONIA) and elsewhere. Cythera (q.v.), which Augustus handed over to Sparta in 21, became his personal possession. Towards 7 B.C. he visited the court of Herod (q.v. 1) and Archelaus (see CAPPADOCIA), making mischief at the former; on his return to Greece he was the cause of widespread disturbances which led to his being accused twice before Augustus and banished, perhaps before 2 B.C. He seems to have died soon after this. Under the more discreet rule of his son Laco his memory was rehabilitated and games called Eurycleia were established and long maintained at Sparta.

G. W. Bowersock, *JRS* 1961, 112 ff.

A. M.; T. J. C.

EURYDICE (1) (*Εὐρυδίκη*, 'wide-judging', i.e. 'princess', a stopgap name like Creusa, q.v. 1), name of a dozen mythological characters, the best known being Orpheus' wife (cf. ORPHEUS). Pursued by Aristaeus (q.v. 1), she was fatally bitten by a snake. Orpheus then descended to Hades and so charmed the infernal powers by his playing that he was permitted to bring her to the upper world again if he did not look back at her on the way. Breaking this taboo, he lost her. See especially Verg. *G.* 4. 454 ff. and for the distribution of the story, Stith Thompson, *F* 81. 1.

H. J. R.

EURYDICE (2), originally called *Adea* (c. 337–317 B.C.), daughter of Amyntas (nephew of Philip II of Macedon) and Cynane (daughter of Philip II and the Illyrian Audata), was betrothed to the feeble-minded Philip (q.v. 2) Arrhidaeus before 323 when he succeeded to Alexander's throne (jointly with Alexander's infant son). Her royal blood endeared her to the Macedonian soldiers, whose protection enabled her to marry Philip Arrhidaeus (322), make trouble for the regent Antipater (321), depose his successor Polyperchon from the regency, and try to rule Macedonia, using Cassander as her minister, and excluding Alexander's son from the succession (317). Her undoing was Olympias, against whom the Macedonians would not fight. Philip and Eurydice became her prisoners, and after Philip's murder Eurydice obeyed an order to commit suicide. In an age of violence her blood, brains, and courage were not enough.

G. H. Macurdy, *Hellenistic Queens* (1932), 40 ff., 48 ff. G. T. G.

EURYMEDON (now *Köprüçay* or *Pazarçay*), one of the principal rivers of the south coast of Asia Minor. Rising in the Pisidian mountains it flows southwards for something over 100 miles into the Mare Lycum. Eight miles from its mouth is the city of Aspendus, and further up the ruins of Selge stand high above its right bank. It was reckoned navigable in antiquity at least as far as Aspendus. At the mouth of the Eurymedon in or about 467 B.C. the Athenian Cimon gained a double victory over the Persian forces by sea and then by land; a well-known epigram attributed to Simonides perhaps celebrates this victory (fr. 142 Bergk). G. E. B.

EURYPONTIDS (*Εὐρυποντίδαι*) was the name of the junior royal house at Sparta. The most notable Eurypontid kings were Agesilaus, Agis II and IV, Archidamus II, and Leotychides (qq.v.). See also AGIADS.

EURYPYLUS, in mythology, (1) son of Euaemon; leads a contingent to Troy (*Il.* 2. 736); takes part in several battle-scenes and is wounded; tended by Patroclus (11. 809 ff.). According to the local legend of Patrae (Paus. 7. 19. 6 ff.), after the war he looked into a chest which contained an image of Dionysus made by Hephaestus, and went mad. He was promised at Delphi a cure when he found a 'foreign sacrifice'. Coming to Patrae, he found human sacrifice practised there, which, according also to Delphi, was to stop when a foreign king brought a foreign god. Both oracles were thus fulfilled and the cult of Dionysus established there under the title of Aesymnetes (see J. Herbillon, *Les Cultes de Patras*, 1929). Some, however, made this Eurypylus son of Dexamenus. (2) Son of Telephus (q.v. 1) and Astyoche sister of Priam (q.v.). (3) Son of Poseidon, a Triton, who meets the Argonauts and gives one of them, Euphemus, a lump of earth as pledge of possession of part of Africa (Cyrene) (Pind. *Pyth.* 4. 20 ff., *Ap. Rhod.* 4. 1551 ff.). H. J. R.

EURYTION, in mythology, (1) Geryon's herdsman, see III RACLES. (2) A centaur (*Od.* 21. 295 ff.); getting drunk and misbehaving at Peirithous' wedding-feast, he began the quarrel between centaurs and men. (3) Brother of Pandarus (q.v.; Verg. *Aen.* 5. 495 ff.). (4) See PEI EUS.

EUSEBIUS of Caesarea (c. A.D. 260–340). Born in Palestine, Eusebius was trained in the tradition of Alexandrian Christian scholarship by Pamphilus, who died as a martyr in 310 during the Diocletianic persecution. Eusebius himself escaped. He became bishop of Caesarea (c. 314) and was a moderate supporter of Arius (c. 320). At the Council of Nicea he was exonerated from the

charge of heresy, vainly tried mediation, and ultimately signed the Nicene creed. He attended the council of Tyre in 335 which condemned Athanasius. He was in close touch with Constantine in whose honour he delivered an oration in 335 for the *tricennalia*. After Constantine's death he wrote a life—or rather a panegyric—of the Emperor, the authenticity of which has been disputed by some modern scholars. Diocletian's persecution and the transformation of the Roman Empire into a Christian kingdom by Constantine were the main sources of inspiration for Eusebius' historical and theological thought. He repudiated chiliastic expectations and had little sympathy for asceticism. He tried to demonstrate the superiority of the Bible over pagan philosophy and history, but showed himself well acquainted with the ways of Greek thought (as one would expect from an admirer of Origen) and attributed importance to pagan achievements as a preparation for Christianity. The coincidence of the *Pax Augusta* with the emergence of Christianity was to him providential. He used Hellenistic theories to justify Christian monarchy but went beyond them in regarding Constantine as the inheritor of the promise to Abraham. His *Præparatio Evangelica* (after 312?) and the later *Theophania* (extant in a Syriac translation and in Greek fragments) are attacks against Greek philosophy in which it is argued that at its best (especially Plato) Greek philosophy coincided with or derived from biblical doctrine. The *Demonstratio Evangelica* (of which little more than the first half is preserved) argues for the fulfilment of Hebrew prophecy in Christ. Commentaries on the Bible—of which those on Isaiah, the Psalms, Luke are partly extant in excerpts—buttressed the same interpretation.

In the line of the great Christian chronographers, Eusebius organized universal history in a brief chronicle accompanied by careful chronological tables from the time of Abraham's birth. The Greek original is lost, but an Armenian version, a Latin adaptation by St. Jerome (q.v.), and various Greek derivations have come down to us. Perhaps the most important work by Eusebius is the *Ecclesiastical History* from its origins. It has probably no precedent, though Eusebius was influenced by Flavius Josephus, the Acts of the martyrs, the biographies of Greek philosophers, and in general by the methods of Hellenistic erudition. The work in its present form ends with A.D. 324, but there were earlier editions. It is uncertain when it was published for the first time: 303 and 312 are possible dates. It was enlarged in successive editions to describe the reversal of the situation after the great Persecution and the triumph of the Church. Eusebius devoted a special pamphlet to the martyrs of Palestine (an enlarged version of which is preserved in the Syriac translation) and he wrote an attack *Against Hierocles* on the subject of the comparison between Christ and Apollonius of Tyana. His *Ecclesiastical History* was a model for all the later ecclesiastical histories, which imitated his characteristic method of quoting authorities and documents. Rufinus (q.v. 2) translated it into Latin and continued it up to A.D. 395.

All the works in Migne, *PG* xix–xxiv; most of them in better editions in the Berlin series of *Griechische Christliche Schriftsteller* (the ed. of the *Ecc. Hist.* by Ed. Schwartz, 1903–9, is one of the masterpieces of classical scholarship: it is accompanied by Th. Mommsen's ed. of Rufinus' translation). The *Ecc. Hist.* available in Greek and Engl. transl. in the Loeb series (K. Lake and J. E. L. Oulton, 1926–32). The commentary of the *Ecc. Hist.* by H. Valesius (1659) is still useful. The *Chronica* in the editions by A. Schoene (1866–75) and J. Karst (1911), who does not entirely replace Schoene. Text, Engl. transl. and comm. of *Præp. Evang.* by E. H. Gifford (1907). Engl. transl. of *Dem. Evang.* by W. J. Ferrar (1920). Engl. transl. of the life of Constantine and of the tricennal speech by E. C. Richardson in *Library of Nicene and Post-Nicene Fathers* 1 (1895). Text and Engl. transl. of the *Contra Hieroclem* in the Loeb series (F. C. Conybeare, 1912). E. Schwartz, *PW* vi (1907), 1370; H. Berkhof, *Die Theologie des Eusebius von C.* (1930); id. *Kirche und Kaiser* (1947); D. S. Wallace-Hadrill, *Eusebius of C.* (1960), with bibl., to be

supplemented by the most recent ed. of B. Altaner, *Patrologie*; J. Moreau, *Dict. Hist. Géogr. Eccles.* 15 (1963), 1437. For Eusebius as a historian R. Laqueur, *Eusebius als Historiker seiner Zeit* (1920); J. Sirinelli, *Les Vues historiques d'Eusèbe de Césarée durant la période préconcénienne* (1961); A. Momigliano, *The Conflict between Paganism and Christianity in the IVth cent.* (1963), 89 ff.; cf. also H. Zimmermann, 'Ecclesia als Objekt der Historiographie', *Sitzb. Österr. Ak.* 235, 4 (1960). Among the recent studies on the life of Constantine cf. F. Vittinghoff, *Rh. Mus.* 1953, 330 ff.; F. Scheidweiler, *Byz. Zeitschrift* 1956, 1 ff.; J. Moreau, *Ist.* 1955, 234 ff.; F. Winkelmann, *Die Textbezeugung der Vita C.* (1962); id. *Byz. Beiträge*, 1964, 91 ff. A. M.

EUSTATHIUS (12th c. A.D.), born and educated at Constantinople, was deacon at St. Sophia and taught rhetoric in the Patriarchal School until in 1174/5 he became Metropolitan of Thessalonica, in which position he continued till his death (c. 1194). His works of classical scholarship were written before 1175. Henceforward he devoted himself to the practical duties of his spiritual office and to combating the prevailing corruption of monastic life.

WORKS. (1) Classical. *Commentary on Pindar*, of which only the introduction survives; this gives information about lyric poetry (especially Pindar's) and Pindar's life, and shorter notes on the Olympian games and the pentathlon. The *Paraphrase of Dionysius Periegetes* has discursive scholia, valuable for citations from earlier geographers, historians, the complete Stephanus Byz., and the lost works of Arrian. The *Commentaries on Homer's Iliad and Odyssey* (*Ἰσακροβόλοι εἰς τὴν Ὀμήρου Ἰλιάδα* [*Ὀδύσσειαν*]) are a vast compilation, in which the *Iliad* commentary is twice as long as that on the *Odyssey*. They are evidently based on Eustathius' lectures. Prefaces deal with the differences between the poems and with the cultural importance of Homer. The notes discuss chiefly questions of language, mythology (interpreted allegorically), history, and geography. Their value consists particularly in the assemblage of material drawn from the old scholia and the lost writings of earlier scholars and lexicographers. His quotations from classical authors are taken mostly at second hand. He often illustrates a point by reference to the customs and observances of his own time.

(2) His other works include a history of the conquest of Thessalonica by the Normans; several polemics, e.g. the famous treatise *Inquiry into Monastic Life*; letters to the Emperor, church dignitaries, and others; speeches and addresses, homilies and tracts, some of which have historical value. Eustathius was the outstanding scholar and orator of his time, enthusiastic for the traditional learning, for the preservation of books, for sound principles of education, and for the moral reawakening of monasticism. He is regarded as a saint by the Orthodox Church, and portrayed in a fresco of c. 1320 in the church of the Virgin in Gračanica.

Commentaria ad Iliadem et Odysseam, G. Stallbaum (1825-30); T. L. F. Tafel, *Eustathii Metropolitae Thessalonicensis opuscula* (1872); Migne, *PG* cxxxv, cxxxvi; A. H. Berücksichtigung der Schriften des Eustathios* (Diss. Munich 1960). J. F. L.; R. B.

EUSTOCHIUS of Alexandria, physician, became a pupil of Plotinus in Plotinus' old age (Porph. *Plot.* 7) (prob. c. A.D. 265), and is said to have edited his master's works.

EUTHYCLEES, writer of (?) Old Comedy (Ath. 3, 124 b). We possess but two titles, *Ἀσώτοι* ἡ *Ἐπιστολή* and *Ἀπάλανθη*, the first of which looks more like Middle than Old Comedy.

FCG ii. 800; CAF i. 805.

EUTHYDEMUS (1) of Chios, Sophist, an older contemporary of Socrates. In the *Euthydemus* Plato presents him as a ridiculous figure. He has sometimes been thought to be unhistorical and merely a mask for Plato's criticism of Antisthenes. His historicity is proved by independent references by Aristotle; but Plato may have used him quite freely for the purpose of pillorying eristic views and arguments. W. D. R.

EUTHYDEMUS (2) I, originally from Magnesia ad Sipylum (c. 235-200 B.C.), probably a satrap of Diodotus II (q.v.), killed him and became king of Bactria-Sogdiana. He consolidated Bactria into a strong state. In 208 B.C. he was attacked by Antiochus III, who failed to subdue him. His kingdom included also Aria and Margiana. His coins are found in large numbers. On his gold and silver money his portrait occurs on the obverse and Heracles-seated-on-rock on the reverse. Some of his portraits are masterpieces of art.

A. K. Narain, *The Indo-Greeks* (1957).

A. K. N.

EUTHYDEMUS (3) II, (c. 200-190 B.C.), belonging to the family of Euthydemus I and Demetrius I, distinguished from his first namesake by his coins with Heracles-standing type, was probably a sub-king. He is one of the three Indo-Greeks who issued nickel coins.

A. K. Narain, *The Indo-Greeks* (1957).

A. K. N.

EUTHYMIDES (end of 6th c. B.C.), vase-painter in Athens, known from seven signatures on large red-figure vases, including Arming of Hector (Munich). He breaks with archaic conventions; his heavy figures show new studies of movement.

Beazley, *ARV²* 26.

T. B. L. W.

EUTHYMUS. Temesa in south Italy was haunted by the ghost of Polites (q.v.), a companion of Odysseus, whom the inhabitants had killed for raping a girl. It could be kept quiet only by giving it the prettiest girl in Temesa every year. One year, when the sacrifice was to be made, Euthymus, a notable boxer, said to be son of the river Caecinus, arrived, pitied and then loved the girl, encountered the ghost, and drove it off for ever (Paus. 6. 6. 4-11).

Nilsson, *GGR* 2. 183.

H. J. R.

EUTHYNA, the examination of accounts which every officer of the State underwent on expiry of his office, at Athens and generally elsewhere. It was primarily an examination into the handling of public money, by ten *logistai* (q.v.) at Athens. If the *logistai* were not satisfied, or if some qualified citizen brought a charge against a magistrate, they must bring the matter before a dicastery and preside at the trial. Even after discharge the magistrate was not entirely free; for thirty days after, ten *euthynoi*, chosen by lot by the *boule* from its own number, were prepared to examine any complaint, on a public or private matter, against an outgoing magistrate, and, if it was sound, brought it before a dicastery.

In democratic states the *euthyna*, though in the vast majority of cases a formality, was the most effective means for the control of the executive; and it put a powerful weapon into the hands of the sycophants (see SYKOPHANTAI).

Arist. *Ath. Pol.* ch. 48.

A. W. G.

EUTROPIUS (1), the historian, who took part in Julian's Persian campaign (A.D. 363) and was *magister memoriae* of Valens, published a survey of Roman history (*Breviarium ab urbe condita*) in ten books. Beginning with Romulus, he reached the Sullan Civil War in book 5,

Caesar's death in book 6, and covered the Empire to Jovian's death (A.D. 364) in books 7-10. The subject-matter for the Republic is based upon the Epitome of Livy, for the Empire upon the end of the Epitome, an expanded adaptation of Suetonius, and an 'Imperial History', closing with personal knowledge of events. The work is short, but well balanced, showing good judgement and impartiality. It was translated into Greek by Paenius about 380, adapted into Greek by Capito of Lycia, and used by Hieronymus (Jerome), Orosius, Isidore, and Paulus Diaconus.

EDITIONS: H. Droysen (ed. minor 1878; ed. maior 1879); C. Wagener (1884); F. Rühl (1887); W. Pirogoff, *De Eutropii breviana A.C. indole ac fontibus* (1873); M. Galdi, *L'epitome nella lett. latina* (1922); A. Momigliano, *Conflict between Paganism and Christianity in the fourth century* (1963), 86. A. H. McLD.

EUTROPIUS (2), minister of the Emperor Arcadius (q.v. 2) and a eunuch, he was the most influential man in the East from A.D. 395 to 399, when he became consul, the first eunuch to hold the office. In that year his political rivals overthrew him and banished him to Cyprus. The poet Claudian wrote vigorously against him. E A T.

EUTYCHES (6th c. A.D.), author of an *Ars de verbo* in two books (ed. Keil, *Gramm. Lat.* v. 447-89) and of a treatise *De aspiratione* (now incorporated in the *De orthographia* of Cassiodorus; ed. Keil, *Gramm. Lat.* vii. 199-202).

Schanz-Hosius, § 1116.

EUTYCHIDES (early 3rd c. B.C.), sculptor and painter of Sicyon, pupil of Lysippus.

WORKS: (1) Statue of Timosthenes, a boy victor at Olympia (2) Tyche of Antioch. Tyche seated, supported by the river god Orontes and crowned by Seleucus and Antiochus. Many copies of Tyche and Orontes have survived, the best probably the marble group in the Vatican (Winter, *KB* 340. 1). The bold composition is Lysippan; the drapery has a new realism. The original of a seated girl in the Conservatori (Winter, *KB* 371. 4) is ascribed to Eutychides because of its likeness in composition. (3) Eurotas. A copy has been recognized in a river-god in the Vatican (Winter, *KB* 340. 2). (4) Dionysus, belonging to Asinius Pollio.

Overbeck, 1516, 1530-6; Lippold, *Griech. Plastik* 206; Bieher, *Sculpt. Hellenist. Age* 40; T. Dohrn, *Die Tyche von Antiochia* (1963). T B L W.

EUTYCHIUS PROCULUS (2nd c. A.D.), from Sicca, a teacher of Marcus Aurelius and author of (lost) grammatical works.

Cf. Schanz-Hosius, § 606. 7.

EUXENIDES, mentioned by the *Suda* as an Athenian writer of comedy contemporaneous with Epicharmus.

EUXINE SEA was the Greek name for the Black Sea. The name is euphemistic, and some authors (Pindar, Euripides) call it *Ἰσθμικὸς*. This sea apparently remained closed to traffic from the Aegean in prehistoric times, and the details of the Argonaut story may have been added at quite a late date. The Euxine was opened up in the seventh century by Milesians and other Ionian Greeks; by 600 it had become ringed with Greek settlements (see COLONIZATION, GREEK), and it remained a Greek lake until the Middle Ages. The earliest surviving description of the Euxine Sea is by Herodotus, who had personal knowledge of its northern coasts and gave a fairly accurate account of it, though he greatly overestimated its length. A more detailed description of the south coast is contained in the geographical work attributed to Scylax (c. 340 B.C.). An excellent survey of the whole

coast was written by Arrian in the days of Hadrian; a later 'Periplus of the Euxine Sea' is an extract from this work and from other Greek geographies.

Herodotus, bk. 4, esp. chs. 85-86; Scylax, chs. 67-92; Arrian, *Periplus Maris Euxini*; Ps.-Arrian, with same title. The last three works in *IGM* 1.

M. C.

EVADNE (Ἐὐάνη), in mythology, (1) a daughter of Poseidon, who became by Apollo mother of Iamus, ancestor of the prophetic clan of the lamidae in Olympia (Pind. *Ol.* 6. 29 ff., see Wilamowitz, *Ilyllos*, 178). (2) Daughter of Iphis and wife of Capaneus, one of the Seven against Thebes. She burned herself on his funeral pyre (Eur. *Supp.* 980 ff.).

H J R.

EVAGORAS (Εὐαγόρας, c. 435-374/3 B.C.), a member of the Teucrid house, the traditional rulers of Cyprian Salamis. Exiled during his youth, which fell in a period of Phoenician domination, he gathered some fifty followers at Soli in Cilicia, and with their aid established himself as ruler of Salamis in 411. His subsequent policy aimed at strengthening Hellenism in Cyprus by co-operation with Athens, and his court became a centre for Athenian émigrés, of whom Conon was the most distinguished. A clash with Persia was ultimately inevitable, but he postponed the issue by assisting in the revival of Persian sea-power culminating in the triumph of Cnidus. War finally came in 390 and dragged on for ten years. In alliance with Akoris of Egypt, Evagoras at first more than held his own. He not only extended his rule over the central cities of Cilicia, but also captured Tyre and dominated Phoenicia. In 382 Persia mobilized an overwhelming armament. Evagoras lost control of the sea at Citium in 381, and was forced to sue for peace, obtaining not unfavourable terms through dissensions among the Persian commanders. In 374 he was assassinated in a palace intrigue.

K. Spyridukis, *Evagoras I von Salamis* (1935).

D E. W. W.

EVAGRIUS SCHOLASTICUS, c. A.D. 536-c. 600, wrote a Church History from 431 to 594, which is the only continuous narrative of the period. Credulous but honest, he used good sources, both ecclesiastical and secular.

Ed. J. Bidez and L. Paltmentier (1898).

H C.

EVANDER (Εὐάνδρος), in Greece a minor god or daemon, belonging to the circle of Pan and worshipped in Arcadia, especially at Palantium, where he had a temple; in Italy connected with the worship of Faunus (identified with Pan) and regarded as the first settler at Rome. According to tradition he was the son of Hermes and of a nymph, daughter of the river-god Iadon, known as Themis and identified in Italy with the prophetic goddess Carmenta (or Carmentis). Through Atlas, grandfather of Hermes, he was connected with the Trojan Dardanus (Verg. *Aen.* 8. 134-7). A more human genealogy made him the son of Echeneus of Tegea, whose grandfather was Pallas (q.v. 2). As a boy he is said to have welcomed Priam and Anchises in Arcadia and conducted them to the city of Pheneos (*Aen.* 8. 165). He left Arcadia owing either to the hostility of Argos or to a famine, and reaching Italy landed on the left bank of the Tiber and made a settlement on the neighbouring hill, which he called after his native city (or his grandfather) Pallanteum (*Aen.* 8. 54), afterwards the Collis Palatinus. He instituted there the worship of Faunus (Pan Lycaeus) and established the Lupercalia (q.v.; Ov. *Fasti* 2. 279 ff.). According to Virgil, Hercules visited him and slew the monster Cacus, who had stolen his cattle; Evander in memory established the cult of Hercules at the Ara Maxima (*Aen.* 8. 185-275; Livy 1. 7). Aeneas, on the outbreak of war against the Latins, made

his way up the Tiber and appealed to Evander for aid. Evander welcomed him as a kinsman, conducted him over the site of the future Rome, and sent back with him his own son Pallas, who was subsequently slain in battle by Turnus (*Aen.* 10). Evander was thus used by the Romans to supply a legendary connexion between Greece and Rome and an aetiological explanation of place-names and cults. C. B.

EVOCATIO. Gods, being in a sense the highest class of citizens, are sometimes thought of as conquered when their city is taken (*Verg. Aen.* 1. 68 = 8. 11, 'uictos penatis', sc. of Troy), but more commonly (as Aesch. *Sept.* 218, on which see Groeneboom; *Verg. Aen.* 2. 351 f.) as leaving it. It was therefore not unnatural to hasten the fall of a city by inducing its gods to leave it, especially that god which particularly protected it. Thus the Romans did by promising the deity a cult in Rome at least as good as the one given by the city in question (Pliny, *HN* 28. 18). The formula of evocation is given by Macrobius, *Sat.* 3. 9. 7-8. The only instance recorded is the evoking of Juno Regina from Veii (*Livy.* 5. 21 ff.), if that of Juno from Carthage in 146 B.C. (Servius, *Aen.* 12. 841) be rejected.

Wissowa, *RR* 383 and note 7. W. Waide Fowler, *Rel. Exper.* 206; Latte, *RR* 125. V. Bananoff, *Evocatio* (Paris, 1947). H. J. R.

EXECIAS (Ἐγκίας) (third quarter of 6th c. B.C.), potter and vase-painter in Athens, known from eleven signatures (two vases are inscribed 'Execias painted and made'). Painted amphorae, calyx craters, cups, pinakes. Note particularly Achilles and Ajax dicing (Vatican), death of Ajax (Boulogne), both excellent compositions showing a psychological insight unique in black-figure.

Beazley, *ABV* 143.

T. B. L. W.

EXEGETES (ἐξηγητής), an interpreter or expounder, usually of sacred lore. Herodotus (1. 78. 2) gives this title to the college of diviners at the Telmessian oracle in Lycia. The Athenians traditionally considered Apollo Pythius their *exegetes*. From c. 400 B.C., if not earlier, Athens had official *exegetai*, expounders of the *patria*, the sacred and ancestral laws. The evidence about their numbers and functions is unclear and disputed. There were (1) at least one *exegetes* elected by the Demos from the Eupatridae; (2) at least one *exegetes* chosen by the Pythia, called *exegetes Pythochrestos*; (3) at least two *exegetai* of the Eumolpidae, who expounded Eleusinian *sacra*. The Athenian *exegetai* were generally concerned with the unwritten sacred law, but they often pronounced on secular and domestic questions (e.g. duties and obligations) untouched by statutes and of possible religious implications. Other cities too had *exegetai*, official or unofficial.

FABIANUS PAPIRIUS, a philosopher of the older school (*Sen. Dial.* 10. 10), pupil of the Elder Sextius and of Blandus, taught the Younger Seneca. His declamations are copiously illustrated in *Sen. Controv.* book 2: cf. *praef.* 4-5.

FABIUS (1, *PW* 48) **AMBUSTUS**, QUINTUS, was *tribunus militum consulari potestate* in 391 B.C. Another tradition assigned his office to 390 and made him responsible for the Gallic attack on Rome, because when sent as ambassador to Clusium he had treacherously murdered a Gallic chief. Thanks to the authority of his father or to his popularity among the plebeians, he had escaped an

ANCIENT SOURCES, both literary and epigraphic are conveniently collected in J. H. Oliver, *The Athenian Expounders of the Sacred and Ancestral Law* (1950), 122 ff.

MODERN LITERATURE Oliver, op. cit.; Ph. Ehrmann, *De juris sacri interpretibus Atticis* (1908); A. Persson, *Die Exegeten und Delphi* (1918); K. von Fritz, *TAPA* 1940, 91 ff.; F. Jacoby, *Attika* (1940), ch. 1, H. Bloch, *AJP* 1953, 407 ff.

EXSILIUM. A Roman citizen or *peregrinus* being threatened by criminal proceedings on account of a capital crime could—even after their inception—leave Roman territory and escape to that of another State before a capital sentence was pronounced against him. This voluntary self-banishment, called *exsilium* (later the same term was used for indicating the banishment pronounced by a judgement in a criminal trial), was tolerated by the magistrates; in the last century of the Republic, however, it became a legal institution, when magistrates were strictly ordered to allow the condemned person time to escape before executing the capital sentence. Thus *exsilium* became a substitute for the death penalty. Its effect was to prohibit the return of the wrongdoer to Roman territory. After his escape a decree, more administrative than jurisdictional in character, pronounced by the *comitia* or a high magistrate, excluded him from all legal protection and threatened him with death in case of illicit return (*aquae et ignis interdictio*). In later times *exsilium* lost its strict technical meaning, being used not only by historians and orators, but even in some juridical texts (if they are not interpolated) indiscriminately for voluntary and involuntary emigration, for legally prescribed banishment, for escape before and after judgement, and generally for all categories of expulsion, from the mildest form of *relegatio* (q.v.) to the severest one of *deportatio*. Because of these different uses of the word we must consider in each case whether it refers to temporary or perpetual expulsion, whether or not it is followed by loss of citizenship, by confiscation (total or partial) of property, and so on. In its old technical sense *exsilium* was perpetual and general, without any gradation; it resulted in loss of citizenship and of all property. See RELEGATIO.

G. Crifo, *Ricerche sull' 'exsilium' nel periodo repubblicano* i (1961), V de Villa, *Studi Albertario* i (1953) A. II.

EXSUPERANTIUS (*PW* 2), IULIUS, in his *opusculum*, preserved in a Sallust MS., describes the Civil War of Marius and Sulla to the death of Sertorius. The dependence upon Sallust (*Jugurtha* and *Histories*) in subject-matter, without understanding of republican institutions or personalities, and in style, without feeling for phraseology, points to the fourth to fifth century A.D., when Sallust was in fashion.

Edited by C. Bursian (1868); G. Landgraf-C. Weyman, *Archiv für lat. Lex.* 1902, 561. A. H. McI

F

attempted patrician prosecution. This story was no doubt invented as an honourable explanation of the Roman defeat at the Alia. It may, however, be inferred from *Livy* (6. 1. 6-7) that the Roman military chiefs were actually prosecuted after the Celts had retired, although sudden death or suicide seems to have saved Fabius.

O. Hirschfeld, *Kl. Schr.* (1913), 269 ff.; Ed. Meyer, *Kl. Schr.* ii (1924), 312 ff.

FABIUS (2, *PW* 44) **AMBUSTUS**, MARCUS, consul 360, 356, and 354 B.C., *princeps senatus* and a patrician leader after the Gallic catastrophe, aimed at re-establishing patrician influence at home and at reasserting the power

of Rome over her neighbours. Successful against the Hernici (356 B.C.) and in 354 against the Tiburtini, over whom he triumphed, he was defeated by Tarquinii. As dictator in 351, he failed to prevent the readmission of the plebs to the consulate. The attempts in the traditional account to conceal or ignore his defeat in 354 demonstrate his authority and that of his family.

Beloch, *Röm. Gesch.* 352, 361 ff.

P. T.

FABIUS (3, *PW* 114) **MAXIMUS RULLIANUS**, QUINTUS, a hero of the Samnite Wars; consul 322, 310, 308, 297, 295 B.C., censor 304 (after 310 his colleague was always P. Decius Mus), dictator 315 (Diod. 19. 101 records a second, probably apocryphal, dictatorship in 313). He celebrated triumphs over Samnites, Etruscans, Gauls. Of the exploits attributed to Rullianus the following deserve mention: his Samnite victory (325), when the dictator Papirius Cursor apparently impeached him for fighting against orders; his defeat by Samnites at Lautulae (315); his Etruscan expedition, reputedly through the Ciminius Forest (310); his annihilation of the Samnite, Gallic, Etruscan coalition at Sentinum (295) (see EGNATIUS 1). The untrustworthy account of Rullianus in our principal source, Livy (books 8–11), whom details in Diodorus, Valerius Maximus, Frontinus, and others supplement, derives partly from Fabius Pictor but more from later annalists. It borrows incidents from the career of Rullianus' great-grandson, Fabius Cunctator; e.g. Rullianus–Papirius Cursor resemble Cunctator–Minucius; the censor Rullianus restricting the rabble to four city tribes suggests Cunctator confining freedmen to those tribes; Rullianus rescuing his son, the consul Fabius Gurgus (292) (see PONTIUS 1), anticipates Cunctator serving under his own son (213 B.C.).

E. T. Salmon, *Samnium and the Samnites* (1967), 220 ff. E. T. S.

FABIUS (4, *PW* 53) **BUTEO**, MARCUS (cos. 245 B.C.), censor 241, and *princeps senatus* from 214 if not from 220. His naval victory off Aegimurus and subsequent shipwreck are improbable. Probably he, not Fabius Cunctator, delivered the Roman ultimatum at Carthage in 218. As dictator he filled up the Senate after Cannae (216).

H. H. S.

FABIUS (5, *PW* 116) **MAXIMUS VERRUCOSUS**, **CUNCTATOR**, QUINTUS, consul I (233 B.C.), triumphed over the Ligurians and dedicated a temple to Honos; censor (230), consul II (228), dictator I between 221 and 219 (probably 221). He probably did not deliver the Roman ultimatum to Carthage (see **FABIUS** 4). After the disaster at Trasimene he was elected dictator II, but quarrelled with his *magister equitum*, Minucius (q.v. 2) Rufus. By religious observances he restored the people's morale and stated his policy of dogging Hannibal's heels and avoiding further pitched battles. He allowed Hannibal to ravage Campania unchecked and later at Callicula to cross the Apennines to Apulia, being duped by the Carthaginian advance at night behind a herd of oxen with burning faggots tied to their horns. Fabius' strategy of exhaustion, which was opposed by many Romans, was only justified as a temporary expedient, since there was yet no real reason to distrust the Roman legions. But when these were defeated at Cannae (216) Fabius' policy had to be continued and the abusive title Cunctator, the Delayer, now became an honour: 'unus homo nobis cunctando restituit rem' (Ennius, Vahlen, 370). As suffect consul III (215) in Campania Fabius covered the road to Rome, while Marcellus and Gracchus parried Hannibal's attacks. Presiding over the elections, he was re-elected consul IV (214) and helped to recover Casilinum. In 213 he served as legate to his inexperienced son, now consul. In 209 he was consul V and *princeps senatus*;

he recovered Tarentum through internal treachery. He strenuously opposed Scipio's determination to invade Africa (205), and died in 203. He was pontifex for twelve years, augur for sixty-two and exploited the political advantages of these priesthoods. A patrician of the older type, courageous, cautious, and unimaginative, Fabius inspired admiration rather than affection. Rightly called the Shield of Rome, he at length wore down Hannibal's strength: 'subsequendo coercuit' (*Elogium*). It was Scipio's bolder strategy which humbled Carthage—yet it was Fabius that had made its application possible. See also PUNIC WARS.

For Fabius' political position see Scullard, *Rom. Pol.*, index; F. Cassola, *I gruppi politici romani nel III sec. a. C.* (1962), chs. 6, 7 (on which see E. S. Staveley, *JRS* 1963, 185 ff.), J. E. A. Crake, *Phoenix* 1963, 123 ff. The attribution of a fragment of an *elogium* from Brundisium to Fabius (e.g. by G. Vitucci, *Riv. Fil.* 1953, 43 ff.) may be wrong (see, e.g., Broughton, *MRR* Suppl. 2). H. H. S.

FABIUS (6, *PW* 126) **PICTOR**, QUINTUS, Roman senator and historian, who took part in the Second Punic War, consulting the Delphic oracle after Cannae, wrote a History of Rome in Greek, the first of the senatorial Historians interpreting Roman institutions and policy to the Greek world. It treated the Greek association of Roman origins in Aeneas, set the foundation of the city in 748/7 B.C., and passed, probably in discursive fashion, to the Gallic and Punic Wars and his own times; his use of Diocles of Peparethus (Plut. *Rom.* 3; 8) is now disputed. Polybius, though criticizing his Roman bias (Polyb. 1. 14; 58; 3. 8–9), follows his authority. Dionysius and Livy cite him; Diodorus' use is uncertain. The Latin annals, if not a later adaptation, may belong to Ser. Fabius, the work *de iure pontificio* to Fabius Servilianus. Fabius' History, political in purpose, probably owed more to Hellenistic historiography than to the pontifical tradition, and it set the standard for senatorial history.

Peter, *HRRel* 12 (1914), lxix, 5, 112; *FGrH* III. C 845 ff. F. Leo, *Gesch. der röm. Lit.* 1 (1913), 85, Beloch, *Röm. Gesch.* 95; M. Gelzer, *Kl. Schr.* III (1904), 51 ff.; Wulliam, *Polybius* 1 27 ff.; A. Alföldi, *Early Rome and the Latins* (1965), esp. ch. 4. A. H. McD.

FABIUS (7, *PW* 100) **MAXIMUS AEMILIANUS**, QUINTUS (c. 186–130 B.C.), born of L. Aemilius Paullus and Papiria and adopted by the Fabii Maximi, accompanied Paullus to Greece in 168. Praetor in Sicily (149); consul (145), he consolidated the position against Viriathus in Spain (145–144). Legate at Numantia in 134/3, he died in 130. His career followed the rise of his brother, Scipio Aemilianus.

H. Simon, *Roms Kriege in Spanien 151–133 v. Chr.* (1962), see index. A. H. McD.

FABIUS (8, *PW* 110) **MAXIMUS (ALLOBROGICUS)**, QUINTUS, son of (7) and nephew of Scipio (q.v. 11), under whom he perhaps served as quaestor in Spain. As praetor (c. 124 B.C.) and proconsul he commanded in Spain, as consul 121 and proconsul in Transalpine Gaul (with Domitius, q.v. 2), triumphing c. 120 and building the first triumphal arch (*Fornix Fabianus*) in Rome. He may have been censor 108. The Fabii remained the chief patrons of the Allobroges. E. B.

FABIUS (9, *PW* 102) **MAXIMUS**, PAULLUS, son of Q. Fabius Maximus (cos. suff. 45 B.C.), owed his *praenomen* to his ancestor Paullus (2). An intimate friend of Augustus, he was consul in 11 B.C., proconsul of Asia, and *legatus Augusti* in Nearer Spain (3/2 B.C.). Rumour said that he accompanied Augustus on a secret visit to Agrippa (q.v. 4) Postumus in A.D. 14, and that his death, which followed shortly, was suicide, occasioned by the betrayal of the secret to Livia by his wife Marcia, daughter

of Philippus (6). Africanus Fabius Maximus (cos. 10 B.C.), named after Scipio (11), was his brother, and Paullus Fabius Persicus (cos. A.D. 34), probably his son.

Syme, *Rom. Rev.*, see index. For coin-portrait, M. Grant, *From Imperium to Auctoritas* (1946), 387. T. J. C.

FABIUS (10, *PW* 140) **RUSTICUS**, from Spain, was perhaps not a Roman senator. He wrote a History, whose prose style led Tacitus (*Agr.* 10. 3) to compare him to Livy. His work had won recognition before the end of Domitian's reign, but it is uncertain whether his unawareness that Britain was an island, which was demonstrated by Agricola's fleet in A.D. 84, indicates composition before 84. His work dealt with Nero's reign and possibly A.D. 69, but its limits are not known. He was hostile to Nero and praised his friend and patron Seneca. He is mentioned by Tacitus, but the extent to which his work was used directly or indirectly (via the Elder Pliny?) is controversial.

Peter, *HRR* ii, 112 f.

H H S.

FABIUS (11, *PW* 90) **IUSTUS**, **LUCIUS**, born c. A.D. 65, probably of Spanish or Narbonese origin, was a friend of the Younger Pliny and one of Trajan's generals; Tacitus dedicated his *Dialogus* to him. In 97 he probably commanded a legion, was cos. suff. in 102, perhaps held a military command in 106/7 (governor of Moesia or on Trajan's staff?), and c. 109 was governor of Syria.

R. Syme, *JRS* 1957, 131 ff.

H. H. S.

FABLE (αἶνος, μῦθος, λόγος, ἀπόλογος), a feature of the popular tradition of the Greek as of other races. It is typically an anecdote of animal life with a moralizing application; it may, however, be drawn from inanimate nature or directly from human experience, and it merges into the *chreia*, the aetiological myth, and the humorous anecdote. Theon, *Progygmn.* 3, defined a fable as λόγος ψευδὴς εἰκονίζων ἀλήθειαν. It is questionable whether Greek Fable is substantially indebted to that of any other race. Foreign sources are occasionally mentioned; e.g. Libya (Aesch. fr. 139), Egypt (Pl. *Phdr.* 275 b), Lydia (Callim. *POxy.* 1011), Sybaris (Ar. *Vesp.* 1259). Instances of its employment occur throughout Greek literature; among the earliest are Hesiod *Op.* 202 and Archilochus frs. 86 and 89; it is not found in Homer. The earlier popular type upon which writers drew appears to have been in prose form. By the end of the fifth century B.C. the body of native Fable was in general ascribed to Aesop, said to have been a slave in Samos in the sixth century (Hdt. 2. 134); his name is already familiar to Aristophanes and Plato. The earliest collection of Greek fables was probably the *Λόγων Αἰσωπείων συναγωγή* of Demetrius of Phalerum (Diog. Laert. 5. 80), presumably in prose. The earliest extant collection is that of Babrius (q.v.), in choliambic verse. In Hellenistic and later times the Fable was found useful in rhetorical training (Hermogenes *Προγυμνάσματα* ad int.), and further collections were made with this object, e.g. the *δεκαμυθία* of Nicostratus (*Suda*, Νικ.) in the second century A.D. The Fable so adapted reached its final form in the medieval collections associated with the name of Aesop, which survive in several recensions, the latest being edited by Maximus Planudes.

LATIN FABLE. As represented in Latin literature Fable is in general derivative from the Greek Aesopic form. It was well adapted for use in the *Satura*, especially in that of the Horatian type. Aulus Gellius (2. 29) cites part of an adaptation by Ennius of an Aesopic fable; Lucilius (988 Marx) uses another. Horace sometimes gives fables in *extenso* (*Sat.* 2. 6. 79 ff.; *Epist.* 1. 7. 29 ff.), sometimes merely alludes to them (*Sat.* 2. 3. 299; *Epist.*

1. 3. 19). The first extant Latin collection was in iambic verse, by Phaedrus (q.v. 4), a freedman of Augustus, who published his five books under Tiberius and Caligula. The MS. tradition is probably the result of selection; an Appendix of fables ascribed to Phaedrus is added. Phaedrus acknowledges his formal debt to Aesop, whilst seeking to improve upon him (4 *prol.* 11). The collection includes besides definitely Aesopic material much that is derived from the author's experience or imagination. He writes professedly (1 *prol.* 3) for entertainment and instruction; at the same time a desire for literary recognition is certainly a leading motive. He incurred the displeasure of Sejanus (3 *prol.* 41), no doubt on account of indiscreet allusions to contemporary events. He has been called a better story-teller than fabulist (Nisard); he is certainly at his best in anecdote, whilst his work lacks in general the peculiar genius of the best Greek Fable. His versification is adroit and finished; and in the terse and vigorous simplicity of his style he shows himself a pupil not unworthy of the preceding epoch. His diction is in general classical, but shows traces of contemporary tendencies. The Phaedrian collection was later paraphrased in prose under the title of *Romulus* (the 'Latin Aesop'). In the third century Titianus, of whose work nothing further is known, composed prose fables (Auson. *Ep.* 16 *praef.*); the extant collection of Avianus (4th or 5th c.), consisting of forty-two fables in elegiac verse, is of no particular literary merit. These later authors appear to have drawn principally on Babrius.

Hervieux, *Les Fables latines* (1893); O. Crusius, *PW* ii (Avian.), Editions (Gr. Aesop) K. Hausrath (Teubner, 1957-9); B. E. Perry, *Aesopica* (1952), (Babrius) W. G. Rutherford (1883), (Phaedr.) L. Müller (Teubner, 1903), J. P. Postgate (1919), (Babrius and Phaedr.) B. E. Perry (Loeb, 1965), (Avian.) A. Guaglianone (1958); (*Romulus*) G. Tiele (1910) W. M. E., R. B.

FABRI. In the early Roman army there were two separately organized centuries of *fabri*, or armourers. They were commanded by *praefecti*. By the time of Caesar, and probably much earlier, these separate centuries of *fabri* had ceased to exist, and this kind of technical work was done by skilled legionaries. The title of *praefectus fabrum* remained as a convenient designation for the A.D.C. to the general.

J. Suolahti, *The Junior Officers of the Roman Army in the Republican Period* (1955), 205 ff. G. R. W.

FABRICIUS (*PW* 9) **LUSCINUS**, **GAIUS**, hero of the war with Pyrrhus (q.v.), consul in 282, 278 B.C., censor in 275. He negotiated for Rome with Tarentum (284) and with Pyrrhus (280, 278). He rescued Thuri from Sabelian besiegers (282) and was twice awarded triumphs for his victories over Brutii, Lucani, Samnites, and Tarentines. His personality lies concealed under the rhetorical stories of his poverty, austerity, and incorruptibility; he rejected alike bribes from Pyrrhus and the proffered aid of would-be poisoners of Pyrrhus. Similar tales are told of the other plebeian hero M'. Curius Dentatus (q.v. 2), whom Cicero (cf. *Paradoxa* 50) constantly cites with Fabricius as a typical specimen of Roman virtue.

A. Pasverini, *Atheneum* 1947, 92 ff.; P. Lévêque, *Pyrrhos* (Paris, 1957); E. T. Salmon *Samnium and the Samnites* (1967), 255 ff. E. T. S.

FABULA (besides meaning 'story', 'talk', 'fable') was the general Latin term for 'play'; special types were *F. Atellana* (see *ATELLANA*); *crepidata*, possibly = *palhata* (*crepida* was a type of Greek shoe, worn with the *pallium*);

palliata, adaptation of Greek New Comedy; (*pallium* = Greek cloak); *praetexta(ta)*, serious drama on Roman historical subjects (*praetexta* was the magistrate's toga); *riciniata*, a mime (see MIMUS II; *ricinium*, properly a woman's mantle, which could be used to veil the head; possibly this made it useful in the mime); *salutica*, libretto for pantomime (see PANTOMIMUS); *stataria*, 'quiet' play, opposed to *motoria*, 'bustling' play (cf. Ter. *Haut.* 36-40); *tabernaria*, 'private-house comedy' (?), apparently identical with *togata*; *togata*, Roman comedy, nearly always concerned with lower life; *trabeata*, a form of *togata* dealing with upper middle-class life, invented by Maecenas' freedman Melissus (the *trabea* was worn by the *equites*). W. B.

FADIUS GALLUS, MARCUS, friend of Cicero, who addresses to him *Fam.* 7. 23-7. In 45 B.C. he was among those who wrote anti-Caesarian eulogies of Cato. See ANTICATONES.

FAESULAE, modern *Fiesole*, an Etruscan town in the hills above Florence, probably on the site of an Iron Age sanctuary. The Orientalizing period is represented nearby by the Montagnola tomb at Quinto Fiorentino, which is similar to the Pietrera tumulus at Vetulonia (q.v.). The parallels at Populonia, Volaterrae, and Felsina (qq.v.) for the carved stone funerary stelae (c. 520-470 B.C.) of Faesulae draw attention to the importance of its position as a point of contact with Etruria Padana. The best archaeological evidence for the town itself dates from the early third century B.C., the date of the town wall, the cemetery, and the temple. Extensive remains of the Roman baths are also visible. Faesulae favoured Rome in the Second Punic War but in the Social War was defeated by Cato (q.v. 3). It subsequently became a *colonia* for Sulla's veterans; this led to unrest among the expropriated landowners as demonstrated in the course of the Catilinarian conspiracy.

M. Lombardi, *Faesulae* (Rome, 1941); A. de Agostino, *Fiesole* (Rome, 1949); G. Maetzel, *Stud. Etr.* 1955 6, 237 ff.; id. and G. Caputo, *Ibid.* 1959, 41 ff.; *Not. Scav.* 1961, 52 ff.; Scullard, *Etr. Cities* 168 ff. D. W. R. R.

FALERINUS AGER, a section of Campania (q.v.), centring on modern *Carinola*, between the Mons Massicus and the Volturnus taken by Rome from Capua (138 B.C. or later) and distributed among Roman citizens (Livy 8. 11. 22; 9. 41). Its exact extent and the origin of its name are alike uncertain. Its celebrated wine was already deteriorating in Pliny's day (*IIN* 14. 62).

E. T. S.

FALISCANS, the Early Iron Age inhabitants of the territory between Monte Cimino and the Tiber, and northern neighbours of Veii and of the closely related peoples of Capena, south and east Mt. Soracte. Their principal city was Falerii Veteres (*Civita Castellana*). In 241 B.C. the Romans captured and destroyed Falerii, transplanting its inhabitants to a new site, Falerii Novi, 3 miles to the west, where they remained throughout the Roman period, migrating once more to their old homes in the early Middle Ages. Though culturally and politically under strong Etruscan influence, the original Faliscan settlers were an independent branch of the same Umbrian peoples as the Villanovans and the Latins. They spoke and wrote an Indo-European language closely akin to Latin. The contents of the Faliscan cemeteries are now in the Villa Giulia Museum in Rome, together with a fine series of architectural terracottas from the temples of Falerii Veteres. The latter included the famous shrine of

Juno Curitis, described by Ovid (*Am.* 3. 13. 1 ff.), one of whose wives was of Faliscan origin.

W. Deecke, *Die Falisker* (1888); *Mon. Ant.* 1894; M. W. Frederiksen and J. B. Ward-Perkins, *PBSR* 1957, 67 ff. J. B. W.-P.

FANNIUS (PW 7), GAIUS (cos. 122 B.C.), the Gracchan annalist, son-in-law of Laelius and pupil of Panactius, served at Carthage (146 B.C.) and in Spain (141), and became tribune (142?), praetor (126?), and consul (122), opposing C. Gracchus' Italian legislation in a celebrated speech (*Cic. Brut.* 26. 99-100). He wrote a History, perhaps from the origins of Rome, but probably of his own times (this depends on the date of the *Drepana* reference of fr. 3). He included speeches verbatim in his narrative, like Cato, and portrayed contemporary personalities. His work was authoritative, recognized by Cicero, Sallust, who praised its *veritas*, and Brutus.

Peter, *IRREL* 2, xcxi, 130; P. Fracasso, *Opusc.* ii (1957), 103, 119; Broughton, *MRR* 1 519, n. 2. A. H. McD.

FANUM FORTUNAE, modern *Fano*, near the mouth of the Metaurus (q.v.) in Umbria: important highway junction, where the Via Flaminia (q.v.) reached the Adriatic. Named after a Temple of Fortune, it also contained Vitruvius' celebrated basilica (*Vitr.* 5. 1. 6). Neither has survived, but the Arch of Augustus (who made Fanum a *colonia*) is intact. E. T. S.

FASCES were bundles of rods (*virgae*), customarily made of elm or birch and bound together by red thongs. Introduced to Rome from Etruria during the late monarchy, they symbolized the tenure of *imperium* and were carried by an equal number of lictors (q.v.) in the fore of all Roman officials who held an active power of command. Originally axes were attached to the *fasces*, but from the early Republic these were removed within the city boundary—no doubt as an act of deference to the body which was the source of magisterial authority (compare the custom of dipping the *fasces* before the people). Only the lictors of dictators continued to carry axes in Rome. The *fasces* of the Emperors and of victorious republican generals were decked with laurel. The basic number of *fasces*, to which were entitled the king, the consul, and the promagistrate of consular rank, was twelve. Other magistrates received such a number as corresponded with the relative strength of their authority—praetors six, dictators and perhaps those with provincial *imperium maius* twenty-four. *Fasces* fewer than six were given to those who had a delegated *imperium*—e.g. five to the legates responsible to the emperor for the management of the imperial provinces. The *insignia* carried by lictors were of several types—e.g. bundles of *bacilli* when they attended municipal magistrates, some form of dummy rods when they attended the Roman consul who did not have the turn of power—but the generic term *fasces* appears to have been reserved to denote the traditional bundles of *virgae*.

Mommsen, *Röm. Staatsr.* 2, 373 ff.; K. Henz-Vogel, *Sav. Zeitschr.* 1950, 62 ff.; E. S. Staveley, *Hist.* 1903, 438 ff. E. S. S.

FASTI, the old calendar of *dies fasti* and *dies nefasti* for legal and public business, which received definite publication by Cn. Flavius in 304 B.C. (*Livy* 9. 46. 5), came to cover also lists of eponymous magistrates (*fasti consulares*), records of triumphs (*fasti triumphales*), and priestly lists (*fasti sacerdotales*). We know of the sacral calendars of Fulvius Nobilior (189 B.C.) and Verrius Flaccus (at Praeneste), and have fragments of the pre-Julian calendar of Antium (c. 70 B.C.) and twenty calendars from the close of the Republic to Claudius; also *fasti* of the Feriae Latinae and two rustic *menologia*, and in book-form the calendar of A.D. 354, the *fasti Idaciani*, and the *Chronicon*

Paschale. Of *fasti consulares* we have the exemplar of Antium (c. 70 B.C.) and the *fasti Capitolini*, which were set up on or near the new Regia (q.v.) of 36 B.C. and then continued to A.D. 13; the *ludi saeculares* were added, until A.D. 88. *Fasti triumphales* appear in the fragments of Tolentino and Urbisaglia, and also from the Regia, where a list from Romulus to 19 B.C. was added about 12 B.C., presumably by Augustus as Pontifex Maximus.

The authenticity of the *fasti* is now scarcely in doubt, but they were subject to systematic editing, even before the work of Verrius Flaccus and Atticus. On archaeological evidence it is argued that the consular names down to c. 450 B.C. simply represent eponymous magistrates still under the kings. The case is yet unproven, but the reconstruction for the fifth century B.C. was necessarily speculative, perhaps politically tendentious; it was sound in its main lines for the fourth century, and from c. 300 B.C. appears consistently accurate, presumably using full regular records. This suggests that the inclusion of magistrates' names and cult notices followed directly on the Flavian publication, and may be associated with the *tabula pontificum* (q.v.).

Rom.* (1920-3); *I fasti triumphali del popolo Romano* (1930), Beloch, *Röm. Geschichte*, 1 ff.; K. Hanell, *Das altröm. eponyme Amt* (1946); E. Gjerstad, *Opusc. Romana* iii (1960), 99 ff.; cf. P. Fraccaro, *JRS* 1957, 59 ff.; A. K. Michels, *The Calendar of the Roman Republic* (U.S.A. 1967). A. H. McD.

FASTING (*νηστεία*), in the sense of abstinence from all food for a stated time, such as a day, is very rare in classical religions, both Greek and Roman. There is, for instance, no evidence whatever that anyone, priest or layman, was expected to come fasting to a sacrificial meal such as normally followed the killing of a victim. For Greece, however, we may cite two well-known instances. At the Thesmophoria the second day was called Nesteia, at all events at Athens (cf. *ATTIC CULTS AND MYTHS*), because, as it would appear, the women conducting the rite took no food then; there was a day at Taras (Tarentum) having the same name (cf. Aelian, *VH* 5. 20, who gives an aetiological story not to be taken too seriously); it probably was part of some rite of Demeter or a similar deity. In like manner, the *ieiunium Cereris* at Rome (Livy 36. 37. 4-5) was instituted by advice of the Sibylline Books, and therefore belongs to the Greek, not the native cult of that goddess. The other outstanding example of a ritual fast in Greece is, like the former, connected with the cult of Demeter. The Eleusinian formula in Clem. Al. *Protr.* 2. 21. 2 (p. 16. 18 Stählin) specifies that the initiate had fasted before drinking the *kykeōn*. Details are, however, lacking. Various statements to the effect that some person would not eat (e.g. Achilles after the death of Patroclus, *Il.* 19. 303 ff.; the beasts after the death of Daphnis, when they show human grief, Verg. *Ecl.* 5. 25-26) should not, therefore, without further proof, be taken to imply ritual fasting. The general prescription of light diet, that the body might hinder the soul as little as possible, for those engaged in divination, especially by dreams, extended to actual fasting in some cases, to judge from Tert. *De Anim.* 48.

The later mystery-cults, on the other hand, seem to have used ritual fasting quite commonly, e.g. that of Attis (Sallustius, *De dis et mundo* iv, p. 8. 22 Nock). It is to be remembered that they are not Greek but Oriental in origin. The many prescriptions of fasting in the use of magic (q.v.) are not all evidence for any prolonged abstinence; for example, the application of the remedy in Pliny, *HN* 26. 93 (the touch of a naked girl's hand). She should do it *ieiuna ieiuno*, but this condition is satisfied if the ceremony is carried out before operator or patient has breakfasted. However, some

examples of real fasting, extending on occasion over more than one day, are to be found (see Ziehen, loc. cit. *infra*, 94. 43 ff.).

What might be called partial fasting, i.e. abstinence during a certain period or for the whole of life from some specified food or class of foods, is common enough. The best-known examples are the vegetarian diets of the Orphics (see ORPHISM) and Pythagoreans (see PYTHAGORAS 1; also J. Haussleiter, *Der Vegetarismus in der Antike*, 1935), but many others exist, as the food-taboos of the *flamen Dialis* at Rome (he might not, e.g., eat beans, Gellius 10. 15. 12) and the very curious restriction on the priestess of Athena Polias at Athens, who might not eat green cheese unless it was imported (Strabo 9. 1. 11).

L. Ziehen in *PW* xvii. 88 ff. P. R. Arbesmann, *Das Fasten bei den Griechen und Römern, Religionsgeschichtliche Versuche und Vorarbeiten*, ed. A. Dieterich et al., xxi. 1 (1929). II. J. R.

FATE. The words for fate in Greek and Latin are all transparent metaphors: the earliest of them, *moira* and *aisa*, mean 'share', 'portion', and, as abstractions denoting, in the first instance, the distinctive events of a man's life, they belong to a very naïve outlook, which stops short of both logic and religion. One's share is above all else death; as such *moira* may be either a fact of nature, a special destiny, an outcome of divine anger or of divine decree, or all of these together, as in Achilles' angry and inconsequent reply to Thetis at *Il.* 18. 115-21. *Moira* consoles, it does not enlighten; and talk of *moira* is more congenial to the epic heroes than to their poet, who dispels the certainty of fate with the scales of Zeus, in which are weighed the 'dooms' (*keres*) of opposing parties. In the epic only a sudden reversal, not the sum of life, comes from fate; a hero does not regard his rank and privileges as *moira*. Of course, one's 'share' may also signify, not fate, but what one deserves, as when something threatens to happen 'beyond' *aisa*. In the sense of 'fated share' or 'lot', however, *moira* and *aisa*, though sometimes referring to a favourable turn, always interrupt the normal course of things. It follows that *moira* is not one man's portion of a great whole, from which all are served; the working of fate does not conform to a general plan or dispensation, any more than does the gods' intervention to an orderly system of divine government. Twice in the epic *moira* has the quite exceptional meaning 'good fortune' (*Il.* 3. 182, where Agamemnon, as the great king, is 'born to good fortune'; *Od.* 20. 76), which has intruded, incongruously, from the language of little people, for whom *moira*, as later *tyche*, was the single factor of existence. In epic accounts of violent death *moira* is very often personified as a form of external compulsion, and called 'deadly', 'unspeakable'. In these contexts *moira* is easily heard as 'doom', 'destruction', a malevolent power like *ker*, so that the *Moirai* are enrolled by Hesiod among the offspring of Night, beside 'the *Keres* of pitiless vengeance'—not as powers of fate, but as a vague plurality of 'Dooms' (*Theog.* 217, 220-3. The dispensers of fate are usually the gods, less often the *Moirai* (*Il.* 24. 49), at first the individual lots personified, later members of a group whose names and number vary.

2. In the epic the gods spin, with a thread, the great realities—death, trouble, riches, homecoming—around a man, as if he were a spindle. From this image come the 'harsh Spinners', *Clothes* (*Od.* 7. 197), and the spinning *Moirai* (Callinus 1. 9 f.). Hesiod made the *Moirai*, like the *Horai*, a group of three, daughters of Zeus and Themis, with the names Clotho, Lachesis ('Getting-by-lot'), and Atropos ('Irresistible') (*Theog.* 904-6), but these three goddesses do not reappear together before Plato, who first describes them as occupied with a common task and singing in harmony (*Rep.* 10. 617 b-621 a). The gods' spinning takes place usually at the moment of birth, once

at marriage as well (*Od.* 4. 207), and so answers to the custom of bringing gifts to the newborn child and to the bridal pair. The 'gifts of the gods', an easy metaphor (*Il.* 3. 65), can also be real: Peleus received them at birth (*Il.* 24. 534), and at his wedding. The Moirai, bringing good fortune, attend the marriage of Peleus and Thetis (first on the François Vase), and later that of Zeus and Themis, and of Zeus and Hera. On these occasions the Moirai did not spin, but rather sang, a motif originating with the Muses; later they both spin and sing for Peleus (Catullus 64. 320-83). The Moirai may either finish their spinning at birth, so as to determine the life ahead—this leads to the burlesque fantasy of Seneca, who has Clotho produce from a little box the spindles of Claudius and his like-fated cronies (*Apoc.* 3)—or continue throughout a man's life, until all the thread has been drawn off the distaff, bringing death. They also weave, and a birth-goddess Rhapsod, the 'Stitcher', was worshipped at Athens. Many other images occur. The Chest of Cypselus showed, beside certain allegorical figures, two old women at work with mortar and pestle, no doubt brewing good and ill for mankind (Pausanias 5. 18. 2). 'We do not know the goal that fate (*potmos*) has marked for our running' (Pindar, *Nem.* 6. 6-7). Later the Fates write their decrees; these are kept in a huge archives office, according to Ovid (*Met.* 15. 858-15). In Greek art two, three, or four Moirai are shown together, mostly as maidens of pleasing appearance. In mythical context the Moirai are generally propitious deities. They are present at great beginnings: together with Time, at the founding of the Olympian Games by Heracles, and at the birth of Aphrodite and of Athena. According to Pindar Tyche, 'Success', was one of the Moirai, stronger than her sisters (Pausanias 7. 26. 8). Since their power is exerted especially at birth, they are sometimes viewed as deities of childbearing, and in this role they receive cult service. The Moirai and Eileuthia visit heroines giving birth, in order to assist or retard the labour; Lachesis 'the glorious midwife' delivers Asclepius (Isyllus 49 f.).

3. It is obvious that 'fate' itself cannot be worshipped. But as birth-goddesses—associated in a number of cults with powers like Artemis, the 'birthday nymphs', the 'Childrearer'—the Moirai can help in time of need, and votive records in this sense are fairly common: such, for example, is a parent's dedication to the 'Saviour Moirai', returning 'thanks for himself and his children'. Athenian brides offered cuttings from their hair to the Moirai, and women swore by them. The Moirai also promote the growth of crops, as their kinship with the Horai in Hesiod's *Theogony* may already intimate, and so receive sacrifice at seed-time, and a thank-offering after the harvest; in a cult legend of Arcadia they persuade Demeter to lay aside her grief and revive the crops (Pausanias 8. 42. 3).

4. Misfortune is often attributed, not to the gods of cult, but to a *daimon*, an animate power that is not identifiable, a lesser god it may be, one of a multitude who hover around us (Hes. *Op.* 122-6). A man owes his lot to a personal *daimon*; more explicitly, a *daimon* 'gets-by-her', and executes, the *moira* of each man ([Lysias] *Epit.* 78. Pl. *Phd.* 107 d; Aristotle *apud* Clement, *Strom.* 6. 6. 53); in the myth of Er Plato repudiates this widespread idea (*Rep.* 10. 617 e; cf. 629 d). The *daimon* himself was 'good' or 'evil', according as a man's affairs prospered or miscarried (Theognis 161-4); or each man has both a good and an evil *daimon* who accompany him through life. Against such fatalism speculative writers—Heraclitus, Epicharmus, Democritus, and Xenocrates—urged that a man's *daimon* was no more than his 'character', and Posidonius made the two *daimones* a parable of reason and emotion contending in the human soul. Although a man might worship his *daimon*, sometimes beside *tyche*, it

was more natural to view him as evil (Menander *apud* Clement, *Strom.* 5. 14. 130, an ethical protest) and to ascribe a hard fate to a cruel malevolence; the epic once says 'a hateful *daimon* attacked him', bringing sickness (*Od.* 5. 396), and the same feeling is vividly expressed in the stories of the menacing apparition that compelled Xerxes to attack Greece against better counsel (Herodotus 7. 12-18), and of Brutus' 'evil *daimon*' (Plut. *Brut.* 36 and 48).

5. At the outset fate and the gods exist side by side, without disturbing each other. The epic gods do not as a rule maintain order and justice among mankind, so why discriminate between their ways and fate? When the heroes give a determinist account of behaviour or suffering, they speak indifferently of *moira* and the gods. The gods taken collectively often assign *moira*, but the interference of Olympian gods acting from personal, and usually partisan, motives does not enter this kind of thinking. Of course, the poet can feign that a god's designs are crossed by a hero's fated share, and that the god gives way: thus Poseidon reluctantly sees that Odysseus' *aisa* is to escape death (*Od.* 5. 288 f.). Here fate is not a matter of conviction, but of poetic intent. It is, however, possible to believe that the Olympian gods are constrained, not indeed by Fate as a higher power, but by their own *moirai*. Even a god cannot escape his allotted portion, Croesus learned from the Delphic oracle (Herodotus 1. 91); the lesson is acknowledged, and exemplified, by the captive Prometheus (Aesch. *Prom.* 103-5). This is no more than a corollary of the traditional view that the Olympian gods, having arrived in a world already made, exercise dominion according to a scheme of 'shares' (*Il.* 15. 187-9) or of 'honours' (Hes. *Theog.* 112 f.). The gods of cult and folklore, on the other hand, are often superior to fate. Apollo, in consequence of his oracular function, was believed to have influence with the Moirai, persuading them to delay the fall of Sardis (Herodotus 1. 91), and also, with the help of wine, to prolong the life of Admetus (Aesch. *Eum.* 723-8). In later times various deities—Apollo, Asclepius, Isis, Serapis—had in the eyes of their worshippers the power of contravening fate.

6. Fate is a problem only for the supreme god, Zeus. In the epic the problem is never envisaged. When Zeus, as 'the steward of war for mankind' (*Il.* 19. 224), weighs two 'dooms' against each other, the image does not imply that he consults fate as a higher authority, or ratifies it as a lesser. The issue is momentarily in doubt, as the poet wishes, but Zeus remains master of the situation: a steward weighing goods does not inquire of fate, and neither does Zeus. Since Zeus is not presumed to will things for the best, it would be pointless to ask whether his will has free play. Here again the poet may imagine for dramatic purposes a conflict which did not exist in real belief: so Zeus proposes to defer the *moira* of a hero on the field (*Il.* 16. 431-43; 22. 167-81). Hesiod, Pindar, and Aeschylus, in their mythical expositions of divine power and goodness, ally the Moirai with the government of Zeus, and the doctrine led to worship of the Moirai linked with Zeus as *Moiragetes*, 'leader of the Moirai', which was introduced at Athens, along with other religious innovations of a moralizing bent, by the mid fifth century; similar cults were widely adopted thereafter.

7. After the fourth century fate was often viewed as a general scheme ruling the world at large, and circumscribing the whole life of the individual, an idea which reflects the influence of scientific determinism, working through astrology and popular philosophy, and which was expressed by the term *heimarmene*—properly meaning fate, but coloured by a false etymology, so that it was understood to signify the 'chain' of mechanical causation. In earlier usage a man received his 'appointed portion',

moira qualified as *heimarmene*, a cognate word, but detached from its literal sense and heard as 'fated'. The substantive *heimarmene*—first attested on a late fifth-century vase, which shows *Heimarmene* beside *Helen* and *Paris*—during the next century replaced *moira*, now felt to be old-fashioned and poetic, in living speech. The Stoics analysed *heimarmene*, which Zeno had made the active principle of matter, as 'the connexion and succession' of causes (Cic. *Div.* 1. 55). Thus it happened that irrational fate and rational determinism— which was otherwise called 'necessity', *ananke*—converged in *heimarmene* and became inseparable. A perfunctory synthesis of *heimarmene*, providence, and nature was the earliest and most popular form of Stoic doctrine, but Posidonius placed god, nature, and *heimarmene* at descending levels, appearing as mind, soul, and matter respectively; and as a vague dualism came to dominate speculative thinking, fate and matter were commonly identified, and opposed to god and spirit. Saviour religions, mystical and gnostic philosophy, and even astrology itself, promised to bring release from the oppressive power of fate.

8. The Latin *Parcae* were assimilated in all respects to the *Moirai*. But originally **parca*, from *parere*, was a common noun meaning 'childbearing': *Parca Maurtia*, inscribed at Lavinium about 300 B.C., is the 'childbearing given by Mars', the principal god of the community. *Parca* was differentiated as *Nona*, *Decuma*, *Morta*, bringing a nine-months' birth, a ten-months' birth, and a still-birth (*mors*) respectively, so that the three *Parcae* belonged to native Roman belief; it was no doubt their number, as well as their nature, that caused them to be identified with the *Moirai*. Livius Andronicus used *Morta* to render the epic *moira* meaning 'death'. In Latin fate is *fatum*, 'what is said', a term probably deriving from a belief in spoken magic (cf. Pliny, *HN* 28. 2. 14–16) rather than from prophecy. In another dedication at Lavinium the goddess of birth receives the epithet *fata*: she 'says', and thus fixes, the lot of the newborn child. In funerary epigrams the *Parcae* determine a person's fate by saying, *dicere*, or chanting, *canere*, *carmen*. *Fatus* is a personal deity, who could be either gracious or malign (Petronius 42, 71, 77), much like *daimon*. Dedications are also addressed to the *Fatae*, always plural, and a tomb-painting depicts, under the title *Fata divina*, three hooded figures, two women and a taller bearded man between them.

Nilsen, *GGR* 19. 361 ff., 'Das Schicksal'; W. C. Greene, *Moira: Fate, Good and Evil in Greek Thought* (1944); D. Amand, *Fatalisme et liberté dans l'antiquité grecque* (1945); W. Theiler, 'Tacitus und die antike Schicksalslehre', *Phyllobolia, Festschrift für P. v. der Mühl* (1945), 35 ff.

FAUNUS (from root of *favere*, 'kindly one', euphemistic), a *numen* anciently identified with Pan, whose festival (5 Dec., Hor. *Carm.* 3. 18. 10) was kept in the *pagi* with dancing and merry-making. He was primarily of the forests, and especially connected with the mysterious sounds heard in them, hence his titles (or identification with) *Fatuus* and *Fatuclus* (Servius on *Aen.* 6. 775), both meaning 'the speaker'. As a god of herdsmen he was further identified with *Inuus*, whose name the ancients connected with *inire* and interpreted as the fertilizer of cattle (ibid.). He had female counterparts, *Fauna* (cf. *BONA DEA*) and *Fatua* (Cornelius Labeo in Macrobius *Sat.* 1. 12. 21). A more formidable side is shown by his identification (Servius, ibid.) with *Incubus*, a *numen* either of nightmare or (Petron. *Sat.* 38. 8) of buried treasure. He was on occasion oracular (*Aen.* 7. 81 ff.; Dion. Hal. 5. 16. 2–3 and elsewhere). For his alleged connexion with the *Lupercalia* (q.v.), see H. J. Rose, *Mnemosyne* 1933, 386 ff.

Wisowa, *RK* 208 ff.; Latte, *RR* 83.

H. J. R.

FAUSTINA (1, *PW* s.v. *Annius* 120), ANNIA GALERIA, called 'the Elder', was daughter of M. Annii Verus (*cos. III* in A.D. 126) and aunt of M. Aurelius. She married the future Emperor Antoninus (q.v. 1) Pius c. 110 or later, and bore him two sons and two daughters, one of whom was Faustina (q.v. 2) 'the Younger'. Faustina the Elder became *Augusta* on the accession of Antoninus in 138. Later tradition questioned her character, but the pair lived in harmony until her death in 140/1, when Antoninus consecrated her and named a new alimentary charity *Puellae Faustinae* (see ALIMENTA) after her. She shared his commemoration in a temple in the Roman Forum.

Diz. Epigr. i. 944 ff.; Wegner, *Herrscherbild* u. 4 (1939); Strack, *Reichsprägung* in; B.M. Coins, *Rom. Emp.* iv; Nash, *Pict. Dict. Rome* i 26 ff. C. H. V. S.; M. H.

FAUSTINA (2, *PW* s.v. *Annius* 121), ANNIA GALERIA, called 'the Younger', was the younger daughter of Antoninus Pius and Faustina (1) the Elder (qq.v.); she was born c. A.D. 125–30. First betrothed by Hadrian's wish to L. Verus (q.v.), in 139 Antoninus betrothed her instead to her cousin M. Aurelius (q.v. 1), whom she married in 145. She became *Augusta* after her first child's birth in 146. Ancient authority groundlessly interpreted her lively temperament as a sign of faithless and disloyal character, not above collusion with Avidius (q.v. 3) Cassius. She accompanied Marcus during his northern campaign in 170–4 and—now *Mater Castrorum*—to the East in 175. There she died. Marcus, who apparently loved her genuinely, consecrated her and founded in her memory a second charity of *Puellae Faustinae* (see ALIMENTA).

Diz. Epigr. i. 508. See also under FAUSTINA (1) and AURELIUS (1). C. H. V. S.; M. H.

FAUSTULUS, probably a by-form of *Faunus* (q.v.; if a deity *fauet*, he is *faustus*), but humanized into a herdsman, husband of Acca (q.v.) Larentia, who found Romulus (q.v.) and Remus being suckled by the she-wolf. In a further rationalization his wife was the she-wolf herself (*lupa*, loose woman, prostitute). He reared the twins, and when Remus was brought before Numitor for an act of brigandage, told Romulus the whole story, whereupon the twins and their grandfather killed Amulius.

Livy 1. 4. 6 ff.

H. J. R.

FAVENTINUS, MARCUS CETIUS, made an abridgement of Vitruvius (q.v.) which Palladius and Isidorus used.

FAVONIUS (1 *PW* 1), MARCUS, of municipal birth, admirer and excessive imitator of Cato (q.v. 5), especially in rude forthrightness. He attacked Clodius (q.v. 1) in 61 B.C., and vehemently (but ineffectually) opposed Caesar, Pompey, and Crassus in the 50s. Aedile in 53, praetor (after a failure) in 49 and active on Pompey's side, he was pardoned after Pompey's death. Tired of civil war, he kept out of the plot against Caesar, but later joined the 'liberators', was captured at Philippi and executed.

E. B.

FAVONIUS (2) EULOGIUS, a rhetor from Carthage in Augustine's time, wrote a *Disputatio de somnio Scipionis*.

Ed. Holder (1901); R. E. van de Weddingen (Coll. Latomus, 1957); M. Siefert, *Beitr. z. Kritik und Erklärung des F. E.* (1959).

FAVORINUS (Φαβρινός), rhetor with philosophical interests of the period of the Second Sophistic. He was born at Arles (Arelate), a congenital eunuch, perhaps about the beginning of Domitian's reign, obtained his Greek education at Marseilles, and later may have heard Dio of Prusa at Rome. Two of the speeches attributed to Dio (Nos. 37 and 64) are almost certainly by Favorinus.

His speaking tours took him to Athens, Corinth, and Ionia, where he became the bitter rival of the rhetorician Polemo. He knew Plutarch and was the teacher of Herodes Atticus, Gellius, and Fronto. At Rome he moved in the circle of the Emperor Hadrian, was advanced to the rank of an *eques*, and held the office of a provincial high priest. About A.D. 130 he fell into disfavour, being supplanted by Polemo, and was exiled to Chios. Antoninus Pius let him return to Rome, where he recovered his status and influence and lived the rest of his life, dying around the middle of the second century.

Of his speeches, *Περὶ φυχῆς* and *Κορινθιακός* were autobiographical; but most were on general topics, e.g. *Περὶ τύχης* ('On Fate'), some with strongly sceptical implications. He also published two miscellanies, the earliest known examples of the type later produced by Aelian and Athenaeus, embodying the fruits of his reading: *Ἀπομνημονεύματα* ('Memoirs') and *Παντοδαπή ἱστορία* ('Miscellaneous History'). Numbers of his *sententiae* are found in florilegia. The titles of nearly thirty of his works are known. So far as the evidence shows, he wrote and spoke Greek by preference.

J. L. Maries, *De F. Arel. vita studiis scriptis* (Utrecht, 1853) (includes fragments no longer satisfactory); W. Schmid in *Phil. v. 2078* (best account of life); Zeller, *Phil. d. Gr. III. 25, 761*; *FlG* iii. 577 ff. (last fragments only); M. Norsa and G. Vitelli, *Il papirio vaticano greco II. Φαβριονος Περὶ φυχῆς*, 'Studi e Testi' 51 (1931); E. Mutschang, *Favorin von Arelate I. 'Texte und Kommentare'* 3, Berlin, 1963 (fragments of the miscellanies with introd. and comm.; part II to follow); Brink in *OCD*⁴, s.v., A. Battagazzi, *Favorino, Opere* (1966) H. S. L.

FEBRIS, the *numen* of fever (it is rash to assume that it was malaria, the early history of which is imperfectly known, see P. Fraccaro, *Studi Etruschi* 1928, 3 ff.). She had three temples in Rome alone (Valerius Maximus 2. 5. 6), in which *remedia* (amulets?) which had proved efficacious were placed. Dedications to her have been found in various parts of the Roman Empire (see Wis-sowa, *RE* 246), some of which call her Tertiana and Quartana, clearly referring to malaria. H. J. R.

FEDERAL STATES first appear in Greece in the fifth century B.C., were most numerous and influential in the Hellenistic age, and continued under Rome as local governments in parts of Greece and Asia Minor. Though their influence on the course of events was considerable, they are particularly important as one of the two chief instruments used by the Greeks for creating units larger than city-states, namely the *symmachia* (q.v.) and the federal State (*sympoliteia*, q.v.). Organizations of both types commonly are called leagues, but to differentiate, it may be well to call federal States confederacies. A distinguishing mark is that while the *symmachia* claimed to preserve the freedom of its members, the *sympoliteia* limited their freedom by the creation of a federal government. Hence the King's Peace led to the dissolution of the Boeotian and other federal States.

2. Federal States developed from tribal units (Boeotians, Arcadians, etc.), and so frequently, even in Roman imperial times, a federal State was called an *ethnos* instead of a *koinon*, and c. 300 B.C. the states of Greece were classified as *ethne* (federal States and tribal States) and *poleis* (*IG*² iv. 1. 68). *Koinon* and *ethnos* are not synonyms, *koinon* meaning 'commonwealth' and *ethnos* 'nation' as in the phrase, 'the *koinon* of the *ethnos* of the Phocians' (*IG* vii. 3426). In some tribes cities developed early, but did not cause the dissolution of the tribe, and such conditions in time led to the growth of federal States. In other tribes, e.g. the Aetolians, a looser ethnic organization was long retained and later transformed into a *sympoliteia*. In either case, if a powerful State was to be developed, it was necessary to overstep the ethnic boundary and incorporate units outside the tribe. This policy was not employed extensively before the third

century B.C., when it was used most successfully by the Achaeans. In most cases federal citizenship seems to have included civil rights in all cities of the confederacy but the rights to vote and hold office only in one.

3. From the very beginning oligarchic States seem to have been more ready than democratic States to adopt representative government, though it must be noted that information is so scanty as to make generalizations dangerous. There is extant a description of the oligarchic Boeotian Confederacy as it was in the early fourth century. The right to vote depended on a property qualification, apparently the hoplite census, and the local governments were uniform with one-fourth of the active citizens serving as the *boule* and the rest as the *ekklesia*. For federal purposes the country was divided into eleven parts. Thebes, with subject communities, controlled four; Orchomenus and Thespieae, together with smaller communities grouped with them, controlled two each; Tanagra, one; the other two districts each included three towns. Each of the eleven parts furnished one Boeotarch, sixty federal *bouleutai* and an unknown number of judges, supplied equal contributions to the federal treasury, and furnished 1,000 hoplites and 100 horsemen to the army. The other numbers are precise, those for the soldiers (obviously) approximate; undoubtedly all active citizens of military age could be called. The federal *boule* was the final authority and thus the federal government was representative. The Confederacy, founded about 447 B.C., was dissolved at the King's Peace. The later confederacy of the time of Epaminondas was democratic; it had Boeotarchs, and a primary assembly meeting at Thebes and dominated by the Thebans. The Arcadian Confederacy organized in 370 had a form of government that suggests democracy with a *boule*, a primary assembly called the Ten Thousand, and a single general as its chief executive. An inscription which mentions the *boule* also lists fifty *damorgoi* by cities showing an inequality of representation, thus suggesting, whatever was their relation to the *boule*, a system of representation in proportion to population also for this body.

4. The functioning and duties of the central government varied from State to State. The frequency with which the head of a confederacy was named general indicates that the federal government was concerned largely with foreign affairs. Apparently as many details as possible were left to the cities. There were federal treasurers and a treasury, but seldom taxes collected directly by federal authorities. Instead cities contributed their quotas, commonly on the ratio of their representation in the federal council. The amount collected varied according to the need, so that, when much booty was taken, the cities could hope for a reduction of their contributions. The federal secretaries must have been busy handling the many communications to the federal government from foreign and domestic sources. The judicial system varied. In Aetolia the *synedrion* seems to have been the only federal court, while for early Boeotia, Acarnania both early and late, and Lycia, a federal judiciary is clearly attested.

5. Whatever the constitutional form, the government of a federal State, through relatively greater activity of magistrates and council and less full attendance at meetings of the primary assembly, in practice functioned more nearly like a representative government than that of a normal city-state. The Boeotian Confederacy and many of the later confederacies took the step outright and dispensed with the primary assembly, which, however, was retained by the Aetolians as long as their Confederacy flourished and by the Achaeans to about 200 B.C. The Thessalian Confederacy, organized in 194 B.C., had as its chief organ of government a *synedrion* of over 300 members; each of the four Macedonian republics organized

in 167 B.C. had a *syndrion* consisting of elected representatives; and the Lycian Confederacy flourishing in the same period is said by Strabo to have had a *syndrion* in which the cities, depending on their size, each had one, two, or three votes. The Lycian inscriptions from imperial times at first surprise the reader by quoting decrees passed by an *ekklesia*, but closer study shows that this was itself a representative body.

6. Only a few of the better-known States have been mentioned. Notice also that, when dates have been given to a Confederacy, these apply only to the government described and do not exclude the existence of a confederacy with a different form of government at other times.

FELICITAS, a goddess of good luck, not heard of till the middle of the second century B.C., when L. Licinius Lucullus dedicated her temple on the Velabrum (see Platner-Ashby, 207); another was planned by Julius Caesar and erected after his death by M. Aemilius Lepidus where the Curia Hostilia had stood (*ibid.*). She is associated with Venus Victrix, Honos, and Virtus at Pompey's theatre (*Fast. Amit.* on 12 Aug.); with the Genius Publicus and Venus Victrix on the Capitol (*ibid.*, 9 Oct.); with the *numen Augusti* (*Fast. Praenest.* on 17 Jan.). Thereafter she is important in official cult under the emperors, appearing frequently on coins (*Felicitas saeculi* with figure of the goddess) and in addresses to the gods in dedications, etc., immediately after the Capitoline triad.

Wissowa, *RK* 266-7.

H. J. R.

FELIX, MARCUS ANTONIUS (*PW* 54), freedman of Antonia, Claudius' mother, was brother of Pallas (q.v. 3). Perhaps sent in A.D. 52 to Samaria with the rank of procurator during the trial of Ventidius Cumanus, he was soon appointed procurator of Judaea, where unrest increased during his administration. He was St. Paul's judge. Accused by the Jews of Caesarea, he was acquitted. He married (1) Drusilla, granddaughter of Antony and Cleopatra, and (2) Drusilla, daughter of Agrippa I. He was succeeded by Festus (q.v. 1) c. 60.

E. Schürer, *Geschichte des jüdischen Volkes* 14. 571 ff.; A. Momigliano, *Annali Scuola Normale Pisa* 1934, 388 ff. A. M.

FELSINA, modern *Bologna*, the most important of the Etruscan cities north of the Apennines, was established in the mid sixth century B.C. on the site of the flourishing Iron Age settlement that has given its name to the Villanovan culture (see VILLANOVA), and continued its function as an entrepôt for trade with northern Europe. The Certosa cemetery has produced the finest of a number of late-sixth-century bronze *situlae* decorated with *repoussé* figures, quantities of Greek pottery imported presumably via Spina and Adria (qq.v.), and a number of fifth-century funerary stelae, some of which bear the earliest representations of Gauls to be found in the Mediterranean world. The Roman colony of Bononia (q.v. 1) was founded in 189 B.C.

R.

FENESTELLA (52 B.C.-A.D. 19 or, possibly, 35 B.C.-A.D. 36), the antiquarian annalist, wrote a Roman history in at least twenty-two books, perhaps from the origins, certainly to 57 B.C.; the citations of Asconius reflect his special authority for the Ciceronian period. The fragments, which, however, may come also from works on constitutional and social antiquities, show his wide antiquarian interests and critical ability, in the Varroan tradition. The Elder Pliny used him, and an epitome was made. See SCHOLARSHIP, LATIN, IN ANTIQUITY.

Peter, *HRKl.* II. cix. 79. L. Mercklin, *De Fenestella* (1844). J. Poeth, *De Fenestella* (1849) A. H. McD.

FERENTINUM, modern *Ferentino*, town of the Hernici (q.v.), whose loyalty to Rome in 306 B.C. secured a measure of independence for it until 90 B.C. Its well-preserved walls, with polygonal lower and squared upper courses, are singularly interesting: the two styles may be coeval (1st c. B.C. for the citadel fortifications).

G. Lugli, *La tecnica edilizia romana* (1957), 127 ff.

E. T. S.

FERALIA, Roman All Souls' Day, 21 Feb., last of the *dies parentales* (beginning at noon on 13 Feb.), during which each household made offerings at the graves of its dead (*Ov. Fasti* 2. 533 ff.). It is marked NP in imperial calendars (cf. *DIES FASTI*), but F in the Fasti Antiaties; what public ritual, if any, was performed and whether any change in this respect took place under Augustus is unknown.

H. J. R.

FERIAE, the Latin term for a day of festival. The basic notion included not only the honouring of gods, but also the abstention from work. Hence, the phrase '*ferias observare*' used of treating work as taboo for ritual reasons. In late times there were recognized peculiar ceremonies for work done on *feriae*. Festivals could be of various kinds: some fixed by the regular calendar of the *Fasti* (*stativae*); others such as the *Feriae sementivae* dedicated to Tellus and Ceres were announced annually (*indictivae*). Movable festivals, which were held annually on days appointed by priests or magistrates, were known as *conceptivae*. Besides public festivals the period assigned to private ceremonial might be classed as *feriae*—e.g. the *denicales* or ten days of mourning.

Latte, *RR passim*; A. K. Michels, *The Calendar of the Roman Republic* (U.S.A. 1967), 69 ff., 130 ff. For *Feriae Latinae* see JUPITER 85.

H. W. P.

FERONIA (Fē-, Verg. *Aen.* 7. 800; Hor. *Sat.* 1. 5. 24; and elsewhere), an Italian goddess, officially received in Rome before 217 B.C. (*Livy* 22. 1. 18), and given a temple in the Campus Martius (*Fast. Arval.* on 13 Nov.). Her principal place of worship was the *lucus Capenatis*, later *lucus Feroniae* (q.v.), near Mt. Soracte (*Cato, Orig.* 1, fr. 26 Jordan; Verg. *Aen.* 7. 697; Strabo 5. 2. 9; Pliny, *HN* 3. 51). Her cult, however, is shown by inscriptional and other evidence to have been widely spread in central Italy (see Wissowa, *RK* 285 f.; Latte, *RR* 189). Of her functions and the etymology of her name, which may be Etruscan, nothing is known, and the ancients seem to have been equally uncertain, to judge by the variety of guesses recorded (Wissowa, *ibid.* 286). Strabo (*loc. cit.*) says that a ceremony of fire-walking was performed in her precinct, but this seems to be a confusion with the so-called Apollo of Soracte (see Verg. *Aen.* 11. 785 ff. and commentators there). Near Tarracina slaves were set free in her shrine (Servius on *Aen.* 8. 564); perhaps on Greek analogies.

Latte, *RR* 189 f.

H. J. R.

FESCENNINI (VERSUS), ribald wedding-songs (Catull. 61. 126-55); cf. the licentious verses sung by soldiers at triumphs. Ancient etymologies were: *Fescennium*, a town in Etruria, and *fascinum* (= witchcraft,

which the songs were supposed to avert). Similar verses were said to be exchanged at harvest-festivals between masked entertainers; such performances were thought to have been the origin of drama (q.v.). For a possible parallel see Hor. *Sat.* 1. 5. 51-70; but see *PW* s.v. 'Fescennini'. On ancient explanations of the origin of Roman drama, see C. O. Brink in *Entretiens Hardt* ix, 175 ff.

W. B.

FESTIVALS (Greek). A festival is a sacred rite repeated yearly or with regular intervals of a certain number of years (every eight, four, two years; in this case there is often a lesser celebration in the intervening years, and except for the Dionysiac orgia, the enlargement consists of games); it is celebrated by an assembly at a certain time and after the introduction of the calendar on a certain day or days, often at full moon. The Roman custom of *feriae conceptivae*, the day of which was fixed by the magistrate within certain limits, is not known in Greece. A remarkable circumstance is that most of the old festivals took place at full moon, generally on the twelfth day of the lunar month, except for those of Apollo which fell on his holy day, the seventh, and those of his mythological sister Artemis which fell on the day before. It is apparent that many rites are predeistic, i.e. magical rites efficient without the interference of any personal god, and only subsequently attached to the cult of a god. Sometimes a great god took possession of a festival which belonged to a lesser god—as happened with Apollo and the Hyacinthia, in which a preliminary sacrifice was offered to the hero Hyacinthus, in fact a pre-Greek god.

Aristotle remarks that in early times festivals chiefly took place after the harvesting of crops and fruits, and in fact a survey of the Greek festivals of early origin proves that most of them were agrarian. This corresponds to the old mode of life in which the people subsisted on the products of their own land, and to the fact that agrarian customs are bound up with the seasons and in consequence easily conform to a calendrical regulation. There is, therefore, much evidence for such festivals in the more backward regions of Greece. The old rites contained in them are very important for the history of Greek religion. Even at an early date people flocked together to a sanctuary at a given time. Their original purpose was to perform worship, but to this were added games, merry-making, and markets. Such festivals were called *panegyreis* and take place even in modern Greece in a manner very reminiscent of the old. The most famous of the ancient *panegyreis* are the great games, the Olympia, Pythia, etc. (qq.v.).

The state of things described above was already in an early time changed by town life. The cult was the concern of the State and its magistrates had charge of it. They performed the rites and arranged the festivals. Almost every god who was not too unimportant had his festival day on which the people went to his temple. Although old rites were carefully preserved, the procession and the sacrifice including the meal that followed became the most prominent parts of the festival, in which great pomp was displayed. The sixth century B.C., in which great temples were built, marked a great advance in this direction, especially due to the tyrants. The Athenian democracy developed this during its heyday; the lavish sacrifices were a means to humour the people. In early times the colonies sent embassies (*theopoi*: see *THEOROI*) to the festivals of the mother town, and the cities to the national games. The Athenians enjoined on their colonies and allies to send sacrificial animals, etc., to the Panathenaea and the Great Dionysia, and on these occasions displayed their glory to them. In the Hellenistic age it became very common for the

cities to send embassies to each others' festivals, especially to the games. New festivals were instituted, many in commemoration of political events, but these are uninteresting, comprising only processions, sacrifices, and games. These festivals were for a great part an expression of the political aspirations of the cities.

Nilsson, *Feste*; L. Deubner, *Attische Feste* (1932-59); P. Stengel, *Die griech. Kultusaltertümer* (1920), 190 ff. (including the games); Nilsson, *GGR* i. 826 ff. (the *panegyreis*). M. P. N.

FESTIVALS (Roman). See *FERIAE*.

FESTUS (1), PORCIUS (*PW* 36, a very full discussion (1953) of the chronological difficulties), succeeded Felix (q.v.) as a procurator of Judaea c. A.D. 60 (date very uncertain). He fought against the Sicarii and a pseudo-prophet and was involved in the controversy between the Jews and Agrippa II. He carried on the trial against St. Paul, whom he sent to Rome (Acts xxv-xxvi). He died in A.D. 62.

A. M.

FESTUS (2), SEXTUS POMPEIUS (late 2nd c. A.D.), scholar, epitomizer of the *De significatu verborum* of Verrius Flaccus (q.v. 8). Of his work (alphabetically arranged in twenty books) the first half is lost. Festus himself was epitomized in the eighth century by Paulus Diaconus. The standard edition (including Paulus) is that of W. M. Lindsay (1913) whose later edition in *Glossaria Latina* iv (93-467) incorporates Festus material gleaned from glossaries. See *SCHOLARSHIP, LATIN*.

Schanz-Hosius, § 341.

J. F. M.

FESTUS (3, *PW* 11), **RUFIVS**, *magister memoriae* under Valens, wrote a *Breviarium rerum gestarum populi Romani* from the origins to the accession of Valens. The first part described the conquest of the Roman provinces, the second the eastern wars from Sulla, especially the Parthian Wars. Dedicated to Valens, it appeared after the Gothic peace (A.D. 369), at the height of the Persian War. It represents ultimately the epitomized Livian tradition and a compendious imperial History.

Ed. W. Förster (1874), C. Wagener (1886); J. W. Eadie, *The Breviarium of Festus* (1907); A. Momigliano, *Conflict between Paganism and Christianity in Fourth Century* (1963), 95, 98. A. H. McD.

FETIALES, Roman priestly officials who conducted international relationships, as treaties and declarations of war. They were twenty (Varro ap. Non. 529), forming a *collegium* (Livy 36. 3. 7), variously said to have been founded by one or another of the kings; who its head was is not known, but it deliberated on questions affecting the state of war or peace (Varro, *ibid.*), though only in an advisory capacity, like all priestly *collegia*; the commonwealth decided what action should be taken.

Our chief informant as to their ritual is Livy. He states (1. 24. 4 ff.) that to make a treaty two *fetiales* were sent. One of these was the *uerbenarius* or *uerbenatus* (see Pliny, *HN* 22. 5; Varro ap. Non. 528), who carried herbs (*uerbenae*, *sagmina*) from the Arx; the other was the *pater patratus* (of doubtful meaning, most probably a 'fully-created father', i.e. not merely one by nature, but also formally appointed by the state). He, after the terms of the treaty had been read aloud in the presence of the other state's *fetiales*, pronounced a conditional curse on Rome if she were the first to break it, confirming this by killing a pig with a *lapis silex*, probably a neolithic implement, cf. JUPITER; STONES, SACRED. On occasion several pairs of *fetiales* might be sent (Livy 30. 43. 9).

If an injury were received from another state, the *pater patratus* crossed the border, first announcing, with his head veiled in a woollen garment (*filum*), who he was and what he came for, calling on Jupiter, *fas*, and the boundaries themselves to hear him and swearing to Jupiter that his errand was just. This formula was

several times repeated at various stages of the journey. If within thirty-three days satisfaction was not given, he formally denounced the offending nation to all the gods and returned to Rome. The Senate would then be consulted by the chief magistrate, and, if it voted for seeking satisfaction *iusto poque bello*, the *fetialis* went once more to the boundary, and there, after formally declaring a state of war in the presence of at least three adults, cast across it either an ordinary spear or a cornel stake sharpened and hardened in the fire (*hustam praestam sanguineam*; to translate the last word by 'bloody' is a many-times-refuted blunder) (Livy 1. 32. 5 ff.). In case of war with a distant nation, the spear was cast upon a piece of land near the *columna bellica* in Rome (see *BELLONA*), which by a legal fiction was considered hostile territory. This was first done in the war with Pyrrhus (Servius on *Aen.* 9. 53 (52)), and was still in use under Marcus Aurelius (Dio Cassius 71. 33. 3; see Frazer on *Ov. Fast.* 6. 206). Other functions of the *fetiales*, however, as the formal claim (*clargatio*) for satisfaction, described above, seem to have gone comparatively early out of use. Generally the office appears to have lapsed in the last century of the Republic and been revived by Augustus. (For changes by the end of the third century B.C. see F. W. Walbank, *CPhil.* 1949, 15 ff.) By a kind of pun, the origin of the *ius fetiale* was credited to the *Aequicoli* ('Plain-dwellers', misunderstood as 'cultivators of equity').

FIBULA (περόνη, πόρνη). The primitive brooch or fibula, of violin-bow form resembling the modern safety-pin, is found in late-Bronze-Age times in Greece, northern Italy, and central Europe. A single centre of diffusion is highly probable, and it is now widely accepted that the fibula is an Aegean invention, developed in the thirteenth century out of a Minoan type of pin which had the end bent to prevent slipping. By further bending until the end, flattened into a catch, could engage the point, the fibula was produced, and the addition of a spiral coil at the angle to increase the tension is also of early date. Later improvements enlarge the bow so as to grip more cloth. Large fibulae from mainland Greece, of late-Geometric times, have broad catchplates with incised figure decoration; the Cypriote type has a double-arched bow, the Asiatic a stilted one. The 'spectacle' type, in which the bow is replaced by spiral coils of wire, is considered of Danubian origin by some authorities. It was current in Greece, and imitated in bone and ivory in the seventh century. After 600 B.C. the fibula falls into comparative disuse in Greece, and no new types appear until Roman times. In Italy the development is unbroken and the types more varied: the bow looped, bent, threaded with disks, or thickened into the 'leech' or 'boat' form; the catchplate set transversely or fantastically prolonged. In the fifth century the simpler 'Certosa' type becomes universal and gives rise to the *La Tène* forms, in which the spiral spring is bilateral, and ultimately to the Roman in which, under the early Empire, a hinge replaces the spiral.

C. Blinkenberg, *Fibulae graecae et orientales* (1926); R. Hampe, *Frühe griechische Sagenbilder* (1936); J. Sundwall, *Die älteren italischen Fibeln* (1943). F. N. P.

FIDEICOMMISSUM. A testator could make bequests out of his inheritance by legacy (*legatum*) or *fideicommissum*. The principal forms of *legatum* were: (1) *per vindicationem*, which enabled the legatee to claim his legacy directly by *vindicatio* (q.v.) from anyone in possession of it, and which was therefore confined to specific things of which the testator had *dominium* (q.v.) *ex iure Quiritium*; (2) *per damnationem*, which confined the legatee to a claim

against the heir, but which had a much wider scope (e.g. legacy of an annuity, or of a debt owed to the testator, or of an act to be performed by the heir). Whereas a *legatum* had to be left in a prescribed form and was chargeable only on an heir appointed by will, a *fideicommissum* was an informal request by the testator to any person who benefited from the inheritance (by will or on intestacy, by legacy or even by another *fideicommissum*). Such requests were originally not legally enforceable, but were simply 'committed to the faith' of the person addressed. Augustus, however, caused some individual *fideicommissa* to be enforced by the consuls, and they later became generally actionable before a *praetor fideicommissarius* (first appointed under Claudius) by *cognitio extraordinaria*. The original purpose of *fideicommissa* was to benefit a person who was legally unable to be an heir or a legatee (e.g. a peregrine, or a woman debarred by the *Lex Voconia* (q.v.)), but most such persons were excluded during the first two centuries A.D., and a *fideicommissum* became in most respects a formless legacy. It could, however, effect a transfer of the entire inheritance from the heir to some other person, either immediately or at some future date, and could therefore be used to create a 'family settlement' lasting several generations or even indefinitely. Hadrian, however, forbade *fideicommissa* in favour of uncertain (including unborn) persons. Justinian revoked this prohibition but restricted the duration of such settlements to four generations.

The formalities of *legata* were abolished in A.D. 339, and Justinian removed all distinctions between different types of *legatum* and almost all distinctions between *legata* and *fideicommissa*. See also INHERITANCE, LAW OF. G. Grosso, *I legati nel diritto romano* (1962). R. N.

FIDENAE, modern *Castel Giubileo*, the first station on the *Via Salaria* (q.v.). In early Latium it frequently fought Rome, which controlled a rival Tiber crossing 5 miles downstream. After 390 B.C. Fidenae dwindled to unimportance. Its quarries supplied stone for the Servian Walls of Rome. In A.D. 27 an amphitheatre collapsed there causing great loss of life.

E. Panaitescu, *Ephemeris Dacoromana* 1924, 416 f.

E. T. S.

FIDES, the Roman personification of good faith. Although her temple (on the Capitol, near that of Jupiter, with whom she is closely connected) is no older than 254 B.C. (see Platner-Ashby, 209), her cult is traditionally very old, said to have been founded by Numa (Livy 1. 21. 4). Livy also gives details of her ritual; the *flamines* (q.v.), meaning probably the *flamines maiores*, drove to her shrine in a covered carriage drawn by two beasts, and the sacrificer must have his hand covered with a white cloth. A pair of covered hands is indeed her symbol, as often on coins commemorating the *fides* of the Augusti, the legions, etc., in imperial times. Since giving the hand is a common gesture of solemn agreement, the symbolism is natural.

Wissowa, *RK* 133 f.; Latte, *RR* 237.

H. J. R.

FIMBRIA, GAIUS FLAVIUS (PW 88), son of a *novus homo* (consul 104 B.C.) and friend of Marius. He supported Cinna and killed some eminent men after his return (87), trying to assassinate or prosecute Scaevola (q.v. 4) after the death of Marius who had protected him. Sent to Asia in 86 as legate of Valerius Flaccus (q.v. 6), he killed him in a mutiny and assumed his command. Ruthless but successful, he nearly captured Mithridates, whom Lucullus (q.v. 2) allowed to escape. After his peace with Mithridates, Sulla attacked Fimbria with overwhelming superiority, forcing him to commit suicide. (85).

E. B.

FINANCE, GREEK AND HELLENISTIC. Conclusions on the revenue and expenditure of the Minoan

and Mycenaean kings are at present only guesswork based on excavations or disputed Linear B lists and treasury accounts. Homeric finance was simple. The kings had comparatively high expenses for household, wars, and hospitality; their revenues came from the royal estate (*temenos*), from gifts (*dotinai*), personal services and customary contributions (*themistes*) of the people, from piracy, presents of foreign merchants and other foreigners, tributes and war-booty.

2. Sparta kept many Homeric characteristics up to the Classical period. No regular taxes existed, except a small contribution in kind to the kings. The helots paid nothing to the State, but gave a share of their crops to their Spartan landlords. The *periorkoi* may have paid a small tribute in kind to the kings, who also had a privileged share of the spoils. Irregular war revenue was derived from the enemy, from contributions of allies, or primitive collections within the community.

3. Exceptional expenses for court and bodyguards, public works, colonization, and wars were characteristic of the finances of the Greek tyrants, and it was, as a rule, impossible for them to pay all these out of the ordinary taxes. Confiscations, irregular levies, monopolies, the undemocratic poll-tax on free citizens, and even extortions had to be introduced to fill the always empty treasuries of such governments.

4. The financial system of the Greek cities, democratic and oligarchic, was more developed. Athens took the lead and was very often the model for smaller communities. The usual expenditure was concerned with police, army, navy, fortifications, ambassadors, palaestrae, gymnasia, education (a Hellenistic innovation), sacrifices, religious festivals, public works (those of Pericles were famous), distribution of money (see *THEORIKA*), grain, and other foodstuffs, salaries of State officials and of citizens entrusted with official duties (e.g. the Councillors, Dicasts, and *ekklesia* of Athens), honorary distinctions (e.g., entertainment in the Prytaneum at Athens), and the maintenance of orphans, invalids, and crippled soldiers.

5. The State revenues of Greek cities were varied. Most towns had a considerable income from state property, especially mines (e.g. the famous silver mines of Laurium in Attica), quarries, houses, and state domains. Court fees and fines at Athens and other towns were another important source of revenue. Direct taxes were, as a rule, only paid by foreigners, non-citizens, and despised professions (e.g. by *metoikoi*, freedmen, *hetairai*, certain craftsmen, and traders). The indirect taxes brought a greater return. The custom dues of Attica at the beginning of the fourth century B.C. amounted to 2 per cent on both exports and imports (during the fifth century, perhaps, only to 1 per cent). Of like importance were the customs of the Bosphorus and Black Sea ports during the Classical period, of Rhodes and the Egyptian ports during the Hellenistic. Treaties made by Athens and other towns, many of which are preserved, provided for delivery, under favourable conditions, of grain and materials for army and navy.

6. Excise duties existed, at least in the smaller cities of Greece. They may have been influenced, in some cases, by the practice of Hellenistic monarchies. The so-called *eponia* represented *ad valorem* gate tolls, auction taxes, and taxes on sales. They were in some places varied for real estate, slaves, cattle, bread, wheat, wine, etc. Another group of excise duties was called *enkyklia*, a Greek term which may be rendered as 'taxes on transport'. Belonging to this group of indirect taxes were harbour rights and dues, fishing rights in lakes and in the ocean, ferry taxes payable from shippers, pasturage taxes, duties for the use of public scales, and for the use of temple precincts for business purposes. In addition,

there were a few land and cattle taxes during the Hellenistic period, and Classical as well as Hellenistic monopolies (q.v.). Certain liturgies (q.v.) had to be performed regularly too.

7. An important item of the Athenian Empire's budget in the fifth and fourth centuries, as well as of other hegemonic States, consisted in tribute and contributions from allies and subject States. The *phoros* of Aristides amounted to 460 talents, a sum which was subsequently increased. A certain amount of external revenue was derived from lands in the cleruchies (q.v.) of Athens and other powerful towns which belonged to the ruling State and were rented out as in the mother country. The regular revenues of Athens, the richest town of Classical Greece, were not always sufficient to meet expenditure. Irregular sources of income included *eisphora* (q.v.), *epidosis*, and other endowments, sale of state property, public loans (often compulsory), selling of political rights and honours, tampering with the coinage, war booty, and financial expedients. The Athenian Empire and the temple States of Delphi and Olympia were able to collect large state treasures in times of peace.

8. Remarkable financial systems were developed in the Ptolemaic and Seleucid Empires, Syracuse, Hellenistic India, and other Hellenistic monarchies. The best-known of these, the Ptolemaic organization, may be described as typical. A planning economy regulated the Empire's budget. Attic and other city-state institutions were imitated. The expenditure was similar to that of the tyrants, but on a much larger scale. Monopolies (q.v.) were most important for the revenues. The whole country-side was farmed out as State land under rigorous State control of agriculture. The Greek poll-taxes, *eponia* and *enkyklia*, were used on a wider scale than in the *poles*. The Ptolemaic control of agriculture, banking, commerce, and industry of Egypt's administrative units reminds us of the planning economies of the eighteenth and twentieth centuries A.D. As Greek *polis* economy has influenced all later public financial organization in countries with free economy, so most later tendencies to planned economy from Byzantium and Hellenistic India to modern times seem to show a clear connexion with such Hellenistic systems.

F. M. H.

FINANCE, ROMAN. The management of Roman public finance formed a part of the general administration of public business; decisions relating to financial matters were made in the Republic by the Senate and in the Empire by the Emperor. The quaestors, and later other officials, in charge of the *aerarium* (q.v.) came to the post as a stage in a senatorial career, and had the duty of making payments when instructed and of preserving the cash and documents kept there, but had no responsibility for financial decisions or policy. Very little is known of the functions of the *a rationibus*, later *rationales*, employed by the Emperor. Only in the fourth century A.D. do we find the office of the Praetorian Prefect making up something resembling an annual budget, to determine the level of the *indictiones* (q.v.), or exactions in kind. Throughout Roman history there is little or no evidence of interest

either in the technicalities of public accounts or budgeting, or even (except with the systematic reform by Diocletian) in the general structure of State finance or the principles of financial policy. Cicero's speeches *de lege agraria*, however, emphasize the importance of the *ager publicus* as a source of revenue and a reserve of wealth for the State. In the speech, directed to the conditions of the early third century A.D., which Cassius Dio (q.v. 2) puts into the mouth of Maecenas in book 52 of his *Roman History*, he proposes that public properties derived from confiscation should be sold, and the proceeds loaned to landholders; the needs of the State, which should be carefully calculated, should be met primarily from the revenue from mines and other properties; only then should taxes, direct and indirect, be levied. The anonymous author of the treatise *de rebus bellicis* (q.v.), probably written in the second half of the fourth century, makes proposals designed to decrease the burden of taxation and allow agriculture to flourish, specifying fraud at the mint, the corruption and excessive exactions of governors and tax-collectors, and the superfluous size of the army as the evils to be dealt with.

If serious analyses are lacking in our sources, so also are extended financial documents comparable to those of classical Athens. Only the two main inscriptions of 'Trajan's *alimenta*' (q.v.) give substantial quantities of information on the workings of a financial operation— itself one which was quite unrepresentative of normal financial business. Frontinus' *De aquae ductu* includes some details of the expenditure on and revenue from the aqueducts of Rome.

Our earliest evidence for the general structure of Roman public finance comes from the sketch of the Roman constitution in the sixth book of Polybius, reflecting conditions in the mid second century B.C. The *aerarium* was managed by two urban quaestors; but all decisions as to payments from it were made by the Senate. On setting out on campaign a consul could draw funds on his own responsibility. But further payments, for the supplies, clothes, or pay of the army, had again to be authorized by the Senate. The Senate also made a quinquennial grant to the censors (q.v.), on the basis of which they let out contracts for building and repairs of public buildings in Rome and the *municipia* and *coloniae* of Italy, and for the exploitation of public properties— rivers, harbours, gardens, mines, and land. Ultimate control of the contracts, for instance in altering the terms, again lay with the Senate.

The acquisition, from the third century onwards, of provinces outside Italy led to two main developments, not included in Polybius' sketch, the raising of tribute (see *TRIBUTUM*) in cash or kind, collected by *publicani* (q.v.) whose greatest period of influence covered the last century and a half of the Republic; and the establishment of provincial governors, who were made a grant, again by the Senate, for the expenses of themselves and their staff, and thereafter were responsible, with the provincial quaestor (q.v.), for revenue and expenditure in the province (the system is most fully illustrated by Cicero's *Verrines*). On his return the governor presented his accounts (*rationes*) to the *aerarium*; it is evident that these could be very perfunctory (see *Verr.* 2. 1. 36) and afforded no real check on the disposition of the funds. A stricter procedure was laid down by Julius Caesar, in accordance with which one copy of the *rationes* had to be left at each of two cities in the province, and a third deposited at the *Aerarium*.

The *aerarium* was the central depository of the State, for both cash and documents; the question of to what extent cash was physically transferred to it from the provinces remains, at all periods, quite obscure. Plut. *Cat. Min.* 16 is the best evidence for the functions of

the quaestor, and his relations with the *aerarium* scribes. The *aerarium* contained the documents relating to the finance of the state, but its officials did not compile them into any sort of budget. The earliest examples of general accounts of the public funds are the *rationes imperii* published by Augustus, Tiberius (until A.D. 26), and Gaius, and the *breviaria* prepared by Augustus in 23 B.C. and A.D. 14. No *rationes* appear to have been published after the reign of Gaius; but the existence, from Tiberius onwards, of the post *a rationibus*, first held by imperial freedmen and later by *equites*, seems to indicate that *rationes* continued to be prepared. Precise evidence about the functions of the *a rationibus* is not abundant. Statius, *Silo.* 3. 3. 85–110, gives valuable details of the revenues and expenditures with which he was concerned; an inscription (*CIL* ix. 2438) shows an *a rationibus* of Marcus Aurelius concerned with protecting imperial flocks in Italy.

The establishment of the Empire meant the transfer from the Senate to the Emperor of the effective power of decision in financial matters, although the Senate retained the function of making routine votes of funds, especially for expenditures in Rome. The *publicani* ceased, finally, to collect tribute (q.v.) but continued to collect indirect taxes (see *VECTIGAL*) until replaced in the second century by imperial procurators (q.v.). A complication was introduced in the pattern of State finance by the appearance of the imperial treasury or *fiscus* (q.v.) whose origins, legal nature, and revenues remain in dispute. The first three centuries saw also the steady accretion of landed property (some of it from confiscation or inheritance) in the hands of the Emperor; the importance of revenue from such property is likely to have been considerable, but cannot be accurately assessed. From c. A.D. 200 documents reveal officials of two apparently separate types of imperial property, the *patrimonium* (q.v.) and the *res privata*; the distinction between them remains obscure. What is certain is that a considerable role in expenditure on public needs was played by the private funds of the Emperor; this is most fully attested at the very beginning of the Empire, in the *Res Gestae* of Augustus. By the third century little real distinction remained between public funds and properties and those of the Emperor.

The third century saw the culmination of two developments, the increasing strain of maintaining a permanent regular army without significant quantities of booty to compensate (in the Empire only Trajan's conquest of Dacia in 105–6 produced booty in large amounts), and the depreciation of the currency; the third century also witnessed a rapid inflation of prices. The result was a decline in the importance of the fixed cash tribute of the provinces (partly compensated for by ever more frequent demands for *aurum coronarium*, q.v.) and a tendency for the State to demand instead supplies in kind for payment to troops and officials. Under Diocletian the irregular requisitions in kind of the third century were put on a regular basis; censuses were taken throughout the Empire and payments assessed by units of population (*capitatio*) and of land (*iugatio*). The principles and workings of this system, which certainly varied from area to area, are still subject to debate. But it seems to have produced a more equitable assessment of capacity to pay and provided a measure of stability for the finance of the later Empire.

This period saw the full development of various tendencies manifest in the finance of the Principate. The Prefects of the *aerarium* are attested until the middle of the fourth century but were of no importance in the finance of the Empire as a whole. This was managed by three departments, the *res privata* which dealt primarily with imperial property, the *sacrae largitiones*, which con-

trolled mines, mints, and State factories, collected taxes and levies in cash, and paid donatives to the troops, and the most important of the three, the office of the Praetorian Prefects, which was responsible for the rations of soldiers and officials, for the maintenance of the *cursus publicus* and of most public buildings, and for calculating annually the required rate of the indiction to produce the supplies in kind.

J. Marquardt, *Römische Finanzverwaltung*¹ (1884) = *Organisation Financière* (1888), Frank, *Econ. Survey* 1 and v; Jones, *Later Rom. Emp.*, 411 ff. F. G. B. M.

FIRE. That the central importance of fire was widely recognized is shown by its prominence both in myth (esp. Prometheus) and in cosmological speculation. Since until recent times its kindling required considerable effort, the easiest way to ensure the availability of fire was to have a flame or glowing embers (*ζώπυρα*) always burning. The ubiquity of perpetual fires, both in public ritual and in private houses, may have been largely due to this, although there are indications that some 'everlasting' fires (e.g. that of Vesta) were rekindled annually. Similarly, banishment was traditionally *aquae et ignis interdictio*. If the fire went out and could not be relit from a neighbour's hearth, the most primitive way of restarting it was to rub two pieces of wood together until the friction generated sufficient heat. The usual *πυρεῖον* (*igniarium, ignitabulum*), however, was a kind of 'drill', consisting of a *τρύπανον* (*terebra*), for which laurel wood was thought best, and an *ἐσχάρα* (*tabula*), preferably of ivy-wood, in which it was rapidly rotated, usually with the aid of a thong or a bow-like contrivance. But side by side with this it was known, by the fifth century B.C. or earlier, that sparks could be struck from pyrites or flint with a second stone or with a piece of iron or steel to set alight tinder (*fomes*) of dry leaves, fungus, or similar material (later sometimes sticks dipped in sulphur). Finally, it was known also, at least by Aristophanes' time, that the rays of the sun could by refraction in a suitably shaped piece of glass or rock-crystal (or even in drops of oil or water) be sufficiently concentrated to kindle tinder placed at the focal point. But this method of fire-lighting was probably very rare, and the use of reflection from a concave (metal) mirror was almost certainly even rarer. Yet Archimedes may well have known the theory of kindling fire at a distance by so arranging a group of mirrors that they reflect the sun's rays to a common focus; but the story that he set fire to the Roman fleet in this way must be apocryphal.

Theophrastus, *de Igne* M. II Morgan, *Harv. Stud.* 1890, 13 ff. (with sources). L. A. M.

FIRMICUS MATERNUS, JULIUS, of Syracuse, wrote (A.D. 334-7) an astrological treatise, *Mathesis*, in eight books, the first containing an apologia for astrology. Firmicus urges the highest moral integrity on the astrologer. The conflict between destiny and freedom of will he resolves on Stoic lines: the soul, being divine, can triumph over the stars. Firmicus shows small technical knowledge; his merit, if any, is rhetorical and stylistic. Later, converted to Christianity, he wrote a fanatical *De errore profanarum religionum*—of great interest to the student of religion—urging Constantius and Constans to eradicate paganism. Dom Morin's attribution of *Consultationes Zacchaei et Apollonii* (ed. 1935) to this author has not gained universal acceptance.

Texts. *Mathesis*, Kroll-Skutsch-Ziegler (1897-1913). *De errore*, K. Ziegler (1953, trans., 1953); with comm., G. Heuten (also trans., 1958), A. Pastorino (1956). L. R. P.; A. H.-W.

FIRST FRUITS. The rite of bringing first fruits to the gods is not strongly characterized in ancient Greece. It is comprised under the rite known as *panspermia*, the bringing of a mixture of fruits at various festivals, some-

times cooked in a pot (at the Thargelia and the Pyanopsia). *Θαλύσια* are, according to the lexicographers, *aparchai* (q.v.) of the fruits and also the first loaf baked after the threshing. The opinions have been advanced that the offering of first fruits represents the breaking of the taboo imposed upon the unripe fruits and that it serves to enhance the power of the remaining crop; in the opinion of the Greeks themselves they were brought in order to ensure fertility; they were also called *εὐεργία*, i.e. a Good Year. They survive in ecclesiastical usage today under the ancient name *κόλλυβα*.

Nilsson, *GGR* 1st, 127 ff.

M. P. N.

FISCUS originally meant 'basket' or 'money-bag' and thence came to be used, in relation to private persons, like 'pocket' ('ex suo fisco', Val. Max. 6. 2. 11), or, in an administrative context, to mean the public funds held by a provincial governor (Cic. *Verr.* 2. 3. 197; Suet. *Div. Aug.* 101). Its most important use came to be that of denoting the funds of the Emperor, as opposed to the public *aerarium* (q.v.).

The question of the origins, legal nature, and revenues of the imperial *fiscus* remains in dispute. The principal views are:

1. The *fiscus* was the property of the Emperor; its income was formed principally by the revenues of the imperial provinces (Mommsen, *Rom. Staatsr.* ii¹, 998 ff.). On this view the distinction between *fiscus* and *aerarium* was a product of the 'dyarchy' of Emperor and Senate, and of the division of the provinces.
2. 'Fiscus' was used originally only of the private funds of the Emperor (Sen. *de ben.* 7. 6. 3), by extension from the usage relating to private persons. Its revenues came at first from properties, gifts, and inheritances, plus probably *aurum coronarium* (q.v.) and *manubiae* (q.v.), and its steady acquisition of wider sources of income represents an encroachment of the Emperor on the public domain.
3. The *fiscus* was in part the property of the Emperor, but the word is also used, by extension from the usage relating to the funds held by proconsuls, to refer to the public funds held by the Emperor, principally in his capacity as governor of the imperial provinces.

It is clear that by the end of the first century, if not before, the *fiscus* was a recognized legal entity. Nerva appointed a praetor to hear cases between the *fiscus* and *privati* (*Dig.* 1. 2. 32), while Hadrian instituted the post of *advocatus fisci* to represent the *fiscus* in such cases. The legal writers of the late second and third centuries indicate that the *fiscus* has a number of important privileges in litigation; in this period such cases were normally judged by imperial *procuratores* (q.v.).

A number of other *fisci* (*fiscus Asiaticus*, *fiscus Alexandrinus*, *fiscus frumentarius*, *fiscus castrensis*, *fisci transmarini*) are known only from inscriptions of the imperial *liberti* attached to them; nothing is known of their nature or of their relationship to the *fiscus*. The *fiscus libertatis et peculiorum* presumably received the payments made by imperial slaves for manumission, and the property which reverted to the Emperor from his slaves and *liberti* on death.

The *fiscus Iudaicus* received the special poll-tax of two *denarii* p.a. paid by all Jews after the revolt of 66-70. Cases relating to this payment were heard by a *procurator* (Suet. *Dom.* 12) and *ostraka* and a papyrus recording payment of the tax are known from Egypt.

FISH, SACRED. Fish were held sacred by various Oriental peoples. The Egyptian priests abstained from fish (Hdt. 2. 37) and there were local taboos on particular species. The Syrian reverence for fish early impressed the Greeks (Xen. *An.* 1. 4. 9); the temples of Atargatis (q.v.) regularly contained a pool for them, and a *lex sacra* from Smyrna (*SIG* 997 = Sokolowski, *Lois sacrées de l'Asie mineure*, 1955, 17) deals with their care. Atargatis punished with illness eaters of fish (Menand. fr. 544, Kock), and the taboo may have originated in the unwholesomeness of the local species. Her priests, however, ate them daily in a ritual meal (Mnaseas, *FGH* iii. 155), and they were a sacred food also in Thracian and Samothracian mystery cults, perhaps through Oriental influence; Julian (*Or.* 5. 176 d) says they were sacrificed in certain mystic rites (and see VOLCANUS). The early Christian symbolism of 'Ιχθῦς may be in part connected with their sanctity in Syria, but its popularity was enhanced by its equation with the formula 'Ι(ησοῦς) Χ(ριστός) θ(εοῦ) υ(ιὸς) α(γάπης), which constituted a convenient confession of faith. See URIZO.

FLACCUS (1), QUINTUS FULVIUS (*PW* 59), as consul I (237 B.C.) fought against the Gauls in north Italy; censor (231); consul II (224) he temporarily subdued the Boii; praetor urbanus in 215 and again *extra ordinem* in 214 to guard Rome; *magister equitum* (213). As consul III (212) he captured Hanno's camp near Beneventum, thus cutting off supplies from Capua, which he then besieged and captured as proconsul (211); proconsul in Campania and dictator to hold the elections (210); consul IV (209), he won over some Lucanian hill-towns. He served again as proconsul (208/7), opposed Scipio's African expedition (205), and died soon afterwards. H. H. S.

FLACCUS (2), QUINTUS FULVIUS (*PW* 61) (*cos.* 179 B.C.), son of (1) above, was curule aedile in 184. As praetor in Spain in 182 he opened the campaigns against the Celtiberians (182-180) which led to the settlement of Ti. Sempronius Gracchus. Consul in 179 in Liguria, he became censor in 174, repatriating Latins in Rome and controlling the *equites*. In 173 he dedicated a temple to Fortuna Equestris, after despoiling the temple of Hera Lacinia in Croton. He committed suicide in 172. It is doubtful whether he built the Via Fulvia. A fine general and conservative senator, his career marks the Fulvian predominance after Scipio Africanus.

Scullard, *Rom. Pol.* 149, 190 ff.

A. H. McD.

FLACCUS (3), MARCUS FULVIUS (*PW* 58), supporter of Ti. Gracchus (q.v. 3) and agrarian commissioner from 130 B.C. When the commission was prevented from applying the Gracchan limits on public land to the Italians (see SCIPIO 11), he proposed to offer them the citizenship to obtain the land, thus introducing the 'Italian question' into Roman politics. Elected consul (125) on this platform against Optimate opposition, he was circumvented by the Senate, which ordered him to assist Massilia against the Salluvii. Returning to triumph (123), he stooped to a tribunate (122) to aid C. Gracchus (q.v. 4) in carrying out an amended version of his policy and shared in his defeat and death (121). Cicero's description of him as a scholar (*Brutus* 108) helps to reveal the distortion that his picture has suffered in hostile sources.

E. Badian, *Foreign Clientelae* (1958), 176.

E. B.

FLACCUS (4), LUCIUS VALERIUS (*PW* 173), the friend and colleague of Cato, curule aedile (201 B.C.), praetor in Sicily (199), was consul with Cato in 195, defeating the Boians and Insubrians (195-194). Legate at Thermopylae (191), he was triumvir in 190-189, reinforcing Placentia and Cremona and founding Bononia. Censor with Cato (184), he became *princeps senatus* on the death of Scipio Africanus; he died in 180. Capable but not outstanding, he maintained a conservative traditionalism against Hellenism in Rome.

Scullard, *Rom. Pol.* 124, 137, 153 ff.

A. H. McD.

FLACCUS (5), LUCIUS VALERIUS (*PW* 176), *flamen Martialis*, was prosecuted *repetundarum* (101 B.C.?) after his praetorship (Cic. *Div. Caec.* 63). Consul in 100 with Marius, he was, according to Rutilius (q.v. 1), 'more his slave than his colleague'. As censor (97) with Antonius (q.v. 1), he apparently helped to enrol Italians generously as citizens. Made *princeps senatus* by Marcus Philippus (q.v. 4) and Perperna (q.v. 2) in 86, he worked for accommodation with Sulla; he joined him in time and (as *interrex*, late 82) secured him a vote of indemnity and election to the dictatorship, becoming his *magister equitum*. He seems to have died soon after, as he is not mentioned again.

E. B.

FLACCUS (6), LUCIUS VALERIUS (*PW* 178), was unsuccessfully prosecuted after his aedileship (98 B.C.) by Decianus; he governed Asia after his praetorship. As suffect consul succeeding Marius (86) he was given the command against Mithridates in 86, passed a law cancelling three-quarters of all debts, and left for Asia, which he reached without a clash with Sulla. But he was murdered in a mutiny brought about by Fimbria (q.v.), who assumed his *imperium*.

E. B.

FLACCUS (7), LUCIUS VALERIUS (*PW* 179), son of (6), served under his father and on the latter's death fled to his uncle Gaius in Gaul. He was military tribune under Servilius (q.v. 1) Vatia in Cilicia, quaestor in Spain under Piso (q.v. 4), legate of Metellus (q.v. 8) in Crète, then perhaps under Pompey. As urban praetor (63) he assisted Cicero against the Catilinarians and, after governing Asia (62-61), was successfully defended by him *repetundarum* in a largely extant speech (59). Legate of Piso (q.v. 5) in Macedonia, he died c. 54.

E. B.

FLACCUS (8), VERRIUS, a freedman, the most erudite of the Augustan scholars and teacher of the grandsons of Augustus. His works (now lost) included *Libri rerum memoria dignarum* (freely used by Pliny the Elder), *De obscuris Catonis*, *Libri rerum Etruscarum*, and *De orthographia*. The *Fasti Praenestini* (CIL i²) were also drawn up by him. But he is best known for his lost *Libri de significatione verborum* in which he quoted freely from the earlier republican authors. His material he arranged in alphabetical order and devoted several books to each letter. From the epitome made by Festus (q.v. 2) we can gain some idea of the richness of learning contained in this work of Verrius Flaccus, which was a quarry for the scholars of the immediately succeeding generations.

Schanz-Hosius, §§ 340-18.

J. F. M.

FLACCUS (9), AULUS AVILLIUS (*PW* 3), schoolfellow of C. and L. Caesar (q.v. 6, 7) and a friend of Tiberius and Macro (q.v.). In A.D. 29 he prosecuted Agrippina (q.v. 2). As prefect of Egypt (32-8) he was friendly to the Greek elements there, and so anti-Jewish. Philon (q.v. 4) wrote *Εἰς Φλάκκον* against him. In 38 he was unexpectedly arrested, condemned at Rome, perhaps on a charge of

plotting with Tiberius (2) Gemellus and Macro, banished to Andros, and later put to death on Gaius' instructions.

Philo, *In Flaccum* ed. H. Box (1939); J. P. V. D. Baladon, *The Emperor Gaius* (1934), 129 ff.; A. Stein, *Die Präfecten von Ägypten* 1950, 26 f. A. M.; T. J. C.

FLAMINES. The word *flamen* appears to mean 'priest' or 'sacrificer', cf. Old Icelandic *blót*, 'sacrificial feast', etc. (Walde, *Lat. etym. Wort.*² (1910), s.v.). In Rome the *flamines* were a group of fifteen priests, three *maiores* and twelve *minores*, forming part of the *collegium pontificum*. Each was assigned to the cult of one god, though he might on occasion take part in the worship of some other; e.g. the *flamen Quirinalis* conducted the ritual of the Robigalia, *Ov. Fasti* 4. 910; Varro, *Ling.* 5. 84, *Cic. Leg.* 2. 20. The three *maiores* were the *flamen Dialis*, of Jupiter; *Martialis*, of Mars; *Quirinalis*, of Quirinus (Gaius 1. 112). The first of these was obliged to observe an amazingly elaborate system of taboos, all designed to keep his extremely holy person from any pollution or bad magic (list, with authorities, Marquardt-Wissowa, *Staatsverw.*² iii. 328 ff.); it is probable that the observances of the other two were, at least originally, hardly less complicated. It is further highly likely that the *Dialis* represented an ancient king, see Rose, *Roman Questions of Plutarch*, 111. Of the twelve *minores* we know the following ten: *Voltumnalis*, *Palatualis*, *Furnalis*, *Floralis*, *Falacer*, *Pomonalis* (these seem to have been the last six, Festus, 144. 12 ff. Lindsay; all six in Ennius ap. Varr. op. cit. 7. 45); *Volcanalis* (Varr. op. cit. 5. 84), *Cerialis* (*CIL* xi. 5028), *Carmentalis* (*Cic. Brut.* 56), *Portunalis* (Festus, 238. 9 Lindsay), but the order of precedence of these four is unknown. Their deities were respectively *Voltumnus*, *Pales*, *Furrina*, *Flora*, *Falacer*, *Pomona*, *Volcanus*, *Ceres*, *Carmentis*, and *Portunus*. The *Divi*, from *Iulius Caesar* in 42 B.C., were regularly assigned special *flamines*.

Latté, *RR* 36, 404

H. J. R.

FLAMININUS (1), **TITUS QUINCTIUS** (*PW* 45) *cos.* 198 B.C., the victor of Cynoscephalae, was military tribune under Marcellus (208 B.C.), *propraetor extra ordinem* at Tarentum (205–204), and for his philhellenism and diplomatic address became consul in 198, not yet thirty, to win the support of Greece against Philip V in the Second Macedonian War. After Cynoscephalae (197) he confined Philip in Macedonia, rejected Aetolian claims in Thessaly, and in 196 at the Isthmian Games proclaimed the freedom of Greece; in 195 he forced Nabis to surrender Argos. In 194 he evacuated Greece, and the Greek cities honoured him as deliverer. In 194–193 he upheld against Antiochus' envoys the Roman guardianship of Greek autonomy in Asia Minor, and in 193–192 suppressed Nabis, but failed to check the pro-Syrian policy of Aetolia. After Thermopylae (191) he procured a truce in Greece. Censor in 189 with M. Marcellus, his liberal policy appears in the restoration of the Campanians' census rights. In 183 he demanded the surrender of Hannibal from Prusias. He died in 174; a son was consul in 150 and a grandson consul in 123. Ambitious and idealistic, he was in his philhellenism and policy a rival rather than a protégé of Scipio Africanus, and this, with his diplomacy and generalship, made him the Senate's best instrument in establishing a protectorate over an autonomous Greece.

Polyb. bks. 17–18; Livy, bks. 32–36; 38. 28 and 36; 39. 51; *Plut. Flam. G. Colin, Rome et la Grèce* (1905), 82 ff.; *L. Homo, Rev. hist.* 1916, 241 ff.; 1916, 1 ff.; *De Sanctis, Stor. Rom.* iv. 1. 76 ff.; A. Aymard, *Les Premiers Rapports de Rome et de la confédération achaeenne* (1938); F. W. Walbank, *Philip V of Macedon* (1940); Scullard, *Rom. Pol.* 97 ff., 119, 175. Coin-portrait: C. Selmann, *Greek Coins*, 225 f. A. H. McD.

FLAMININUS (2), **LUCIUS QUINCTIUS** (*PW* 43), *cos.* 192 B.C., *curule aedile* (201 B.C.), *praetor* (199), commanded the Roman fleet in Greece in 198–194 for his brother T. Flamininus. Consul in 192, he was guilty of oppression in Gaul, for which on moral grounds Cato expelled him from the Senate in 184. A. H. McD.

FLAMINIUS (*PW* 2), **GAIUS**, a *novus homo* who reached the consulship in 223 B.C. and was the greatest popular leader before the Gracchi to challenge the senatorial government. *Tribunus plebis* in 232 B.C., despite bitter senatorial opposition he carried a timely measure to distribute to poor Roman citizens the *ager Gallicus* (7 et *Picenus*), recently confiscated from the Senones. A hostile aristocratic tradition (preserved by Polybius and probably reflecting Fabius Pictor) alleges that this caused the beginning of 'the demoralization of the people' and, by annoying the Gauls, hastened the Gallic invasion of 225; further, it was alleged that his own father opposed Flamininus. As *praetor* in 227 he was the first to hold that office in Sicily: his governorship was popular. Consul I (223), he led the first Roman army across the Padus disregarding a senatorial order to return to Rome. He defeated the Insubres: accounts which assign the victory to the legions' efficiency in spite of their general's rashness are suspect. He celebrated a triumph at the people's wish despite senatorial objection. He was *magister equitum* to his enemy Q. Fabius Maximus (221). As censor (220) he built the *Via Flaminia* (q.v.) and the *Circus Flaminus*. The reform of the *Comitia Centuriata*, which Mommsen assigned to his censorship, is probably earlier. Alone of the senators, he supported the *Lex Claudia* (see **CLAUDIUS** 7). His election to a second consulship in 217 was a popular criticism of the Senate's conduct of the Hannibalic war. He guarded the Western Apennines at Arretium; when Hannibal passed, he hastened south (probably to join his colleague Servilius with whom it was alleged he refused to co-operate) but fell into Hannibal's ambush at Lake Trasimene, where his army was destroyed and he himself met a hero's death, a fate which hostile tradition attributed to his disregard of the customary religious ceremonies.

K. Jacobs, *Gaius Flaminius* (1938; written in Dutch); F. Cassola, *I Gruppi politici romani nel III sec. a. C.* (1962), 209 ff. (unorthodox: cf. *JRS* 1963, 185 f.); Z. Yavetz, *Athenaeum* 1962, 325 ff. H. H. S.

FLAVIUS (1, *PW* 15), **GNAFUS**, son of a *libertus* of Appius Claudius (q.v. 4) Caecus, whose secretary he became. Pomponius (q.v. 6) relates that he purloined a MS. of Appius' containing the *Legis actiones* (see **LAW AND PROCEDURE**, **ROMAN** II. 2) and published it (but perhaps Appius in fact instigated his act). This publication (known as *Ius civile Flavianum*) was supposedly the first to give the people knowledge of the forms of procedure, which had been the monopoly of the pontiffs. For this service Flavius became *tribunus plebis*, senator, and *aedilis curulis* in spite of his humble origin. In his aedileship (304) he exhibited in the forum the calendar of court-days on which the *legis actio* was admissible.

F. Schulz, *History of Roman Legal Science* (1946), 9 ff. (criticizing this traditional account); A. K. Michels, *The Calendar of the Roman Republic* (U.S.A. 1967), 108 ff. A. B.; B. N.

FLAVIUS (2) **FELIX**; his verses, often unclassical in quantities, are preserved with Florentinus' verses in the *Anthologia Latina* (ed. Riese, 254).

FLEVO LACUS, the Zuyder Zee. In Roman times it was a lake (whose name is preserved in *Vlieland*), with an island of the same name; most of the Frisian Islands were then part of the mainland. The waterways of this region were used by the Roman fleets in the wars of Drusus, Tiberius, and Germanicus; and Drusus canalized

the Vecht for navigation from the Rhine to the sea. Knowledge of the shape and size of the Zuyder Zee in the Roman period may be considerably affected by current studies on relative sea-level in the North Sea region.
O. B.; P. S.

FLORA (Oscan *Flusia*: Conway, *Ital. Dial.* nos. 46; 175 a; L. 24), an Italian goddess of flowering or blossoming plants. The antiquity of her cult in Rome is proved by the existence of a *flamen Floralis* (cf. FLAMINES), but her festival is not in the 'calendar of Numa' (see CALENDARS), and therefore was movable (*conceptivae*). In 238 B.C., by advice of the Sibylline books, she was given a temple (Pliny, *HN* 18. 286; cf. Platner-Ashby, 209 f.). Its dedication day was 28 Apr., and games (*ludi Florales*) began to be celebrated then annually in 173 B.C. (Ov. *Fast.* 5. 329 f.). These included farces (*mimi*) of a highly indecent character (Ov. *ibid.* 331 and Frazer, *ad loc.*). Foreign, probably Greek influence accounts for this non-Italian feature (Aphrodite *Ἀφροδεία*?).

Wissowa, *RK* 197; Latte, *RR* 71.

II. J. R.

FLORENTIA, the modern *Florence*, probably was not an Etruscan foundation. It may have been in existence by the time of the Civil Wars (Florus 2. 8: text doubtful and certainly exaggerated), and possibly received a colony under the 'Triumvirs' (*Lib. Colon.* 213). In Tiberius' reign a Florentine mission to Rome asked that the Clanis be not diverted into the Arnus (Tac. *Ann.* 1. 79). Otherwise Florentia played no recorded part in history until late imperial times. In the fifth century it was a considerable fortress (Procop. *Goth.* 3. 5. 6); by Lombard times apparently the capital of a duchy.

L. A. Milani, *Mon. Ant.* 1896; E. Pucci, *Short History of Florence* (Florence, 1939); G. Maetzke, *Florentia* (1941); C. Hardie, *JRS* 1965, 122 ff.
E. T. S.

FLORIANUS, MARCUS ANNIUS (*PW* 46), praetorian prefect of the Emperor Tacitus—of whom he was wrongly said to be the brother. On the death of Tacitus at Tyana he seized the Empire and was recognized everywhere except in Syria and Egypt, which set up Probus. Probus took the field against him at Tarsus and, by cleverly delaying the campaign, tired out and demoralized Florianus' troops. Florianus was put to death by his own men (autumn A.D. 276).
H. M.; B. H. W.

FLORUS (*PW* 9) (*Lucius Ann(a)eus F.* in Cod. Palat. 804 and most editions, *Julius F.* in Cod. Bamberg.) is generally held to be identical with Florus the poet-friend of Hadrian and with P. Annius Florus, author of the imperfectly preserved dialogue *Vergilius orator an poeta* (see *infra*). The dialogue states that he was born in Africa and in boyhood took part unsuccessfully in the Capitoline competition under Domitian; he afterwards settled at Tarraco in Spain, but returned to Rome in Hadrian's time. His chief work is entitled *Epitome bellorum omnium annorum DCC.* He states (Introd. § 8) that he is writing 'not much less than 200 years after Caesar Augustus'; if these words mean the beginning of Augustus' principate (27 B.C.), '200 years' is a considerable exaggeration.

WORKS. The *Epitome* is an abridgement of Roman history with special reference to the wars waged up to the age of Augustus. Some manuscripts describe it as an epitome of Livy; but it is sometimes at variance with Livy. The author also made use of Sallust, Caesar, and in one passage (I. Intr. 4-8) probably the Elder Seneca; and there are reminiscences of Virgil and Lucan. It is planned as a panegyric of the Roman people. Of the two books the first traces the rise of Rome's military power, the second its decline, the former containing wars of conquest down to 50 B.C., the latter covering civil wars from the time of

the Gracchi and going down to the wars of Augustus, with the suggestion that the latter had brought peace to the world.

Of the dialogue only a fragment of the introduction survives. It was probably written about A.D. 122 (F. Schmidinger, 'Untersuchungen über Florus', *Neue Jahrb. f. Philol.* xx, Supplement 6, 781 ff.; E. Woelfflin (*Arch. für latein. Lexikogr.* vi (1889)) shows that its diction closely resembles that of the *Epitome*.

Poems. The lines on Hadrian beginning 'Ego nolo Caesar esse', had the honour of a retort from him (S.H.A. *Hadr.* 16. 3). Other fragments are preserved (Riese, *Anth. Lat.* i. 1, nos. 87-9 and 245-52). They are not sufficient to enable judgement to be passed on the author's poetry and hardly justify the theory that the famous *Pervigilium Veneris* is his work (H. O. Müller, *de P. Annio F. poeta et Pervig. Ven.* (1855); E. K. Rand, *Rev. Et. Lat.* 1934, 83 ff.).

Florus in the *Epitome* shows a certain literary gift, marred, however, by a strong tendency to rhetoric. His brevity often entails obscurity, though he sometimes produces a felicitous epigram. He has irritating habits of inserting exclamatory remarks and repeating favourite words. As an historian he is often inaccurate in both chronology and geography, but the work as a whole achieves a limited success as a rapid sketch of Roman military history. It was a favourite school-book in the seventeenth century.

E. S. F.; G. B. T.

FOEDUS means a treaty, solemnly enacted, which established friendly association, *pia et aeterna pax*, and alliance between Rome and another State or States for perpetuity. *Foedus* is distinct from *indutiae*, which ended a state of war and were limited in duration up to a century. It might be *aequum* or *iniquum*. The former kind set both parties on equality, and provided for military assistance in defensive wars. The latter marked out Rome as *in foedere superior*, the second party being bound to assist Rome in offensive wars also, and to respect the dignity of Rome, *maiestatem populi Romani comiter conservare*. This attempt to express the spirit of the law in the letter indirectly limited the allies' sovereignty, placing them in the relationship of client to patron (see SOCII). Special conditions were not normally added to the treaty, being out of place in *foedus aequum* and unnecessary in *foedus iniquum*, until the later Republic. Treaties were usually limited to establishing the general alliance, with arrangements for agreed alterations and the usual sanctions. The earliest known *foedus aequum* is the treaty of Spurius Cassius (q.v. 1). *Foedera iniqua* were commonest in Italy and stressed the Roman hegemony (see SOCII). *Fetiales* (q.v.) or consuls usually officiated, but other military commanders also could make treaties, which then needed ratification at Rome. They were published on bronze and kept on the Capitol. Exceptional forms appear in the first two Carthaginian treaties, which are of non-Roman type, and the *foedus Gabinum* which mediated the incorporation of Gabii in Rome (6th c. B.C.).

For bibliography see SOCII.

A. N. S.-W.

FOLK-SONGS, GREEK. The Greeks, like other peoples, had their folk-songs, though it is impossible to give dates to them or to construct a history. They may be roughly classified as follows: (1) to gods (*Carm. Pop.* 5, 8, 14, 25, 26); (2) ritual songs (*ibid.* 2); (3) occupational (*ibid.* 3, 23, 28); (4) averting songs (*ibid.* 13); (5) love-songs (*ibid.* 7, 27).

TEXT. Page. Poet. Mel. Gr. 450-61; J. M. Edmonds, *Lyra Graeca* (Loeb) iii, 488 ff. C. M. B.

FOLK-TALES. Only one *märchen*, told as such, has come down to us from antiquity, and that in a literary form, Apuleius' story of Cupid and Psyche (*Metam.* 4. 28 ff.; this is Stith Thompson C 421). Tertullian names two more, *adv. Valent.* 3. But numerous folk-tale themes are to be found scattered up and down classical legends, though the chronological question whether the theme or the legend is the older often cannot be decided. Examples are the external soul (Meleager 1, q.v.); the husband who returns just in time to stop his wife, who supposes him dead, marrying another (Odysseus, q.v.); the unwitting killing by Aedon (q.v.) and Themisto (see ATIAMAS) of their own children (essentially the story of Tom Thumb and the ogre); Home-Comer's Vow, the tale of the man who, like Jephtha, vows to sacrifice the first thing which meets him on his return, or otherwise to destroy or dispose of it, and is met by his own child. This is told of Idomeneus (q.v. 1). At least one Greek tale, that of Odysseus and Polyphemus (see CYCLOPES), is found as far away as Lapland (see Vigstad, *Lappiske Eventyr og Sagn* ii (1928), 448 f.). The vast popularity of Homer makes it no wise incredible that we have here simply Homer's story (source unknown). That several of the longer cycles of story, as the legends of Perseus and of the Argonauts (qq.v.; see S. Hartland, *Legend of Perseus* (1894-6), and Halliday, op. cit. *infra* (2), 21 ff.), are packed with details found in various folk-tales in and out of Europe is common knowledge.

For one common form of (Oriental?) folk-tale, the beast-fable, Greece has been a great distributing centre, owing to the collections popularly associated with the name of Aesop (q.v.). From earlier oral or written versions (see Halliday (1), 101 ff.; (2), 143 ff.) these apologues have spread, first into Latin (Phaedrus, 'Romulus', etc.), thence into modern languages, meanwhile never ceasing to be repeated among the later Greeks themselves. In all cases it is necessary to remember the reciprocal action between literary and popular compositions. Supposing, for example, what is likely in itself, that the beast-fable was originally popular and oral, we find it at very varying levels. It is used by serious authors to point grave morals (Hes. *Op.* 202 ff.; Pind. *Pyth.* 2. 72 ff.; Aesch. fr. 139 Nauck). It was a popular form of after-dinner story (Ar. *Vesp.* 1259 f.). It was used as edifying reading for children (Babrius, *praef.*), and for first exercises in composition (Quint. *Inst.* 1. 9. 2). Finally, it became a popular chap-book, and so found its way back into oral or quasi-oral circulation. Thus the simple, popular tale may always be a worn-down form of the elaborate and literary one, not its predecessor. Caution is therefore necessary in tracing connexions such as those suggested above.

H. J. R.

FOLLIS, the bag in which coins were collected for large payments; then the coins themselves.

Follis seems to be applied only to coins of bronze or silvered bronze, but not to be restricted to any continuously unchanged denomination. Under Diocletian it may have denoted the common 'Genio Populi Romani' piece.

Under Julian six *folles* are the price of a pound of pork. St. Augustine knows the *follis* as a tiny fraction of the *solidus*. In Byzantine times the *follis* was pre-eminently the piece of 40 *nummia*. The *Historia Augusta* is very doubtful authority for the use of the word in the third century A.D.

E. Babelon, *Traité des monnaies grecques et romaines* (1901) i. 615 ff., 761 ff.; A. H. M. Jones, *JRS* 1959, 34 ff.; L. Ruggini, *Rend. Linc.*, 1961, 306 ff.; A. Cameron, *Num. Chron.* 1964, 135 ff. II M.

FORTEIUS (*PW* 12), MARCUS, began his career under Cinna (q.v. 1), but joined Sulla. He served in Spain and Macedonia and, after his praetorship, governed Transalpine Gaul (probably 74-72 B.C.), enthusiastically exacting men, money, and grain for the wars in Spain and elsewhere. Accused *repetundarum*, he was defended by Cicero in a speech which is partly extant, and probably acquitted.

E. B.

FOOD AND DRINK. The Greeks and Romans were in general notably frugal in their diet. The austerity of the Spartans, the 'greed' of the Boeotians, and even the much-condemned luxury of imperial Rome must be viewed in the context of the standard set by this general simplicity.

The diet was based on corn, oil, and wine. Cereals were the principal source of carbohydrate, and at all times provided the staple food, so that *aitos* and *frumentum* often denoted food generally. For details see CORN. When wheat bread had become common it was sometimes flavoured with or accompanied by cheese, honey, etc., and many varieties of cake (*πλακοῦς*, *placenta*) were also known.

Fats were derived mainly from olive-oil (q.v.), while wine (q.v.), usually diluted with water, was the only important beverage. The drinking of beer and to a large extent that of milk (q.v.) ranked as marks of barbarians; and there were no infused or distilled drinks. For sweetening, honey was used instead of sugar.

Among the 'things eaten with bread (or other cereal food)', for which the Greeks used the generic term *ἄψον*, fish, which might be fresh, dried, or pickled, occupied a prominent place. Many species were known (cf. D'A. W. Thompson, *A Glossary of Greek Fishes*, 1947), and at Athens fish was *ὄψον par excellence*. In Rome lampreys, mullets, and oysters came to be reared in fishponds by and for the wealthy.

Poultry, game, and eggs played a large part in Roman cookery, but there was comparatively little butcher's meat, except for pork and occasionally veal. Wild birds (pheasants, partridges, quails) were also eaten; but the appearance of peacocks, flamingoes, cranes, etc., on the tables of the rich must have been largely due to the mere search for novelty.

For ordinary folk, however, vegetables (especially the pulses, but also onions, radishes, marrows, beet, garlic, etc.) provided the most important addition to the 'basic three'; and in the eyes of imperial Roman writers a 'simple' diet is often vegetarian in the strictest sense. Among fruit, figs and grapes played a leading part, but apples, pears, mulberries, and dates (the latter of Phoenician origin) were also eaten widely; and by Roman times peaches, apricots, and cherries had been naturalized in Italy. (Potatoes, tomatoes, oranges, and bananas were unknown, and most berries were not cultivated.)

Sauces (especially the Roman fish-sauce *garum*, *liquamen*) and condiments and herbs (including the famous silphium) were popular throughout; and the Romans in particular seem to have disliked the natural taste of most cooked foods. This partiality for flavourings, which still gives much Mediterranean cooking its special character, is one of several features of the ancient diet of

which survivals are discernible in the diet of present-day Greece and Italy. Cf. also **COOKERY, MEALS**.

J. André, *L'Alimentation et la cuisine à Rome* (1961); M. A. Levi, *La Grecia antica* (1963), 33 ff., *Roma antica* (1963), 81 ff., with bibliography; J. I. Miller, *The Spice Trade of the Roman Empire* (1969). L. A. M.

FORDICIDIA (this is the pure Latin form; Sabine *Hordicidia*, cf. Conway, *Ital. Dial.* 1. 385): Roman festival of Tellus on 15 Apr., when a *forda* (cow in calf) was sacrificed to her (Ov. *Fasti* 4. 630 ff.). It and the Fornacalia (q.v.) were the only festivals which in historic times were organized on the basis of the Curiae (q.v.). See further Frazer, *Fasti of Ovid* iii. 317; add Pausanias 2. 11. 4 (pregnant ewes sacrificed to the Eumenides).

H. J. R.

FORGERIES, LITERARY. I. **GREEK.** Forgeries differ from other *pseudepigrapha* (works wrongly attributed to authors) in two respects. With a true forgery the attribution must be made by the real author himself, and there must be intention to deceive. On both points we are frequently left in doubt. If Lobon (q.v.) wrote the *Hymn to Poseidon* attributed to Arion, Lobon is not necessarily responsible for the attribution; and the authors of the later *Theognidea* certainly took no pains to pass off their work as that of Theognis. Again, the *Anacreontea*, though they bear the superscription of Anacreon, and often refer to his darling Bathyllus as living, make no serious claim to be Anacreon's work (cf. 1. and 60 π τὸν Ἀνακρέοντα μιμοῖ). The poems are only fathered on the old poet by a fanciful pretence, not even consistently maintained. Similarly, we cannot say that the composers of letters attributed to eminent Greek authors or personages (e.g. the famous Epistles of Phalaris) meant in every case to deceive the public (see **LETTER**). On the other hand, it is certain that from desire for gain, fame, or a *cachet* for philosophical doctrines some deliberate forgeries were perpetrated, e.g. the *Orphica* of the neo-Pythagoreans and much Jewish-Greek literature. Heraclides Ponticus, according to Aristoxenus, wrote tragedies which he attributed to Thespis; and *pseudo-Democritea* (see Diels's *Vorsokratiker*) are numerous. The music to part of Pindar's first *Pythian*, published by Kircher in 1648, is an almost certain example of forgery by a modern scholar. The invention of sources, e.g. by Ptolemaeus Chennus (and see DIONYSIUS (12) SCYTOBRACHIION), may also be mentioned here. J. D. D.

II. **LATIN** Forgeries should be distinguished from *pseudepigraphic* literature (q.v.) by the author's calculated attempt to have the works attributed to someone other than himself. Suetonius in his life of Horace told of such work: *venerunt in manus meas et elegi sub titulo eius et epistula prosa oratione quasi commendantis se Maecenati: sed utraque falsa puto, nam elegi vulgares, epistula etiam obscura, quo vitio minime tenebatur*. Suetonius could detect the elegy and the letter attributed to Horace as forgeries by their style. Not all critics (not even he) were always so perceptive, and the *Culex* (among other forgeries in the *Appendix Vergiliana*—q.v.) was accepted as a very early work of Virgil by Lucan, Statius, Martial, and even Suetonius. The first half of the first century A.D. seems to have been particularly interested in such productions. It seems likely that in this period the *Epistulae ad Caesarem senem* were carefully composed in the very distinctive style of Sallust (and are still deceiving scholars). The *Invectiva in Ciceronem*, though certainly a forgery and probably of the same time, differs in that its author was not so concerned or else not so successful in reproducing Sallustian style: the intention was, however, to produce a fake. Another clear example of a forgery, prob-

ably produced also in the same period, is the so-called *Commentariolum Petitionis*, ostensibly a treatise on how to attain the consulship written by Quintus to his brother Marcus Tullius Cicero in the year 64 B.C. (but it is really a farrago, composed in an imitation of Ciceronian style, from the speeches of Cicero—including speeches now lost—of 63 B.C.). It is preserved in the correspondence *ad Quintum fratrem*.

G. L. Hendrickson, *The Commentariolum Petitionis attributed to Q. Cicero* (1904); E. Fievel, *JRS* 1952, 2 ff. (= Kl. Beiträge ii. 181 ff.); R. Syme, *Sallust* (1964), Appendix II. G. W. W.

FORMIAE, modern *Formia*, reputedly the home of Homer's Laestrygonians (q.v.), Volscian town on the Via Appia (q.v.) below Tarracina (q.v.). It obtained Roman citizenship early (*sine suffragio*, 338 B.C.; full franchise, 188 B.C.). Its fine climate and surroundings made it a fashionable resort where prominent Romans had villas: e.g. Mamurra (q.v.) and Cicero, who was murdered nearby. Ancient ruins include Munatius Plancus' tomb.

E. T. S.

FORNACALIA, a movable festival, celebrated not later than 17 Feb. (Quirinalia), which day was hence called also *stultorum feriae*, because, as Ovid explains (*Fast.* 2. 531-2; from Verrius Flaccus, cf. *Festus*, 304. 5 ff.; 418. 33 ff.; 419. 5 ff. Lindsay), those who were too stupid to know to what *curia* they belonged kept the festival then instead of on the proper day, proclaimed by the *curio maximus* (Ov. *ibid.* 527-8). It was, then, celebrated by the *curiae*, not the people as a whole; it consisted of ritual either to benefit the ovens, *fornaces*, which parched grain, or to propitiate the doubtful goddess Fornax who presided over them, *ibid.* 525.

See Frazer, *ad loc.*; Wissowa, *RE* 158, 399; Latte, *RR* 143.

II. J. R.

FORTIFICATIONS in the Mediterranean area were from the first closely related to physical conditions. 'Praeruptis oppida saxis' are generally typical. In the Aegean region, the successive stages of Troy (q.v.), and, in the Late Bronze Age, the cyclopean walls of Mycenae, Tiryns, Athens, and Gla (on Lake Copais) well represent this acropolis type. But small fortified towns also occur, e.g. Early Cycladic Khalandriani (on Syros), having a main wall with frequent semicircular towers and a lower outer wall. Particular attention was paid to protection of gates by enfiling bastions (e.g. Mycenae; cf. Troy I) and tactical plan (e.g. Gla, courtyard gate), and to safeguarding the water supply (Mycenae). (For corresponding developments in the Near East, see Y. Yadin, *The Art of Warfare in Biblical Lands*, 1963.) The simple yet robust brick walls of Old Smyrna (900-600 B.C., *BSA* 1958/9, 35 ff.) illuminate the somewhat obscure position in the Dark Age and archaic period. Extensive town-walls of masonry or brick began to develop in the sixth and, especially, fifth centuries B.C., while the systems of Long Walls (q.v.) show how large-scale fortifications were used for strategic ends. Fourth-century improvements in siegecraft (q.v.) and the introduction of artillery (q.v.) created increasing problems. Fortification-designers steadily responded to the challenge. Towers increased in number (e.g. Mantinea; Latmian Heraclea) and, from Messene (369) onwards, in height (e.g. tall towers at Aegosthena, Perge). Their upper chambers were embasoured for defensive catapults. Walls, occasionally casemated for artillery (Perge; Side; Rhodes), became thicker and higher. A ditch (Poseidonia) or ditches combined with outworks (Syracuse; Selinus) hampered the approach of powerful Hellenistic siege-engines. Defences sometimes included numerous sally-ports to facilitate active resistance. Philon (q.v. 2) Byzantinus (c. 200 B.C.;

cf. Vitruv. i. 5) admirably summarizes the full, relatively sophisticated Hellenistic defensive technique.

The Italic tradition had an early development partly akin to that of Greece, but was less dependent upon the acropolis, being early modified by dissociation of the fortified bank, or *agger*, from hillsides, as at Ardea or at Rome itself (*murus terreus*, Varro, *Ling.* 5. 48), and the revetment of such earth-banks in stone, creating earth-filled walls. The progressive development of such a wall has been traced at Pompeii (*Mon. Ant.* 1930, pt. 2), beginning in 520–450 B.C.; it was enlarged in Italic style, as a revetted *agger* with rearward slope, in the fourth and third centuries B.C., and only hellenized, by the addition of towers, in 120–89 B.C. Meanwhile Rome had been experimenting with a masonry wall of partly Hellenistic type (see WALL OF SERVIUS), such as she found already existing round her colony at Paestum (Poseidonia) and adopted in her colonies of Ostia, Minturnae, and Cosa (qq.v.). But Hellenistic practice was not introduced wholesale until Sulla's day, as at Tarracina and Ostia II, though artillery casemates, as at Perusia and Rome, had been introduced somewhat before this. Another strain in Roman military architecture had already been introduced by military field-work, developed on a scale hitherto quite unknown, and predominant in all frontier provinces until the latter half of the first century A.D. There are notable works in earth and timber at Xanten, Haltern, Oberaden, and Alteburg in lower Germany, at Murgidunum and Fendoch in Britain. This tradition of military building, combining simplicity and strength, was not ousted until the Flavian period in legionary fortresses, and under Trajan on the frontiers. Thenceforward masonry building takes first place, though never completely deserting the earthwork tradition. The fortified frontier, in which a wall, rampart, or palisade, patrolled from watch-towers, connected a chain of forts, is also a Roman invention (see LIMES). The town-walls of the later Roman Empire and occasional forts, like Altrip, culminating in the double walls and artillery defences of Constantinople, combine the best Greek theory with Roman resource, and remained unsurpassed until the invention of gunpowder created entirely new defensive problems.

I. A. R.; E. W. M.

FORTUNA or FORS (Ennius ap. Cic. *Off.* 1. 38), in full Fors Fortuna (Ter. *Phorm.* 841), an Italian goddess identified in classical times with Tyche (q.v.). There is, however, good evidence that she was in the native cult not a deity of chance or luck, but rather the 'bringer', as her name signifies (*ferre*), of fertility or increase. She is praised by gardeners (Columella 10. 316), and her ancient temple in the Forum Boarium at Rome (see Platner-Ashby, 214; *ibid.* 212 ff., for her other Roman shrines) had the same dedication-day as that of Mater Matuta (see MATUTA), viz. 11 June (Ov. *Fasti* 6. 569). These facts suggest a deity potent for the fruits of the earth and the life of women, cf. her titles Muliebris (Festus, 282. 21 Lindsay; this shrine was 2 miles from Rome, and only women living in a first marriage might approach the goddess) and Virgo (Varro ap. Non. 189. 19). However, her titles are so numerous (see especially Plut. *Quaest. Rom.* 74, and Rose ad loc.) that too much should not be made of these.

It is regularly said that her cult was introduced into Rome by Servius Tullius (Plut. *ibid.*, and many other passages), and this is true in the sense that she has neither a *flamen* nor a feast-day belonging to the oldest list. How old her cult is in other parts of Italy is unknown, but certainly older than at Rome, whither it came from some place outside. Of the other Italian centres of her worship, one of the most interesting is Praeneste, where a number of archaic inscriptions throw light on the cult. One is a dedication 'nationu cratia', 'for offspring' (*CIIL* xiv. 2863), which furthermore calls the goddess 'Diuo filia primocenia', i.e. 'Iouis filia primigenia', the one instance in Italian cult which makes one deity the child of another, unless, as suggested in Rose, *Roman Questions of Plutarch* (1924), 83 f., a very old error underlies the title. Equally interesting is the fact that she had an oracular shrine there. The method of consultation was for a boy to draw at random one of a number of billets of oak-wood (*sortes*), inscribed with sentences (one was 'Mars shakes his dart', at a similar oracle at Falerii, Livy 22. 1. 11) which the consultant might apply to his own case (Cic. *Div.* 2. 85–6, and Pease ad loc.). A temple was built to the Praenestine goddess on the Quirinal (Livy 29. 36. 8; 34. 53. 5). This was in 194 B.C. At Antium a plurality of Fortunae was worshipped (Macrobi. *Sat.* 1. 23. 13), and these also gave oracles, apparently by movements of the statues (Macrobi. *ibid.*) (C. I. NORTIA).

Wissowa, *RR* 256 ff.; Drexler in Roeder's *Lexikon* i. 1503 ff. (exhaustive account of her titles, identifications, representations in art, etc.); Latte, *RR* 170 ff., with references to excavations at Praeneste (q.v.). The temple of Fortuna in the Forum Boarium is probably to be identified with one of the two temples excavated at Sant'Omobono, of the early fifth century, it was preceded by an open-air sanctuary: see I. Gjerstad, *Early Rome* in (1960), 178 ff.; Nash, *Pict. Dict. Rome* i. 415 ff.

H. J. R.

FORTUNATAE INSULAE ('Blessed Islands') were originally, like the 'Gardens of the Hesperides', the mythical winterless home of the happy dead, far west on Ocean shores or islands (Hom. *Od.* 4. 563 ff.; Hes. *Op.* 171; Pind. *Ol.* 2. 68 ff.). They were later identified with Madeira (Diod. 5. 19–20; Plut. *Sert.* 8), or more commonly with the Canaries, after their discovery (probably by the Carthaginians). The Canaries were properly explored by King Juba II (c. 25 B.C.–c. A.D. 23), who described apparently six out of the seven. From the meridian line of this group Ptolemy (*Geog.* passim) established his longitudes eastwards.

Cary-Warmington, *Explorers* 52 ff.; (Pelican) 69 ff.; Thomson, *Hist. Anc. Geog.* 184, 282; Hyde, *Greek Mariners* 150 ff.; J. Delgado, *Archivo Español de Arqueología* 1950, 164 ff.

E. H. W.

FORUM AUGUSTUM or **AUGUSTI**, dedicated in 2 B.C., is the vast precinct (110 metres by 83 metres) of Mars Ultor in Rome, vowed by Octavian at Philippi. The octostyle temple, of the Corinthian order, stood upon a lofty podium at the north end; the interior of the cella was flanked by columns and terminated in an apse, housing colossal statues of Mars and Venus. Caesar's sword was kept there. The apse was set against the high precinct wall of fire-resisting peperino, irregular in plan owing to rising ground and the difficulties of buying out private property in the populous Subura. The temple lies between broad walks, leading from the Subura by flights of steps and spanned by triumphal arches, dedicated to Drusus and Germanicus in A.D. 19. The Forum area was flanked by porticoes in two stories, the upper decorated with Caryatids copied from the Erechtheum at Athens. Behind the porticoes were big semicircular *exedrae* in which stood statues of mythical figures, *virii triumphales*, and others. Laudatory inscriptions from the bases of the statues survive. In this *Forum* youths were admitted to manly estate, here provincial governors ceremonially departed or returned. Behind the northern *exedra* a

group of apartments, centred upon an *atrium*, may have housed the *Sulii*, priests of Mars.

G. Lugh, *Roma antica* (1946), 258 ff.; Nash, *Pict. Dict. Rome* i. 401 ff.; G. Fiorini, *La Casa dei Cavalieri di Rodi al Foro di Augusto* (1951), 10 ff. I. A. R.; D. E. S.

FORUM CAESARIS or **IULIUM**, dedicated by Julius Caesar in 46 B.C., on land bought eight years earlier for 60 million *sesterces* (Cic. *Att.* 4. 16. 8). The Forum (approximately 160 metres long by 75 metres wide) had long colonnades on the east and west sides and a series of *tabernae* behind the eastern colonnade. The main entrance was at the southern end and by the south-west corner lay Caesar's new *curia* (q.v. 2) and appendages. At the north end stood the octostyle temple of Venus Genetrix, mythical foundress of the Julian *gens*, with an equestrian statue of the Dictator in front of it. The temple was completely rebuilt after a fire and rededicated between A.D. 108 and 113 (Not. Scav. 1932, 201).

G. Lugh, *Roma antica* (1946), 245 ff.; R. Thomsen, *Opusc. Arch.* (1941), 195 ff.; Nash, *Pict. Dict. Rome* i. 424 ff. I. A. R.; D. E. S.

FORUM IULII, modern *Fréjus*, presumably founded by Julius Caesar as a market town (*forum*). A colony was settled here probably by Augustus, who dispatched here the warships captured at Actium, so that Forum Iulii became a naval base as well (*Colonia Octavianorum Pacensis Classica*). The fleet was still here in A.D. 69, but the harbour, now quite dry, was perhaps already silting up. Very extensive remains of the port and colony survive. **Forum Iulii** was the birthplace of Cn. Julius Agricola and probably of C. Cornelius Gallus.

A. Donnadieu, *Fréjus* (1927); Grenier, *Manuel* i. 208 ff.; *Carte arch. de la Gaule rom.* ii. 1 ff.; O. Blohan, *Roman Gaul* (1953), 94 ff. C. E. S.

FORUM NERVAE or **TRANSITORIUM**, 120 metres long by 45 metres wide, was built in Rome by Domitian and dedicated by Nerva in A.D. 97. It converted the Argiletum, which approached the *Forum Romanum* between *Forum Augustum* and *Forum Pacis*, into a monumental avenue: hence the name *Forum Transitorium*. At its east end, against the south *exedra* of *Forum Augustum*, stood a temple of Minerva, Domitian's patron goddess; reliefs illustrating her cult and legends decorated the marble frieze and attic of the peperino precinct wall, which is divided into fifteen shallow bays by detached marble columns. Alexander Severus placed here colossal statues of the *Divi*. At the east end traffic from the Subura entered on the south side of the temple only; at the west end, towards the *Forum Romanum*, were twin monumental gates.

P. H. von Blanckenhagen, *Flavische Architektur und ihre Dekoration untersucht am Nervaforum* (1940); Nash, *Pict. Dict. Rome* i. 433 ff. I. A. R.

FORUM PACIS or **VESPASIANI** was the precinct of the Temple of Peace at Rome, dedicated by Vespasian in A.D. 75. The area, 145 metres long by 100 metres wide, was laid out with ornamental flower beds and surrounded by an enclosure wall of peperino and marble porticoes. The Temple of Peace, which housed the treasures from Jerusalem, was in the centre of the east side, flanked by other buildings, including the *Bibliotheca Pacis*. The Severan Marble Plan was attached to a building, almost certainly the library, on the south of the Temple, which was later converted into the church of St. Cosmas and Damian. After the fire of Commodus the Forum was restored by Severus, and the Marble Plan shows traces of a Diocletianic restoration.

A. M. Colini, *Bull. Com.* 1937, 7 ff.; G. Carettoni, *Forma Urbis Romae* (1960), 177 ff.; Nash, *Pict. Dict. Rome* i. 439 ff. I. A. R.; D. E. S.

FORUM ROMANUM, the chief public square of Rome, surrounded by monumental buildings, occupied a swampy trough between the Palatine, Oppian, Quirinal, and Capitol. The edges of the marsh, of which Lacus Curtius was a survival, were covered with cemeteries of early Iron Age settlements, until the area was drained in the sixth century B.C. by the Cloaca Maxima (q.v.). The establishment of the Forum as the centre of Roman civic life dates from this time; the Regia, Aedes Vestae, and Lacus Iuturnae were traditionally associated with this period. The earliest dated monuments are the temples of Saturn (497 B.C.: Livy 2. 21), Castor (484 B.C.: Livy 2. 20, 42), and Concordia (336 B.C.: Plut. *Cam.* 42). The *rostra* (q.v.) were decorated by Maenius (338 B.C.), whose civic sense gave balconies (*maeniana*) to the *tabernae veteres* and *argentariae novae*, the latter associated with the shrine of Venus Cloacina, and decorated in 310 B.C. with Samnite *clipei*. Butchers and fishmongers were relegated to the *macellum* and *forum piscarium*. *Basilicae* were introduced in 184 B.C. by Cato (Livy 39. 44), and of this stage in the Forum's development Plautus (*Curc.* 468-81) gives a racy sketch. Cato's work was soon imitated by the *basilica Aemilia* (179 B.C.) on the north side behind the *tabernae novae*, and *basilica Sempronia* (170 B.C.) on the south screened by the *tabernae veteres*.

The growing official importance of the *Forum* is emphasized by the transfer thither of the *comitia tributa* in 145 B.C., with the consequent change in direction of the *rostra*. In 121 Opimius restored the temple of Concord, and built a new adjacent *basilica*, while the first triumphal arch, to Fabius Maximus Allobrogicus (*CIL* vi. 1303-4), spanned the Sacra Via. The temple of Castor was rebuilt in 117 (Cic. *Scour.* 46). Much of the present setting, however, is due to Sulla (*JRS* 1922, 1 ff.), who planned the erection of the Tabularium (q.v.), new *rostra*, and a new *basilica Aemilia*, paving much of the area and altering many minor monuments to suit his new plan.

Caesar, working through Aemilius Paulus (Cic. *Att.* 4. 16. 14), rebuilt the *basilica Aemilia* and planned a new *basilica Iulia*, to replace the old *basilica Sempronia*, which, like the *curia* (q.v.) was finished by Augustus. His repaving of the *Forum* is marked by the series of galleries (*cuniculi*) below it. After Caesar's assassination a column was erected to mark the site of his pyre and later (29 B.C.) replaced by the *aedes divi Iuli*. Caesar's *rostra* were also rebuilt by Augustus, who received a triumphal arch in 30 B.C., replaced by another arch in 19 B.C. Many old buildings were rebuilt at this time by *virii triumphales* and others: the Regia (36 B.C.), the *Basilica Aemilia* (14 B.C.), and the temples of Saturn (c. 30 B.C.), Castor (A.D. 6), and Concord (A.D. 10). Minor Augustan monuments were the *porticus Iulia*, the *milliarium aureum*, the repair of *fons Iuturnae*. Under Tiberius came an *arcus Tiberii* (A.D. 16), another repair of *basilica Aemilia*, the *templum divi Augusti*, and the *schola Xantha* (*CIL* vi. 30692).

The Flavians made their impression on the *Forum*. The temple of Vespasian (*CIL* vi. 938; 1019) was built in 81, and Domitian also restored the *curia* and the temple of *divus Augustus*. His equestrian statue occupied the centre of the open space in 91.

Later monuments were the Hadrianic sculptures from the *rostra*, commemorating *alimenta* for Italy and taxation-reliefs for the provinces, the *templum divae Faustinae* (A.D. 141: *CIL* vi. 1005), the *arcus Severi* (A.D. 203: *CIL* vi. 1003), the Diocletianic columns in front of *basilica Iulia* (*Röm. Mitt.* 1938), the columns for the *decennalia* and *vicennalia* (*CIL* vi. 1203; 1204), the *templum divi Romuli* (A.D. 307), the *basilica* of Maxentius, completed by Constantine, the *equus Constantini* (*CIL* vi. 1141), the *statio aquarum* at *fons Iuturnae* (*CIL* vi. 36951). Last of all come the monuments to Stilicho (*CIL* vi. 1187), the

rostra Vandalica, and the column of Phocas (*CIL* vi. 1200).

FORUM TRAIANI or ULPUM. Of all *fora* in Rome this huge colonnaded square, of which the fourth side is occupied by the Basilica Ulpia, most resembles provincial *fora*, though on the vaster scale paid for by Dacian spoils. The *Forum* was completed for Trajan by the architect Apollodorus of Damascus in A.D. 113. It lies between the Capitol and Quirinal, impinging upon the slopes of both by immense *exedrae*. It has a single portico to the south, where its main entrance, adorned by a triumphal arch in A.D. 116, faced the *Forum Augustum*; the lateral porticoes were double. The *basilica*, with broad nave, double aisles, and two very large apsidal *tribunalia*, occupied the north side of the *Forum*. Behind it lay Greek and Latin libraries, flanking a colonnaded court, modified to contain Trajan's Column, 38 metres high. The column was decorated with a spiral frieze of reliefs illustrating the Dacian Wars; Trajan's statue surmounted it, and it contained his and Plotina's ashes. The inscription on the column seems to assert that its purpose was to show the height of the cutting required for the *Forum*: this refers to the scarping of the Quirinal, where the elaborate *exedra*, separated from the *Forum* by firewall and street, screens a terraced rock-face ingeniously adapted to streets and staircases and crowned by an interesting market-hall. The libraries and column originally marked the end of the group of buildings, but Hadrian added the *templum Divi Traiani* beyond them.

G. Lugli, *Roma antica* (1946), 278 ff.; Nash, *Pict. Dict. Rome* i. 450 ff. I. A. R.

FOUR HUNDRED, THE, were a revolutionary oligarchic council set up to rule Athens in 411 B.C. The movement started in the fleet at Samos in summer 412, when Alcibiades (q.v.) offered to win Persian help for Athens if an oligarchy were established. Peisander (q.v. 2) was sent to Athens in the winter to prepare the way, and secured an embassy to negotiate with Persia. Though the oligarchs soon discarded Alcibiades and the Persian negotiation failed, it was then too late to stop. In the spring the oligarchic clubs (*hetairai*, q.v.) murdered prominent democrats and intimidated the Council and the Assembly. So far the published programme was 'moderate': financial economy and the restriction of the franchise to 5,000, those 'able to serve the state in person or with their wealth'. But after Peisander's return to Athens in May 411 a meeting of the Assembly, summoned to hear the proposals of a constitutional commission, was persuaded or terrorized into electing five men who, indirectly, selected 400 to act as a *boule* with full powers to govern. The supporters of the original 'moderate' programme were overwhelmed by the extremists of the 400, who never summoned the 5,000. But the democrats recovered control over the fleet at Samos; and when the Peloponnesians attacked Euboea, the squadron hastily sent by the 400 was completely defeated. Theramenes (q.v.) now came out for the moderates, the 400 were overthrown (Sept. 411), and the 5,000 were instituted: but after the victory at Cyzicus (spring 410) full democracy was restored. See also ANTIPHON (1).

Thuc. bk. 8 (probably closest to the actual course of events); Arist. *Ath. Pol.* chs. 29-33 (based on documents, reformers' drafts rather than measures actually passed, which seriously distort the narrative). Hignett, *Hist. Athen. Const.*, ch. 10 and app. xii. I. A. R.

FRANKS, a name ('freemen') assumed in the third century by a coalition of German tribes on the middle and lower Rhine. They are prominent in attacks on Gaul and Spain between A.D. 253 and 276. A violent

incursion in 355 was subsequently defeated by Julian, who granted the Salian Franks a large area for settlement (Toxandria). Frankish relations with the Empire were fairly good after this, and Franks (e.g. Count Arbogastes) rose to high positions in the Empire. About 425, however, the Salians under Chlodio broke out from Toxandria, and the Franks of the middle Rhine crossed into Gaul. Both were checked by Aetius, but succeeded after his death in extending their power southward and westward. With the defeat of Syagrius in 486 or 487 by the Salian Clovis at Soissons, the last remains of Roman power in Gaul disappeared, and in the ensuing century the Merovingian house of the Salian Franks made itself supreme in the whole area of modern France (*Francia*).

FRATRES ARVALES, an ancient priestly college in Rome, mentioned under the Republic only by Varro, *Ling.* 5. 85, and restored by Augustus before 21 B.C. We owe our detailed knowledge of this brotherhood to the survival of substantial remains of their records (*Acta Fratrum Arvalium*) in inscriptions, some found in various places in Rome, but most on the site of the sacred grove of the brethren at the fifth milestone on the *Via Campana* outside the *Porta Portuensis* (now the settlement *La Magliana* on the Rome-Pisa railway, near the station). The first in a long series of discoveries was made there in 1570; systematic excavations carried out in the years 1867-71 almost doubled the number of fragments.

The college consisted of twelve members chosen from the most distinguished senatorial families by co-optation; the reigning Emperor was always a member. The president (*magister*) and his assistant (*flamen*) were elected annually. The most important ceremony of the brotherhood took place in May in honour of the goddess Dea Dia to whom the grove was dedicated. The rites of this agricultural cult belong to an early stage of Roman religion. The Acts of the year A.D. 218 have preserved the famous song of the Arval Brethren, the *Carmen Arvale* (q.v.), which originated in the fifth century B.C., and traces of Greek influence have been seen in its construction and form.

While the brotherhood's worship was directed to Dea Dia and other traditional deities, divus Augustus was added after his consecration, and one of the explicit intentions of that worship was the well-being of the imperial house. Numerous events in the history of that house received commemoration, and these commemorations, being dated, are a very important source for the chronology of the Empire. The preserved records begin in 21 B.C. and end in A.D. 241 (*ILS* 9522), but the cult still existed in 304 (*Not. Scav.* 1919, 105 f.). See also AMBARVALIA.

For the history of Latin script in Rome the *Acta Fratrum Arvalium* are of unique significance.

FUNDAMENTAL EDITIONS. W. Hensen, *Acta Fratrum Arvalium* (1872); *CIL* vi. 2023-119, 32338-98, 37164 f. The edition by E. Paroli (1950) is worthless.

NEW FRAGMENTS *Not. Scav.* 1014, 464 ff.; 1019, 100 ff.; 1021, 40-51; *Bull. Com. Arch.* iv (1927/8), 275 ff.; *Epigraphica* 1945, 27 ff.; *Athenaeum* 1946, 188 ff.; *Bull. Comm. Arch.* lxxviii (1961/2), 116 ff.

SELECTIONS H. Dessau, *ILS* 220-30, 241, 451, 5026-49, 9522. For the *Carmen Arvale* see Ed. Norden, 'Aus altromischen Priesterbüchern', *Acta Reg. Soc. Hum. Lit. Lund.* 1939, 109 ff. A new edition of the *Acta* is being prepared by H. Bloch. H. B.

FREEDMEN. Roman *libertini* and *liberti* appear to have been far more numerous than Greek ἀπελεύθεροι and ἐλεύθεροι because (1) little survives of Greek legislation and there was virtually no Greek juristic writing; (2) many Roman freedmen became citizens and were therefore much discussed in politics and literature; and (3) the

liberti Caesaris were for a time at the centre of political conflict. The fact is that we have no figures at all, absolute or relative. The freedman of great wealth or political influence was rare, but he was also notorious, leading to the illusion that there were many more like him.

As a general rule an owner was free to manumit a slave whenever and however he pleased. The legislation of Augustus restricting the number who could be manumitted by testament and introducing a few other controls (Gai. *Inst.* 1. 13-47) was altogether exceptional and will not bear the weight of sweeping reform that has been imposed on it. The form in which a manumission was completed did not often matter substantially, though there might be later legal complications (see *LATINI IUNIANI*). Many were accomplished informally, others by testament, by fictitious sale to a god (as at Delphi), or by some other formality designed to provide the freedman with legal proof if challenged.

The law bound a freedman in certain ways to his manumittor, now his *patronus* (q.v.). How far these obligations extended in practice beyond *obsequium* and *reverentia* is not clear, other than, in Rome, such claims as a patron had on any client (q.v.), and the patron's right to inherit if the freedman died childless and intestate. The not infrequent Greek practice, surviving to the end of antiquity, whereby an ex-owner explicitly retained a claim to specified services, suggests that otherwise, in a society without the institution of *clientela*, the freedman's obligations were more formal than practical.

Most freedmen were humble people. In Greece they merged with the other free non-citizens (see *METICS*), though some communities imposed special restrictions on them, such as residence in specified localities. In Rome, however, they normally acquired the political status of their manumittor, even Roman citizenship. The state therefore had to take cognizance of them, for example, in allocating them to voting tribes during the Republic, in excluding them from the legions and the curule magistracies, or, under Augustus, in excluding criminals from citizenship and even Latin status (see *DEDICITII*). Children born to a freedman after his manumission were free from all special restrictions.

The policy begun by Augustus of using his own *familia* in the administration led under Claudius to the rise of a few freedmen to great power and wealth (see *PALLAS* 3, *NARCIS* 2, *NYMPHIDIUS*). After Nero they were soon reduced to the lower echelons of the service. See also *SLAVERY*.

Treggiari, *Roman Freedmen during the Late Republic* (1969). M. I. F.

FREGELLAE, modern *Opri* near *Ceprano*, on the River Liris (q.v.) below Sora (q.v.). Establishment of a Latin Colony here (328 B.C.) provoked the Second Samnite War. Staunchly loyal to Rome against Pyrrhus and Hannibal, it revolted against her in 125 B.C. and was destroyed. *Fabrateria Nova*, a new foundation some miles away, replaced it.

G. Colasanti, *Fregellae* (Rome, 1906).

E. T. S.

FRENTANI, Oscan-speaking people between Marrucini and Apulia (qq.v.) on Italy's Adriatic coast. Chief settlements: Ortona, Histonium, Buca, Anxanum (see too *LARINUM*). A tribally organized State, they sided with Rome, after initial hostility, in the Second Samnite (q.v.) War and remained her loyal allies until the Social War

when they joined the insurgents. They were romanized rapidly thereafter.

E. T. Salmon, *Samnium and the Samnites* (1967), see index. E. T. S.

FRISI, a Germanic people, who lived on the North Sea coast where the Frisians still live, but extended eastwards to the Ems. Overrun by Drusus in 12 B.C., they paid the Romans taxes of ox-hides but revolted in A.D. 28 owing to the extortionate exaction of the hides by a centurion named Olenius. They maintained their freedom until 47, when Corbulo subjugated them; but in 69-70 they were active in the rebellion of Civilis (q.v.). In the third century, however, *cunri Frisionum* (*ILS* 2635, 4761) served in Britain. Like the Bructeri and the Chauci, they were divided into two sections called *maiores* and *minores*, but the significance of this is unknown; nor do we know their precise relationship with the Franks, who ruled their part of the world at a later date. E. A. T.

FRONTINUS, **SEXTUS JULIUS** (*PW* 243), c. A.D. 30-104, *praetor urbanus* in 70 and *consul suffectus* in 74 (?); after his consulate he was appointed governor of Britain (probably 74-8), where he subdued the Silures (q.v.). He was probably the founder of the legionary camp at Isca (q.v.).

Frontinus' writings are essentially practical, dealing with professional subjects in a straightforward style admirably suited to his purpose. Of his two-volume work on land-surveying, published under Domitian, only excerpts survive. A theoretical treatise on Greek and Roman military science (*De re militari*), used by Vegetius (1. 8; 2. 3), has perished; but the *Strategemata*, also of Domitian's reign, a more general manual of historical examples illustrating Greek and Roman strategy for the use of officers (book 1, *praef.*) survives in four books. The first three are closely related (stratagems before, during, and after battle; during sieges), but book 4, where critics detect differences of style and structure, collects instances more ethical in character (Discipline, Justice, etc.) and has been attributed to a later 'Pseudo-Frontinus'. Its authenticity remains doubtful.

Appointed *curator aquarum* by Nerva (A.D. 97), Frontinus began for his own and his successors' guidance a two-volume account of the water-supply of Rome (*De aquis urbis Romae*), completed under Trajan. This describes the aqueducts and their history, with complete technical details as to quantity and distribution of supply, and examines the regulations governing the system and its public and private use. The sources include personal inquiry, engineers' reports, State documents and plans, and senatorial decrees, as well as previous technical writers.

He was again suffect consul in 98, and *ordinarius* in 100 with Trajan.

WRITINGS. 'Texts. Surveying: excerpts in C. Iachmann, *Röm. Feldmesser* (1848). C. Thulin, *Corpus Agrimensorum Rom.* 1 (1913). *Strategemata*. G. Gundermann (1888); C. Bendz, *Index verborum* (1939); *Textkrit. u. interp. Bemerkungen* (1941). *De aquis*: F. Hühner (1858); F. Krohn (1922). Text and translation: *Strat. and De ag.*, C. E. Bennett, M. B. McElwain (Loeb, 1925); *Les aqueducs*, P. Grimal (Rudé, 1944-61).

On *De aquis*: R. Lanciani, *Topografia di Roma antica: i commentarii di Frontino intorno le acque e gli acquedotti* (1880); C. Herschel, *The Two Books on the Water-supply . . . of . . . Frontinus* (1913); T. Ashby, *Aqueducts of Ancient Rome* (1935).

On 'Pseudo-Frontinus': C. Wachsmuth, *Rh. Mus.* 1860 (bk 4 spurious); P. Estrenaux, *Die Kompos. v. Frontins Strategemata* (1899) (bk 4 authentic); G. Bendz, *Die Echtheitsfrage des vieriten Buches der Frontinschen Strategemata* (1938) (convincing defence). G. C. W.

FRONTO, **MARCUS CORNELIUS** (*PW* 157) c. A.D. 100-c. 166, born at Cirta, Numidia, became the foremost Roman orator of his day. After passing through the *cursus honorum* (*CIL* viii. 5350) he was *consul suffectus* in 143.

Some years earlier he had been appointed tutor in Latin rhetoric to the future Emperors M. Aurelius and L. Verus, and he continued in their service till his death in 166 or soon after.

In the pages of Aulus Gellius Fronto makes several appearances as the centre of a philological coterie. Later writers speak highly of his oratory, mentioning him in the same breath with Cato, Cicero, and Quintilian; the author (Eumenius?) of the *Panegyricus Constantio dictus* (14) even calls him 'Romanae eloquentiae non secundum sed alterum decus'. Except for a doubtfully ascribed treatise *De Differentiis Vocabulorum* there was no basis for testing these judgements till early in the nineteenth century, when palimpsests at Milan and Rome were found to contain the greater portion of his correspondence with M. Aurelius and others. Its publication so disappointed the expectations of historians that Fronto became the victim of much intemperate criticism. The correspondence has indeed little bearing on history, though it does something to rehabilitate the characters of Verus and of the Elder and Younger Faustina, and clearly pictures the bourgeois home life of the Antonines. It is, however, of considerable interest as a personal record, as a literary by-product, and as a document for the study of rhetoric and language. The mutual affection of Fronto and M. Aurelius is unquestionably sincere, and is the more remarkable since the author of the *Meditations* so obviously preferred philosophy to rhetoric and Greek to Latin. They write to each other as close friends, with just that touch of self-consciousness which is inevitable between master and pupil, but with no thought of having to run the gauntlet of posterity. Much of their correspondence is the merest small-talk, but it is also largely concerned with the study of rhetoric, and Fronto's views on this subject are amply documented, though it remains impossible to estimate his achievement in oratory either from his precepts or from the few rhetorical exercises which survive with the correspondence. As a teacher Fronto employed the traditional rhetorician's technique, and reposed an excessive faith in similes. His favourite prose reading consisted of Cato, C. Gracchus, Sallust, and Cicero's letters; of Seneca he speaks slightly. He deprecated the purism which would confine literary Latin to the vocabulary of Cicero's orations, and by drawing partly on early poets and partly on the *sermo cotidianus* he devised the *elocutio novella*. This euphuistic attempt to revitalize a decaying language is best illustrated in his own writings and those of his fellow countryman Apuleius, but it left its mark on most of the Latin prose written after his time.

TEXT: M. P. J. van den Hout (Leiden, 1954). With translation: C. R. Haines (Loeb, 1919-20).

Critical essays, text and translation of selected letters, and full bibliography to date: M. D. Brock, *Studies in Fronto and his Age* (1911). Critical (but over-enthusiastic) study: F. Portaliup, *Marco Cornelio Frontone* (1961). See also R. Marache, *La Critique littéraire de langue latine et le développement du goût archaïsant au II^e siècle de notre ère* (1952). Date of death: G. W. Bowersock, *The Sophists in the Roman Empire* (1969), App. III. R. G. C. L.

FRONTONIANI (Sid. Apoll. *Epp.* 1. 1. 2), followers of Fronto (q.v.) in his archaizing theories of a style, *elocutio novella* (q.v.), calculated to displace both Silver Age mannerisms and Quintilian's veneration for Cicero by a return to the old-fashioned and largely discarded language of Ennius, Cato, and the Gracchi as models. See **ARCHAISM**.

M. D. Brock, *Studies in Fronto and his Age* (1911); E. S. Bouchier, *Life and Letters in Roman Africa* (1913), ch. 5. J. W. D.

FRUSINO, modern *Frosinone*, on the Via Latina (q.v.). It participated in, and indeed instigated, the revolt of some Hernici against Rome in 306 B.C. and lost much territory in consequence. Although reduced to a *prae-*

fectura, it remained reasonably prosperous. Today it is a large town with negligible traces of antiquity. E. T. S.

FUCINUS LACUS, a large lake at the centre of Italy. It lacked a visible outlet, but legend stated that the river Pitonius from the Pacligni country traversed it without their waters mingling, the Pitonius reappearing near Sublaqueum to supply the Aqua Marcia (Pliny, *HN* 2. 224; 31. 41; Lycoph. *Alex.* 1275). The lake sometimes overflowed (Strabo 5. 240: exaggerated). Claudius, employing 30,000 men for eleven years, executed Caesar's plan to drain the lake: an *emissarium* was excavated 3½ miles through a mountain ridge to carry the lake waters to the Liris (q.v.) (Suet. *Jul.* 44; *Claud.* 20 f.; 32). But Claudius' efforts were not entirely successful. Even repairs to his *emissarium* by Trajan and Hadrian proved vain (Dio Cass. 60. 11. 33; Dessau, *ILS* 302; S.H.A. *Had.* 22). Drainage attempts recommenced in A.D. 1240, but were unsuccessful until the nineteenth century, when practically the whole lake-bed was reclaimed.

E. Agostinoni, *Il Fucino* (1908).

E. T. S.

FUFIVS (PW 10) CALENUS, QUINTUS, assisted Clodius (q.v. 1) as tribune in 61 B.C., supported Caesar as praetor (59), and some years later served under him in Gaul and in the Civil War (especially in Greece), becoming consul in 47 (not elected till September) with Vatinius (q.v.). After Caesar's death he supported his friend Antonius (q.v. 4) against his enemy Cicero. He held part of Italy during the Philippi campaign, and then governed Gaul for Antony with eleven legions, which, on his death (40), his son handed over to Octavian. E. B.

FULGENTIUS, FABIVS PLACIADIVS, c. A.D. 467-532, *vir clarissimus*, known as the *Mythographus*, is probably identical with the famous bishop of Ruspe. (A summary of the question in K. Polheim, *Die lateinische Reimprosa* (1925), 287 ff. Critical of the identification, G. Kruger in *Harnack-Ehring* (1921).) Fulgentius was born at Thelepte in Byzacene, Africa, of a rich family, received a good education, including Greek, and became *procurator* in his native town. The collection of writings usually grouped together under his name (*Mitologiarum Libri tres, Expositio Virgilianae Continentiae secundum Philosophos morales, Expositio Sermonum antiquorum, De aetatibus mundi et hominis, and the Super Thebaidem* (Bischoff, *Byz. Zeitschr.* 1951, ascribes the last to the 12th or 13th c.)), with their bizarre style, their searching after unusual words, their strange etymologies and stranger allegorizing, probably belong to an earlier period of Fulgentius' life. All of them, but especially the *Virgiliana Continentia*, were widely read in the Middle Ages. Apuleius and Martianus Capella (qq.v.) were Fulgentius' models. He uses the dialogue form, by means of which Calliope unravels the meaning of the myths, and Virgil the allegory underlying his *Aeneid*. The *De Aetatibus mundi* is a summary of world history, sacred and secular. Besides his highly rhetorical sermons modelled on Augustine, and theological works, there is an alphabetical 'psalm', against the Arian Vandals, which closely follows the pattern of Augustine's 'psalm' against the Donatists.

After years of monastic life, Fulgentius became bishop of Ruspe in 507. The Vandal King Thrasamund twice banished him to Sardinia, finding him too able a champion of the Catholic faith.

Opera, ed. R. Helm (Leipzig, 1898); theological works, Migne, *PL* lxxv; two 'new' sermons, J. Leclercq, *Revue Bénéd.* 1045/6; Fulgentius' *Commentarium*, A. Souter, *JTS* 1913; *Psalm*, C. Lambot, *Revue Bénéd.* 1936. G. Lapeyre, *S. Fulgence de Ruspe* (1920); O. Friebe, *Fulgentius der Mythograph und Bischof* (1911); P. Courcelle, *Les Lettres grecques en Occident de Macrobe à Cassiodore* (1948: pp. 206-9 for bibliographical references in notes), bibliography in *Clavis Patrum Latinorum*, ed. E. Dekker (1961). F. J. E. R.

FULLING. In the ancient world the fuller (*κναφεύς*, *fullo*) was employed both in the finishing processes of cloth and in the cleaning of soiled garments that could not be washed at home (mainly, though not exclusively, those made from wool). In the absence of soap, the cloth was first washed by treading it in ditches (*πλυνοί*, *lacunae*) or tubs (*πίλαι fullonicae*) with water and soda (*νίτρον*) or some other alkaline detergent (often human or animal urine). It was then beaten with wooden sticks or mallets to close up its texture, washed again to clean and shrink it, dried, brushed with special tools or teasel burs to raise the nap, bleached with sulphur, dressed with fuller's earth or some similar substance, and finally 'shorn' (to remove uneven fibres) and pressed in special presses. Fullers' workshops (one with wall paintings illustrating the processes) have been found at Pompeii and elsewhere. Fullers' guilds were well established in Ptolemaic Egypt, and in imperial Rome the 'collegium aquae' was of considerable importance.

Pliny, *HN* 35. 196-8. H. Blümmner, *Technologie der Gewerbe und Künste* 1 (1912), 170 ff.; Forbes, *Stud. Anc. Technol.* iv², 82 ff.
L. A. M.

FULVIA (*PW* 113), the rich daughter of M. Fulvius Bambalio and Sempronia, both from disappearing noble families, was wife successively of Clodius (q.v. 1), Curio (q.v. 2), and (by 45 B.C.) Antony. The stories of her cruelty in the proscriptions are suspect, but she was certainly ambitious and strong-minded, and took a prominent part in the political campaign of 41 which led to the Perusine War (see *ANTONIUS* 6). Thereafter (early 40) she escaped to Greece, where she shortly died, her spirit broken by Antony's reproaches. To Clodius she bore a son Publius (later praetor) and a daughter Claudia who became Octavian's first wife (he dismissed her untouched during the dissensions of 41), to Curio a son executed by Octavian after Actium, and to Antony Antyllus and Iullus (see *ANTONIUS* 7 and 8).

Syme, *Rom. Rev.*, see index; E. Malcovati, *Le donne di Roma antica* 1 (1945); C. L. Babcock, *AJPPhil.* 1965, 1 ff. (speculative).
T. J. C.

FUNDANIUS, GAIVS, unrivalled in witty comedy according to Horace, *Sat.* 1. 10. 40-3 (cf. Porphyry ad loc.). Belonging to Maecenas' circle, he is imagined to describe Nasidienus' dinner (*Sat.* 2. 8. 19).

FUNDANUS, MINICIUS (*PW* 13) or **MINUCIUS, COS.** suff. A.D. 107, had a wide circle of friends who included the Younger Pliny and Plutarch. As proconsul of Asia (in 122-3; cf. *AE* 1957, 17) he received Hadrian's rescript about procedure concerning Christians. A copy of this was later attached to the end of Justin Martyr's *First Apology* (c. 150).
H. H. S.

FUNDI, modern *Fondi*, interesting for its walls and ancient street plan, Volscian town on the Via Appia near Tarracina (q.v.). It obtained Roman citizenship early (*sine suffragio*, 338 B.C.; full franchise, 188 B.C.) and became a prosperous *municipium*, whose chief official Horace ridicules (*Sat.* 1. 5. 34). Its territory produced the choice Caecuban wine.

G. Lugli, *La tecnica edilizia romana* (1957), 152 ff.; Cantagnoli *Stud. urb.*, 71 ff.
E. T. S.

FURIAE, Latin equivalent of Erinyes (q.v.), perhaps a translation (*furere* = *ἐρινύειν*, to rage like an Erinyes). There is no proof of their existing in cult or unprompted popular belief; sometimes they are identified with the obscure goddess Fur(r)ina (q.v.), as Cicero, *Nat. D.* 3. 46.
H. J. R.

FURIUS (1, *PW* 34) **ANTIAS** (i.e. of Antium), **AULUS** (fl. 100 B.C.), friend of Q. Lutatius Catulus (Cic. *Brut.*

132), epic poet influenced by Ennius and in turn influencing Virgil, cf. his 'pressatur pede pes' with Verg. *Aen.* 10. 361. From his *Annales*, a national poem in at least eleven books, Gellius (18. 11) quotes six hexameters.

Baehr, *FPR*; Morel, *FPL*.

J. W. D.

FURIUS (2, *PW* 78) **PHILUS**, **LUCIUS**, friend of Scipio (q.v. 11) Aemilianus, whose cultural interests he shared (see *SCIPIONIC CIRCLE*). As consul in 136 B.C. he was closely concerned with the affair of the *foedus Mancinum* (Cic. *Rep.* 3. 28; see *MANCINUS*), and under his supervision Mancinus was offered to the Numantines. This Furius may be the author of a work which included two sacral formulae used against besieged cities (Macrobius *Sat.* 3. 9. 6). Cicero, who introduced him into his *De Republica*, reports the excellent Latinity and educated style of his speeches.

FURNITURE. Very little furniture has survived from the Minoan and Mycenaean Palaces. At Cnossos there was some wooden furniture and furniture of gypsum and coloured marbles. The Treasury of Atreus is reported to have had marble tables, and part of a table of rosso antico was found in the megaron at Mycenae. The Palace at Pylos yielded a variegated marble table top inlaid with red stone and the remains of wooden thrones, chairs, and footstools. Very gaudy and elaborate furniture is recorded in the Pylos furniture tablets, and these records, together with fragments found in excavations, show that Homer's references to bedsteads, chairs, and footstools with inlays of gold and silver and ivory preserve an authentic Mycenaean tradition.

The forms of classical Greek furniture are known mainly from representations in art. Most of the furniture was carved wood, turnery being introduced in the sixth century B.C. The principal forms were: the throne (*θρόνος*), a high-backed chair for occasions of state; the chair (*κλισμῶς*) of lighter build, without arms, in general domestic use; the stool (*διφῶς*), four-legged, boxed, or folding (*δίφῶς ὀκλαδίας*); the footstool (*θρήνης*), which might be square or oblong; the table (*τράπεζα*), always small and portable, on three legs and oblong or circular (*τρίπους*); the couch (*κλίνη*), used for dining as well as for sleeping; and the chest (*κεβωτός, λάρναξ*), in which clothes and bedding were stored. Rugs were used on the couches; in the fifth century their use as floor-coverings was considered effeminate, though the practice was known to Homer and became common in Hellenistic times. Utensils were piled on the floor or hung on the walls; lamps stood on shelves or in niches. The general effect to our eyes would be one of bareness and simplicity.

The Greek types are the basis of Etruscan and Roman furniture, and the greater luxury of these nations is evinced more in costliness of material than in novelty of form. Etruria introduced a new type of chair with rounded back resembling the modern arm-chair, and high candelabra of metal on which clusters of candles could be placed. Rome adapted these as lamp-stands. The Roman throne (*solium*), chair (*cathedra*), and stool (*sellā*), follow Greek models; the couch (*lectus*) was either of Greek shape or was provided with a back, like a sofa. Sideboards and cupboards with drawers, sometimes used as book-cases, appear in imperial times, together with new forms of the table (*mensa*) which was the typical object of domestic ostentation: Cicero gave a million sesterces for a table of citron wood.

G. M. A. Richter, *The Furniture of the Greeks, Etruscans and Romans* (U.S.A. 1966); W. Deonna, *Délos xviii: Le Mobilier délien* (1938); *A History of Technology* (ed. C. Singer, 1956) ii. 221 ff.

F. N. P.; D. E. S.

FURRINA (preferable to **FURINA**), a divinity belonging to the earliest stratum of Roman religion; she possessed a grove, an annual festival (*Furrinalia*, 25 July), and a *flamen*, but by the last decades of the Republic her very name was largely forgotten. The interpretation as *Furia* (despite Altheim, *History of Roman Religion* (1938), 116 f.) rests upon a false analogy; the term *Nymphae Furrinae* appears to be late, although Furrina may have been a divinity of a spring or of springs. The location of her grove, on the slopes of the Janiculum near the Pons Sublicius, is indicated by the account of the death of C. Gracchus in 121 B.C. (Plut. *C. Gracch.* 17; Auctor, *De Vir. Ill.* 65; less precisely, Oros. 5. 12. 8), and fixed by epigraphical and other discoveries (P. Gauckler, *Le Sanctuaire syrien du Janicule*, 1912); these have established the existence of springs and the fact that under the Empire the traditional worship became almost totally ousted by Oriental cults. Cicero (*QFr.* 3. 1. 4) mentions another shrine near Arpinum.

S. M. Savage, 'The Cults of Ancient Trastevere', *Am. Ac. Rome* 1940, 35 ff. A. W. VAN B.

FURTUM (theft) is defined in Justinian's *Digesta* (q.v.) as 'contractatio ["handling"] rei fraudulosa lucri faciendi gratia. . .' (*Dig.* 47. 2. 1. 3). The *res* must, however, be movable: land could not be stolen. This, and the probable etymology of 'furtum' ('fero'), suggest that a carrying away was necessary, but, at least in the developed law and in the majority opinion, this was not so. Nor need the thief intend permanently to deprive the owner (e.g. when a borrower uses the thing in an unauthorized way—the so-called *furtum usus*). The owner could himself be liable for theft (e.g. from a pledgee—the so-called *furtum posses-*

sionis). By the XII Tables a thief who came by night, and any thief who used a weapon, might be killed out of hand. A *fur manifestus* (caught in the act) was scourged and subjected to the plaintiff by *addictio*, but the praetor substituted a penalty of fourfold the value of the thing. For *furtum nec manifestum* the penalty was, and remained, twofold. The plaintiff was the owner or other person, such as a usufructuary (see *SERVITUDES*) or a pledgee, having a sufficient interest. These distinctions and penalties were preserved by Justinian, but it is probable that already in the classical law the normal proceeding was by criminal prosecution. The owner might also claim restitution of the thing by *vindicatio* (q.v.) or compensation for its loss by *condictio furtiva*.

P. Huvelin, *Études sur le furtum* 1 (1915), H. F. Jolowicz, *Digest* xviii. 2, *De Furtis* (1940), B. Albanese, *Annali del seminario giuridico Palermo* 1953, 1956. B. N.

FUSCUS, CORNELIUS (*PW* 158), of a senatorial family, adopted the equestrian career, 'quietus cupidine', though of a dashing and adventurous character (*Iac. Hist.* 2. 86). He was a partisan of Galba in A.D. 68 and was rewarded by him with the procuratorship of Illyricum, in which function he actively helped the Flavian generals to invade Italy. Later, as Prefect of the Guard, he was entrusted with the conduct of the war against the Dacians; he crossed the Danube and penetrated into Dacia (86 or 87), but met with a signal defeat and lost his life (*Dio* 67. 6; Jordanes, *Getica* 13. 76). The altar at Adam-Klissi (q.v.) has been connected with him, without much reason (cf. *CAH* xi. 670); and the problem of his *colonia* of origin (perhaps Narbonensian) arouses some interest.

R. Syme, *AJPhil.* 1937, 7; *Tacitus*, 623; 683 f.

R. S.

G

GABII, an ancient Latin city whose site has been excavated 12 miles east of Rome. Prehistoric finds do not contradict the story of its foundation by Alba Longa (q.v.) (Verg. *Aen.* 6. 773). Its resistance to Tarquin (q.v. 2), separate treaty with Rome, and special role in augural practices prove its early importance (Livy 1. 53 f.; Dion. Hal. 4. 53; Varro, *Ling.* 5. 33). After 493 B.C. Gabii appears as Rome's ally but was possibly sacked in the Latin War (Livy 3. 8; 6. 21; Macrobi. *Sat.* 3. 9. 13). By 50 B.C. it had become a village (Cic. *Planc.* 23. Record of Sulla's colony is suspect: *Lab. Colon.* p. 234). Nevertheless the poets exaggerate its desolation. Under the Empire Gabii was a prosperous *municipium* with celebrated baths and ornate Hadrianic buildings (*ILS* 272). Although still a bishopric in the ninth century, today only a temple (third century B.C.) remains. The Romans reputedly derived from Gabii the *inctus Gabinus*, a particular mode of wearing the *toga* which was used in certain ceremonial rites (Serv. on *Aen.* 7. 612; Livy 5. 46).

T. Ashby, *PBSR* 1902, 180 ff.; A. Alföldi, *Early Rome and the Latins* (U.S.A. 1905), 378 ff. E. T. S.

GABINIUS (1, *PW* 6), AULUS, the grandson of a slave, served under Metellus (q.v. 3) in Macedonia in 148 B.C., and as legate in 146 warned the Achaeans against war. Tribune in 139, he introduced the secret ballot in elections. A. H. McD.

GABINIUS (2, *PW* 11; cf. 10), AULUS, as tribune 67 B.C. transferred Bithynia and the legions of Lucullus (q.v. 2) to the consul Glabrio, and then carried the law giving

Pompey (q.v.) command against the pirates, threatening to depose Trebellius, a fellow tribune who attempted veto. It was also probably now (rather than in his consulate) that he forbade the lending of money to provincials in Rome. He served Pompey as legate in the East and in 58 as consul, when he incurred Cicero's lasting hatred by scorning his appeals for help. Clodius had bribed him with the province of Syria, which he administered competently, reorganizing Judaea and setting Antipater in power. But in 55 he restored Ptolemy Auletes, for a large bribe; in return for this, and for his alienation of the *publicani* (perhaps through his leniency to the provincials—Cic. *Prov. Cons.* 10), he had to face three prosecutions on his return in 54. Cicero called his acquittal for *maiestas* a 'lex impunitatis', but next month was shamefacedly defending him for *repetundae*; this time, however, Gabinius was condemned and went into exile, a third charge, for *ambitus*, being dropped. Recalled by Caesar, he fought for him in Illyricum (winter 48/7), but was besieged by barbarian tribes in Salona, where he died.

He seems to have reached the consulate late, since he is probably identical with the Gabinius who was military tribune under Sulla in 86 and his legate in Asia in 81. See E. Badian, *Philol.* 1959, 87 ff. G. E. F. C.

GADES (τὰ Γάδερα, from Phoenician Gadir; now *Cádiz*), on the Spanish coast north-west of Gibraltar. The traditional foundation by Phoenicians of Tyre c. 1100 B.C. is accepted by some; others lower the date to the eighth or seventh century. It was often confused with Tartessus (q.v.). Before Herodotus, the adjacent island

was the legendary seat of Geryon; Heracles-Melqart and Saturn-Baal were long worshipped in Gades. It was Hamilcar Barca's first Spanish base, and kept Punic letters on its coins down to Augustan times. It went over to Rome in 206 B.C. and received favourable terms; Julius Caesar, after other acts of patronage, gave it Roman municipal status; it added Augustus' name to its title. In social prestige it ranked with the Roman colonies; in wealth it was next to Rome and Patavium, having 500 men of equestrian census. Always a trading-post, it was long unrivalled in the West for commercial shipping; both busy and gay, *Gades iocosae* also had the best dancing-girls. In the second century A.D. it was eclipsed by the traffic of Hispalis (q.v.), and by the fourth century it was decadent or derelict. It had been the home of the Corneli Balbi, Columella, and Hadrian's mother.

For temple and cult of Hercules, see A. García y Bellido, *Archivo Español de Arqueología* 1963, 70 ff. M. I. H.

GAEA (Γαῖα) or **GE** (Γῆ), the Earth, conceived as a vaguely personal goddess. It may be that in the earliest times she, like Tellus (q.v.), was simply the power or *mana* resident in that parcel of earth which the particular group of worshippers tilled or otherwise used; but as far back as our records go she is the Earth in general, or a goddess resident in and governing it. Her cult can be traced in a number of places, though in most of them she has been superseded by a more definitely personal power, chthonian or other. At Delphi she was the original holder of the oracular shrine (Aesch. *Eum.* 2), a statement which there is no reason to doubt, as it is supported by sundry other traditions and by the fact that Apollo is said to have killed Python, a serpent and therefore a creature of earth (he actually gave the oracles, Hyg. *Fab.* 140. 1), before he could take over the holy place; cf. APOLLO. Her well-supported identity or close connexion with Themis (q.v.; Aesch. loc. cit. and *Prom.* 209-10) is to be explained by that goddess's original nature as simply 'the fixed or firm one' and not an abstraction (see Farnell, op. cit. *infra* 12 ff.). For more or less probable identifications of her with other figures, see *ibid.* 19 ff. One of her most characteristic functions is as a witness to oaths (as *Il.* 3. 278), because she must know what is done on her surface.

In mythology she is the offspring of Chaos, or at least comes into being after it. Heaven (*Ouranos*) is her child and husband, and their offspring, besides such things as seas and mountains, are the Titans, Cyclopes, and Hecatoncheires (qq.v.). After her separation from Uranus (cf. KRONOS) she bore the Erinyes and Giants (qq.v.), being fertilized by the blood from his mutilation; later she produced Typhon (q.v.), whose father was Tartarus (Hesiod, *Theog.* 117 ff.; 820 ff.). This is a systematized account of the wedding of Sky and Earth; there are many legends ultimately to the same effect, e.g. the union of Zeus and Semele (see DIONYSUS) and many more children of Earth, as Erichthonius (see ATHENA), and Python in some accounts.

Apart from actual cult of Earth as a goddess, antiquity had its share of beliefs concerning her, as, e.g., the source (probably) of the life of new-born children, hence the Roman custom of placing them on the ground; the author of the potency ascribed to sundry herbs, and so forth. See, in general, A. Dieterich and E. Fehrle, *Mutter Erde*¹ (1925); for herbs, A. Delatte, *Herbarius*² (1938).

Farnell, *Cults* iii. 1 ff. (cult); Drexler in Roscher's *Lexikon*, s.v. (mythology, etc.); for a critical view, largely discounting her cult, Nilsson, *GGR* i². 456 ff. H. J. R.

GAISERIC, king of the Vandals and Alans (qq.v.) from A.D. 428 to 477. In 429 he transported the Vandals from Spain to Africa, and in 439 occupied Carthage and de-

clared himself an independent ruler owing no allegiance to Rome. In 431, 441, and 467 he heavily defeated East Roman attempts to overthrow him. He was the only German king to build a fleet, and with this fleet he controlled the western Mediterranean throughout his reign. His most famous exploit was the capture of Rome in June 455. For a fortnight his men occupied the city and carried off many valuable works of art, including the treasures which Titus had taken from the Temple at Jerusalem. He died undefeated in 477.

See C. Courtois, *Les Vandales et l'Afrique* (1955).

E. A. T.

GAIUS (1), the Emperor, 'Caligula' (GAIVS JULIVS (PW 133) CAESAR GERMANICVS; A.D. 12-41), son of Germanicus and Agrippina, born at Antium on 31 Aug. A.D. 12. In 14-16 he was on the Rhine with his parents and, because of the military boots which he wore, was nicknamed Caligula ('Baby Boots') by the soldiers. In 18-19 he was with his parents in the East and, after Germanicus' death in 19, lived in Rome with his mother until her arrest in 29, then successively with Livia and Antonia Minor, until 32, when he joined Tiberius on Capreae. After the death of his brother Drusus in 33 he was the only surviving son of Germanicus and, with Tiberius (q.v. 2) Gemellus—Claudius' claims not being considered seriously—next in succession to the Principate. He was elected *pontifex* in 31 and was *quaestor* two years later, but received no other training in public life. Tiberius appointed Gaius and Tiberius Gemellus joint heirs to his property, having already indicated in language typically obscure that he expected Gaius to succeed to the Principate. Strongly supported by Macro (q.v.), prefect of the Praetorian Guard, Gaius was acclaimed Emperor (16 March 37). Tiberius' will being declared invalid by the Senate, so that Gaius might inherit the whole of his property. In the early months of his rule Gaius honoured the memory of his mother, father, and brothers and spoke abusively of Tiberius. Antonia, a restraining influence, died on 1 May 37. In October Gaius was seriously ill, and it is possible that Philo (*Leg.* 14; 22) is right in thinking that his mind was unhinged as a result (see, however, Balsdon, op. cit. *infra* 212 ff.). On recovering he executed, some time before 24 May 38, both Macro and Tiberius Gemellus. In Jan. 39 Gaius quarrelled seriously with the Senate, revised his attitude to Tiberius' memory, and became more autocratic. The autumn and winter of 39-40 he spent in Gaul and on the Rhine; at Moguntiacum he forestalled a conspiracy against his life, whose leader, Cn. Cornelius Lentulus Gaetulicus, was executed. It is possible that at this time two new legions were raised (XV and XXII Primigeniae) and that Gaius intended to invade Germany or Britain. The intention, if serious, was abandoned, either because of military indiscipline or because of Gaius' instability of character (Suet. 24. 3; 39; 43-9; Dio Cass. 59. 21-3; 25. 1-5; cf. Balsdon, op. cit. 58-95 and *JRS* 1934, 13-18). After his return to Rome (in ovation, on 31 Aug. 40) Gaius was in constant danger of assassination, governed with much cruelty, and was murdered in the Palace on 24 Jan. 41. His (fourth) wife, Milonia Caesonia, and daughter (his only child) were also murdered.

The government of Gaius was more autocratic than that of earlier emperors. He was consul four times, in 37 (suffect), 39, 40 (sole consul), 41; on the first occasion for two months, on the last two for a few days only. In many respects he appears to have deserted the Augustan form of principate in favour of monarchy of the Hellenistic type; this, at least, is the easiest explanation of his treatment of his sisters, especially Drusilla, with whom he was suspected of committing incest and whom he consecrated after her death. For himself he accepted extravagant honours, which came close to

deification, and, though in face of opposition he desisted from his intention to set up a statue of himself in the temple at Jerusalem, he was responsible for serious unrest among the Jews both in Alexandria and in Judaea.

ANCIENT SOURCES. Bks. 7 and 8 of the *Annals*, in which Tacitus described the principate of Gaius, being lost, we depend on Suetonius, *Gaius Caligula*, Dio Cassius, bk. 59, and Josephus, *Ag.* 18. 6. 8. 205-19. 2. 5. 111 (with a detailed account of the murder of Gaius and an estimate of his character and principate, probably derived from Cluvius Rufus; see M. P. Charlesworth, *Camb. Hist. Journ.* 1933, 105 ff.). For detailed knowledge of Gaius' relations with the Greeks and Jews of Alexandria we have contemporary evidence in Philo, *Contra Flaccum* (edited by H. Box, 1939), *Legatio ad Gaium* (edited by E. M. Smallwood, 1961) (Philo was himself a member of the embassy to Gaius which he describes), and from papyri (H. A. Musurillo, *The Acts of the Pagan Martyrs: Acta Alexandrinorum*, 1954). See also, on the sources, A. Momigliano, *Rend. Linc.* 1932, 293 ff.

MODERN LITERATURE. J. P. V. D. Halsdon, *The Emperor Gaius (Caligula)* (1934); E. Koerberlein, *Caligula und die ägyptischen Kulte* (1962); J. A. Marner, *A Commentary on C. Suetonii Tranquilli Vita C. Caligulae Caesaris*, 1-31 (U.S.A. 1949). J. P. B.

GAIUS (2, *PW* 2) (2nd c. A.D.), one of the most renowned Roman jurists, though nothing certain is known of his personality. His gentile name and cognomen are unknown, likewise his origin (perhaps a Greek province) and studies. Born perhaps under Trajan, he evidently lived at some period at Rome and wrote extensively, without having the *ius respondendi* or any public office. An adherent of, and perhaps a teacher in, the Sabinian School (see SABINUS 2), he sometimes rejects their point of view, and takes into consideration opinions of the opposite school. It is a striking fact that he was never cited by his contemporaries or by later jurists, not even by Paulus (q.v. 1) and Ulpianus (q.v. 1) who must have known and used his works. In post-classical times, however, he was popular and his authority was officially established by the Law of Citations (A.D. 426) which gave his writings equal authority with those of Papinianus (q.v.), Paulus, Ulpianus, and Herennius (q.v. 2). Justinian seems to have had a special predilection for Gaius, for he frequently calls him 'Gaius noster', and by his order Gaius' students' textbook, the *Institutes*, which was already the basis of first-year studies in the Eastern law-schools, was used as the basis for the composition of the imperial *Institutiones* (q.v.).

WORKS: *Ad edictum provinciale*, a long commentary in thirty-two books, which is one of the grounds for the suggestion that he was a provincial; *Ad edictum praetoris urbani*; *Ad legem XII tabularum*; *De verborum obligationibus*; *Res cottidianae sive Aurea*; *Liber singularis regularum*; and several monographs. His principal work was his *Institutionum commentarii quattuor*, probably completed soon after 161. Until they were discovered (1816) on a codex rescriptus at Verona (probably of the 5th c.), the *Institutes* were known only by a score of fragments in the *Digest* and an epitome in two books in the *Lex Romana Visigothorum*. The Veronese MS., containing the fourth book of the *Institutes* (till then unknown), furnished quite new details on the *legis actiones* and formulary procedure (see LAW AND PROCEDURE, ROMAN 11). In spite of attacks by some radical critics, the Veronese text is generally held to be substantially genuine. The new fragments of the *Institutes* found in Egypt in 1933 on a few parchment sheets, and belonging apparently to the fourth century, supported this view, although they revealed the omission of a passage dealing with the obsolete *societas ercto non cito* (see COMMUNIO).

Opinions differ as to the merits, and in particular as to the originality, of Gaius. The arrangement of his *Institutes*, with its division of the law under the headings *personae*, *res*, *actiones*, and its further sub-divisions, achieved, through the medium of Justinian's *Institutes*, immense influence in later legal thought, but it may not have been originated by him. His work indisputably, however, has the qualities of clarity, simplicity, and economy, and his

style, judged by the standards of his time, is plain and good. His historical explanations are sometimes erroneous, but he stands almost alone among the jurists for his interest in such things. Moreover, even if his merits were less than they are, his *Institutes* would still be of the greatest importance as being the only classical legal work to have come down to us in substantially its original form.

Editions of the *Institutes*. G. Studemund and P. Krüger (1923); E. Seckel, B. Kübler, 8th ed. (1939), F. de Zulueta (1946), with commentary (1953); M. David and H. L. W. Nelson (1954—unfinished). On the new fragments (*PSI* xi 1182), see F. de Zulueta, *JRS* 1934, 168 ff., 1935, 19 ff., 1936, 174 ff. A. M. Honoré, *Gaius, A Biography* (1962), on which see F. Wieacker, *Sav. Zeitschr.* 1964, 401, and see bibliography s.v. JURISPRUDENCE. A. B.; H. N.

GALATEA (Γαλάτεια, perhaps 'milk-white'), name of a sea-nymph, first in Homer (*Il.* 18. 45); her legend was apparently first told by Philoxenus (see BERGK, *PLG** iii. 609 ff.). Polyphemus (see CYCLOPS) loved her, and wooed her uncouthly; the story is a favourite especially with pastoral writers (Theocr. 11; cf. 6. 6 ff.; Bion, fr. 12 Wilamowitz-Moellendorf; 'Εμπερίφιλος Βίανος, 58 ff.; Verg. *Ecl.* 9. 39 ff.; cf. 2. 19 ff.; 7. 37 ff.; but particularly Ov. *Met.* 13. 738 ff.). In this, the earliest surviving passage which adds anything important to the story, Galatea loved a youth, Acis, son of Faunus (Pan?) and a river-nymph. Together they listened in hiding to Polyphemus' love-song, but when he had finished he rose to go and caught sight of them. Galatea dived into the sea, but Polyphemus pursued Acis and hurled a huge rock at him. As it fell on him and crushed him, Galatea turned him into a river, which bore his name ever after. The whole may well be a local Sicilian tale. The resemblance between Galatea's name and Γαλάτης, a Gaul, seems to underlie a less-known version in which she finally accepted Polyphemus' attentions and had by him a son, Galas or Galates, ancestor of the Gauls (see App. *Ill.* 2)—mere pseudo-historical or pseudo-mythical aetiology. H. J. R.

GALATIA is used, when applied to territory in the East, in two senses. (1) As the name of a territory in central Asia Minor, comprising parts of what was formerly Phrygia and Cappadocia, occupied and settled by a Celtic people which crossed the Hellespont in 278 B.C., and after much raiding and plundering were finally penned in an area stretching from the Sangarius to east of the Halys by Attalus I of Pergamum in 230. Here they continued to harass their neighbours; after the battle of Magnesia Rome sent Manlius Vulso to subdue them, and afterwards used them as a check on Pergamum. In the Mithridatic Wars they remained faithful to Rome. Their territory was organized on the Celtic tribal basis, the three tribes Tolistobogii, Tectosages, and Trocmi occupying separate areas around their respective capitals Pessinus, Ancyra, and Tavium, and each tribe being divided into four parts under tetrarchs. The council of the three tribes met at a place called Drynemetum, and tried cases of murder. The Galatians maintained their Celtic character throughout the imperial period, and when visited by St. Jerome were still speaking a Celtic language.

(2) As the name of a Roman province, formed in 25 B.C., incorporating the kingdom of Amyntas, which comprised besides Galatia proper parts of Phrygia, Lycaonia, and Pisidia, and possibly Pamphylia. Other territories in Paphlagonia and Pontus were afterwards added to the province, which was normally governed by a praetorian *legatus* until about A.D. 72, when Cappadocia and Armenia Minor were united with Galatia, and the combined province was put under a *legatus* with consular rank. Galatia was reduced in size, and again put under a praetorian *legatus*, by Trajan, and still further diminished about A.D. 137. Under Diocletian the province shrank

to the size of Galatia proper, with a strip of Lycaonia. The two principal cities of the province Galatia were Ancyra (the metropolis) and Pisidian Antioch.

It is disputed whether the 'Galatia' of St. Paul's Epistle to the Galatians refers to Galatia proper (the 'North-Galatian theory') or to the province Galatia, in whose Lycaonian and Phrygian regions St. Paul founded the churches mentioned in Acts (the 'South-Galatian theory').

GALBA (1), the Emperor (SERVIUS SULPICIVS (PW 63) GALBA, c. 3 B.C.–A.D. 69), son of C. Sulpicius Galba and Mummia Achaica, was adopted by Livia Ocellina, second wife of his father. He was highly esteemed by Augustus and Tiberius, and was a favourite of Livia, as afterwards of Gaius and Claudius. Governor of Aquitania, consul (A.D. 33), legate of Upper Germany, proconsul of Africa (45), and from 60 governor of Hispania Tarraconensis, he had an exceptionally brilliant record to his credit, when in 68 Vindex (q.v.) invited him to replace Nero. He made his troops proclaim him only a legate of the Senate and of the Roman people. He had one legion and enrolled another of provincials (afterwards VII Gemina). The dangers inherent in the fall of Vindex were removed by Nero's death (see VERGINIUS (2) RUFUS). Nymphidius (q.v.) Sabinus with the praetorians declared for Galba, who took the title of Caesar and marched slowly to Rome with Otho (q.v.), governor of Lusitania, entering the city in early October. Threats from Nymphidius Sabinus and Clodius (q.v. 2) Macer were removed; but Galba incurred odium for massacring a body of marines outside Rome. Galba had the mind of an honest, but suspicious, administrator: 'omnium consensu capax imperii nisi imperasset'. His parsimony was notorious. He did not pay the donative promised to the soldiers. A commission was appointed to recover Nero's presents. He was unwise in sending his Spanish troops to Pannonia. Early in Jan. 69 the troops of the Rhine declared against him (see VITELLIUS 1). He adopted a certain L. Calpurnius Piso (q.v. 11) Frugi Licinianus as his successor, and offended Otho, who had hoped for that position. Otho organized a conspiracy among the praetorians, and Galba was killed on 15 Jan. 69.

SOURCES. Tac. *Historiae* (ed. H. Heubner, 1963); Suet. *Galba* (ed. G. W. Mooney, 1950); Plut. *Galba* (ed. F. G. Hardy, 1890); Dio Cass. bks. 63–4. Tacitus, Suetonius, Plutarch mainly follow the same author (the usual identification with the Elder Pliny is not certain, but see G. B. Townend, *APPhil.* 1964, 337 ff.).

MODERN LITERATURE. Syme, *Tacitus*, esp. 150 ff., 204 ff.; E. Koestermann, 'Das Charakterbild Galbas bei Tacitus', *Navicula Chilonensis* (1956), 101 ff.; G. E. F. Chilver, 'The Army in Politics, A.D. 68–70', *JRS* 1957, 29 ff.; M. Fuhrmann, 'Das Vierkaiserjahr bei Tacitus', *Philol.* 1960, 250 ff. A. M.; G. E. F. C.

GALBA (2) MAXIMUS, PUBLIUS SULPICIVS (PW 64), was elected consul for 211 B.C. without having held any curule magistracy. He defended Rome against Hannibal's surprise attack. As proconsul (210–206) in Greece he conducted the First Macedonian War against Philip of Macedon, leading the first Roman fleet into the Aegean, where he captured Aegina (210); he achieved little else, and the main burden of war was gradually transferred to Rome's Greek allies. He was dictator in 203, probably to hold the elections. As consul II (200) he conducted the Second Macedonian War. Landing at Apollonia he planned to invade Macedonia from the west. He worsted Philip at Otlobolus and forced the pass of Banitza, but retired to Illyria for the winter (199); this campaign, though marked by no great military success, led the Aetolians to support Rome. Galba served as legate to Flaminius (197), as one of the ten senatorial

commissioners appointed to help Flaminius settle Greece (196), and later as ambassador to Antiochus (193).

N. G. L. Hammond, *JRS* 1966, 42 ff. (for campaign of 199). H. H. S.

GALBA (3), SERVIUS SULPICIVS (PW 58), military tribune in 168 B.C., opposing Aemilius Paullus' triumph in 167, was praetor in 151 in Further Spain, where in subduing the Lusitanians he treacherously massacred a number who had sued for peace (151–150). A prosecution against him in 149, supported by Cato, failed. He was consul in 144. His oratory set new rhetorical standards in emotional effect.

Livy 45, 35 ff.; Per. 48–9; App. *Hisp.* 58–60; Cic. *Brut.* 22, 86. Scullard, *Rom. Pol.* 234 ff., 269 ff.; Malcovati, *ORF* 2 109. A. H. McD.

GALBA (4), GAIUS SULPICIVS (PW 51), son of (3) above, in 143 B.C. married Licinia, the elder daughter of Crassus (q.v. 1) the father-in-law of Gaius Gracchus. He probably served on a land-commission in Africa c. 121–119 (see Degraffi, *ILLRP* n. 475) and conceivably also on the Gracchan agrarian commission (so Cichorius, *Rom. Stud.* 113 ff., but see M. Gelzer, *Gnomon* 1929, 656 f.). Though possibly an augur, he was condemned by the Mamilian commission (110) for corruption in the Jugurthine war; the peroration (*Epilogus*) of his defence was a choice specimen of oratory to be committed to memory in Cicero's boyhood (*Brut.* 127). H. H. S.

GALBA (5), SERVIUS SULPICIVS (PW 61), probably grandson of no. 4, was a *legatus* in Gaul under C. Pomptinus (62–60 B.C.) and Caesar (58–56), and praetor in 54. In 50 he stood unsuccessfully for the consulship. In the Civil War he apparently took Caesar's side (Cic. *Att.* 9. 9. 3; Tac. *Hist.* 1. 15 ?) but in 44 joined in his assassination. In 43 he fought against Antony in the battle of Forum Gallorum, which he described to Cicero in a letter (*Fam.* 10. 30). He was condemned for Caesar's murder under the law of Pedius (q.v. 1). T. J. C.

GALBA (6), GAIUS SULPICIVS (PW 52), son of (5) and grandfather of the Emperor Galba, wrote an historical work cited by Juba.

Peter, *HRRel.* n. 41; *FGRH* 92.

GALEN of Pergamum (A.D. 129–?109) in a spectacular career rose from gladiator-physician in Asia Minor to court-physician in the Rome of Marcus Aurelius. Well educated in his native town, he travelled later, studied in Greece and Alexandria, started practising in Pergamum in 157, and went to Rome in 162. He had become very famous when he left there in 166, only to return again from Pergamum in 169. He then stayed in Rome until his death. Writing all his life, he began with philosophical treatises and ended with medical books.

As philosopher and as physician Galen was an eclectic dogmatist. Plato and Hippocrates were his gods; Aristotle he held in sincere respect. But in spite of his belief in authorities he was anxious to form his own judgements, and his personality, therefore, takes the foreground in all his actions and writings. His knowledge was equally great in theory and practice; he excelled in diagnosis and prognosis and was a remarkably good teacher. His system is the ambitious effort to comprise the whole of medicine, the usual specialization of that time being rejected. Yet Galen realized that the physician has to deal with individuals, and that medicine can never be expressed adequately in general statements.

Galen was particularly productive as anatomist and physiologist. Performing dissections carefully in all their details, he collected and corrected the results of earlier generations and added many new facts. His

physiological research based on experiment was masterly, particularly in the field of neurology; he proved that the arteries as well as the veins carry blood. His pathology was founded on the doctrine of the four humours; here he was most strongly influenced by speculative ideas. His pharmacological and dietetic doctrines were the codification of what had been accomplished in these fields.

Galen's monothestic views, his ardent belief in teleology, his religious attitude—even anatomy to him was praise and veneration of God—foreshadow the coming Middle Ages. Yet his dominant influence on later generations, comparable only to that of Aristotle, is rather based on his two greatest achievements as a scientist, and in establishing a sect of medicine, which was above all sects; he had overcome the dissension characteristic of all earlier science and had laid the basis for the modern concept of a *scientia aeterna*, a science in which all scientists equally share and on which all of them unanimously agree.

GALERIUS (1), the Emperor (GAIUS GALERIUS VALERIUS MAXIMIANUS, *PW* 2), was chosen as Caesar of the East by Diocletian in A.D. 293 and put away his wife to marry Diocletian's daughter, Valeria. Born about A.D. 250 at Serdica, the son of a peasant, he had risen from the ranks in the army. Tough and uneducated, he was entirely loyal to Diocletian. In 294 he engaged the Sarmatians on the Danube frontier and in 295 the Carpi, many of whom he settled in Pannonia. In 297 he was called East to a greater task, the defence against Narses of Persia. Defeated at first near Carrhae, he was given opportunity to repair his

error. With reinforcements from the Balkans, he invaded Armenia, and gained a complete victory over Narses; a peace entirely favourable to Rome followed (298). Diocletian is said to have discountenanced the large annexations that Galerius was disposed to make.

Galerius' religious views were similar to those of Diocletian; but being of a less prudent temperament than the latter he may have been the leading spirit behind the persecution of the Christians which began in 303. On Diocletian's abdication, Galerius became Augustus of the East (1 May 305), nominally second to Constantius, actually superior, as both Caesars, Severus and Maximinus Daia, were his men. When Constantius died (306) Galerius reluctantly accepted Constantine as Caesar of the West, but declined to recognize Maxentius who rebelled the same year, and sent Severus, now Augustus of the West, against him. After the defeat and capture of Severus, he himself invaded Italy, but was forced to beat an ignominious retreat. Summoning Diocletian from his retirement, he made a new settlement of the Empire at Carnuntum (308), appointing Licinius Augustus and declaring Maxentius a public enemy. But Constantine and Daia refused the offered rank of 'filii Augustorum' and assumed the full imperial title in 310. Falling ill in 311 Galerius relented so far as to issue an edict of partial toleration to the Christian Church. He died shortly afterwards, leaving the Church on the edge of triumph and the system of Diocletian on the brink of dissolution.

C. H. V. Sutherland, *RIC* VI, 15 ff

II M.; B. H. W.

GALERIUS (2, *PW* 8) **TRACHALUS** (cos. A.D. 68), a recent orator mentioned by Quintilian. He had an impressive appearance and his lofty and lucid style were enhanced by a voice and delivery 'that would have done credit to the stage' (*Inst.* 10. 1. 119; 12. 5. 5 and 10. 11). Tacitus says that it was generally believed that Otto made use of his ability in civil matters and some thought that he employed him to write the speech referred to in *Hist.* i. 90. He was proconsul of Africa.

J. W. D., G. B. A. F.

GALINTHIAS (Γαλινθίας, Anton. Liber. 29), or **GALANTHIS** (Γαλανθίς, Ov. Met. 9. 307), in mythology, a friend or servant of Alcmena (q.v.). When the latter was bearing Heracles, Eleuthia (and the Moirai) sat with hands clasped (and knees together), magically preventing delivery. Galinthias, perceiving this, ran out crying that Alcmena had borne a son; the goddess(es) leaped up in surprise and the charm was broken. In anger, they turned Galinthias into a lizard (Ovid) or weasel (Ant. Lib.).

H. J. R.

GALLIC WARS is the name usually given to the campaigns by which Caesar (q.v. 1) completed the Roman conquest of Gaul (58–51 B.C.). It is uncertain whether this conquest had been premeditated by Caesar; but appeals for his intervention on behalf of one Gallic tribe against another, or against German intruders, involved him in campaigns beyond the existing Roman province in south Gaul, and drew him as far as the Rhine (see AEDUI, ARIOVISTUS, HELVETII). At the end of 58 Caesar took up winter-quarters in north-east Gaul, an act foreshadowing a permanent Roman occupation of all Gaul. In 57 accordingly he had to meet preventive attacks by the tribes of northern Gaul (see BELGAE, NERVII); by his victories over these he brought northern France and Belgium under Roman control. In 56 Caesar had evidently resolved on the complete subjugation of Gaul, for in this year he forced the submission of the peoples on the Atlantic seaboard (see VENETI 1). It is uncertain whether the tribes of central Gaul at this time came to terms with him; but these were now ringed off within

the Roman area of occupation, and Caesar at this stage considered the pacification of Gaul as complete.

In this belief Caesar spent the campaigning seasons of 55 and 54 in Germany and Britain. But sporadic revolts in northern Gaul kept him occupied throughout the winter of 54/3 and the following summer, and in 52 he was confronted by a formidable coalition of tribes in central Gaul under the leadership of Vercingetorix (q.v.). The duel between Caesar and Vercingetorix was the most critical event in the Roman conquest of Gaul. After repeated marches and counter-marches across central Gaul the issue still remained undecided, when Vercingetorix allowed Caesar to invest him in the fortress of Alesia (q.v.). The reduction of Alesia by famine and the capture of Vercingetorix finally broke Gallic resistance, and the local rebellions which flared up here and there in 51 strained Caesar's patience more than his resources.

The conquest of Gaul was accomplished by Caesar at a surprisingly low cost of men. The Gauls lost heavily in men and in treasure; but the estimate of Plutarch (*Caesar*, ch. 15), that their casualties amounted to one million killed and two millions captured, need not be taken literally. For the results of the conquest see GAUL.

For bibliography see CAESAR (1) and GAUL. T. Rice Holmes, *Caesar's Conquest of Gaul* (1911), C. E. Stevens, 'The *Bellum Gallicum* as a Work of Propaganda', *Latomus* 1952, 3 ff. and 165 ff.; G. Walser, 'Caesar und die Germanen', *Hist. Einzelschr.* 1956. M. C.

GALLIENUS, PUBLIUS LICINIUS (PW 84) EGNATIUS, son of Valerian, appointed Augustus with him in A.D. 253. While his father lived, he commanded in the West and fought a series of successful campaigns against German tribes on the Rhine. In 258 he checked an invasion of Italy by the Alamanni at Milan. After the capture of Valerian by the Persians (260), he faced continual invasions and internal revolts. The defence of the Eastern provinces was left to the care of surviving officers and to Odaenathus of Palmyra, while Gallienus successfully crushed two rebels, Ingenuus and Regalianus, in Pannonia (260). The revolt of Postumus, probably in the same year, detached Gaul and the West; Gallienus could make no headway against him. There was also unrest in Africa. At the end of the year Macrianus revolted in the East, but was defeated in 261 by Aureolus in Thrace, and Odaenathus then defeated Quietus and Ballista in Emesa. After the failure of an attempt on Gaul in 263/4, Gallienus tacitly recognized the rule of Postumus. In the East, Odaenathus received the title of *dux* c. 262 and loyally defended the Roman cause; counter-attacks were launched on Persian territory which perhaps twice (262 and 266) penetrated as far as Ctesiphon. The chronology of further barbarian attacks on the Balkans and Asia Minor is obscure, but in 267 the Goths and Heruli made a particularly destructive raid, sacking Athens and other Greek cities. While marching against them, Odaenathus fell victim to a domestic plot. A substantial victory over the invaders may perhaps be attributed to Gallienus. In 268 he defeated Aureolus who had been proclaimed Emperor at Milan, but was then murdered by his staff officers, who proclaimed Claudius his successor.

Later tradition is uniformly hostile to Gallienus, probably because he excluded senators from military commands; this policy was dictated by the need to have professional rather than amateur generals. Modern scholarship has tended to rehabilitate his reputation; another fruitful military development was the creation of a substantial cavalry corps. He was tolerant toward the Christians, reversing his father's policy. In general, he successfully preserved the essential unity of the Empire in a time of great danger.

G. Walser and Th. Pékary, *Die Krise des römischen Reiches* (1962), 28 ff. B. H. W.

GALLIO, LUCIUS ANNAEUS (PW 12) NOVATUS, brother of the philosopher Seneca, was adopted by the orator and senator L. Junius Gallio, by which name he was then known. As proconsul of Achaia c. A.D. 52 (SIG 11¹. 801) he refused to consider the case put by the Jews against St. Paul (Acts xviii. 12). He was consul at some unknown date. Seneca dedicated some works to him. After his brother's ruin he was compelled to commit suicide.

F. Jackson and K. Lake, *Beginnings of Christianity* v (1933), 462; E. Grogg, *Röm. Reichsbeamten von Achaia* (1939), cols. 32 ff.; Syme, *Tacitus*, 589 ff. A. M.

GALLUS (1), GAIUS LUCRETIVUS (PW 23), praetor commanding the Roman fleet against Perseus in 171 B.C., destroyed Iliartus and captured Thisbe. He oppressed the Greek allies, e.g. Chalcis, and requisitioned corn, e.g. from Athens. Returning to adorn Antium with spoil, he was convicted and fined. A. H. McD.

GALLUS (2), GAIUS SULPICIUS (PW 66), the Roman astronomer, as military tribune under Aemilius Paullus, predicted the eclipse of the moon on 21 June 168 B.C., before Pydna. Consul in 166, in Liguria, he was envoy to Pergamum in 164. He wrote, or adapted, an astronomical work from Greek sources (Pliny, *HN* 2. 53 and 83).

De Sanctis, *Stor. Rom.* iv. 1. 360.

A. H. McD.

GALLUS (3), GAIUS CORNELIUS (PW 164), poet, general, and friend of Augustus and Virgil, was born c. 69 B.C. at Forum Iulii (q.v.), possibly of a native Gallic family, and rose to equestrian rank. Concerned in the settlement of veterans in Cisalpine Gaul (41), he is said to have saved Virgil's farm for him. In 30, as a *praefectus fabrum* (see FABRI) of Octavian, he took over the Antonian forces in Cyrenaica from the renegade L. Pinarus Scarpus, advanced against Egypt, occupied Paraetonium, defeated Antony's attempt to retake it, helped in the capture of Cleopatra, and as he recorded on an ancient obelisk, now in front of St. Peter's in Rome—laid out a 'forum Iulium' in an Egyptian town, perhaps the Nicopolis founded by Octavian near Alexandria. Octavian made him the first *praefectus* of the new province of Egypt. He easily crushed local rebellions at Hieronopolis and in the Thebaid, advanced beyond the First Cataract, formally received the king of Ethiopia (q.v.) into Roman protection, and appointed a ruler for the buffer-district of Triakontaschoinos. He celebrated these achievements in a boastful trilingual inscription at Philae (see ELEPHANTINE) dated 15 Apr. 29 (*ILS* 8995) and in inscriptions on the pyramids, and set up statues of himself all over Egypt. For this and other obscure reasons Augustus apparently recalled him, and formally renounced his friendship; moves to prosecute him (for treason?) were made, and he committed suicide (26). That Virgil, on Augustus' instructions, now rewrote the latter half of his fourth *Georgic*, replacing a long eulogy of Gallus which had stood in the first draft (Serv. *Ecl.* 10. 1; *Georg.* 4. 1), is unlikely.

His poetry, of which one pentameter survives (Morel, *FPL* 99), included four books of love-elegies which were widely read (Prop. 2. 34. 91 f., Ov. *Am.* 1. 15. 29). Entitled *Amores*, they were addressed to his (once Antony's) mistress, the actress Cytheris, under the pseudonym of Lycoris. Virgil, in his Tenth *Eclogue*, of which Gallus the poet and disappointed lover is the theme, included lines (43–49?) based on some of Gallus' own (Serv. ad loc.). Besides elegies, Gallus apparently also wrote *epyllia* including one, on Apollo's shrine at Gryneum, cf. Verg. *Ecl.* 6. 64–73. Euphorion (q.v.) was his principal Greek model (Verg. *Ecl.* 10. 50), and his friend Parthenius (q.v.) supplied him with suitable love-themes. For his place in Roman literary history, see

ALEXANDRIANISM, LATIN; ELEGIAC POETRY, LATIN; EPHYLLION.

T. J. C. and G. W. W.

GALLUS (4), AELIUS (*PW* 59), Prefect of Egypt after Gallus (3) above and before C. Petronius. Influenced by prevalent and exaggerated reports of the wealth of Arabia Felix, Augustus instructed him to invade that land. The expedition, which lasted two years (25 and 24 B.C.), was a complete failure; the blame was conveniently laid upon the treachery of the Nabatean Syllaeus. Aelius Gallus wrote upon medical topics and was a personal friend of Strabo the geographer. It is highly probable that he adopted the son of the distinguished Roman knight L. Senius Strabo (see SEJANUS).

S. Jameson, *JRS* 1968, 71 ff

R. S.

GALLUS (5), GAIUS ASINIUS (*PW* 15), son of C. Asinius Pollio (q.v.), was consul in 8 B.C. and proconsul of Asia two years later. He had married Vipsania (see AGRIPPINA 1) when Tiberius was forced to divorce her in 12 B.C., and there were five sons of the marriage. A friend of Augustus, who judged him ambitious enough to aim at the principate (*Tac. Ann.* I. 13), he angered Tiberius, whom in the Senate he went out of his way to offend, and, at the age of 71, was arrested in A.D. 30 and died of starvation after three years' imprisonment. His book *A Comparison of Cicero and my Father* evidently contained intemperate criticism of Cicero's style.

For coin-portrait see M. Grant, *From Imperium to Auctoritas* (1946), 387.
J. P. B.

GALLUS (6), AULUS DIDIUS (*PW* 6) (*cos. suff.* A.D. 36), a prominent Claudian senator. When legate of Moesia (c. A.D. 46) he conducted an expedition to the Cimmerian Chersonesus and established Cotys as king of Bosphorus, for which service he received the *ornamenta triumphalia*. He was also *curator aquarum* and proconsul of Asia or Africa. Legate of Britain from 52 to 58, Didius made no noteworthy advance, though interfering with the Brigantians, and was able to maintain the conquests of his predecessors. The fragmentary inscription *ILS* 971 (Histonium) may be referred to him (see also *AE* 1947, 76; 1949, 11, Athens). He was the adoptive parent of Fabricius Veiento (q.v.).
R. S.

GALLUS (7), APPIUS ANNIUS (*PW* 49), *consul suffectus* between A.D. 62 and 69, was dispatched as general by Otho against the Vitellians in 69. In 70 he was legate of Germania Superior against Civilis.
A. M.

GALLUS (8) CAESAR (FLAVIUS CLAUDIUS CONSTANTIUS, *PW* 5), reigned in Antioch, A.D. 351 to 354. Born in Etruria (c. 325) he was the half-brother of Julian. His lonely upbringing left him harsh and tactless, and his reign at Antioch is described as oppressive and bloody. He put down revolts in Palestine and in Isauria, but was recalled by Constantius II and executed near Pola (354).
E. A. T.

GAMES. One of the earliest games played in Greece, if we may believe Athenaeus, was marbles. According to his story the suitors of Penelope shot their alleys in turn against another marble, which represented the queen; the first one to hit had another turn, and if he were successful again he was considered to be the presumptive bridegroom. A favourite game at Athens was

draughts (*πασσολί*). The board was divided into thirty-six squares, and on them the oval pieces were moved; the centre line was called *ἑπὰ γραμμῇ*, perhaps because when you crossed it you were on the enemy's ground. A tablet somewhat resembling a backgammon board has been found in the Palace of Cnossos. More popular still was the 'Wine-throw' (*κότταβος*), especially at the end of dinner. The players, reclining on their left elbow, had to throw with their right hand the last drops of wine from their cups into a basin set in the middle, so that none was spilt. This was the simplest form; alternatively the basin was filled with water on which saucers floated, and the game was to sink the saucers with the wine; in a third variety the wine had to fall into a scale suspended over a small figure—Manes—so that the two came into contact.

At Rome the two favourite games were 'Twelve Lines' (*duodecim scripta*) and 'Robbers' (*ludus latruncularum*). The first resembled our backgammon or race-game. The other, also played on a board, had pieces of different value, *calculi*, *latrones*, *mandrae*, and the object was either to take or check—*ad vicinas redigere*—your opponent's pieces. There were also two games, common to Greeks and Romans, whose names explain themselves, 'Odd and Even', and 'How many fingers do I hold up?' See also ASTRAGALUS, ATHLETICS, BALL-GAMES, DICING, LUDI.

Athenaeus 15. 2. 7, *Panegyricus in Pisonem* 180. 200. F. A. W.

GANYMEDES (*Γανυμήδης*; probably not Greek, but suggesting to a Greek ear γάνος or a cognate, cf. *Etym. Magn.* s.v.; older Latin *Catantius*). Son of Tros (*Il.* 5. 205; 20. 232; later authorities, from the *Little Iliad* on, make him son of one of the other Trojan princes), carried off by the gods to be Zeus' cup-bearer, his father being given in exchange a marvellous breed of horses (*Il.* loc. cit.) or a golden vine (*Little Iliad* ap. schol. Eur. *Or.* 1392, *Tro.* 821). The older authorities say nothing definite of the manner of his carrying off, though the reason given is his beauty, and Zeus, who gives the horses or the vine, is clearly the prime mover. In the *Homeric Hymn* to Aphrodite it is a storm-wind, *ἄλλα*, which takes him (208), but at some unknown date, probably not early, it was said that he was snatched up by an eagle (*Verg. Aen.* 5. 255), or Zeus himself in that shape (*Od. Met.* 10. 155 ff.). The eagle, in the former version, was turned into the constellation Aquila, Gany-medes himself becoming Aquarius (*Homil. Clement.* 5. 17; [Eratosth.] 26; 30). The earlier versions also imply simply that the gods wanted a handsome cup-bearer; the later ones (from Theognis 1345) make him Zeus' minion. His childishly pretty figure is a favourite in Hellenistic and later literature and art. For examples see Drexler in Roscher's *Lexikon*, s.v.
H. J. R.

GARDENS. Minoan and Hellenic pottery, wall-paintings, and artistic objects, evincing manifest pleasure in decorative flowers, anticipate the Homeric appreciation of wild and planted flora, notably trees (cf. *Il.* 6. 419; *Od.* 5. 64), including the imported date-palm (*Od.* 6. 162), and prepare for palace gardens like that of Alcinoos (*Od.* 7. 112 ff.). The emphasis, however, is upon vegetables and fruit. Cultivated roses are first mentioned in 648 B.C., though the appreciation is much older in Homeric epithets. Evidence has been discovered in recent excavations for the formal layout of shrubs and trees in the area of the Agora at Athens. Royal parks (*παράδεισοι*) derive from Persia, and Hellenistic examples are described in the *Geoponica*, a work containing extracts from earlier writers compiled by Cassianus Bassus in the tenth century A.D. (10. 1; 11. 23; 3. 13), by Longus (4. 2), and Achilles Tatius (1. 15). Closely connected are the sacred groves (*ἄλσοι*), as at Antioch-Daphnae. A wide range of

plants is mentioned by Theophrastus (*passim*), while private gardens occur in Alciphron (fr. 6. 1-9).

In Rome also the *hortus* is old, but primarily a kitchen garden, part of the *heredium*. Flower-gardens, however, soon grew up in the *xystus* or *viridarium* of the courtyard house. But the word for gardener (*topiarius*) is of the late Republic, and so is the formal garden, with topiary work (Pliny, *HN* 12. 13) and *ambulationes* of given sizes (*CIL* vi. 29774, 29975). Wall-paintings give a vivid picture of the scope of Roman gardening, from formalism to landscape-gardening (cf. *Röm. Mitt.* 1890, 783 ff.; *JDAI* 1904, 103 ff.). Much attention was paid to irrigation. Large pleasure gardens are very late, the earliest in Rome being the *horti Lucullani*, and they always remained the privilege of emperors, aristocrats, and wealthy freedmen. Sacred groves were no less frequent than in Greece.

D. B. Thompson, *Garden Lore of Ancient Athens* (U.S.A. 1963); P. Grimal, *Les Jardins romains* (1943); M. M. Gabriel, *Livia's Garden Room at Prima Porta* (1958). For Fishbourne see B. Cunliffe, *Ant. Journ.* 1967, 55 ff. J. A. R.

GARGANUS MONS: promontory projecting from Apulia (q.v.) into the Adriatic to form the 'spur' on the Italian boot. Its forested mountain rises over 5,000 feet. It is the *Matinus* celebrated by Horace (*Odes* 1. 28. 3; 4. 2. 27; *Epod.* 16. 28), but otherwise seldom appears in ancient literature. E. T. S.

GARGILIUS MARTIALIS, QUINTUS, wrote on gardens (*De hortis*), probably in the third century A.D.; Galen is already quoted by him. The remnants preserved in late excerpts do not allow a judgement about the book as a whole; they show, however, that Gargilius relied on his own experience as well as on a carefully discriminating study of the literature. The book apparently was very famous, since Servius, in commenting on Virgil (*G.* 4. 147-8) 'haec . . . praeterea atque alius post me memoranda relinquo', tersely remarks: 'aliis: Gargilium Martialem significat'. Cassiodorus recommended Gargilius' work, like those of Hippocrates and Galen. If this Gargilius is identical with the Gargilius who wrote on the diseases of oxen, both treatises may have been part of a book on agriculture. The identification with the otherwise unknown historian Gargilius who wrote about Alexander Severus (*S.H.A. Alex. Sev.* 37. 9) is as uncertain as is that with the Gargilius of an inscription of A.D. 260 (*ILS* 2767).

TEXT: V. Rose (Teubner, 1875), together with Plinius Secundus, *De Medicina, Cusae Bonae*, in Vegetius, F. Lommatzsch (Teubner, 1903); other fragments, V. Rose, *Anecdota Graeca II*. MODERN LITERATURE: A. Thomas, *Rev. Phil.* 1907; Gargilius source of Palladius (?), M. Wellmann, *Hermes* 1908. L. E.

GAUL (Transalpine). Geographically, the territory bounded by the Alps, the Rhine, the Ocean, the Pyrenees, and the Mediterranean forms a unity, and most of its history has been a sequence of unifying cultural developments, followed by catastrophes. Such a cultural unity was achieved in respect of religious feeling in the neolithic period (c. 2000 B.C.), when megalithic tombs are found spread over the area, and maintained itself more or less till disrupted by the invasions of the Celts across the Rhine. Commencing perhaps as early as 900, these spread with varying thickness a layer of Celtic culture over the country, represented from c. 500 by the artistic style of La Tène. An 'erratic' in this picture is the Phocaean colony of Massilia, founded c. 600, which established trading-posts along the Mediterranean, and spread Hellenism in the hinterland.

2. Rome's interest in Transalpine Gaul was at first confined to the security of communications with Spain, and these were guarded by her old ally Massilia. When Massilia, however, was threatened by a Celtic coalition,

Rome intervened (121) and annexed a belt of territory between the Cévennes and the Alps. Threat to the *status quo* in the shape of Helvetian and German inroads led to the campaigns of Julius Caesar (58-51), by which all Transalpine Gaul was annexed (see *GALLIC WARS*).

3. Formal settlement came with Augustus. The earlier conquests, called Gallia Narbonensis from their capital Narbo (q.v.), became senatorial; the remainder (Gallia Comata) became imperial, and was eventually divided into three provinces, cutting deliberately across ethnological divisions.

4. Narbonensis (the *provincia* above all others, its inhabitants 'provinciales') had an Italian air. There were five military colonies; the important native towns enjoyed Latin rights, and eventually the name, and, in some cases at least, the full privileges of a Roman colony. Throughout the country *tria nomina* (the badge of citizenship) are as normal as they are rare in Gallia Comata, and legionary soldiers with Narbonensian domiciles are numerous.

5. In Gallia Comata, Lugdunum, Augusta (*Augst*), Noviodunum (*Nyon*), and subsequently Cologne are the only Roman colonies. Native towns enjoying at later date the title of colony are also rare (e.g. Trier, Avenches), as is possession of the citizenship or entry into the legions. Under Claudius Aeduan nobles were admitted to the Senate (A.D. 48). Local government was based on the old tribes (now *civitates*) with their subdivisions of *pagi* and *vici*.

6. Romanization proceeded apace with construction of new towns in place of hill-forts, public buildings (temples, theatres), and roads; the expense of the process indeed provoked local revolts (A.D. 21), which were easily suppressed by the troops of the Rhine. Here eight legions with auxiliaries were stationed in two commands, intended as much to overawe Gauls as to repel Germans; and a rebellion in 68 against Nero was similarly suppressed by them; while a national movement started by the Treveri under cover of disturbances in the frontier garrisons (69-70) failed not least owing to the lukewarmness of the Gauls, who were realizing the advantages of the Roman connexion.

7. Roman ideas were introduced by the application of Roman names to native gods, which often maintained, however, extraordinary shapes (e.g. horned, cross-legged Cernunnus); and by the imperial cult, which may have been utilized to supplant Druidism (suppressed by Claudius). The centres of worship were Narbo and the river-junction below Lyons, itself the financial centre of the Comata. To the latter the sixty Celtic *civitates* sent deputies to form a provincial parliament.

8. Gaul developed a vigorous if somewhat upstart culture, and was famous for good foodstuffs (and good eating). Its pottery industries, undertaking orders of thousands of mass-produced pieces, competed successfully even in the Italian market. Inroads on capital wealth and a series of devastating barbarian invasions (notably 253 and 276) crippled its prosperity, which was but partially restored in the fourth century. Studded with fortresses and posts connected with state supplies, with its towns huddled into a fraction of their former area behind walls made of the debris of temples, with brigands (Bagaudae) abroad, Gaul had a sad look. Christianity, however, which was becoming important in the second century, had firm hold by the fourth, and was responsible, incidentally, for extinguishing the Gaulish language: its development stimulated the Gallic taste for story-telling (Sulpicius Severus) and vigorous rhetoric (Hilary of Poitiers, Salvian). The later Empire shows a veritable Indian summer of interesting if rather mediocre literary figures (Ausonius, Paulinus of Nola, Sidonius).

9. The withdrawal of Roman garrisons in the fifth

century and the slow development of federate barbarian settlements into independent kingdoms, mark the end of the Roman Empire in Gaul. But though there are decisive dates (e.g. the cession of Auvergne in 475, the victory of Clovis in 486 or 487), the process was gradual. Of formal movements of independence there were virtually none; indeed, even the 'regnum Galliarum' (260-70) was a device of military expediency rather than a separatist movement. Gaul through all its history remains a document of the success of romanization.

GAVIUS (1) **BASSUS**, contemporary with Cicero, wrote *De Origine Verborum et Vocabulorum* and other works quoted by Gellius and Macrobius.

H. Funaioli, *Gram. Rom. Frag.* 486 ff.

GAVIUS (2) **SILO**, an orator to whose eloquence in pleading cases Augustus testified when he heard him at Tarraco in 26 B.C. (Sen. *Contron.* 10 *praef.* 14).

GAZA, an ancient city of the Philistines with harbour on the coast of southern Palestine in a key position on the route from Egypt to Syria and Mesopotamia. For long an ally of the Assyrians it was later a Persian garrison town. In the Persian period its coins reflect trade connexions with Greece, although its main economic links were always with the lands to the south. It was stormed by Alexander after a lengthy siege in 332 B.C. but continued to be an important city, obliged to submit to Ptolemies and Seleucids in turn, throughout the Hellenistic period. It was captured and destroyed by the Jewish ruler, Alexander Jannaeus, in 96 B.C. and lay deserted for a generation, but Pompey declared it a free city (hence its era, dated from autumn 61) and Gabinus rebuilt it on a new site, like the former site some 13 miles inland from the harbour. It was granted to Herod in 30 B.C. but after his death reverted to the province of Syria, in which it flourished for centuries. Its coins cease with Gordian, who, like Hadrian before him, was honoured by the city as a benefactor. Later it acquired the status of a Roman colony. It was for long a centre of Hellenistic culture, with a famous school of rhetors. Pagan cults survived until the end of the fourth century. In 635 it was conquered by the Arabs under Omar.

GELA (Γέλα—modern *Gela*, until 1927 *Terranova*) on the south coast of Sicily was founded in 688 B.C. by

Cretans and Rhodians, itself colonizing Acragas (q.v.) a century later. Commanding the fertile plain of the River Gelas, it spread its influence inland to native settlements such as Butera (Omphake?) and Monte Bubbonia (Maktoria?). Its tyrants Cleander and Hippocrates (q.v. 1) made it temporarily Sicily's strongest state; but on Gelon's (q.v.) removal to Syracuse many Geloans were compelled to accompany him, and Hieron (q.v. 1) exiled many others. Repopulated after 466, Gela prospered, refounding Camarina (q.v.) in 461 and supporting Syracuse in 427-424 and 415-413. Abandoned by Dionysius I (q.v.) in 405 it never fully recovered. A revival under Timoleon (q.v.) was frustrated by Agathocles (q.v.), who slaughtered 4,000 Geloans (311). In 280 Phintias of Acragas removed Gela's inhabitants to his new foundation Phintias (*Licata*), but the Mamertini subsequently destroyed the vacated city. The surviving stretch of the Timoleonitean fortifications is one of Sicily's most remarkable monuments.

Bérard, *Bibl. topogr.* (1941), 53 f.; Dunbabin, *Western Greeks*; P. Orlandini, *Konstantos* 1962, 69 ff.; P. Griffo and L. von Matt, *Gela* (1963). A. G. W.

GELIMER, the last Vandal king of Africa (A.D. 530-4), was a great-grandson of Gaiseric (q.v.). He deposed his pro-Roman cousin Hilderic in 530, but in 533 an East Roman army led by Belisarius (q.v.) landed in Africa and occupied Carthage. Gelimer, who mishandled the campaign and was utterly defeated, was taken prisoner (534) and was sent to Constantinople. He was given an estate in Galatia but refused to abandon his Arian Christianity. E. A. T.

GELLIUS (1, *PW* 4), **GNAEUS**, the Gracchan annalist, whom Cato attacked in defence of L. Turrinus, wrote *Annales* from the origins of Rome to at least 146 B.C., reaching the Sabine Rape in book 2, the year 389 in book 15, and the year 216 in book 33 (or 30); a reference to book 97 is incorrect. His work is fuller than the previous annals; the reason is probably the publication of the *Annales maximi* and the first use of rhetorical methods in elaborating source material. Dionysius used his work.

Peter, *HRRel* 2, col. 148; Beloch, *Rom. Gesch.* 103 f.; M. Gelzer, *Kl. Schr.* iii (1964), 102, 220 ff. A. H. McD.

GELLIUS (2, *PW* 17) **POPPLICOLA**, **LUCIUS**, probably related to the Valerii Messallae, studied oratory under C. Carbo (q.v. 1). *Praetor peregrinus* in 94 B.C., he governed an eastern province as proconsul afterwards and, while passing through Athens, offered—not altogether seriously—to reconcile the rival schools of philosophy. Consul in 72 with Lentulus (q.v. 3), he acted against Verres (q.v.), passed a law enabling Pompey to confer citizenship for valour, and was defeated by Spartacus (q.v.). Censor (again with Lentulus) in 70, he severely purged the Senate. He served under Pompey against the pirates, supported Cicero against Catiline, and lived on, amid domestic troubles, until the late 50s. E. B.

GELLIUS (3, *PW* 2), **AULUS** (c. A.D. 130-c. 180), wrote the *Noctes Atticae* in twenty books (we now lack the beginning and the end, and all book 8 except for the chapter headings). There is no indication of his place of birth, nor are the dates of his life securely known. He was still at school when Erucius Clarus (d. A.D. 146) was *praefectus urbi*; hence his birth must come around A.D. 130. E. Castorina (*Giorn. Ital. Filol.* 1950, 137 ff.) argues from 19. 12. 1 that his work cannot have been published much before 180. As a youth he studied literature at Rome, above all with Sulpicius Apollinaris, and knew Fronto. Thereafter he went for further work in Athens for at least one year, attending the lectures of Calvus Taurus and visiting Herodes Atticus. His work contains

many delightful pictures of his student days at Athens. It was possibly after his return from Athens that he was appointed a *iudex* to try private cases (14. 2. 1), for which the minimum age at this time was probably 25 (*Digest* 42. 1. 57; 50. 4. 8). There is no evidence whatsoever to lead us to believe that he continued his interest in legal practice in later life. His preface also tells us that he married and had children.

The *Noctes Atticae* is a collection of mainly short chapters dealing with a great variety of topics: philosophy, history, law, grammar, literary criticism, textual questions, and many others. He began collecting his material during the winter nights in Attica (*praef.* 4), and assembled it later in life (*praef.* 23-4), with the specific purpose of entertaining and instructing his own children (*praef.* 1).

The writer of the *Noctes* reveals himself to us as a man of great enthusiasm for learning, although he lacks a keenly critical mind. His work, he tells us (*praef.* 2), is in a deliberately haphazard arrangement, but individual chapters are usually carefully worked out, often with picturesque (if fictitious) settings to enliven the discussion. Most of his information is clearly obtained at second-hand, but the investigation of his sources is often difficult or impossible (cf. Hosius, *praef.* xvi-lx). The work has a distinct charm of its own, but the great usefulness of the *Noctes* is derived from the preservation of countless fragments of earlier writers. Many hundreds of quotations are given from both Greek and Latin literature. He was widely used by later writers (list in Hertz, *ed. maior* ii. ii-xlvii), especially by the compilers Nonius Marcellus and Macrobius. His popularity in the Middle Ages is attested by a number of twelfth-century anthologies of his work.

His Latinity is a strange mixture of an attempt at classical purity and an affectation of archaism, but is by no means as peculiar as that of his contemporaries Fronto and Apuleius. His literary tastes reflect the general feeling of his time, with a heavy leaning towards the archaic writers, but he has the good sense to appreciate Virgil as well as Ennius in verse, and Cicero as well as Cato in prose.

GELON (Γέλων) (c. 540-478 B.C.), son of Deinomenes. Cavalry-commander under Hippocrates (q.v. 1), tyrant of Gela, he became guardian to his sons, whom he dispossessed (c. 490), assuming the tyranny himself. He fulfilled Hippocrates' ambitions by seizing Syracuse, under cover of reinstating the exiled Syracusan aristocrats, and transferred his seat of power thither (485 B.C.), leaving his brother Hieron (q.v. 1) at Gela as viceroy. Syracuse thus inherited the Gelonian supremacy in eastern Sicily and prospered to such an extent that it was acknowledged as the greatest Hellenic power of the time. In the next two years Gelon destroyed Camarina and Megara Hyblaea (q.v.), removing their inhabitants to Syracuse. Envoys

of the Hellenic alliance sought his aid against Persia, but drew back when, as the price of assistance, he claimed the supreme command (Hdt. 7. 157-62). In any event, a Carthaginian invasion had been imminent since 483, but Gelon was well prepared. In alliance with Theron (q.v.) of Agragus he defeated at Himera a great Carthaginian army under Hamilcar, whose expedition landed at the time of, if not in concert with, Xerxes' attack on Greece (480 B.C.). Gelon lived two years after his greatest triumph, a great and popular ruler much (perhaps exaggeratedly) respected in later tradition.

GEMINUS, writer of elementary textbooks on mathematical subjects (? c. 70 B.C.). His only extant work is *Introduction to Astronomy* (εἰσαγωγή εἰς τὰ φαινόμενα), which gives a factual but non-mathematical account of basic concepts of astronomy, mathematical geography, and the calendar (important as a source for Greek knowledge of Babylonian astronomical parameters). He also wrote a treatise on the scope of the mathematical sciences entitled *Περὶ τῆς τῶν μαθημάτων τάξεως ἢ θεωρίας*, in at least six books, citations from which are made by various writers, especially Proclus (q.v.) and the scholiasts on Euclid book 1, including the Arabian an-Narrizi (c. A.D. 990), whose knowledge of it comes from Simplicius. The treatise included a classification of the mathematical sciences, arithmetic, geometry, mechanics, astronomy, optics, geodesy, *canonic* (musical harmony) and *logistic* (practical calculation), an examination of the first principles, definitions, postulates, axioms, and of the whole structure based upon them (book 6 dealt with conic sections). Geminus also classified 'lines' (including curves), from 'simple' lines (straight lines and circles) to higher curves, e.g. the conics, the cissoid, 'spiral' curves, and the cylindrical helix; so also with surfaces. Geminus gave a proof of the special property of 'uniform' lines (the straight line, the circle, and the cylindrical helix). Simplicius (in *Phys.* 201-2 D.) quotes from an epitome by Geminus of Posidonius' *Meteorologica*.

Edition of the *εἰσαγωγή* by Manitius (Teubner, 1898), with German translation.

GEMS. Precious stones were valued in antiquity as possessing magical and medicinal virtues, as ornaments, and as seals when engraved with a device. Such engravings (intaglias) in soft mediums like steatite or ivory are found in Early Minoan days (see SEALS); the use of hard stones dates from the Middle Minoan Age. Late Minoan and Mycenaean gems have a rich repertory of human and animal designs, the favoured shapes are the lenticular (round) and glandular (sling-stone). In sub-Mycenaean and Geometric times the art of working hard stones was largely lost. A revival in the seventh century B.C. is usually associated with the island of Melos, and the commencement of classical gem engraving in the sixth century is marked by the introduction of the scarab (beetle) form of seal from Egypt. This was soon abandoned in Greece for the scaraboid, which omits the beetle-back. The late fifth and fourth centuries mark the climax of Greek gem engraving. In Hellenistic times the choice of subjects grows restricted, but excellent work was done in portraiture. In Italy the Etruscans used the scarab until the third century; gems of the later Roman Republic show a wide range of subjects, combined with clumsiness of execution. With Augustus begins the large

series of 'Graeco-Roman' gems with few local characteristics. A period of decadence in the middle Empire is succeeded by a revival under Constantine.

Cameos, in which the design is in relief, are for ornament only, and the finest are of the early Empire.

Several gem-engravers are recorded in literature, e.g. Pyrgoteles, who worked for Alexander the Great; others are known from their signatures on extant stones, though many signatures are false.

Engravers of gems used the drill and the wheel. These had to be coated with powdered emery (of which Naxos was and is an important source), except for working softer stones such as steatite, which was consequently often used in the earlier periods. The stones most favoured for engraving in view of their durability, moderate hardness, and absence of grain were quartzes, especially those of the crypto-crystalline variety such as agate, plasma, jasper, carnelian, and most popular of all, sard. Red garnet, amethyst, lapis lazuli were much prized in jewellery. Cameos in which design and background were in contrasted colours were made of layered stones such as onyx and sardonyx. Of the hardest stones, emeralds, aquamarines, and sapphires were rarely engraved, while the diamond, probably unknown before the first century A.D., was not even cut. The diamond-point, however, was sometimes used for engraving other stones. Imitations of gems in paste (see GLASS) were apparently much in demand; in the British Museum collection they even outnumber sards. Imitations of rock crystal and red garnet were considered particularly convincing.

GENETHLIACON, a birthday poem. We do not know of such poems at Rome before the last century of the Republic. Though there were Greek antecedents in the conception of the *δαίμων*, in the rhetorical handling of natalician themes, and in epigrams of the Anthology, yet the typical birthday poetry of Rome was so intimately associated with the worship of the Genius, that as a separate genre it made one of the original features in Latin literature. Virgil's fourth *Eclogue* stands apart as a mystical herald of an expected birth. The birthday poetry of Tibullus and in the *Corpus Tibullianum* shows more independence of Hellenic mythology than Propertius does, and more devotion to Roman religious tradition. Propertius' single example (3. 10) greets Cynthia with an anticipation of banquet and festivity. In him and in Horace (*Carm.* 4. 11, invitation to Phyllis to celebrate Maecenas' birthday) there is formal excellence, but a sincerer human note marks Tibullus and Ovid. Ovid pours out his personal feelings: *Tr.* 3. 13 deprecates the melancholy birthday of an exile for whom there is no white robe or altar ceremony; and 5. 5 expresses his sympathy with his innocent wife on her birthday.

Persius in his second *Satura* turns birthday congratulations into a homily on praying aright; and Statius in *Silv.* 2. 7, addressed to Lucan's widow on the dead poet's anniversary, blends birthday elements with those of the *laudatio funebris* and *consolatio*. Martial proves the importance attached to birthdays: he celebrates a friend's anniversary, which he loves like his own (9. 52; cf. 10. 24; 12. 60); he sends three epigrams to Lucan's widow recalling his anniversaries (7. 21; 22; 23); another is on Virgil's (12. 67), which Pliny (*Ep.* 3. 7. 8) says Silius kept more strictly than his own birthday; others are bantering pieces, on being passed over for a birthday feast, on being asked for the day after, on a man of 'no birth' who entertains the highest society on his birthday, on one who, as he does not want gifts on the day, might oblige

Martial with a gift instead (7. 86; 11. 65; 10. 27; 8. 64; 9. 53). The last pagan poem in this class is Ausonius' address to his grandson entering his sixteenth year (*Idyll* 5), where the Genius no longer counts. Christian poets break the ancient tradition by their faith that death is a new birthday, though in structure poems of the sort by Sidonius Apollinaris, Ennodius, and Julianus are indebted to classical rules (see Menander Rhetor ap. Spengel, *Rhet.* iii, 368 ff.).

E. Cesareo, *Il carne natalizio nella poesia latina* (1920). J. W. D.

GENIUS, literally 'the begetter', cf. *ludius*, 'player'. In classical Latin the attendant spirit of every man, a sort of guardian angel, but originally his inborn power whose activities were apparently directed largely towards fostering the natural desires and their satisfaction; 'suom defrudans genium' (Terence, *Phorm.* 44) means living very parsimoniously; 'genio indulgere' is to enjoy oneself. Although in common parlance every male, bond or free, seems to have a *genius*, in family cult only one *genius* was honoured in each household, that of the *paterfamilias*, particularly on the occasion of his marriage, as Festus, 83. 23 Lindsay ('genialis lectus, qui nuptus sternitur in honorem genii'), but also in the ordinary worship at the *lararium*, see, e.g., G. K. Boyce in *Am. Ac. Rome* 1937, plate 17. 1 (one large serpent, bearded and therefore male, a well-known art-convention, underneath a scene of sacrifice); 18. 1 (two such serpents, one beardless, i.e. female, presumably the *uno* of the *materfamilias*, cf. JUNO). It is quite conceivable (see Rose, *CQ* 1923, 57 ff.) that originally the *genius* is the life-force of the family or clan, always in the guardianship of the *paterfamilias* for the time being and passing on at his death to his successor.

Be that as it may, in classical times the *genius* seems to have been thought of as exactly equivalent to the *ἰδιος δαίμων* (cf. BIRTHDAY); Horace even says that it is mortal (like its possessor: *Epist.* 2. 2. 188), though adding 'in unum quodque caput', which might imply that it passes to another person on the death of the first one. By a curious extension, gods are said to have a *genus* (first in 58 B.C., *CIL* 1. 1. 166 = Bruns 90, line 16). It is more understandable that corporations and places are said to have each its *genus* (Wissowa, 178). Through the practice that slaves venerated the *genus* of their master developed in imperial times the cult of the Emperor's *genius*. The fact that occasionally the *genus* of a dead person is mentioned (examples in De-Marchi, 71) is certainly Greek; cf. the occasional dedications to the *daimon* of the departed. It is the divine guardian who still watches over him in another world.

A. De-Marchi, *Il culto privato di Roma antica* (1896), 69 ff.; Wissowa, *RR* 175 ff.; Latte, *RR* 103, 306. H. J. R.

GENOS (*γένος*, in some States *πάτρα* or *πατρίς*), a family, in the sense of a group of persons claiming descent in the male line from a single ancestor; narrower than a phratry (q.v.), of which it might form a part, it could itself comprise a number of branches (*οἰκοί*). Its members were *γενῆται* (or *πατριῶται*). We naturally hear most of noble families, supposedly of heroic, ultimately divine ancestry and usually bearing names in patronymic form. Such families were to be found in most, probably all, Greek States. Like phratries, *gene* were organized corporations whose specific activity was the worship of the supposed ancestor. In some states the advance of democracy involved the establishment of artificial *γένη* or *πάτρας* forming the lowest tier in a new classification of the citizen-body.

At Athens the noble, i.e. named *gene* appear to correspond with the Eupatridai (q.v.). About sixty such *gene* are known; most have patronymic names. That the

lower classes were organized in *gene* is at best doubtful: the tradition that the whole citizen-body at an early date comprised 360 *gene* of thirty men each, distributed equally between the twelve phratries and four *phylai* (q.v.), so as to correspond with the days, months, and seasons of the year (Arist. *Ath. Pol.* fr. 3), is quite unreliable; and, whatever may have been the position in early times, it is hard to see how the new citizens accepted by Solon (q.v.) and Cleisthenes (q.v. 1) can have been admitted into existing *gene* or given new *gene* of which we hear nothing. That some citizens were not *gennetai* is implied by the law obliging *phrateres* to accept both *orgeones* (q.v.) and *ὁμογάλακτες* (said to be an old synonym for *gennetai*); and the evidence of the fourth-century orators makes it pretty clear that while all citizens had *phrateres* and, potentially, *συγγενείς* (relations on the father's and mother's side: see ANCHISTEIS), some did not have *gennetai*. Hence the widely accepted view that the Athenian *gene* were throughout aristocratic in character.

Like the phratries they had a definite constitution and elected officials, including an *ἀρχων*. Besides the eponymous ancestor, they worshipped Zeus Herkeios and Apollo Patroos, the tutelary deities of all Athenians. They met at least once a year to elect officials, pass decrees, and enrol new members, who had to be sons of existing members born in lawful wedlock or formally adopted. Acceptance seems to have carried unquestioned acceptance in the phratry also; rejection might be contested in the courts. *Gennetai*, like *phrateres*, *συγγενείς*, and *demotai* (see DEMOI) were called on in the courts to bear witness to status.

The Athenian aristocratic *gene* were probably formed in post-Mycenaean times and dominated public life till Solon. Not only was the archonship reserved to them (see EUPATRIDAI), but individual families had an exclusive right to certain priesthoods; e.g., the Eumolpidae and Kerykes (see EUMOLPUS) supplied priests for the Eleusinian Mysteries (q.v.). Solon deprived the *gene* of their monopoly of office, and though Cleisthenes did not legislate against them directly (Arist. *Ath. Pol.* 21. 6), his reorganization of the citizen-body (see DEMOI, PHYLAI), must further have diminished their political power. While some *gene* gave their names to demes, which perhaps indicates that they were still locally concentrated and continued to wield local influence, others, already dispersed, are found split between several demes. But their priestly privileges remained intact (ibid.); they continued to provide leading men; and though some were wiped out in the wars (Isocr. 8. 88), they remained a prominent feature of Athenian life and long outlived the phratries, some surviving into the third century A.D.

Greek writers on Roman affairs used *γένος* to translate *gens* (q.v.).

J. Topffer, *Attische Genealogie* (1889); C. Lécrivain in *Dur.-Sag.*, n.v. (1896); W. S. Ferguson, *CPhL* 1010, 257 ff.; R. Dahms, *PW* vii. 2, 2867 ff.; Busolt-Swoboda, *Griech. Staatsk.*, see indexes; D. P. Costello, *JHS* 1938, 171 ff.; Hignett, *Hist. Athen. Const.*, see index; A. Andrewes, *BSA* 1957, 30 ff.; *JHS* 1961, 1 ff.; N. G. L. Hammond, *JHS* 1961, 76 ff.

GENS (etymologically related to *gignere*) indicates a Roman clan, or a group of families linked together by a common name and their belief in a common ancestor. Beside this, purity of blood, personal liberty, descent from freeborn parents, and freedom from any shameful punishment implying *de minimis capitis*, were held the essential claims to membership of a *gens*. Theories that the *gentes* existed before the State, or were set up by law, or originated from an artificial partition of the community, have been refuted by anthropologists and historians, who have rightly emphasized how the rapid economic improvement of the wealthier classes in a predominantly agrarian State would soon lead to a marked distinction

between upper and lower classes, and later to the establishment of an order with a narrow family organization. Yet the *gentes*, despite their political and social importance, never fulfilled any specifically public or political duties, apart from superintending several cults and ceremonies. The privacy of the *gentes* and the fact that their members (*gentiles*) neither recorded nor worshipped their founders confirms their relatively late origin. A further proof that the gentile assemblies were not regarded as legally capable of passing resolutions binding on the whole community is that the annalists never mention any public enactment carried in these assemblies, although they often record measures taken by the *gentes* (cf. Livy 6. 20. 14). Although the *gentes* played little part in Roman constitutional and political history they greatly influenced the development of law and religion, even after the prohibition of intermarriage between the orders, which caused the early collapse of several patrician *gentes*, had been abrogated by the *Lex Canuleia* (see CANULEIUS). When social equality was attained, the wealthiest plebeian families had already organized themselves on the model of the patrician *gentes*, to which some of them probably gained admission. This, rather than a supposed original difference of race, settlement, or nationality, explains best the existence of both plebeian and patrician families within the same *gens*, and both *minores* and *maiores gentes*.

If a member of a *gens* died intestate, his *gentiles* inherited all in default of direct agnates; this fact supports the view that in early times land-property was based on the principle of family, rather than individual, ownership. The gentile assemblies dealt with questions concerning testaments and bequests, *adrogatio*, adoption, emancipation, guardianship of minors, and appointment of *curatores* for insane or spendthrift members; their resolutions had to come twice a year before the *comitia calata* which also had to ratify resolutions referring to the *detestatio sacrorum* and the consequent *transitio ad plebem*. Clients and servants of the *gentiles* shared in their worship, and ceremonies, and were often buried in their masters' family tombs. These *sacra gentilicia* mainly consisted in honouring the guardian divinities of the *gens*. They frequently came to be worshipped by the whole community; so, for instance, faith and flattery transformed Apollo, the 'private god' of the *gens Iulia* and of Augustus, into the most honoured god of imperial Rome.

Mommsen, *Röm. Staatsr.* iii. 9 ff.; A. H. J. Greenidge, *Roman Public Life* (1911), 9 ff.; De Sanctis, *Stor. Rom.* i. 229 ff.; P. de Francisci, *Primordia Civitatis* (1959), 162 ff.

P. T.

GENUA, the modern *Genoa*, although presumably always Liguria's chief town, is not mentioned until 218 B.C. when already under Roman control (Livy 21. 32). After its destruction in the Hannibalic War Rome restored Genua and used it as a base against the Ligurians (q.v.) (Livy 30. 1; 32. 29; Val. Max. 1. 6. 7). A boundary quarrel between Genuates and Veituri Langenses was settled by Roman adjudicators in 117 B.C. (*ILS* 5946). Although an important harbour and road-centre, ancient writers seldom mention Genua. For its exports and imports see Strabo 4. 202.

E. T. S.

GENUCIUS (*PW* 5), LUCIUS, tribune of the plebs in 342 B.C., is credited with three laws of which only the first has historical foundation: (1) forbidding the lending of money on interest as a temporary measure (which was soon disregarded) to relieve social troubles, caused by debts, usury, and a military rebellion; (2) fixing a ten-year interval before a second tenure of the same office (this was seldom observed and its attribution to Genucius is doubtful); (3) according to Livy (7. 42. 2) allowing both

consuls to be plebeian, or more probably making one plebeian consulship obligatory.

G. Niccolini, *Fatti dei tribuni della plebe* (1934), 66 ff. P. T.

GEOGRAPHY (γεωγραφία, 'delineation of land'). It was the Greeks who created geography as a science (the Romans being merely their pupils). The Greeks based their geography on fewer adjunct sciences than modern geographers, and throughout they lacked good technical appliances, and therefore could not obtain technical accuracy. Their knowledge of the globe covered but a fraction of the Old World; and scientific study merged with imaginative speculation and *a priori* deduction about the unknown. Within these limitations, however, their achievements in mathematical and descriptive geography were considerable.

2. In Homer and Hesiod the earth was a round ocean-girt plane, symmetrically vaulted by heaven above and Tartarus below. In the following centuries the gradual discovery of the Mediterranean basin and of the adjacent lands not only gave wider knowledge of geographical details, but stimulated the Ionian philosophers (from c. 625 B.C.) to investigate the real causes of the earth's structure and to map the earth and heavens more systematically. The Pythagoreans (after c. 525 B.C.) put forward the theory that the earth was a sphere, and Aristotle proved it. Heraclides Ponticus (c. 388-315) declared that the earth revolved round its axis, Aristarchus of Samos (c. 310-230) stated that it might also be revolving round the sun. But only the theory of the earth's sphericity won general acceptance, and after 450 the 'universal' geography of the Greeks tended to be replaced by a more narrow study of the οἰκουμένη or inhabited land-mass of the earth.

3. Geographic elucidation of the οἰκουμένη, progressing continually with geographic discovery, was expressed in a literature comprising the following classes:

A. WORKS ON PARTICULAR REGIONS. (a) Reports of discoveries. These were partly official, e.g. the reports of Hanno on north-west Africa, and of Nearchus (embodied in Arrian's *Indica*) on the Asian coast from Indus to Euphrates. Some of Caesar's chapters are geographical, e.g. *B.Gall.* 5. 12-13, 6. 25. A surviving unofficial specimen is the *Periplus of the Erythraean Sea* (see PERIPL.).

(b) Reports of surveyors. Of this class we possess fragments from Alexander's surveyors in Asia, and the *Parthian Stations* of Isidorus of Charax. These were in the nature of road-books, giving the important halts on the routes described.

(c) Manuals for travellers, sometimes based on first-hand information. A large proportion of these consisted of coastal descriptions for practical navigators (περίπλοι, παράπλοι, ἀνάπλοι). Fragments of an early example c. 500 B.C. are reproduced in Avicennius; an almost complete specimen survives in the so-called 'Periplus of Scylax' (c. 350). We also have large pieces of Arrian's *Periplus of the Euxine Sea*, and of the *Stadiasmus Maris Magni* (3rd c. A.D.), detailing landmarks, harbours, and waterpoints of the Mediterranean coasts, with distances in stades. To this class also belong the surviving *Itineraria* (q.v.).

(d) Maps (q.v.), issued in connexion with the above works, or published independently.

B. GENERAL TREATISES OF DESCRIPTIVE GEOGRAPHY. These comprised comprehensive surveys (γῆς περίοδος or περιήγησις), with or without maps, coupled with descriptions of separate lands and land-groups (χωρογραφία), or of particular places (τοπογραφία). They sometimes included physical geography and ethnography. The *Ἰῆς περίοδος* of Hecataeus (c. 510-490) described towns and peoples as well as geographic

features; the geographic insertions in Herodotus' *History* contain much ethnological material. Of two fourth-century historians who included geography Ephorus attempted ethnography and historical geography, and devoted entire books to descriptive geography. Timaeus dealt largely with the general geography of western Europe. The contemporary historians of Alexander contained much useful geographical material. The description of India by Ctesias (c. 400) was overloaded with fable, but that of Megasthenes (c. 295) gave a good description of the Ganges valley, of which he had personal knowledge.

The opening up of the Near East by Alexander's successors was reflected in Agatharchides' description of the Red Sea coasts (c. 110—partly extant), and in the geographical chapters of Diodorus Siculus (c. 100-20), that of western Europe by the Romans in the geographical excursuses of Polybius and of Posidonius. A general resumptive work on Mediterranean and Near Eastern geography was composed by Artemidorus (c. 100). This was eclipsed a century later by the treatise of Strabo, which includes topography, physical, historical, political, and also mathematical geography. The only other descriptive geography of scientific value was the *Descriptio Orbis* of Agrippa, containing a commentary to his map of the world. Other works of this class were books 2-6 of the *Natural History* of Pliny (little more than a gazetteer); a description of Africa by Juba II (25 B.C.-c. A.D. 24); a versified description of the whole known world by Dionysius Periegetes (Hadrianic?); and school primers like that of the versifier miscalled 'Scymnus' (c. 100 B.C.) and of Pomponius Mela (c. A.D. 43).

C. MATHEMATICAL GEOGRAPHIES. Scientific analysis of the earth's surface and a more accurate plotting of maps became possible when Aristotle demonstrated the earth's sphericity, Eratosthenes made a reasonably exact measurement of the earth's circumference, and latitudes were determined by means of shadow-sticks or by calculation from the length of a solstitial day. Aristotle introduced the general principle of dividing the globe into zones. Dicaearchus (c. 310) laid down a basic line of latitude from Gibraltar to the Himalayas; Eratosthenes drew several parallels of latitude and longitude to a main line of latitude and a meridian intersecting at Rhodes; Hipparchus (c. 150) divided Eratosthenes' main parallel of latitude into 360 degrees, drew parallels of latitude computed from the duration of the longest day, and proposed to plot all places on the map by latitude and longitude. A comprehensive attempt to apply the principles of mathematical geography was made in the *Γεωγραφικὴ ὑφήγησις* of Ptolemy (c. A.D. 150-60). Though the greater part of his geographical data was not actually determined by astronomical observation, he systematically expressed them in reference to curved lines of latitude measured northwards from the Equator, and curved meridians measured eastwards from the Canary Islands. Unfortunately the works of the mathematical geographers and of Strabo did not command the attention which they deserved; the erroneous beliefs of older writers were preserved by tradition, and the authors of later date than Ptolemy were for the most part mere compilers from variegated and incongruous sources. See also ITINERARIES, MAPS, PERIPL., and articles on the persons mentioned above.

GERASA, later Antiochia on the Chrysorhoas and modern *Jerash* in Jordan, was a Seleucid foundation, probably by Antiochus IV. Held by Alexander Jannaeus (102-71 B.C.), it remained in Jewish hands until Pompey assigned it to Roman Syria and the Decapolis. Henceforth its prosperity, which largely depended on caravan trade with the Nabataeans and others, increased, particularly later when Trajan annexed Arabia Nabataea. Gerasa was visited by Hadrian and enjoyed a 'golden age' under the Antonines. Though a colony in the third century A.D., the city and its trade steadily declined until a revival under Justinian; then followed capture by Persians (614) and Arabs (635) and an earthquake in 746. Extensive ruins of many buildings survive and the city-plan is clear: an arch, stadium, forum, colonnaded avenue, temples of Zeus and of Artemis (with Propylaea), theatre, open reservoir, and several Christian churches.

GERGOVIA, modern *Gergovie* (*Merdogne* till 1865), an *oppidum* of the Arverni (q.v.) successfully held by Vercingetorix against Caesar in 52 B.C. Caesar's camps here were located by Stoffel for Napoleon III and more recently the hill-fort itself has been excavated. Occupation before 52 appears to have been slight, but thereafter a small Gallo-Roman town persisted until well into the first century A.D., despite the foundation of Augustonemetum (*Clermont-Ferrand*) only 4 miles to the north-west, while a temple remained in use till longer.

GERMANI. The earliest home of the German race was south Scandinavia, Jutland, and the north German coast from the Weser to the Oder. In the long period from the last glaciation to the Iron Age many different immigrant groups arrived from south-west, south, and east. From c. 1000 B.C. Germans expanded southwards and westwards, so that by 600 there were Germanic elements in the lowlands around the lower Rhine mixing with the peoples already established there. As the Germans moved southwards they came into contact with the Celts, who held the belt of highlands from the Ardennes to Bohemia against them for some centuries to come. In the third century German pressure became serious, and a fresh horde crossed the lower Rhine, while others pushed into the Westerwald and Taunus region of the middle Rhine and crossed to the Moselle, where they brought a Germanic strain into the Treveri. A new invasion west of the lower Rhine brought in the *Germani cisrhenani* known to Caesar, and some of the mixed population was driven down into the Marne-Aisne basins (see *BELGAE*). The migration of the Cimbri and Teutones followed shortly after 120, and the Helvetii south of the Main, already suffering from the pressure of tribal movements, retreated into Switzerland. This general falling-back of the remaining trans-Rhenane Celts was hastened when early in the first century B.C. a new German host, the Suebi, moved south-west to the Main and Rhine.

Corresponding expansion took place among the Germans to the East. Those of the Baltic coast had spread over a wide area before the second century B.C. but were pushed away from the sea by the arrival of successive tribes from Scandinavia (q.v.), Vandals from Jutland, Burgundians from Bornholm, the Langobardi from Gotland, the Rugii from south Norway, and the Goths from south Sweden. The vanguard of the east Germans

were the Bastarnae, who appeared on the borders of Thrace c. 200 B.C. By the first century A.D. the Vandals, with the Lugi, occupied Silesia, the Burgundians were behind them astride the Warthe, and the Langobardi had moved in the wake of the Cimbri and Teutones to the lower Elbe, leaving the Rugi on the Pomeranian coast, while the Goths held the lower Vistula.

The origin of the name *Germani* is explained in Tacitus, *Germania*, 2. One of the tribes or tribal groups taking part in the great offensive along the lower Rhine of the third century B.C. had been called *Germani*, and this name was adopted by the Gauls to designate the whole race (cf. the analogous case of *Alemanni* and *Allemands*).

The Germans themselves believed that they were descended from the god Tuisto, born of the earth; his son Mannus (Man) had three sons, the ancestors of the three west German groups, Ingaevones (northern and north-western tribes), Istaevones (Westphalian and Rhenish tribes), Herminiones (Suebi, Chatti, Cherusci, etc.). The absence of the east Germans from this classification points to its originating in a period before they became differentiated. They worshipped Woden (Mercury), Donar or Thor (Hercules), Ziu or Tiu (Mars). Goddesses were as a rule less important, though notable exceptions like Nerthus and Tamfana are known, both the central deities of important religious federations. Though there were no temples in the classical sense, there were from an early age places—most commonly sacred groves—set apart for the worship of the gods. (See RELIGION, GERMANIC.)

The Germans in the time of Tacitus were pastoralists who also engaged in agriculture. Among some tribes there were permanent chiefs, but among others special leaders were elected for special campaigns. The final decision on all matters of importance was taken by the warriors in their assembly; but the business of the assembly was considered first by a council of *principes*, whose manner of appointment is unknown. Whether the *notae* mentioned by Tacitus (*Germani* 7) were a form of runes is still a matter of dispute.

Tac. *Germani*, ed. Anderson (1918); E. A. Thompson, *The Early Germans* (1965); Much, *PW*, *Suppl.* iii, s.v.; L. Schmidt, *Geschichte der deutschen Stämme*³ (1934-41). O. B. E. A. T.

GERMANIA. For the Romans Germania long remained an undefined area east of the Rhine. After Caesar's campaigns the river became a frontier of the Empire. Augustus (q.v.) abandoned his plans to conquer western Germany and to advance the frontier eastwards from the Rhine to the Elbe (cf. also *GERMANICUS*), although he established the Danube as a frontier line against the German tribes to the north. Thereafter the Rhineland became a military area, controlled by eight legions under two consular 'legates of the armies in Upper and Lower Germany' (with the point of division at Vinxtbach); civil administration belonged to the governor of Gallia Belgica. Under the Flavians some districts east of the Rhine, namely the Agri Decumates (q.v.) and the Taunus Mountains area, were annexed (see *VESPASIAN*) and c. A.D. 90 Domitian (q.v.) formally established two provinces of Germania Superior in the south and Germania Inferior in the north under *legati Augusti pro praetore*, although their financial administration was still linked to Belgica under a *procurator provinciae Belgicae et utriusque Germaniae*. The reduction of the legions to four under Trajan indicates general pacification. With Hadrian and Antoninus (1) (q.v.) the frontier system was reorganized (see *LIMES*). After the loss of the Agri Decumates and other trans-Rhenane territory (c. 263), Diocletian named Germania Inferior *Germania Secunda*, while Superior became *Prima* and *Maxima Sequanorum*, all three belonging to

the diocese of the Gauls and under the *praefectus praetorio Galliarum* at Trier.

H. H. S.

GERMANICUS JULIUS (PW 138) CAESAR (before adoption **NERO CLAUDIUS GERMANICUS**?), elder son of Drusus (q.v. 3), and Antonia (3), was born 24 May 15 B.C. and adopted in A.D. 4 by his uncle Tiberius. Since the latter was immediately adopted by Augustus, Germanicus thus became a member of the Julian gens, standing in the direct line of succession, and his career was presently accelerated by special dispensations. He served under Tiberius in Pannonia (7-9), and Germany (11). In 12 he was consul, and in 13 was sent out again as proconsul and commander-in-chief in the Gallic and German provinces. By now he was an established popular figure. Like his father, he was held to entertain republican sentiments, and his affability was contrasted with the dour reserve of Tiberius. But, though by no means incapable, he was overemotional and his judgement was unsteady. When, on the death of Augustus, the legions of Lower Germany mutinied, his loyalty was proof against the suggestion that he should supplant Tiberius, but his handling of the awkward situation lacked firmness: he resorted to theatrical appeals and committed the government in Rome to the acceptance of the mutineers' principal demands.

Eager to emulate his father and conquer a large part of Germany, before the end of 14 he led the repentant legions against the Marsi. In the spring of 15 he campaigned against the Chatti (q.v.), Cherusci (q.v.), and Marsi, and rescued the pro-Roman Cheruscan Segestes from Arminius (q.v.). In the summer he attacked the Bructeri (q.v.), reached the *Saltus Teutoburgiensis* (q.v.), and paid the last honours to Varus (q.v. 2): after an indecisive battle with the Cherusci, led by Arminius, his forces suffered heavy losses on their way back. For the main campaign of 16 a great fleet was prepared and the troops were transported via his father's canal and the lakes of Holland to a station on the Ems, whence they proceeded to the Weser and defeated Arminius in two battles at Idistaviso (near Minden) and somewhat to the north; the fleet suffered considerable damage from a storm on its homeward journey.

Although Germanicus believed that one more campaign would bring the Germans to their knees, Tiberius judged that the positive results so far achieved did not justify a continuation of the drain on Roman resources, and called him to Rome to celebrate a triumph (26 May 17) and to take up a new command over all the eastern provinces, with *maius imperium*. Germanicus entered on his second consulship (18) at Nicopolis (q.v. 3), crowned Zeno, son of Polemo (q.v.), king of Armenia and reduced Cappadocia and Commagene (qq.v.) to the status of provinces. In 19 he offended Tiberius by travelling, out of romantic curiosity, to Egypt, which Augustus had barred to senators. On his return to Syria the enmity between him and Cn. Piso (q.v. 7), whom Tiberius had unhappily appointed governor of Syria with the intention of controlling him, became intolerable, and he ordered Piso to leave his province. Presently, however, he fell mysteriously ill, and on 10 Oct. died at Antioch (q.v. 1), convinced that Piso had poisoned him. His death—compared by some with that of Alexander—provoked widespread demonstrations of grief and in Rome some suspicion and resentment also; many honours were paid to his memory (see *TABULA HEBANA*); his ashes were deposited in the mausoleum of Augustus at Rome.

Germanicus married Agrippina (2), the daughter of

Agrippa (3) and Julia (2). She bore him nine children, among whom were Nero (d. 31), Drusus (d. 33), Gaius (later Emperor), Agrippina (3), Drusilla (q.v.), and Julia (4). Eloquent and studious, he wrote comedies in Greek (all lost) and Greek and Latin epigrams; he also translated into Latin the *Phaenomena* of Aratus (q.v. 1), bringing it up to date and adding further matter on the planets and the weather.

GEROUSIA, the Council of Elders at Sparta, consisting of twenty-eight *γέροντες* of over 60 years of age drawn from a restricted circle of aristocratic families, together with the two kings. Elected similarly to the ephors (q.v.), by acclamation of the citizens (a childish system, *Arist. Pol.* 2. 1271^a), the *gerontes* held office for life, but at some later date the office was made annual, and under the Roman Empire re-election became a frequent practice. Possessing both deliberative and judicial functions, they considered questions of public policy and prepared business for the assembly (see *APELLIAI* 1), whose wishes they were in some circumstances competent to ignore. They heard cases involving death, exile, or *ἀρμία*, and could try even the kings; when the ephors laid charges before them they joined them in passing sentence. But representing as they did a largely unchanging aristocratic élite, the effect of their prestige alone would go far beyond anything given to them by specific powers.

Gerousia was also a common name for city councils of an aristocratic or plutocratic type, whether survivals of the Homeric Councils of Elders, or new creations, as in the Greek towns of Asia Minor in Hellenistic or Roman times.

A. M. W.; W. G. F.

GESORIACUM (Bononia) under the later Empire), modern *Boulogne-sur-Mer*, and almost certainly the *Portus Itius* (i.e. 'channel harbour') of Caesar; under the Empire the normal port of embarkation for Britain and station of the *Classis Britannica*. Its lighthouse was constructed by Caligula. Carausius' fleet was blockaded here in A.D. 292.

C. E. S.

GESSIUS FLORUS, from Clazomenae, married Cleopatra, a friend of Poppaea (q.v.), and thus gained the favour of Nero who in A.D. 64 appointed him procurator of Judaea which Gessius proceeded to govern ruthlessly. Although Josephus' account of his villainies may be exaggerated, he certainly inflamed Jewish feeling (e.g. a demand for 17 talents from the Temple treasury led to rioting and bloodshed) and helped to precipitate the great insurrection of 66.

A. H. M. Jones, *The Herods of Judaea* (1938), 235 ff. H. H. S.

GESTURES. Since the peoples of southern Europe notoriously make more use of gesture than the northerners, it is not surprising that gesticulation was frequent and lively among the ancients. (a) The natural signs of the emotions were less restrained than with us. Thus, to jump for joy would appear to be no mere metaphor nor confined to children and excitable young people; Q. Cicero says he did it on receiving good news (*Fam.* 16. 16. 1). Angry or troubled people bite their nails or their fingers (*Hor. Epod.* 5. 48; *Pers.* 5. 162). Achilles,

disturbed by bad news, smites his thighs (*Il.* 16. 125), and so do many after him, but it was too violent a gesture for an orator till Cleon introduced it (*Quint. Inst.* 11. 3. 123). One or two gestures are strange to us, as the angry or perplexed scratching of the ear or cheek (*Apul. Met.* 6. 9; *Heliodorus* 2. 8 (p. 44. 29 Bekker)). (b) Orators and actors naturally made a study of gesture. The former were at first very restrained, particularly at Athens, where it was not good form till after Pericles to withdraw the hand from under the mantle (*Aeschin.* 1. 25); later they elaborated, keeping, however, within narrower limits than those of the stage (*Quint. loc. cit.*, 89; see the whole passage for oratorical usage). Concerning actors we are not so well informed, especially for tragedians of the classical Greek period, who cannot have gesticulated freely in their heavy costume. Of New Comedy we can say a little more, owing to the descriptions by characters of their own movements, e.g. *Plaut. Capt.* 794 ff., where Ergasilus runs about the stage, shouldering through an imaginary crowd. In farce and pantomime much could be conveyed by gesture (e.g. *Suet. Nero* 39; *Lucian, Salt.* 37 ff.). (c) Religious and magical gestures: the most common gesture of prayer was to look up, or down, according as a celestial or infernal power was invoked, holding the hands palm upwards, or downwards (*Il.* 3. 275; 24. 307; *Picard in Rev. Hist. Rel.* 1937, 137 ff.). In the latter case the ground might be struck or stamped upon (as *Il.* 9. 568; *Cic. Tusc.* 2. 60), which perhaps is why the latter is not very common as a mere sign of irritation. Kneeling or prostration were not usual in Greece (*Theophr. Char.* 16. 5, where see H. Bolkestein, *Theophrastos' Charakter der Deisidaimonia*), quite common in Rome. Kissing statues was common (*Cic. Verr.* 2. 4. 94), also blowing kisses to them (*Min. Fel. Oct.* 2. 4). In human relationships a friend kissed the face, a suppliant the hand (*Sittl, op. cit. infra*, 79, 166); handshaking was more solemn. The most common magical gesture (to avert the evil eye, etc.) was to hold the hand so as to imitate the *puenda* of one or the other sex, *Sittl*, 101 ff.

It is not surprising that there grew up a sign-language, ranging in signification from rudeness (*Pers.* 1. 58-60) to arithmetical calculations and even a sort of deaf-and-dumb alphabet (*Bede, De computo vel loquela digitorum*; critical text in *Sittl*, 256 ff.).

Neumann, *Gesten und Gebärden in der griechischen Kunst* (1905); R. Brilliant, *Gesture and Rank in Roman Art* (U.S.A. 1963). H. J. R.

GĒTA (1), LUCIUS SEPTIMIUS (*PW* 32), younger son of Septimius Severus and brother of Caracalla, became Caesar in A.D. 198 and Augustus in 209. During the Scottish campaigns he was left as governor of Britain at York. The mutual hatred of the two brothers was intensified after their father's death. On their return to Rome they lived in different parts of the Palace. After some vain attempts at reconciliation by their mother, Geta was assassinated by his brother in 212. See AURELIUS (2).

H. M. D. P.

GETA (2), GNAEUS HOSIDIUS (*PW* 6), perhaps the subject of an acephalous inscription from Histonium (*ILS* 971), in A.D. 42 as propraetorian legate in Mauretania fought against the Moor Sabalus. Afterwards he (if *Γναίος* is read for *Γάιος* in Dio Cass. 60. 9. 1), or his brother, served as legionary legate on Plautius' staff during the invasion of Britain and distinguished himself at the Medway battle. He was later suffect consul (c. 45).

R. Syme, *AJPhil.* 1956, 270.

H. H. S.

GETA (3), HOSIDIUS (2nd c. A.D.), contemporary with Tertullian (*De praescr. haeret.* 39), patched together

from lines or phrases of Virgil a cento (q.v.) to form dialogue and choruses of a tragedy *Medea*, probably identical with that in *Anth. Lat.* (codex Salmasianus).

TEXT. *Baebr. PLM* iv. 219 ff.; *Riese, Anth. Lat.* 1 i. 61 ff.; with metrical English translation J. J. Mooney (1919); with notes P. Burman Younger, *Anth. Vet. Lat. Epigr. et Poem.* (1750), 149 ff. See J. O. Delepiere, *Tableau de la littérature du centon* (London, 1874-5) i. 37 ff.

J. W. I.

GETAE, a Thracian tribe who had settled by the fourth century B.C. on the lower Danube to the south and east of the Carpathians (see THIRACE). Greek writers tended to confuse them with the Dacians (see DACIA) while later writers applied their name to the Goths, with whom they had nothing in common.

J. J. W.

GIANTS, a mythological race of monstrous appearance and great strength. According to Hesiod they were sons of Ge (Earth) from the blood of Uranus which fell upon earth; he describes them as valiant warriors (*Th.* 185). Homer considers them a savage race of men who perished with their king Eurymedon (*Od.* 7. 59). The prevailing legend of the fight of the gods and the giants was formulated in archaic epics and was embroidered by many later writers. A substantial account is given by Apollodorus (1. 6. 1.). When the gods were attacked by the giants they learned that they could win only if they were assisted by a mortal. They called in Heracles, who killed the giant Alcioneus and many others with his arrows. Zeus, who led the gods, smote with his thunderbolt Porphyryon who attempted to ravish Hera; Athena killed Pallas or Enceladus; Poseidon crushed Polybotes under the rock that became the island of Nisyrtus (*Strabo* 489); Apollo shot Ephialtes; Hermes slew Hippolytus; Dionysus killed Eurvtus and many other giants besides who were caught in his vine; and Hephaestus aided the gods, throwing red-hot iron as missiles. The giants were defeated and were believed to be buried under the volcanoes in various parts of Greece and Italy, e.g. Enceladus under Aetna. Bones of prehistoric animals were occasionally believed to be bones of giants.

The Gigantomachy was one of the most popular myths in Greece and accordingly the names of participants and the episodes of the battle vary from writer to writer and from representation to representation. Zeus, Heracles, Poseidon, and later Athena, are the usual protagonists. In its early stage the myth seems to represent a variation of the popular motif of the tribe that attempted to dethrone the gods; in a more advanced stage of culture the myth was interpreted as the fight of civilization against barbarism.

In art the giants are first shown as warriors or wild men (*Hanfmann, Art Bull.* 1937), later as snake-legged monsters (*Waser, PW Suppl.* iii, s.v. 'Giganten'). The most famous sculptural renderings are found on the archaic treasury of the Siphnians and on the Hellenistic altar of Pergamum.

G. M. A. H.

GILDAS (died c. A.D. 570), a British cleric and author of the *De excidio et conquestu Britanniae* (written c. 540), a work of moral exhortation which includes a short history of Britain. Full of imaginative errors though this is, it yet can yield valuable information on the chronology and culture of the Dark Age, and was used as a source by Bede, who thus perpetuated some of Gildas's chronological mistakes, notably in relation to the coming of the Saxons.

Stevens, 'Gildas Sapiens', *Eng. Hist. Rev.* 1941, 353 ff.; J. Morris, 'Dark Age Dates', in M. G. Jarrett and B. Dobson, *Britain and Rome* (1966), 150 ff.

S. S. F.

GLABRIO (1), MANIUS ACILIUS (*PW* 35) (cos. 191 B.C.), a *novus homo*, tribune in 201 B.C., plebeian aedile in 197, rose under the aegis of Scipio Africanus to the praetorship in 196, crushing an Etruscan slave revolt, and became consul in 191 in the Syrian War. He defeated Antiochus at Thermopylae and began operations against the Aetolians; he extended the Delphic sanctuary. After triumphing (190) he stood for the censorship, but withdrew under a charge of peculation supported by Cato in opposition to the Scipionic group. In 181 his son dedicated a temple to *Pietas* vowed at Thermopylae. The *Lex Acilia de intercalando* may belong to his consulship.

G. Daux, *Delphes au II^e et au I^{er} siècle* (1936), 225; R. Flacelière, *Les Aitoliens à Delphes* (1937), 356; Scullard, *Rom. Pol.* 28 n. 3, 81, 125, 131 n. 1, 137 ff.; A. K. Michels, *The Calendar of the Roman Republic* (U.S.A. 1967), 101 ff. A. H. McD.

GLABRIO (2), MANIUS ACILIUS (*PW* 37), grandson of (1), born c. 155 B.C., son-in-law of Scaevola (q.v. 3); augur and friend of C. Gracchus (q.v. 4); as his colleague (as tribune 122) he passed a *lex Acilia repetundarum* changing procedure in the *repetundae* (q.v.) court to make it more severe and providing for juries consisting of *equites* (q.v.). He died soon after. The law is almost certainly that preserved (in part) on bronze tablets now in Naples and Vienna (Riccobono, *FIRA* 7; transl. E. G. Hardy, *Roman Laws and Charters*, 1).

E. Badian, *AJPhil.* 1954, 374.

E. B.

GLABRIO (3), MANIUS ACILIUS (*PW* 38), son of (2), as praetor *repetundarum* (70 B.C.) presided at the trial of Verres (q.v.); consul in 67; as proconsul he fought ineffectually against Mithridates until superseded under the law of Manilius (q.v. 2).

E. B.

GLABRIO (4), MANIUS ACILIUS (*PW* 40), consul with the future Emperor Trajan in A.D. 91, when he was compelled to fight in the arena and was exiled. In 95 he was executed. The cause is uncertain (Christian faith?). He or his family is connected with the catacombs of Priscilla.

Dio Cass. 67, 14. P. Styger, *Die römischen Katakomben* (1933), 100 ff.; F. Cabrol-H. Leclercq, *Dict. d'Arch. chrétienne* vi 1259; K. Friedmann, *Atene e Roma* 1931, 69 ff. A. M.

GLADIATORS. Gladiatorial combats, held at the funerals of dead warriors in Etruria, were introduced to Rome (perhaps by way of Samnium and Campania) in 264 B.C., when three pairs fought at the funeral games in honour of D. Brutus Pera. They were held on an increasingly lavish scale. Julius Caesar exhibited 320 pairs in 65 B.C. -- by private individuals, at first always as (or on the pretext of being) games in honour of a deceased male relative until in 46 B.C. Julius Caesar's games were in part not commemorative at all, in part commemorative of his daughter Julia (q.v. 1). Five thousand pairs fought in eight different games given by Augustus (*Res Gestae* 22, 1), and the same number in a single series of games given by Trajan to celebrate the conclusion of the Dacian war in A.D. 107. Gladiators were of four types: the *Mirmillo*, with a fish for crest on his helmet, and the *Samnite*, both heavily armed with oblong shield, visored helmet, and short sword; the *Retiarius*, lightly clad, fighting with net and trident; and the *Thracian* with round shield and curved scimitar. They were prisoners of war, condemned criminals, slaves bought for the purpose, or volunteers who had signed on for a fee and bound themselves by oath, *auctoramentum gladiatorium* (a practice which Marcus Aurelius tried by legislation to prevent). They were trained in gladiatorial schools (mainly in Campania) under a *lanista* (who was sometimes a retired gladiator) and were an investment which attracted even the prudent Atticus (q.v. 1). After Domitian gladiatorial games could only be given by emperors in Rome; outside Rome they

required official sanction. In Italy and the provinces they were given in amphitheatres or theatres by rich individuals or local magistrates or priests (often as a result of strong public pressure) or by entrepreneurs, who charged for admission. Though the life of a defeated combatant was often spared by the audience's wish, these games (approved by the Younger Pliny, *Pun.* 33) were condemned by sensitive pagan as well as by Christian writers.

Friedländer, *Roman Life and Manners* (E.T. 1908-13) ii 41 ff.; iv. 166 ff.; 190 ff.; Dar - Sag. and *PW* Suppl.-II. iii. 760, s.v. 'Gladiatores', P. J. Meier, *Gladiatura Romana* (1881); F. Weege, *Arch. Jahrb.* 1909, 134 (claiming Campanian origin), A. Piganiol, *Recherches sur les jeux romains* (1923); L. Robert, *Gladiateurs dans l'Orient grec* (1940); H. M. Colini and L. Cozza, *Ludus Magnus* (1962); M. Grant, *Gladiators* (1967). Illustrations *Bull. Mus. Civ. Rom.* 19 (1956-8), 37, S. Aurigemma, *I mosaici di Zliten* (1926), 131. J. P. II.

GLANUM (Γλανόν), a Greek and Roman town south of St.-Rémy-de-Provence, under excavation since 1921. The earliest element was a Ligurian shrine, but in the second century B.C. a considerable Massaliote settlement grew up. Structures uncovered include several Hellenistic houses and a possible *bouleuterion*, and the town struck its own coins.

Romanization began, after a break, in the time of Marius, but the town seems to have suffered with Massalia in 49 B.C. Thereafter, as Glanum *Livii*, it was re-established, with massive public buildings, and enjoyed Latin rights (Pliny, *HN* 3, 37). To the north stands a monumental arch and a mausoleum (*Les Antiques*); though the latter has been claimed as a cenotaph for Gaius and Lucius Caesar (qq.v. 7 and 8), a date c. 48 B.C. now seems probable for both. After the destruction of Glanum by barbarians (c. A.D. 270) the site was abandoned and a new walled town built at St.-Rémy itself.

H. Rolland, *Fouilles de Glanum* i (1946), ii (1958) (supplements to *Gallia*); G. C. Picard, *Les Tropées romains* (1959), 195 ff.

GLAPHYRA (1), a hetaera, met Antony in 41 B.C. and supposedly induced him to make her son Archelaus king of Cappadocia (q.v.) c. 36.

T. J. C.

GLAPHYRA (2), daughter of Archelaus, king of Cappadocia (q.v.), was wife first of Alexander, son of Herod (q.v. 1), then of Juba II (q.v.), and finally of Alexander's half-brother Archelaus (q.v. 4), ethnarch of Judaea.

T. J. C.

GLASS (ὑαλος, *vitrum*). The art of producing a vitreous surface on stone, powdered quartz (faience), or clay was known in predynastic Egypt and passed to Crete, where plaques and figurines from the Palace of Knossos illustrate the high level attained in the second millennium B.C. Glazed objects are common on Greek sites of the archaic period, some of them Egyptian imports, others probably made locally. In Hellenistic and Roman times Egypt and Asia Minor were centres of fabrication, and St.-Rémy-en-Rollat in southern France produced vases during the Early Empire.

Objects composed entirely of glass paste began to appear in Egypt about 1500 B.C., when two allied processes seem to have been in use: modelling molten glass about a core of sand, and pressing it into an open mould. The chief Mycenaean glass is dark blue imitating lapis lazuli, used for beads, inlays, and architectural ornaments. In the sixth century small vases made by the sand-core process became known in Greece; they have opaque blue or white bodies decorated with polychrome bands formed by fusing coloured threads rolled round the body, and zig-zag patterns were produced by means of a comb or spike. Their place of origin is unknown. In the Hellenistic period bowls made in moulds came into fashion; these were produced mainly in Egypt. Here the tradition of

opaque polychrome glass was continued far into Roman times with the *miliefiori* bowls, in which polychrome patterns were formed by fusing glass canes of various colours and pressing them into moulds. In the same tradition are the vases in two layers of which one is carved like a cameo: the Portland Vase in London is the best-known example.

The invention of glass-blowing in the first century B.C. (probably in Syria) wrought a profound change in the glass industry, which, hitherto limited to luxury articles, now became capable of cheap mass production. Under the Roman Empire glass largely replaced pottery for domestic use and funeral furniture. Foundries have been located in many provinces; like the *terra sigillata* potteries, the manufacture tended to move away from the Mediterranean towards the borders of the Empire. Thus in the later Empire, Belgic Gaul and Germany had taken the place of Italy and southern Gaul. In Britain also there were glass works, e.g. at Wilderspool, near Warrington. The vases, even when plain, show much variety of form, and there are several styles of decoration—tooling or applying relief ornament to the surface when warm, cutting or engraving or painting when cold. Window glass, made by a primitive process of rolling, was known at Pompeii, and later became common; in the late Empire also begins the use of glass for mirrors. Gemstones were imitated, often skilfully, in glass paste at all periods from the seventh century B.C. onwards. Burning-glasses were used, and these may conceivably have been used as magnifying glasses by gem engravers. There is, however, no evidence that spectacles were known in antiquity.

A. Kisa, *Das Glas im Altertum* (1908), M. L. Trowbridge, *Philological Studies in Ancient Glass* (U.S.A. 1930); Forbes, *Stud. Anc. Technol.* v; D. B. Harden in *History of Technology*, ed. C. Singer, etc. II (1958), 311 ff.

GLAUCIA, GAIUS SERVILIUS (PI¹ 65), of low (i.e. equestrian?) birth, but a witty popular orator. His career is obscure; but he was quaestor before 102 B.C., when Metellus (q.v. 6) Numidicus, as censor, wanted to expel him from the Senate. As tribune (101) and praetor (100) he co-operated with Saturninus (q.v. 1), and, in one of those years (probably), passed a law on the *repetundae* (q.v.) court, restoring the court to the *equites* (q.v.), whose support he was seeking. He hoped to be consul for 99, after the assassination of Memmius (q.v. 1), but his candidature was disallowed and he died with Saturninus.

J. P. V. D. Balsdon, *PBSR* 1938, 98 ff.; E. Badian, *Ist.* 1962, 206 ff.

GLAUCUS, in mythology, (1) a Lycian, son of Hippolochus, second in command of the Lycian contingent before Troy (*Il.* 2. 876 and often). He encounters Diomedes (q.v. 2), and exchanges armour with him in sign of friendship when told that they are hereditary ξῖνοι, getting the worse of the bargain, since his is gold and that of Diomedes bronze (*Il.* 6. 234–6; proverbial later). Wounded by Teucer (12. 387–8), healed by Apollo (16. 527 ff.), he rallies the Lycians after the death of Sarpedon. Killed, over the body of Achilles, by Aias son of Telamon (Quint. Smyrn. 3. 278 ff.), Apollo caused the winds to snatch his body from the pyre and take it to Lycia, where the Nymphs made the river of like name to spring up about his grave (ibid. 4. 4 ff.). (2) Of Anthedon in Boeotia. He somehow (Ov. *Met.* 13. 920 ff. is but one of several versions; see Drexler in Roscher's *Lexikon* i. 1679–80) became immortal by a magic herb (or a magic bath, schol. on Pl. *Resp.* 611 c) and then for some reason leaped into the sea and became a sea-god. He was renowned for his prophecies (schol. ibid. and often); vainly wooed Scylla (q.v. 1; Ov. *ibid.*). (3) Of Corinth (*Il.* 6. 154), son of Sisyphus and father of Bellerophon (q.v.), therefore great-grandfather of Glaucus (1)

(Bellerophon–Hippolochus–Glaucus). His most famous legend is connected with Potniae in Boeotia, where he kept a stud of mares and fed them on human flesh (or they ate a herb which drove them mad, or Aphrodite was angry with Glaucus because he would not let them mate), till they devoured him at the funeral games over Pelias, whereupon he became a Taraxippos (horse-frightener) which scared the teams at the Isthmus (Verg. *G.* 3. 267, Servius and 'Probus' ad loc., Pausanias 6. 20. 19; *Elym. Magn.* 685, 41). That the name belongs to these and some dozen other persons (Drexler, op. cit.) is due to its being (a) an epithet of the sea, (b) an adjective appropriate to the 'bright' eyes of a vigorous man. H. J. R.

GLAUCUS (4) of Chios (or Samos, according to some late authors), to whom is ascribed the invention of welding iron (σιδήρου κόλλησις; not of soldering iron, which is a modern process), made for Alyattes of Lydia (reigned 617–560 B.C.) a stand of iron, supporting a silver bowl; this was for Herodotus (1. 25) 'worth seeing above all the other offerings at Delphi'. In the time of Pausanias (10. 16. 1) the bowl had disappeared, but the stand remained, tower-shaped with an upward taper, the sides of openwork with crossbands, and decorated with figures and animals (Ath. 5. 210 c).

F. N. P.

GLAUCUS (5) of Rhegium (c. 400 B.C.) wrote an important work *On the Ancient Poets and Musicians* (used by [Plut.] *De Mus.*), which began the ancient study of the history of lyric poetry. His comments on Homer and his discussion of the plots of Aeschylus may have formed part of this work. The name Glaucus has been thought to be a pseudonym of the sophist Antiphon.

J. F. L.

GLEVUM, Roman Gloucester, was founded as the fortress of Legio XX Valeria in A.D. 49 when Ostotius (q.v.) was moving against the Silures; *Chors VI Thracum* had earlier occupied an adjacent fort at Kingsholm as an outpost of the frontier of Plautius (q.v. 4). Legio XX is thought to have moved to Viroconium (q.v.) in 66, and Glevum was probably then held by Legio II Augusta until c. 74 when it was advanced to Isca (q.v. 3). In 96 8 the vacant fortress was settled as a *colonia* under Nerva (*ILS* 2365). Little is known of its subsequent history: the town never expanded as did Lindum (q.v.), and was perhaps overshadowed by the prosperity of Corinium (*Cirencester*). Colonial tile-works are attested by stamps reading *R(ei) P(ublicae) G(levensium)* and sometimes mentioning magistrates. The town fell to Ceawlin and the West Saxons in 577.

I. A. Richmond, *Arch. Journ.* 1946, 68 ff.

S. S. F.

GLITIUS ATILIUS AGRICOLA, a *novus homo* from Augusta Taurinorum, was one of Trajan's generals, and is known only from epigraphical evidence (*ILS* 1021, 1021a; *CIL*, v. 6980). His career: military tribune in Moesia and quaestor under Vespasian; after his praetorship, *iuridicus* in Hither Spain, commander of Legio VI Ferrata in Syria, legate of Gallia Belgica (A.D. 95?–96/97), suffect consul under Nerva (97), governor of Pannonia under Trajan (100/1–3), consul suffect 11 (103), and *praefectus urbi*.

Syme, *Tacitus*, see index.

H. H. S.

GLOSSA, GLOSSARY (Greek). In Greek literary criticism γλῶσσαι meant any words or expressions (not being mere neologisms or metaphors) ἀ οὐδείς ἂν εἴποι ἐν τῇ διαλέκτῳ (Arist. *Poet.* 1458^b32), i.e. belonging not to the spoken language familiar to the critic (1458^b6), but to a dialect, literary or vernacular, of another region or period (1457^b4). The interpretation of Homeric

γλῶσσαι, misunderstood already by Hesiod, fell, no doubt, from the first, to schoolmasters (cf. Ar. *Dattaleis*) and rhapsodes, and it appealed to sophistic interest in language: cf. Democritus, *Περὶ Ὁμήρου ἢ ὀρθοεπειῆς καὶ γλῶσσέων*. The living dialects were early used for the purpose (cf. Arist. *Poet.* 1461^a12), but, apart from Aristarchus, Alexandrian commentators, no less than the Pergamenes, usually preferred to explain by etymology, as did Neoptolemus of Parium in *Περὶ γλῶσσῶν Ὁμήρου*. Interest in dialects was fostered by fifth-century linguistic speculations, and in the next two centuries by Peripatetic studies, not least in natural history and its vocabulary, and by monographs based on personal knowledge of local dialects before the levelling operation of the κοινή. The spirit of Alexandrianism in literature further encouraged search for linguistic oddities. Sometimes literary glosses were collected with only sporadic dialectal illustration, as the Homeric Glosses of Philetas and Simmias. Some specifically dialectal collections were devoted to Homer, Alcman, the Old Comedy, etc.; others were not so related to particular authors or styles, e.g. the *Φρόγαι φωναί* of Neoptolemus, the *Ἐθνικά λέξεις* of Zenodotus (perhaps not the Alexandrian), and the *Αἰολικά γλῶσσαι* of Antigonos of Carystus. The *Ὀνομαστικόν*, often with dialectal variants, also became common: e.g. Callimachus compiled names of winds, fishes, and months, Dionysius Iambus had a chapter on fishermen's terms, and Eratosthenes other vocational vocabularies. Aristophanes of Byzantium excelled all in the scope and diversity of his lexicographical labours (cf. Ael. *NA* 7. 47). In his footsteps followed his pupil Artemidorus (on Doric, and cookery), Philistides (on names of family relationships), and many others, notably, in the first century B.C., Cleitarchus of Aegina, who proved a fertile source of dialect glosses under the Empire. The *Περὶ τῶν ὑποτιτωμένων μὴ εἰρηθῆναι τοῖς παλαιῶς* of Aristophanes is a prototype of the 'Atticist' lexica which were common in the first century A.D. and still more in the following centuries. The first professed Atticist lexicographer was Eirenaeus of Alexandria (end of 1st c. A.D.), and the ultimate sources of most later Atticists are also Alexandrian. As to glosses of all kinds, in the first century B.C. compilation largely displaces independent research, and almost exclusively prevails under the Empire; to the latter period, down to Constantine, the extant scholasts and lexicographers are directly or indirectly indebted; but the sources thus absorbed have generally perished. The many glossaries and word-lists surviving in papyri show the importance of such aids to reading in an age when the literary and spoken languages diverged considerably. Some of these are mere jejune lists; others are works of scholarship in which entries are supported by quotations. Some are general alphabetical lists, others limited to the vocabulary of a particular dialect or a particular craft.

K. Latte, *Philol.* 1925, 136; R. Reitzenstein, *Geschichte d. Gr. Etymologia* (1897); R. A. Pack, *The Greek and Latin Literary Texts from Greco-Roman Egypt* (1965), 1058 ff., see also under GRAMMAR, ETYMOLOGY. P. B. R. F.; R. B.

GLOSSA, GLOSSARY (Latin). The need for marginal or interlinear interpretations of difficult or obsolete words (γλῶσσαι) is coincident with the serious study of literature. The earliest reference to Latin glosses is in Varro (*Ling.* 7. 10: "tesca" aiant sancta esse qui glossas scripserunt). Some of the work of republican scholars like Opilius and Ateius was of a glossographical kind, and Verrius Flaccus was indebted to collections of glosses on Plautus, Ennius, Lucilius, etc.

The extant Latin glossaries (generally named from their first item, e.g. Abstrusa, Abavus, or from the home of their chief MS., e.g. St. Gall, Erfurt) cannot be traced back further than the sixth century A.D. They arose

from the needs of monastery teachers who in the first instance gathered together (as *glossae collectae*) and arranged in a roughly alphabetical order the trivial marginalia from copies of the Bible, Terence, Virgil, Orosius, etc., in their own or neighbouring libraries, only rarely did such marginalia contain any scholarly comment, and few glossary compilers had access to e.g. Festus or the *Etymologiae* of Isidore from which to borrow. Copies of a glossary thus constructed sometimes had a wide circulation and formed the basis for larger derivative compilations; for example, Abstrusa (which contained material from a good Virgil commentary) and Abolita (which contained Festus items and Terence and Apuleius glosses) form the foundation for Abavus, Affatim, etc., and above all for the huge (early 9th c.?) encyclopaedic *Liber Glossarum* or *Glossarium Ansileubi* (which also includes long passages from Jerome, Ambrose, Gregory, Isidore, etc.). The value of such glossaries is threefold: (a) their interpretations sometimes contain or provide evidence for Late Latin or Early Romance words; (b) they sometimes contain latent evidence for readings in the text of an author; (c) occasionally they transmit some fragment of ancient learning.

Amongst later collections of glosses the best known are those of Salomon (10th c.) and Papias (11th c.), both of which rely on the *Liber Glossarum*.

Of bilingual glossaries may be mentioned: (a) the (6th-c.?) Cyrillic glossary (Greek with Latin interpretations) wrongly attributed to the fifth-century patriarch of Alexandria and not yet fully published; (b) the Philoxenus glossary (Latin with Greek interpretations) wrongly attributed to the consul of A.D. 535; (c) the *Hermeneumata* (Greek with Latin interpretations) wrongly attributed to Dositheus; (d) glossaries with Anglo-Saxon, Celtic, or Germanic interpretations.

J. Tolkstein, s.v. 'Lexikographie', and G. Goetz, s.v. 'Glossographie', in *PW*, Schanz-Hosius, § 1119; W. M. Lindsay and H. J. Thomson, *Ancient Lore in Medieval Latin Glossaries* (1921), J. F. Mountford, *Quotations from Classical Authors in Medieval Latin Glossaries* (1925) Vol. 1 (1923) of the *Corpus glossariorum/latinorum* (ed. G. Goetz), entitled *De origine et fatis glossariorum latinorum*, consists entirely of prelatory material, vols. II-V give abographs of the oldest MS. of the chief early medieval glossaries (with readings of other MSS. in the app. crit.): II (1888) contains Latin-Greek (= Philoxenus) and Greek-Latin glossaries, III (1892) contains the pseudo-Dositheus *Hermeneumata*; IV (1889) contains Abstrusa + Abolita (under the name *gloss. cod. Vat. lat. 7121*) and short derivative glossaries; V (1894) contains the Placidus glossary, excerpts (only) from the *Liber Glossarum*, etc., vols. VI and VII (1899-1901), entitled *Thesaurus Glossarum Emendatarum*, present the items of vols. II-V in alphabetical and corrected form. The series *Glossaria Latina* (ed. W. M. Lindsay and others) gives critical editions of the chief glossaries and (where possible) indications of the source of each item: vol. I (1926) contains the purely glossary material of the *Lab. Gloss.* in its entirety; vol. II (1926) contains the Arria, Abavus, and Philoxenus glossaries; vol. III (1926) contains Abstrusa and Abolita, vol. IV (1930) contains Placidus (and an ed. of Festus based on glossary material), vol. V (1931) contains the Abba and AA glossaries. Of Latin-Anglo-Saxon glossaries, the Leyden glossary has been edited by J. H. Hessels (1906), the Corpus glossary by W. M. Lindsay (1921). Latin-Celtic glossaries were edited by Whitley Stokes and John Strachan, *Thesaurus Palaeohibernicus* (1901-3), two vols. with *Supplement* (1910); cf. R. Thurneysen, 'Irische Glossen', *Zeitschrift für Celtische Philologie* XXI; and Latin-Germanic by E. Steinmeyer and E. Sievers (*Die Althochdeutschen Glossen*, 4 vols. 1879-98).

J. F. M.

GLYCON (1), poet of unknown date and place to whom the Γλυκωνεῖον or glyconic metre is attributed by Hephaestion (33. 12). Nothing else is known about him. The epigram in *Anth. Pal.* 10. 124 on the unreason of the universe is thought to be by a different poet of later date, since it appears with other late poems.

S. Leichsenring, *De metris graecis quaestiones onomatologicae* (1888). C. M. B.

GLYCON (2), sculptor, of Athens; known from signature of Farnese Heracles (Winter, *KB* 333. 4) in Naples. The statue was found in the baths of Caracalla, and is proved by the ancient inscription on another example in

Florence to be a copy of a Heracles by Lysippus (q.v. 2) Nothing in the copy suggests a date later than the first century B.C.

G Lippold, *Kopien und Umbildungen* (1923), 56. T. B. L. W.

GNATHIA, near modern *Fasano* on the Adriatic coast of Apulia (q.v.), which gives its name to a curious type of polychrome pottery. Its history is unknown, but inscriptions from its recently excavated site reveal that Messapi (q.v.) once lived there. Horace (*Sat.* 1. 5. 99) rightly ridicules the story of volcanic activity here (cf. Pliny, *HN* 2. 240). E. T. S.

GNIPHO, MARCUS ANTONIUS, a scholar of the Ciceronian age. He taught in the home of Julius Caesar and had a school of his own. His lectures on rhetoric were attended by Cicero during his praetorship (66 B.C.). He is said (by his pupil Aterius Philologus) to have composed only two books *De sermone latino*; but there is evidence that he wrote a commentary on the *Annales* of Ennius. J. F. M.

GNOME (γνώμη). From the root-meaning 'expression of opinion' various specialized meanings spring, one of which is 'pregnant utterance', the pithy expression of a general thought. The sense is something like 'epigram' (in the commonest modern sense of that word), or, when the epigram has become current coin, 'proverb'. Man must have begun to think of gnomes almost as soon as he was capable of making general propositions. At any rate we meet them on the threshold of Greek literature; for Homer's αὐτὸς γὰρ ἐφέλκεται ἄνδρα σιδήρεος (*Od.* 16. 294) is a gnome. The famous γνώθι σεαυτὸν and μηδὲν ἄγαν are unsurpassable for brevity. Hesiod is full of gnomes, and so, centuries later, is Euripides, in whose day the cult of the gnome in intellectualist circles is satirized by Aristophanes (see I.S.J. s.v. γνωμίδιον, γνωμοτυπῶ, and cognate words). In prose, the gnostic tendency is strongly marked in Heraclitus (q.v., and e.g. fr. 43), and even more so in Democritus (q.v.). The use of the gnome as not merely an ingredient in poetry or prose but as a literary form in itself can be traced back to Phocylides and Theognis (1) (qq.v.) in the middle of the sixth century B.C., and Democritus (c. 460–370 B.C.) himself talks of his works as γνωμῶν (fr. 35). For the collection of gnostic sayings into anthologies, see CHIREIA. See also SENTENTIA.

PW. Suppl. vi (1935), 74 ff (Horna and v. Fritz). J. D. D.

GNOSTICISM is a generic term primarily used of theosophical groups which broke with the second-century Christian Church. A wider, imprecise use of the term describes a syncretistic religiosity diffused in the Near East, contemporaneous with and independent of Christianity. Many ingredients of second-century Gnosticism are pre-Christian. But there is no evidence of a pre-Christian religion or cultic myth resembling Christianity as closely as the systems of Basilides, Valentinus, and Manichaeism (q.v.), all of which owed the essentials of their beliefs to Christianity, or even as the doctrine of Simon Magus which provided a rival religion of redemption with a redeemer replacing Jesus.

The principal characteristics of the second-century sects are (1) a radical rejection of the visible world as being alien to the supreme God and as incompatible with truth as darkness with light; (2) the assertion that elect souls are divine sparks temporarily imprisoned in matter as a result of a pre-cosmic catastrophe, but saved by a redeemer, sent from the transcendent God, whose teachings awake the sleep-walking soul to a consciousness of its origin and destiny, and also include instructions how to pass the blind planetary powers which bar the soul's

ascent to its celestial home. The first proposition has close affinities with late Jewish apocalyptic; for the second the Gnostics claimed, with some reason, large support in the dialogues of Plato. The characteristic theosophical claim is also made, viz. to present a religion that is at once esoteric and universal, satisfying the quest for an exclusive mystery while also claiming that all religions offer equally valid symbolic myths about the human condition. To explain how humanity came to need such drastic redemption, many Gnostics expounded Genesis 1–iii as an allegory of the fall of a female cosmic power, an accident which led to the making of this visible world by an incompetent, perhaps malevolent creator. So the natural world betrays nothing of a beneficent creative intention. The cosmogony provided the ground for an ethic which in most sects was rabidly ascetic, but in a few groups (especially Carpocrates') produced a religion of eroticism, supported by an antinomian interpretation of St. Paul's antithesis of law and grace and by an extreme predestinarianism.

The principal sources of Gnosticism are the Platonic dualism of spirit and matter in which matter is invested with quasi-demonic properties by an evil world-soul (*Leg.* 896 e, *Th.* 176 e), hellenized forms of Zoroastrian dualism (chiefly attested in Plutarch's interpretation of Isis and Osiris), Mithraism with its theme of the soul's ascent through the seven planets (modified to form part of the Ophite Gnostic system as described in Origen, *contra Celsum* vi), Judaism which, besides the book of Genesis, contributed the apocalyptic themes of the conflict between angelic powers and of the deliverance of the elect from this evil world, and above all Christianity to which Gnosticism was like a diabolical Doppelgänger. The evidence of the Pauline epistles (esp. Galatians, 1 Corinthians, Colossians) shows St. Paul using language often close to that of Gnosticism and at the same time strenuously resisting Gnostic tendencies in his churches. The fact that some of the proto-Gnostic elements in the Pauline epistles can also be found in Philo suggests that extreme liberalizing Judaism was a material cause of Gnostic origins. Nevertheless, the Jewish element is not strong in all the systems, and in many there is an anti-semitic spirit. From the second century, attitudes closely resembling Gnosticism appear in pagan texts, especially in Plutarch's theosophical tracts, 'Hermes Trismegistus', Numenius of Apamea, the Chaldean Oracles (qq.v.), and alchemists like Zosimus. It is entirely possible that some Gnostic influence passed from Numenius to Plotinus and Porphyry. Plotinus' passionate attack on the Gnostics (2. 9) is the work of a man who not only had to purge his own circle but felt within himself the power of Gnostic infiltration; and the theurgy of the later Neoplatonists is near to some of the grosser forms of second-century Gnosticism combated by the Church.

In Christianity Gnosticism produced a sharp reaction against its rejection of the doctrines of the goodness of the creation and the freedom of man. The capacity of individual sects for survival was also weakened by the syncretistic acceptance of all religious myths as valid and true. Nevertheless, Gnosticism had a strikingly successful future in Manichaeism (q.v.). One early sect still survives in the Mandaeans of Iraq.

SOURCES. Original Gnostic documents survive mainly in Coptic, esp. forty-four documents in thirteen codices found at Nag-Hammadi, Upper Egypt, in 1946, in process of publication: see J. Doresse, *The Secret Books of the Egyptian Gnostics* (1960); W. C. van Unnik, *Newly Discovered Gnostic Writings* (1960). Earlier discoveries: C. Schmidt, *Koptisch-gnostische Schriften* (1905). Fragments of Heraclion, Marcion, and Valentinus are preserved in quotations made by orthodox critics (esp. Irenaeus, Tertullian, Clement of Alexandria, Hippolytus, Origen).

GOLD (*χρυσός*, *aurum*). Gold is a rare metal in Greece, and the source of the rich treasures found in tombs of the Bronze Age (Mycenae, etc.) is unknown. The island of Siphnos prospered in the sixth century B.C. by its gold production; later the mines were flooded. Mines on Thasos, opened by the Phoenicians, were working in Thucydides' day, but have not been found. Macedonia and Thrace had a large auriferous area, where the mines of Mt. Pangaeus were working before 500 B.C. More fruitful than the home supplies were probably those from overseas. Nearest at hand were Mysia, Phrygia, and Lydia; their fame as gold-bearing lands is attested by the stories of Midas, Croesus, and the river Pactolus. Electrum (*ἤλεκτρον*), a natural alloy of gold and silver, was panned in the rivers of Asia Minor, and was used for the earliest coins and for jewellery. Colchis also furnished gold, and Scythians brought supplies from inner Asia. Yet there was a scarcity of gold in Greece until the conquests of Alexander made available the hoards of Persia.

Early Etruscan tombs show a wealth of gold furniture comparable to that of Bronze Age Greece. Traces of early mining are found in several districts of Italy, in particular the Pennine Alps. At Rome the metal long remained rare; it probably first became common through war indemnities. Under the late Republic and early Empire the main source of supply was Spain, where the north-west and Baetica yielded immense quantities. Gold was also mined in southern France and dredged from rivers in other parts of Gaul; there are also workings in south Wales. After the first century the western gold-fields were largely superseded by those of the Balkans, Noricum, and Dacia. When the supply from these fell off during the third century a shortage of the metal appears to have been generally felt.

GORDIAN I (MARCUS ANTONIUS (PW 61) GORDIANUS), Roman Emperor, A.D. 238. When proconsul of Africa he was at the age of 79 invited to become Emperor by some young nobles who had revolted at Thysdrus out of resentment at Maximinus' fiscal policy. He made his son, GORDIAN II, his colleague. The Senate, possibly forewarned, acknowledged him, but Capellianus, governor of Numidia, remained loyal to Maximinus. Gordian II opposed his legionary army with a volunteer militia, and when he was killed his father committed suicide after a reign of twenty-two days (238). See R. A. G. Carson, *Centennial Publication of the American Numismatic Society* (1958), 181 ff.

GORDIAN III (PW, Antonius 60), son of Gordian I's daughter Maecia Faustina, was, after the murder of Balbinus and Pupienus (see BALBINUS) in A.D. 238, saluted Emperor by the Praetorians at the age of 13. The conduct of affairs was at first in his mother's hands, but in 241-4 it passed to the praetorian prefect Timesitheus. A major campaign began in 242 in reply to a Persian attack the previous year (the Alamanni and Carpi took advantage of troop movements to raid across the northern frontiers). There were substantial Roman successes before Timesitheus died (243). In his place Gordian appointed an Arab called Philippos, who soon showed his imperial aspirations. Profiting by a food shortage he appealed to the soldiers who wanted a man, not a boy, as their

ruler. Gordian was murdered at Zaitha in 244 (see PHILIPPUS 1).

GORDIUM, capital of ancient Phrygia, situated at the point where the River Sangarius is crossed by the main route westward from the Anatolian plateau to the sea, that of the 'Royal Road'. The site was occupied in the Early Bronze Age and Hittite period, and Phrygian settlement began probably in the tenth century B.C. at the latest. Gordium became capital of Phrygia in the eighth century, at the end of which it reached its height under King Midas. The city had massive fortifications and impressive buildings, and around it many tumuli were built in the eighth to sixth centuries containing richly furnished tomb chambers. Gordium was destroyed by the invading Cimmerians in the early seventh century; it recovered, but passed under Lydian and then, after a further destruction, under Persian domination. It was visited by Alexander the Great (333), who cut or untied the 'Gordian knot'. From the mid third century it was a Galatian village, abandoned in 189 B.C. In the time of Strabo there was a village at the site.

See PHRYGIA; G. and A. Körte, 'Gordion', *JDAI* 1904, R. S. Young, *Excavation reports in AJArch* 1955-60, 1962, 1964, 1966; *Proc. Amer. Phil. Soc.* 1963, 348 ff. D. J. B.

GORDYENE, a small Hellenistic kingdom (remnant of the Seleucid Empire), originally the land of the Kardouchoi, east of sources of Tigris, bordering Armenia (Strabo 16. 1. 8 and 24). It was a vassal kingdom of Tigranes (q.v. 1) the Great, who enlarged it at the expense of Parthian Adiabene. Its last king, Zarbienuis, was executed for plotting with Lucullus (Plut. *Luc.* 29), who later looted its treasures. Pompey resisted Parthian claims, sent Afranius to overrun it, and restored most of it to Tigranes (Cass. Dio 37. 5. 4). Occupied by Trajan but regularly part of the Parthian and Sassanid Empires, it was finally ceded to Persia by Jovian (Ammian. 25. 7. 8 f.).

Baumgartner, *PW* vii, s.v. *Γορδωνίη*, U. Kahrstedt, *Artabanos III* (1950), 59 ff. E. W. G.

GORGAS (1) of Leontini (c. 483-376 B.C.), one of the most influential of the sophists (q.v.), principally a teacher of rhetoric (cf. Pl. *Grg.* 449 a). His visit to Athens as an ambassador from his home town in 427 is a landmark in the history of rhetoric (q.v., § 1). Later writers attribute philosophical doctrines to him, especially the thesis that 'nothing exists, and if anything did we could not know about it'; but it seems likely that this was a paradox maintained as a *tour de force* rather than a serious position. Gorgias' main contribution to literature is in style; the extant *Encomium of Helen* (notable especially for the praise of λόγος, §§ 8-14) and *Defence of Palamedes*, and also the *Eptaphios* fragment (6 Diels-Kranz), illustrate clearly the seductions of his antithetical manner, with its balancing clauses and rhymes: antithesis, homocoteleuton, and pariosis became known as σχήματα Γοργίου. His influence can be seen in Antiphon and Thucydides, as well as in his great pupil Isocrates. Plato treats him with some respect; but Agathon's speech in *Symposium* 194 ff. is a vigorous parody.

FRAGMENIS. Diels, *Vorsokr.* 1. 82 (76); L. Rademacher, *Artium Scriptores* (1951), B. vu *Helen*, ed. O. Immisch, 1927. See G. B. Kerferd, *Phronesis* 1 (1955/6), 3 ff.; E. R. Dodds, ed. of Plato's *Gorgias* (1959), 6 ff.; Norden, *Ant. Kunstpr.* 63 ff.; J. D. Denniston, *Greek Prose Style* (1952), 8 ff.; G. A. Kennedy, *The Art of Persuasion in Greece* (1963), 61 ff. D. A. R.

GORGAS (2) (1st c. B.C.), a rhetor, who taught Cicero's son at Athens in 44 B.C. He was best known for a treatise in four books *Περί σχημάτων* (cf. Quintil. 9. 2. 102 ff.), of

which a Latin abridgement by Rutilius Lupus is extant (Halm, *Rhet. Lat. min.* 3-21).

D. A. R.

GORGO or **MEDUSA**, a terrible monster in Greek mythology. Gorgo was the daughter of the marine deities Phorcys and Ceto. She had a round, ugly face, snakes instead of hair, a belt of the teeth of a boar, sometimes a beard, huge wings, and eyes that could transform people into stone. She had two immortal sisters, who in art are also shown in the shape of Gorgons, Sthenno ('the Strong') and Euryale ('the Wide Leaping'), with whom she lived in the far West, where Poseidon loved her. Perseus went in search of Gorgo, killed her with the aid of Athena, and escaped (Hes. *Theog.* 270). Her head adorned the aegis (q.v.) of Zeus and also that of Athena (*Il.* 5. 738). From the body of Gorgo blood sprang forth; from one vein blood that Asclepius used to revive the dead, from the other blood which he used to harm men (Apollod. 3. 10. 3). In the moment of her death Gorgo-Medusa gave birth to Pegasus and Chrysaor.

The myth of Gorgo-Medusa as known in classical Greece contained religious and folkloristic elements of diverse origin. The head of Gorgo, buried under the Agora of Argos (Paus. 2. 21. 5), seems to indicate that the Gorgoneion was originally an independent embodiment of apotropaic power. Medusa again may have been originally an independent earth goddess (L. Malten, *JDAI* 1914, 184; 1925, 121 ff.). In art, Perseus killing Gorgo and pursued by Gorgons is a popular subject during the archaic period; Gorgo alone, a running winged daemon, is also frequently shown, especially in Corinthian art. In the classical period Gorgo is humanized, and Hellenistic representations develop a definitely beautiful type of head for the dying maiden Gorgo (cf. Cic. *Verr.* 4. 124). Her head always remained a popular apotropaic symbol.

GORTYN, one of the most important towns of Dorian Crete and capital of the Roman province, was situated in the southern central plain of the island. Many ruins have been excavated, and many inscriptions found, among them the famous 'Code of Gortyn', containing large parts of a supplementary codification (probably c. 450 B.C.). It included many older laws, or referred to them; some of these are also preserved in other inscriptions. The code contains rules of civil law only, but some facts of public law are mentioned. The laws, lacking systematic order, deal with the family and family property, with slaves, surety, donations, mortgage, procedure in trials, and other items. The code of Gortyn is a mixture of primitive and developed regulations. Most interesting is the position of the slaves, who had certain rights for their protection; they were also allowed to have their own property, and even to marry free women. There was a clear distinction, especially in matters of hereditary right, between family and private property. There were detailed and rather liberal regulations on adoption and sole heiresses. Criminal law was still closely connected with family law, but in many cases money penalties had replaced previous forms of punishment, and frequently the fines were payable to the State. Self-defence was forbidden. Witnesses and compurgators, and the oath of the party, served to establish a case; but the judge decided at his own discretion. On the whole, the laws of Gortyn are the most important source of pre-Hellenistic Greek law, and reveal rather a

high standard of juristic conceptions, though it is not certain how far this code was valid even among Cretan states.

GOTHS, a Germanic people, who left their original homes in southern Scandinavia about the beginning of the Christian era, and settled around the lower Vistula, where Tacitus knew of them. In the period A.D. 150-200 they migrated to the lands north of the Black Sea, and in 238 at latest began to raid the Roman Empire. In the mid third century they launched heavy attacks on the provinces of Asia Minor and the Balkans, but were checked by the victories of Gallienus and Claudius (2) Gothicus (qq.v.). A section of them, the Visigoths, occupied the province of Transdanubian Dacia, from which Aurelian (q.v.) withdrew the Roman army and administration (c. 275). The remainder, the Ostrogoths, built up a huge empire in the Ukraine, which they held until the Huns overran them c. 370. Escaping from Hun rule in 455, they lived in the Balkan provinces until 489 when they marched to Italy under the leadership of Theodoric the Great (q.v.). As for the Visigoths, the Huns drove them across the lower Danube in 376; and on 9 Aug. 378, led by Fritigern, they defeated and killed the Emperor Valens in the great battle of Adrianople. After living as *Federates* in Lower Moesia (382-95), they then, under the leadership of Alaric, devastated Greece, migrated to Italy, and in Aug. 410 sacked Rome. Thereafter they moved to Gaul and Spain, and in 418 settled as *Federates* between the mouths of the Garonne and the Loire with their capital at Toulouse; but in 475 King Euric threw off the overlordship of Rome and proclaimed an independent kingdom. His son Alaric II was defeated and killed by Clovis and the Franks at the battle of Vouille in 507, and the Visigoths were driven from most of Gaul. They retreated to Spain, much of which had been conquered by Euric. In Spain the Visigothic kingdom survived until it was overrun by the Muslims in 711. Ulfila (c. 311-83) translated the Bible into Gothic and was responsible for the conversion of the Visigoths to Arian Christianity late in the fourth century. They became Catholics under King Reccared in 589.

L. Schmidt, *Die Ostgermanen* (1942), 195 ff.; L. A. Thompson, *The Visigoths in the Time of Ulfila* (1966).

E. A. T.

GRACCHUS (1), **TIBERIUS SEMPRONIUS** (*PW* 51), curule aedile (216 B.C.) and *magister equitum* to Junius Pera after Cannae, commanded two legions of *volones*, slaves enrolled after Cannae. As consul I (215) he thwarted Hannibal at Cumae, as proconsul (214) near Beneventum he defeated Hanno who was trying to join Hannibal from south Italy. Consul II (213); as proconsul in 212 he was surprised and killed probably in Lucania.

II 11. S.

GRACCHUS (2), **TIBERIUS SEMPRONIUS** (*PW* 53), the censor, was augur in 204 B.C., accompanied the Scipios to the East in 190, negotiating with Philip V, and as tribune at the time of the prosecution of L. Scipio saved him from imprisonment. Envoy to Greece in 185, he became curule aedile in 182, and as praetor in 180 succeeded Q. Fulvius Flaccus in Spain. Here he completed the reduction of the Celtiberians by systematic operations and a liberal settlement (180-179), founding Gracchuris and giving peace for a generation. Consul in 177, he ruthlessly subjugated Sardinia (cf. Livy 41. 28. 8-10).

Censor in 169, with C. Claudius Pulcher, he intervened in the levies, opposed the *publicani*, and restricted the rights of freedmen; his austerity became famous. He served on embassies to the East (165, 162), was again consul (163), and died in 154. A man of high character and liberal thought, a fine strategist and great colonial governor, he dominated the policy of foreign consolidation and internal restoration towards the middle of the century. He married Cornelia, daughter of Scipio Africanus, and his twelve children included Tiberius and Gaius Gracchus.

Carcopino, *Autour des Gracques* (1928), 47. Scullard, *Rom. Pol.* 143, 204 ff., 282, 294 ff.; F. Badian, *Foreign Clientelae* (1958), 121 ff.; D. C. Earl, *Tiberius Gracchus* (1963), 49 ff. A. H. McD.

GRACCHUS (3), TIBERIUS SEMPRONIUS (PW 54), son of (2) and Cornelia (q.v. 1), was cousin and brother-in-law of Scipio (q.v. 11) Aemilianus, under whom he served in 146 B.C. As quaestor (137) in Spain, he used his father's connexions and reputation to save Hostilius Mancinus' (q.v.) army by a treaty, which the Senate, on Scipio's advice, disowned. Embittered against Scipio for undermining his *fides*, he married a daughter of Ap. Claudius (q.v. 9) and, as tribune in 133 in Scipio's absence, proposed—on the advice of Claudius, the consul P. Scaevola (q.v. 2) and Crassus (q.v. 1) Mucianus—an agrarian law designed to solve the main social and economic problems of the day in a way profitable to this faction. The law reaffirmed the statutory (but long ignored) limit of 500 *iugera* of public land per person, allowed an extra 250 per child to make this more acceptable, and instituted a commission (to which he, his brother (4) and Claudius were appointed) to confiscate the surplus land—with power to judge on disputed boundaries—and distribute it in small holdings to poor citizens. The purpose of the bill was probably both to alleviate poverty (thus Plutarch) and to increase the number of men with sufficient property for military service (thus Appian). No doubt at the suggestion of his advisers (two of them eminent lawyers), he tried to short-circuit delaying tactics in the Senate (cf. LAELIUS 2) by putting the bill straight to the People—which was legal, but contrary to *mos maiorum*. It was vetoed by Octavius (q.v. 2)—who, persisting in opposition, was deposed by popular vote—and then passed in a harsher form. This deposition struck at the foundations of Roman constitutional practice and alarmed many hitherto uncommitted. Tiberius next took advantage of the death of Attalus III (of which, through inherited connexions with Pergamum, he had heard first) to propose that Attalus' property, left to Rome, should be used to equip the new allotment-holders. This prejudged the important question of whether to accept the bequest and struck a blow at the Senate's traditional (though not legally established) control of foreign affairs and finance. When he sought re-election in order to see his programme through, he aroused fears of tyrannical power even among some of his previous supporters. When his friend Scaevola refused to use force against a tribune, Scipio (q.v. 12) Nasica led a mob of senators and their clients against Tiberius. Taken by surprise, he and some of his adherents were killed on the Capitol. In 132 Popilius (q.v. 2) punished many of those surviving; but the land commission continued its work, for the moment unhampered, and Tiberius' opponents tried to claim the credit for moderate reform.

Tiberius' tribunate marks the introduction of murder into Roman politics and the beginning of the disintegration of the ruling oligarchy under the blows of Populares in its own ranks.

D. C. Earl, *Tiberius Gracchus* (1963). For further bibliography see next article. The sources on Tiberius Gracchus (3) are bedevilled by his brother's propaganda and by rival ancient interpretations. E. B.

GRACCHUS (4), GAIUS SEMPRONIUS (PW 47), younger brother of (3), served under his cousin Scipio (q.v. 11) Aemilianus at Numantia (134/3 B.C.) and on his return to Rome made it his main aim to avenge Tiberius' death and continue his programme. A member of the agrarian commission from the start, he supported the plans of Fulvius Flaccus (q.v. 3) in 126, but was sent to Sardinia as quaestor. Returning in 124, despite obstacles raised by his enemies, he was elected tribune for 123 and again for 122. After laws meant to avenge his brother and secure himself against a similar fate, he passed a programme of radical reform, aided by friendly tribunes. The most important measures were: (1) a law assuring citizens of wheat at a reasonable (normally subsidized) price; laws founding colonies—including one on the site of Carthage which, early in 122, Gaius himself went to establish—and reviving land distributions; laws regulating army service and providing for public works throughout Italy—all these both to relieve poverty and to gain the support of the plebs; (2) a law to have contracts for the *decuma* (q.v.) of Asia sold by the censors in Rome; and two laws (one probably passed by M. Iunius Silanus and one by Acilius Glabrio (q.v. 2)) establishing a new procedure for *repetundae* (q.v.) trials and taking juries for them, finally, from the wealthiest non-senators (see EQUITES)—these to protect provincials from senatorial extortion, provide a sounder basis for budgeting, and set up men assumed to be uninterested in politics to control politicians; (3) finally, in 122, he proposed (but could not pass) a bill to give citizenship to Latins and Latin status to other Italians—probably still chiefly for economic reasons (see FLACCUS 3), but also to protect them against increasing oppression by Roman magistrates.

In 123 he found little opposition. In 122 Fannius (q.v.), for whom he had secured the consulship, and the noble tribune Drusus (q.v. 1) combined to defeat him on the citizenship bill, building up the common people's reluctance to share their privileges—a policy that ultimately led to the Social War. Gaius and Fulvius failed to secure re-election for 121. When their policies were attacked in that year, they resorted to violence and, after the Senate's first use of the so-called *senatus consultum ultimum* (q.v.), died in a riot. The consul Opimius (q.v.) severely punished many of their supporters.

Gaius was more gifted and more far-seeing than his brother. A proud aristocrat himself, a good orator and skilled at using the political system, he saw the need for radical reform, though not always the right way to achieve improvement. Aiming at the relief of poverty and the protection of citizens and allies from oppression; at the improvement of budgeting and administrative efficiency; above all, at the creation of a politically responsible senatorial class, subject to constitutional checks in its control of the state (which he did not intend to take from it); he in fact created, in the *eques* (q.v.), a new exploiting class, more oppressive than the Senate and not restrained by a tradition of public service or the exercise of political responsibility. Thus he ultimately reinforced the worse and neutralized the better characteristics of Senate rule. However, it was his enemies' final success that prepared the way for disaster.

Our chief sources on the Gracchi (apart from numerous passing references in Cicero) are Appian, *B.Civ.* 1 and Plut. *Tiberius and Gaius Gracchus*. On the tribunes, see Broughton, *MRR* 1. 493, 513, 517. Recent treatment with bibliography and discussion of sources, in H. H. Scullard, *From the Gracchi to Nero* (1963), ch. II. See also F. Badian, *Hist.* 1962, 200 f. (bibliography 233 f.), R. J. Rowland, *TAPA* 1965, 361. E. B.

GRAECINUS, JULIUS, entered the Senate under Tiberius and reached the praetorship. He is quoted by Columella (e.g. 1. 1. 14; 4. 3. 6) for his work on vines; possibly son of the Graecinus addressed by Ovid, *Am.* 2. 10, *Pont.* 1. 6, and father of Julius Agricola (Tac. *Agr.* 4),

whose name may allude to farming tastes. Agricola's father was executed A.D. 39 or 40 (*AE* 1946, n. 94).

J. W. D.; G. B. A. F.

GRAIAE (*Γραιαί*), in mythology, daughters of Phorcys and Ceto, by name Pemphredo, Dino, and Enyo, sisters of the Gorgons (Hea. *Theog.* 270 ff.); they were three (Aesch. *PV* 794 ff.). They are an incarnation of age, grey-haired from birth (Hesiod), with one eye and one tooth left (Aesch.). Perseus (q.v. 1) stole their eye and so made them tell him the way to the Gorgons (Pherecydes ap. schol. Ap. Rhod. 4. 1515); or threw it away (Aesch. ap. [Eratosth.] 22) and left them blind and unable to help their sisters.

GRAMMAR, GRAMMARIANS (Greek). Linguistic analysis and classification begin, in Greece, with the fifth-century sophists. Their phonetic studies are reflected in the title of a lost work of Democritus 'On euphony and cacophonous letters', and in a fragment of Euripides' *Palamedes* *ἄφωνα καὶ φωνοῦντα συλλαβὰς τιθεῖς* . . . Plato (*Cra.* 424 c; cf. *Th.* 203 b) mentions a classification of the alphabetic sounds as (a) voiced (the vowels), (b) *ἄφωνα* but not *ἄβηττα* (the *ἡμίφωνα* of Aristotle), and (c) *ἄφωνα καὶ ἄβηττα* (the largest class): the last are the *ἄφωνα* of the Alexandrians, who followed Aristotle in dividing them into *δυσία*, *ψιλὰ*, and *μέσα* (χ θ φ, κ τ π, and γ δ β), and used *σύμφωνα* (consonants) to include both second and third classes, (b) and (c) above.

2. Plato notices two distinctions of accentual intonation, 'acute' and 'grave' (*Cra.* 399 b), Aristotle also a third, intermediate, our circumflex (*Poet.* 1456^b33). In ps.-Arcad. at p. 186—probably a sixteenth-century interpolation—Aristophanes of Byzantium is said to have invented signs for the accents (and other marks); but earlier work in this subject was eclipsed by that of Aristarchus.

3. Grammatical classification of words begins with Protagoras, who first distinguished *γένη ὀνομάτων* as *ἄρρενα*, *θῆλεα*, and *σκευή*. Aristotle has the same terms, but sometimes uses *μεταξύ* for *σκευή*, and notes that many *σκευή* are *ἄρρενα* or *θῆλεα*. By the first century B.C. *οὐδέτερον* (neuter) came into use, and *κοινόν* (common) was added, and *ἐπικούριον* (i.e. of one gender but used of both sexes).

4. Plato (*Soph.* 261 d) makes a practical discrimination between examples of two classes of words, *ῥήματα* and *ὀνόματα*, distinguished by their potential functions as predications and designations respectively, in a sentence. Aristotle (*Poet.* 20) names and defines *ὄνομα*, *ῥήμα*, *σύνδεσμος*, and *ἄρθρον*; but as to the two last the text is disputed as to both definitions and examples. These four, however, with *στοιχείον*, *συλλαβή*, *πτῶσις*, and *λόγος* (composite statement—possibly without verbs) Aristotle calls parts of speech. He includes under *πτῶσις* all forms of the noun (which comprises also our pronoun, adjective, and adverb) other than the *κλήσις*, our nominative, and all verb-forms except the present indicative (*ῥήμα* in the narrowest sense). These flexions, whether nominal or verbal, have no separate names. Subject and predicate are distinguished as *ὑποκείμενον* and *κατηγορούμενον*.

5. The stages leading up to Stoic grammar are obscure. There is evidence that Chrysippus discriminated *τὰ προσηγορικά*, perhaps as a class of noun. Diogenes Babylonius recognized five parts of speech—Aristotle's with the addition of *προσηγορία* (common noun). His pupil, Antipater of Tarsus, added a sixth, named by him *μεσότης* (as allied to noun and verb), by others *πανδέκτης*, but excluded from the final Stoic classification, which was the same as that of Diogenes. The terminology of inflexion—as of most phenomena—was greatly developed

by the Stoics. In Chrysippus, *On the Five Cases*, the fifth was almost certainly the adverb (cf. Aristotle); for the Stoics did not reckon the vocative a case. The nominative they called *ὀρθή* or *εὐθεία*; the others (*πλάγιοι*, oblique) were *γενική*, indicating a *γένος*, *δοτική*, used after verbs of giving, and *αἰτιατική*, denoting the *αἰτία* of the result caused. A tense (*χρόνος*), present (*ἐνεστώς*) or past (*παροχρήμενος*), might be *ἑτελής* (sometimes called *παρατατικός*), imperfect, or *τέλειος* (or *συντέλειος*), perfect; a past tense might be described as *ἀόριστος*, undefined in respect of this distinction. The future tense was named *ὁ μέλλον* (*χρόνος*). Predications by finite verbs (*κατηγορήματα* or *συμβάματα*, while *ῥήμα* is, in contrast, restricted to the infinitive) were classified as active (*ἐνεργητικά*), passive (*παθητικά*, including reflexives, *ἀντιπεποιθότα*), and *οὐδέτερα* (neuter, e.g. *ζῶ*); or, on another basis, as complete (our intransitive) and incomplete (our transitive—requiring an object), with other refinements as to *παρασυμβάματα* (e.g. *μέλει μοι*).

6. From their predecessors the Alexandrians adopted *ὄνομα* (but not, as an independent part of speech, *προσηγορία*), *ῥήμα*, *σύνδεσμος*, and *ἄρθρον*; also the adverb (including our interjections), under a name, *ἐπίρρημα*, the history of which is obscure. To these they added *αὐτωνυμία* (personal and possessive pronouns only) and *πρόθεσις*—a term which Chrysippus used, but in what sense does not appear; the later Stoics had a class of *προθετικοὶ σύνδεσμοι*. The eighth part was created by separating the *μετοχή* (participle) from the verb; and some proposed, in vain, to give the infinitive and possessive adjective a like status. These eight were known to Aristarchus, and were standardized by the text-book of his pupil, Dionysius (q.v. 15) Thrax. Thus far Greek grammar was descriptive. With the Atticist movement we find prescriptive grammar coming to the fore. One of the results of this change is the growth of false forms, known only to grammarians and those who followed them.

7. Systematic syntax made little progress until the first century A.D. (see HARRON and THEON 1): the next century saw, however, the great and original work of Apollonius (q.v. 13) Dyscolus.

For the history of kindred studies, see GLOSSA (GREEK) and ETYMOLOGY. It should be noted that *γραμματική* is much wider in meaning than 'grammar'. Of the six elements in Dionysius Thrax's (q.v.) definition of *γραμματική* only two belong to 'grammar'; the rest fall under lexicography or literary criticism.

J. E. Sandys, *Hist. of Class. Schol.* 1 (1903), II. Steinthal, *Geschichte d. Sprachwissenschaft b. d. Gr. und Römern* (no index), G. Murray, *Greek Studies* (1946), 171 ff. R. H. Robins, *Ancient and Mediaeval grammatical theory in Europe* (1951); Christ-Schmid-Stählin. The most important Greek grammarians have been, or are to be, published in Teubner's *Grammatici Graeci et Lexicographi Graeci*.

P. B. R. F., R. B.

GRAMMAR, GRAMMARIANS (Latin). The Romans' interest in formal grammar was stimulated, even if not first aroused, by Crates of Mallos (c. 169 B.C.). The Greek influence on Roman grammatical theory was permanent and is clearly indicated by the Latin terminology, e.g. *casus* (*πτῶσις*), *accentus* (*προσῳδία*), *coniugatio* (*συζυγία*). It was the doctrines of the Stoic scholars of Pergamum in their *τέχνη περὶ φωνῆς* (a part of the theory of *διαλεκτική*), and not (as is sometimes asserted) the work of Dionysius Thrax, which afforded the model for Roman grammatical treatises. The short school grammar, no less than the large comprehensive expositions, had three essential sections: (a) on *vox*, *littera*, *syllaba*, with an introduction defining *ars* and *ars grammatica*; (b) on the parts of speech with details of declensions, conjugations, etc.; (c) on the *vitia* and *virtutes orationis*.

When fully expanded, section (b) treated each of the eight *partes orationis* according to their *accidentia*: thus, nouns (including adjectives) were subdivided according to *qualitas* (*propria* or *appellativa*), *genus* (= gender), *figura* (*simplex* or *composita*, as *felix* : *infelix*), *numerus*, and *casus*; verbs according to *qualitas* (as *perfecta*, *imperfecta*, etc.), *genus* (*actiuium*, *passiuium*, *neutrum*, *deponens*), *figura* (*simplex* or *composita*), *persona*, *numerus*, *modus*, *tempus*, *coniugatio*. Section (c) included discussions of *barbarismus*, *soloecismus*, *cetera vitia* (e.g. *pleonasmus*, *tautologia*), *tropi* (e.g. *metaphora*, *onomatopoeia*), *metaplasma*, *schemata lexeos*, and *schemata dianoeas*. Syntax was treated incidentally in sections (a) and (b), but sometimes (as in Priscian) a further section of *constructio* was appended. The later grammars frequently included other sections: *de orthographia*, *de differentiis*, *de idiomatibus* (i.e. divergences between Greek and Latin usage, e.g. *sequor te* : *οὐκ ἔπομαι*), *de metris* (in which all metres were frequently derived by *additio* and *detractio* from the dactylic hexameter and the iambic trimeter); but these topics were often the subjects of separate treatises.

2. Interest in grammatical matters is first attested in the ninth book of Lucilius. In the second century B.C. Aelius Stilo, in the first century B.C. Gnapho, Opilius, Cosconius, Ateius, Nigidius Figulus, and Santra are known as writers on grammar; but it is Varro's grammatical system (included in book 1 of his lost *Libri disciplinarum* and implicit in his *De Ling. Lat.*) which is the earliest we can reconstruct with any fullness. He distinguished only four parts of speech: nouns (including adjectives and pronouns), verbs, participles, and particles (including adverbs). The genitive, dative, and ablative cases he called *casus patricius*, *casus dandi*, and *casus sextus* (the last of which persisted for centuries alongside of *ablativus*); and nouns he grouped according to the ending of the nominative singular. The terms *declinatio* and *modus* were apparently not used by him, nor were the conjugations clearly defined.

3. No complete grammatical work of the first century A.D. is extant (if we except the very interesting sketch in Quint. 1. 4-8), but the *Ars* of Remmius Palaemon, known to Quintilian and quoted by later writers, was clearly a work of great importance. Planned on a large scale, it brought a new clarity into grammatical exposition. The eight parts of speech are now satisfactorily differentiated, the ending of the genitive singular becomes the basis for classification into declensions, and the four conjugations (I, II, III *correpta*, III *producta* [= IV]) are distinguished by the final syllable of the second person singular present active indicative. Furthermore, the practice of illustrating points by quotations from standard authors is firmly established.

4. Except for the *De Orthographia* of Velius Longus and a similar work of Terentius Scaurus, nothing remains of second-century A.D. grammatical work, though both these writers, like Flavius Caper, seem to have written comprehensive grammars. Of the third-century writers, Julius Romanus is known only by fragments, and the relatively short work of his contemporary Sacerdos (which omits the *vitia et virtutes orationis* and includes a section on metre) remains as our oldest extant Latin grammar. Possibilities of originality and innovation were apparently exhausted by the fourth century; for, apart from short grammars of the school-book type (e.g. Aelius Donatus), authors either boldly copied out with minor modifications large sections of their predecessors' work (e.g. Charisius) or fashioned a minute mosaic of borrowed phrases and ideas (e.g. Diomedes); in either case they achieved a fictitious novelty by their combination of sources and their illustrative quotations. To this century belong, besides those mentioned, Albinus,

Cominianus, Marius Victorinus, Servius (who expanded the *ars* of Donatus), and the bilingual Dositheus. From the fifth century have been preserved the treatises of Asmonius, Cleodnius, Consentius, Phocas, Pompeius, and Rufinus, none of which is of major importance; but the early sixth century witnessed the publication of the vast grammar of Priscian (in eighteen books) which remained a standard work of reference for grammatical matters in the Middle Ages.

H. Keil (and others), *Grammatici Latini*, 8 vols. (1855-78), contains all the extant treatises from the third to sixth centuries A.D. (but for Charisius the standard ed. is now that of Karl Barwick, 1925, for Dositheus, that of J. Tolkiehn, 1913); G. Funaioli, *Grammaticae Romanae Fragmenta* (1907), gives the remains of republican and early imperial grammarians. A. Gudeman, s.v. 'Grammatik' in *PW*; K. Barwick, *Remmius Palaemon und die römische ars grammatica* (1922); — *Philologus*, suppl. xv, ii, especially 215 ff.; J. F. Sandys, *History of Classical Scholarship* 1st (1906). J. F. M.

GRAMMAR, GREEK. There are two fundamental reference works:

1. R. Kühner, *Ausführliche Grammatik der griechischen Sprache*, 3rd ed., I (Phonology and Morphology) by F. Blass (1890-92); II (Syntax) by B. Gerth (1898-1904).

2. E. Schwyzler, *Griechische Grammatik* (in I. von Müller's *Handbuch*), 3 vols. (1939-53).

Kühner-Blass-Gerth is primarily a synchronic descriptive grammar, while Schwyzler's treatment is diachronic. Schwyzler contains full bibliographical material. For Hellenistic and New Testament Greek the indispensable reference work is:

3. F. Blass, *Grammatik des neutestamentlichen Griechisch*, 10th ed. by A. Debrunner (1959).

The history of the Greek language is treated by:

4. A. Meillet, *Aperçu d'une histoire de la langue grecque* avec bibliographie mise à jour et complétée par D. Masson (1965).

5. O. Hoffmann and A. Debrunner, *Geschichte der griechischen Sprache*, 2 vols. (1953-4). N.B. This work does not take account of the decipherment of the Linear B tablets.

The dialects of ancient Greek are treated exhaustively in two works:

6. A. Thumb, *Handbuch der griechischen Dialekte*, 2nd ed., vol. 1 by E. Kieckers (1932), vol. iii by A. Scherer (1959).

7. F. Bechtel, *Die griechischen Dialekte*³, 3 vols. (1963). A briefer treatment of the dialects with select texts is found in:

8. C. D. Buck, *The Greek Dialects* (U.S.A. 1955).

A detailed descriptive treatment of Classical Greek syntax is given by:

9. W. W. Goodwin, *Syntax of the Moods and Tenses of the Greek Verb*, rewritten and enlarged (1912 and reprints).

The most complete treatment of the particles is given by:

10. J. D. Denniston, *The Greek Particles*² (1954).

R. B.

GRAMMAR, LATIN. There are two fundamental reference works:

1. R. Kühner, *Ausführliche Grammatik der lateinischen Sprache*. New ed. by F. Holzweissig and C. Stegmann, 3 vols. (1912-14).

2. M. Leumann, *Lateinische Laut- und Formenlehre* (1963); J. B. Hofmann and A. Szantyr, *Lateinische syntax und Stilistik* (1965) (both in I. von Müller's *Handbuch*). Leumann-Hofmann-Szantyr is more diachronic in treatment than Kühner-Holzweissig-Stegmann.

The history of the Latin language is treated in broad outline by:

3. L. R. Palmer, *The Latin Language* (1954).

For detailed discussion of historical phonology and morphology reference should be made to:

4. W. M. Lindsay, *The Latin Language* (1894).
5. F. Sommer, *Handbuch der lateinischen Laut- und Formenlehre* (1948).

6. R. G. Kent, *The Sounds of Latin*¹ (U.S.A. 1945).

7. R. G. Kent, *The Forms of Latin* (U.S.A. 1946).

The most complete treatment of morphology, on a synchronic basis, is to be found in:

8. F. Neue, *Formenlehre der lateinischen Sprache*, 3rd ed. by C. Wagener, 4 vols. (1892-1905).

A modern survey of Latin syntax is given by:

9. E. C. Woodcock, *A New Latin Syntax* (1959).

A fuller, historical discussion of many aspects of Latin syntax is given by:

10. E. Löfstedt, *Syntactica*², 2 vols. (Lund, 1933-42).

The evidence for the spoken Latin underlying the literary language is discussed by:

11. J. B. Hofmann, *Lateneische Umgangssprache*³ (1936).

A good introduction to later Latin both literary and non-literary is:

12. E. Löfstedt, *Late Latin* (Oslo, 1959).

On vulgar Latin, the ancestor of the Romance languages see, in addition to 3 above,

13. C. H. Grandgent, *An Introduction to Vulgar Latin* (U.S.A. 1907).

14. V. Väänänen, *Introduction au latin vulgaire* (1963).

R. H.

GRAMMATEIS, secretaries, of various kinds; generally not responsible magistrates, though like them elected (mostly by lot), and serving for a year only. They are found in most Greek States (sometimes called *γραμματισταί* or *γραφείς*). In Athens the *grammateus* of the *boule* was, until c. 367 B.C., an elective official; but he served for a prytany only. After this the *boule* had two secretaries, both elected by lot (but not from the *bouleutai*) and serving for one year. The *γραμματεὺς τῆς βουλῆς* performed the general secretarial duties. The *γραμματεὺς κατὰ πρυτανεῖαν* supervised the copying, registering, and preserving of all State documents, and (at first) arranged for their publication when this was ordered; his name was normally put at the head of a published document as a guarantee of its accuracy. The *γραμματεὺς τῷ δήμῳ* or *τῆς πόλεως* read out dispatches, etc., to the *ekklesia*. The *πρυτανεὺς* (q.v.) also had a *grammateus* (one of their own number); and collegiate magistracies, as the Eleven, the *Hellenotamiai*, the *Thesmothetai*, had theirs—the last chosen from the *phyle* not represented by the nine archons, and performing some duties for his *phyle*.

A more important official, though serving for a year only, was the *γραμματεὺς τοῦ κοινοῦ* or *τῶν συνέδρων* of Federal States, such as the Aetolian and Achaean Confederacies. He generally ranked next after the higher military officers.

A. W. G.

GRAMMATICUS in rhetoric has a wider meaning than 'grammarian', and implies a professor of literature, who carried on the elementary work of the *litterator* and trained a student for advanced rhetoric or even trenched on its province (Quint. *Inst.* 2. 1. 4-6). The Greek *γραμματικός* supplanted the Latin *litteratus*: *grammatici* were *poetarum explanatores* (Cic. *Div.* 1. 116) and expounders of a still more extensive field of knowledge (Cic. *De Or.* 187). Suetonius (*Gram.* 4) gives an instructive summary. See EDUCATION, IV. 6.

J. W. D.

GRANIUS (PW 13) **LICINIANUS** wrote a handbook of Roman history in annalistic arrangement going back ultimately to Livy, but including antiquarian material,

e.g. signs and wonders, anecdotes, and curiosities. The remains, preserved in a London palimpsest, come from books 26 (?), 28, 33 (?), 36, referring to events of 165, 105, 78 B.C. The work, which shows archaism in style, an interest in Sallust, and the aim of school use, was written after Hadrian's completion of the Olympieum in Athens, at earliest in the Antonine period.

EDITIONS: G. Camozzi (1900); M. Flemisch (1904). O. Dreckmann, *De Gran. Lic. fontibus et auctoritate* (1896); M. Flemisch, *Gran. Lic.* (1898). A. H. McD.

GRAPHE (*γραφῆ*) in Athenian law was a type of prosecution, the commonest kind of public case. The name seems to imply that when this procedure was instituted its distinctive feature was that the charge was made in writing, whereas in other procedures the charge was made orally. It may perhaps have been introduced by Solon early in the sixth century B.C. By the fifth century charges in other cases also were put in writing, but the name *graphe* continued to be used for ordinary public cases, excluding special types like *apagoge* or *phasis*.

Sometimes the term was used more loosely, either to refer to any type of public case, or to refer to the written charge in any case, public or private.

See DIKE, GRAPHH, PARANOMON.

J. H. Lipsius, *Das attische Recht und Rechtsverfahren* (1905-15), 237 ff.; G. M. Calhoun, *The Growth of Criminal Law in Ancient Greece* (1927). D. M. M.

GRAPHE PARANOMON (*γραφῆ παρανόμων*) in Athens was a prosecution (see GRAPHH) for the offence of proposing in the assembly or council a law or decree which was contrary to an existing law in form or content. As soon as the accuser made a sworn statement (*ὅρκισμα*) that he intended to bring a *graphe paranomon* against the proposer, the proposal, whether already voted on or not, was suspended until the trial had been held. The case was tried in a lawcourt (see DIKASTERION) under the presidency of the *thesmothetai* (q.v.). If the jury condemned the proposer, his proposal was annulled and he was punished, usually by a fine; if a man was convicted three times of this type of offence, he suffered disfranchisement (see ATIMIA). If more than a year had elapsed since a law had been passed, its proposer could no longer be prosecuted, but the law could still be attacked and annulled by a similar procedure.

It is not known when this type of prosecution was instituted, but the earliest known cases are the prosecution of Speusippus by Leogoras in 415 B.C. (And. 1. 17) and the prosecution of Demosthenes the general at about the same time (Plut. *Mor.* 833 d). At that period ostracism (q.v.) had recently fallen out of use, and in its place a *graphe paranomon* became a popular method of attacking prominent politicians; the fourth-century politician Aristophan (q.v.) boasted that he had been acquitted on this type of charge seventy-five times. The most famous example is the prosecution of Ctesiphon by Aeschines (q.v. 1) for his proposal to confer a crown on Demosthenes; the surviving speeches of Aeschines *Against Ctesiphon* and Demosthenes *On the Crown* were written for this trial. Other extant speeches composed for such cases are those of Demosthenes *Against Leptines*, *Against Androtion*, *Against Aristocrates*, and *Against Timocrates*, and Hypereides *Against Philipides*.

J. H. Lipsius, *Das attische Recht und Rechtsverfahren* (1905-15), 383 ff.; Hignett, *Hist. Athen. Const.* 210 ff. D. M. M.

GRATIAN, FLAVIUS, Roman Emperor (A.D. 367-83), was the son of Valentinian I. Most of his reign was spent in the defence of Gaul. An earnest Catholic he was much influenced by St. Ambrose. He was the first Emperor to omit the words *pontifex maximus* from his titulature; and despite the protests of Symmachus he ordered the statue

of Victory to be removed from the Senate House in Rome. He was overthrown by Magnus (q.v.) Maximus and was murdered at Lyons in 383.

A. Cameron, *JRS* 1968, 96 ff.

E. A. T.

GRATTIUS 'FALISCUS' (less correct 'Gratius', Bucheler, *Rh. Mus.* 1880, 407: *CII*, vi. 19-117 ff.; his connexion with Falerii, based on 1. 40 and the epithet 'Faliscus' reported from a lost MS., are not universally accepted), Augustan poet contemporary with Ovid before A.D. 8 (*Pont.* 4. 16. 34), has left one work in about 540 hexameters, the *Cynegetica*. In it he treats of the chase and especially the management of dogs for hunting. It is difficult to decide whether he owes anything to Xenophon (or pseudo-Xenophon) and Plutarch; for his list of breeds of dogs he may have used an Alexandrian source. The Latin influence most operative upon him is that of Virgil's *Georgics*; but he also borrowed from the *Aeneid* and from Ovid (*Verdiere* 1. 33-57). Authorities differ as to his influence on the similar poem by Nemesianus (q.v.).

The earlier part of his work, after a proem, deals with equipment for capturing game (nets, snares, spears, and arrows); the remaining and longer part (150-541) deals with huntsmen, dogs, and horses. Here, the allotment of nearly 300 lines to dogs (their breeding, points, and ailments) justifies his title. Fortunately for a reader's interest, Grattius diversifies his theme by the introduction of episodes. There is pleasant relief in these digressions—a eulogy on the chase, the accounts of two clever huntsmen (Deicylus and, considerably later, Hagnon), the homily on the deleterious effects of luxurious fare on human beings (somewhat amusingly juxtaposed with plain feeding for dogs), and two descriptive passages, a Sicilian grotto and a sacrifice to the huntress deity Diana. The concluding portion on horses is mutilated. Grattius' diction and versification are Augustan, but he does not always express himself lucidly. How far his inadequacies are to be ascribed to his exiguous MS. tradition (*Vindob.* 277 is the sole independent witness) is uncertain.

GREECE (*Geography*). Greece with the Aegean basin is a section of the great mountain zone, a product of tertiary earth-movements, running from the Himalaya to the Alps; a section tilted and sunken towards the east, where the Cyclades are the mountain-tops of a land submerged. A volcano remains active in Thera. The breach between the Cyclades and the eastern Aegean islands, off Asia Minor, is ancient enough to be marked by significant differences in the native flora.

2. To west and south, the Aegean basin has a high rim. The many-folded ranges of Pindus, with some peaks exceeding 8,000 feet in height (Parnassus is just 8,000), run NNW.-SSE. from Albania (Illyria) to the Corinthian Gulf. Their line is continued in the ranges of Parnon (6,427) and Taygetus (7,805 feet), dropping to the southern capes of Malea and Taenarum (Matapan) respectively. Turning east, the 'rim' reappears in the mountains of Crete, where Ida and the White Mountains slightly exceed 8,000 feet. The greatest sea-depths in the Mediterranean are found off the west coast, with 2,000 fathoms west of Cephalonia and more west of Crete. None of the above mountains, nor any other in Greece, approaches

the height of Olympus (9,750 feet), which towers above its neighbours in the coastal range and the northern frontier range of Thessaly.

3. The mountains, whose slopes formerly carried much oak and beech forest, a protection against the terrible later denudation, are mainly of blue-grey tertiary limestone; in a few places, as in Crete and Cephalonia, cretaceous rocks appear. In places, where the limestone has been metamorphosed under great pressure, it has become crystalline; hence the famous white marbles of Paros, Naxos, Thasos, and of Mount Pentelicus in Attica, and the coloured marbles, valued in the Roman Empire, of Tenos, Scyros, Euboea, and Thessaly. Other valuable minerals are rare. The gold and silver mines of Siphnos were worked out or flooded in late archaic times, and the chief source of gold in the Aegean area was now in the Pangaea massif in Thrace; but the silver mines of Laurium in Attica and iron-ores in Laconia played a considerable part in the rise to power of Athens and Sparta.

4. Rain falls in the Mediterranean mainly in winter; in Greece from mid May to late August there is normally none. The mountains intercept the rain-bearing westerly winds, producing a disparity in rainfall between west and east: Corfu has 45 inches in an average year, Attica about 16. The west coast of Asia Minor is again well-watered, and fertile; hence the early power of the Ionian cities, cut short only through their exposure to enemies inland. Summer temperatures can reach 40° C. (104° F.) in Athens, and more in mountain-girdled Thessaly; but the dry air and north winds of summer (a constant factor in Aegean sailors' calculations) render the climate of Athens one of the most bracing in the world. Agricultural work is intense in late spring, with harvest in May, and autumn, with ploughing and sowing after the first rain, vintage and the long business of olive-picking, but slack in winter and summer; an alternation of work and leisure, in which some have found one of the keys to an understanding of the Greek achievement.

5. But the vital factor determining the course of ancient Greek history, the struggles of the city-states, was the scarcity, and the distribution in scattered pockets among the mountains, of arable land. The chief alluvial plains of the peninsula—those of Laconia, Messenia, 'hollow' Elis and Argos; of Agrinon in Aetolia; of Eleusis, Athens, the 'midland' and Marathon in Attica; the plain of Thebes and the Boeotian Cephissus valley, its adjacent hill-sides studded with the cities of Boeotia and Phocis; the Spercheus valley and even the wide plains of Thessaly (qq.v.)—all together make up only a small part of the land area. In the highlands and islands, such land is still scarcer. Where it occurs, it is tolerably fertile, though better for olives (between which corn is grown) and vines than for the essential grain; and the difference between its quality and that of the hill-foot land, to which peasants perforce expanded, tended to deepen the gulf between them and the old 'best families' in the plains (see *PEISISTRATUS*). The hill-country between the chief centres of population, and the abundance of strong citadels, helped to confirm autonomy at the city level; the success of Sparta, controlling Taygetus, in conquering Messenia, was exceptional, and fateful. Expansion overseas and the import of food were the only solution (see *COLONIZATION*).

6. To the traveller northward-bound, the change of scenery in Thessaly and still more in the plains of Macedonia is striking; but precisely here, the characteristic ways of life of the city-state did not take root. Only the colonies in the Chalcidic peninsula played some part in the affairs of Greece proper (see *OLYNTOS*). Sicily and Magna Graecia (qq.v.) were as an America to Greece's Europe; but the Greek heart-land remained in the

peninsula, 'rough', as Odysseus said of Ithaca, 'but a good mother of men'.

GREECE (History). Greek history begins not with the first occupation of the peninsula and islands which we call Greece but with the arrival, several millennia later, of those Greek-speaking invaders whose language has been dominant over all comers of whatever race down to the present day. The Hellenes, as the Greeks of classical times called themselves, traced their ancestors back to Thessaly, then ruled by Deucalion's descendants 'Hellen, the war-loving king, and his sons Dorus, Xuthus, and Aeolus', and to southern Macedonia where 'Magnes and Macedon, delighting in horses, lived in the area of Olympus and Pieria'; and they saw Jason, Perseus, Heracles, Laius, and many others as Greek heroes living in Greece before the Trojan War, that is before the last phase of the Bronze Age. The decipherment of Linear B has provided a *terminus ante quem* Greek was written on the mainland and in Crete, whether that terminus is dated c. 1400 B.C. or c. 1250 B.C. (see MINOAN SCRIPTS). Extensive excavation has shown that the mainland experienced large-scale invasions c. 2000-1700 B.C.; thereafter settled conditions enabled Mycenaean civilization (q.v.) to develop and flourish. It is generally agreed that these invasions marked the coming of the first waves of Greeks, their dialects being Ionic (Ion being son of Xuthus) and Aeolic, and in the following centuries Greek dominated the languages of the earlier races of the mainland. The last wave of Greeks, those represented by the ancestor Dorus, entered Greece in the century c. 1125-c. 1025, their dialects being Dorian and north-west Greek. As they came from the areas of Epirus and Western Macedonia, it seems likely that the reservoir of Greek-speaking peoples from which these waves of invasion spread was situated c. 2000 B.C. in Albania and in western and southern Macedonia.

Mycenaean civilization resulted from a fusion of the Greek genius and the skills of their predecessors on the mainland, of Minoan culture in Crete (see MINOAN CIVILIZATION) and of inspiration from the Near East (kings such as Danaus, Cadmus, and Pelops having come from overseas, according to the Greek tradition). One Greek element was love of war; it enabled the Mycenaeans to capture Crete and the southern islands, to carry Mycenaean arms and trade to the Levant and to Sicily and Italy, and finally to sack Priam's city, Troy. The legends and the physical remains show that wealth and power were concentrated in the citadels of the kings and their noble retainers, champions in battle, armed with bronze weapons and equipped with horse-drawn chariots, an élite as remote as the medieval knights from the commoners. Love of war was one of the factors which weakened the Mycenaean world in the last century and a half of its existence. Many citadels were strengthened by even more massive fortifications; Thebes was sacked by its rival Argos; the palace at Pylos was destroyed, perhaps by its neighbours, perhaps by pirates from the Adriatic Sea. Although the Greek kings combined to capture Troy, they returned to an even more troubled Greece. As we learn from the Nostoi (see HOMER AND EPIC CYCLE), from Thucydides (1. 12), and from the results of excavation, internal revolution and inter-state warfare caused widespread destruction. The annihilation of Troy, the weakening of her allies, and the deterioration of the Mycenaean world opened the way for invaders from the north. Hordes overran Asia Minor early in the twelfth century and set up waves of migration which threatened Egypt. Invasions of central Greece were followed by the

so-called Dorian invasion which overthrew Mycenaean power in the Peloponnese for ever (c. 1125 B.C.) and set up waves of migration overseas. The Iron Age started in chaos and in poverty, so far as Greek lands and the eastern Mediterranean were concerned.

Our knowledge of the Late Bronze Age is being constantly enlarged by excavation and by the decipherment of inscribed tablets but mainly in matters of economic and material life. Greek mythology which was concerned to a remarkable extent with the last century and a half of the Mycenaean world gives us some idea of the beliefs and motives of men at that time. The epic poems of Homer and the Epic Cycle (qq.v.) may supply a much fuller and a generally authentic picture of Greek life towards the end of the first great age of Greek achievement. As these poems were composed from 800 B.C. onwards in the form in which they have survived and as even the earliest of them, the *Iliad*, was at least four centuries later than the events in the Trojan War which it describes, some scholars regard them as almost wholly fictitious. The Greeks of the classical period thought otherwise, and the results of archaeological investigation have gone far to justify their credence. For example, the poems describe the Greeks not as Hellenes or Dorians but as *Akhaioi* and *Danaoi*, and these names have appeared on Hittite and Egyptian documents which were contemporary with the period of the Trojan War. The Catalogue of Greek allies (*Iliad* 2. 485-760) provides a map of political power which was at variance with the situation c. 800 B.C. but has been strikingly vindicated through excavation as true of the Late Bronze Age. The evaluation of poetic evidence is a fascinating problem in Greek history.

The invasions of c. 1125-1025 B.C. were on a more massive scale than those of c. 2000-1700 B.C.; for they brought a completely new population to many parts of the mainland. Sometimes the invaders expelled the earlier inhabitants, sometimes they held them in serfdom, sometimes they merged with them. Attica and Arcadia alone preserved their independence and became centres for refugees from other Mycenaean countries: Attica because she preserved the unity, centred on Athens, which Theseus had brought about, and she was attacked only when the forces of invasion were spent, and Arcadia because the mountaineers were as tough and vigorous as the invaders. Peoples displaced from Thessaly and countries to the south, speaking the Aeolian dialect, went overseas to occupy Lesbos and the northern sector of western Asia Minor. Peoples displaced from the Peloponnese and the Isthmus and led by refugees who had been adopted by Athens occupied the islands of the central Aegean and the central sector of western Asia Minor; they and the Athenians spoke Ionic dialects. Dorians, who pressed on after capturing most of the Peloponnese, occupied Melos, parts of Crete, the southern islands, and the southern sector of western Asia Minor. The north-western islands and mainland were swamped by the rearguard of the invading peoples who came from further north. The map of classical Greece was largely drawn by 900 B.C.—a map entirely different from that of Mycenaean Greece—and the newcomers together with people of Mycenaean origins were destined to produce a second age of great achievement, markedly different from its predecessor except in one respect, love of war.

This was not apparent in 1125-900 B.C. The unit of organization was the village in most of the mainland and in Crete, but the villages were split by tribal and family feuds, and in Dorian areas by the gulf between the masters and the serfs. The first development was the partnership of several villages which was known as the *polis* (q.v.; Arist. *Pol.* 1252^b28), small, compact, based on race and initially self-sufficient. The earliest-known *poleis* of this kind were formed in Crete, Sparta, Corinth, and Megara,

all Dorian states in which the masters alone had the franchise. At Sparta the creation of the *polis* made possible the reduction of the Dorian villages in Laconia and later in 720 B.C. the annexation of Messenia, two achievements which laid the economic basis for Sparta's greatness. But it was the organization of the Spartiates within their *polis* which was most remarkable (see SPARTA): State education, military mess-life for men to the age of 60, equality of the franchised in politics and in agricultural property, free use of State-owned serfs (Helots) and the brigading of the franchised for political and military purposes not by racial tribes but by residential qualifications. The constitution had the same elements as in other primitive *poleis*—King, Council, and Assembly—but gave more power to the Assembly of 'Equals', which elected the councillors and made final decisions on the Council's proposals, and less power to the two kings (for Sparta had two royal families), who were members of the Council (called the Gerousia); later, when the Assembly's powers declined, its elected magistrates (the Ephors) represented its interests. Thucydides attributed the power of Sparta to this organization and constitution, which he dated to the late ninth century (I. 18. 1); his attribution is generally accepted, though many scholars lower his date.

Cultural revival came from the east, where the Ionian school of Epic poetry reached its zenith in the Homeric poems and the skill of the Phoenicians in seafaring, art, and writing (see ALPHABET) inspired Greek traders. One effect of political development and cultural revival was the ability to launch the colonizing movement (see COLONIZATION, GREEK), which was led by seafaring commercial states, such as Miletus, Paros, Chalcis, Megara, and Corinth, and planted hundreds of small independent *poleis* on the seaboard of the Black Sea, the northern Aegean, the north-west mainland, Italy, Sicily, southern France and Spain, and Cyrenaica, generally within the period 750–550 B.C. Corinth alone retained some political influence over her colonies; she was able to apply sanctions because she controlled the portage on a runway (*diolkos*) across the Isthmus for trade between the Aegean basin and the western Mediterranean and she held the lead in naval construction. Aegina too benefited from the expanding trade which resulted from the colonizing movement; her wealth enabled her to be the first State of the western Aegean to adopt coinage (invented in Lydia; see COINAGE, GREEK) soon after 650 B.C.

Another beneficiary was Athens. A large but loosely organized State, it had launched the Ionian migration but had since then shown less energy and initiative than the young Dorian *poleis*. Wealth and privilege were still concentrated in the leaders of the familial units—clans, phratries, and tribes. They held the archonships (which had replaced the monarchy and its officers) and formed the Areopagus Council; and their power was such that the State authorized them to hold bankrupt debtors on the land in a form of serfdom and (where the debtors were not landowners) sell their victims as slaves. This chaos was ended in 594 B.C. by Solon (q.v.), the founder of the progressive Athenian State. He abolished serfdom and enslavement of Athenians by Athenians, established a people's court (Heliæa) to safeguard the equality of all Athenians before the law, classed the citizens not by racial qualifications but by financial resources, and directed the Athenian economy towards the commercial field alongside Corinth. His constitutional reforms were directed towards making the Assembly effective but controlled; to this end he established as its steering committee a Council of 400, nominated from the three higher classes. The magistrates were now answerable to the Heliæa as well as to the Areopagus; candidature for office was restricted to certain classes, members of the fourth and lowest class being excluded. The purposes of Solon were

thwarted by prolonged faction but were fulfilled in part by an enlightened party leader, Pisistratus, who seized power, ruled as tyrant (546–527 B.C.), and was succeeded by his sons (527–510 B.C.). Many wealthy States had already experienced the rule of tyrants (Corinth, for instance, from c. 657 B.C. to c. 582 B.C.), capable men who put an end to faction, promoted the prosperity of the State but left a legacy of political animosity (see TYRANNY).

Inter-state relations were facilitated by the religious centres and festivals (see DELPHI, OLYMPIA, DODONA, DELOS, NEMEA, ISTHμία) and by the common bond of aristocratic oligarchy, which prevailed in the archaic period. The tyrants too were aristocrats and favoured dynastic and military alliances. Wars tended to be between rival States—Sparta and Argos, or Chalcis and Eretria—and rules of warfare were laid down by the religious league (see AMPHICTIONIES). The first State to initiate a system of lasting alliances was Sparta c. 550 B.C. She attracted other States because her constitution was stable, her army was incomparable, and her territorial ambitions were satisfied, and in the sixth century she overthrew the last tyrant in several States. The alliances were defensive alliances between Sparta and an individual state, but they each contained two clauses in Sparta's interest: that she commanded the allied forces and that her allies helped her against the Helots. Before the end of the century Sparta and her allies created a machinery for the formation of policy: the Spartan State deliberated independently, the assembly of allied representatives—each State casting one vote—deliberated independently, and a joint policy was formed by agreement of the two chambers. Under this bi-cameral system Sparta as military commander (*hegemon*) had an equal say with the sum of her allies, and the organization was known as 'The Lacedaemonians and their allies', *οἱ Λακεδαιμόνιοι καὶ οἱ σύμμαχοι*. It has been called by modern scholars 'the Peloponnesian League' and more correctly, because it was a military coalition called into existence only if a defensive alliance was invoked, 'the Spartan Alliance'.

In 510 B.C. 'the Lacedaemonians and their allies' included most Peloponnesian States but not Argos; Aegina; and several central Greek States, including Athens which had been liberated with Spartan aid from her last tyrant. However, the dominance of Sparta was repugnant to Ionian Athens. Faction broke out again, and despite Spartan intervention Athens broke away under a democratic leader, Cleisthenes, defeated Boeotia and Chalcis when they attacked her, and held off a third enemy, Aegina. The surprising success of Athens was due to the foresight of Solon and the policy of the Pisistratids, which had placed her ahead even of Corinth in commercial prosperity, and to the brilliance of Cleisthenes (q.v. 1), who united and inspired the relatively large Athenian State by his democratic reforms. He destroyed an important source of aristocratic power, which worked through the clan system, by establishing ten new tribes recruited on a territorial basis from *demes* (q.v.) or small wards. The new tribes and their constituent *demes* had their own religious and political activities; and they each provided by a system of election in *demes* and sortition in tribes a group of fifty State councillors annually. The ten groups made up the democratic Council of 500, each group sitting in permanent committee for a tenth of a year (see PRYTANEIS) and the whole Council meeting regularly as a steering committee for the Assembly and as an organ of administration. Replacing the Solonian Council of 400, it acted alongside the Council of the Areopagus, which remained guardian of the constitution. In 501/0 B.C. the people elected one *strategos* (q.v.) from each tribe to command the armed forces for one year.

The expansion of Greece and the maturing of the city-states had taken place when their neighbours were unaggressive or backward. But the sudden rise of Persia changed the situation. When Darius crossed the Bosphorus c. 514 B.C., his empire extended from the Indus valley to the Mediterranean coast and included the Greek States in Asia Minor; and although discomfited by the Scythians he controlled the north Aegean coast and some islands off the Asiatic coast. The presence of this colossus did not stop the Greek States of the mainland from warring with one another; but it alarmed Sparta, which opposed Persia in diplomacy, and it tempted Argos, Athens, and other States to intrigue with Persia. In 499 B.C. a Persian force intervened at Naxos, in the centre of the Aegean. Its lack of success led to a revolt by the Ionians, which was supported at first by Athens and Eretria. Although the revolt spread to other Greek States on the Asiatic coast, to Caria, and to Cyprus, the Persian armies proved too strong and in the final sea-battle at Lade Greek disunity brought disaster. A Persian expeditionary force destroyed Eretria but was defeated by Athens and Plataea at Marathon in 490 B.C., and a huge army and a large fleet invaded the Greek mainland from the north in 480 B.C. (see PERSIAN WARS). The unexpected victories of the Greeks were due to the superior equipment and fighting power of the hoplites, to the new Athenian fleet, to the seamanship and ramming tactics of the trireme crews (see TRIREMES), and to the co-ordination of operations on land and at sea; in a wider sense to the formation of a Greek League (similar to the Ionian League in that each State had one vote) and its election of Sparta to command on both elements; and in the widest sense to the libertarian spirit and vigorous intelligence of the Greek States. In the West the same qualities enabled the Greeks of Sicily (q.v.) to defeat the Carthaginians decisively.

The expansion of the Greek world and the defeat of Persia and Carthage were the greatest achievements of the Greek city-states in terms of foreign policy. They were due in the main to the well-directed dynamism of the city-states and to their ability to combine in a crisis. The sense of direction or purpose in the city-state of this period sprang from a solidarity of feeling among the citizens who found a common focus in the religion of tribe and clan and in the worship of the gods and goddesses of the State; we can see this sense of purpose in the poetry of Tyrtaeus, Solon, Pindar, and Aeschylus (qq.v.). One factor in their ability to combine was a Panhellenic feeling, which contrasted Greek and barbarian ways and found religious expression in the worship of the Olympian gods and in the festivals of Delphi, Olympia, Nemea, and the Isthmus (qq.v.); it inspired a large number of states to resist foreign aggression in a spirit which was not found in later centuries. After the Persian Wars the forces of traditional corporate religion began to ebb; rationalism, humanism, and individualism in inter-State relations and in social conduct within the State gained ground, bringing to birth unparalleled intellectual and artistic achievements but a diminution of creative political power in the Greek world. In the aftermath of victory over Persia Sparta lost her power of leadership because she sought only her own advancement in refusing to let Athens rebuild her defences and in restricting the scope of Greek actions against Persia. Athens stepped into her place; she was prepared to act with vision, to liberate the Ionian States and their neighbours from Persia, and to carry the war into the enemy's camp. She organized her supporters in the so-called Delian League (q.v.), which was in origin and in name an Athenian Alliance; for each ally was an ally of Athens and conceded to Athens the hegemony or command in war. The allies as a group had their own treasury and their own Synod or meeting of delegates at Delos, the religious centre of the islanders. Athens

and her allies had at first a common purpose in expelling Persia from the Aegean area and safeguarding Greek maritime trade; and this purpose was acceptable also to Sparta and the mainland States, who had opted out of the war against Persia. The rapid success of Athens was achieved under the leadership of Cimon (q.v.).

In 462/1 B.C. an advanced democracy was established at Athens under the leadership of Ephialtes (4) and Pericles (qq.v.). Its foreign policy was marked by aggressive action against both Persia and Sparta and by exploitation of the allies, and the energy and the courage of the democrats were such that Athens achieved a favourable peace with Persia, a stalemate with Sparta, and the conversion of her alliance into an empire. This position was recognized in the 'Thirty Years Peace' of 445 B.C., which marked the division of the Greek States into two armed camps but produced a cessation of hostilities for fourteen years. These years were those of Athens' acme as the acknowledged ruler of an empire, the leading seapower in the Mediterranean and the centre of the artistic and intellectual life of the Greek world, and those of Athens' unrivalled statesman, Pericles, who set his own stamp on the culture of his city. His aim for Athens was expressed in the Parthenon and the Propylaea and in the Funeral Speech which Thucydides included in his history. But it was an aim which had no place for passivity; he planned to remove Sparta from his path, and his diplomacy produced a situation in which the risk of war was obvious. Sparta took up the challenge. The Peloponnesian War (q.v.) resulted in the complete overthrow of Athens and the dissolution of her empire; in the limited victory of Sparta which included the alienation of her allies and the invocation of Persia; and in the revival of Persian influence in Greek political affairs. In Sicily too the strain of war weakened Syracuse and the Sicilian States, and they were almost engulfed by Carthage in 405 B.C. (see SICILY). More sinister was the spread of *stasis*, the revolutionary struggle within a state between extremist parties which aimed at annihilating one another; Thucydides described its effects in a famous passage (3. 82-3). While the internecine wars of the Greek States made combination and even peace unlikely, the onset of *stasis* revealed the breakdown of communal spirit among the citizens, the animosity between the rich and the poor, and the deterioration of political aims. The victor of the Peloponnesian War, Sparta, tried to unite the Greek States against Persia but Thebes and Athens rose against her; Sparta then sold the liberties of the Greek States in Ionia for Persian help and imposed her rule on the States of the mainland by authoritarian methods (see AGESILAUS). In 379 B.C. Thebes and Athens rose again. Thebes, led by Epaminondas (q.v.), defeated the Spartan army decisively at Leuctra in 371 B.C., and Athens drove the Spartan navy from the seas. Thebes formed the Boeotian Confederacy on a democratic basis, whereby a federal union of States was drawn tighter by a sovereign Assembly of all Boeotian citizens, and through her influence similar federations developed in Acarnania, Aetolia, Thessaly, Arcadia, and Achaea. Athens formed the Second Athenian League (q.v.) in which explicit guarantees of independence were given to the contracting States; its immediate success showed the Greek States' need of liberal leadership in pursuit of peace and liberty. But Athens and Thebes, once in positions of power, quarrelled with one another and pursued imperialistic policies which failed utterly in the Social War 357-355 B.C. (q.v.) and in the Sacred War 356-346 (q.v.). In Sicily union had been imposed after 405 B.C. by a tyrant using mercenary troops and ruthless methods, Dionysius (q.v. 1); he defeated Carthage, held southern Italy, and allied himself with Sparta, but his son and successor was expelled in 355 B.C. and anarchy ensued in Syracuse and in Sicily.

This century of political turmoil in which the Greek States damaged no one except themselves was a period of intense intellectual and artistic activity which set the highest standards for ensuing ages in drama, architecture, history, oratory, philosophy, and sculpture. Greek society was moving towards a common form and outlook which rose above the limitations of city-state nationalism. Capitalism was fully developed; banking, insurance, and legal procedures were standardized (see HANKS and FINANCE). Slavery provided relatively cheap methods of production; seaborne trade flourished throughout the Mediterranean area, including the Black Sea; and the Greek way of life was spreading into barbarian lands and creating new markets.

Where the city-states had failed, Macedonia succeeded. Philip II (q.v.), having demonstrated the solidarity of the Macedonian State and the superiority of its military power over that of Thebes and Athens, persuaded the Greek States to enter into a federal union, known as 'The Greeks', with full guarantees of autonomy, collective security, and stable government, and then to ally themselves with the Macedonian State in a joint war against Persia in which the military command was vested in the king of Macedon. The Macedonian State was a monarchy with feudal institutions, entirely distinct from the city-state and fully conscious of its distinctness; but Philip and his successor Alexander (q.v. 3) the Great appreciated Greek culture and Greek capitalism. When Alexander overthrew the Persian Empire and advanced to the Indus valley, he opened up a vast field for Greek enterprise and founded numerous urban communities which practised a Greek way of life and spread Greek culture far and wide. But in Greece itself many city-states maintained resistance to Macedon, both before and after Chaeronea (q.v.); the leader was Demosthenes (q.v. 2) of Athens, and after the death of Alexander a war conducted by Athens and the Aetolian League in 323-322 B.C. ended in the capitulation of Athens and the suicide of Demosthenes. Thereafter the fortunes of the city-states depended upon the strength of the Macedonian kingdom. They were involved in the Wars of the Successors (see DIADOCHI) who divided up the great empire of Alexander, between 320 and 275 B.C. Then the Antigonids gained and held the Macedonian throne, Antigonus (q.v. 2) Gonatas defeated Athens and Sparta, when they combined against him and took subsidies from Egypt 267-263 B.C. He and his successors faced stronger powers in the Aetolian Confederacy (q.v.), which expanded until it contained most of central Greece by 224 B.C., and the Achaean Confederacy (q.v.) which, led by Aratus (q.v. 2), gained adherents from the Peloponnesian States except Elis, Messenia, and Sparta, the last being revolutionized by Cleomenes III (q.v.) in 227 B.C.

In 229 B.C. Roman forces gained control of part of the Illyrian coast and of Corcyra. Their proximity to Macedonia led Philip V (q.v.) to ally himself with Carthage in 215 B.C. Rome raised his Greek enemies against him in 212 B.C. and defeated him decisively in 197 B.C. at Cynoscephalae with the help of the Aetolian and Achaean Leagues, Athens, Rhodes, and Pergamum. Rome was now involved in the rivalries of the Hellenistic kingdoms as well as in those of the Greek States. When Antiochus (q.v. 3) of Syria entered Greece at the invitation of the Aetolian Confederacy, Rome drove him back into Asia, defeated him at Magnesia in 190 B.C., and extended her protectorate over the Greek city-states in Asia Minor. The Aetolian Confederacy was reduced to impotence. In 171 B.C. Rome ordered Perseus (q.v. 2) to disband his forces; he refused and was crushed at Pydna in 168 B.C. The Macedonian kingdom was split into four republics. In 167 B.C. Molossia in Epirus was sacked for its support of Perseus, and in 146 B.C. the Achaean Confederacy and

its allies in central Greece were crushed and Corinth was razed. Rome's regulations were thenceforth to be obeyed; the liberties of the Greek States were at an end.

The outer Greek world had grown enormously with the conquests of Alexander both in extent and in prosperity. The Hellenistic kingdoms, established by the Successors, were ruled by Macedonian dynasts and relied to a great extent upon Greek personnel and Greek civilization. The Ptolemies (see PTOLLEMY I to PTOLLEMY XV) harnessed the productivity of Egypt by highly efficient administration and capitalist methods formed on the Greek model; their foreign policy was directed against the kingdoms of Syria and Macedonia; they controlled Cyrenaica and traded along the coasts of East Africa and Arabia. The last of the Ptolemies, Caesarion, son of Cleopatra and Julius Caesar, was executed on the order of Octavian (later Augustus) in 30 B.C. The Seleucids (see SELEUCUS, ANTIOCHUS, and SYRIA) founded many Greek cities in their realm and ruled through district governors, but the onslaughts of Egypt, Rome, and Parthia reduced the kingdom to a small area which was annexed by Pompey in 62 B.C. Many smaller Hellenistic kingdoms grew up in the period between Alexander's conquests and the expansion of Rome to the east; they ranged from those of Bactria (q.v.) in Afghanistan and western Pakistan to the kingdom of Lysimachus (q.v.) in Thrace or that of Pyrrhus (q.v.) in north-western Greece and southern Illyria. Monarchies of a similar kind ruled in the Crimea (see SPARTOCIDS) and in Syracuse. Some kings, e.g. Hiero II of Syracuse and Attalus I of Pergamum, joined the Roman cause and survived; others were reduced to the status of client kings; others were suppressed. But under their care the Hellenization of the eastern Mediterranean and of some countries in the east as far as Afghanistan was completed. The Greek genius flowered for many centuries in this wider world. It gave cultural vitality to the Roman Empire and to the Byzantine Empire, and it brought enlightenment to Italy and the west in the Renaissance.

GREGORY (1) I, the Great, c. A.D. 540–604, was born of a patrician Roman family. Before becoming Pope (590) he had a career as civil administrator (*praefectus urbi* 573), then as monk and for six years Roman nuncio in Constantinople (579–85). His correspondence is a rich source both for church affairs and for the political and social situation in Italy under the Lombard conquests. He never learnt Greek properly and distrusted the court and patriarch at Constantinople. In Italy he acted with astonishing freedom in relation to both the Emperor and his exarch at Ravenna, and negotiated with the Lombards independently. The Papacy's gaze was turning towards the barbarian kingdoms, a policy expressed in his mission to the Anglo-Saxons. Several letters were written to accompany gifts of wonder-working relics to barbarian kings, and his *Dialogues*, partly modelled on Sulpicius Severus (q.v. 5) exemplify his vivid faith in prodigies. His relation to classical culture is not simple. One bishop is rebuked for teaching pagan mythology, 'inappropriate even for a religious layman' (ep. 11. 34). The story that he burnt the Palatine library, so shocking to Machiavelli and humanists since, is legend first reported in John of Salisbury's *Policraticus* (1159). He despised pedantry and preciousness, but not clear grammatical prose. He seems to have found Pliny's *Natural History* and the *Physiologus* (q.v.) helpful in explaining strange beasts in Job. But most of his letters concern administrative questions, and are written with the polished formality of a high official, without classical allusions or rhetorical turns. The attribution to Gregory of the institution of the Roman *schola cantorum* and the invention of 'Gregorian chant' rests on the ninth-century 'Life' by John the Deacon.

GREGORY (2) OF NAZIANZUS, A.D. 320–89, later entitled 'the theologian'. His father (not he) was bishop of Nazianzus in Cappadocia. With his friend Basil (q.v.) of Caesarea he shared an Athenian education and subsequent enthusiasms for Origen (q.v. 1) and for asceticism. Basil mistakenly forced him to become nominal bishop of the village of Sasima (372); he never went there. At Constantinople (379–81) he helped Theodosius' expulsion of Arianism, and during the council of Constantinople (381) became, briefly, bishop of the capital. His impractical policies raised a storm to which he was unequal. Too thin-skinned for politics, he retired to Cappadocia and wrote a self-pitying autobiography in iambic trimeters. Recognition and applause meant much to him. His greatness lay in rhetoric. His orations and letters, full of neatly turned phrases and classical allusions, put Christian content into traditional forms with exemplary skill. His theological verses and epigrams are not great poetry but show a mastery of school models put to as good a use as in any contemporary pagan. He understood the classical tradition as well, or as indifferently, as Julian (q.v.), whose edict excluding Christians from education he resented and against whom he published two invectives.

GREGORY (3) OF NYSSA, c. A.D. 330–c. 395, younger brother of Basil (q.v.) of Caesarea who made him bishop of Nyssa (371). Despite Basil's complaints of his political ineptitude, which gave him an inferiority complex, he played a worthy role from 379 to 380 in assisting Theodosius' suppression of Arianism. A superior thinker to his brother, he achieved an intimate synthesis of Christianity and Plotinian mysticism, expressed in, e.g., his com-

mentary on the *Song of Songs* or his *Life of Moses* whose ascent to Sinai's darkness symbolizes the soul's beatific union with God. Against Plato, Gregory denies the soul's pre-existence and inherent immortality. Through moral purification and a contemplation of its true destiny made possible by divine grace, the soul, created in God's image and akin to its maker, seeks for salvation in a knowledge of God which is infinite advance unthreatened by satiety. His criticisms of Plotinus and Origen (1) (qq.v.) do not hide the extent of his debt to both. He held Origen's belief in the final salvation of all souls, which he cautiously expresses in a tract 'on the soul and resurrection' largely modelled on Plato's *Phaedo*.

GREGORY (4) THAUMATURGUS, A.D. c. 213–c. 275, was born of noble family at Neocaesarea, Pontus. He went to study law at Berytus, but when visiting Caesarea (Palestine) was converted to Christianity by Origen (q.v. 1). His parting panegyric of gratitude describes Origen's methods of instruction. On returning to Pontus he successfully preached Christianity. His memory was venerated a century later by Basil (q.v.) of Caesarea and Gregory (q.v. 3) of Nyssa. The latter wrote a 'Life' on the basis of Pontic folk-traditions which ascribed to him extraordinary prodigies as 'the wonderworker'.

Panegyric, ed. P. Koetschau (1894). J. Quasten, *Patrology* 2 (1951), 123 ff. H C

GRILLIUS (5th c. A.D.), grammarian. Extracts from his *Commentum in Ciceronis libros de inventione* are extant (ed. Halm, *Rhet. Lat. Min.* 596–606).

Schanz-Hosius, § 1122.

GROMATICI, Roman land-surveyors. Earlier and commoner names are *mensores*, *agrimensores*. The later name comes from their instrument, the *groma* (derived, through Etruscan, from *γρόμα* or *γρόμα*). This had a cross which fitted into a pivot on top of a curved bracket; from each arm of the cross hung plumb-lines. It was used to take bearings on a system of squares (*limitatio*, *centuriatio*; see CENTURIATION). References were made by means of *cardines* and *decumani* (see TOWNS, 11), e.g. SD 1 – first road to left (*sinistra*) of *decumanus maximus*; VK 11 – second beyond *cardo maximus* (*ultra kardinem*). A surveying instrument more accurate than the *groma* was the *dioptra*, perfected and described by Heron (q.v.); among others was the *chorobates*, a levelling instrument about 20 feet long. A surveyor's workshop with tools was found at Pompeii in 1912.

The land-surveyors formed a special profession, to which we find reference made as early as Plautus (*Poen.* 48 f. *furtor*). Their services were used for the plotting of camps (q.v.; *castrametatio*), the division and assignment of *ager publicus* (q.v.), the planning of colonies (see COLONIZATION, ROMAN), the measurement and division of estates, and the assessment of land tax. They also produced plans (*formae*) and several types of register, and acted as arbitrators or assessors in private land-disputes. During the land assignments of the last century of the Republic the demand for surveyors was probably met by private enterprise. An example of their activity under the early Empire has survived in the fragments from Arausio (q.v.). Under the later Empire official surveyors formed a highly organized branch of the civil service. Military surveying, which in Caesar's army was done by the *centuriones*, became a specialized profession, and inscriptions show that each legion had *mensores* attached. The combination of mathematics, practical advice, and law which we find in Roman writings on this subject does not occur in Greece, although the mathematical basis is Greek.

The technical literature of the profession is represented by a collection of miscellaneous treatises ranging widely in date, and dealing with such subjects as the technique of mensuration, boundary-marking and map-making, and the rules of land-tenure as they concern the surveyor. The collection has come down to us in an edition of the sixth century A.D., in which the original matter has suffered much from corruption and interpolation. Besides excerpts from Frontinus (q.v.), embedded in a commentary by Aegnius Urbicus, it contains works ascribed to Ilyginus (2), Balbus (5), Junius (3) Nipsus, Siculus Flaccus, and Innocentius (qq.v.), *libri coloniarum* (q.v.), notes on geometry, and extracts from registers and laws. The wide differences in date between the parts are reflected in their latinity; the writing is crabbed, often to the point of obscurity, and devoid of literary merit. MSS. of the corpus at Wolfenbützel and Rome contain well-preserved coloured miniatures of the sixth-seventh and ninth centuries.

The only complete edition is *Die Schriften der römischen Feldmesser*, by F. Blume, K. Lachmann, and A. Rudorff (2 vols. 1848, 1852, repr. 1962), vol. II contains essays by Lachmann, Rudorff, and Mommsen which are still valuable. The Teubner *Corpus Agrimen-sorum Romanorum* (I. ed. C. Thulin, 1911; no more appeared) contains Frontinus, Aegnius Urbicus, Ilyginus, and Siculus Flaccus. A. Schulten, *Die römische Flurteilung* (1898); H. GUARDIANSHIP. (a) GREECE. The development of the law of guardianship in Greece and Rome was influenced by the change in the conception of guardianship itself, which began as a right of preserving and protecting the ward's property in the interest of the whole kin (as contingent heir of the ward), but became gradually a duty of the guardian in the interest of the ward himself. This explains the restrictions imposed upon the guardian with regard to his control over the child's property, and the increasing supervision of public authorities over his activity as guardian. The Greek guardian was either *ἐπίτροπος* of boys and girls until their majority—18 years in the case of boys—and registration in the citizen list, or *κύριος* of women for lifetime or until marriage. Guardians were appointed by the father's will; failing testamentary appointment the next relatives (brother or uncle), being the most likely successors, were entitled to claim the guardianship; in the absence of these an official (the Chief Archon in Athens) appointed the guardian. The guardian had to provide for the ward's education, attend to all his interests, and represent him in legal transactions: in general he was required—as Plato, *Leg.* II. 928 recommends—to act on his behalf with the same solicitude as for a child of his own. The administration of property by the guardian, especially of landed property, was submitted to the control of magistrates. Action for damages caused by the guardian might be brought against him by the ward within five years of the end of the guardianship. The principles of guardianship of women were analogous; but a woman could dispose freely of objects of lesser importance, without the help of her *κύριος*.

2. (b) ROME. Roman law distinguished between *tutela* and *cura* as types of guardianship of persons *sui iuris*, i.e. not subject either to *patria potestas* or *manus* (qq.v.). *Tutela* concerned children below the age of puberty (*impuberes*: eventually boys under 14, girls under 12) and women; *cura* comprehended *pueres* under 25 (*minores*), lunatics (*furiosi*), and spendthrifts (*prodigi*).

3. The original conception of guardianship (above)

can be seen in the rule which gave *tutela* of an *impubes* on the death of the *paterfamilias* to the nearest agnate (*tutor legitimus*), as being the person who would succeed to the property of the ward (*pupillus*) in the event of his death (see INHERITANCE, LAW OF). But already in the XII Tables the father was allowed to appoint someone else by will (*tutor testamentarius*). In later times, if there were neither a *tutor testamentarius* nor a *tutor legitimus*, a magistrate would appoint one (*tutor dativus*). *Tutela* of males ended with puberty, when the ward was capable of begetting an heir who would exclude the agnate from the inheritance and therefore from any interest in the *tutela*. But a female could have no such heir (her children would be heirs to their father), and *tutela* of women was therefore in principle lifelong. In the classical law, however, it had become for the most part an empty form, except, significantly, in the case of *tutela legitima*.

4. The shift in the nature of *tutela* from a valuable right to a burden can be seen in the evolution of the tutor's liability for misconduct. In early law he was liable only for fraudulent misappropriation, but in the later Republic he could be required (by *actio tutelae*) to account for his conduct according to the principles of good faith. There thus grew up a body of rules which required him to act conscientiously in the interest of the ward. This in turn led to the evolution of a list of grounds (public office, age, ill health, etc.) on which a *tutor testamentarius* or *dativus* (but not a *tutor legitimus*) might be excused.

5. The tutor's concern was with the property of the child, not with his custody or upbringing. In regard to the property he could act either directly, by administering it himself, or indirectly by validating the acts of the ward. The former method suffered from the disadvantage that in principle his acts only affected himself and therefore the ward might repudiate them on coming of age. In the classical law some inroads had been made on this principle, but the indirect method remained the more effective. So long as a child was incapable of reason (strictly, of speech—*infans*: fixed in A.D. 407 at 7 years) he could do no legal act. Thereafter he could act, but (until puberty) if the act might make his position worse (i.e. cause him to relinquish rights or incur duties) he required the express oral approval (*auctoritas*) of his tutor. It was by giving or withholding *auctoritas* that the tutor exercised his control.

6. *Cura minorum* grew out of the *Lex Plaetoria* (c. 200 B.C.) and the Praetorian remedy of *in integrum restitutio*, whereby transactions with a *minor sui iuris* might be impugned if advantage had been taken of his inexperience. This made dealings with *minores* risky, and the practice grew up of calling in an independent adult to approve the transaction. This practice eventually, in the Principate, hardened into the institution of a *curator* appointed by a magistrate on the request of the *minor*. In Justinian's law *cura* and *tutela* have been largely, but not entirely, assimilated.

GYGES, king of Lydia (c. 685–657 B.C.), founded the Mermnad dynasty by murdering King Candaules and marrying his widow; attacked Miletus and Smyrna, captured Colophon, and sent offerings to Delphi. He sought protection from Assyria against the Cimmerians, but lost it later by helping Psammetichus of Egypt, and was killed in a new Cimmerian invasion. He coined in

gold (Pollux 3. 87) and his tomb was famous (Hipponax fr. 24); it has been identified at Bin Tepe and was excavated recently (*Arch. Rep.* 1964-5, 40). His son Ardys succeeded him.

GYLIPPUS, Spartan general, was sent in 414 B.C. to help Syracuse against Athens. His very arrival won Sicel support and gave heart to the Syracusans, whose resistance he organized with skill and courage. He succeeded in regaining the initiative for Syracuse and eventually defeating the Athenians. Returning to Sparta after the war, he was convicted in 405 B.C. of embezzling public funds, but fled into exile.

A. G. W.

GYMNASIARCHOS. This official appears in Egypt under the Ptolemies as a functionary of Greek type, charged with the supervision of gymnasia in towns or villages where there was a hellenized community, the office was probably a voluntary one. The Roman authorities seem to have allowed an organization of the Graeco-Egyptian population to subsist under officials with Greek titles, of whom the gymnasiarch ranked as the chief; his duties, judged by the evidence of papyri, were extended from the gymnasia to all kinds of public works. The office thus became in practice a liturgy. At first the normal tenure was apparently a year; as the impoverishment of the Graeco-Egyptian class increased two men might share the burden; in the third century several are found acting together or for short periods. As even children are named as gymnasiarchs, the title would seem

to have been given to any person of means who could be asked for money. The only place where the gymnasiarch played a part of more than local importance was Alexandria; in the time of Strabo they were not of sufficient standing there to be named as city officers, but half a century later they were the leaders of the Nationalist opposition to Rome, and reappeared as such on occasion till the end of the second century.

B. A. van Groningen, *Le Gymnasiarque des métropoles de l'Égypte romaine* (1924); Jones, *JH. Arch.* 1938, 65 ff.; J. Delorme, *Gymnasium* (1960), index, s. v. J. G. M.

GYMNASIUM. The Greek *γυμνάσιον* was a sports ground, usually outside the city walls; a public institution, and open to all citizens. Its main feature was a running-track, but it usually also contained a *palæstra* (q.v.). The site was often a sacred grove beside a stream, as was the case with the three gymnasia at Athens, the Lyceum on the banks of the Cephissus, the Academy and the Cynosarges by the Eridanus and the Ilissus. The two first of these were large enough for riding lessons and cavalry parades, and besides the running-track there were jumping-pits and ranges for throwing the discus and javelin. The buildings included bathrooms, undressing-rooms, an oil store, a dust-room where the athletes powdered themselves before exercise, a room for ball games, and a room for practising boxing with hanging punch-balls of different sizes. The gymnasia were especially frequented by the *epheboi* (q.v.). At Athens they were managed by a board of ten *Sophronistai*, in other cities by an honorary magistrate, the gymnasiarch, who employed and paid professional trainers, the *gymnastai* and *paidotribai*. See EDUCATION, IV.

H

HABRON, of Phrygia and Rhodes (1st c. A.D.), a Greek grammarian at Rome. His *Περὶ ἀντωνυμίας* is cited, sometimes with approval, by Apollonius Dyscolus.

FRAGMENTS. R. Berndt, *B. phil. Woch.* 1915.

HADES (Ἅιδης, Epic Ἰδης, 'the Unseen'), one of the sons of Kronos (q.v.), lord of the lower world, 'the House of Hades'; the name is always that of a person, never of a place, in classical Greek, the dead going *ἐς Ἅιδου*. He has next to no mythology, except the story of his wedding with Persephone (see DEMETER). Personally, he is represented as grim, unrelenting, a severe punisher of wrongdoers (in those pictures of the lower world which find room for a Hell or a Purgatory), but never as evil; Greek mythology has no Satan. Nor does he appear as the actual tormentor of the wicked dead, that being the business of the Erinyes (q.v.).

Under his own name he has almost no cult, the one exception being his precinct at Elis (Paus. 6. 25. 2). But under various titles he is heard of here and there. Of these the best known is Pluton (*Πλούτων*), i.e. the Rich One, obviously connected with Plutus (q.v.). For example, at Byzantium there was a temple of Pluton (Dionysius Byzant. fr. 9 Müller; *GGM* ii. 23). For others see CLYMENUS, EURYLEUS; more examples in Farnell, op. cit. *infra* 281 ff. He is quite often called Zeus, with some distinguishing title. It seems reasonable to recognize three motives at work: (a) reluctance to name anyone so ill-omened as the god of the dead, to which may be added a feeling that he has little to do with the living,

save in so far as they are solicitous for the condition of their dead kin; (b) confusion of such a god, as lord of the depths of the earth, with deities concerned with its fertile surface (cf. DEMETER); (c) comparatively developed theological ideas, which extended the activity of Zeus beyond his proper sphere of the sky and air.

Farnell, *Cults* iii. 280-8 and refs.

H. J. R.

HADRIAN: PUBLIUS AELIUS (*PW* 64) HADRIANUS, Roman Emperor A.D. 117-38, was born in 76, probably at Italica in Baetica. He was son of P. Aelius Hadrianus Afer and of Domitia Paulina of Gades; his paternal grandfather (a senator) had married Ulpia, aunt of Trajan (q.v.). Left fatherless in 85, Hadrian became the ward of Trajan and of Attianus (q.v.) and entered Trajan's childless household. He became tribune successively of Legio II Adiutrix, probably at Aquincum (95), V Macedonica in Lower Moesia (96), and XXII Primigenia under L. Julius Ursus Servianus in Upper Germany (*ILS* 308). Thence, in 99 he accompanied Trajan (now Emperor) to Rome where he married Vibia Sabina (q.v.) in 100. He became imperial quaestor (101); staff-officer in the First Dacian War (101-2); senatorial archivist; plebeian tribune (105); commander of Legio I Minervia in the Second Dacian War (105-6), and simultaneously praetor (106); governor of Lower Pannonia (107); *cos. I suff.* in June 108; and a member of priestly colleges. He was in high favour with Trajan and Plotina and friendly with the chief court officers. However, he had received no special position to suggest that Trajan envisaged him as successor and also he was perhaps unpopular with some

of Trajan's more senior generals. Nevertheless, in 111 or 112 he was elected archon of Athens—a significant honour—and in 114 (less probably 117) he was appointed governor of Syria (S.H.A. *Had.* 4. 1) during Trajan's Parthian war. He was designated *cos. II* in 117 for 118.

2. Trajan died at Selinus in Cilicia on 8 Aug. 117. On the 9th it was announced at Antioch that he had adopted Hadrian as his successor, and on the 11th (Hadrian's *dies imperii*) that he was dead. The circumstances were unfortunate, even ambiguous. Trajan had not advertised his dynastic intentions (but see, for a now lost gold *aureus* with the reverse legend HADRIANO TRAIANO CAESARI, *H.M. Coins, Rom. Emp.* iii. lxxxvi, 124); men like Nerva (q.v.) Priscus and Servianus (q.v.) were senior in experience; Plotina (q.v.) was known to favour Hadrian; Trajan's sudden death in a remote and isolated town encouraged doubt of the validity of Hadrian's adoption and claim to the succession. The ancient biographers regarded the 'adoption' as fictitious, forgetting that Hadrian had been given the key position in Syria during Trajan's absence in the East—the culmination of a life of intimacy and advancement under Trajan, who would hardly leave the succession a matter for armed contention, still less for senatorial decision. The death-bed adoption may probably be accepted.

3. Hadrian at once communicated Trajan's death and his own proclamation by the troops to the Senate, with a promise to respect senatorial privileges. The Senate, despite doubts, voted to him the imperial powers. Hadrian returned to Rome only in 118, when he held a Parthian triumph in Trajan's name. Called quickly to Moesia, he subdued the Sarmatae and Roxolani, and gave unified command of Dacia and Pannonia to Turbo (q.v.). He had already removed Lusius (q.v.) Quietus from Judaea. Thus he brought to a head the disaffection of the 'old guard', in the 'conspiracy of the four consuls'. Quietus, A. Cornelius Palma (q.v.), L. Publius Celsus, and C. Avidius (q.v. 2) Nigrinus were said to have plotted against Hadrian's life, and were swiftly executed in different Italian towns by the Senate in his absence. Returning to Rome (still in 118), Hadrian attributed responsibility for the executions to Atrianus, now praetorian prefect, and by such favours as an extra public largesse, remission of accession gifts for Italy, a week's gladiatorial show, reform in the postal services, grants to the *alimenta*, financial assistance to poor senators, and especially a ceremonial cancellation of 900,000,000 *HS.* worth of debts to the State, he sought to placate a suspicious public opinion. Senatorial circles, however, cannot have relished his prompt abandonment of Trajan's imperialist policy in the East. But senatorial prerogative was not sensibly diminished (S.H.A. *Had.* 8; Dio 69. 5. 7).

4. Various reasons prompted Hadrian to tour the provinces: military organization and defence; administrative co-ordination; the need to recognize—and guide—provincial aspirations by showing himself as their common symbol; and his own desire to observe provincial conditions, especially in the hellenized areas. He deliberately advertised his policy by coins (cf. *B.M. Coins, Rom. Emp.* iii. clxxi ff.). In 120 or 121 he travelled to Gaul, and thence to the Rhine, where, living a simple soldierly life, he instituted stricter regulations for legionary discipline. Crossing from Holland to Britain in 121 or 122 (cf. *CIL* iii. 4279; a previous detour by Raetia and Noricum is very unlikely), he established the triple *hms* (see WALL OF HADRIAN). Returning to Gaul, where he commemorated Plotina's death by a temple at Nîmes, he reached Spain in 122; his personal intervention in the Mauretanian campaign (S.H.A. *Had.* 12. 7) is very doubtful. In 123 he sailed to the East from Spain, and toured Asia, the Troad, Propontis, and Phrygia, founding or restoring or favouring communities. In 125, he went to Greece, and

finally, in 127, returned via Sicily to Rome, after an absence of about seven years. In 128 he visited Africa, to review the troops (*CIL* viii. 2532, 18052) and to revise conditions of land-tenure on imperial domain lands (ibid. 10570). After a few weeks in Rome, he left late in 128 to winter in Athens, where he dedicated the Olympium (q.v.), and himself—called in the East a new Zeus Panhellenios—accepted the title *Olympus*. In 129 he travelled to Caria, Cilicia, Cappadocia, and Syria; in 130 he journeyed up the Nile (there to lose Antinous; q.v. 2), and only returned to Rome in 131.

5. These travels influenced a foreign policy which aimed at peaceful economy and secure defence, witness the restoration of the Flavian *status quo* in the East, the building of the British 'sentry-walk' (the Wall of Hadrian; q.v.), the consolidation of Dacia (the contemplated destruction of the Danube bridge deserves no credence), and the demarcation of a customs palisade on the German-Raetian frontier. Risings in Britain and Mauretania called for purely punitive measures. Only in Judaea was his policy questionable: the building of a shrine to Jupiter Capitolinus on the site of the Temple at Jerusalem (itself renamed *Colonia Aelia Capitolina*), with or without the prohibition of circumcision, precipitated a revolt in 132–5, which perhaps drew Hadrian to Antioch for a time. After a siege of Jerusalem and widespread repressive measures, Judaea became *Syria Palaestina*, under a consular legate with two legions; and the new colony and temple were established. This final denationalization of Judaea meant that the Jews became 'homeless' (see JEWS II), and definitely divorced the nascent Christian Church from dependence on its original nucleus in Jerusalem (see CHRISTIANITY). To Christianity as such Hadrian's attitude was, like Trajan's, tolerant so far as consistent with the maintenance of good order.

6. His general administrative policy was perhaps less innovating than is sometimes held. He made regular (but not absolute, as implied by S.H.A. *Had.* 22. 8; cf. *Epit. de Cues.* 14. 11) the appointment of equestrians instead of freedmen (q.v.) to the chief secretariats in the imperial bureaucracy. There was reorganization in the army; the *alimenta* (q.v.) continued in Italy; Trajan's institution of municipal *curatores* (q.v.) was developed to supervise local finance; provincial extortion was rare; and conditions of slavery were ameliorated. In jurisdiction there was real progress, of which the appointment of four consular circuit judges (*Iviri consulares*) to administer law in Italy was a symptom. The *consilium principis* (q.v.) was established on a more regular basis, with juriconsults (perhaps salaried) as members. About 131, the Praetors' Edict (see EDICTUM) was given a definitive text by L. Salvius Julianus (q.v. 2); thereafter this text could be altered only by the Emperor. This put an end to legal innovation (*ius honorarium*) by magistrates. Hadrian also made the unanimous opinions of authorized jurists binding on courts (Gaius, *Inst.* 1. 7; Pomponius in *Dig.* 1. 2. 2. 49). It may be noted that Hadrian allowed no treason charges.

7. Spanish born and Greek inspired, intellectual critic and connoisseur, littérateur, accomplished executant in music and the arts, Hadrian enjoyed from 131 to 138 the mature pleasures of peaceful life at Rome. He erected important buildings in Athens and in Rome, notably the Pantheon (q.v.), the Temple of Venus and Rome, and his mausoleum (the Castel San Angelo), as well as a vast villa below Tibur (q.v.). All of these embody significant architectural innovations. Government was enlightened centralization, in which his debt to the gods was plain (cf. *B.M. Coins, Rom. Emp.* iii. clxiv f.). The succession must be made clear, especially if plotting now began: Servianus and his grandson Fuscus were

both executed in 136. Hadrian, weakening in health, in the same year adopted L. Aelius (q.v. 2); after Aelius' death (138) he turned to Antoninus (q.v. 1) Pius. In 138, consumptive and dropsical, he died, aged 63, at Baiae (q.v.), reputedly with a versified farewell to his soul on his lips. Buried in the Mausoleum which he had built, he was deified at the insistence of Antoninus by a Senate perhaps alienated, perhaps apathetic.

ANCIENT SOURCES. *Literary:* the garbled biography in the *Historia Augusta* contains a few statements from Hadrian's lost Autobiography and from Marius (q.v.) Maximus. Cf. also fragments of Dio Cassius bk. 69, with a critique in F. Millar, *A Study of Cassius Dio* (1964), 60 ff.; brief references in Aurelius Victor and Eutropius. *Coins:* B.-M. *Coins, Rom. Emp.* in (1936); Strack, *Reichsprägung* 1 (1937), 230 f., for the aureus of Hadrian as *Caesar*, ii (1938), through-

C. H. V. S.; M. H.

HADRUMETUM (modern *Sousse*), a seaport 60 miles south of Carthage founded by the Phoenicians probably in the sixth century B.C. Hannibal made Hadrumetum his base for the Zama campaign. It joined the Romans in 146 B.C., and was made a *civitas libera et immunitas*. In 46 B.C. it opposed Caesar; his plan for a colony there was probably carried out in 42–40. Under Trajan it was entitled *Colonia Concordia Ulpia Traiana Frugifera*. Hadrumetum grew very prosperous from agriculture, horse-breeding, and shipping. Under Diocletian's reorganization it became capital of the province of Byzacena. It was an important Christian centre with extensive catacombs.

W. N. W., B. H. W.

HAEMON (Αἰμων), (1) eponym of Haemonia, i.e. Thessaly, and father of Thessalus (Rhianus, fr. 25 Powell). (2) Grandson of Cadmus (q.v.); leaving Thebes on account of homicide, he came to Athens, and his descendants went successively to Rhodes and Acragas; Theron, tyrant of the latter city, claimed him as an ancestor (schol. Pind. *Ol.* 2. 16). (3) Son of Creon (q.v. 3). For his legend as usually told see ANTIGONE; but according to Apollodorus (3. 54) he was killed by the Sphinx (cf. the *Oedipodia* ap. schol. Eur. *Phoen.* 1760). Homer makes him father of Maeon, one of the Thebans who ambushed Tydeus (*Il.* 4. 394).

H. J. R.

HALICARNASSUS, a Greek city of Caria commanding the sea route between Cos and the Asiatic mainland. Founded perhaps c. 900 B.C. from Troezen in the Argolid, it is said by Herodotus (himself a Halicarnassian) to have been one of the cities that participated in the Dorian festival at Triopion; but in classical times its culture was Ionic, and a high proportion of its citizens had Carian names. It was the capital of a minor dynasty which included the Artemisia who fought on the Persian side at Salamis in 480. Joining the Delian League, it served as an Athenian naval station after the revolt of the allies in 412. Mausolus, dynast of Caria, made his capital at Halicarnassus c. 370 and incorporated into it a number of native villages. Thereafter, with its great wall circuit, closed harbour, dockyard, public buildings, and the

funerary temple of the dynasty (the Mausoleum), Halicarnassus was one of the spectacular cities of the ancient world. Captured by Alexander after an arduous siege in 334, it was in turn subject to the dowager Ada, Asander, Antigonos, Lysimachus, and the Ptolemies (until 197), then in 129 B.C. came under Roman rule. Nothing remains in position of the superstructure of the Mausoleum, but carved marble pieces, mostly recovered from the castle of the Knights of St. John, are now preserved in the British Museum.

C. T. Newton, *Halicarnassus, Cnidus and Branchidae* (1863); G. E. Bean and J. M. Cook, 'The Halicarnassus Peninsula', *JSA* 1955.

J. M. C.

HALIRRHOTHIUS, in mythology, son of Poseidon; for the usual legend about him see ARES. There is, however, another account, according to which he was sent by his father to cut down Athena's sacred olives, but his axe missed the trees and mortally wounded him (schol. Ar. *Nub.* 1005, cf. Servius on Verg. *G.* 1. 18).

H. J. R.

HALTERES (ἁλτήρες) were pieces of iron or stone shaped and gripped like our dumb-bells. They normally weighed between 3 and 5 pounds. Competitors in the long jump always used them, one in each hand, thereby effectively improving their performance. They were also employed in various gymnastic exercises and in musical drill.

F. A. W., R. L. H.

HALYS (the 'Salt River', so called from the salt springs in its upper course), the longest river in Asia Minor (about 650 miles in length), now called Kızılırmak, the 'Red River'. It rises near the Armenian border and flows in a great loop from south-west to north-east to join the Euxine west of Amisus. In the time of Croesus it divided the Lydian Kingdom from the Persian Empire; hence 'Croesus by crossing the Halys destroyed a great empire'. There was a bridge across it in the fifth century (Hdt. 1. 75), of which the position has not been conclusively determined. Herodotus (5. 52), probably in error, made the Royal Road from Sardes to the Cilician Gates cross the Halys.

W. M. C., G. E. B.

HAMILCAR (1) (5th c. B.C.), Carthaginian general, son or grandson of the great Mago (q.v. 1). He commanded a large army and fleet against the Sicilian Greeks. At the hard-fought battle of Himera he was completely beaten by Gelon (q.v.) and killed (480 B.C.). Diodorus, probably based on Timaeus (q.v. 1), is here a better informed source than Herodotus.

Hdt. 7. 165 f.; Diodorus 11. 20 ff.

V. E.

HAMILCAR (2) **BARCA** (probably = Semitic Bārāq, 'lightning'), commanded the Carthaginian fleet and ravaged the coast of Bruttium (in 247 B.C.). Landing in Sicily he seized Himera (q.v.), where he held the Romans at bay by frequent skirmishes, again raiding the Italian coast as far as Cumae. In 244 he advanced to Mt. Eryx (q.v.), but failed to relieve the siege of Drepana. After the Punic defeat at Aegates Insulae he negotiated the terms of peace, and his command terminated. When attempts to suppress the subsequent revolt of the mercenaries failed, Hamilcar was reappointed commander-in-chief (241). He thrice defeated the mercenary leader Spendius; then, co-operating with Hanno, his old enemy, he defeated the other leader Mitho and reduced Utica (238), thus ending the revolt. In 237 he was sent to Spain with his young son, Hannibal. Based on Gades he conquered southern and eastern Spain, advancing the frontier to Cape Nao and building a fortress at Acra Leuce (Alicante). To a Roman protest, prompted by Massilia, he replied that his conquest was designed to secure money to pay his country's war indemnity (231). While withdrawing from the siege

of Helice (? Ilici, modern *Elche*) he was drowned (229/8). The anti-Barcid tradition, found in some Roman writers, that he conquered Spain against the will of the Carthaginian government, is tendentious and designed to shift the responsibility of the Hannibalic war on to the Barca family and to represent it as a personal war of revenge not countenanced by the home government. The immediate purpose of Hannibal's conquest was to add the mineral wealth and man-power of Spain to his country's empire, which had lost Sicily and Sardinia; whether he hoped ultimately to invade Italy is uncertain, but each of his three sons, Hannibal, Hasdrubal, and Mago, attempted this adventure. H. H. S.

HANNIBAL, the great Carthaginian general, born in (late) 247 B.C., was the eldest son of Hamilcar (q.v. 2) Barca. After making Hannibal swear eternal hatred to Rome Hamilcar took him in 237 to Spain, where he served until he assumed command in 221 on the death of Hasdrubal (q.v. 1). Although he married a Spanish princess from Castulo, he reverted to his father's warlike policy by attacking the Olcades (Upper Guadiana). In 220 he advanced Carthaginian arms beyond the Tagus, defeating the Vaccaei and Carpetani. He then besieged Rome's ally, Saguntum, which fell after an eight months' blockade (219). Although his action may have broken no formal agreement with Rome, he knew that it involved the risk of war.

2. Hannibal intended to win the war, which he had precipitated, by a bold invasion of Italy before Rome was prepared. He would sacrifice his base in Spain, cross the Alps recruiting *en route*, and seek a new base on the northern plain of Italy, where he could encourage the Italian allies of Rome to revolt. Leaving Carthago Nova in Apr. 218 with some 35,000–40,000 men he reached the Rhône. Thence by a heroic effort, made more difficult by early autumn snow, he crossed the Alps (somewhere between the Little St. Bernard and Mt. Genève passes: the perennial problem of the exact route does not admit of a definite solution) and reached Turin, but with only 26,000 men. After defeating P. Scipio in a cavalry engagement at Ticinus, he won a great victory at Trebia over the combined forces of Scipio and Ti. Sempronius Longus, thanks to his outflanking tactics combined with an ambush (Dec. 218). In May 217 Hannibal crossed the Apennines, ravaged Etruria, and entrapped the army of Flaminius (q.v.) in a defile between the hills and lake of Trasimene: nearly two Roman legions were destroyed. But as no towns revolted to him Hannibal marched to Apulia and then into Campania, where he failed to force Fabius (q.v. 5) to an open battle and was thus compelled to retire to Apulia for the winter. In 216 at Cannae (q.v.) he inflicted on the Romans the worst defeat they had known. Capua and many towns in Campania and south Italy went over to him, but as the Romans refused to acknowledge defeat and central and northern Italy remained loyal to them, he had to devise a wider strategy to force them to dissipate their strength (see PUNIC WARS), while in Italy he vainly tried to provoke another pitched battle.

3. While the Romans held the line of the Volturnus Hannibal wintered in Capua, where it was alleged (falsely?) that luxurious quarters undermined the discipline of his troops. The failure of his attacks from Mt. Tifata on Cumae, Nola, and Puteoli (215–214), which were parried by Marcellus, Gracchus, and Fabius (qq.v.), forced him to abandon his offensive in Campania. He won over Tarentum and other Greek cities in 213, but after failing to force the Romans to relax their siege of Capua (started in 212) by a vain march against Rome itself (211), he retired to Apulia. Ever pressed further south, Hannibal suffered a setback in the Roman capture of Tarentum

(209), while his hope of reinforcements was sadly diminished when his brother Hasdrubal (q.v. 2) was defeated at Metaurus (207). Forced to withdraw, unaided and undaunted, to Bruttium, he lost Locri in 205 and held on desperately like a lion at bay until ordered to return to Africa to defend Carthage (autumn 203). After sixteen years in enemy country he withdrew his unconquered army and advanced to final defeat by Scipio (5) Africanus at Zama (qq.v.) in 202. He escaped to Carthage and counselled peace.

4. As suffete (between 197 and 195; probably 196) Hannibal weakened the power of the oligarchs at Carthage by constitutional reforms; he also reorganized the revenues and encouraged commerce and agriculture. His political enemies replied by telling Rome that Hannibal was intriguing with Antiochus of Syria. When a Roman commission of inquiry arrived in Carthage, Hannibal fled, ultimately to Antiochus, whose hostility to Rome he is alleged to have encouraged. He was ready, it was said, to stir up the Carthaginians against Rome and even to invade Italy if given an army by Antiochus. In fact he took only a small part in the subsequent war: he was defeated in a small naval engagement off Side in Pamphylia by the Rhodian fleet under Eudamus (190). After Antiochus' defeat at Magnesia Hannibal fled to Crete and then to Prusias of Bithynia whom he supported against Eumenes of Pergamum (184). He took his own life to avoid a Roman extradition order (183 or 182).

5. Adjudged by common consent one of the world's greatest soldiers, Hannibal was the disciple of Alexander and Pyrrhus as well as of his father Hamilcar. He developed the Hellenistic system of combining infantry and cavalry till he could surround and annihilate the enemy. But beside extraordinary tactical skill and a wide and bold conception of strategy he possessed a capacity for leadership which commanded the loyalty of mercenary troops amid danger and defeat. His strategical plans and his reforms at Carthage should win for him the name of statesman. Above all it is his character (which remains unsullied despite accusations of perfidy and cruelty deriving from Roman propaganda) that counts and that has given to the Hannibalic war its epic quality and invested his name with an undying glamour (see, e.g., Polyb. 9. 21–26, 10. 32–33, 11. 19, 23. 13 and Livy 21. 4).

For bibliography see PUNIC WARS; fundamental for his campaigns are the works of J. Kromayer and G. De Sanctis there cited (cf. De Sanctis in *Enc. Brit.*, s.v. Hannibal). See also Walbank, *Polybius*, p. 100; G. Charles-Picard, *Hannibal* (Paris, 1967). For his statesmanship: E. Grogan, *Hannibal als Politiker* (1929). For his coin-portraiture see E. S. G. Robinson in *Essays in Roman Coinage presented to H. Mattingly* (1950), 39 ff. H. H. S.

HANNO (1), Carthaginian, sent to west Africa before 480 B.C., founded Thytiaterium (*Mehedia*), Carian Fort (*Mogador*), Acra (*Agadir*), etc., beyond Soloeis (C. Cantin), and river Tensift. After staying by river Luxus (*Draa*) and founding Cerne (*Herne*?), Hanno reached river Chretes (*Senegal*), the Guanches, and C. Verde, river Gambia, West Horn (*Bisagos Bay*), God's Chariot (*Mt. Kakulma*?), S. Horn (*Sherbro Sound*), where gorillas (dwarfs? apes?) were caught, and Sierra Leone. Of his report, written in Punic, a Greek version survives. The original Punic may have had intentional gaps and obscurities (so Carcopino believes); or the Greek writer of a later date may have been influenced by Herodotus' style (so G. Germain).

Schmitt, 'Connaissance des Îles Canaries dans l'antiquité', *Latomus* 1968, 362 ff. E. H. W.

HANNO (2), called 'the Great', led the anti-Barcine faction at Carthage. He raised supplies in Africa for the First Punic War. A good organizer, but a poor general, he helped after failures and quarrels with Hamilcar Barca to crush the rebel mercenaries (241–238 B.C.). He represented the landed nobility who wished to maintain good relations with Rome and to develop the Carthaginian land empire in Africa rather than to pursue foreign conquest in the interests of the trading class. He thus disapproved of the Hannibalic War and argued for peace after Cannae (216). He may be identified with a Hanno who participated in the peace negotiations after Zama.

H. H. S.

HARBOURS. The first steps in harbour improvement must be connected with the increase of commerce during the Greek age of colonization and the development of trade routes centring on certain cities. Beginning with Delos in the eighth century, the more prosperous communities guarded their natural harbours with moles of rough stone and built quays, to which ships, now larger, tied up. Harbour works increased steadily in magnitude, carefulness, and complexity. Whereas the earlier port had often been some distance from the city, to assure neutrality of commerce and to protect the city itself (cf. Arist. *Pol.* 7. 5), by the fifth century the importance of commerce and of the grain trade demanded that the urban walls should contain at least one harbour, and many cities possessed two. The moles were fortified and ended in lofty towers, the ancestors of the lighthouse (q.v.), between which chains could be strung to close the entrance. Within the harbour were storehouses for warcraft, and the market, with a sales hall, grain hall, and other buildings. Such a complex as the Piræus (q.v.), with its three harbours, Cantharus, Zea, and Munychia, all enclosed by walls and connected by the famous Long Wall with Athens itself, possessed a greater unity and self-sufficiency than our modern harbour.

The new ports of the Hellenistic period were built on a more regular plan which took less account of natural protection. In the Roman Empire military and commercial harbours were separated for the first time, and architects gained complete independence of nature. The great Claudian harbour at Ostia, measuring over 170 acres—the largest in antiquity—was constructed on a bare shore by extensive excavation and the sinking of a large ship as artificial island breakwater.

Strabo 17. 1. 6–10 (Alexandria), Pliny, *Nat. Hist.* 6. 31 (Centumcellae). K. Lehmann-Hartleben, 'Die Antiken Hafenanlagen des Mittelmeeres', *Klio*, Beih. 14 (1923). C. G. S.

HARMOST (ἀρμοστής) the title of a Spartan military governor or commander abroad, first attested in 412 B.C. (Thuc. 8. 5. 2) but probably already used at Heraclea Trachinia in 426 (Thuc. 3. 92). Harmosts became common in occupied cities after the fall of Athens in 404, occasionally with wider commands, e.g. Thibron and Euxenos in Asia Minor (Xen. *Hell.* 3. 1. 4; 4. 2. 5), Teleutias in Chalcidice (ibid. 5. 2. 18 and 37). One is attested in Cythera (*IG* v. 1. 937, 74th c. B.C.); but it is unlikely that such officials regularly governed the towns of the *perioikoi* (q.v.).

H. W. Parke, *JHS* 1930, 37 ff.

W. G. F.

HARPALUS (c. 355–323 B.C.), a Macedonian noble of the princely house of Elimeiotis and a close friend of Alexander from earliest youth. A cripple, and hence no

soldier, he accompanied Alexander to Asia as paymaster, but gave early evidence of his unreliability by a sudden flight to Greece, of which the occasion is unknown. Alexander reinstated him, and later (331) entrusted him with the central treasury of the Empire at Babylon. During Alexander's absence in India (327–5) Harpalus was guilty of gross extravagance and malversation, if not of positive treason, and when Alexander returned he decamped with money and soldiers. He sought refuge in Athens, and probably bribed various Athenian politicians, including Demosthenes; but failing of his purpose he took his force to Crete, where he was killed by one of his officers.

Berve, *Alexanderreich*, no. 143; F. Haddan, 'Harpalus', *JHS* 1961, 16 ff. G. T. G.

HARPALYCE, in mythology, (1) see ALASTOR, CLYMENUS, (2) Daughter of Harpalycus, king of the Amymonoi in Thrace. Her mother dying, her father brought her up as a warrior, and on one occasion she saved his life in battle. After his death she became a brigand, but at last was caught and killed. At her tomb rites were celebrated which included a sham fight (Hyg. *Fab.* 193; Servius on *Aen.* 1. 317). Cf. Verg. loc. cit. (earliest mention); his Camilla is modelled upon her. H. J. R.

HARPOCRATION, VALERIUS, of Alexandria, lexicographer. His date is not known: some identify him with the teacher of Verus named by Capitolinus. His *Collection of florid expressions* (Συλλογή ἀνθηράων) is lost, but elements of it survive in later rhetorical lexica. His *Lexicon of the Ten Orators* is preserved in an early abridgement and in a longer form, closer to the original but not free from corruptions. It is designed as an aid to reading, not to composition. It is based mainly on works of the imperial age, e.g. by Didymus, Dionysius of Halicarnassus, and Dionysius son of Tryphon, but cites also Aristophanes of Byzantium, Aristarchus, οἱ γλωσσόγραφοί, and many historical and antiquarian sources such as Hecataeus, Hellanicus, Theopompus, Ister, and Apollodorus. The contents are words (including proper names) and phrases, mainly from the Orators, in alphabetical order, generally assigned to their sources, with explanations of points of interest or difficulty. Some of the entries are drawn from non-oratorical literature, and in his explanations throughout Harpocration quotes, from time to time, nearly every important Greek writer, from Homer downwards. Besides stylistic details he has valuable notes on architectural, religious, legal, constitutional, social, and other antiquities.

EDITIONS: I. Bekker, 1817; W. Dindorf, 1851; C. Boysen, *De H. lex. fontibus*, 1876; G. Kalkoff, *De cod. epitomae Harpocratonae* (1886); *FGrH* 244, 208 ff.; M. Naoumides, *TAPA* 1961, 184 ff. P. B. R. F.; R. B.

HARPYIAE, HARPIES (Ἄρπυιαι), supernatural winged beings, apparently winds in origin, who 'snatch', as the name implies, and carry off various persons and things. They have at the same time some characteristics of ghosts, and, as the ideas of wind and spirit are closely allied (cf. the etymology of the words in Greek, Hebrew, Latin, and other tongues), it is perhaps most correct to say that they are spirit-winds. Their names are Aello, Ocypete, and Celaeno (Hes. *Theog.* 267, who says that they and Iris, q.v., are daughters of Thaumas and Electra, daughter of Ocean). They appear in *Od.* 20. 77 as carrying off the daughters of Pandarus, apparently to the other world, since they are given as servants to the Erinyes (q.v.). Much later (Ap. *Rhod.* 2. 188 ff.) they plague Phineus (q.v.) by carrying off his food and defiling what they leave with their excrement. Whence this detail comes is not known; it is an ingenious suggestion (W. R. Dawson, *Bride of Pegasus*, 1930 (1), 27) that Apollonius had heard of the

voracious and filthy fruit-eating Indian bat. Virgil (*Aen.* 3. 210 ff.) follows Apollonius in part, but describes them as birds with women's faces.

They appear (named) on an Attic vase of about 600 B.C. Here, and in pictures of their pursuit by the Boreads from the sixth century on, they are shown as winged women, not woman-headed birds, the type used for Sirens; though death-spirits in this form have given its modern name to the 'Harpy Tomb' from Xanthos (Brommer, *Vasenlisten*², 351). H. J. R.; C. M. R.

HARUSPICES. This word, variously spelled (*haru-*, *aru-*, *hari-*, *ari-*, *are-*) and probably cognate with *χορδή*, Latin *hira*, etc. (Walde-Hofmann, *Lat. etym. Wörterb.*³ s.v.) and the root of *specio*, was applied to diviners imported into Rome from Etruria (where an *haruspex* was called *netivis*; *GIL* xi. 6363). Appearing, according to Livy 1. 56. 4-5, in the reign of Tarquinius Superbus, *haruspices* increased in importance from the Second Punic War, and though long regarded as barbarous (Cic. *Nat. D.* 2. 11), gradually encroached upon the field of the augurs. From the late Republic on they formed an *ordo haruspicum* LX, headed by a *summus*, *præmarus*, or *maximus haruspex*, while others served in Italian municipalities. The art was practised to the time of Theodosius (*Cod. Theod.* 16. 10), and still seriously discussed as late as Laurentius Lydus (6th c.) or later. The principles were contained in priestly books (Cic. *Div.* 1. 72), which legend derived from Tages (q.v.); also Cic. *Div.* 2. 50 and Pease's note), and some of which were translated into Latin by Tarquinius Priscus (C. Thulin, *Ital. sakrale Poesie u. Prosa* (1906), 1-5).

This Etruscan discipline sought to interpret three types of phenomena (Cic. *Div.* 1. 12, 2. 26): *exta*, *monstra* (*ostenta*, *portenta*, *prodigia*), and *fulgura*. Significant for the *exta* were the size, shape, colour, and markings of the vital organs, especially the livers and gall-bladders of sheep, changes in which were believed by many races to arise supernaturally (cf. Pl. *Tim.* 71 a ff.; Cic. *Div.* 1. 118; Iamb. *Myth.* 3. 16) and to be susceptible of interpretation by established rules. Models of the liver—e.g. from Piacenza (Etruscan), Boghazkeui (Hittite), and Babylonia—were probably intended for instruction in extispicy. *Monstra* (from *monco*) or prodigies (see *PRODIGIA*) included teratological or otherwise unusual births or growths and abnormal meteorological phenomena. *Fulgura* were interpreted by their frequency, the precise one of the sixteen Etruscan divisions of the heavens in which they were seen, and by their physical effects. Of these three types of divination that through the *exta* was deliberately sought (*impetratum*), but those by *monstra* or *fulgura* were considered divinely sent (*oblatus*) and hence usually demanding some expiation (*procuratio*). See also *RELIGION, ETRUSCAN*.

For bibliography see under *DIVINATION*.

A. S. P.

HASDRUBAL (1), a popular leader in Carthage and son-in-law of Hamilcar (q.v. 2) Barca, whom he accompanied to Spain (237 B.C.). Later he reduced a Numidian rising in Africa, and according to the anti-Barcine tradition used by Fabius Pictor (Polyb. 3. 8) he schemed to overthrow the Carthaginian constitution. He succeeded to the command in Spain on Hamilcar's death (229) and achieved more by diplomacy than force of arms. He married an Iberian princess and founded Carthago Nova (q.v.), whence he advanced to the Ebro, which was later recognized as the boundary of Carthaginian and Roman spheres of influence in a treaty with Rome (226). In 221 he was murdered by a Celtic slave. The view of Fabius that Hasdrubal ruled as viceroy in Spain

independent of his home government is improbable (cf. Walbank, *Polybius*, I. 310 f.).

For a possible coin-portrait, see F. S. G. Robinson in *Essays in Roman Coinage presented to H. Mattingly* (1956), 37 f. H. H. S.

HASDRUBAL (2) (**BARCÁ**), son of Hamilcar (q.v. 2) and younger brother of Hannibal, was left in command in Spain (218 B.C.). Repulsed by Cn. Scipio (218), he launched a combined land and sea attack which terminated in a naval defeat off the Ebro (217). Reinforced and with his rear secured by his defeat of the Turdetani (216), Hasdrubal took the offensive with the hope of ultimately joining Hannibal in Italy, but was defeated at Ibera on the Ebro owing to the failure of his enveloping tactics (215). Recalled to Africa, where he crushed the rebellious Syphax, he returned to Spain (212) and defeated Cn. Scipio at Illici (211), so that Carthaginian control was extended to the Ebro. Tactically outwitted by P. Scipio (q.v. 5) at Baecula, he withdrew his army from complete defeat and reached Gaul through the western Pyrenees (208), crossing the Alps, perhaps by the pass used by Hannibal, he raised his forces to 30,000 and moved south to join Hannibal (207). Unexpectedly faced by two consular armies through the arrival of Claudius Nero (q.v. 2) he could not force the coast road and so withdrew along the Metaurus (q.v.) valley by a night, either to retire to north Italy or more probably in a desperate attempt to reach central Italy. Overtaken and defeated in a decisive battle, he died fighting. A good organizer and a fairly competent soldier, his generalship did not match his courage (Polyb. 11. 2). H. H. S.

HASDRUBAL (3) (son of Gisgo) commanded a Carthaginian army in Spain 214-206 B.C. With Mago he compassed the destruction of P. Scipio (211), but later was driven from his base Orongis (? Jaen) to Gades (207) and was completely defeated with Mago at Ilipa by Scipio Africanus (206). He fled via Gades to Africa, where as commander-in-chief he relieved the siege of Utica (204), but his camp was burnt by Scipio and his newly raised army was defeated at Campi Magni (203). After some guerrilla warfare he was accused of treason and committed suicide before Zama. H. H. S.

HASDRUBAL (4), commanded the Carthaginian forces against Masinissa (q.v.) and was defeated in 150 B.C. Although condemned to death, he escaped and was reinstated in his command at the outbreak of the Third Punic War. He organized resistance at first in the countryside (149), twice repulsing the Romans at Nephesis, and then, on the arrival of Scipio Aemilianus, in Carthage itself during the siege (148-146). In this he showed more ability than Polybius' unflattering characterization might suggest (38. 1-2), but when the city was doomed Hasdrubal surrendered, later to grace Scipio's triumph, while his wife and children preferred death to capture. H. H. S.

HATÉRIUS, QUINTUS (*cos. suff.* 5 B.C.), Augustan orator and declaimer, of senatorial family, noted for facility of improvisation and fluency of delivery (Tac. *Ann.* 4. 61; Sen. *Ep.* 40. 10) which caused Augustus to remark 'What he needs is a brake' (Sen. *Controv.* 4. pr. 6-11). He died A.D. 26, nearly 90 years old.

Syme, *Tactus*, 321 f., 580.

C. J. F.

HATRA (modern *al-Iadr*), a city in Mesopotamia c. 50 miles south of Mosul. It first comes into notice in A.D. 117, when it successfully withstood a siege by Trajan. Septimius Severus twice failed to take it (201-200) after its ruler, Barsemeius, had supported his rival, Niger. It was ruled by a dynasty of Aramaic origin and owed its

rise to the increasing importance of the overland trade route between northern Syria and the Persian Gulf. Because of Parthian obstruction or negligence the merchant caravans opened up a new desert route through upper Mesopotamia and past Hatra. In its last years an ally of Rome, Hatra was finally captured (c. 241) by the Sassanid Sapor I (q.v.) and thereafter was gradually abandoned by its inhabitants. Its decline was parallel with that of Palmyra and due to loss of trade caused by the increasing frequency of frontier wars. In 363 Jovian's army found it a ruin.

Its extensive ruins date mainly from the last period of Parthian rule. Its walls, nearly 4 miles in circuit, are strengthened by some thirty rectangular towers and within them is a vast palace complex of buildings and temple-remains, in process of excavation in 1965. The syncretistic religion, art, and architecture of Hatra reveal the cultural influence of its more powerful neighbours on what was essentially an Arab city and population.

W. Andrae, *Hatra* 1, n (1908 12), A. Stein, *Journ. Royal Asiatic Soc.* 1941, 299 ff., on trade route; J. Ingholt, *Parthian Sculptures from Hatra* (1954), A. Maricq, *Syria* 1955, 273 ff.; *ibid.* 1957, 288 ff., J. Walker, *Nimr Chron.* 1958, 167 ff., on coinage; D. Hommes-Fredericq, *Hatra et les sculptures parthes* (1963), J. Teixidor, *Syria* 1966, 93 f. E. W. G.

HEATING for cooking or warmth was primarily supplied in the classical world by charcoal stoves; hence the importance of charcoal-burning. The stoves took the form of chafing-dishes, gridirons, or braziers, elaborated in the Hellenistic world into jacketed vessels heated by fire or boiling water, of which magnificent examples for table use have been discovered at Pompeii. Equally old is the oven, extending from baker's shop to field-army, without a flue and heated by blazing wood withdrawn upon exhaustion of the air within. The use of hot water for bathing is as old as Homer (*Od.* 8. 249, 253) and precedes him at Cnossos, while Herodotus (4. 75) mentions sweat-baths, traditionally assigned to Sparta (Strabo 3. 154; Mart. 6. 42. 16) and warmed with heated stones, as in Lusitania. In Italy, where public bathing was widely introduced by the third century, heating was revolutionized by the introduction of the heated floor or hypocaust (q.v.). See **BATHS**. I. A. R.

HEBE (*Ἥβη*, i.e. adolescence, youthful beauty), daughter of Hera (q.v.) and Zeus, sister of Ares and Eileithyia (q.v.) (Hesiod, *Theog.* 922). She is unimportant in cult (temple at Phlius, Paus. 2. 12. 4; 13. 3, where she had been anciently called Ganymeda, cf. **GANYMEDES**), but occasionally associated with other deities (Heracles at Cynosarges, Paus. 1. 19. 3; Aphrodite, Farnell, *Cults* ii. 624, 744). In mythology she is the cup-bearer of the gods, as *Il.* 4. 2 and often later. Heracles has her to wife from *Od.* 11. 603 (a doubtfully genuine passage) onwards, and she appears now and again in a scene of Olympian domesticity, e.g. she bathes Ares after his encounter with Diomedes (*Il.* 5. 905), as a sister might an earthly brother in Homeric society. She intervenes to make the aged Iolaus young again, Eur. *Heracl.* 349 ff.; according to Ovid (*Met.* 9. 401-2) Heracles induced her to make him young again. See von Sybel in Roscher's *Lexikon*, s.v. H. J. R.

HECALE or **HECALINE**, a goddess worshipped with Zeus Hecalos in the deme Hecale; said to have been an old woman who entertained Theseus.

Callim. *Hecale* (see **CALLIMACHUS** 3); Plut. *Thes.* 14; L. Deubner, *Attische Feste* (1932), 217.

HECATAEUS (1), son of Hegesander, of Miletus, one of the earliest Ionian logographers, advised against the Ionian revolt in 500 B.C., but Aristagoras (q.v. 1) rejected his advice (Hdt. 5. 36, 124-6). He was familiar with the

strength of the Persian Empire thanks to travels in Asia and Egypt, where Herodotus followed in his footsteps (2. 143) and borrowed much from him, as later critics pointed out (Euseb. *Praep. Evang.* 10. 3). Like Anaximander (q.v.) he made a map, perhaps the map of the world which Aristagoras showed to Cleomenes in Sparta (Hdt. 5. 49). He wrote a *Periegesis* or *Περιήγησις*, a 'guide' or 'journey round the world', to illustrate his map, a description of the countries and peoples to be encountered on a coastal voyage of the Mediterranean and Black Sea, with some diversions into the interior, ranging as far as India, Persia, and Scythia. There are over 300 fragments of this work, but many are brief citations in Stephanus of Byzantium, mentioning that a certain city or people occurred in the first book, 'Europe', or the second, 'Asia' (which included Africa). Callimachus (q.v. 3) as librarian of Alexandria would not accept the copy of 'Asia' known to him as the work of Hecataeus, but the grounds for his decision are unknown. Herodotus made use of the *Periegesis*, perhaps quite extensively, but he never mentions it and professes to scorn makers of maps (4. 36).

Hecataeus also wrote a mythographic work, cited variously as *Γενελογίαι*, *Ἱστορίαι* or *Ἡρωολογία*. The fragments of this work are less numerous, but they show that he dealt with the legends of Heracles and Deucalion and their descendants, as with other families that claimed heroic or divine origin—including, apparently, his own (Hdt. 2. 143). Some fragments show a rationalistic interpretation, and in his opening sentence (fr. 1) he shows a dogmatic attitude: 'I write what I believe to be the truth, for the Greeks have many stories which, it seems to me, are absurd.'

Fragments and testimonia in *FHG* 1 1-31, iv 627b; *FGH* 1, no. 1, G. Nenci, *Hecataei Milesii Fragmenta* (1954), H. Diels, *Hermes* 1887, 413 ff.; F. Jacoby, *Griechische Historiker* (1956), repr. from *PW Hekataios*, W. A. Heudel, *Mem. Amer. Acad. of Arts and Sc.* 18. 2 (1935), 53 ff.; L. Pearson, *Early Ionian Historians* (1939), ch. 2 (bibliography 106 ff.). See **GEOGRAPHY** HERODOTUS, **LOGOGRAPHERS**. L. P.

HECATAEUS (2) of Abdera. His history of Egypt (*Αἰγυπτιακά*) under Ptolemy I, c. 300 B.C., popularized the theory of Egypt as the source of civilization, and was the basis of Manetho's more official account.

FGH iii. 264.

HECATE, an ancient chthonian goddess (a kind of fish, *τρίγλη*), is sacrificed to her, Apollodorus ap. Ath. 325 a, and fish are a typical offering to under-world powers, cf. F. J. Dolger, *Ἰχθύς* (1928-43), *passim*, probably of Carian origin, as suggested by Nilsson (*GGR* i², 722 ff.). She is frequently confused with Artemis (q.v.), whose functions overlap to some extent with hers, also with Selene, the theory that she is a moon-goddess being supported also by many modern authors, though without justification, as no cult of the moon is to be found in Greece; however, a goddess of women, such as she was, tends to acquire some lunar features. Her associations with Artemis are so close and frequent that it is not always easy to tell to which of them a particular function or title belongs originally (Farnell, *Cults* ii. 516 ff.).

Hecate is not mentioned at all in Homer, but comes into sudden prominence in a sort of hymn to her in Hes. *Theog.* 411 ff., a passage whose genuineness has been much disputed. There she is daughter of Coeus and Phoebe, other authors giving other genealogies in a way which suggests that her connexion with Greek, or even pre-Greek and Titanic, deities was precarious. Zeus honours her exceedingly, giving her power and honour on earth and sea and also in the heavens, and taking away none of her original rights. If a man invokes her, she can benefit him in all manner of ways, for she is powerful in courts of law and in assemblies, can grant

victory in war and athletics and success in horsemanship, in fishing, and cattle-breeding; she is also a nurturer of children (κουροτρόφος, a title likewise of Artemis). No other passage rates her so high, and this one must reflect the enthusiasm of a strong local cult, Boeotian or other, of which no more is known. Generally she is associated with uncanny things and the ghost-world. For this reason she is worshipped at the cross-roads (typically a place where a side path joins a main road), which seem to be haunted the world over. Here the notorious 'Hecate's suppers' were put out monthly for her (Ar. *Plut.* 594 ff. with schol.). It was a rite of purification, and one of its common constituents was dogs' flesh (Plut. *Quaest. Rom.* 290 d); cf. EUG. Hecate is herself a formidable figure, *Artaia* (see Hesychius, s.v.), i.e. a bogy which 'meets' and frightens wayfarers. Hence it is not remarkable that she is associated with sorcery and black magic, from at least the tragic Medea (Eur. *Med.* 394 ff.) onwards. Thus we find her invoked to go away and take an obsessing spirit with her (Sophron, new frag.; see Festa in *Mondo classico* ii. 476 ff. for recent text); to help a dangerous love-charm which may bring destruction on the person it is aimed at (Theoc. 2. 12 ff.); and very often in magical papyri, etc. However, a more respectable cult of her seems also to have continued, see Farnell, *Cults* ii. 501 ff., 506 ff., and Nilsson, *op. cit.* and vol. ii *passim* for references to her cult in late periods.

Alcámenes was said to be the first to show her with three bodies (Paus. 2. 30. 2). Apart from the little Roman 'Hecataia' which may echo his statue, she is rarely represented in art. On a vase of the time of the Parthenon she lights Persephone from Hades; and other figures with torches may be meant for her rather than Persephone or Demeter.

T. Kraus, *Hekate* (1960), at cross-roads, see Roscher in his *Lexikon* i. 1904 ff., to which add *Hymn. Magic.* 5. 22 Abel (in his *Opifera*), Preisendanz, *PGM* iv. 281 f., Lydus, *Ment.* 3. 8, p. 41. 20 Wünsch, for her twofold aspect. H. J. R.; C. M. R.

HECATOMNUS of Mylasa, son and successor of Hyssaldomus, satrap of Caria after the fall of Tissaphernes. He commanded the fleet in the Persian operations against Cyprus in 390 B.C. After his death in 377 his children (Mausolus and Artemisia, Idrieus and Ada, Pixodarus) ruled in succession as satraps and despots in south-western Asia Minor. J. M. C.

HECATON (Ἑκάτων) of Rhodes, a Platonizing Stoic, pupil of Panaetius, wrote chiefly on ethics, and was, next to Panaetius and Posidonius, the most influential member of the middle Stoic school.

WORKS: *Περὶ ἀγαθῶν, Περὶ ἀρετῶν, Περὶ παθῶν, Περὶ παραδόξων, Περὶ τεχνῶν, Περὶ τέλους, Χρεῖαι, Περὶ καθήκοντος*. Cicero preserves some of his arguments with regard to conflict of duties, from which he seems to have been interested in casuistry.

H. Gomoll, *Der stoische Philosoph Hekaton* (1931); M. Pohlenz, *Die Stoa* ii (1955), 123 f. W. D. R.

HECATONCHEIRES, hundred-handed monsters, Cottus, Briareos, and Gyges, sons of Heaven and Earth (Hes. *Theog.* 147 ff.); aided Zeus against the Titans (713 ff.). Briareos (called Aegaeon by men) was brought by Thetis to protect Zeus against Hera, Poseidon, and Athena (*Il.* 1. 396 ff.).

HECTOR, in mythology, eldest son of Priam and Hecuba (qq.v.), and the bravest of the Trojan champions; husband of Andromache (q.v.) and father of Astyanax (*Il.* 6. 394 ff.). His name appears to be Greek ('holder', 'stayer'), and it is possible that he is the invention either of Homer or of some earlier poet. In the *Iliad* he first appears leading the Trojans out to battle (2. 807 ff.); he reproaches Paris for avoiding Menelaus (3.

38 ff.), and arranges the truce and the single combat between the two (85 ff.). He takes a prominent part in the fighting of books 5 and 6, but in the latter leaves the field for a while to advise the elders to make offerings to the gods. He thus sees Andromache for the last time and returns with Paris to the battle. In book 7 he challenges any Greek to single combat, and is met by the greater Aias, who has somewhat the better of it, they part with an exchange of gifts. In the next book he drives the Greeks back to their camp and bivouacs with his army on the plain. In the long battle of books 11-17 he takes a prominent part, leading the chief attack on the fortification of the camp and being struck down with a stone by Aias (14. 409 ff.), but restored by Apollo to the command of Zeus (15. 239 ff.). He dispatches Patroclus (16. 818 ff.). After the appearance of Achilles at the trench he again bivouacs in the open, against the advice of Polydamas (18. 249 ff.). After the rout of the following day he refuses to enter Troy (22. 35 ff.), but waits for Achilles, despite the entreaties of his parents. At Achilles' approach he flees, but after a long chase halts, deceived by Athena into thinking that Deiphobus has come to his aid. In the subsequent fight he is killed and his body dragged behind Achilles' chariot to the ships. After the burial of Patroclus, Priam ransoms his body (24. 188 ff.), and his funeral ends the *Iliad*. Later poets add nothing of importance to Homer's account.

Hector had a hero-cult in several places, notably at Troy and at Thebes, his supposed bones having been brought to the latter city at the bidding of an oracle (Julian, *Ep.* 79 Bidez-Cumont; Lycophron, 1205 ff. and schol. there; Paus. 9. 18. 5). See Halliday in *Liverpool Annals* xi, 3 ff.

In art he is shown from the early sixth century setting out to fight, or in combat with Aias or another, and especially meeting his death at Achilles' hands. The dragging and ransom of his body are also shown (Brommer, *Vasenlisten*², 257 ff., 279, 288 ff.).

Farnell, *Hero-Cults* 328 f.

H. J. R.; C. M. R.

HECUBA (Ἑκάβη, Lat. *Hecuba*), in mythology, chief wife of Priam (q.v.), daughter of Dymas king of the Phrygians (*Il.* 16. 719; but later writers, as Eur. *Hec.* 3, call her father Cissus). Who her mother was posed a problem to mythologists in Tiberius' time (Suet. *Tib.* 70). She was the mother of Hector (q.v.) and eighteen others of Priam's fifty sons (*Il.* 24. 495-7), the most noteworthy being Paris (q.v.).

In Homer she is a stately and pathetic figure, coming only occasionally into the foreground, as in the lament for Hector (*Il.* 24. 747 ff.). In Tragedy she is more prominent. Euripides (*Hecuba*) tells the following story of her last days. Her son Polydorus (q.v. 2) had been murdered by the Thracian Polymestor, to whom he had been entrusted; the discovery of his body came as a final blow to Hecuba after the sacrifice of her daughter Polyxena (q.v.). By a desperate appeal to Agamemnon, she got permission to revenge herself and, enticing Polymestor into her tent, she and her women killed his children and blinded him. He then foretold that she should turn into a bitch before her death, the place Cynos Sema getting its name from her tomb. In Eur. *Tro.* 969 ff., she so convincingly accuses Helen that Menelaus promises to kill her on reaching home, one of Euripides' curious departures from tradition. In several plays no longer extant, e.g. Ribbeck, *TRF, incert.* 5, from some Greek model, she was represented as dreaming, while carrying Paris, that she brought forth a torch, which burned all Troy (Apollod. 3. 148). All these legends appear in numerous variants, with rationalizations, more or less fanciful additions, and so forth, as is usual with much-handled themes. H. J. R.

HEDYLUS (fl. 280 B.C.), Greek epigrammatist, came from a family of Athenian poets and lived in Samos and Alexandria. He has a few gay poems in the Greek Anthology (q.v.) and others are cited by Athenaeus: drink and feasting are his main themes. He worked closely with Asclepiades (2) and Posidippus (2) (qq.v.) but his tone is coarser.

Gow and Page, 1825 ff. W. and M. Wallace, *TAPA* 1939, T. B. L. Webster, *Hellenistic Poetry and Art* (1964), ch. 2. G. H.

HEGEMON of Thasos, parodist, described 'by some' as a poet of Old Comedy (Ath. 1. 5 b. But Ath. 15. 699 a γέγραφε δὲ καὶ κωμῳδίαν εἰς τὸν ἀρχαῖον τρόπον ἢ ἐπιγράφοι Φιλίῳ suggests a later date for him). For Aristotle (*Poet.* 2. 1448^b12) Hegemon is ὁ τὰς παρῳδιῶν ποιήσας πρῶτος, in that Hegemon raised Parody (already cultivated by others, see PARODY) into an independent genre with a separate place of its own in competitions. A passage of Hegemon (21 vv.) is quoted by Athenaeus (15. 698 f.) from Polemon: Hegemon's verses claim for his performance 50 drachmae, the second prize, and Polemon attests the victory of Hegemon at Athens with his *Gigantomachia* and other parodies.

For two verses of the *Philine* see CAF 1. 700. Brandt, *Corp. poet. ep. Graec. lud.* 37 ff., *FCG* 1. 214 f. W. G. W.

HEGESANDER of Delphi (2nd c. B.C.) wrote at least six books of *Mémours* (ὑπομνήματα: Ath. 162 a), an ordered collection of unreliable anecdotes concerning Hellenistic kings, parasites, courtesans, philosophers, etc.; references mainly in Athenaeus (*FGH* iv. 412-22).

HEGESIAS (1) of Cyrene, head of the Cyrenaic school between Parabates and Anniceris in the time of Ptolemy Soter (who died 283 B.C.); nicknamed *Πεισιθάνατος* because in his *Ἀποκατεργῶν* he advocated suicide. He was expelled from Alexandria because of the scandal caused by his lectures.

G. Giannantoni, *I Cirenaici* (1958), E. Mannebach, *Aristippi et Cyrenaeorum Fragmenta* (1961). W. D. R.

HEGESIAS (2) of Magnesia (3rd c. B.C.), historian and orator. Some fragments of his *History of Alexander* survive (*FGH* 142). All ancient judgements of his style are hostile; as the typical 'Asianist' (see RHETORIC, GREEK § 3), he was the *bête noire* of classicizing writers from the time of Cicero onwards (see, e.g., Cic. *Brutus* 286; Dion. Hal. *de compositione verborum* 4. 28; 'Longinus' 3. 2). His fragments show strongly rhythmic short cola, eccentric expression, and 'Gorgianic' figures.

Norden, *Ant. Kunstpr.* 134 ff.

D. A. R.

HEGESIPPUS (1) (c. 390-c. 325), Athenian statesman, contemporary with Demosthenes, nicknamed *κραιβύλος* ('top-knot') from his old-fashioned hair style, an obscure but not unimportant figure. He was already a man of note in the 350s, and in 355 proposed the decree of alliance with Phocis. In the 340s he became prominent as a vigorous opponent of Philip, and appears to have been one of the very few Athenian statesmen who opposed the making of the Peace of Philocrates (Schol. ad Dem. 19. 72). In 344/3 he played a decisive part in obstructing the offer of Philip, brought by Python of Byzantium, to turn the Peace into a Common Peace of all the Greeks. With Demosthenes' support, Hegesippus persuaded the Athenians to send him on an embassy to renew their claim on Amphipolis, which they had renounced in 346; as was to be expected, he was unceremoniously received by Philip, and, when in early 342 Philip made the offer again, Hegesippus exerted himself to secure its final rejection. The speech of *Halonneso* ([Dem.] 7) is now generally agreed to be his contribution to the debate on that occasion (Dionysius of Halicarnassus, who accepted it

as Demosthenic despite strong contrary indications of style, was not followed by Libanius). The speech is misleadingly titled from the first topic with which it deals; it is really concerned to answer a letter from Philip *περί τῆς ἐπανορθώσεως τῆς εἰρήνης* (§ 18 ff.) and manifests a complete refusal to assent to the decisions of 346. His policy was, in short, like that of Demosthenes, to seek a renewal of the war (cf. Plut. *Mor.* 187 e and Aeschin. 2. 137). He was still active in politics after Chaeronea, but was not one of the demagogues whose surrender Alexander demanded in 335. G. L. C.

HEGESIPPUS (2), New Comedy poet, who, like others in this period, mentions Epicurus (fr. 2). In *fr.* 1 a vain-glorious cook expatiates upon his art.

FGG iv. 479 ff., *CAF* iii. 312 ff.

HEGESIPPUS (3) (fl. 300 B.C.), a professional writer of epigrams: eight of his poems are in the *Greek Anthology*, most of them authentic inscriptions for tombs and votive tablets. His language is noticeably formal, archaic, and impersonal.

HEIRCTE (Ἑῖρκτη, 'Ἐρκταί, 'Ἐρκτή), a mountain near Panormus (Palermo) in Sicily, seized and held by Hamilcar Barca (247-244 B.C.) in order to strike at the rear of the Roman armies besieging Drepana and Lilybaeum and to threaten Panormus. Its identification with *Monte Pellegrino* has been maintained by De Sanctis (*Stor. Rom.* iii. 1. 181) against J. Kromayer (*Antike Schlachtfelder* iii (1912), 1), who identifies it with *Monte Castellaccio* north-west of Palermo.

Polych. 1. 56 (cf. Wallbank, *Commentary* ad loc.).

II. II S.

HEKTEMOROI (ἑκτέμωροι, 'sixth-part men'), a class of peasants in Attica before Solon (q.v.). Exactly what they were and what Solon did for them was not clearly remembered and is much disputed. Most probably they were in origin free small-holders who in difficult times had borrowed corn from wealthier neighbours. These, in default of repayment, progressively took over their land, planting on it markers of wood or stone (*ῥοποι*) as a sign of ownership, but allowed them to continue to farm it as serfs, on condition they handed over one-sixth of the produce. If they failed to do this, they and theirs were apparently liable to be sold into slavery. Solon cancelled their debts and restored their land to them, removing the markers.

N. G. L. Hammond, *JHS* 1961, 76 ff., A. French, *Hist.* 1961, 242 ff., *Growth of the Athenian Economy* (1964), 10 ff.; F. Cassola, *PP* 1964, 26 ff., with full bibliography; also E. Will, *Rev. Ét. Anc.* 1957, 5 ff., G. Ferrara, *PP* 1960, 20 ff.; R. J. Hopper in *Ancient Society and Institutions* (1966), 119 ff. A. W. G., T. J. C.

HELEN (Ἑλένη), daughter of Zeus and Leda, or Nemesis (qq.v.). She is one of the most plausible examples of a 'faded' goddess, i.e. one whose original deity has been forgotten, and who has been consequently made into a mortal woman in mythology. This is not proved by her having had a cult at Sparta and elsewhere (Farnell, *Hero-Cults*, 323); we may compare, for instance, the much more widely spread worship of Heracles (q.v.). But her non-Greek name, her association with trees (*Δεδῶρις* at Rhodes, Paus. 3. 19. 10, with a story that she was hanged on a tree, cf. Artemis *Ἀπαρχομένη*, *ibid.* 8. 23. 6-7; 'Helen's tree' at Sparta, Theoc. 18. 43 ff.), and her connexion with birds (she is born from an egg and Zeus takes bird-form to visit her mother; cf. Nilsson, *Minoan-Mycenaean Rel.* 2, ch. 10, for epiphanies of Minoan gods in bird-shape) all fit an ancient, pre-Hellenic goddess, probably connected with vegetation and fertility, better than a dimly remembered princess, or even a purely imaginary human member of an ancient royal

family. It is in no wise impossible that an old deity traditionally worshipped by the pre-Dorian population of Laconia had been taken, long before Homer, for an ancestress of their kings. Even in Homer she has something daemonic about her, e.g. the mere fact of being her husband is Menelaus' passport to Elysium (*Od.* 4. 569). Also, as Nilsson (*GGR* 1², 475) has stressed, the legends of her being carried off fit a goddess of vegetation.

In the *Iliad* and *Odyssey* she is the human wife of Menelaus, who has been carried off to Troy by Paris (q.v.). She is, while at Troy, Paris' wife, not his mistress, but feels deeply the anomalous position of being the legal wife of two different men in different places (see *Il.* 3. 139-40, 443 ff.; 24. 763 ff.). Her sympathies are on the whole with the Greeks, but on occasion she is decidedly pro-Trojan, as *Od.* 4. 274 ff. There seems to have been no difficulty about a reconciliation between her and Menelaus after the war, and in the *Odyssey* she is living happily with him at Lacedaemon. Her carrying off by Paris is the cause of the war (*Il.* 3. 87 and often).

Later authors, not realizing that Agamemnon was overlord of Mycenaean Greece, elaborate the reasons for the war. Besides the original plan of Zeus (cf. NEMESIS, and add Hesiod, fr. 96. 58 ff. Rzach), she was wooed by the noblest men in Greece, and they all swore to support the rights of her husband, whoever he might be (authorities and variants in Rose, *Handb. Gk. Myth.* 249, note 7). Others tell the story of her earlier and later life. She was carried off when a mere child by Theseus (*Plut. Theb.* 31 and elsewhere; cf. DIOSCURID). At the sack of Troy Menelaus was at first disposed to kill her (see Robert, *Bild und Lied* (1881), 76 ff.; cf. ILICUBA). She never went to Troy at all, but Paris carried off a phantom of her, (Stesichorus; J. Vürtheim, *Stesichoros' Fragmente* (1919), 64 ff.). She appears as St. Elmo's fire (schol. *Eur. Or.* 1637; Pliny, *IIN* 2. 101). See also ACHILLES.

Her chief appearances in art, from the sixth century, are: her abduction by Theseus; her wedding to Menelaus; her flight with Paris; the wedding to Paris in Troy; Helen with Paris; her recovery by Menelaus (who sometimes attacks her with drawn sword). On some late fifth- and fourth-century vases we find her hatching from the egg; and Agoracritus showed her on the base of his Nemesis at Rhamnus being presented to Nemesis by Leda.

Farnell, *Cults* ii 675; *Hero-Cults* 123 ff.; and the dictionaries and handbooks of mythology. In art, Brommer, *Vasculisten*, 168 f., 291 ff., 311, 320, 326, 362 f.; Ghali-Kahil, *Les enlèvements et le retour d'Hélène* (1955). H. J. R.; C. M. R.

HELENUS, in mythology, son of Priam, warrior and prophet. In the *Iliad* he gives prophetic advice to Hector (6. 76, 7. 44), and is wounded by Menelaus at the battle of the ships (book 13). Captured by Odysseus, he prophesied the fall of Troy if Philoctetes was brought there with his bow (*Soph. Phil.* 604-13). After the fall of Troy he was carried off by Neoptolemus, who gave him Andromache as his wife (*Eur. Andr.* 1243). They settled in Epirus and made 'a little Troy'; there they were visited by Aeneas, to whom Helenus prophesied his future wanderings (*Verg. Aen.* 3. 294-505). C. B.

HELIAIA (ἡλιαία) seems originally to have meant just 'assembly', but in Athens the term was used specifically for an assembly of citizens meeting to hear appeals against magistrates' verdicts, or to impose penalties above certain limits, according to the procedure instituted by Solon (q.v.). When this function was taken over by juries, *heliaia* was sometimes used to mean the whole body of jurors, and ἡλιαστὴς was a word for 'juror', synonymous with δικαστής. But more often *heliaia* was

used as the name of one particular court, the court of the *thesmothetai* (q.v.).

See DIKASTERION and the bibliography there.

D. M. M.

HELICON, the largest mountain of Boeotia (5,868 feet), between Copais and the Corinthian Gulf; and particularly the summit behind Thespieae, which contained the sanctuary of the Muses in a glen. There are remains of an Ionic temple, theatre, and statues of the Muses; games were held every fourth year in their honour. On its slopes lay Ascra, the home of Hesiod. The spring Hippocrene, struck by Pegasus' foot from the rock, the inspiration of poets (*Prop.* 3. 3; legend and function are Hellenistic), is a little below the summit.

PAUS. 9. 28-31; Bölte, Mayer, and Fiehn, *PW* viii. 1 ff., 1853 ff.; xvi. 896 ff., 821; P-K, *GL* 1 u. 434 ff. See also THIESPIAE. T. J. D.; R. J. H.

HELIODORUS (1) of Athens wrote (c. 150 B.C.?) *Ἀναθήματα* (title varies), fifteen books on artistic works on the Athenian Acropolis, with historical and other digressions.

Ath. 6. 229 c; 9. 406 c; 2. 45 c (?); Pliny *IIN* 1. 34-5; *FGrH* iii. 373.

HELIODORUS (2), a metrist who flourished in the middle of the first century A.D. He gave Aristophanes' comedies a colometry (division of the text into cola), adding metrical signs (συνμετρία) and a continuous metrical analysis. Much of his labours is preserved in the scholia to Aristophanes. He was the principal authority used by Juba (q.v. 3).

J. W. White, *The Verse of Greek Comedy* (1912), 384 ff. K. J. D.

HELIODORUS (3), a popular surgeon of the time of Juvenal (who lived c. A.D. 60-140; cf. *Juv.* 6. 373), probably from Egypt. He belonged to the pneumatic school.

WORKS: (1) *Χειρουργούμενα* (principal work, chiefly known from Oribasius); (2) ? *Περὶ ἀνθρώπων πραγματεία* or *Ἐπιμήχανος*; (3) *Περὶ ὀλισθημάτων πραγματεία*; (4) *Περὶ ἐπιθέσεων* (on bandages); (5) *Περὶ μέτρων καὶ σταθμῶν*; (6) *Epistula phlebotomiae* (Lat. transl.). See SURGERY, § 6.

W. D. R.

HELIODORUS (4), Greek romancer, author of the *Aethiopica*, the longest and best constructed of the Greek novels extant. His floruit is generally put (Münchinger) at A.D. 220-50, on the basis of admittedly treacherous stylistic comparisons with other romancers and authors. Whether he is to be identified with the Heliodorus who became a Christian bishop (Socrates, *Hist. Eccl.* 5. 22) is doubtful. Heliodorus was from Emesa in Syria, as he says (*Aeth.* 10. 41), calling himself 'son of Theodosius, of the race of the Sun', which seems to point to some family connexion with the Helios cult established in that town. The environment did not fail to influence our author, whose work is penetrated with sincere religious piety, pervaded by an edifying tone and free from licentiousness. Heliodorus' syncretistic faith is deep: Helios (identified with Apollo) holds the personages (often through his priests) in leading-strings. The story is that Charicleia, the daughter of the queen of Aethiopia, having been born white and consequently exposed by her mother for fear of the king's suspicions, had been brought up by priests and became herself a priestess of Apollo in Delphi, where she meets, and falls in love with, a noble Thessalian by the name of Theagenes. After innumerable adventures and much wandering the enamoured couple are finally married, in the very presence, and with full approval, of the Aethiopian royal couple. The scheme of the plot is evidently the traditional

one in the genre (the triumph of two lovers over all difficulties; there are, of course, battles, abductions, pirates, robbers, tortures, voyages, all the compulsory ingredients). Language and style, too, are very much in accordance with the genre: Heliodorus follows the canons of the sophistic *apheleia*, his diction is pure Attic (although vulgarisms escape him now and then), there are excursions on natural phenomena, descriptive *ekphrasis*, letters. The author's literary pretensions are evident in the use of excessively daring metaphors and recherché expressions; unlike Achilles Tatius, he often indulges in ample sentences with frequent use of participles, in harmony with the amplitude of his work. Heliodorus' characterization is weak, as Byzantine critics did not fail to note: this is another point which he has in common with the romancers. He is lacking in sense of humour, and his—fortunately rare—*argutiae* are frigid. On the other hand, the author's literary knowledge was unusually wide, as appears from his frequent and often apt quotations and allusions. What makes Heliodorus excel over the other Greek romancers is, however, his skilled and unsurpassed technique of narration: he superbly masters the development of the plot, which, in spite of its amplitude and complexity, never becomes confused. The novel brings us in *medias res*: our interest is immediately, and for ever, captivated. Through 'flash-back', appropriate concatenation of the many accessory episodes, 'surprises' intervening at the right moment, the tension is never relaxed: he mentions himself some elements of his technique in *Aeth.* 10. 39. The Byzantine critics particularly admired Heliodorus for the skilled *oikonomia* of his narration and his edifying tone; their admiration was inherited by the Renaissance. Scaliger praised him very highly, and so did Tasso, who modelled the early life of one of his heroines (Clorinda, in *Gerusalemme Liberata* 12. 21 ff.) on that of Charicleia. Calderon's *Los hijos de la Fortuna* and Cervantes' *Persiles y Sigismunda* are modelled upon Heliodorus' romance. After the appearance of the editio princeps (1534) and Amyot's French translation (1547) innumerable translations in modern languages were published (German, Italian, Spanish, English, Dutch).

EDITIO PRINCEPS. Basel, 1534 (Opsopoeus).
STANDARD EDITIONS. Colonna (Rome, 1938); Rattenbury-Lumb-Maillon (Paris, 1935-43, 3 vols., with excellent introduction and preface on text, style, etc.; repr. 1960).
COMMENTARY. Coraas (Paris, 1804, in modern Greek).
CRITICISM. Münscher, *PW*, s.v. Heliodorus 15; Rohde, *Griech. Roman* 453 ff.; Christ-Schmid-Stählin II. 2^a, 820 ff.; A. Lesky, *Gesch. d. griech. Litt.* 3 (1963), 922 ff.; J. Fritsch, *Der Sprachgebrauch des Heliodor und sein Verhältnis zum Atticismus* (1901-2) (2 parts); H. Oeftering, *Heliodor und seine Bedeutung für die Literatur*, (1901); H. Dorrie, H. DATE: late fourth century: R. Keydall, *Polychronicon für F. Dölger* (1966), 345 ff. G. G.

HELIOPOLIS (modern *Baalbek*) was the religious centre of the Ituraean tetrarchy (q.v.), after whose dissolution it received a Roman colony (c. 16 B.C.). The huge temple of Jupiter-Hadad (1st. cent. A.D.), its two courtyards (completed under Philip the Arab), the adjacent temple of Bacchus (Antonine period), and another small circular temple are among the most impressive monuments of the Syrian school of Hellenistic architecture.

T. Wiegand, *Baalbek* (1921-5); O. Eissfeldt, *Tempel und Kultus römischer Städte* (1941); P. Collart and P. Coupel, *L'Autel monumental de Baalbek* (1951). A. H. M. J.; J. S.

HELIOS, the Sun-god. The general attitude towards the heavenly bodies in Greece seems to have been that although undoubtedly gods (cf. the indignation at Athens over Anaxagoras' announcement that the sun was a material body, *Diog. Laert.* 2. 12; and Nilsson's com-

ments, *Harv. Theol. Rev.* 1940), they were no concern of mankind, or at most were beings to be saluted with due reverence on occasion (*Pl. Leg.* 887 e), not to receive a regular cult, as did those gods who dwelt in the cities or country-side, like Athena or the Nymphs, or at farthest on hill-tops, like Zeus. Hence the traces of sun-cult in Greece proper are few and often uncertain (see Farnell, *Cults* v. 419 f.). Rhodes, however, had a vigorous cult of Helios, which is one of several non-Greek features in its classical culture. He appears to have been the chief national god (*Diod. Sic.* 5. 56. 4), and the local legend (*Pind. Ol.* 7. 54 ff.) makes the island his peculiar property, chosen by him before it rose to the surface of the sea, and his sons its chief early inhabitants, after whom the leading towns were named; their mother was the eponymous nymph of the country, Rhodos. His festival was the Halicia (Nilsson, *Feste* 427); it was celebrated with much splendour and included important athletic contests, though never rising to the level of the Great Games. Outside of actual cult, Helios is often appealed to as a witness of oaths and the like, as *Il.* 3. 277, because, as there stated, he sees and hears everything.

He has not much mythology; for the most interesting story about him see PHAETHON. He is regularly conceived as a charioteer, who drives daily from east to west across the sky. The question how he got back again during the night was evidently discussed very early, and the quaint solution evolved that he floated around the earth by the stream of Ocean in a huge cup (references collected in Athenaeus, 469 c ff.).

In later times the theological importance of Helios increased considerably, owing to the growing tendency to identify him with other gods. In the case of Apollo (q.v.), this is as early as the fifth century B.C., and doubtless the allegorizing tendency of the Stoics, who very commonly sought a physical explanation of myths, made its contribution a century or so later; but the strongest impetus in this direction was given by the late imperial increase of actual cult of the Sun, culminating in making him in some sense the principal god of the Empire from Aurelian on. The *locus classicus* is Macrobius, *Sat.* 1. 17. 2 ff., where by a series of ingenious arguments the proposition is supported that all the gods, 'dumtaxat qui sub caelo sunt', i.e. with the omission of the transcendental powers outside the material universe, are powers or activities ('uirtutes', 17. 4) of the sun; but Macrobius' own quotations, beginning with Verg. *G.* 1. 6, show that the theory had been long growing.

Farnell, *Cults* v. 417 ff.; Rapp in Roscher's *Lexikon*, art. 'Helios'; Cumont, *Rel. or.*, see index, s.v. 'Solcel'; Nilsson, *ARW* 1933, 141 ff.; Cumont, *Mélanges Budé* (1934), 141 f. For the developments in late periods, see Nilsson, *GGR* II. 486 ff. H. J. R.

HELLANICUS of Lesbos was a contemporary of Herodotus who outlived him and was still writing in 406 B.C. (*Schol. Ar. Ran.* 694); since the name 'Ελλάνικος appears to commemorate a 'Greek victory' one tradition held that he was born on the day of Salamis (*Vit. Eurp.* 2). He was a prolific writer, and fairly extensive fragments survive which mention twenty-four separate titles. His work falls into three groups:

(1) Mythographic works, which attempted to bring order into the contradictions of mythology, often with bold innovations. *Phoromis*, *Deucaeloneia*, *Atlantis*, and *Asopis* offered systematic accounts of heroic families; *Troica* continued the story after the fall of Troy and brought Aeneas to Italy. These works were used extensively by Dionysius of Halicarnassus in his *Roman Antiquities* and in Apollodorus, *Bibliotheca*.

(2) Regional history or ethnography, e.g. *Iesiaca*, *Boeotica*, *Aegyptiaca*, *Persica*, *Scythica*, *Βαρβαρικά νόμια*.

(3) Local history and chronology, e.g. *Atthis*, the first

history of Athens from earliest times (see ATTHIS), cited by Thuc. 1. 97 for its inadequate chronology of the fifth century; a chronological table based on lists of *Priestesses of Hera in Argos* (cf. Thuc. 2. 2.); and a list of *Carnean victors*.

His style is said to have been undistinguished (Cic. *De Orat.* 2. 12. 53).

FHG 1. 45-60; *FGH* i (ed. 2 1957), no. 4, iii H. 40 50, in b Suppl. 1. 57; Jacoby, *Gr. Historiker* (1956), 262 ff. (repr. of *PW*); *Atthis* (1949), L. Pearson, *Early Ionian Historians* (1939), ch. 5; *The Local Historians of Attica* (1942), ch. 1; A. Lesky, *History of Greek Literature* (Engl. Transl. 1966), 330 ff. L. P.

HELLANODIKAI were the judges of the Olympian Games (q.v.). They were chosen from the ruling families of Elis, to whom also the revenues of the festival accrued. Dressed in purple robes, they had special seats, presented the victors with their crowns, and presided over the banquet which ended the festival. They exercised disciplinary authority over the athletes and imposed fines for breaches of their rules. F. A. W.

HELLEN (*Ἑλλης*), eponymous ancestor of the Hellenes, son or brother of Deucalion (q.v.; Thuc. 1. 3. 2; schol. *Pind. Ol.* 9. 68). His sons were Dorus, Xuthus (see *ΚΕΥΣΑ* 1) and Aeolus (q.v. 2) (Hesiod, fr. 7 Rzsch); i.e. the Dorian, Ionian, and Aeolian have a common ancestry. This is not mythology, but early ethnological theory cast in the traditional mythological form of a genealogy.

H. J. R.

HELLENES (*Ἕλληνες*), the national name of the Greeks. Originally it was confined, as well as the territorial name of Hellas, to a small tribe in south Thessaly (Horn. *Il.* 2. 683 f.). Perhaps these were in some way related to the Selloi or Helloi of Dodona (though these were a priesthood, not a tribe); the surroundings of Dodona were called Heliopia (cf. Arist. *Met.* 1. 352^a 31 ff.). The name of 'Hellenes' wandered southwards, probably in connexion with the migration of the Dorians and the western tribes. We do not know how the name spread further. 'Panhellens' was earlier than 'Hellenes' (*Il.* 2. 530, Hes. *Op.* 528, Archil. 54 D), but was nothing but an extended tribal name. Homer calls the Greek people Achaeans, Argives, or Danai. The name 'Hellenes' for the Greek people in general is probably not older than the seventh century B.C. For their eponymous ancestor, Hellen, father of Dorus, Aeolus, and Xuthus (whose sons were Ion and Achaëus), see the preceding article. The name of the judges at the Olympian Games (*Hellanodikai*, q.v.) may indicate that the name of Hellenes was first used at the Games. In calling the treasurers of the Delian League *Hellenotamiai* (q.v.) it was made clear that they were not State officials; at the same time, there may have been the implicit idea of a Hellenic league.

Entretiens Hardt, vol. 8, V. Ehrenberg, *The Greek State* (1960). V. E.

HELLENOTAMIAI ('Treasurers of the Greeks') were the financial overseers of the Delian League, with their office in Delos from 477 to 454 B.C., thereafter in Athens; from the first, however, they were Athenian officials, elected at Athens, and they were ten in number. After 454 they were elected perhaps by vote, normally one from each *phyle*, and received, through the *apodektai* (q.v.), the tribute from the cities of the League, subject to audit by the *logistai* (q.v.). They had general management of the tribute for the year, paying out sums on the instruction of the *ekklesia*, chiefly to *strategoi*, sometimes for other purposes (such as the Acropolis buildings). After 411 they received wider powers (see *KOLAKRETAI*); with the fall of the Athenian Empire in 404 the office was abolished.

A. G. Woodhead, *JHS* 1959, 149 ff.

A. W. G.

HELLESPONT, the narrow strait dividing Europe from Asia at the final exit of the waters of the Black Sea and Marmara into the Aegean—the modern Dardanelles. It was crossed by the Persian army under Xerxes between Sestos and Abydos, at the narrowest part near the modern Nagara Point. It was again crossed by Alexander the Great in 334 B.C. A strong current runs out from the Hellespont into the Aegean. Callipolis (*Gallipoli*), Lampascus, Sestos, and Abydos are on its shores, with the sites of Troy and Dardanus on the Asiatic side. All cities alike derived much of their wealth from the fisheries, and from the passage of people and armies from Europe to Asia and vice versa. The name Hellespont is connected with the legend of Phrixus and Helle (see *ATHAMAS*).

J. Boardman, *The Greeks Overseas* (1964), 275 ff.

S. C.

HELOTS. Some Greek States had servile populations who were not proper, privately owned slaves (q.v.) but stood 'between the free men and the slaves' (*Poll. Onom.* 3. 83). Unlike slaves, they were not imported from outside but were subjected *en bloc* in their own territories, either during the 'dark age' in early Greece and Crete or during the later Greek expansion, western and eastern. They were engaged chiefly in agriculture and pasturage and in domestic service, and their historical importance was primarily in the less urbanized States. Very little is known about any of them other than the helots of Sparta (q.v.) and it is therefore convenient to group them under this rubric, without, however, implying that they were all in precisely identical positions. Much of the surviving information comes from the lexicographers, who were attracted by their curious names and the opportunity for fanciful etymological play: the *prnestai* of Thessaly, the *gymnetes* of Argos, the *korynephoroi* of Sicyon, the *Mariandynoi* of Heraclea Pontica, the *Kylllyrioi* of Syracuse, and the various odd names in Crete. 'Helots' were probably more widespread, at one time or another, in Sicily, Asia Minor, and what are now Rumania and Russia, than this mere collection of names might suggest.

The helot system in Laconia (q.v.) presumably originated during the migrations and resettlement following the Mycenaean breakdown, and it was then extended to Messenia (q.v.) by conquest. Actual figures are unavailable (the 7:1 ratio implied by Hdt. 9. 10, 29 is unacceptable), but the helots clearly outnumbered the Spartans and perhaps even the total free population of Laconia, a balance unknown in communities with a genuine slave population. Unlike slaves, too, helots maintained genuine family, and even community, relations. They were a self-perpetuating body who survived, without recruits from outside, in Messenia until Thebes freed them in 369 B.C., in Laconia until King Nabis (q.v.) early in the second century B.C. They were 'owned' by the State (Strabo 8. 5. 4), who had the sole power to manumit, exercised only exceptionally, in particular when, from the Peloponnesian War on, manpower shortage compelled the enrolment of surprisingly large numbers in the hoplite ranks. After manumission helots became *Neodamodeis*, a status about which hardly anything is known.

The main responsibility of helots to their individual Spartan masters was the provision of a fixed quota of supplies (keeping the surplus for themselves) and some domestic service, including that of batman on campaign. The extent to which individual Spartans could dispose of their helots by gift, dowry, or possibly even sale, is unclear, nor is it known if and how the State replaced anyone's depleted stock (e.g. as the result of enrolment in the army). Control and punishment were exercised both by individuals and by the State (see *KRYPTETAI*).

Greek writers stressed Spartan brutality towards the helots (e.g. Thuc. 4. 80). If helot revolts are attributed chiefly to that, the difficulty arises of explaining their

employment in the army or the fact that the great revolts were restricted to the Messenian helots. Probably the emphasis should rather be on 'national' cohesion, the element lacking in the large slave concentrations (who did not revolt). Aristotle noted (*Pol.* 1272^b16) the quiescence of the servile population in Crete and explained the difference in behaviour by the absence of foreign intervention. Some support comes from the Argive revolt (*Hdt.* 6. 83), probably, in 494 B.C., in conjunction with the invasion by Cleomenes (q.v. 1), possibly from the Sicel revolt under Ducetius (q.v.), and perhaps from the Crimean revolt under the Scythian Saumacus at the time of Mithridates VI (q.v.).

HELVETII, a Celtic tribe originally located in south Germany, which migrated gradually c. 200 B.C. to an area between the Rhine, the Jura, and the lake of Geneva. Part of it joined the Cimbri c. 111, and a migration (probably not, as Caes. *B.Gall.* 1. 29. 1, *en masse*) in 58 was defeated by Caesar, who sent the remnants home, allowing them, however, the privilege of a *foedus*. Under Augustus they formed part of *Gallia Belgica*, later of *Germania Superior*, with the normal organization of a cantonal senate at the capital, *Aventicum* (q.v.: *Avenches*), and *pagi*. The region paid dearly for opposition to Vitellius (A.D. 69); Vespasian, however, restored Avenches with the title of colony, and a period of prosperity began. From c. A.D. 260, when the *Limes* was abandoned, the region was exposed to the attacks of Alamanni and was heavily fortified. By 460 it was under the control of Burgundians and Alamanni.

HELVIDIUS PRISCUS, son of a *principularis* from Samnium, was *tr. pl.* A.D. 56, praetor 70. In early youth he studied philosophy seriously, and about 55 married (as his second wife) Fannia, daughter of Thraseus (q.v.) Pactus, whose political doctrines he shared. Exiled after his father-in-law's condemnation, he returned under Galba; and though earlier a friend of Vespasian, he took a critical attitude towards the Flavian regime from the start (*Tac. Hist.* 4. 6-8, 43). Later his attacks on the Emperor became violent, and he was exiled and subsequently executed (? 75). If Tacitus was right in ascribing Stoic principles to him, the *δημοκρατία* which Dio Cassius (65. 12) says he preached can hardly have been rule by the people: it was probably the old aristocratic ideal of *libertas* not necessarily Republicanism, but perhaps including strong opposition to Vespasian's conception of an hereditary principate.

Helvidius' son by his first marriage, a friend of Tacitus and Pliny the Younger, became consul under Domitian but was executed c. 93.

D. R. Dudley, *A History of Cynicism* (1937), 132 ff.; Rostovtzeff, *Roman Empire*, 114 ff.; Syme, *Tacitus*, see index. G. E. F. C.

HEMITHEA, in mythology a daughter of Sraphylus, was established by Apollo as a healing deity at Kastabos in the Carian Chersonese (*Diod.* 5. 62-3). Her sanctuary has been identified on a spur of the Eren Dag. The temple, in the Ionic order with 6 by 12 columns, was

built in the late fourth century, and the cult was at its height in the following period of Rhodian domination.

J. M. Cook and W. H. Plommer, *Sanctuary of Hemithea at Kastabos* (1966). J. M. C.

HENDEKA. The Eleven (*οἱ ἑνδεκα*) were Athenian officials, appointed by lot, who had charge of the prison and executions. They took into custody persons accused of theft or certain other crimes. If an accused man admitted guilt, they executed him without trial; if he denied it, they presided over the lawcourt which tried him. They also carried out the confiscation to the State of the property of an executed criminal.

Arist. *Ath. Pol.* 52. 1. J. H. Lipsius, *Das attische Recht und Rechtsverfahren* (1905 15), 74 ff.; U. E. Paoli, *Rev. Int. des Droits de l'Antiquité* 1957, 151 ff. D. M. M.

HENIOCHUS, Middle Comedy poet. One of his plays was named *Πολύευστος*, not necessarily after the well-known partisan of Demosthenes: it was a common name. From the prologue of a piece (fr. 5), perhaps entitled *Πόλεις*, eighteen verses are spoken by a deity or abstraction who introduces the assembled States (did they form the chorus?); they have come to Olympia to make thank-offerings for freedom, but the disturbing influence of *Δημοκρατία* and *Ἀριστοκρατία* thwarts their purpose. This perhaps refers to the time of the Corinthian alliance under Philip, 338 B.C.

HEPHAESTION (1) (c. 356-324 B.C.), son of Amyntor, a Macedonian noble, became a friend of Alexander the Great from childhood, and remained his closest companion. His military career after 330 was distinguished, and he was evidently a competent commander, though probably not the equal of Craterus or Ptolemy (or others who proved themselves later). His value to Alexander, however, apart from personal affection, lay in his sympathetic understanding of his dearest plans for the empire. Alexander revived for him the Persian office of 'chiliarch' (vizier), which, with other honours, marked him out as his first subordinate (324). Hephæstion seems to have been of an arrogant and possessive nature, and he was not liked by all, but his sudden death caused Alexander great grief, and he was mourned extravagantly.

Berve, *Alexanderreich*, no. 357.

G. T. G.

HEPHAESTION (2), metrist, probably to be identified with the tutor of Verus (A.D. 130-69). His treatise *Περὶ μέτρων*, originally written in forty-eight books, was reduced by successive abridgements to an *ἐγχειρίδιον* in one book, in which form it is extant. Ancient commentaries on Hephæstion sometimes enable us to reconstruct the earlier, fuller, versions; and parts of the extant treatise appear to belong to one of these versions, not to the final abridgement (*Π. σημείων* and *Π. παραβάσεως*), while others may not come from Hephæstion at all (*Π. ποιήματος*, *Π. ποιημάτων*). The work is divided into the following parts: (1) on long and short syllables; (2) on *συνεμφώνησις* (synizesis); (3) on feet, in general; (4) on catalexis; (5)-(13) on the various feet, including the antispast (— — —); (14) on cola composed of heterogeneous feet; (15) on *συνάρτητα* (combinations of two cola separated by diaeresis, e.g. the Archilochean dicolon); (16) on *πολυσχημάσις* (cola which assume varying forms). There follow appendices dealing with the building of a poetic structure out of lines and cola (*Π. ποιήματος*, *Π. ποιημάτων*) and with notation for elucidating that structure (*Π. σημείων*). Besides the *Encheiridion* various other works on metre are ascribed to Hephæstion in the *Suda*.

Hephæstion belonged to the school of metrists who

sought to explain metre by analysing it into its primary elements (*μέτρα πρωτότυπα*), that is, the feet, as opposed to others who derived all metres from the Homeric hexameter and the iambic trimeter. His treatment of lyric metre is almost confined to solo lyric and comedy, and he rarely tries his hand on the more difficult measures of choral poetry and tragedy. His procedure is extremely mechanistic, and we learn little from him directly of the true nature of Greek metric. But he has preserved many fragments of lost poems which are of great value to metrical science.

TEXT. M. Conabrich (Teubner, 1906).

J. D. D.

HEPHAESTUS (*Ἥφαιστος*), god of fire and especially of the smuthy fire. It is, however, extremely unlikely that this was his original character. Examination of the distribution of his cult (facts in L. Malten, s.v. 'Hephaistos', in *PW*) shows that it spreads from the volcanic regions of Asia Minor via Lemnos, which is also volcanic. This decidedly indicates that he was originally an Asianic deity of volcanic fire; that he is associated with volcanoes in Greek mythology (his forge is under Aetna, or one of the neighbouring islands, Callim. *Dian.* 47; Verg. *G.* 4. 170 ff., *Aen.* 8. 416 ff.) is less cogent, as such a notion might have grown up independently, to explain the eruptions of the mountain, considered as a huge chimney. But there is no doubt that for the Greeks he was a craftsman's god and himself a divine craftsman; hence the distribution of his cult in Greece itself, where it is practically confined to the most industrialized regions, being particularly prominent at Athens and partly displacing the old native worship of Prometheus.

His mythology is what might be expected from his development into a smith-god, which had taken place before Homer. Indeed his worship has been inferred from a tablet at Cnossos. He is lame (in an early community a lame man with strong arms would naturally become a smith, being handicapped for farming, fighting, or hunting), and consequently awkward in his movements and somewhat ridiculous (*Il.* 1. 597 ff.). He is constantly employed in making manifold works of all sorts (as *Il.* 18. 373 ff.; *Od.* 7. 91 ff.), clearly magical (a smith is often a magician also). He makes various famous objects, as Achilles' armour, Harmonia's necklace (see CADMUS), Agamemnon's sceptre (*Il.* 2. 101 ff.). His workmen are the Cyclopes (q.v.), though not in Homer (see Callimachus and Virgil, loc. cit. *supra*). He makes Pandora, the first woman (Hesiod, *Op.* 70 ff.), or mankind in general (Lucian, *Hermot.* 20; cf. PROMETHEUS. His parents are Zeus and Hera (Homer), or Hera alone (Hes. *Theog.* 927), but he was cast out of heaven by Hera, because he was misshapen (*Il.* 18. 395 ff.), or by Zeus, because he defended Hera against him (*Il.* 1. 590 ff.). A comic story of his return was told by Epicharmus in his *Κωμωδοί* (see Hyg. *Fab.* 166 and Rose ad loc.) and can be traced much earlier in archaic art. His wife is Charis (*Il.* 18. 382) or more usually Aphrodite (as *Od.* 8. 266 ff.), which is little more than an allegory, Craftsmanship allied to Grace or Beauty.

From the first half of the sixth century Hephaestus' return to Olympus is a favourite subject in vase-painting. He is also shown helping Zeus to give birth to Athena and in gatherings of Olympians; and from the fifth century delivering Achilles' arms to Thetis.

H. J. R.; C. M. R.

HERA (*Ἥρα*, Epic *Ἥρη*), an ancient, pre-Hellenic goddess. Her Greek name seems to be a title, 'lady', fem. of *ἥρως*; her native name is unknown. She is regularly said to be wife of Zeus, his numerous connexions with other goddesses being explained away by making

them either former wives or mistresses. But the natural suggestion that she is the earth, a common consort of the sky-god, lacks cogent evidence (see Farnell, op. cit. *infra*, 181 ff.). She is rather a deity of marriage and of the life, especially the sexual life, of women. Her connexion with Zeus is perhaps best explained by supposing that the Greeks on arrival found her cult too strong to be suppressed or ignored, supposing that they wished to do so, and made room for her by making her the wife (and sister) of their own principal god. It seems conceivable that the persistent stories of the quarrels of the divine pair (e.g. *Il.* 1. 540 ff.) reflect a faint memory of a time when the two cults were not fully reconciled. That in pre-Hellenic belief she should be very prominent and have either no male partner or none of any importance is quite in accord with what is known of early religion. She is associated with Zeus on a tablet from Pylus.

Mythologically, she is one of the children of Kronos and Rhea (e.g. Hes. *Theog.* 454); later versions differ only in details, as Hyg. *Fab.* 139, where Hera has not been swallowed by her father (cf. KRONOS) and saves Zeus from him. She is the mother of Ares, Eileithyia, Hebe, Hephaestus, and, in one account, of Typhon (q.v.). Beyond these points her story consists mainly of her hostility to Troy, and consequently in later authors, such as Virgil, to Aeneas (q.v. 1), and generally her bitterness against her numerous rivals and their offspring, see, e.g., LETO, SEMELE. In the story of the Argonauts (q.v.) she appears in all accounts as the friend and helper of Jason (q.v.). For her part in the Judgement of Paris, see PARIS.

Her most ancient place of worship seems to be Argos (q.v. 2), hence her very common title of *Ἀργεία*. But Samos (q.v.) certainly worshipped her from very early times also (references in Farnell, 253 f.), and there is abundant evidence for cults of her, many certainly old, all up and down the Greek world, both alone and with Zeus. Perhaps her most characteristic rite is the sacred marriage (q.v.), whereof more or less clear evidence can be had for eight places (Farnell, 185). She is also connected with the ritual of ordinary human marriage, as at Ceos (Callim. *Aet.* 3, fr. 1. 4 Mair), at least in legend. To her functions as marriage-goddess several of her titles refer, as *Zygia*, *Gamelia*, and so forth; for her remarkable surnames at Stymphalus see EPITHETS, § 2. She is also frequently connected with birth and the nurture of children; not only is she mother of Eileithyia (q.v.), but she is called Eileithyia herself (Hesychius s.v. (Argos), Farnell, 247, n. 28 c (Attica)).

At some places, especially Argos and Samos, she rises to the status of a city-goddess, a not unnatural development, considering the vital importance of increase to any State; but not many of her titles bear witness to a civic side of her activities (Farnell, 196 f.).

Associations with deities other than Zeus are occasionally to be found; for example, she is paired with Aphrodite (q.v.) (Paus. 3. 13. 9; Sparta, where an ancient statue of her was called Hera Aphrodite), and once or twice elsewhere.

Her ritual for the most part is not remarkable; at Argos she is connected with the ancient ceremonial of the Shield. At her festival, the *Heraia*, a shield was the prize at the athletic contests which took place, and an armed procession was a prominent feature. A detailed discussion of this somewhat unusual proceeding for the cult of a goddess (I. R. Arnold, *AJArch.* 1937, 436 ff.) would associate it with the Minoan-Mycenaean sacred shield and shielded goddess.

Hera was commonly identified with Juno (q.v.), occasionally with other foreign goddesses. She appears in archaic and classical art as a queenly figure with sceptre and diadem (in archaic sometimes a *polos*): alone; with

Zeus; in Olympian gatherings, fastened to the magic throne in pictures of Hephaestus' return.

H. J. R.; C. M. R.

HERACLEA ('*Ἡράκλεια*) (1), modern *Polisoro*, a Tarentine foundation in Lucania (432 B.C.), which replaced Siris (q.v.). Here Pyrrhus (q.v.) won his first costly victory over Rome, 280 B.C. By granting Heraclea an exceptionally favourable treaty Rome detached it from Tarentum c. 278 B.C. (Cic. *Balb.* 21 f.; *Arch.* 6 f.). The so-called *Lex Iulia Municipalis* (see *LEX, LEGES*) was found here (Dessau, *ILS* 6085).

For bibliography see *MAGNA GRAECIA*.

E. T. S.

HERACLEA (2) (*ἡ πρὸς Λάτμῳ*), a Carian city on the slope of Mt. Latmus (famous for the legend of Endymion) at the head of the gulf east of Miletus. Originally called Latmus it was refounded (perhaps by Mausolus) with the new name, and may have been the Heraclea occupied by Pleistarchus, brother of Cassander, c. 300 B.C. The fortifications are excellently preserved.

F. Kriechen, *Milet* iii. 2 (1922).

J. M. C.

HERACLEA (3) **PONTICA**, a Megarian and Boeotian colony founded c. 560 B.C. among the Mariandyni, whom the colonists reduced to serfdom, but agreed not to sell outside the city territory. Heraclea at one time controlled much of the coast as far as Cytorus; it founded two colonies, Callatis and Chersonesus, and was active in Euxine trade, its people being among the chief navigators there in the days of Xenophon. Civil discord led to tyranny, which lasted eighty-four years (until 280 B.C.), and is said, when at its height, to have been the town's best period. Clearchus, a pupil of Plato and Isocrates, who seized power in 364/3, was murdered in 353/2. He was succeeded by his brother Satyrus and then by his two sons Timotheus and Dionysius. Dionysius, who ruled 337/6–305, extended his dominions in 334, supported Antigonus I, and finally took the title king. He was succeeded by his widow Amastris (a Persian princess and former wife of Craterus); she married Lysimachus of Thrace (302) who soon abandoned her for Arsinoe, daughter of Ptolemy I. She returned to Heraclea and founded a city named Amastris, but was murdered by her sons. Lysimachus resumed control of Heraclea but on his death (280) democracy was re-established. The rise of the Bithynian and Pontic kingdoms and the settlement of the Galatians in the interior steadily weakened the city and reduced its territory. Allied to Rome soon after 188, it was forced to join Mithridates in 74. Taken and sacked by the Romans in the Third Mithridatic War, it finally lost its prosperity, and the colony which Caesar founded there did not endure. Heraclea became a metropolis of the Pontic *Koinon* in the second century A.D.

T. R. S. B.

HERACLEA (4) **TRACHINIA**, a Spartan colony founded in 426 B.C. in a strong position about 5 miles from Thermopylae, as a halting-place for armies marching to the north and also as a naval base. Owing to misgovernment by Spartan officials and raids by local tribes the colony scarcely fulfilled expectations. In the Corinthian War Heraclea was captured by Boeotians and Argives, who expelled the Peloponnesians. After a brief revival of Spartan control, Jason of Phrae dismantled the fortifications and handed the city over to the Oetaeans.

Heraclea was forced to join the Aetolian League in 280 and was sacked by the Romans in 191.

HERACLES ('*Ἡρακλῆς*, '*Ἡρακλῆς*). Many details must remain obscure for us concerning this, the most popular and widely worshipped of Greek heroes. In the first place, we have lost all the older continuous accounts and also Plutarch's 'Life' of him, which no doubt contained much valuable information, and are reduced to patching together many scattered references, with such late documents as [Apollodorus] 2. 61 ff., Ilyginus, *Fab.* 29–36 as our basis. However, the following conclusions may be accepted as fairly certain.

2. He is a hero, not a god, although occasionally worshipped as a god (Farnell, op. cit. *infra*, 97; on his cult see also Ch. Picard, *BCH* 1923, 241 ff., H. Seyrig, *ibid.* 1927, 185 ff. and 369 ff.), for his name is theophoric, and no Greek deity is thus named from another. Heracles (cf. 'Diocles'), 'Hera's glory', i.e. probably 'glorious gift of Hera (to his parents)', is a typically human name. Behind all the rest of the story, then, must lie a man, real or, less likely, imaginary, the son of a Hera-worshipping people. This fits excellently with the constant tradition that he was an Argive, or rather a Tirynthian, apparently of a younger branch of the Perseid dynasty (cf. *Il.* 19. 105), related to Eurystheus of Argos, for whom he performed the Labours. If the real Heracles was prince or baron of Tiryns, the king of Argos (or Mycenae) might well have been his overlord, and it seems possible that distinguished service in some forgotten war or other exploit may have laid the first foundations of his vast reputation for strength and courage, though the stages by which he rose to his unique position in popular favour remain unknown. But his Argive nationality is supported by the geography of his Labours, six of them belonging to the Peloponnesus. By all accounts, these were (1) The Nemean Lion. For authorities see Rose, *Handb. Gk. Myth.* 211, n. 113; it may be remarked that in the earliest versions the beast was apparently not invulnerable (O. Berthold, *Die Unverwundbarkeit*, 1911, 2 ff.). (2) The Hydra of Lerna. (3) The Boar of Erymanthus. (4) The Hind of Ceryneia. (5) The Birds of Stymphalus. (6) The Stables of Augeas (authorities, Rose, *ibid.*, n. 117 ff.). Nor are the other six Labours inconsistent with Argive origin and residence. The seventh, the Cretan Bull, and the eighth, the Horses of Diomedes (q.v. 1), are in or near the Greek world, but the other four are quite outside it, and so about equally remote wherever we suppose Heracles' home to have been; they are (9) The Girdle of the Amazon (q.v.), (10) Geryon, (11) Cerberus, (12) The Apples of the Hesperides. All these last three are variants of one theme, the conquest of Death. The hero must go to an island in the extreme west, Erytheia (q.v.), and there overcome a triple-bodied monster, Geryon, and his attendants and take his cattle; or he must descend to the House of Hades and steal the infernal watch-dog; or, finally, he must pluck the golden apples from the dragon-guarded tree at the world's end (further details and references in Rose, op. cit. 214 ff.). All these are manifestly more elaborate forms of the simple and ancient tale that on one occasion Heracles met Hades and worsted him (*Il.* 5. 395 ff., cf. Pind. *Ol.* 9. 33). The fact that they are variants one of another indicates that the cycle of the twelve Labours is artificial, made up to the round number, familiar anywhere in the wide region which used the Babylonian sexagesimal counting, by including duplicates.

3. But the story is complicated by an attempt on the part of Thebes (already known to Homer, *Il.* 19. 99) to acquire Heracles; cf. *ALCMENE, AMPHITRYON*. The only

legend of his birth and early adventures which we have is laid in Thebes, and in this connexion we must notice that he is often called Alcides, a name explained by that of the father of Amphitryon, Alcaeus (Apollod. 2. 50). As a matter of fact, Ἀλκαῖος and Ἀλκείδης are variants, respectively Boeotian, as we may suppose, and a translation from it into a more normal Greek patronymic, of a name which meant no more than Valiant; and it is a reasonable guess that this Alcaeus was a Theban hero, with whom Heracles became identified by local zeal. To Alcaeus we may attribute the little group of Boeotian adventures, the conquest of Orchomenus (Apollod. *ibid.* 67 ff.), the killing of the lion on Mt. Cithaeron (*ibid.* 65), which suspiciously resembles the Nemean labour, and the episode of the daughters of Thespius, all fifty of whom the hero enjoyed while the guest of their father (*ibid.* 66).

4. Finally, an attempt was made by the Dorians to acquire him, with some success, since it was for a time a dogma of modern researchers that he was a Dorian hero. See AEGIMIUS, HERACLIDAL.

5. The Athenians were content to model their national hero upon him; see THESEUS.

6. So far we have dealt with him simply as a hero; it is to be noted that he was on occasion identified with foreign gods. The story that he was sold into slavery to Omphale, queen of Lydia (Soph. *Trach.* 252; Apollod. *ibid.* 131-3), probably has behind it some myth of an Oriental goddess and her inferior male consort. At the other end of the Mediterranean the famous temple of 'Heracles' at Gades (Cadiz), in a region under Carthaginian influence and with its Semitic-sounding taboo on swine (Silus Italicus 3. 22-3), is no doubt a shrine of Melqart (cf. Arrian, *Anab.* 2. 16. 4). In Egypt, Herodotus identifies him with one of the native deities (2. 43). The ancients themselves had noticed the diversity of these identifications, and early evolved a theory that Heracles was not one person but several (Herodotus and Arrian, *loc. cit.*).

7. Outside the cycle of the Labours, the chief events of his life, as generally told, are as follows. Hera pursued him from childhood with implacable enmity; here we may see a stock feature of the myths of Zeus' children imported into a legend where, to judge by the hero's name, it is little in place. She first attempted to destroy him by sending serpents to attack him in his cradle (Pind. *Nem.* 1. 39 ff., and many later passages). These he strangled. Later, when for his services to Thebes he had been given Megara, daughter of Creon (q.v. 2), to wife and she had borne him children, he murdered (her and) them in a fit of madness sent by Hera (Eur. *III*), which puts this after the Labours; Apollod. *ibid.* 72 makes them the penance prescribed by Delphi for his purification). In addition, incidentally to the Labours, he had a vast number of other adventures, traditionally classified into the *πράξεις*, or independent exploits, and the *πάρεργα*, which merely happened as incidents in the Labours proper. Of these only a few examples can be given. For the former, we may instance his dealings with Laomedon king of Troy, whom he killed and sacked his city, sparing, however, his son Podarces, later known as Priam (q.v.). This arose out of a *πάρεργον*; on his return from the ninth Labour, bringing the girdle of Hippolyte, queen of the Amazons, he touched at Troy and found the city in distress as a result of Laomedon's treacherous dealings with Apollo and Poseidon, whom he cheated of their wage when they built the wall of his city. A sea-beast was ravaging the country and must be appeased by the sacrifice of Hesione, Laomedon's daughter. Heracles promised to kill the monster and save her if Laomedon would give him his famous horses; he fulfilled his part of the bargain, but Laomedon would

not keep his, hence the campaign later (see Apollod., *ibid.* 103-4, 134-6). For his second marriage and death see DEIANIRA; it is noteworthy that the manner of his death, by burning on a pyre on Mt. Oeta, when he found Nessus' poison overcoming him, is an interpolation into his original story, though an early one, due to the desire to find an *action* for the ancient fire-ceremony there (Nilsson, *Hist. Greek Rel.* (E.T. 1949), 63 f.; to the refs. there add *Nordisk Tidskrift* (1923), 125). He is an intruder into the Argonautic story, hence perhaps the dropping of him early in the adventure, cf. NYLAS. One of the most singular ramifications of his legend is the story of Heracles the Dactyl (Paus. 8. 31. 3, statue at Megalopolis; 5. 7. 6 ff., foundation of the Olympian Games by him and not, as generally said, by Heracles son of Alcmena). No plausible connexion between the hero and this gnome-like being has ever been suggested.

8. Something has incidentally been said of his cult. Details are given in Farnell, ch. 5. It is interesting that, especially in private worship, he was commonly appealed to as warder-off of evils and victor over them (*ἀλεξίκακος, καλλίνικος*). Naturally, his sundry identifications with other deities and his ambiguous status (mostly worshipped as a hero but occasionally as a god) led to very great local variations in his ritual. The Cynic and Stoic schools seized on his reputation for hardness, simple living, and valour in the service of mankind to idealize him into the exemplar of the follower of their doctrines.

9. Heracles is popular in all forms of archaic and classical art. His equipment of lion-skin, club and bow becomes canonical during the sixth century. In archaic and early classical art he is sometimes beardless when confronting the lion, otherwise bearded; later often youthful. The twelve labours first appear as a set in the metopes of the temple of Zeus at Olympia (c. 560 B.C.), which perhaps fixed the canon.

HERACLIDAE ('*Ηρακλίδαι*). The Dorians, who seem to have little mythology of their own, having tried to make Heracles (q.v.; cf. AEGIMIUS) a kind of connexion of theirs and his eldest son Hyllus a Dorian by adoption, formed the adventures of his sons into a legend legitimizing their conquest of the Peloponnesus by making their kings descendants of the Perseidae. After sundry adventures, in which the sons of Heracles were persecuted by Eurystheus and defended by Athens (Eur. *II*), they inquired of Delphi when they might return, and were told to do so at 'the third harvest'. Hyllus supposed this to mean the third year, but failed and was killed in single combat against a Peloponnesian champion at the Isthmus. A hundred years later his descendant Temenus again inquired, and got the same reply, which was now interpreted for him as meaning the third generation. The Dorians therefore tried again, in three companies, led by Temenus, Cresphontes, and the sons of Aristodemus, Eurysthenes, and Procles. They entered by Elis, taking, again by oracular advice, the 'three-eyed man' for their guide; he turned out to be Oxylus of Aetolia, whose mule, or horse, had but one eye. Conquering the Peloponnesus, they divided it into three parts, whereof Cresphontes took Messenia, Temenus Argos, and the sons of Aristodemus Laconia, thus founding the dual kingship of Sparta. In the fighting Tisamenus, son of Orestes and grandson of Agamemnon, was killed, thus ending the line of the Pelopidae.

See Apollod. 2. 167 ff.; Paus. 1. 41. 2; 3. 1. 6; 5. 3. 5 ff.; 8. 5. 1; *II* 2. 9. 26. 4 ff.
H. J. R.

HERACLIDES (1) PONTICUS, academic philosopher of the fourth century. Born of a wealthy and aristocratic family in Heraclea on the Black Sea (Pontus), he came to Plato's Academy in Athens as a pupil of Speusippus, although he also attended Aristotle's lectures. He was placed in temporary charge of the Academy during Plato's third visit to Sicily (367/360) and after the death of Speusippus (338) he was a candidate for the leadership. Defeated by only a few votes, Heraclides returned to Heraclea where he possibly opened his own school. He was still alive in 322.

The fragments of Heraclides' writings, mostly dialogues, reveal the wide variety of interests—ethical, political, physical, historical, and literary—characteristic of the fourth century. Diogenes Laertius (5. 86–8) gives an incomplete list of titles of his works, including those on logic and metaphysics which are completely lost.

Heraclides' significance for posterity lies in four directions: in the distinctive form of his dialogues; in physics, particularly astronomy; in his eschatology; and in his contribution to the Pythagorean legend. His dialogues were famous for their elaborate proems, their colourful use of historical personages, and the seductive quality of their anecdotes and myths. They influenced both Cicero, whose *De Re Publica* may give some indication of their characteristics, and Plutarch. In astronomy, ancient authorities credit him with (i) the hypothesis of the earth's axial rotation; (ii) an attempt to explain the apparent movement of Venus in relation to the sun, in which some scholars have seen a theory that both Venus and Mercury revolve around the sun, and the sun around the earth: hence a step towards the Tycho system (Heath, 255 ff.; against, Frank, 212); (iii) a vague adumbration of the heliocentric theory. Clearly Heraclides took part in the lively astronomical debate of his time, but the importance of his contribution is difficult to gauge. In physics, Heraclides proposed a theory of 'loose-jointed particles' (*ἀναρμοὶ ὄγκοι*), i.e. molecules, which he probably developed from Plato's *Timaeus* as an attempt to account for elemental change. In a way typical of fourth-century philosophy, Heraclides combined this interest in science with an interest in eschatology and in such shamanistic figures, real or invented, as Empedotimus, Abaris, Pythagoras, and Empedocles. In the vision of Empedotimus (Fr. 96 and 98 Wehrli), the soul was described as substantial light, having its origin in the Milky Way. By his use of Empedocles and Pythagoras as dialogue figures, Heraclides influenced the biographical tradition; in particular, he may be responsible for Academic colouring in the Pythagorean legend.

Heraclides has been seen alternatively as a highly original thinker, and as a dilettante. Perhaps the answer lies in his literary ability. Without great powers of scientific invention himself, he was in close and intelligent touch with the most fertile thought of his day, which he was able to present in an attractive form to succeeding centuries.

Diog. Laert. v. 86–93; fragments and testimonia newly collected and discussed by F. Wehrli, *Heraclides Ponticus* (Basel 1953), though O. Voigt, *De Heraclidis Pontici vita et scriptis* (Diss. Rostock 1896), is still very useful; PW viii. 472 ff.; Ueberweg-Praechter, *Grundriss* 345; Zeller, *Phil. d. Gr.* ii/1. 1034 ff.; R. Hirzel, *Der Dialog* (1895) i; T. L. HERACLIDES (2) of Cyme, author of a Persian history (*Ἱερσικά*) written c. 350 B.C. One of Plutarch's sources for the life of Artaxerxes II.

FGH iii. 689.

HERACLIDES (3) LEMBOS of Callatis or Alexandria became an Egyptian civil servant at Oxyrhynchus, and was living at Alexandria in 170 B.C.

WORKS: (1) *Ἱστορίαι*, a mythological and historical commonplace-book, only known by five fragments; (2) *Λεμβευτικός λόγος*, perhaps about Homer. (3) The Epitome of the 'Lives' of Satyrus, and (4) the Epitome of the *Διαδοχή* of Sotion. These two collections of biographies of the Greek philosophers were much used by Diogenes Laertius. (5) A 'Life' of Archimedes in Eutocius, *In Arch. circ. dm.*, may be by him. (6) A selection from Aristotle's *Πολυτεία*.

Fragments in Müller, *FGH* iii. 167.

W. D. R.

HERACLIDES (4) of Tarentum (fl. c. 75 B.C.), physician. He was trained in the Herophilean school, but later became more empirical in his methods and, indeed, the most important empirical physician of antiquity. He is highly praised by Galen for his technical skill and for his objectivity in the pursuit of truth. He seems to have practised dissection of human bodies, and this makes it probable that he worked in Alexandria. The names of fourteen works by him are known, and fragments of some of them are preserved in Galen; his most important work was done on pharmacology, therapeutics, and dietetics.

W. D. R.

HERACLIDES (5) PONTICUS the Younger, grammarian, from Heraclea Pontica, pupil of Didymus, later taught at Rome under Claudius and Nero, and wrote three books in Sapphic hendecasyllables (Ath. 649c) called *Λέσχαι*, which may have influenced Statius' *Silvae*. These were crude and obscure (*Etym. Gud.* 297, 50, Artem. 4. 63) in the style of Lycophron. He also wrote epic poems and *Pyrrichae* of which nothing is known.

Susemihl, *Gesch. gr. Litt. Alex.* ii. 196.

C. M. B.

HERACLITUS (*Ἡράκλειτος*), son of Blosion of Ephesus, probably came of royal blood and surrendered the (nominal) kingship voluntarily to his brother. He is said instead of publishing his treatise (written c. 500 B.C. and surviving in brief but numerous fragments) to have deposited it in the temple of Artemis.

Heraclitus' book opened by assigning the traditionally divine attribute of eternity not (like the Milesian philosophers) to a primary substance but to the universal Logos, which men can but do not understand, although their experience (like all occurrences) is governed by it. Following Anaximander he conceived the universe as a ceaseless conflict of opposites regulated by an unchanging law, but he found in this law the proper object of understanding; it is the Logos which spans but could not exist without the cosmic process: 'people do not understand how what is at variance accords (has one logos) with itself, an agreement in tension as with bow and lyre' (fr. 51). This Logos Heraclitus equated with transcendent wisdom and the elemental fire. So 'God is day–night, winter–summer, war–peace, satiety–famine', and when we are aware of one opposite of any pair, our standpoint is partial and perceptual, our linguistic activity one of using 'names' not 'discourse' or logos (fr. 67). Hence in politics 'the people must fight for the law as for a wall' (fr. 44), for 'all human laws are nourished by the divine which is one' (fr. 114). Unlike his predecessors Heraclitus disbelieved in the genesis of the universe in time and the Stoics were wrong in thinking he believed in a periodic world-conflagration. In the perpetual stream of creation 'all things are an exchange for fire and fire for all things, as goods for gold and gold for goods' (fr. 90), but 'the world-order (*κόσμος*) was not made by any god or man but was, is, and will be everlasting fire being kindled in measures and quenched in measures' (fr. 30).

Heracitus' challenge to mankind is to learn to understand (*ἐνέειναι*) the discourse of nature, i.e. to know the 'natural' way to discourse and act. Wisdom lies not in much learning (fr. 40) but in the awakening of the entire soul from the slumber of its private wants and opinions to awareness of the 'common' world-order. Thus all knowledge is self-knowledge ('I sought for myself' fr. 101). 'The dry soul is wisest' (fr. 118), for it approximates more to the divine fire. Nevertheless, compared with God man is a child in wisdom, his speech at best a lisping version of the divine discourse (fr. 79). Accordingly Heraclitus writes consciously in the oracular style of Delphi, aiming 'neither to say nor conceal but to indicate' the truth (fr. 93).

Heracitus' physics and astronomy are elementary. His achievement is that he is the first Greek writer to inquire what discourse is and how it can be true and to find the intelligible principle of the universe not only in an external order (like Anaximander), but primarily in the depths which the philosophic soul discovers within itself and cannot fathom because it itself deepens them (frs. 45, 115).

Phil.* i 403 ff.; *PW* Suppl. x. 246 ff. A. H. C.

HERALDS (*κέρυκας*) in Homeric times were important aids of the kings used for a multiplicity of tasks such as maintaining order in meetings, making proclamations, and bearing messages. They were under the protection of Hermes, were inviolable, and carried a herald's staff as a symbol of authority. In later Greece they retained much of their importance, assisting magistrates in assemblies and lawcourts and bearing messages to other States. In this capacity they are to be distinguished from ambassadors, who were authorized not only to transmit messages but also to negotiate. Heralds could circulate freely even during wars and so at times were sent to open negotiations and request permission to send ambassadors. The Roman public crier (*praeco*) was a more humble attendant of magistrates. See also WAR, RULES OF.

J A O. L.

HERCULANEUM was built on a spur projecting from the lower slopes of Vesuvius, c. 5 miles from Naples, on the coast road to Nuceria Alfaterna; it covered c. 26 acres. Strabo (5. 4. 8) says that it was settled, like Pompeii, successively by Oscans, Etruscans, Pelasgians, and Samnites; but the Greek character of the town-plan suggests Greek colonization (6th c.?) and the influence of Naples. During Samnite occupation Herculanum was in the league headed by Nuceria, but Roman intervention in Campania (326-307 B.C.) brought the town into the Roman confederacy. In the great Italian rebellion Herculanum joined the rebels, was reduced in 89 B.C., and became a Roman *municipium*; her *meddix tuticus* was superseded by *duoviri*. Though small (c. 4,000) the town was wealthy; in the early Empire her public buildings were richly ornamented, and her upper classes lived elegantly. The earthquake of A.D. 63 did serious damage (Seneca, *QNat.* 6. 1. 2); the eruption of Vesuvius in A.D. 79 was fatal. Herculanum was buried deep under heavy volcanic ash; the covering solidified to a form of tufa. As a result the buildings have collapsed more completely than at Pompeii, but having been more completely sealed, their furnishings are better preserved.

In the eighteenth century excavation began in search of works of art. By shaft and tunnel the theatre and, later, the basilica were reached and robbed. In the nineteenth century tunnelling was abandoned in favour of complete

excavation; systematic work on the site was resumed in 1927.

Herculanum differs profoundly from Pompeii. The Greek town-plan is completely regular. The streets show no signs of heavy traffic, there are no stepping-stones for pedestrians, no painted notices on the walls; shops are less obtrusive. Herculanum was a residential, not a commercial town, the main industry being fishing. The houses show great variety in construction and plan, more modern than Pompeii. The principle of lighting from inner court and windows is freely used; upper stories are built with confidence. Most of the houses show taste and refinement as well as wealth, notably those that overlook the sea, with their terraces and gardens. In contrast is the *Casa a gratuccio*, lightly built of rubble in a timbered frame, with small apartments separately accessible.

Luxurious villas were common in the neighbourhood, and the Villa of the Papyri, north-west of the town, excavated in the eighteenth century, yielded numerous statues and an Epicurean's library of papyrus rolls, mainly the work of Philodemus of Gadara. Recent excavations on the north of the site have revealed the lower side of the colonnaded forum, and on the east part of an unusually grand palaestra.

HERCULES, Roman pronunciation of Heracles (q.v.). His is perhaps the earliest foreign cult to be received in Rome, the Ara Maxima (see Platner-Ashby, 253), which was his most ancient place of worship, being within the *pomerium* of the Palatine settlement. It was probably desired to make the Forum Boarium, in which it stood, a market-place under the protection of a god better known than the local deities. The theory of some ancients (as Propertius 4. 9. 71 ff.) that he is identical with Semo Sancus Dius Fidius (q.v.), although revived in modern times by Preller (Preller-Jordan, *Römische Mythologie* (1881-3) ii. 272 ff.) is untenable, and seems ultimately to rest on nothing better than the interpretation of *Dius Fidius* as *Iovis filius*. His cult had become very popular with merchants, no doubt because of his supposed ability to avert evil of all kinds (see HERACLES) and the long journeys involved in his labours and other exploits. It was common to pay him a tithe of the profits of an enterprise (see, e.g., Eliz. C. Evans, *Cults of the Sabine Territory* (U.S.A. 1939), 70 ff.); this was not confined to commercial dealings but included spoils of warfare.

His worship at the Ara Maxima had some interesting features. No other god was mentioned (Plut. *Quaest. Rom.* 90, citing Varro); no women were admitted (Propert. *ibid.* 21 ff.); dogs were excluded (Plut. *loc. cit.*). The ritual was originally in the hands not of the Pontiffs but of two *gentes*, the Potitii and Pinarii, of whom the former were senior (Plut. *ibid.* 60, Veranius ap. Macrobi. *Sat.* 3. 6. 14); in the censorship of Appius Claudius Caecus, 312 B.C., it passed to the State (Asper ap. Macrobi. *ibid.* 13). It was performed in Greek fashion (Varro ap. Macrobi. *ibid.* 17). The exclusion of women is found also in his cult at Lanuvium (Tert. *Ad nat.* 2, 7).

For his numerous other places of worship at Rome, see Platner-Ashby, 251 ff.; Nash, *Pict. Dict. Rome* i. 462 ff. The most important, after the Ara Maxima, are a sanctuary of Hercules Cubans within Caesar's Gardens, temples of Hercules Custos near the Circus Flaminius (probably c. 221 B.C.), of Hercules Invictus near the Porta Trigemina, of Hercules Musarum near the Circus Flaminius (erected by Fulvius Nobilior c. 187 B.C.), of

Hercules Pompeianus near the Circus Maximus, of Hercules Victor (dedicated by Mummius in 142 B.C.), and of Hercules Victor (Invictus), a round temple in the Forum Boarium decorated with frescoes by Pacuvius.

Identification or comparison with Hercules was common among the later emperors, as Commodus (S.I.A. Comm. 1. 8. 5), Maximinus (Maxim. 18. 4. 9; 6. 9).

Wisowa, RK 271 ff.; J. Bayet, *Les Origines de l'Hercule romain* (1926), Latté, RR 213 ff., D. van Herchem, 'Hercule Melquart à l'Ara Maxima', *Rend. Pont.* 32 (1959/60), 61 ff. H. J. R.

HERCYNIAN FOREST, German mountains, properly the wooded heights of Thuringia and Bohemia. Originally put near the Pyrenees (schol. ad Dionys. Per. 286) or among Celts (schol. Ap. Rhod. 4. 640) near the Northern Ocean (Diod. 5. 21, etc.), Aristotle (*Met.* 1. 13) placed it in north Europe, Timaeus found the Danube's sources in it ([Arist.] *Mir. Ausc.* 105). The name came to be used for all the wooded mountains extending from the Rhine to the Carpathians. Caesar (*BCall.* 6. 25) heard that it was more than nine days' journey wide, sixty days' travel long from the Black Forest along the Danube's northern bank, and thence turned north. Strabo (7. 290) extends it from Lake Constance and Danube sources to the north frontier of Bohemia and Moravia. After the exploratory conquests of Tiberius and Drusus the Hercynian Forest was clearly distinguished from the Alps and was identified with the heights extending round Bohemia and through Moravia to Hungary (Pliny, *HN* 4. 80, 99-100; Tac. *Germ.* 28, 30). In Ptolemy (*Geog.* 2. 11. 7) the name is restricted to a range between the Sudetes and the Carpathians. E. H. W.

HERDONIAE (*Herdonia*, *Erdonia*, *Erdoniae*), a town in Apulia which overlooked the Carapelle near modern Ortona 11 miles south-east of Foggia. The surrounding Daunian cemeteries attest its early importance. In the late Republic it received a wall circuit (still partially visible) and grew in importance when it became a stage on the Via Traiana. Recent excavations have uncovered many of the internal streets and buildings. Centuriation systems based on twenty *actus* grids occupy the land to east and west of the town.

CIL ix. 64 ff., T. Ashby and R. Gardner, *PSR* 1916, 148 ff.; F. Johnson, *The Farwell Collection*; J. Mertens, *Ortona*, 2 vols. (Brussels, 1965-7). G. D. B. J.

HERENNIUS (1, *PW* 44) **SENECIO**, a native of Hispania Baetica, was its quaestor and afterwards supported Pliny the Younger in the prosecution of Baebius Massa, an oppressive governor of Baetica (A.D. 93). He wrote the 'Life' of Helvidius Priscus and was put to death by Domitian. His memory was attacked by M. Aquilinus Regulus. A. M.

HERENNIUS (2, *PW* 31) **MODESTINUS**, one of the last classical Roman jurists. A pupil of Ulpianus (q.v. 1), he was *praefectus vigilum* at some time between 226 and 244, and an apparently recent *responsum* of his is cited in a rescript of 239, but little else is known of his life. He was one of the five jurists singled out as authoritative in the 'Law of Citations' (426), but this is perhaps attributable more to his late date than to any outstanding merits. His works seem to have been mainly handbooks for students and practitioners, but they included an extensive collection of his *Responsa* (nineteen books). He cites previous jurists rarely (imperial constitutions more often) and he seems to have relied mainly on Ulpian and Paulus (q.v. 1), his few citations of earlier jurists being perhaps at second hand. He wrote a monograph in Greek on the grounds of exemption from guardianship, and this has been adduced as evidence that Greek was his mother tongue, but it is at least as

likely that the work was intended for those who had recently been made citizens by the *constitutio Antoniniana* (see CITIZENSHIP, ROMAN). B. N.

HERILLUS of Carthage, pupil of Zeno of Citium and founder of a separate Stoic sect. He seems to have treated knowledge as the supreme end, the life of moral virtue as a subordinate end (*ὑποτέλεις*), and to have added that the subordinate end differs in detail for different men according to their circumstances; the natural goods of life, in distinction from knowledge and virtue, he treated as strictly indifferent. The sect of the *Ἡριλλεῖοι* seems not to have survived 200 B.C.

Testimonia in von Arnim, *SVF* 1. 91-93.

W. D. R.

HERMAGORAS of Témnos (fl. c. 150 B.C.), the most influential rhetor of the Hellenistic period, author of an elaborate system of rhetoric which we know in fair detail from later writers, especially Quintilian and Hermogenes. His most important work concerned *εἰσαίς*; he did little for the theory of style. By discussing not only themes involving particular situations (*ὑποθέσεις*) but also general themes (*θέσεις*, e.g. 'should a man marry?'), he helped to extend the scope of rhetorical education to cover moral and philosophical subjects. His complex and subtle classification of the *στάσεις* (*status*, 'issues') of cases was decisive for later theory (see RHETORIC, GREEK, § 4), and it is this for which he was mostly remembered.

D. Matthes, *Hermagorae Tēmtae Testimonia et Fragmenta* (1962); id., *Lustrum* 1958, 58 ff.; G. A. Kennedy, *The Art of Persuasion in Greece* (1963), 303 ff. D. A. R.

HERMAPHRODITUS or **Aphroditus**. The concept of this bisexual divinity is perhaps due originally to certain marriage rites in which the sexes exchange clothing; the god was then fashioned to fit and explain the rite. Aphroditus (Hesych. s.v.; Macrobi. *Sat.* 3. 8. 2) is found at Anathus in Cyprus. A unique dedication, of the early fourth century B.C., attests the cult of Hermaphroditus in Attica (*Ath. Mitt.* 1937, 7 f.; cf. Theophr. *Char.* 16. 10; Alciphron. *Epist.* 3. 37). Fourth-century art portrayed Hermaphroditus as a beautiful youth with developed breasts; later art as an Aphrodite with male genitals. Ovid (*Met.* 4. 285-388) relates the myth of the union in one body of Hermaphroditus, son of Hermes and Aphrodite, and the nymph Salmacis.

Nilsson, *Feste* 369 ff.; M. Delcourt, *Hermaphrodite, Mythes et rites de la bisexualité dans l'antiquité classique* (1958, Engl. transl. 1961). F. K. W.

HERMARCHUS of Mytilene, Epicurean, studied under Epicurus in Mytilene before the school was moved to Lampsacus in 310 B.C., and in 270 he succeeded Epicurus as head of the school. Epicurus' will enjoins his heirs to put part of the revenues of his estate at Hermarchus' disposal for the maintenance of the school, and bequeaths to him the whole of Epicurus' library. With Epicurus, Metrodorus, and Polyaeus, Hermarchus was treated as representing the authoritative form of the Epicurean doctrine.

WORKS: *Πρὸς Πλάτωνα*, *Πρὸς Ἀριστοτέλην*, *Ἐπιστολικά περὶ Ἐμπεδοκλέους*, *Περὶ τῶν μαθημάτων*, all of them polemical works.

K. W. G. Krohn, *Der Epikureer Hermarchos* (1921).

W. D. R.

HERMES (1) (*Ἑρμείας*, *Ἑρμῆς*), one of the younger gods in myth, though in reality he is probably one of the oldest and most nearly primitive in origin. His name may occur on a tablet from Pylos. The most plausible explanation of his name is that it is connected with *ἔρμα*, and signifies the daemon who haunts or occupies a heap of stones, or perhaps a stone, set up by the roadside for

some magical purpose (examples of such in Frazer, *GB*, see index s.v. 'Stones' and art. STONES, SACRED, hercin). Tradition and cult facts combine to make him Arcadian; he was son of Zeus and Maia daughter of Atlas, born on Mt. Cyllene on the fourth day of the month (*Hymn. Hom. Merc.* 19; four is Hermes' number). He was cunning from birth, and on the first day of his life invented the lyre, stole Apollo's cattle, impudently denied the theft, and was reconciled to his elder brother. The merry tone of the hymn is characteristic. Hermes never had much concern with the higher moral or philosophical developments of religion: the writings ascribed to Hermes (q.v. 2) Trismegistus have nothing to do with the Greek Hermes but are the result of fathering on the Egyptian Thoth, who was identified with him, certain late mystical philosophizings. For the most part, Hermes has a subordinate part in myth, being rather a messenger of the greater gods, and especially of Zeus, than an independent actor. Hence the shape he takes when represented in fully human form is that of a herald, equipped for travelling with a broad-brimmed hat and a stout pair of sandals and carrying the *kerykeion* (Lat. *caduceus*) or herald's staff (to be distinguished from the magic wand which also he bears on occasion, see de Waele, *The Magic Staff*, The Hague, 1927). But he was from early times shown, and continued to be so represented, as a meric stock or stone, a herm, having generally a human head carved at the top and a phallus half-way up it. The latter is, indeed, a characteristic emblem of this god, who was always interested in fertility; which perhaps is why we find him occasionally united with a goddess connected with fertility, Aphrodite (mother by him of Hermaphroditus, Ovid, *Met.* 4. 288; of Priapus, q.v., see Hyginus, *Fab.* 160, cf. H. Herter, *De Priapo*, 64), Hecate (q.v.), or Brimo (schol. Lycophron, 1176, cf. Propert. 2. 2. 11-12), Herse daughter of Cecrops (Ovid, *Met.* 2. 708 ff.). One of his most striking functions may also derive in part from his connexion with fertility, though his occupation as messenger probably has something to do with it. He is the Guide of Souls, from Homer (or at least *Od.* 24. 1 ff., he that genuinely Homeric or not) onwards. In this respect he is unique among the gods, unless we count the Dioscuri (qq.v.) as originally divine; for the others belong either to the upper or the lower world, the peculiar position of Persephone, for whom see DEMETER, not constituting a real exception. It is in this connexion especially that his magic wand (see above) becomes prominent (e.g. Verg. *Aen.* 4. 242 ff., where see the further material collected by Pease ad loc., and add Wilamowitz-Moellendorf, *Glaube der Hellenen* (1921) ii. 147, n. 2). Such a wand is the characteristic implement of a necromancer. It is not particularly remarkable that he is the god of merchants and others who use roads, including thieves, though the latter characteristic illustrates his non-moral nature (for illustrations see Ar. *Plut.* 1155, with schol., *Plut. Quaest. Graec.* 55, with Halliday's note). In Crete we find him associated with a piece of ritual topsy-turvydom, for which cf. KRONOS, SATURNUS. At the Hermaea there (city not specified) masters waited on their slaves as they feasted (Ath. 639 b). For a deity with chthonian associations he has very little to do with divination and oracles; Apollo grants him an obscure minor form of divining, in the Homeric Hymn, 550 ff., and he had an oracle at Pharae (Paus. 7. 22. 2 3). Here the consultant, after paying his respects to the god, stopped his ears till he got beyond the market-place where the temple stood; the first words he heard when he unstopped them were the answer to any question he had asked of Hermes. This is no more than a systematization of one of the most usual forms of omen, the *κληδών* or unintentionally significant utterance.

Two other functions show a longer development from the old daemon of the roadside, if that is what he originally was. A herald must of course state his business plainly and on occasion plead the cause of those who sent him. Hence from a fairly early date Hermes is associated with oratory. When to this is added the invention, already told, of the lyre, we can see how he became in time a general patron of literature, Horace even calling those who follow it 'Mercuriales uiri' (*Carm.* 2. 17. 29-30). It is less evident why he is constantly regarded, in classical times, as the patron of young men and their exercises, and himself represented in statuary as a young man. The stages are perhaps as follows: fertility easily passes into the notion of luck or good fortune; luck is needed by those who engage in athletic contests (cf. HECATE), but the most regular practitioners of such things are the younger men, whose athletic training formed an important part of their education in every normal Greek State.

Hermes is popular in archaic and classical art, often escorting heroes, with herald's wand, winged cap, and boots (later sandals). In archaic art he is bearded and clad in a short chiton, later often naked and, apart from archaizing heads of phallic herms, young. His adventures as a baby are found on some archaic vases.

Farnell, *Cults* v. 1 ff., for his worship generally; Nilsson, *Feste* 388 ff., for his non-Attic, L. Deubner, *Attische Feste* (1932), 217, for his (unimportant) Attic cult, K. Kerényi, 'Hermes, der Seelenführer', *Albue Ungar* 1 (1944); J. Duchemin, *La boulette et la lyre. Recherches sur les origines pastorales de la poésie*, 1. *Hermès et Apollon* (1960). H. J. R., C. M. R.

HERMES (2) TRISMEGISTUS, a clumsy translation of Egyptian 'Thoth the very great', with the adj. emphasized by repetition (W. Scott, *Hermetica* 1. 5, note 1). When so named, Thoth is the reputed author of the philosophico-religious treatises known collectively as *Hermetica* (see Gnosticism), also of sundry works on astrology, magic, and alchemy. These are invariably late, Egyptian in the sense of being produced in Egypt by men of Greek speech, and (except for the astrological books Nock, *Gnomon* 1939, 359 ff.) contain little or nothing of native Egyptian doctrine or custom. Their attribution to the Egyptian god of letters is a result of the then prevalent enthusiasm for the supposed ancient wisdom of Egypt and of the older Oriental cultures generally.

W. Scott A. S. Ferguson, *Hermetica* (1924-36), edition by A. D. Nock and A. J. Festugière 1-iv (1945-54); A. J. Festugière, *La Révélation d'Hermès Trismégiste* 1-iv (1944-54). H. J. R.

HERMESIANAX of Colophon, probably born c. 300 B.C., was a pupil of Philetas (schol. Nic. *Ther.* 3). His mistress's name, which he took as title for his collection of elegies, was Leontion (Ath. 13. 597 b).

WORKS. The *Persica* (schol. Nic. *Ther.* 3) may have contained the story of Nanis and Cyrus (Parth. 22 = fr. 6). The *Leontion* was in three books. One line describing Polyphemus gazing out to sea is definitely cited from book 1. This suggests a treatment of the Polyphemus-Galatea story, cf. fr. 7. 69-74, and two other bucolic love-stories (frs. 2 and 3) may have been narrated in this book. Book 2 contained the tale of Arcephron and Arsinoe, the rejected suitor and the callous maid, who is punished by being turned into stone (Ant. Lib. *Met.* 39), possibly also the story of Leucippus' incest with its tragic sequel (Parth. 5). From book 3 Athenaeus (13. 597 b) has preserved a 'catalogue of love-affairs'. In the manner of contemporary Peripatetic biographers, e.g. Chamaeleon, Hermesianax details the loves, unrequited or otherwise unlucky, of a series of poets, starting with Orpheus and ending with Philetas, and of philosophers (Pythagoras, Socrates, Aristippus). Three times in the fragment the poet addresses Leontion herself, but it is unlikely that he used this device throughout the poem. Of the remaining

fragments (8-11) one is cited from an 'Elegy on the Centaur Eurytion'.

The loss of most early Alexandrian poetry has given to the long fragment from the *Leontion* an importance which it hardly merits. It is true that Hermesianax illustrates many features found in later representatives of that poetry, e.g. a fondness for 'glosses', an interest in love, especially if it be unhappy, and in aetiology, but, though he is a tolerable metrist despite his monotonous habit of ending the first half of a pentameter with an adjective and the second with the substantive which it qualifies, he possessed, to judge by what remains of his poetry, a very mediocre brain. Thus Homer is made the lover of Penelope and Hesiod of Eoia, a name taken from a poem attributed to him; Alcæus and Anacreon are rivals for the love of Sappho, and Socrates is the lover of Aspasia! If this is meant to be comical, the humorous element is not made evident.

TEXTS. Powell, *Coll. Alex.* 96-106; Diehl, *Anth. Tyr. Graec.* II, fasc. VI, 56-64.

GENERAL LITERATURE. Heibges, 'Hermesianax (2)', in *PW* viii, 821 ff. E. A. B.; C. A. T.

HERMIAS (1), tyrant of Atarneus (in Mysia, opposite Lesbos) c. 355 B.C. A former student of the Academy (though he never met Plato), he introduced a more moderate regime, admitting the Platonists Erastus and Coriscus of Scepsis to a share in his power and encouraging them to found a new philosophical school at Assos. There they were joined on Plato's death (348) by Aristotle, Xenocrates, and Callisthenes, and later by Theophrastus. Aristotle became an intimate friend of Hermias and married his niece and adopted daughter Pythias. Hermias possessed a formidable naval, military, and financial power, and was virtually independent of the Persian Empire. He negotiated, with Aristotle's assistance, an understanding with Macedonia. In 341, however, he was treacherously arrested at a conference with Mentor, and sent captive to the Great King, who vainly tried to coerce him into revealing Philip's plans and executed him. He was a recipient of Plato's sixth epistle and is said to have written on the immortality of the soul.

W. Jaeger, *Aristotle* (1934), 105; D. E. W. Wormell, *Yale Studies in Classical Philology* v (1935).

HERMIAS (2), choliambic poet, of Curion, not before the third century B.C., reviled the Stoics (*Ath.* 563 d).

Powell, *Coll. Alex.* 237; G. A. Gerhard, *Phoenix von Kolophon* (1909), 213.

HERMIONE, in mythology, daughter of Menelaus and Helen (qq.v.; *Od.* 4. 14 and often in later authors). Possibly she was originally a goddess, as her name occurs as a title of Demeter and Persephone (*Hesychius*, s.v.). She was at various times (details differ in different authors, see Weizsäcker in Roscher's *Lexikon*, s.v.) betrothed to Orestes and Neoptolemus (1) (qq.v.). According to Eur. *Or.* 1655 Neoptolemus never married her, but in Eur. *Andr.* he did so, was murdered by Orestes while at Delphi inquiring why Hermione was childless, and she was carried off by Orestes. All authors, save schol. *Pind. Nem.* 10. 12, citing Ibycus, who says she married Diomedes, agree that she became Orestes' wife and mother (*Paus.* 2. 18. 6) of his son Tisamenus.

HERMIPPUS (1), Athenian comic poet and brother of Myrtilus (q.v.), won at least one victory (435 B.C.) at the City Dionysia and four at the Lenaea, the first c. 430 B.C. (*IG* ii². 2325. 57, 113, *Hesperia* 1943, 1 ff.). We have ten titles and 100 fragments. *Apionōides*, in which Hyperbolus and his mother were ridiculed (cf. *Ar. Nub.* 551 ff. cum schol.), must belong to the period 421-416.

Fr. 46 (from an unnamed play) refers to Cleon's attack on Pericles in 431 or 430; fr. 63 (from *Φορμαφόροι*) is of interest because it names (with jokes interspersed) the characteristic imports to Athens from various Mediterranean countries c. 430-420 B.C., and fr. 82 (play unnamed) represents Dionysus giving his opinions on different wines. Several of Hermippus' titles indicate mythological burlesque.

FCG ii 380 ff.; CAF i 224 ff.; FAC i 284 ff.

K. J. D.

HERMIPPUS (2) of Smyrna (fl. 3rd c. B.C.), Peripatetic biographer and follower of Callimachus, wrote a vast work (descending to his own time) on famous writers, philosophers, and law-givers, which Plutarch used. Hermippus deliberately falsified history, reveling in sensationalism, particularly in death scenes. Fragments in *Diog. Laert.* Perhaps Hermippus also wrote *Φανόμενα*.

FHG iii. 35-54; additional fts. listed by Heibges, *PW*, s.v. F. W. W.

HERMIPPUS (3), grammarian of the time of Trajan and Hadrian, from Berytus (a village of the interior, not the harbour-town, according to the *Suda*). By birth a slave, he became a pupil of Philon (q.v. 5) of Byblos. His works include *Ὀνειροκριτικά* in five books; *Περὶ ἔρσομίδος*; and *Περὶ τῶν παιδείᾳ διαπρεσβύτων οὐσίων*.

FHG iii 35; Schmid-Stählin ii, 2, 868.

HERMOCRATES (d. 407 B.C.), Syracusan statesman and general, much (perhaps exaggeratedly) admired by Thucydides, who saw in him a Sicilian Pericles. He urged a pan-Siceliot front against Athenian intervention at the conference of Gela (424), and as leader of the moderates in 415, contrasted with the demagogue Athenagoras, he organized resistance to Athens' great expedition. Next year he was unsuccessful as general, but the arrival of Gylippus (q.v.) reinvigorated the defence, and Hermocrates' tactics helped to bring about the Athenian disaster.

Hermocrates commanded the Syracusan squadron sent to assist Sparta in 412. The more radical democracy under Diocles (q.v. 1) exiled him *in absentia*, but after Cyzicus (410) he continued in Spartan service as a mercenary captain. Returning to Sicily in 408, he raided Carthaginian-held territory, and with moderate democracy, perhaps even with tyranny, as his aim he made an attempt on Syracuse in the course of which he was killed. Dionysius I (q.v.) married his daughter.

Thuc. 6. 8; Xen. *Hell.* 1; Diod. Sic. 11. H. Wentker, *Sicilien und Athen* (1956); K. F. Strohecker, *Dionysius I* (1958); H. D. Westlake, *Bull. Rylands Libr.* xli (1958/9), 239 ff.; P. Grosso, *Κωκκαλός* 1966, 102 ff. A. G. W.

HERMOGENES (1) (c. 200 B.C.), a Greek architect. His only known works are the temple of Dionysus at Teos and the temple of Artemis Leucophryene at Magnesia-on-Maeander, both in the Ionic Order. From these, and from his books about them, Vitruvius (q.v.) derived some of the principles of proportion included in his own book. But the remains of the two temples do not exactly agree with the precepts he attributes to Hermogenes; nor was the octastyle pseudodipteral type of temple invented by Hermogenes as he states. He also includes Hermogenes among those architects who objected to the use of the Doric Order in sacred buildings because of the complications arising from the spacing of the triglyphs. Strabo praises the Magnesian temple, and it is probable that Hermogenes' influence on Roman architecture of the Augustan period was considerable. Hermogenes son of Harpalus, mentioned in an inscription of Priene (no. 207), may be the same man.

Vitr. 3. 3; 4. 3; 7 *praef.*; Strabo 14. 1. 40 (c. 647).

H. W. R.; R. E. W.

HERMOGENES (2, *PW* 22) of Tarsus (2nd c. A.D.), rhetor. A child prodigy, admired by M. Aurelius, he failed to fulfil his promise as a speaker (hostile account in Philostr. *VS* 2. 7); he did, however, write a comprehensive set of textbooks which were much used and annotated in Byzantine and Renaissance times. We have two works which are certainly authentic: *Περὶ τῶν στάσεων* (see **HERMAGORAS**) and *Περὶ ἰδεῶν*. A set of progymnasmata (q.v.) is of doubtful authenticity; *Περὶ μεθόδου δεινότητος* is spurious, as is also *Περὶ εὐρέσεως*, though Hermogenes did write on these subjects. The most significant of his works is *Περὶ ἰδεῶν*, which deals with seven qualities of style, all to be seen as ingredients in the perfection of Demosthenes: *σαφήνεια*, *μέγεθος*, *κάλλος*, *γοργότης*, *ἥθος*, *ἀλγθεια*, *δεινότης*. These *ἰδέαι* derive from the *ἀρεταὶ λέξεως* found, e.g., in Dionysius of Halicarnassus, and traceable to Theophrastus (J. Stroux, *De Theophrasti virtutibus dicendi*, 1912); a similar scheme is to be found in the *τέχνη* ascribed to Aristides (q.v. 5).

The text in Spengel, *Rhet.* II, was superseded by H. Rabe (1913). Byzantine commentaries in C. Walz, *Rhetores Graeci* (1832-6), vii. D. Hagedorn, *Zur Ideentheorie des Hermogenes* (1964). D. A. R.

HERMOGENIANUS (*PW* 2), a Roman jurist of the time of Diocletian, and one of the two post-classical writers excerpted in Justinian's *Digesta* (q.v.). (The other is Arcadius Charisius, a *magister libellorum* of approximately the same period, who is represented by only a few fragments). Hermogenian's only work, *Iuris Epitomae* (six books), is relatively generously represented, and can be seen as characteristic of its period—an anthology of summarized (and unattributed) extracts from the legal literature of the Classical period. He may be the author of the *Codex Hermogenianus* (see **CODICES**, **LEGAL**), and was perhaps *praefectus praetorio* under Maximian.

D. Laebs, *Hermogenians Iuris Epitomae* (1964), A. Cenderelli, *Ricerche sul Codex Hermogenianus* (1965). B. N.

HERMOPOLIS (modern *Ashmunein*) in Graeco-Roman times marked the boundary between Middle and Upper Egypt, where dues were collected on goods passing along the Nile. The mounds there have yielded many papyri, but the buildings described by Jomard (c. 1800) have almost disappeared. Recent excavations have disclosed important religious and sepulchral structures in the western quarter, with interesting Graeco-Egyptian wall-paintings and inscriptions. The papyri give useful information about the organization of the town under the Romans.

E. Jomard, *Description de l'Égypte, Antiq.* ch. 14, pl. 50-2; G. Méautis, *Hermopolis-la-grande* (1918) (chiefly on papyri); S. Gabra, *Rapport sur les Fouilles d'Hermopolis Ouest* (Cairo, 1941); A. J. B. Wace and others, *Hermopolis Magna, Ashmunein, The Ptolemaic Sanctuary and the Basilica* (Alexandria, 1959). J. G. M.

HERMS were marble or bronze pillars surmounted by a bust and given a human semblance by the addition of genitals in the case of the male. Usually two beam-shaped projections near the shoulders were added to hold wreaths. Originally herms represented only the god Hermes, but later they served also for other deities. Alcmenes (q.v.) made a famous herm of Hermes Propylaeus at the entrance of the Acropolis of Athens. Herms stood in large numbers in the streets of Athens and other cities. Their mutilation in 415 B.C. was a sacrilegious act which led to the banishment of Alcibiades (q.v.). The use of the herm for portraits apparently began in the Hellenistic period and became particularly common with the Romans, who in their copies converted the original Greek portrait statues into the abbreviated forms of herms and busts. S. C.; G. M. A. R.

HERMUS, now *Gediz Çayı*, the largest river on the west coast of Asia Minor after the Maeander, is mentioned by Homer (*Il.* 20. 392). Herodotus (i. 80, cf. Strabo 626, Pliny *HN* 5. 119) says it rises on the holy mountain of the Dindymene Mother in Phrygia (now *Murat Dağı*) and enters the sea by Phocaea. This is also its present course; but at some unknown time it left its bed and turned to the south after passing the gorge west of Magnesia ad Sipylum and ran into the Gulf of Smyrna. In 1886, to save the gulf from becoming silted up, the river was diverted back into its ancient bed. Among its tributaries are the Hyllus and the gold-bearing Pactolus.

G. E. B.

HERNICI inhabited the Trerus valley and hills north of it in Italy (Strabo 5. 231: inaccurate). Their treaty with Rome in regal times is possibly apocryphal (Dion. Hal. 4. 49; Festus, 476 L.). But they certainly signed a defensive alliance with Rome c. 486 B.C., and in the subsequent wars against Aequi and Volsci (qq.v.) fought staunchly (Dion. Hal. 8. 64 f.; Livy 2. 41, etc.: untrustworthy). Later, in 387 and 362, the Hernici opposed Rome but renewed the old alliance in 358 (Livy 6. 2 f.; 7. 6 f.). After remaining loyal in the Latin War the Hernican cities, except Ferentinum, Alatrium, and Verulae, were led into war against Rome in 306 by Anagnina (qq.v.), but were easily conquered and granted partial, later full, citizenship (Livy 9. 42 f.; Festus, 262 L.). Hernican territory became part of Latium and the Hernici were so completely latinized that their own language cannot be discovered. Possibly it was a Latinian dialect, but their name meaning 'men of the rocks' (Festus, 89 L.) looks Oscan (q.v.).

G. Devoto, *Gli Antichi Italiani* (1951), 127 f.

E. T. S.

HERO (*Ἡρώ*) and **LEANDER** (*Λεάνδρος*), a pretty love-story of apparently Alexandrian origin (earliest surviving authorities Ov. *Her.* 18 and 19, where see Palmer's note, and Verg. *G.* 3. 258 ff.). Hero was priestess of Aphrodite at Sestos; Leander lived at Abydos, saw her at a festival, fell in love with her, and used nightly to swim the Hellespont to see her until a storm put out the light by which she guided him across and he was drowned; she threw herself into the sea after him. Cf. Strabo 13. 1. 22.

H. J. R.

HERO-CULT, the worship, as being superhuman, of noteworthy dead men and women, real or imaginary, normally at their actual or supposed tombs. The nature of the cult did not differ appreciably from that given to other chthonian powers (black victims, generally not shared by the worshippers, evening or night rather than day for the ritual, blood and other liquids poured into a trench, hearth, or low altar, *εὐχάρα*, rather than the high Olympian altar, *βαμός*), except that it was seldom practised at more than one place, or if at more, usually because several places claimed to possess the bones of the hero or heroine. The most noteworthy exception, Heracles (q.v.), was on his way to become a god and, indeed, received divine honours in some places. Hero-cult must be distinguished from the ordinary tendence of the dead, i.e. the performance of certain rites, including offerings of food and drink, intended to make them comfortable in the next world, for this did not involve worship.

Hero-cult is not found in Homer, where the word *ἥρως* means simply 'gentleman, noble'; *Iliad* 2. 550-1, supposing it genuine, is proof rather that Erechtheus (q.v.) was regarded as a god than that hero-worship was then practised. But excavation has repeatedly shown that Mycenaean tombs were the site of cult continuously into the historic period (see Nilsson, *GGR* i². 378 ff.). In

classical and post-classical literature mention of it is exceedingly common, and its typical objects are the traditional *ἥρωες* of Homer and other writers of saga, though this is not the only category (see below). It is therefore likely that it began after the Dorian migration, when the ancient chieftains had become legendary figures, idealized because native and not belonging to the new invading aristocracy. Whatever its origin, it spread to include many persons who had never existed save in the imagination of their worshippers.

These imaginary figures may be considered as a class in themselves; for more elaborate classification, see Farnell (op. cit. *infra*). It includes the so-called 'faded gods', that is to say figures originally divine, which for one reason or another had come to be considered dead men, and their places of worship tombs. Many such are of course doubtful, see ASCLEPIUS, HELEN, IPHIGENIA, for example. Others are practically certain, as Ilyacinthus (q.v.), Trophonius, and Agamedes (see TROPHONIUS), who, although they have a characteristic folk-tale told of them concerning their prowess as master-builders and master-thieves (Paus. 9. 37. 5 ff.), have no other existence except that the former is the possessor of a famous oracle. Generally the following characteristics may be looked for in a 'faded' figure. The name often, if Greek, is significant of something directly connected with the ritual; Trophonius seems to be the 'feeder', a natural enough name for a chthonian power, but odd for a human being. The legend, if one exists, is generally irrelevant to the cult altogether, as in the case of Hyacinthus, or explains some detail of it only, as with Glaucus (q.v. 3), whose connexion with the Taraxippos at the Isthmus is obviously secondary. The connexion with a genealogy is non-existent, fluctuating, or artificial (Hippolytus may be a case in point, see Farnell, 64 ff.; Aeneas, perhaps an offshoot of Aphrodite to begin with, becomes an ancestor by suspicious processes, cf. Farnell, 55, and *Cults* ii. 638 ff.). Finally, the ritual generally contains something alien to normal worship of the dead, as the curious performances connected with the Delphic 'heroine' Charila (Plut. *Quaest. Graec.* 12).

The more normal heroes, i.e. those who, if they ever really existed, were human, are simpler. Many naturally are worshipped by their descendants or former subjects; indeed, this is the ordinary case, as with Theseus (q.v.) at Athens and the Tritopatores (q.v.) in the same city. Many, again, are characters from the epic poems, and here ancestral connexion, although desirable (presumably the alleged fetching by the Spartans of Orestes' bones from Tegea, Hdt. 1. 67. 3 ff., had to do with their adoption of the house of Agamemnon as in some sense theirs), was not necessary; the Thebans who imported the bones of Hector (q.v.) did not claim to be descended from him, nor the Athenians from Oedipus (q.v.); the mere presence in the land of the bodies of such men was a blessing, however they came there. Others, though regarded as ancestors, are transparent inventions, made up from the name of the city or its people, as Messene (see Farnell, 360). Finally, a considerable number were fully historical, heroized because of some notable action or even mere strangeness, as Brasidas at Amphipolis (Thuc. 5. 11. 1) and the homicidal lunatic Cleomedes at Astypalaea (Paus. 6. 9. 6 ff.). (See also EUTHYMUS.)

Theological speculation busied itself with the possibility of heroes ultimately becoming gods (see Plutarch, *De def. or.* 415 b), not the least interesting part of the common Hellenistic and later belief that men could turn into gods if sufficiently virtuous.

See also RELICS. Older standard work F. Rohde, *Psyche* (1907); completest, with many references to ancient and modern literature, Farnell, *Hero-Cults*. On the ritual see W. S. Ferguson and A. D. Nock, *Harv. Theol. Rev.* 1944. See CITY-FOUNDERS, RIDER-GODS.

H. J. R.

HEROD (1) THE GREAT (c. 73-4 B.C.) was the son of the Idumaean Antipater (q.v. 6) and a Roman citizen from 47. By 41 Herod had risen to a high position in the kingdom, and when Hyrcanus was captured by Parthian invaders in 40, he escaped to Rome, where Antony nominated him king of Hyrcanus' ethnarchy together with Idumaea. His throne was not secure, however, until a Roman force stormed Jerusalem for him in 37. Despite the intrigues of Cleopatra, who coveted his kingdom, he kept Antony's favour, and in 30 Octavian confirmed his position and restored to him most of the cities freed by Pompey in 63. In 23 and 20 he added large parts of the tetrarchy of Ituraea (q.v.). Herod was an able administrator and a skilful financier. He developed the economic resources of the country, building a new port, Caesarea (q.v. 2). Spiritual and temporal power were henceforth separated; the High Priesthood, now in Herod's gift, ceased to be hereditary or life-long, the Sanhedrin lost much of its power to a royal council on Hellenistic lines, and the old aristocracy was replaced by a new nobility of office, including Greeks. As a secular king Herod tried to promote Hellenization: games were held even in Jerusalem; his sons received Greek education; the imperial cult was introduced among his non-Jewish subjects; several cities were founded or refounded on Greek lines within his kingdom; and lavish gifts, mostly of buildings, were bestowed on many cities outside it. This policy was unpopular with his Jewish subjects, and neither his championship of the rights of the Dispersion nor his magnificent new Temple won him their affection. Rather their hatred for their semi-foreign king steadily increased, and late in his reign there was opposition from the Pharisees, previously acquiescent. His power was based on his chain of fortresses (including the Antonia in Jerusalem, q.v.), his gentile mercenary army, his secret police, and a centralized bureaucracy, with which he ruthlessly and effectively fulfilled a client king's function of maintaining order. By steadfast loyalty to Rome he retained Augustus' confidence for many years, but he eventually lost it through his high-handed conduct in a dispute with Nabataea and his savagery towards his family, intrigues in which caused him to execute his favourite wife, Mariamne I, in 29, her two sons in 7, and his eldest son in 4. Serious disturbances requiring Roman intervention followed his death, and his kingdom was then divided between his sons Antipas, Archelaus, and Philip (qq.v.).

Josephus, *B.J.* 1. 203-671; *A.J.* 14. 158-17. 199. W. Otto, *PW* Suppl. II, 1 ff.; A. H. M. Jones, *The Herods of Judaea* (1938), 28 ff. E. M. S.

HEROD (2) ANTIPAS, on the death of his father Herod the Great (q.v.), was appointed tetrarch of the central part of his kingdom, Galilee, where he rebuilt the city of Sepphoris and founded Tiberias (q.v.), and Peraea, where he rebuilt Betharamphtha as Lias (later renamed Julias). When he was in Jerusalem for the Passover (A.D. 30 or 33) Pilate tried unsuccessfully to transfer to him the responsibility for trying the Galilaean Jesus. In 36 Tiberius trusted him with a share in the negotiations between Rome and Parthia. During or before John the Baptist's ministry Antipas had divorced his wife, a daughter of Aretas IV of Nabataea, in favour of his niece Herodias, and in 37 Aretas took revenge by invading Peraea and defeating Antipas; Roman reprisals on Aretas were called off on Tiberius' death. In 39, at Herodias' instigation, Antipas asked Gaius for the title of king, but he was deposed on a charge of treason trumped up by his nephew Agrippa I (q.v.), who inherited his tetrarchy.

Josephus, *B.J.* 2. 94-5; 167-8; 181-3; *A.J.* 18. 27; 36-8; 101-5; 109-24, 240-55. *PW* Suppl. II. 168 ff. A. H. M. Jones, *The Herods of Judaea* (1938), 176 ff., 195 f. E. M. S.

HERODAS (HERONDAS?), a third-century B.C. writer of *mimiambi*, literary mimes in iambic scazons. Questions of time and place are debatable, and even the correct form of his name is uncertain. Only a few quotations were extant until 1891, when a papyrus acquired two years previously by the British Museum was published by F. G. Kenyon. This edition contained Mimes 1-7 and the first three lines of 8. Additional fragments were pieced together later. The mimes are short, subtle, realistic presentations of typical mime-themes, perhaps intended for solo performance. 1. *The Bawd*. Metrichē, whose lover (husband?) has gone to Egypt, is visited by old Gyllis, who urges her to transfer her affections to a young athlete, Gryllus. She refuses with refreshing firmness and politely dismisses Gyllis with a cup of wine. 2. *The Pimp*. Battarus delivers a harangue in court against a trader for house-breaking and attempted abduction of one of his slave-girls. The vulgar, unctuous, menacing yet entirely mercenary pimp is perhaps the author's masterpiece. There is much parody of legal forms. 3. *The Schoolmaster*. The voluble Metrotrime, exasperated by poverty and the pranks of her incorrigible son Cottalus, brings him to the dry schoolmaster, Lampriscus, for a flogging, which is duly administered. 4. *The Women Worshippers*. Cynno, her friend Coccale, and the maid (mute) bring their humble offering to the temple of Asclepius at Cos. The matter-of-fact, short-tempered mistress Cynno, the naive Coccale, lost in admiration at the temple-statues, and the oily sacristan are effectively portrayed. 5. *The Jealous Mistress*. Bitinna, furious at discovering the infidelity of Gastron, her slave-paramour, orders him off for flogging, in spite of his entreaties; then she hastily sends her maid Cydilla to fetch him back for branding; finally Cydilla wheedles her into granting a provisional pardon. 6. *The Private Conversation*. Metro calls on Coritto to ask for certain information, and the two dear friends converse with admirable cynicism. 7. *The Shoemaker*. Metro introduces some prospective lady-customers to the fashionable shoemaker Cerdon, an outstanding portrait of the salesman, alternately oily and truculent. 8. *The Dream*. A farmer (clearly Herodas himself) relates his dream of how his goat was torn limb from limb by certain worshippers of Dionysus, and how, in the subsequent contest, he won the prize. Herodas is evidently referring to the harsh treatment of his works by his critics (perhaps Callimachus and his circle), and his hopes of ultimate recognition as the successor of Hipponax. 9. *Women Breaking a Fast*. Only a fragmentary introduction survives. Guests are greeted; and slaves seem to be scolded somewhat in the manner of the opening of Theocritus 15.

ANNOTATED EDITIONS. J. A. Nain (1904); W. Headlam and A. D. Knox, with translation (1922); O. Crusius (2nd ed., by R. Herzog, 1926); A. D. Knox (Loeb, with Theophrastus' *Characters*).
W. B.; D. E. E.

HERODES (1), Tl. CLAUDIUS (PW 71) ATTICUS (d. c. A.D. 137), the wealthy father of Herodes (q.v. 2) Atticus, received *ornamenta praetoria*, and was legate of Judaea (99/100-102/3?). He became *cos. suff.* (?104) and, according to Philostratus, again under Hadrian. ἀρχιεπὺς τῶν Σεβαστῶν at Athens (between 97 and 102), where he had a seat of honour in the theatre (IG ii. 3². 5090), he was honoured throughout Greece.

P. Graindor, *Un Millardaire antique, Hérode Atticus* (1930), 20 ff.; for dates, E. M. Smallwood, *JRS* 1962, 131 ff. H. H. S.

HERODES (2) ATTICUS (L. VIBULLIUS HIPPARCHUS Tl. CLAUDIUS ATTICUS HERODES), c. A.D. 101-77, Athenian of the deme Marathon, consul at Rome 143. A sophist of great wealth, generously used in building and benefaction, he combined a career as a Roman senator with literary activity that won him primacy among coevals

and comparison with the classics. His style was straightforward, elegant, and restrained, recalling Critias and influencing a wide circle of pupils. A friend of Hadrian, Antoninus, and Aurelius, he was responsible for the teaching of the last and of L. Verus. His works included letters, διαλέξεις and ἐφημερίδες: only a Latin translation of a *fabula* survives (Gell. 19. 12) apart from a symbolaeutic speech with the superscription Ἱερῶδου περὶ πολιτείας whose attribution is contested.

Philostr. *VS* 2. 1; [Ἱερῶδου] περὶ πολιτείας ed. Drerup (1908) cf. Wade-Gery, *CQ* 1945; W. Schmid, *Der Atticismus* (1887), vol. 1; P. Graindor, *Hérode Atticus et sa famille* (1930); G. W. Bowersock, *Greek Sophists in the Roman Empire* (1969), ch. 7. E. L. B.

HERODIAN (1) (AELIUS HERODIANUS), son of Apollonius Dyscolus, of Alexandria, grammarian at Rome under M. Aurelius. He wrote works on the accentuation of the *Iliad* and *Odyssey*, and of Attic. These he afterwards included in his *Καθολικὴ προσηφία*, reviewing the accentuation of (it is said) some 60,000 words. It was in twenty-one books: 1-19 contained rules of accentuation, the 20th dealt with quantities and breathings, and the last with enclitics, synaloepha, and some other points concerning words in combination. This immense work survives only in later citations, and in extracts such as those by Theodosius and ps.-Arcadius. It was largely based on Aristarchus and his successors in this field. Two of Herodian's other works are extant—*Περὶ μνηρῶν λέξεως* (on anomalous words) and *Φιλέταυρος*, a short Atticist lexicon. He disagrees, however, with his father's extreme doctrines of ἀναλογία, expressly repudiating such forms as ἔμ (see APOLLONIUS (13) DYSCOLUS). Of his many other works the titles of about thirty survive, together with extracts and quotations by later scholars: they cover many departments of grammar, including, e.g., treatises on various parts of speech, figures, declensions, conjugations, defective verbs, and some anomalous words such as ὕδωρ. Herodian ranks with his father as one of the greatest, as he is the last, of original Greek grammarians. A number of later compilatory works are falsely attributed to him.

EDITIONS. Φιλέταυρος: A. Dain, 1954; Π. μνη. λέξ. Dindorf, 1823; Π. μνη. λέξ., Π. Ἰωνικῆς προσηφίας, Π. διχρονῶν, Lehrs, 1848. *Herodiani Reliquiae* (much conjectural reconstruction), Lentz in Teubner's *Gramm. Gr.*; cf. also H. Erbse, *Beitr. zur Überlieferung d. Iliascholien* (1960), 311 ff. P. B. R. F., R. B.

HERODIAN (2) of Syria, a subordinate official in Rome early in the third century A.D., wrote *Τῆς μετὰ Μάρκον βασιλείας ἱστορίαι* in eight books from M. Aurelius to Gordian III (A.D. 180-238). Moralizing and rhetorical, his work is superficial, although his value increases with his contemporary knowledge.

TEXTS. L. Mendelssohn (1881); K. Stavenhagen (1922); F. Cassola, *Erodiano* (1968), text with Italian transl. A. H. McD.

HERODICUS of Babylon (perhaps late 2nd c. B.C.), author of *Κωμικοῦσμένοι* (persons satirized in Comedy, see AMMONIUS 1), *Σύμμικτα ὑπομήματα*, and *Πρὸς τὸν φιλοσωκράτην*.

M. Müller, *De Seleuco Homérico* (1891), 10 ff.; J. Steinhausen, *Κωμικοῦσμένοι* (1910); A. Dittmar, *Aschines von Sphettos* (1912), 56 f. J. D. D.

HERODOTUS (1), son of Lyxes, of good family in Halicarnassus, and related to Panyassis, a 'reviver of epic', was born 'a little before the Persian War, and lived till the Peloponnesian War' (Dion. Hal. *Thuc.* 5). In civil strife at Halicarnassus Panyassis was killed by the tyrant Lygdamis, grandson of Artemisia (q.v.), and Herodotus withdrew to Samos. By 454 Halicarnassus was pacified and a Delian tributary; but if Herodotus returned, he did not remain; for he had travelled, and lectured in Greece, and visited Athens, before he joined the Athenian colony at Thurii (founded 444/3). Biographers

who dated his birth in 484 (Aul. Gell. 15. 23) may have simply counted back forty years from this central event of his life. Lucian, *Herodotus*, represents him as giving lectures in various cities, but it is hard to believe that he was paid 10 talents for a lecture or reading in Athens (Plut. *De malign. H.* 826 b), however highly he may have flattered Athenian pride. His history was known in Athens in 425, when it was parodied by Aristophanes (*Ach.* 513 ff.), but there is no clear proof of any return after 443. He mentions Greek events of 430, but none later, and is presumed to have died in Thurii before 420; a tomb, with an epitaph in verse (Steph. Byz. s.v. *Θούριος*) was shown there in later years, but there was also a tradition that, like Euripides, he died at Pella.

2. TRAVELS. Besides acquaintance with Samos (3. 60), Athens (5. 77), and south Italy (4. 15. 90), Herodotus records travels—(a) in Egypt, to Elephantine, during the Nile flood and ebb, after the Persian reconquest (449), perhaps also before the revolt of 460–454; (b) to Gaza (3. 5), Tyre (2. 44), and down the Euphrates (1. 185) to Babylon (1. 178–83); (c) in Scythia, to Olbia (4. 16) and up the Borysthenes (4. 81), and in the north Aegean from the Bosphorus (4. 87) to Thasos (6. 47). Though he has much to say of Persian customs, he never indicates a visit to Persia; but Cyrene (4. 156–203), like Crete, is a likely stopping place on a voyage to Egypt. It has been conjectured that he travelled as a merchant, but there is nothing in the text to suggest it; on the contrary, he sometimes says that he went to places expressly to seek information (2. 3, 44). What he saw with his own eyes (*ὄψις*) is contrasted with what he heard (*ἀκοή*). Sometimes, especially in Egypt and at Delphi, he tried to corroborate traditions by examining monuments and questioning priests and temple attendants. Silence about western journeys suggests that the main motive was not geographical but historical, and that the visit to Athens was a crisis in life and outlook: acquaintance with Sophocles, who wrote him verses (Plut. *Mor.* 785b), interest in Pericles and Alcmaeonid house-lore, in Cimon's ancestors (4. 137–8; 6. 34 ff., 103 ff.), and in topographical details (5. 77, 8. 53) enhance the significance of his eulogy and vindication of Athenian aims and achievements (7. 139). This does not mean that he started to write his history or conceived it in any coherent form before going to Thurii.

3. OTHER SOURCES. Besides his own travels and inquiries Herodotus has wide geographical, historical, and literary knowledge. He quotes Homer and Hesiod, discusses the authorship of the *Cypria* (2. 117), notes suspect or misapplied oracles (7. 6; 8. 20; 9. 43), and defends genuine ones (8. 77); dissents from current Ionian theories (2. 15, 20; 4. 36), and expressly criticizes and derides Hecataeus (2. 143; 6. 137), from whom, however, he borrows freely. Other literary sources, lost or unknown to us, have been suspected, e.g. accounts of oracles (R. Crahay, *La Littérature oraculaire chez H.* (1956)), memoirs written by Dicaeus, an Athenian exile in Persia (8. 65, P. Trautwein, *Hermes* 1890, 527 ff.), as well as the work of logographers like Charon and Xanthus (see LOGOGRAPHERS). But apart from Hecataeus Herodotus mentions no contemporary prose writers and his frequent references to national sources, e.g. a Samian version, as contrasted with a Spartan (3. 47), probably indicate oral information as a result of inquiry (*ἱστορίη*).

4. TEXT. There are a few lacunae, and the account of the Pyramid kings (2. 124–36) should follow 2. 99. An unfulfilled reference to *Ἀσσυρίοι λόγοι* (1. 184) indicates that a Mesopotamian country to the description of Egypt has been lost, or was not written.

5. PLAN AND SCOPE. The plan of the *History* is stated in its opening words (1. 1). Great deeds have value in retrospect, whether done by Greeks or by others (and

Herodotus' portraits of Persians are masterly), and it is reasonable to ask, of the Great War, 'what they fought each other for'. Blame for the clash of Persians with Greeks is put on Croesus, whose headstrong attack on Cyrus ruined Lydia (1. 6). The story of that 'middle kingdom' (1. 7–94) is interrupted characteristically by a pair of digressions (1. 59–68), explaining why neither Athens nor Sparta helped Croesus. The rise of the Medes, their subjection by Cyrus, and a sketch of him and his Persians (1. 95–140) lead to his conquest of the Asiatic Greeks (1. 141–77). The story of the Empire under Cyrus, Cambyses, and Darius (1. 178 to 5. 27) includes a long account of Egypt (book 2), formally motivated by Cambyses' invasion of the country. The accession and reforms of Darius (3. 61–87, 150–60) are interlarded with his first overseas success, against Polycrates of Samos (3. 39–60; 120–49), and followed by pendent narratives of his aggressions in Thrace and Scythia (4. 1–144; 5. 1–27) and in Libya (4. 145–205). After all this retrospect comes the Ionic Revolt (5. 28–38), its suppression (5. 97–6. 42), and the consequent Marathon campaign (6. 94–120), similarly alternated with events in Greece, involving Sparta (5. 39–54; 6. 51–84) and Athens (5. 55–96; 6. 85–93, 121–40) in resistance to Persia. In books 7, 8, 9 the accession of Xerxes and his choice between policies (7. 1–19) lead to pendent narratives of preparation, Persian (7. 20–131) and Greek (7. 131–75). Then the sea-fight at Artemisium (7. 175–95) and the land-battle at Thermopylae (7. 196–239), with their sequels (8. 1–23, 24–39), prepare for the crucial struggle at Salamis (8. 40–112) and its aftermath, the return of Xerxes (8. 113–32), and the winter parleys (8. 133–44). Finally, the land-battle of Plataea (9. 1–89) and the naval operations at Mycale (9. 90–106) are the counterpart of Artemisium and Thermopylae.

6. The *History* has been regarded as unfinished; but the brief epilogue (9. 107–22) elaborately displays Persian demoralization, contrasted with initial hardness. If Herodotus meant to go beyond the capture of Sestos (9. 117–21), it would mean a fresh 'account' of new aims and events; and it is where our text of Herodotus ends that Thucydides begins his retrospect (1. 80) of *τὰ μετὰ τὰ Μηδικά*. The clumsy division of the work into nine 'Muses' is some librarian's fancy: Herodotus himself cross-refers to this or that *λόγος*.

7. LITERARY ART. Within this broad design the main story is clearly distinguished from 'additions' (*προσθήκαι* 4. 30; *παρενήκαι* 7. 171) large and small, some composed for their place, some utilizing earlier drafts. Such digressions have epic precedent, and those of Herodotus—for which he apologizes, e.g. 2. 123—are deliberate. His literary art must be compared with Pindar's notions of relevance, and with the tragedians' use of choral odes, annotating rather than interrupting the development of the plot. Like the dramatists, too, Herodotus chooses a hero—Croesus, Polycrates, Cleomenes, Mardonius—and traces his response to events and persons, in success and in disaster. Through *peripeteia* and *catastrophē* the question—*δὲ ἦν αἰτίη*—answers itself: only rarely need Herodotus intervene, chorus-like, to point a moral; for his public, like the audience of a tragedy, knew the outline of the story. Hence economy of detail, significant hearsay without guarantee of veracity; Aeschylean word-painting, Pindaric allusiveness, Aristophanic humour, above all, Sophoclean irony; a new literary art and expository skill, applied in lucid prose to a fresh field of research—the causes of 'men's deeds'—which establish Herodotus as the 'Father of History'.

8. HISTORICAL METHOD. Herodotus professes to record things seen and heard. His book results from his journeys; yet it is no mere *περίοδος γῆς ἢ ἐπιδημία*, but

ιστορίας ἀπόδειξις, the outcome of research. What he has seen (ὅψις 2. 99, 147; 4. 81; cf. 5. 59), heard (ἀκοή 2. 99-106; 6. 82; 7. 35), and read (in poets, Ionian travellers, and theorists) is supplemented and verified by inquiry (ιστορίη 2. 19, 44, 75, 113, 118; 4. 96) and criticized by common sense (γνώμη 2. 24; 5. 3). He states alternative versions and views with discreet reticence (2. 3, 46-7), and reserves judgement or offers conjecture (εἰκασία 2. 24; 4. 11-12; 8. 22) when evidence fails. Ethnographical and historical interests have outrun (but not extinguished) physical and geographical. Historical facts have intrinsic value and rational meaning. Patriotic pride and religious belief are tempered by comparison of regimes and customs, and by respect for age-long Oriental experience. In Egypt he believed that he had received mystic teaching; but he reveals nothing, because 'all men know equally about divine things' (2. 3).

9. PERSONALITY. His personality is written in his book. Explorer, observer, and listener, he combines encyclopaedic interest and curiosity—about deeds rather than ideas—with humane sympathy and goodwill. Childlike, he loves wonders and secrets, enjoys a tale and a joke, and tells them vividly. Devoid of race-prejudice and intolerance, he venerates antiquity and is fascinated by novelties; and in these things trusts informants overmuch. Without linguistic skill, he extracts information from all; without military insight, he has recorded a great war. For a philosophy he has common sense, moral honesty, and piety. In a world regulated by fate (μοῖρα), but de-ranked by chance (τύχη), the gods uphold righteousness and punish wrong-doers. They can warn, but they do not prevent, though they intervene to punish arrogance. Amid these external forces, and with the guidance of law and usage, man, using experience and reason, has freedom of choice and is responsible (αἴτιος) for his acts.

10. Of such work, criticism was immediate and persistent. Herodotus himself replies to critics (6. 43); Thucydides (1. 20) challenges statements (6. 57; 9. 53); Aristophanes parodies the preface (*Ach.* 513 ff.); Plutarch (*De Malignitate Herodoti*) imputes unfairness and perversion of facts, thinking him disrespectful of tradition and φιλοβαρβάρους. Christian writers make charges of plagiarism, which Sayce (1883) has repeated and amplified. But closer study and better acquaintance with the resources, equipment, and literary custom of ancient writers have restored Herodotus' reputation for industry and honesty, while noting mistakes and omissions. J. L. M.

11. Herodotus' style probably owes little to the early logographers, whose scanty fragments hardly reveal any style at all—an impression confirmed, on the whole, by Dion. Hal. *Thuc.* 5 and 23. To Homer he undoubtedly owes much, in cast of thought as well as in language (Norden, *Ant. Kunstpr.* 1. 40). What other literary influences may have gone to the moulding of him it is hard to say. Nor is it easy to analyse the surpassing beauty of his prose, for Herodotus has no mannerisms. Sometimes it is traceable to a subtle disposition of long and short words, as in the majestic poem (comparable, in this respect, to the openings of Sappho's *Ode to Aphrodite* and Lucretius' poem) and in 1. 45, ad fin.; sometimes to other technical means (1. 119, unobtrusive word-echoes; 1. 45, loc. cit., hyperbaton; 1. 32, asyndeton and initial assonance). But hardly a single technical device can be said to be characteristic of Herodotus. Each is used when, and when only, it is needed, as the period, for example, is reserved for great moments (e.g. 1. 45, 86). The first book is peculiarly rich in noble passages: Solon and Croesus (29-33, with the unforgettable solemnity of *ὁ θεῖον πᾶν εὖν φθονερὸν τε καὶ παραχῶδες* and *πᾶν ἔστι ἀνθρώπου συμφορὴ*, and 86-90); Harpagus eating

his children's flesh (119, with the master-stroke at the close, where the historian is transformed into the hushed, yet curious, spectator). Such passages are the perfection of tragedy, as Don't-care Hippocleides pirouetting on his head is the perfection of comedy. They reveal a side of Herodotus not always perceived by modern readers or by ancient critics, who praise his sweetness and beauty, but find him lacking in emotional power (e.g. Cic. *Orat.* 39 'quasi sedatus amnis fluit'; Quint. *Inst.* 10. 1. 73 'dulcis et candidus et fusus Herodotus'; Dion. Hal. *Pomp.* 3 and *Thuc.* 23 (comparisons with Thuc.); Ath. 3, p. 78 e (μελίγρηπος)). Hermogenes, however (*Id.* 2, p. 421), does recognize his grandeur and emotional power. Herodotus has suffered the fate which befell Mozart. His charm, wit, and effortless ease have diverted attention from the note of profound sadness and pity sounded not seldom in his History.

HERODOTUS (2), pupil of Agathinus and adherent of the pneumatic school of medicine, in the Flavian period (A.D. 70-96), wrote *Ἱατρὸς* and *Περὶ βοηθημάτων* (lost); *Διάγνῃσις περὶ τῶν ὀξέων καὶ χρονίων νοσημάτων* (extant).

HERON of Alexandria, mathematician and inventor (fl. A.D. 62), was known as ὁ μηχανικός. The following works are associated with his name: (1) *Metrica*, 3 books, on the measurement of surfaces and bodies, and division of them in a given ratio. (2) *Definitions* (ὁροί), defining geometrical terms and concepts. (3) *Geometrica*, (4) *Stereometrica*, and (5) *On Measures* (Περὶ μέτρων), all works of practical mensuration. (6) *Pneumatica*, on the construction of devices worked by compressed air, steam, and water. (7) *On Automata-making*, mostly on the construction of θαύματα ('miracle-working' devices used especially in temples). (8) *Mechanica*, 3 books (extant only in Arabic), a treatise on how to move weights with the least effort, containing (book 1) the foundations of statics and dynamics, (book 2) the five simple machines, (book 3) the building of lifting-machines and presses. (9) *Dioptra*, on the construction and use of a sighting-instrument for measurement at a distance (with additions describing unrelated instruments, e.g. a hodometer). (10) *Catoptrica* (extant only in Latin translation), on the theory and construction of plane and curved mirrors. (11) *Belopoeica*, on the construction of war-catapults. Some of these, notably (3), (4), and (5), can hardly be

by Heron in their present form, but all may well be based on treatises by him.

Other works by Heron no longer extant include a commentary on Euclid's *Elements* (substantial remains in an-Nairizi's commentary on Euclid, ed. Curtze, *Euclidis Opera Omnia Supp.*, Leipzig, 1899); βαρουλκός, description of a machine for lifting huge weights by means of a combination of gear-wheels (parts are incorporated into *Mechanica* i. 1 and *Dioptra* 37); *On Waterclocks* (Proclus, *Hypotyp.* 120); and perhaps *Cheirobalistra*, another type of artillery weapon (only fragmentarily preserved). The *Geodæsia* and *Liber Geoponicus* are later compilations, largely extracts from the *Geometrica* and other mensurational works.

Heron, though very adept at both mathematics and applied mechanics, was probably not very original in either. But his mensurational works are of great importance as our main source for practical mathematics in the Greco-Roman world. While classical 'Euclidian' mathematics aimed at constructing theorems, 'Heronian' mathematics was directed towards solving practical problems, if necessary by approximation. Thus, Heron gives examples of approximations to irrational square- and cube-roots. He also solves quadratic equations arithmetically, and gives the formula for the area of a triangle, $\Delta = \sqrt{s(s-a)(s-b)(s-c)}$. The roots of this type of mathematics lie in Mesopotamia. In pneumatics, mechanics, and the other sciences too, though Heron often discusses theoretical matters, his purpose is utility and amusement; hence we get detailed descriptions, with figures, of devices such as siphons, a self-regulating lamp, a water-organ, pulley-systems, and a variety of 'mechanical toys'. Though the discovery of the principles behind these, and perhaps many of the devices too, were due to Heron's predecessors, such as Archimedes and Ctesibius (q.v.), here too he is of major importance as a source. See also PHYSICS. §§ 5, 6

EDITIONS. (1) to (10) in *Heronus Opera*, 5 vols. ed. W. Schmidt and others, Leipzig (Teubner), 1899-1914 (with German translation and fragments). See also Hultsch, *Heronus Alexandrinus geometricorum et stereometricorum reliquiae* (Berlin, 1864). *Belopoetica*, ed. H. Diehl and E. Schramm, *Abh. Berlin. Akad.* 1918, 2 (Phil.-hist. Kl.) (with German translation) For an attempted reconstruction of the *Cheirobalistra* see V. Prou, *Notes et Extraits des Manuscrits* xxvi. 2 (1877).

HEROPHILUS of Chalcedon, one of the leading dogmatic physicians, lived in Alexandria in the first half of the third century B.C.; his school was still flourishing at the end of the first century A.C. Herophilus stressed the importance of experience no less than that of reasoning. Though a great scholar, his work seems primarily determined by the practical task of the physician; health he went so far as to consider the indispensable foundation of all physical and intellectual happiness. His greatest original contributions were his anatomical inquiries based on the human cadaver; he probably wrote a systematic outline of anatomy (particularly famous was his study of the brain—to him the organ of the soul—of the liver, the eye, the sexual organs). He discovered the rhythm of the pulse and formulated a mathematical law of its systole and diastole. Much interested in the aetiology of diseases, he explained their origin through humours. In therapy he paid careful attention to prognostics and used drugs abundantly; but he was also an authority on dietetics and gymnastics. Through his books, in which practical questions were emphasized, he

exercised a considerable influence. See ANATOMY AND PHYSIOLOGY, § 7.

TEXT. Fragments: K. F. H. Marx (1838); Marx, *De vita, scriptis*, etc. (1842). On Herophilus as the discoverer of both sensory and motor nerves see F. Solmsen, *MH* 1961, 185 ff. List of writings: Susemihl i. 787.

TRANSLATION AND COMMENTARY. J. F. Dobson, *Proceedings of the Royal Society of Med.*, Section Hist. of Med. (1925), indispensable for interpretation of the more important fragments.

LITERATURE. The handbooks on history of medicine; F. Kudlien, 'Herophilus und der Beginn der Medizinischen Skepsis', *Gesnerus* 1964, 1 ff., assumes an influence of Pyrrhon's scepticism on Herophilus, especially on the preference he gives to the study of phenomena. But this trait and the sceptical overtones of Herophilus' theory seem to derive from the emphasis and scepticism of the late Peripatetism (see L. Edelstein, *Bulletin Inst. Hist. Medicine* 1935, 235 ff., on the development that led to human anatomy of which Herophilus is one of the founders). Tradition unanimously regards Herophilus as a Dogmatist; a turn to academic scepticism is responsible for the rise of the Empirical School which grew out of that of Herophilus (s.v. Philinus). Pupils of Herophilus: H. Gossen, *PW* viii. 1104. L. E.

HERULI, a Germanic people, who were expelled from Scandinavia by the Danes. In the later third century A.D. some of them appear on the Rhine and others in the Black Sea region. The former were of little importance, but the latter in 267 sacked Athens, Corinth, Sparta, and Argos. One of the most primitive of the Germanic peoples, they still practised human sacrifice in the sixth century.

E. A. T.

HESIOD, one of the oldest known Greek poets, often coupled or contrasted with Homer as the other main representative of early epic. Which was the older of the two was much disputed from the fifth century B.C. on (Xenophanes ap. Gell. 3. 11. 2, Hdt. 2. 53, Ephorus fr. 101 J., etc.): Homer's priority was carefully argued by Aristarchus, and generally accepted in later antiquity. Hesiod's absolute date is now agreed to fall not far before or after 700 B.C. Of his life he tells us something himself, that his father had given up a life of unprofitable sea-trading and moved from Aeolian Cyne to Ascræ in Boeotia (*Op.* 633-40); that he, as he tended sheep on Mt. Helicon, had heard the Muses calling him to sing of the gods (*Th.* 22-35, a celebrated passage); and that he once won a tripod for a song at a funeral contest at Chalcis (*Op.* 650-60). For his dispute with Perses see below (2). He is said to have died in Hesperian Locris (*Thuc.* 3. 96, etc.), but his tomb was shown at Orchomenus (Arist. fr. 565, *Certamen* 14, Paus. 9. 38. 3). The story of his meeting and contest with Homer was probably an invention of the sophist Alcidas (see *Certamen Homeri et Hesiodi*). The poems anciently attributed to him are as follows (only the first three have survived complete, and only the first two have a good claim to be authentic):

1. The *Theogony* (Θεογονία). The main part of the poem, which is prefaced by a hymn to the Muses (1-104; cf. the Homeric Hymns), deals with the origin and genealogies of the gods (including the divine world-masses Earth, Sea, Sky, etc.), and the events that led to the kingship of Zeus: the castration of Uranos by Kronos, and the overthrow of Kronos and the Titans, the 'former gods' (424), by the Olympians. This 'Succession Myth' has striking parallels in Akkadian and Hittite texts, and seems originally to have come from the Near East. Hesiod's version shows some stylistic awkwardness and inconcinnity, but is not without power. Interlarded with it are the genealogies, which run smoother. The first powers born are Chaos, Earth, and (significantly) Eros (116-22). From Chaos and Earth, in two separate lines, some 300 gods descend; they include personified abstracts, whose family relationships are clearly meaningful. There is an interesting passage in praise of the unhomeric goddess Hecate (411-52), further myths, notably the aetiological tale of Prometheus (521-616), and a detailed description of Tartarus (720-819). The

poem ends with the marriages of Zeus and the other Olympians, and a list of goddesses who lay with mortal men. This last section, which refers to Latinus (1013) and led on to the *Catalogue* (below, 4), is agreed to be post-Hesiodic, though opinions vary as to where the authentic part ends.

2. The *Works & Days* (*Ἔργα καὶ Ἡμέραι*). This poem, apparently composed after the *Theogony* (cf. 11–24 with *Th.* 225), would be more aptly entitled 'the Wisdom of Hesiod'. It gives advice for living a life of honest work. Hesiod inveighs against dishonesty and idleness by turns, using myths (Prometheus again, with the famous story of Pandora, 42–105; the Five World-Ages, 106–201), parable (202–12), allegory (286–92), proverbial maxims, direct exhortation, and threats of divine anger. The sermon is ostensibly directed at a brother Perses, who has bribed the βασιλῆες and taken more than his share of his inheritance (37–9); but Perses' failings seem to change with the context (cf. 28 ff., 275, 396), and it is impossible to reconstruct a single basic situation. Besides moral advice, Hesiod gives much practical instruction, especially on agriculture (381–617, the year's 'Works'), seafaring (618–94), and social and religious conduct (336–80, 695–764). There is a fine descriptive passage on the rigours of winter (504–35). The final section, regarded by many as a later addition, is the 'Days' (765–828), an almanac of days in the month that are favourable or unfavourable for different operations. The poem as a whole is a unique source for social conditions in early archaic Greece. It has closer parallels in Near Eastern literatures than in Greek, and seems to represent an old traditional type. (Virgil's *Georgics*, though much influenced by Hesiod, are shaped by the Hellenistic tradition of systematic treatment of a single theme (see DIDACTIC POETRY).)

It has always been the most read of Hesiodic poems. There was even a 'tradition' that it was Hesiod's only genuine work (Paus. 9. 31. 4); but he names himself in *Th.* 22, and links of style and thought between the two poems confirm identity of authorship. Both bear the marks of a distinct personality: a surly, conservative countryman, given to reflection, no lover of women or of life, who felt the gods' presence heavy about him.

3. The *Shield* (*Ἰλιάς*) is a short narrative poem on Heracles' fight with Cycnus, prefaced by an excerpt from the fourth book of the *Catalogue* giving the story of Heracles' birth (1–56). It takes its title from the disproportionately long description of Heracles' shield (139–320), which is based partly on the shield of Achilles (*Il.* 18. 478–609), partly on the art of the period c. 580–570 (R. M. Cook, *CQ* 1937, 204 ff.; this proves that Aristophanes of Byzantium was right in denying the poem to Hesiod). Disproportion is characteristic of the work; the Homeric apparatus of arming, divine machination, brave speeches, and long similes is lavished on an encounter in which two blows are struck in all. Parts of the description of the shield betray a taste for the macabre.

4. The *Catalogue of Women* (*Γυναικῶν Κατάλογος*) or *Ehoiai* (*Ἠοίαι*) was a continuation of the *Theogony* in five books, containing heroic genealogies with many narrative annotations. Numerous citations and extensive papyrus fragments survive. The poem was accepted as Hesiod's in antiquity, but seems not to antedate the sixth century.

5. Other lost poems. (a) Narrative: *Μεγάλοι Ἠοίαι* (genealogical), *Μελαμποδία* (in at least three books; stories of famous seers), *Κήρυκος Γάμος*, *Ἰδαῖοι Δάκτυλοι*, *Αἰγίμιος* (in at least two books; alternatively ascribed to Cercops of Miletus). (b) Didactic: *Χείρωνος Ὑποθήκαι* (addressed to Achilles), *Ἀστρονομία* (risings and settings—and myths?—of principal stars), *Μεγάλα Ἔργα*, *Ὀρνιθομαντεία* (appended to the *Works & Days* in some ancient texts). A few fragments of most of these poems survive.

6. The *Κάμινος* or *Κεραμείς* (Hom. *Epigr.* 14) was ascribed to Hesiod by some (Pollux 10. 85).

HESIONE (*Ἡσιόνη*), in mythology, (1) an Oceanid, wife of Prometheus (Aesch. *PV* 560). (2) Wife of Nauplius and mother of Palamedes (q.v.), Oeax, and Nausimedon (Apollod. 2. 23). (3) Daughter of Laomedon (q.v.; *ibid.* 3. 146). After her rescue from the sea-monster by Heracles (q.v.), she was taken prisoner by him when he captured Troy, given as the prize of valour to Telamon, and granted leave to save any prisoner she chose; she therefore bought (*ἐμπόρω*) her brother Podarces for a nominal price, and he was henceforth called *Πριάμος*. By Telamon she became mother of Teucer (q.v.; Apollod. 2. 136; 3. 162). H. J. R.

HESPERIDES, the daughters of Night and Erebus (Hes. *Theog.* 215) or, in later versions, of Hesperis and Atlas (q.v.; Diod. Sic. 4. 27. 2) or of Ceto and Phorcys (schol. in Ap. Rhod. 4. 1399), were guardians of a tree of golden apples given by Earth to Hera at her marriage. From the same tree came the apples thrown down by Hippomenes (or Melanion) in his race against Atalanta (q.v.). The garden of the Hesperides was popularly located beyond the Atlas mountains at the western border of the Ocean. The number of the sisters, renowned for their sweet singing, varies from three to seven. Names attributed to them include Aigle, Erytheia, Arethusa, Hespere, and Hesperethusa. In some accounts they were associated with the Hyperboreans (q.v.). Heracles (q.v.) succeeded in taking the apples after slaying Ladon, the dragon who guarded the tree.

HESPERUS (*Ἑσπερος*, Lat. *Vesper*, *Vesperugo*), the Evening Star; shown in art as a boy carrying a torch. Early tradition makes him the son of Astraeus (or Cephalus) and Eos (see Hyg. *Poet. Astr.* 2. 42) but later he was associated with Atlas (q.v.) as his son or brother (Diod. Sic. 3. 60; Serv. in Verg. *Aen.* 1. 530, 4. 484). He disappeared from Mt. Atlas in a whirlwind after climbing up to observe the stars. As father of Hesperis, he was grandfather of the Hesperides (q.v.).

HESTIA, goddess of the hearth, etymologically identical with Vesta (q.v.), and not unlike her in cult, though less important and not having her virgin priestesses. In early times, when it was a difficult and slow process to make fire, to keep a hearth burning continually was very advisable, and it would seem that in communities of that age, both in Greece and in Italy, the hearth of the chief or king was especially important, probably for practical reasons and certainly also from magico-religious motives; it seems to have been considered in some sense the life of the people (the equation 'fire = life' is very widespread). Hence the cult of the communal or sacred hearth was apparently universal, but the goddess never developed, hardly even achieving anthropomorphization. She therefore has next to no mythology. Homer never mentions

her, the word *ἱερὴ* meaning simply a fire-place; Hesiod and later authors after him make her daughter of Kronos (q.v.) and Rhea (*Theog.* 454), and the *Homeric Hymn to Aphrodite* says (21 ll.) that she 'liked not the works of Aphrodite', and so refused to marry either Poseidon or Apollo, but swore to remain a virgin, and Zeus accordingly granted her sundry honours, especially to 'sit in the midst of the house taking the fatness'. The brief *Hymn to Hestia* (24) was evidently composed for the eternal fire in the temple of Apollo at Delphi. Of her private cult not much is known; swine or, on occasion, cows were offered to her, no doubt according to the means of the household (Ar. *Vesp.* 844 and schol.; Callim. *Cer.* 109). At the Amphidromia (Plato, *Thet.* 160, schol. there and lexicographers s.v.), when the 5-days-old child was received into the family and named, part of the ceremony was to run with it around the hearth, but it does not appear that the goddess was thought present in any personal way. Publicly, she has 'the town halls (*prytaneia*) for her portion' (Pind. *Nem.* 11. 1), confirmed by the public hearth in the *prytaneia* of many cities (Farnell, op. cit. *infra* 348). Since the Senate-house often had a sacred hearth also, Hestia is not infrequently called *Βουλαια*, 'she of the Senate'. She commonly received the first of the sacrifice, or a preliminary sacrifice for herself, was named first in prayers and first or nearly so in oaths (Preuner in Roscher, 2616 ff.; Farnell, 346, 349; Rose in *Harv. Theol. Rev.* 1937, 172).

Farnell, *Cults* v. 345 ff.; Preuner in Roscher's *Lexikon*, s.v. (cf. his *Hestia-Vesta*, 1864), Diehl, *Anthologia Lyrica* ii. 301 f. (hymn of Aristonous at Delphi). H. J. R.

HESYCHIUS of Alexandria, lexicographer. If the Eulogius to whom he addresses the introductory epistle of his lexicon is Eulogius ὁ σχολαστικός, Hesyechius (like Eulogius) probably belongs to the fifth century A.D. The comprehensive scope of his design is indicated both in that epistle and in the title, *Συναγωγή πᾶσιν λέξεων κατὰ στοιχείου*. The work, Hesyechius says, was based on the specialist lexica (see GLOSSA, GREEK) of Aristarchus, Heliodorus (1st c. B.C.), Apion, and Apollonius, son of Archibius (pupil of Apion), and on Diogenianus and Herodian; Hesyechius seems to have added the interpretations of a number of proverbs which are included. The lexicon is known only from a fifteenth-century MS., badly preserved, and in many places interpolated (even obliterated) by expansions and other notes made by the first editor, Marcus Musurus (1514). Bentley showed that the Biblical Glosses in Hesyechius are interpolations; less successful attacks have been made on the Latin and Atticist items. The original, as Hesyechius says, included the sources of the rare words listed. The sources, however, have disappeared in the severe abridgement which has reduced the lexicon to a glossary, copious though that remains. Hesyechius often preserves correct readings for which easier synonyms have been substituted in our extant MSS. of Greek literature. His dialectal items are sometimes imperfect: he writes *φ* either as *β* (less often *γ*) or as *Γ* (less often *Τ*), as, e.g., *Γοῖδα οὐκ οἶδα* [sic cod.], *Γιγόν* [sic cod.]: *ῥον*. Nevertheless, he is of the greatest value for the study of Greek dialects, the interpretation of inscriptions, and the criticism of poetic texts.

HETAIRAI. Although Archilochus and Sappho were familiar with the phenomenon, the name first occurs in Herodotus (2. 134). Despite modern and ancient arguments to the contrary (e.g. Ath. 571-2), it is simply the Attic euphemism for those women, slave or free, who traded their sexual favours for long or short periods outside wedlock (Dion. Hal. 1. 84. 4; *Suda*, s.v.), whether

they were streetwalkers, the inmates of civic or private brothels, or accomplished and expensive courtesans (*μεγαλόμισθοι*). They were unknown in the heroic period and at Sparta, and our earliest references point to their existence in Ionia and Egypt in the sixth century. By Solon's time they were established in Athens and no doubt elsewhere in mainland Greece (Plut. *Vit. Sol.* 23. 1). The social protection they offered as an alternative to adultery ensured their continued toleration until the growth of Christianity. They enjoyed legal safeguards in most cities as well as certain social and civil disadvantages, such as taxation (*πορνεῖον τέλος*). Certain towns, especially ports, were notorious for the number and quality of their *hetairai*, among them Athens, Comena, and Corinth, which boasted also sacred prostitutes (*ἱερόδουλοι ἑταῖραι*) and high prices. *Hetairai* often had other professions and might double as hostesses, entertainers, and musicians; the most attractive and talented of them (e.g. Phryne, Lais, Neaera, Thais, and Leontion) sometimes became the mistresses of men of political, philosophical, or artistic distinction. It is from the late fifth to the third century, the great age of *hetairai*, that the most famous names and stories come down to us: an extensive literature sprang up about them, and real and fictitious members of the profession figured in New Comedy (e.g. Machon q.v.), where attitudes towards them varied from the cynical to the romantic. It is at this period that we find attempts made to distinguish the better class of *hetairai* from the lowly *πῶρη* or slave prostitute. Their social danger lay in their frequent rapacity and the ruinous infatuation they could inspire in the young or foolish, an aspect stressed in New (and Roman) Comedy, although the depiction is lightened by tales of *hetairai* with hearts of gold and reluctant *hetairai* of respectable origins. Our best source of information other than Comedy is Athenaeus Book 13, but Lucian (*Dial. Meretr.*) and Alciphron offer convincing and amusing sketches of their psychology and methods.

Dar.-Sag. s.v. *Meretrices*; K. Schneider, *PW* II Herter, 'Die Soziologie der antiken Prostitution', *Jahrb. f. Antike u. Christentum* 1960, 70 ff. J. P. S.

HETAIRIAI (*ἑταῖραι*, -εῖαι), associations of 'comrades' (*ἑταῖροι*). In some, perhaps most, Cretan cities the citizens were grouped in *hetairiai* as part of the military system; each had its table in the city's *andreion* or common mess (cf. the Spartan *phiditia*). For the 'Companions' of the Macedonian kings, see the next article. There is some evidence for the use of the words *ἑταῖρος* and *ἑταιρία* by associations of a wholly private character, as professional guilds (see CLUBS, GREEK); but the *hetairiai* best known to us are political factions, i.e. more or less temporary associations of partisans under a leader or leaders. They are sometimes called *συνωμοσίαι*, from the oaths of loyalty which might be required. They are attested for many cities and for all periods of Greek history from the archaic to the Roman, and were formed for the maintenance or overthrow of the existing regime, the furtherance of the personal ambitions of their leaders, and for mutual assistance in the law courts or at elections. At Athens most political leaders from Cylon (q.v.) onward organized such a following; Aristides (q.v. 1) was said to be an exception. After the establishment of the democracy, its opponents worked through *hetairiai*, and these helped to bring about the usurpations of the Four Hundred (q.v.) and of the Thirty Tyrants (q.v. 1). A law against subversive *hetairiai* cited by the orators may have been passed on the restoration of the democracy.

Schreiber, *Zur Gesch. der Hetairien in Athen* (Diss. Vienna, 1948); F. Sartori, *Le Eterie nella vita politica ateniese* (1957); *Iura* 1958, 100 ff.; *Hist.* 1958,

157 ff.; R. Sealey, *Hist.* 1960, 155 ff.; C. Talamo, *PP* 1961, 297 ff.; G. J. Staggis, *Institutional Aspects of the Hetairoi Relation* (Diss. Wisconsin, 1962; *Hist.* 1968, 385 ff. T. J. C.

HETAIROI (ἑταῖροι, Companions), first applied to the 2,500 Myrmidons of Achilles in the *Iliad*, this title in classical times was peculiar to Macedonia. Anaximenes (fr. 4 Jacoby *FGH*) ascribed the institution of *hetairoi* and *pezetauroi* to Alexander. Probably the *hetairoi*, as Cavalry-Companions, had existed for centuries before the *pezetauroi* or Infantry-Companions were formed; since Macedonia was not economically emancipated until the fourth century, the *pezetauroi* system may be ascribed to Alexander II (369–368 B.C.). By adopting the nobles of Upper Macedonia and able Greeks into the Companions, Philip II welded together his expanding State on a military basis. The *hetairoi*, to whom Philip granted estates of conquered land, numbered 800 c. 340 B.C. (*FGH* 115 F 225). Alexander the Great increased their number, and late in his life enrolled Asiatics even in the royal bodyguard who served as his Council. In war the *pezetauroi*, equipped by Philip with *sarissa* and *pelta*, formed the defensive phalanx, and the *hetairoi*, equipped with a thrusting spear, delivered the offensive, usually from the right wing; they formed the core of the invincible army led by Alexander the Great. After his death Seleucus commanded the survivors of the *hetairoi* in one hipparchy, which later split up among the Successors. Further references in Arrian, *Anab.* N. G. L. H.

HIATUS, the gap that occurs when a word ending with a vowel is immediately followed by a word beginning with a vowel.

I. HIATUS IN GREEK VERSE

For hiatus at end of line or colon see *METRE, GREEK, I* (4). Hiatus within line or colon, (1) without shortening of the first vowel, (2) with shortening:

(1) Hiatus without shortening is common in Homer, at certain points in the line, and, after certain words, in Comedy. Elsewhere it is rare, except that post-Homeric poets allow themselves some epic freedom in hexameters. Broadly speaking, the post-Homeric examples fall into the following classes:

(i) Where the second word is digammatized (e.g. ἀναξ, ἔπος, ἰών), hiatus cannot be truly said to exist in the case of poets (e.g. Alkman, Pindar, Bacchylides, Epicharmus) for whom the digamma was a living letter. Further, the precedent of epic and lyric makes tolerable such juxtapositions as δέ οἱ (dative) in Sophocles. Hiatus is also tolerated (ii) before certain proper names in lyric poetry (e.g. Ἰσθμός, Pind. *Isthm.* 1. 9 and 32); (iii) often in drama after, or between, exclamations: e.g. ἐλεεῖ ἐλεεῖ (Aesch. *PV* 877), αἰαί, ἰκροῦμαι (Soph. *El.* 136), ὦ Πράκλει, often in Comedy. Even in tragic trimeters, ὦ οὐτος (Soph. *OC* 1627). Similarly with quasi-interjectional expressions. ἴθι ἴθι (Soph. *Phil.* 832), παῖ, ἦμᾶ, παῖ (Ar. *Ran.* 37); (iv) after τί, occasionally in tragic trimeters, very frequently (and also after ὅτι, ὅ τι) in Comedy, especially in such phrases as τί ἔστι; τί οὖν; (v) εὖ οἶδα (ἴσθι, ἴσσε) very occasionally in tragic, more frequently in comic, trimeters; (vi) in Comedy often after περί, occasionally after πρό and μέχρι (ἄν); (vii) οὐδέ (μυθεῖ) εἰς (ἐν), occasionally in Old Comedy, very often in Middle and New Comedy, (viii) in the phrase μὴ ὦρας, ὦρας (Comedy).

It will be noticed that in drama hiatus is mainly found within a more or less closely unified word-group, where the *concurus vocalium* seemed hardly more objectionable than within a single word (e.g. ἄοκνος). Perhaps, therefore, the freer toleration of hiatus (as of crasis) in Comedy is a consequence of a delivery more rapid, and less articulated, than that employed in Tragedy.

(2) Hiatus with shortening, sometimes called 'Epic correction' because of its commonness in epic (and elegiac) verse, is found in the dactylic cola of the early lyric poets (e.g. Sapph. fr. 116 οἶον τὸ γλυκύμαλον ἐρεύθεται ἄκρῳ ἐπ' ὕσδῳ), and is frequent in the dactylo-epitrites of Pindar and Bacchylides. In the lyrics of Tragedy, Sophocles uses it far more frequently (e.g. *El.* 162–70) than Aeschylus or Euripides (who in his later plays almost banishes it). It is found in the anapaestic dimeters of Tragedy and Comedy (in the resolved arsis as well as in the thesis), and in the catalectic anapaestic tetrameters of Comedy (much more often in earlier than in later Aristophanes). A monosyllabic thesis does not admit correction; consequently all cases in dochmiu, and the few cases in lyric iambs, occur in resolved arses (e.g. Soph. *Aj.* 349 μῦνοι ἐμῶν). The shortened syllable is much more frequently a diphthong (especially, perhaps, an accentually short diphthong in -αι or -οι) than a single vowel.

See J. Desroix, *Le Trémère iambique* (1931), 26 ff. and for bibliography see F. Kalinka in *Hinsian Jahrb.* 250, 402 ff. J. D. D.

II. HIATUS IN GREEK PROSE

Theory. Isocrates (Τέχνη) deprecates hiatus generally; Hermogenes and Longinus accept this ruling (Walz iii. 289; vi. 102 3; ix. 560). [Arist.] *Rh.* *Al.* 1435^{ab} probably concerns ambiguous elision, not hiatus. Dionysius distinguishes: the austere style (Thucydides) allows hiatus freely, the middle style (Demosthenes) allows a little; the smooth style avoids it carefully—Isocrates and Theopompus too carefully (*Comp.* 22–3; *Dem.* 4, 38, 40, 43; *Isoc.* 2; *Pomp.* 6). Plutarch satirizes Isocrates' scrupulousness (*Mor.* 350 e). Demetrius thinks marked hiatus desirable in the grand style, but too dignified for the simple style (*Eloc.* 68–74, 207, 299–301). Cf. also Cic. *Orat.* 77, 150–2, *De Or.* 3, 171–2; Quint. 9. 4, 33–7.

Practice. Marked avoidance of hiatus first appears in Thrasymachus, then in Gorgias (*Pal.*) and Alcidas (*Soph.*), there is moderate avoidance in Antisthenes and Lysias; little in Andocides; none in Antiphon. (Benseler assumes that pre-Isocratean writers cannot have avoided hiatus, and rejects as spurious those works which show avoidance.)

Isocrates is the pattern of the technique of avoidance, in securing which he relies little on crasis, elision, or pauses, but much on word-order and word-choice; hence some hyperbaton and such plurals as ταῖς ἀληθείαις, σεμνότησιν. His few licences are chiefly before ἄν, οὖν, and after καί, περί, πρό, ὦ. He avoids long vowels in hiatus (especially η) more strictly than short. His judicial speeches show rather more freedom than the rest.

Demosthenes, though careful, allows hiatus also before ὥς and after εἰ, ἦ, ὅτι, μή, and the article; at pauses within and after sentences; and with proper names and set phrases (ἐν τῷ ἐμῷ ὕδατι εἰπάτω). He often elides.

Further, hiatus is avoided carefully: by Lycurgus, Dinarchus, Demades, Theopompus, Polybius, Philodemus; by Isacus and Plutarch sometimes; by Plato in his late works; by Aristotle in *Pol.* and *Metaph.* 1. It is tolerated by Aeschines and Hyperides, and freely allowed by Herodotus, Thucydides, and Xenophon.

G. E. Benseler, *De hiatu in oratoribus Atticis* (1841, detailed, dogmatic), F. Blass, *Attische Heredsamen* (1887 98); S. Skimna, *Études sur le rythme de la prose grecque I* (1937).

W. H. S.; K. J. D.

III. HIATUS IN LATIN VERSE

There are three groups of fairly homogeneous cases:

(1) 'Epic correction' in or before Greek words from Cicero to Horace: *etesiae* Cic. *Aratea* (*Phaen.*) fr. 24

(marked by himself, *Orator* 15. 2) and Lucr. 6. 716, *Peliō Ossam* Verg. *G.* 1. 281 (imitated—Ov. *Met.* 1. 155), *insulæ Ionia Aen.* 3. 211; cf. *Ecl.* 6. 44, *G.* 1. 437, 4. 461, *Aen.* 5. 261, Ov. *Am.* 2. 13. 21. *Without a Greek word: valē* Verg. *Ecl.* 3. 79 (imitated—Ov. *Met.* 3. 501); cf. *lectulō* Catull. 57. 7. This licence is of Greek origin and conditioned by metrical necessity.

(2) Hiatus without shortening is not infrequent in Virgil, e.g. *pecori*, | *apibus* *G.* 1. 4, *dea*. | *ille Aen.* 1. 405 (cf. Hor. *Epod.* 5. 100, *Carm.* 1. 28. 24). In some of these cases Greek technique is obviously imitated, e.g. *Glaucō* | *et Panopee* *G.* 1. 437, *castaneae* | *hirsutae* *Ecl.* 7. 53 (cf. Hor. *Epod.* 13. 3, Ov. *Met.* 3. 184, 5. 625).

(3) Cases like *qui a(m)at*, *dum ab(est)* — *u(u)u(ū)*. They are frequent in dramatists (especially Plautus) and Lucretius (see Munro on 2. 404), and occur sporadically in Catullus (55. 4), Virgil (e.g. *Ecl.* 8. 108), Horace (*Satires*), etc., but not in Ovid or later. This phenomenon is not of Greek origin and its prosodial character is doubtful, disyllabic and monosyllabic pronunciation being both possible.

Apart from these three groups there are some hundreds of cases of hiatus in Plautus, many of them complicated by problems of prosody or textual criticism. Some scholars think that hiatus in the caesura is legitimate in Plautus; but it has not yet been proved that hiatus is more frequent in the caesura than it would be if it was legitimate at any place in the line.

Luc. Muellet, *De re metr.* (1894), 368 ff., B. Maurenbiecher, *Hiatus u. Verschleifung im alten Latein* (1899), J. Pelz, *Der prosodische Hiatus* (1930), Kalinka, *Bursian Jahrb.* 1935, 407 ff. P. M.

HIBERNIA (*Ἰβηρία*), Ireland, first known to the Greeks through Massiliote mariners (c. 525 B.C.) as being 'five days' sail from Brittany, near the Albion's island'. Eratosthenes (c. 235), probably through Pytheas' circumnavigation of Britain (c. 310–306), placed Ireland correctly on his map. Strabo (4. 201) says that, oblong in shape, it lay near and north of Britain and contained greedy incestuous cannibals. Mela (3. 6. 53) makes Ireland nearly as large as Britain, oblong, with pastures that caused the cattle to burst, and savage untrustworthy husbandmen. Pliny gives as its area 800 × 100 miles. Agricola may have reconnoitred Ireland. Ptolemy (*Geog.* 2. 2) shows fair knowledge of the whole coast, giving sixteen peoples of counties Wicklow, Kildare, Waterford, Wexford, Kerry, Dublin (Eblana, south of the mouth of the River Buhinda—the Boyne), Connaught province; rivers Shannon, Barrow, Lagan, Avoca, Boyne, Liffey. Solinus added the detail that Ireland has no snakes. The older tendency to place Ireland between Britain and Spain was due probably to early direct voyages from Spain.

Cary Warmington, *Explorers* 29 ff.; (Pelican) 43 f., 50 f., Orpen, *Journ. R. Soc. Antiqu. of Ireland*, June 1894 (Ptolemy), MacNeill, *New Ireland Rev.*, Sept. 1906, S. P. O'Riordan, *Proc. Royal Irish Academy*, section 1C, 1948, 35 ff., R. E. M. Wheeler, *Rome beyond the Imperial Frontiers* (1955), 16, J. J. Tierney, *JHS* 1959, 132 ff.; Thomson, *Hist. Anc. Geog.* 54, 144, 194, 235, 230 f. (Ptolemy's map), 334, 357 f. E. H. W.

HICETAS of Syracuse, Pythagorean, probably the teacher of Epicharmus and younger than Philolaus, is said to have been the first to teach that the earth moves in a circle (also ascribed to Philolaus). His view probably was that the earth rotates on its own axis while the heavenly bodies are at rest.

Testimonia in Diels, *Vorsokr.* 1. 441–2.

W. D. R.

HIEROCLES, Stoic of the time of Hadrian (A.D. 117–38), wrote (1) an *Ἠθικὴ στοιχειώσις* (*Elements of Ethics*) which may have been an introduction to (2) a work on ethics, fragments of which are preserved in

Stobaeus. The former was a scientific work dealing with the instinct of self-preservation (*πρώτη οικειώσις*) as the starting-point of the Stoic ethics, and with self-consciousness as the foundation of this instinct. The latter was a work of edification dealing with duties, *Περὶ καθήκοντων*. The teaching in both works followed the orthodox doctrine of the early Stoics.

Ed. H. von Arnim, *BKT* 4 (1906).

W. D. R.

HIERODOULOI, a relatively late term (first in 3rd-c. B.C. papyri), though temple-slaves, performing the menial tasks, existed from early times in Greece as elsewhere (cf. Martiales at Larinum, Cic. *Clu.* 43). The word *hierodouloi* can designate such chattels of a god; it can also bear certain special connotations. In Ptolemaic Egypt the *hierodouloi* take minor roles in the ceremonies, tend the sacred cats (*PSI* 440), or collect temple revenues (*Plib.* 35). In Asia Minor they may be the serfs, rather than actual slaves, attached to the great temple estates (Strabo, books 11–12, *passim*). The religious prostitutes of Comana Pontica (Strabo 559) and Corinth (Athen. 573–4; Strabo 378) are called *hierodouloi*, and the term has hence been mistakenly applied to all sacred prostitution (q.v.). In Oriental cults a devotee might consider himself the slave of a divine master (cf. *δοῦλος τοῦ θεοῦ* in Christian inscriptions); the *κάτοχοι* of Egypt (cf. SARAPIS) and some of the *ἱεροὶ* in Anatolia may fall in this category. In the Hellenistic period arose the custom of manumitting slaves through a fictitious sale (or occasionally dedication) to a god, who thus became the guarantor of their freedom; persons thus freed were occasionally called *hierodouloi* (A. Cameron, *Harv. Theol. Rev.* 1939, 154 f., cf. 149).

See METRAGYRITES.

F. R. W.

HIEROMNEMONES, religious officials, found in many Greek States. Aristotle (*Pol.* 1321^b) classifies them with the civil registrars of public and private documents, and temples frequently served as record offices. Their functions varied widely: some appear as archivists, others as financial officers, some managed the festivals or controlled temple properties, and in several cities, e.g. Issa and Byzantium, they were the eponymous magistrates. They usually formed a college, and the position was one of responsibility and honour. Best known are the *hieromnemones* who represented their States in the Delphic-Pylaeon Amphictiony. Their number was normally twenty-four, but varied considerably under the Aetolian domination (c. 290–191 B.C.). Their exact relationship to the other delegates, the *pylagorai* (in the Aetolian period called *agoratroi*), is not clear. The duties of the *hieromnemones* are set forth in a law of 380 (*IG* n^o. 1126). Their tenure of office varied from State to State: in the fourth century the Thessalian *hieromnemones* served for several years, the Athenians one year, while the Malians sent different *hieromnemones* for each of the semi-annual meetings; a Chian decree of 258–254 (*SIG* 443) stipulates that their delegate should serve one year and be ineligible for reappointment. For *ἱερομνήμονες ἐνὶ θησαυρῶν* and *ἐνὶ ταῖς οἰσίαι* at Locri Epizephyrii see *Klearchos* 1961–2; for *hieromnemones* as a functionary of a private cult association see *Δῶρ.* 1933, 254. The term was sometimes used to translate the Latin *pontifex*.

F. R. W.

HIERON (1) **I** was appointed ruler of Gela when his brother Gelon (q.v.) became master of Syracuse. He succeeded to the Syracusan tyranny in 478 B.C., overcoming the counter-claims of his brother Polyzelus. He sought to rival by intervention in Italy Gelon's Carthaginian triumph, in 477 helping the Sybarites against Croton

and deterring Anaxilas (q.v. 1) of Rhegium from an attack on Locri. Etruscan pressure on Cumae required his assistance further north, and he destroyed Etruscan seapower by a great victory in 474 (for dedicated helmets see *SEG* xxiii 252/3). A short-lived colony on Ischia was a further development of his Italian policy. He strengthened his power in Sicily by refounding Catania under the name Aetna with 10,000 new settlers (475). After a breakdown of his alliance with the Acragantines, his victory over Acragas contributed to the overthrow of the tyranny there (472). His court was open to poets and philosophers, while his victories in the Games extended his prestige. He died in 467/6.

Ancient refl. assembled in G. F. Hill, *Sources for Greek History between the Persian and Ptolemaean Wars* (1951), 361 f. A. Schenk, Graf von Stauffenberg, *Trinakria* (1963), chs 14, 15, 17, 18, 11. Berve, *Die Tyrannis bei den Griechen* 1 (1967), 147 ff., on the chronology, R. van Compenhelle, *Étude de chronologie et d'historiographie antiques* (1959), 319 ff. A. G. W.

HIERON (2) II (c. 306–215 B.C.), of an unimportant Syracusan family, first appears as a lieutenant of Pyrrhus (q.v.), then (in 275 B.C.) as independent commander of the Syracusan army. In this capacity he seized power in Syracuse. Severely defeated by the Mamertines (q.v.) in 270, he won a great victory in the following year at the river Longanus and was hailed as king. Now claiming descent from Gelon and Hieron I (qq.v.), he reigned for fifty-four years—years of wealth and prosperity for Syracuse even though initially his political misjudgements involved the city in difficulties.

When the Romans seized Messina in support of the Mamertines, Hieron defied tradition and allied himself with Carthage. Driven back by Roman forces he concluded a peace with Rome (263) by which he became Rome's ally, remaining so till his death (Polyb. 1. 16. 10). He provided ships, supplies, and facilities for Rome during the Punic Wars, and paid 100 talents as indemnity—25 immediately and the rest in annual payments. The latter were remitted on the renewal of the alliance in 248, when additions were made to Syracusan territory.

Relying thereafter on Roman protection, Hieron maintained a good fleet and employed Archimedes to improve the city's defences. The *Lex Hieronica* formed an equitable basis for taxation under a system of tithes, later taken over by the Roman provincial government. His son Gelon predeceased him, and he was succeeded by his grandson Hieronymus.

HIERONYMUS (1) of Cardia, the contemporary and trustworthy historian of the period from the death of Alexander (323 B.C.) to the death of Pyrrhus (272) or perhaps as far as 263, the year of the treaty between Antigonus Gonatas and Alexander of Epirus. He appears first in the service of Eumenes of Cardia, fighting for him against Perdiccas and Antigonus until Eumenes' execution by the latter after the battle of Gabiene (316). Hieronymus entered the service of Antigonus, was present at the battle of Ipsus (301), and was appointed harmost of Boeotia (293) by his son Demetrius Poliorcetes. He retained the friendship of Antigonus Gonatas until his death (c. 250). His account of this period, for which he became the accepted authority, was entitled *Αἱ περὶ Διαδόχων Ἱστορίαι* and was the most important source behind Arrian (*Tὰ μετὰ Ἀλέξανδρον*) and Diodorus (books 18–20). The work was known to Pompeius Trogus and Pausanias and was used by Plutarch for his lives of Eumenes, Pyrrhus, and Demetrius. The relatively few

fragments do not allow the distribution of the subject-matter to be assessed.

HIERONYMUS (2) of Rhodes, philosopher and historian of literature, lived at Athens c. 290–230, under the protection of Antigonus Gonatas. Trained in the Peripatetic school, he left it when it was declining under Lycon's headship, and founded an eclectic school.

W. D. R.

HIEROPHANTES, head of the Eleusinian cult, was the most revered priest in Attica. He was chosen for life from the hieratic family of the Eumolpidae (see EUMOLPUS). He was distinguished by a head-band (*σπρόφιον*) and a long purple-dyed robe ornamented with embroideries. His principal duty was to preside over the Mysteries. Before the celebration he sent forth *spondophoroi* to proclaim truce for the period of the Mysteries. He opened the ceremonies with a proclamation that barbarians, murderers, and those defiled must keep away, and he had the right to refuse admittance to others. To the initiates he revealed the secrets of the Mysteries; for this purpose it was necessary that a man of impressive voice should be selected for the office. He was assisted by the *daduchos* (*δαδούχος*, torch-bearer) and two *hierophantides* (*ιεροφάντιδες*). He also took part in other State festivals and had several minor public duties. In the imperial period his only legal name was Hierophantes; on entering office he performed the ceremony of casting his old name into the sea.

HILARY (*Hilarius*) of Poitiers (d. A.D. 367), after receiving the complete pagan education, in which he failed to find satisfaction for his soul, was converted by Scripture study. As bishop (c. 353), he became a protagonist in the conflict with Arianism. Being banished to Asia, he used the opportunity to increase his knowledge of Greek literature. He wrote commentaries on Matthew and on the Psalms, and a 'liber mysteriorum', but the greatest of his works is his *De Trinitate* (in twelve books). He was also the author of three Latin hymns, the earliest we have.

HILDESHEIM TREASURE, a collection of Roman silver plate found in 1868 at Hildesheim in south Hanover and now in Berlin; assigned to the Augustan age and possibly booty from the camp of Quinctilius Varus in the Saltus Teutoburgiensis (A.D. 9). The principal piece is a mixing-bowl covered with floral relief resembling that of the Ara Pacis; there is also a series of drinking-bowls with embossed designs of Minerva, Hercules and the snakes, reliefs of Cybele and Men-Attis, and Bacchic emblems.

E. Pernice and F. Winter, *Der Hildesheimer Silberfund* (1901).

F. N. P.

HIMERA (*Ἱμέρα*), on the north coast of Sicily, was founded c. 649 B.C. by the Zancleans, helped by the clan of the Myletidae, exiled from Syracuse. Stesichorus (q.v.) was its most famous citizen. In the early fifth century it was controlled by a tyrant Terillus who, on his

expulsion by Theron (q.v.) of Acragas, appealed to Carthage. The Carthaginian expedition was decisively defeated at Himera (480 B.C.), where a fine Doric temple celebrated the triumph of Gelon (q.v.) and Theron. Independent of Acragas after 461, Himera was obliterated by Carthage in 409 as an act of revenge.

In 408/7 the Carthaginians founded *Thermae Himeraeae* (*Termini Imerese*) 7 miles westward, where the Himeraean refugees settled. Although in Carthaginian territory, it was completely Greek—even sometimes referred to as Himera, and was the birthplace of Agathocles (q.v.). Within the Roman province of Sicily after 241 B.C., it became a *colonia* under Augustus.

Bérard, *Bibl. topogr.* 57 f.; Dunbabin, *Western Greeks*; P. Marconi, *Himera* (1931). *Thermae Himeraeae*: G. Giacomazzi and G. Corrietti, *Termini Imerese* (1965). A. G. W.

HIMERIUS (c. A.D. 310–c. 390), Greek rhetorician. Born in Prusias in Bithynia, he studied in Athens, where he spent most of his life as a successful teacher of rhetoric. He was a younger contemporary and rival of Proairesius (q.v.). He visited Constantinople, Thessalonica, Nicomedia, and Antioch, among other places. Of his eighty speeches Photius (q.v.) read seventy-two, but there survive now only twenty-four, with excerpts from ten others. Six are declamations on themes from Athenian history, the rest deal with contemporary subjects, and include addresses to high Roman officials, inaugural lectures and other ceremonial orations in connexion with his school, and a funeral oration on his son. Unlike Themistius (q.v.) and Labanius (q.v.), Himerius has no interest in politics; he is equally untouched by philosophy. His eloquence is an end in itself, like poetry. His style is marked by wealth of imagery, care for euphony, avoidance of the concrete, and frequent quotations from classical poetry. Though the school orations are of some interest, Himerius in the main displays a talent for saying nothing gracefully and at length. Among his pupils were Gregory (2) of Nazianzus and St. Basil (qq.v.).

HIMILCO (1), Carthaginian navigator who explored northwards four months from Gades but not beyond Brittany (probably before 480 B.C.). His complaints about calms, shoals, tangled seaweeds, which held ships back, have been taken to indicate that he reached also, or was blown to, the Sargasso Sea. But he may never have gone out of sight of Spain and France. Whether he ever visited Britain is unknown.

See Pliny 2. 160, Avienius, *Ora Maritima*, 114–14. 380–0. 406–15. Cury–Warmington, *Explorers* 31 ff.; (Pelican) 45 ff.; Warmington, *Greek Geography* (1934), 75 ff.; Thomson, *Hist. Anc. Geog.* 54 f.; Hyde, *Greek Mariners*, 121 ff. E. H. W.

HIMILCO (2), a Carthaginian general. Signatory of an agreement between Carthage and Athens in 407/6 B.C., he commanded the forces which in 406 conquered and sacked Acragas, Gela, and Camarina (qq.v.). Next year, when Syracuse seemed at his mercy, disease in his army forced him to conclude a peace which nevertheless confirmed Carthaginian power in Sicily. In 397 Dionysius I (q.v.) renewed the war. Himilco, returning to the island, reconquered the north coast in 396, advancing once more to the gates of Syracuse. His blockade, strengthened by a naval victory, was again broken by the onset of plague, and the Syracusans completely defeated his demoralized troops. By agreement with Dionysius Himilco saved the Carthaginian citizen-soldiery; after returning home he committed suicide.

HIPPALUS, a Greek merchant who discovered the full

use of monsoon-winds to and from India. Mortimer Wheeler (as cited below) forcefully argues that complete use of these winds was known before the death of Augustus in A.D. 14. Becoming aware of the general shape of the Arabian Sea and the southward projection of India and the existence of regular winds between Aden Gulf and north-west India, one summer Hippalus sailed across from Ras Fartak to the Indus. This resulted in cross-sea voyages even to south India and back by Greeks and vast increase in commerce with India. Hippalus' name was given to the south-west monsoon, to an African cape, and to part of the Arabian sea.

HIPPARCHUS (1), younger son of Pisistratus of Athens by his first wife; constantly associated with his elder brother Ippias, under whom he acted as patron of literature and art. Anacreon and Simonides came to Athens at his invitation, and the artistic movements of Pisistratid Athens, which included the first great developments of red-figured vase-painting and corresponding activities in sculpture and architecture, owed much to this frivolous and amorous but cultured prince. His personal vices led to his murder by Harmodius and Aristogiton in 514 B.C. Hipparchus planned the temple of Zeus Olympius at Athens with a double peristyle of the Ionic order.

For bibliography, see PISISTRATUS.

P. N. U.

HIPPARCHUS (2) (fl. c. 260 B.C.), New Comedy poet and (probably) actor. In frs. 1 and 3 foreign drinking-cups (κόνδυ, λαβρόνιος) are mentioned, and in *Zwγράφος*, fr. 2, the painter praises professional skill.

FCG iv. 431 f., CAF iii. 272 ff.

HIPPARCHUS (3), astronomer (c. 190–after 126 B.C.). Born at Nicaea in Bithynia, he spent much of his life in Rhodes; his recorded observations range from 162 to 126. His only extant work is the *Commentary on the Φαινόμενα of Eudoxus and Aratus*, in three books, containing criticisms of the descriptions and placings of constellations and stars by those two (qq.v.), and a list of simultaneous risings and settings. Though it is a comparatively early and slight work, valuable information on Hipparchus' own star co-ordinates has been extracted from it. Most of our knowledge of Hipparchus' other astronomical work comes from the *Almagest* of Ptolemy (q.v. 4), whose solar and lunar theory is only a modification of his predecessor's.

Hipparchus was the first to construct a theory of the motion of sun and moon which was properly based on observational data. The theory of the epicyclic/eccentric system which he adopted had already been worked out by his predecessors, probably Apollonius (see ASTRONOMY). His contribution was to combine his own systematic observations with the Babylonian eclipse-records going back to the eighth century which were available to him, and to extract accurate estimates of the mean motions of sun and moon, and the length of the tropical year (which he put at 365 $\frac{1}{4}$ days). He is most famous for his discovery of the precession of the equinoxes, which he did by comparing his own observation of the distance of the star Spica from the autumnal equinox with that of Timocharis about 160 years before (*Almagest* 7. 2). He investigated the problem of parallax, and thus came to devise the first practical method for determining the

sizes and distances of the sun and moon; his estimate for the latter was close to the truth (Pappus, *Comm. in Alm.* v, 11 ed. Rome, 66 ff.). He was a paradigm of the practical astronomer: to accuracy of observation (he improved observational techniques) he joined great critical acumen in selecting observational data and in distinguishing what was relevant to his ends. His scientific spirit is shown in his refusing to attempt to construct a planetary theory because of the insufficiency of the data; he was content to record his own and previous observations and to show that they contradicted existing theories (*Almagest* 9. 2). He displayed considerable mathematical ability in applying observational results to determine the numerical parameters of his geometrical schemata for the movements of the heavenly bodies. He is the first person known to have made systematic use of trigonometry (he compiled a *Table of Chords in a Circle*, the ancient equivalent of a sine-table). He was probably the inventor of stereographic projection (Synesius, *Opusc.* ed. Terzaghi 2, 138).

His geographical work was a polemic against the *Geography* of Eratosthenes (q.v.), criticizing descriptive and especially mathematical details. Hipparchus' work was important in the development of mathematical geography, as it laid down the rules for the essential observational foundations for a scientific treatment of the subject (see also GEOGRAPHY).

Among other works were some on astrology and weather signs.

EDITIONS. *Comm. in Arat.* ed. Manitius (Teubner, 1894, with German translation). *Geographical Fragments* ed. D. R. Dicks (1960, with introduction and translation).

LIFE AND WORKS. Dicks, op. cit. 1 ff.

COMMENT. General, Lamiery, *Histoire de l'astronomie ancienne* (1891), esp. chs. 8-11. Most of what has been written about the *star catalogue* (e.g. Boll in *Bibl. Math.* 31. 2 (1901), 185 ff.) misrepresents our knowledge of what it was really like. Most useful is H. Vogt in *Astronomische Nachrichten* 25 (1925), no. 5354-5, cols. 17-54, which is based on the data in the *Comm. in Arat.* Use of Babylonian parameters. A. Yahne in *Centaurus* 1955, 122 ff.; O. Neugebauer, *Notes on Hipparchus in Studies presented to Harry Goldhamer* (U.S.A. 1956), 29-ff. Geography. Dicks, op. cit. Astrology. Several texts, edited in C. A. G. Boll, 'Die Erforschung der antiken Astrologie', *N. J. f. Kl. Alt.* 21 (1908), 106, n. 4. Neugebauer, op. cit.

HIPPASUS of Metapontum, an early Pythagorean later regarded as having founded the branch of the school called *μυθηματικὴ* (see PYTHAGORAS 1), and as having been punished for revealing a mathematical secret: later sources disagree both on the punishment (expulsion, shipwreck) and on the secret (irrational magnitudes, construction of the dodecahedron). Aristotle couples him with Heraclitus as having identified the source of the world with fire.

Testimonia in Dicks, *Forstner* 1: 107-10. M. T. Cardini, *I Pitagorici* 1 (1958). W. Burkert, *Weisheit und Wissenschaft* (1962); Guthrie, *Hist. Grk. Phil.* 1: 120 ff. G. E. L. O.

HIPPEIS (ἵππεις), cavalry. The use of cavalry in Greek warfare dates from the decline of the war-chariot (obsolete by c. 700 B.C.), and was never on a large scale except in areas suitable for horse-breeding, such as Thessaly and Boeotia. After hoplites (q.v.) had become the standard troops, those who could afford horses often used them merely as a means of proceeding expeditiously to and from battle. The Athenians first instituted a regular cavalry-force after the Persian Wars, the original strength of 300 had been raised to 1,000 by 431. As the men provided their own horses, it was a rich men's corps, with corresponding political sentiments (*Ar. Eq.* 225-7). At Sparta there was a long-established body of 300 *hippeis*, but by the early fifth century it had become an élite of infantry. Regular cavalry was instituted in 424, when a force of 400 was raised; in the fourth century it numbered 600. Cavalry was an important element in the armies of

Alexander and the Hellenistic kings. See ARMIES, GREEK AND HELLENISTIC, and WAR, ART OF (GREEK).

In most States the rearing and possession of horses was a mark of the upper class, and, where and when strongly established, favoured the maintenance of oligarchical government (*Arist. Pol.* 1297^b 18-32, 1321^a 7-11). In some States the ruling oligarchs were actually known as *Hippeis*, as at Eretria; cf. the Hippobotai at Chalcis. At Athens, too, *Hippeis* was one of the names for the uppermost class (see EUPATRIDAI), until Solon (q.v.) gave it to the second of his census-classes, which comprised men with an estimated annual income of between 300 and 500 *medimnoi* of corn, or the equivalent in other produce or money. As the minimum qualification was not high, most of the citizens of this class probably served as hoplites.

HIPPIAS (1), tyrant of Athens 527-510 B.C., eldest son and successor of Pisistratus (q.v.), was at first a mild ruler; he reduced taxation and came to an understanding with some leading clans, whereby Cleisthenes (1) and Miltiades (qq.v.) held the eponymous archonship, while his brother Hipparchus favoured the arts and included recitation of Homer in the Panathenaic festival. But his rule became harsher as conditions worsened with the advance of Persia. He lost his outpost at Rhacalus and his revenues from mines at Mt. Pangaeus (q.v.), and a group of exiled nobles, based upon Leipsydrium, made an unsuccessful attempt to oust him. Hipparchus was assassinated in 514 B.C. (see ARISTOTELION). The Spartans, supported by the Alcmaeonidae (q.v.) and egged on by Delphi, invaded Attica and were defeated by Hippias and his Thessalian allies. But a further invasion forced him to capitulate. He and his family escaped to Sigeum and later went to the court of Darius. He was with the Persian forces at Marathon.
